PROJECT MANUAL
VOLUME ONE
OSSINING UNION FREE SCHOOL DISTRICT
NEW 7TH & 8TH SCHOOL BUILDING

300 Van Cortlandt Ave

Ossining, New York - 10562

DIVISIONS 00 THROUGH 14

CPL PROJECT NO.: R24.16941.00
DOCUMENT ISSUE DATE: November 10, 2026

NEW YORK STATE EDUCATION DEPARTMENT PROJECT CONTROL NUMBER(S):
7th & 8th School Building: 66-14-01-03-0-028-001

DESIGN PROFESSIONAL'S CERTIFICATION:
The undersigned certifies that, to the best of his or her knowledge, information and belief, that the "Design conforms to all applicable provisions of the current New York State Uniform Fire Prevention Code, Building Code and Energy Conservation Code, the building standards of the New York State Education Department and that the “Work will not involve known or suspected ACBM”.

ALTERATION WARNING STATEMENT:
It is a violation of the New York State Education Law and the Commissioner's regulations for any person, unless acting under the direction of a licensed Architect, Engineer or Land Surveyor, to alter an item in any way. If an item bearing the seal of an Architect, Engineer or Land Surveyor is altered, the altering party shall affix to the item, their seal and the notation " ALTERED BY ", followed by their signature and the date of such alteration, and a specific description of the alteration.

007200 - A232 General Conditions Cover (CMA)
007250 - Additional Insurance Requirements - Contractor
007343 - Wage Rate Requirements

SPECIFICATIONS

DIVISION 01 -- GENERAL REQUIREMENTS

011100 - Milestone Schedule
011200 - Summary of Multiple Contracts
012100 - Allowances
012200 - Unit Prices
012300 - Alternates
012500 - Substitution Procedures
012519 - Equivalents
012600 - Contract Modification Procedures
012900 - Payment Procedures

013100 - Project Management and Coordination
013119 - Project Meetings
013200 - Construction Progress Documentation
013216 - Construction Progress Schedule
013300 - Submittal Procedures
014119 - Regulatory Requirements - NYS Education Department
014120 - Work Restrictions
014200 - References
014500 - Quality Requirements
014533 - Code-Required Special Inspections and Procedures
015000 - Temporary Facilities and Controls
015600 - Construction Dust Collection
016000 - Product Requirements
017300 - Execution
017329 - Cutting and Patching
017419 - Construction Waste Management and Disposal
017423 - Cleaning Up
017700 - Closeout Procedures
017701 - Checklist for Project Closeout
017719 - Project Record Documents
017823 - Operation and Maintenance Requirements
017900 - Demonstration and Training
019113 - General Commissioning Requirements

DIVISION 02 -- EXISTING CONDITIONS

024100 - Demolition

DIVISION 03 -- CONCRETE

033000 - Cast-in-Place Concrete

DIVISION 04 -- MASONRY

042000 - Unit Masonry

DIVISION 05 -- METALS

051200 - Structural Steel Framing
051223 - Structural Steel Thermal Breaks
052100 - Steel Joist Framing
053100 - Steel Decking
055000 - Metal Fabrications
055113 - Metal Pan Stairs
055133 - Metal Ladders
055213 - Pipe and Tube Railings

DIVISION 06 -- WOOD, PLASTICS, AND COMPOSITES

060660 - Resin Panel System
061000 - Rough Carpentry
062000 - Finish Carpentry
064100 - Architectural Wood Casework
068316 - Fiberglass Reinforced Paneling

DIVISION 07 -- THERMAL AND MOISTURE PROTECTION

071400 - Fluid-Applied Waterproofing
072100 - Thermal Insulation
072726 - Fluid-Applied Vapor Permeable Membrane Air Barriers
074213 - Metal Wall Panels
074233 - Solid Phenolic Rainscreen Wall Panels
075323 - Elastomeric (EPDM) Membrane Roofing
076200 - Sheet Metal Flashing and Trim
077200 - Roof Accessories
078100 - Applied Fire Protection
078400 - Firestopping
078413 - Penetration Firestopping
079200 - Joint Sealants
079513.13 - Interior Expansion Joint Cover Assemblies
079513.16 - Exterior Expansion Joint Cover Assemblies

DIVISION 08 -- OPENINGS

081113 - Hollow Metal Doors and Frames
081416 - Flush Wood Doors
081743 - FRP - Aluminum Hybrid Doors
083100 - Access Doors and Panels
083313 - Coiling Counter Doors
083323 - Overhead Coiling Doors
083343 - Overhead Coiling Smoke Curtains for Elevator Doors
084313 - Aluminum-Framed Storefronts
084413 - Glazed Aluminum Curtain Walls
085113 - Aluminum Windows
085653 - Security Windows
087100 - Door Hardware
088000 - Glazing
088723 - Safety and Security Films

DIVISION 09 -- FINISHES

090561 - Common Work Results for Flooring Preparation
092116 - Gypsum Board Assemblies
093000 - Tiling

095100 - Acoustical Ceilings
095423 - Linear Metal Ceilings
096400 - Wood Auditorium (Stage) Flooring
096466 - Wood Athletic Flooring
096500 - Resilient Flooring
096566 - Resilient Athletic Flooring
096700 - Fluid-Applied Flooring
096813 - Tile Carpeting
096816 - Sheet Carpeting
097200 - Wall Coverings
097220 - Vinyl Window Film
097800 - Interior Wall Paneling
098430 - Sound-Absorbing Wall and Ceiling Units
099000 - Painting and Coating

DIVISION 10 -- SPECIALTIES

101100 - Visual Display Units
101419 - Dimensional Letter Signage
101423 - Panel Signage
102113.17 - Phenolic Toilet Compartments
102123 - Cubicle Curtains and Track
102600 - Wall and Door Protection
102800 - Toilet Accessories
104400 - Fire Protection Specialties
105113 - Metal Lockers
105528 - Key Cabinets

DIVISION 11 -- EQUIPMENT

114000 - Food Service Equipment
115313 - Laboratory Fume Hoods and Related Products
116133 - Production Rigging, Curtains and Tracks

DIVISION 12 -- FURNISHINGS

122413 - Roller Window Shades
123100 - Manufactured Metal Casework
123200 - Manufactured Wood Casework
123500.00 - Musical Instrument Storage
123553.19 - Wood Laboratory Casework
123600 - Countertops
126100 - Fixed Audience Seating
126613 - Telescoping Bleachers

DIVISION 13 -- SPECIAL CONSTRUCTION (NOT USED)

DIVISION 14 -- CONVEYING EQUIPMENT

142100 - Electric Traction Elevators

DIVISION 21 -- FIRE SUPPRESSION

210500 - Common Work Results for Fire Suppression

210523 - General-Duty Valves for Water-Based Fire-Suppression Piping

210553 - Identification for Fire Suppression Piping and Equipment

211100 - Facility Fire-Suppression Water-Service Piping

211300 - Fire-Suppression Sprinkler Systems

DIVISION 22 -- PLUMBING

220500 - Common Work Results for Plumbing

220513 - Common Motor Requirements for Plumbing Equipment

220517 - Sleeves and Sleeve Seals for Plumbing Piping

220519 - Meters and Gauges for Plumbing Piping

220523 - General-Duty Valves for Plumbing Piping

220529 - Hangers and Supports for Plumbing Piping and Equipment

220553 - Identification for Plumbing Piping and Equipment

220716 - Plumbing Equipment Insulation

220719 - Plumbing Piping Insulation

221005 - Plumbing Piping

221006 - Plumbing Piping Specialties

221114 - Facility Natural-Gas Piping

221319 - Sanitary Waste Piping Specialties

221323 - Sanitary Waste Interceptors

221423 - Storm Drainage Piping Specialties

221429 - Sump Pumps

223000 - Plumbing Equipment

224000 - Plumbing Fixtures

224500 - Emergency Plumbing Fixtures

DIVISION 23 -- HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

230000 - General Provisions for Mechanical Work

230002 - Mechanical and Electrical Coordination

230513 - Common Motor Requirements for HVAC Equipment

230516 - Expansion Fittings and Loops for HVAC Piping

230517 - Sleeves and Sleeve Seals for HVAC Piping

230519 - Meters and Gauges for HVAC Piping

230523 - General-Duty Valves for HVAC Piping

230529 - Hangers and Supports for HVAC Piping and Equipment

230530 - HVAC Rooftop Support Systems

230550 - Wind Restraint for HVAC Systems

230553 - Identification for HVAC Piping and Equipment
230593 - Testing, Adjusting, and Balancing for HVAC
230713 - Duct Insulation
230716 - HVAC Equipment Insulation
230719 - HVAC Piping Insulation
230800 - Commissioning of HVAC
230913 - Instrumentation and Control Devices for HVAC
230923 - Direct-Digital Control (DDC) System for HVAC
230934 - Variable Frequency Motor Controllers
230993 - Sequence of Operations for HVAC Controls
232113 - Hydronic Piping
232114 - Hydronic Specialties
232123 - Hydronic Pumps
232300 - Refrigerant Piping
232513 - Water Treatment for Closed-Loop Hydronic Systems
233100 - HVAC Ducts and Casings
233300 - Air Duct Accessories
233319 - Duct Silencers
233423 - HVAC Power Ventilators
233439 - Air Destratification Fans
233700 - Air Outlets and Inlets
235100 - Breechings, Chimneys, and Stacks
235216 - Condensing Boilers
236423 - Scroll Water Chillers
237413 - Packaged Rooftop Units / Outdoor Air Handling Units
238126.13 - Small-Capacity Split-System Air Conditioners
238200 - Convection Heating and Cooling Units
238214 - Chilled Beams

2.01 DIVISION 24 -- RESERVED (NOT USED)

2.02 DIVISION 25 -- INTEGRATED AUTOMATION (NOT USED)

DIVISION 26 -- ELECTRICAL

260010 - General Provisions for Electrical Work
260513 - Medium-Voltage Cables
260519 - Low-Voltage Electrical Power Conductors and Cables
260526 - Grounding and Bonding for Electrical Systems
260529 - Hangers and Supports for Electrical Systems
260533.13 - Conduit for Electrical Systems
260533.16 - Boxes for Electrical Systems
260553 - Identification for Electrical Systems

260573 - Power System Studies
260583 - Wiring Connections
260923 - Lighting Control Devices
260961 - Production Lighting Control and Equipment
262200 - Low-Voltage Transformers
262413.11 - Switchboards - Schneider Electric Square D Flexset / QED-2
262416.11 - Panelboards - Schneider Electric Square D NQ / NF
262713.16 - Power Quality Meters - Schneider Electric Square D Powerlogic
262726 - Wiring Devices
262813 - Fuses
262816.13 - Enclosed Circuit Breakers
262816.16 - Enclosed Switches
263100 - Photovoltaic Collectors
263213 - Engine Generators
263323.13 - Automatic/Nonautomatic Transfer Switches - Schneider Electric ASCO 7000
264300 - Surge Protective Devices
265100 - Interior Lighting
265600 - Exterior Lighting

DIVISION 27 -- COMMUNICATIONS

270536 - Cable Trays for Communications Systems
271000 - Structured Cabling
271100 - Communications Equipment Room Fittings - Scheider Electric APC
271123.21 - Communications Cable Management - Velcro Brand-One Wrap
274100 - Performance Audio Video Systems
275116 - IP Public Address and Clock System
275123 - Performance Sound Systems

DIVISION 28 -- ELECTRONIC SAFETY AND SECURITY

280153 - Conductors and Cables for Electronic Safety and Security
281000 - Access Control System
281523 - Intercom Entry Systems
282000 - Video Surveillance System
283111 - Intrusion Detection System
283210 - Automated Lockdown System
284600 - Fire Detection and Alarm System

DIVISION 31 -- EARTHWORK

310519 - Geosynthetics for Earthwork
311000 - Site Clearing
312200 - Grading
312316 - Excavation

312316.13 - Trenching
312316.26 - Rock Removal
312319 - Dewatering
312323 - Fill
312500 - Erosion and Sedimentation Control
313700 - Riprap
315000 - Excavation Support and Protection

DIVISION 32 -- EXTERIOR IMPROVEMENTS

321120 - Subbase and Aggregate Base Courses
321216 - Asphalt Paving
321313 - Concrete Paving
321623 - Sidewalks
321723 - Pavement Markings
321726 - Tactile Warning Surfacing
323113 - Chain Link Fences and Gates
323129 - Wood Fences and Gates
323300 - Site Furnishings
325900 - Restoration of Surfaces
329119 - Landscape Grading
329219 - Seeding
329223 - Sodding
329300 - Plants

DIVISION 33 -- UTILITIES

330110.58 - Disinfection of Water Utility Piping Systems
330130.87 - Changing Elevations of Manholes and Drainage Structures
330503.31 - Hydrostatic Testing
330505.36 - Vacuum Testing
330505.41 - Air Testing
330505.43 - Mandrel Testing
330561 - Concrete Manholes
331416 - Site Water Utility Distribution Piping
331900 - Water Utility Metering Equipment
333113 - Site Sanitary Sewerage Gravity Piping
334100 - Subdrainage
334211 - Stormwater Gravity Piping
334213 - Stormwater Culverts
334230 - Stormwater Drains
334600 - Stormwater Management
335216 - Gas Hydrocarbon Piping

DIVISION 34 -- TRANSPORTATION

340551 - Traffic Maintenance and Protection

DIVISION 35 THROUGH 48 (NOT USED)

SECTION 001116
INVITATION TO BID

THE OSSINING UNION FREE SCHOOL DISTRICT INVITES BIDS FOR "OUFSD 24BD_ NEW 7-8 SCHOOL BUILDING" PROJECT. SEPARATE SEALED BIDS WILL BE RECEIVED AT THE OSSINING UFSD, 400 EXECUTIVE BOULEVARD, OSSINING NY 10562, UNTIL 3:00 P.M., LOCAL TIME, ON 12-11-2026

1.01 PROJECT INFORMATION

A. Project Identification:OUFSD 24BD_ New 7-8 School Building
   1. Project Location(s):
      a. 7th & 8th School Building, 300 Van Cortlandt Ave, Ossining, New York 10562

B. Owner: Ossining Union Free School District, 400 Executive Boulevard Ossining, NY 10562
   1. Owner's Representative:
      a. Jared Mance
      b. PH: 914-762-5740

C. Architect/Engineer: CPL (Clark Patterson Lee), at 26 IBM Road, Poughkeepsie, NY 12601.

D. Construction Manager: Arris Contracting Company, Inc. - 189 Smith Street Poughkeepsie, NY 12601
   1. Construction Manager's Representatives:
      a. Fred Eberhard
         1) PH: (914) 755-0494
      b. Chris Hanaburgh
         1) PH: (914) 755-4468

E. Project Description: Construction of a new 7th & 8th grade building. Site Construction, General Construction, Mechanical, Electrical, Plumbing and Fire Sprinkler trades will be involved.

F. Construction Contract: Bids will be received for the following Work:
   1. Multiple Contract Project consisting of the following prime contracts:
      a. Site Construction.
      b. General Construction.
      c. Mechanical Construction.
      d. Electrical Construction.
      e. Plumbing Construction.
      f. Fire Sprinkler Construction.

1.02 BID SUBMITTAL AND OPENING

A. Owner will receive sealed lump sum bids until the bid time and date at the location given below. Owner will consider bids prepared in compliance with the Instructions to Bidders issued by Owner, and delivered as follows:
   1. Bid Date: 12-11-2026
   2. Bid Time: 3:00 p.m. local time.
   3. Location: Ossining UFSD, 400 Executive Boulevard, Ossining NY 10562

B. Bids will be thereafter publicly opened.

1.03 BID SECURITY

A. Bid security shall be submitted with each bid in an amount not less than five percent (5%) of the base bid in the form and subject to the conditions provided in the "Instructions to Bidders".

1.04 PREBID MEETING

A. Prebid Meeting: A Pre-Bid meeting/walk-thru for the Project will be held at 9:30 AM, local time on 11-23-2026, starting at the ACCI Office Trailer at 100 Van Cortland Ave, Ossining, New York 10562. Prospective bidders are **requested** to attend. Prospective bidders may visit the site during business hours by appointment by contacting Fred Eberhard at (914) 755-0494.

1.05 DOCUMENTS

A. Complete digital sets of Bidding Documents may be obtained online (with a free user account) as a download for a nonrefundable fee of One-Hundred ($100.00) Dollars at the following websites: newburgh.cplplanroom.com or projects.biddyhq.com.

B. Complete hard copy sets of Bidding Documents may be obtained from the Office of Biddy c/o Long Island Blueprint, 179 New York Ave. Huntington, NY 11743 (631-271-7033), upon a payment of One-Hundred($100.00) Dollars for each combined set. Checks for payments shall be made payable to Ossining Union Free School District and may be uncertified. Any bidder requiring documents to be shipped shall make arrangements with the printer and pay for all packaging and shipping costs.

C. All bid addenda will be transmitted to registered plan holders via email and will be available at the above referenced websites Plan holders who have paid for hard copies of the bid documents will need to make the determination if hard copies of the addenda are required for their use, and coordinate directly with the printer for hard copies of addenda to be issued. There will be no charge for registered plan holders to obtain hard copies of the bid addenda.

1.06 TIME OF COMPLETION

A. Successful bidder shall begin the Work upon receipt of the Notice to Proceed and shall complete the Work within the Contract Time.

1.07 BIDDER'S QUALIFICATIONS

A. Bidders must be properly licensed under the laws governing their respective trades and be able to obtain insurance and bonds required for the Work. A Performance Bond, separate Labor and Material Payment Bond, and Insurance in a form acceptable to Owner will be required of the successful Bidder.

1.08 NOTIFICATION

A. Attention of the Bidder is particularly called to the Owner's sales tax exemption, the requirements as to conditions of employment to be observed, and the minimum wage rates to be paid under the Contract. In addition, the Bidding Documents contain detailed requirements for the qualification of Bidders. These include, among other things, rigid bonding and insurance requirements, financial statements, bank references, lists of lawsuits, arbitrations or other proceedings in which the Bidder has been named as a party, a statement of surety's intent to issue Performance and Payment Bonds, and a description of other projects of similar size and scope completed by the Bidder.

B. Bids shall be prepared as set forth in "Instructions to Bidders", enclosed in a sealed envelope bearing on its face the name and address of the Bidder and the title of the Work to which the bid enclosed relates.

C. No bids may be withdrawn for a period of forty-five (45) days after opening of bids.

1.09 AWARD OF BIDS

A. The Ossining Union Free School District hereby reserves the right to waive any informalities and reject any, or all, Bids or to accept the one that, in its judgement, will be in the best interest of Ossining Union Free School District.

B. The Owner further reserves its right to disqualify Bidders for any material failure to comply with the "Instructions to Bidders".

ARTICLE 1 DEFINITIONS

§ 1.1 Bidding Documents include the Bidding Requirements and the Proposed Contract Documents. The Bidding Requirements consist of the advertisement or invitation to bid, Instructions to Bidders, supplementary instructions to bidders, the bid form, and any other bidding forms. The Proposed Contract Documents consist of the unexecuted form of Agreement between the Owner and Contractor and that Agreement's Exhibits, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, all Addenda, and all other documents enumerated in Article 8 of these Instructions.

§ 1.2 Definitions set forth in the General Conditions of the Contract for Construction, or in other Proposed Contract Documents, apply to the Bidding Documents.

§ 1.3 Addenda are written or graphic instruments issued by the Architect prior to the execution of the Contract, which, by additions, deletions, clarifications, or corrections, modify or interpret the Bidding Documents.

§ 1.4 A Bid is a complete and properly executed proposal to do the Work for the sums stipulated therein, submitted in accordance with the Bidding Documents.

§ 1.5 The Base Bid is the sum stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents, including all required allowances, to which Work may be added or deleted by sums stated in Alternate Bids.

§ 1.6 An Alternate Bid (or Alternate) is an amount stated in the Bid to be added to or deducted from, or that does not change, the Base Bid if the corresponding change in the Work, as described in the Bidding Documents, is accepted.

§ 1.7 A Unit Price is an amount stated in the Bid as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, as described in the Bidding Documents.

§ 1.8 A Bidder is a person or entity who submits a Bid and who meets the requirements set forth in the Bidding Documents.

§ 1.9 A Sub-bidder is a person or entity who submits a bid to a Bidder for materials, equipment, or labor for a portion of the Work.

ARTICLE 2 BIDDER'S REPRESENTATIONS

§ 2.1 By submitting a Bid, the Bidder represents that:

- **.1** the Bidder has read and understands the Bidding Documents;
- **.2** the Bidder understands how the Bidding Documents relate to other portions of the Project, if any, being bid concurrently or presently under construction;
- **.3** the Bid complies with the Bidding Documents;
- **.4** the Bidder has visited the site, become familiar with local conditions under which the Work is to be performed, and has correlated the Bidder's observations with the requirements of the Proposed Contract Documents;
- **.5** the Bidder has evaluated and satisfied itself as to the conditions and limitations under which the Work is to be performed, including without limitation (1) the location, condition, layout and nature of the Project site and surrounding areas, (2) generally prevailing climatic conditions, (3) anticipated labor supply and costs, and (4) availability and cost of materials, tools and equipment;
- **.6** the Bid is based upon the materials, equipment, and systems required by the Bidding Documents without exception; and
- **.7** the Bidder has read and understands the provisions for liquidated damages, if any, set forth in the form of Agreement between the Owner and Contractor.

§ 2.2 To be considered qualified, the Bidder must demonstrate to the Owner's satisfaction the following:

- **.1** The corporation, partnership, sole proprietorship of other business entity in whose name the Bid is submitted has been in business, continuously, for no less than the previous five (5) years performing or coordinating the work which it is bidding on;
- **.2** The Bidder has satisfactorily completed no less than five (5) projects of comparable size, complexity and type to this Project as a prime contractor to project owner;

User Notes: (1483633270)

.3 The Bidder is not currently involved in bankruptcy proceedings.
.4 The Bidder is licensed to perform the work it is bidding on in the jurisdiction where the work will take place;
.5 The Bidder is capable of and intends to perform at least 25% of the Work with its own forces;
.6 The Bidder is able to perform the Work with manpower available to it; and
.7 The Bidder and its subcontractors have a minimum of five (5) years' experience in the Work and applicable trades.

ARTICLE 3 BIDDING DOCUMENTS

§ 3.1 Distribution

§ 3.1.1 Bidders may obtain Bidding Documents as designated in the Advertisement or Invitation to Bid, for the deposit sum and method stated therein.
(Paragraph deleted)
(Paragraphs deleted.)

§ 3.1.2 Any required deposit shall be refunded to Bidders who submit a bona fide Bid and return the paper Bidding Documents in good condition within thirty (30) days following the award of the Contract or the rejection of the Bids. The cost to replace missing or damaged paper documents will be deducted from the deposit. A Bidder receiving a Contract award may retain the paper Bidding Documents, and the Bidder's deposit will be refunded.
Good condition as used in this section means that the Bidding Documents must be returned bound as issued, legible, and containing only the markings necessary for bidding purposes.

§ 3.1.3 Bidding Documents will not be issued directly to Sub-bidders unless specifically offered in the advertisement or invitation to bid, or in supplementary instructions to bidders.

§ 3.1.4 Bidders shall use complete Bidding Documents in preparing Bids. Neither the Owner nor Architect assumes responsibility for errors or misinterpretations resulting from the use of incomplete Bidding Documents.

§ 3.1.5 The Bidding Documents will be available for the sole purpose of obtaining Bids on the Work. No license or grant of use for any other purpose is conferred by distribution of the Bidding Documents.

§ 3.1.6 All materials submitted as part of the bid shall become the property of the Owner and will not be returned to the Bidder. The Bidder is responsible for making its own copies of any or all parts of the Bid Documents for its files.

§ 3.2 Modification or Interpretation of Bidding Documents

§ 3.2.1 The Bidder shall carefully study the Bidding Documents, shall examine the site and local conditions, and shall consider federal, state and local Laws and Regulations and shall notify the Architect of errors, inconsistencies, or ambiguities discovered and request clarification or interpretation pursuant to Section 3.2.2.

§ 3.2.2 Requests for clarification or interpretation of the Bidding Documents shall be submitted by the Bidder in writing via email and shall be received by the Architect at least seven working days prior to the date for receipt of Bids, as follows:

Stephanie Wisniewski; swisniewski@CPLteam.com

§ 3.2.3 Modifications and interpretations of the Bidding Documents shall be made by Addendum. Modifications and interpretations of the Bidding Documents made in any other manner, including phone calls, shall not be binding, and Bidders shall not rely upon them.

§ 3.2.4 In the absence of an interpretation, correction or change, should the Drawings disagree in themselves or with the Specifications, the better quality, the costlier or the greater quantity of work or materials shall be estimated upon, and unless otherwise ordered, shall be furnished.

§ 3.2.5 Communications regarding the Bidding Documents shall be directed to Stephanie Wisniewski; swisniewski@CPLteam.com

§ 3.2.6 EQUIVALENCY

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA Logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. This document was produced at 13:58:58 ET on 10/29/2026 under Order No.3104239969 which expires on 12/31/2026, is not for resale, is licensed for one-time use only, and may only be used in accordance with the AIA Contract Documents® Terms of Service. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (1483633270)

§ 3.2.6.1 In the Specifications, if two or more kinds, types, brands, or manufacturers or materials are named, they shall be regarded as the required standard of quality, and are presumed to be equal. The Contractor may select one of these items or, if the Contractor desires to use any kind, type, brand, manufacturer or material other than those named in the Specification, he shall indicate in writing to the Architect and Owner, and prior to the award of Contract, what kind, type, brand or manufacturer is included in the Base Bid for the specified item. Refer to Specification 012519 Equivalents for Equivalent Certification Form.

§ 3.3 Substitutions

§ 3.3.1 The materials, products, and equipment described in the Bidding Documents establish a standard of required function, dimension, appearance, and quality to be met by any proposed substitution.

§ 3.3.2 Substitution Process

§ 3.3.2.1 Written requests for substitutions shall be received by the Architect no later than ten days prior to the date for receipt of Bids. Requests shall be submitted in the manner established for submitting clarifications and interpretations in Section 3.2.2.

§ 3.3.2.2 Bidders shall submit substitution requests on a Substitution Request Form if one is provided in the Bidding Documents.

§ 3.3.2.3 If a Substitution Request Form is not provided, requests shall include (1) the name of the material or equipment specified in the Bidding Documents; (2) the reason for the requested substitution; (3) a complete description of the proposed substitution including the name of the material or equipment proposed as the substitute, performance and test data, and relevant drawings; (4) all supporting data including technical information, catalog cuts, warranties, installation instructions, operating procedures, significant qualities of proposed substitution (e.g. performance,weight, size, durability and visual effects); (5) samples, if applicable and requested; and (6) any other information necessary for an evaluation. The request shall include a statement setting forth changes in other materials, equipment, or other portions of the Work, including changes in the work of other contracts or the impact on any Project Certifications (such as LEED), that will result from incorporation of the proposed substitution.

§ 3.3.2.4 By making a request for substitution, the Bidder:

- **.1** represents that a representative of it has personally investigated the proposed substitute product and has determined that it is equal to or superior in all respects to that specified;
- **.2** represents that the warranty for the substitution will be the same, or greater than, that applicable to the specified product;
- **.3** certifies that the cost data is complete and includes all related costs under the Contract to be awarded, including professional services necessary and/or required for the Architect to implement the proposed substitution and waives any and all claims for additional costs related to the substitution which subsequently become apparent;
- **.4** represents that it will coordinate the installation of the accepted substitute, making all such changes to the Drawings effected by the change and to all Specifications as required for the work to be completed in all respects;
- **.5** shall submit an affidavit stating that (a) the proposed substitution conforms and meets all the requirements of the pertinent Specifications and the requirements shown on the Drawings and (b) the Bidder accepts the warranty and correction obligations in connection with the proposed substitution as if originally specified by the Architect; and
- **.6** represents the proposed substitution will have no effect on the construction schedule.

§ 3.3.3 The burden of proof of the merit of the proposed substitution is upon the proposer. The Architect's decision of approval or disapproval of a proposed substitution shall be final.

§ 3.3.4 If the Architect approves a proposed substitution prior to receipt of Bids, such approval shall be set forth in an Addendum. Approvals made in any other manner shall not be binding, and Bidders shall not rely upon them.

§ 3.3.5 No substitutions will be considered after the Contract award unless specifically provided for in the Contract Documents.

§ 3.4 Addenda

§ 3.4.1 Addenda will be transmitted to Bidders known by the issuing office to have received complete Bidding *(Paragraphs deleted)*
Documents through the print method stated in the Advertisement or Invitation to Bid.

§ 3.4.2 Addenda will be available where Bidding Documents are on file.

§ 3.4.3 Addenda will be issued no later than four days prior to the date for receipt of Bids, except an Addendum withdrawing the request for Bids or one which includes postponement of the date for receipt of Bids.

§ 3.4.4 Prior to submitting a Bid, each Bidder shall ascertain that the Bidder has received all Addenda issued, and the Bidder shall acknowledge their receipt in the Bid.

§ 3.4.5 The failure of any Bidder to receive any such Addenda will not relieve the Bidder of any obligation contained in the Addenda. Any Addenda issued shall become part of the Bidding Documents and Contract Documents.

ARTICLE 4 BIDDING PROCEDURES

§ 4.1 Preparation of Bids

§ 4.1.1 Bids shall be submitted on the forms included with or identified in the Bidding Documents.

§ 4.1.2 All blanks on the bid form shall be legibly executed. Paper bid forms shall be executed in a non-erasable medium.

§ 4.1.3 Sums shall be expressed in both words and numbers, unless noted otherwise on the bid form. In case of discrepancy, the amount entered in words shall govern.

§ 4.1.4 Edits to entries made on paper bid forms must be initialed by the signer of the Bid.

§ 4.1.5 All requested Alternates shall be bid. If no change in the Base Bid is required, enter "No Change" or as required by the bid form.

§ 4.1.6 Each copy of the Bid shall state the legal name and legal status of the Bidder. As part of the documentation submitted with the Bid, the Bidder shall provide evidence of its legal authority to perform the Work in the jurisdiction where the Project is located. Each copy of the Bid shall be signed by the person or persons legally authorized to bind the Bidder to a contract. A Bid by a corporation shall further name the state of incorporation and have the corporate seal affixed. A Bid submitted by an agent shall have a current power of attorney attached, certifying the agent's authority to bind the Bidder.

§ 4.1.7 A Bidder shall incur all costs associated with the preparation of its Bid.

§ 4.1.8 In accordance with the Wicks Reform 2008, for Single Prime Contracts for projects under the monetary threshold of $1,500,000, the bid shall be accompanied by a separate sealed envelope naming each subcontractor for the Plumbing, HVAC and Electrical work, and providing the amount to be paid to such subcontractors. After the low bid is announced, the sealed list of subcontractors submitted with such low bid will be opened and the names of such subcontractors shall be announced. Thereafter, any change of subcontractor or agreed-upon amount to be paid to each subcontractor shall require the approval of the public owner that is based on the Bidder or Contractor demonstrating to the public owner a legitimate construction need for the change sought, which demonstration shall be open to public inspection. Legitimate construction need includes a change in the Project specifications, a change in material costs, a change to subcontractor status as determined pursuant to NY Labor Law Section 222(2)(e), or the subcontractor has become otherwise unwilling, unable or unavailable to perform the subcontract. Once the low bidder's list is opened, it must be open for public inspection. The sealed lists of subcontractors submitted by all other bidders shall be returned to them unopened after the contract award.

4.1.9 Pursuant to Section 220-i, each Bidder must provide proof of their registration with the Department of Labor of the State of New York, which proof must, at a minimum, include their certificate of registration. Failure to include proof of their registration will disqualify their bid from consideration for award and will result in rejection of their bid as nonresponsive.

User Notes: (1483633270)

§ 4.2 Bid Security

§ 4.2.1 Each Bid shall be accompanied by the following bid security:

(Paragraphs deleted)

Bid Security of not less than five percent (5%) of the total Base Bid (including all allowances) plus the sum of all alternates, in the form of a Bid Bond or a Certified Check made payable to the Owner.

§ 4.2.2 Except as stated under Section 4.4.3 hereof, the Bidder pledges to enter into a Contract with the Owner on the terms stated in the Bid, with the understanding that the Bid Security shall guarantee that the Bidder will not withdraw its Bid for a period of forty-five (45) days after the scheduled closing time for the receipt of Bids, and that if its Bid is accepted, the Bidder will enter into a formal contract with the Owner in accordance with the terms stated in the Bid and will furnish any required performance and payment bonds at the time required. In the event of the withdrawal of said Bid within the forty-five (45) day period or the failure of the successful Bidder to enter into the Contract with the Owner or the failure of the successful Bidder to furnish required performance and payment bonds at the time required, the bid security shall be forfeited to the Owner as liquidated damages, not as a penalty, which represents the damage the Owner incurred as a result of the Bidder's default.

§ 4.2.3 If a surety bond is required as bid security, it shall be written on AIA Document A310™, Bid Bond, unless otherwise provided in the Bidding Documents. The attorney-in-fact who executes the bond on behalf of the surety shall affix to the bond a certified and current copy of an acceptable power of attorney. The Bidder shall provide surety bonds from a company or companies lawfully authorized to issue surety bonds in the jurisdiction where the Project is located.

§ 4.2.4 The Bid Securities shall be returned to all Bidders except the three (3) lowest Bidders within three (3) days after the formal opening of bids. The remaining Bid Securities will be returned within forty-eight (48) hours after the Owner and the successful Bidder have executed the Contract and executed performance and payment bonds have been approved by the Owner. If a Contract has not been executed or performance and payment bonds have not been approved by the Owner within forty-five (45) days after the scheduled closing time for the receipt of bids, and the Bidder notifies the Owner that its bid is withdrawn and requests return of its Bid Security, then the Bid Security will be returned by the Owner within three (3) days after the request for its return unless the Bid Security has been forfeited under § 4.2.2.

§ 4.3 Submission of Bids

§ 4.3.1 A Bidder shall submit its Bid as indicated below:

(Indicate how, such as by website, host site/platform, paper copy, or other method Bidders shall submit their Bid.)

§ 4.3.2 Paper copies of the Bid, the bid security, and any other documents required to be submitted with the Bid shall be enclosed in the same sealed opaque envelope. The envelope shall be addressed to the party receiving the Bids and shall be identified with the Project name, the Bidder's name and address, and, if applicable, the designated portion of the Work for which the Bid is submitted. If the Bid is sent by mail, the sealed envelope shall be enclosed in a separate mailing envelope with the notation "SEALED BID ENCLOSED" on the face thereof.

§ 4.3.3 Bids shall be submitted by the date and time and at the place indicated in the invitation to bid, subject to any modification of such date, time and place included in any Addenda. Bids submitted after the date and time for receipt of Bids, or at an incorrect place, will not be accepted.

§ 4.3.4 The Bidder shall assume full responsibility for timely delivery at the location designated for receipt of Bids. The Bidder assumes the risk of any delay in the mail or in the handling of the mail by employees of the Owner and the employees of the mail or delivery service used.

§ 4.3.5 A Bid submitted by any method other than as provided in this Section 4.3 will not be accepted.

§ 4.4 Modification or Withdrawal of Bid

§ 4.4.1 Prior to the date and time designated for receipt of Bids, a Bidder may submit a new Bid to replace a Bid previously submitted, or withdraw its Bid entirely, by notice to the party designated to receive the Bids. Such notice shall be received and duly recorded by the receiving party on or before the date and time set for receipt of Bids. The receiving party shall verify that replaced or withdrawn Bids are removed from the other submitted Bids and not considered. Notice of submission of a replacement Bid or withdrawal of a Bid shall be worded so as not to reveal the amount of the original Bid.

User Notes: (1483633270)

§ 4.4.2 Withdrawn Bids may be resubmitted up to the date and time designated for the receipt of Bids in the same format as that established in Section 4.3, provided they fully conform with these Instructions to Bidders. Bid security shall be in an amount sufficient for the Bid as resubmitted.

§ 4.4.3 After the date and time designated for receipt of Bids, a Bidder who discovers that it made a clerical error in its Bid shall notify the Architect of such error within three days, or pursuant to a timeframe specified by the law of the jurisdiction where the Project is located, requesting withdrawal of its Bid. Upon providing evidence of such error to the reasonable satisfaction of the Architect and Owner, the Bid shall be withdrawn and not resubmitted. If a Bid is withdrawn pursuant to this Section 4.4.3, the bid security will be returned.

§ 4.4.4 Unless a Bid error complies with Section 4.4.3, a Bid may not be modified, withdrawn or canceled by the Bidder for a period of forty-five (45) days following the time and date designated for the receipt of Bids, and each Bidder agrees to this requirement in submitting a Bid.

ARTICLE 5 CONSIDERATION OF BIDS

§ 5.1 Opening of Bids

If stipulated in an advertisement or invitation to bid, or when otherwise required by law, Bids properly identified and received within the specified time limits will be publicly opened and read aloud. A summary of the Bids may be made available to Bidders.

§ 5.2 Rejection of Bids

Unless otherwise prohibited by law, the Owner shall have the right to reject any or all Bids.

§ 5.3 Acceptance of Bid (Award)

§ 5.3.1 It is the intent of the Owner to award a Contract to the lowest responsive and responsible Bidder, provided the Bid has been submitted in accordance with the requirements of the Bidding Documents and does not exceed the funds available for the Project. Unless otherwise prohibited by law, the Owner shall have the right to waive informalities and irregularities in a Bid received and to accept the Bid which, in the Owner's judgment, is in the Owner's best interests. The responsibility of Bidders and of their proposed subcontractors will be considered in making the award. The Owner, through the Architect and Construction Manager, may make such investigation as the Owner deems necessary to determine the responsibility of any Bidder or to determine the ability of any Bidder to perform the Work.

§ 5.3.2 Unless otherwise prohibited by law, the Owner shall have the right to accept Alternates in any order or combination, unless otherwise specifically provided in the Bidding Documents, and to determine the lowest responsive and responsible Bidder on the basis of the sum of the Base Bid and Alternates accepted.

.

ARTICLE 6 POST-BID INFORMATION

§ 6.1 Contractor's Qualification Statement

§ 6.1.1 The Owner shall have the right to take such steps as it deems necessary to determine the ability of the Bidder to perform its obligations under the Contract, and the Bidder shall furnish the Owner all such information and data for this purpose as the Owner may request. The right is reserved to reject any Bid where an investigation of the available evidence or information does not satisfy the Owner that the Bidder is qualified and capable to carry out properly the terms of the Contract. The issuing of Bid Documents and acceptance of the Bidder's payment by the Owner shall not be construed as pre-qualification of that Bidder. If the Bidder is later discovered to have misrepresented or provided false or incorrect information with regard to any material party of the information submitted to the Owner, including but not limited to information regarding experience, debarment, claims, lawsuits, arbitrations, mediations, finances, license, contract termination, the Owner reserves the right to reject the Bid of such Bidder and, if a construction contract has been awarded, it will become automatically voidable at the sole discretion and election of the Owner.

§ 6.1.2 Within forty-eight (48) hours after the Bids are opened, the two (2) apparent low Bidders for each Prime Contract must submit the required pre-award submittal package described below to the Construction Manager via email:

.1 Workforce and Work Plan – Provide a detailed written Work Plan which shall demonstrate the Contractor's understanding of overall Project scope and shall include, but not be limited, to the following:

AIA Document A701 – 2018. Copyright © 1970, 1974, 1978, 1987, 1997 and 2018. All rights reserved. User Notes: (1483633270)

.2 Sequential listing of specific Project activities required to successfully complete the Work of the Contract Documents.
    .1 Include Schedule and list Critical Milestones.
    .2 Include phasing of the Work, if required.
    .3 Include listing of long lead items.
    .4 Statement the Project can be completed in the established time.
.3 Resumes for the Bidder's proposed supervisory staff, including qualifications for specialized expertise or any certification(s).
.4 Any special coordination requirements with other trades.
.5 Any special storage and/or staging requirements for construction materials.
.6 Detailed Cost Estimate: A copy of a Detailed Cost Estimate outlined in CSI format by material and labor.
.7 A copy of the Bidder's two (2) most recent financial statements audited by a CPA or, if the Bidder has no audited financial statements, then the two (2) most recent financial statements prepared and/or reviewed by a CPA.
.8 A properly completed and executed AIA Document A305™-2020, Contractor's Qualification Statement.
.9 Required insurance certificates.
.10 A designation of the Work to be performed by the Bidder's own forces.
.11 Names of the principal products and systems proposed for the Work and the manufacturers and suppliers of each.
.12 Names of persons or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for the principal portions of the Work.
.13 Names, addresses and phone numbers of the subcontractors that the Bidder proposes to use on the Project;
.14 A description of the Bidder's experience with at least five similar projects (completed in the last five years) of comparative size, complexity and cost together with documentary evidence showing that said projects were completed to their respective owner's satisfaction and were completed in a timely fashion listing type and scope of work. Provide names, addresses and current phone numbers of owners, architect and Construction manager associated with each project.
.15 The Bidder's proposed site safety plan.
.16 Proposed list of submittals and a proposed schedule for making and issuing them, within the Bidder's proposed work plan and schedule;

§ 6.2 Owner's Financial Capability

A Bidder to whom award of a Contract is under consideration may request in writing, fourteen days prior to the expiration of the time for withdrawal of Bids, that the Owner furnish to the Bidder reasonable evidence that financial arrangements have been made to fulfill the Owner's obligations under the Contract. The Owner shall then furnish such reasonable evidence to the Bidder no later than seven days prior to the expiration of the time for withdrawal of Bids. Unless such reasonable evidence is furnished within the allotted time, the Bidder will not be required to execute the Agreement between the Owner and Contractor.

§ 6.3 Submittals

§ 6.3.1

(Paragraphs deleted)

Intentionally omitted

§ 6.3.2 The Bidder will be required to establish to the satisfaction of the Architect, Construction Manager and Owner the reliability and responsibility of the persons or entities proposed to furnish and perform the Work described in the Bidding Documents.

§ 6.3.3 Prior to the execution of the Contract, the Architect or Construction Manager will notify the Bidder if either the Owner, Construction Manager or Architect, after due investigation, has reasonable objection to a person or entity proposed by the Bidder. If the Owner, Construction Manager or Architect has reasonable objection to a proposed person or entity, the Bidder may, at the Bidder's option, withdraw the Bid or submit an acceptable substitute person or entity. The Bidder may also submit any required adjustment in the Base Bid or Alternate Bid to account for the difference in cost occasioned by such substitution. The Owner may accept the adjusted bid price or disqualify the Bidder. In the event of either withdrawal or disqualification, bid security will not be forfeited.

User Notes: (1483633270)

§ 6.3.4 Persons and entities proposed by the Bidder and to whom the Owner, Construction Manager and Architect have made no reasonable objection must be used on the Work for which they were proposed and shall not be changed except with the written consent of the Owner, which may be provided through the Construction Manager.

ARTICLE 7 PERFORMANCE BOND AND PAYMENT BOND

§ 7.1 Bond Requirements

§ 7.1.1 The Bidder shall furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder.

§ 7.1.2 The cost of the bonds shall be included in the Bid.

§ 7.1.3 The Bidder shall provide surety bonds from a company or companies licensed and admitted to do business in New York State and lawfully authorized to issue surety bonds in the jurisdiction where the Project is located.

§ 7.1.4 Unless otherwise indicated below, the Penal Sum of the Payment and Performance Bonds shall
(Paragraphs deleted)
each be equal to one hundred (100) percent of the Contract Sum and shall be increased if and when the Contract Sum is increased by any Modification (as defined in AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, as revised for this Project) issued after award of the Contract.

§ 7.2 Time of Delivery and Form of Bonds

§ 7.2.1 The Bidder shall deliver the required bonds to the Owner not later than ten (10) days after the Bidder has received notice of the acceptance of its Bid but in no event shall bonds be delivered later than the date of execution of the Contract. If the Work is to commence sooner in response to a letter of intent, the Bidder shall, prior to commencement of the Work, submit evidence satisfactory to the Owner that such bonds will be furnished and delivered in accordance with this Section 7.2.1.

§ 7.2.2 Unless otherwise provided, the bonds shall be written on AIA Document A312, Performance Bond and Payment Bond and shall contain the following modifications in a rider to each bond or stated in the Modifications section of each bond (Section 16 of the Performance Bond and Section 18 of the Payment Bond):

.1 The Surety hereby agrees that it consents to and waives notice of any addition, alteration, omission, change, or other modification of the Contract Documents. Any addition, alteration, change, extension of time, or other modification of the Contract Documents, or a forbearance on the part of either the Owner or the Contractor to the other, shall not release the Surety of its obligations hereunder and notice to the Surety of such matters is hereby waived.

.2 Notwithstanding any prior provision of this bond, the Surety also agrees that no meeting is required to be offered, arranged or held with the Owner, Contractor and/or Surety prior to termination of the Contract or the Contractor. The Surety agrees that it is obligated under the bonds to any successor, grantee, or assignee of the Owner

.3 Surety further agrees that in event of any default by the Owner in the performance of the Owner's obligations to the Contractor under the Contract, the Contractor or Surety shall cause written notice of such default (specifying said default in detail) to be given to the Owner, and the Owner shall have fourteen (14) days from receipt of such notice within which to cure such default, or such additional reasonable period of time as may be required if the nature of such default is such that it cannot be cured within fourteen (14) days. Such Notice of Default shall be sent by certified or registered U.S. Mail, return receipt requested, first class postage prepaid, to the Owner.

§ 7.2.3 The bonds shall be dated on or after the date of the Contract.

§ 7.2.4 The Bidder shall require the attorney-in-fact who executes the required bonds on behalf of the surety to affix to the bond a certified and current copy of the power of attorney.

ARTICLE 8 ENUMERATION OF THE PROPOSED CONTRACT DOCUMENTS

§ 8.1 Copies of the proposed Contract Documents have been made available to the Bidder and consist of the following documents:

.1 AIA Document A132™–2019, Standard Form of Agreement Between Owner and Contractor,

SECTION 002600
PROCUREMENT SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.01 DEFINITIONS

A. Procurement Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Procurement and Contracting Documents, submitted prior to receipt of bids.

B. Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Contract Documents, submitted following Contract award. See Section 012500 "Substitution Procedures" for conditions under which Substitution requests will be considered following Contract award.

C. Equivalent Product: For products proposed as an Equivalent to the specified product. prior to award of contract use the form located in Section 012519 “Equivalents” after award of bid and prior to entering into a contract.

1.02 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.03 PROCUREMENT SUBSTITUTIONS

A. Procurement Substitutions, General: By submitting a bid, the Bidder represents that its bid is based on materials and equipment described in the Procurement and Contracting Documents, including Addenda. Bidders are encouraged to request approval of qualifying substitute materials and equipment when the Specifications Sections list materials and equipment by product or manufacturer name.

B. Procurement Substitution Requests will be received and considered by Owner when the following conditions are satisfied, as determined by Architect; otherwise requests will be returned without action:
   1. Extensive revisions to the Contract Documents are not required.
   2. Proposed changes are in keeping with the general intent of the Contract Documents, including the level of quality of the Work represented by the requirements therein.
   3. The request is fully documented and properly submitted.

1.04 SUBMITTALS

A. Procurement Substitution Request: Submit to Architect. Procurement Substitution Request must be made in writing by **PRIME CONTRACT BIDDER ONLY** in compliance with the following requirements:
   1. Requests for substitution of materials and equipment will be considered if received no later than (10) OR Insert number days prior to date of bid opening.
   2. Submittal Format: Submit electronic copies of each written Procurement Substitution Request, using form bound in section 006000 of this Project Manual.
   3. Submittal Format: Submit Procurement Substitution Request, using format provided on Project Web site.
      a. Identify the product or the fabrication or installation method to be replaced in each request. Include related Specifications Sections and drawing numbers.
      b. Provide complete documentation on both the product specified and the proposed substitute, including the following information as appropriate:
         1) Point-by-point comparison of specified and proposed substitute product data, fabrication drawings, and installation procedures.

2) Copies of current, independent third-party test data of salient product or system characteristics.
3) Samples where applicable or when requested by Architect.
4) Detailed comparison of significant qualities of the proposed substitute with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
5) Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
6) Research reports, where applicable, evidencing compliance with building code in effect for Project, from [ICC-ES] OR Insert applicable code organization.
7) Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors, which will become necessary to accommodate the proposed substitute.

c. Provide certification by manufacturer that the substitute proposed is equal to or superior to that required by the Procurement and Contracting Documents, and that its in-place performance will be equal to or superior to the product or equipment specified in the application indicated.
d. Bidder, in submitting the Procurement Substitution Request, waives the right to additional payment or an extension of Contract Time because of the failure of the substitute to perform as represented in the Procurement Substitution Request.

B. Architect's Action:
1. Architect may request additional information or documentation necessary for evaluation of the Procurement Substitution Request. Architect will notify all bidders of acceptance of the proposed substitute by means of an Addendum to the Procurement and Contracting Documents.

C. Architect's approval of a substitute during bidding does not relieve Contractor of the responsibility to submit required shop drawings and to comply with all other requirements of the Contract Documents.

SECTION 003000
REQUESTS FOR CLARIFICATION OF BID DOCUMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Requests for clarifications of the Bid Documents shall be submitted by Bidders to the Architect/Engineer via email (send to: SWisniewski@CPLteam.com and LJFasciglione@CPLteam.com) and to the Construction Manager vial email (send to: FEberhard@arriscontracting.com, CHanaburgh@arriscontracting.com and ASmith@arriscontracting.com). Requests shall include the following information:
   1. Project Name: Ossining Union Free School District, OUFSD 24BD_ New 7-8 School Building.
   2. Bidder's name and full contact information.
   3. Subject Specification Number.
   4. Subject Drawing Number.
   5. Clarification request/question.

B. All valid request for clarifications will be answered via written addendum.

SECTION 003114
CONSTRUCTION SCHEDULE

PART 1 GENERAL

1.01 CONSTRUCTION SCHEDULE

A. Contractor shall complete work of their Contract per the following Schedule:

Work	Start Date (Date listed or earlier if permitted by Owner)	Completion Date
Submittals:	Submittals to begin upon award of Contract.	Priority submittals within 15 days after NTP/NOA. Balance of submittals within 30 days of NTP/NOA.
Construction:	Refer to Milestone Schedule 011100	Refer to Milestone Schedule 011100

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 003114

SECTION 003119
EXISTING CONDITION INFORMATION

PART 1 GENERAL

1.01 EXISTING CONDITION INFORMATION

A. This Document, with its referenced attachments, is part of the Procurement and Contracting Requirements for this Project. They provide Owner's information for Bidders' convenience and are intended to supplement, rather than serve in lieu of, the Bidders' own investigations. It is made available for Bidders' convenience and information and is not a warranty of existing conditions. This Document and its attachments are not part of the Contract Documents.

B. Existing drawings that include information on existing conditions, including previous construction at Project Site, are available for viewing or download at the office of the Architect.

C. Existing specifications and submittals that include information on existing conditions, including previous construction at Project Site, are available for viewing or download at the office of the Architect.

D. Site survey information that includes information on existing conditions, prepared by Control Point Associates Inc., P.C., on 15 August 2024, is available for viewing or download at the office of the Architect and as indicated on the drawings.

E. Soils investigation information that includes information on existing conditions, prepared by Terracon, on June 11, 2025, is available for viewing or download at the office of the Architect.

F. Related Requirements:
   1. Section 003132 - Geotechnical Data: Reports and soil-boring data from geotechnical investigations that are made available to bidders.

PART 2 PRODUCTS – (NOT USED).

PART 3 EXECUTION – (NOT USED).

END OF SECTION 003119

SECTION 003132
GEOTECHNICAL DATA

PART 1 GENERAL

1.01 GEOTECHNICAL DATA

A. This Section with its referenced attachments are part of the Procurement and Contracting Requirements for Project. They provide Owner's information for Bidders' convenience and are intended to supplement rather than serve in lieu of Bidders' own investigations. They are made available for Bidders' convenience and information, but are not a warranty of existing conditions. This Document and its attachments are not part of the Contract Documents.

B. Because subsurface conditions indicated by the soil borings are a sampling in relation to the entire construction area, and for other reasons, the Owner, the Architect, the Architect's consultants, and the firm reporting the subsurface conditions do not warranty the conditions below the depths of the borings or that the strata logged from the borings are necessarily typical of the entire site. Any party using the information described in the soil borings and geotechnical report shall accept full responsibility for its use.

C. A geotechnical investigation report for Project, prepared by Terracon, dated June 11, 2025 and a Recreation Field Slope Stability Analysis and Commentary for Project, prepared byTerracon, dated July 29, 2025 , are available for viewing and is appended to this Document.
   1. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from the data.
   2. Any party using information described in the geotechnical report shall make additional test borings and conduct other exploratory operations that may be required to determine the character of subsurface materials that may be encountered.

D. Related Requirements:
   1. Section 002000 "Instructions to Bidders" for the Bidder's responsibilities for examination of Project site and existing conditions.
   2. Section 003119 "Existing Condition Information" for information about existing conditions that is made available to bidders.

Terracon Project No. JB245223

Dear Ms. Fasciglione:

We have completed the Geotechnical Engineering services for the above referenced project in general accordance with Terracon proposal no. PJB245223 – Rev 1, which was authorized on or about January 18, 2025. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design and construction of foundations, floor slabs, and pavements for the proposed project.

We appreciate the opportunity to be of service to you. If you have any questions concerning this report or if we may be of further service, please contact us at your convenience.

Sincerely,
Terracon Consultants-NY, Inc.

Asa Barnhill, P.E.
Sr. Staff Geotechnical Engineer

Joseph Robichaud Jr., P.E.

Introduction

This report presents the results of our subsurface exploration and geotechnical engineering services performed for the proposed new building and site improvements at the Ossining Anne M. Dormer Middle School campus in Ossining, NY. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Seismic site classification per IBC
- Site preparation and earthwork
- Dewatering considerations
- Foundation design and construction
- Floor slab design and construction
- Lateral earth pressures
- Pavement design and construction
- Frost considerations
- Infiltration test results

The geotechnical engineering scope of services for this project included the advancement of 21 structural, site and infiltration test borings to depths ranging from 9.7 to 34.4 feet below existing site grades, field infiltration testing, limited laboratory testing, an engineering evaluation of the conditions encountered and the preparation of this report. Although a total of 23 test borings were originally planned, borings ST-8 and ST-9 were deleted by CPL on March 4, 2025, following concerns from the school district with having the test borings in the existing baseball field.

Terracon previously completed a geotechnical investigation at this school campus in September 2024 for pavement improvements and to provide preliminary subsurface information for the proposed building development which is the focus of this geotechnical report. Information from the prior investigation has been considered in the preparation of this report and is included herein where applicable.

Figures indicating the site and test boring locations are included as the **Site Location** and **Exploration Plan**, respectively.

Project Description

Our understanding of the project is tabulated below.

Item	Description
Information Provided	■ Email request for proposal quote on October 2, 2024. ■ Follow up request for proposal on November 8, 2024, which included a conceptual site plan and proposed boring locations titled "11-8-24 GEOTECH SCOPE PLAN" (herein referenced as Original Plan). ■ "Conceptual Site Plan" which included existing topography by CPL dated September 12, 2024 (herein referenced as Topo Plan). ■ Previous Terracon Geotechnical Engineering Report, JB245138, prepared for pavement improvements and preliminary information for the proposed 7th/8th grade building, dated September 13, 2024. ■ "Overall Site Plan" drawing number 7&8 C200 by CPL dated May 5, 2025 (herein referenced as Updated Plan). ■ Phone/email correspondences, and collaboration with CPL throughout the project.
Project Description	This project includes construction of a new 7th/8th grade school building as well as new site improvements planned at the campus. Some of the improvements that were indicated on the Original Plan at the time our proposal was prepared, and the test boring scope determined, were eliminated on the Updated Plan provided after completion of the subsurface investigation program. Our understanding of the current improvements planned at the time of this report are based on the Updated Plan referenced above and as follows: ■ A recreational and stormwater treatment/detention area is planned east of the proposed 7th/8th grade building. The area is primarily planned to be developed utilizing sloped site grades rather than retaining walls as was initially indicated on the Original Plan. Retaining walls are not indicated on the Updated Plan, however, we understand they may still be used to establish design grades. ■ New pavements are planned north of the proposed 7th/8th grade building and a drive lane is planned east of the proposed building.

Item	Description
Project Description (continued)	■ Infiltration testing was performed in the planned parking lot area south of the proposed building. ■ Borings were completed to provide subsurface information and groundwater conditions in other areas of site. ■ The potential baseball/multiuse and soccer fields have been eliminated from the project scope.
Proposed Structures	The proposed building is roughly 76,000 square feet in plan based on the layout provided in the Updated Plan. The building is planned to be 3-story and slab on grade.
Building Construction	Assumed to be steel framed with a brick façade.
Finished Floor Elevation	Plans indicate the finished floor elevation at 357.0 feet.
Maximum Loads	In the absence of information provided by the design team, we have assumed the following loads in estimating foundation settlement of the new building based on our experience with similar projects. ■ Columns: 150 kips ■ Walls: 8 kips per linear foot (klf) ■ Slabs: 200 pounds per square foot (psf)
Grading/Slopes	Referencing the Updated Plan, cuts on the order of 5 feet are anticipated within the building pad. Proposed grading of the site has not been fully developed; however, the recreational area is shown with a proposed finished grade of 325 feet on the Updated Plan. Cuts on the order of 25 feet or so and fills on the order of 10 feet or so will be required to establish the finished grade within this area. The Updated Plan shows shaded areas where steep slopes (greater than 20%) and flat slopes (less than 5%) will be required within the recreational area to establish finished grades.
Below-Grade Structures	None anticipated.
Free-Standing Retaining Walls	Retaining walls are no longer indicated on the Updated Plan, however, general earth retaining wall recommendations have been requested by CPL. If retaining walls are incorporated as the site plans are developed, additional subsurface explorations may be required to facilitate design.

Item	Description
Pavements	We have provided recommendations for both flexible (asphalt) and rigid (concrete) pavement sections in our report. The assumed pavement design period is 20 years.
Building Code	2020 Building Code of NYS.

Site Conditions

Existing conditions at the site are summarized in the following table.

Item	Description
Parcel Information	The project is located at the Ossining Anne M. Dormer Middle School campus at 100 Van Cortlandt Ave in Ossining, NY. Latitude/Longitude (approximate): 41.1773° N, 73.8598° W See **Site Location**
Existing Improvements	Existing Middle School, maintenance building and associated asphalt parking and drives. Northern limits of the site are undeveloped.
Current Ground Cover	Asphalt paved or wooded.
Existing Topography (from Conceptual Site Plan)	Existing grades within the proposed building generally range between elevation 357 and 362 feet. Grades east of the proposed building generally slope downhill from east to west towards Sing Song Brook from about elevation 362 feet to elevation 220 feet. Specifically, within the limits of the proposed recreational area, grades slope downhill between elevation 350 feet and 315 feet. Based on review of available USGS topographic mapping, existing slopes in the proposed development area range in inclination from about 1V:12H (8%) to 1V:3.8H (26%).

If any of the above information is incorrect, please let us know so we can review the conclusions and recommendations provided in this report for applicability to the actual design and update the report as appropriate.

As the design of the project progresses and site grading plans and building loads are fully developed, we should be retained to assess this site-specific information relative to the recommendations contained herein.

Subsurface Characterization

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual subsurface logs. The subsurface logs can be found in the **Exploration Results** attachment to this report, together with the results of whatever laboratory testing was performed, and the GeoModel can be found in the **Figures** section.

Subsurface Profile

The following model layers were identified within the subsurface profile. For more detail concerning the model layers with their respective depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	**Fill**	Sandy Silt and Silty Sand, trace gravel, rootlets, organics, and tree roots noted.
2	**Native fine-grained Soils**	Silt with varying amounts of sand and gravel, rootlets noted, soft to very stiff.
3	**Native coarse-grained Soils**	Silty Sand with varying amounts of gravel, schist fragments noted, very loose to dense.
4	**Glacial Till**	Sand with varying amounts of silt and gravel, schist fragments, cobbles and boulders noted, medium dense to very dense.
5	**Weathered Bedrock**	Schist fragments recovered.

Surface Materials

Surface materials at the locations investigated consisted of about 1 to 6 inches of topsoil. The topsoil thickness as indicated on the subsurface logs should be regarded as a rough approximation only; contractors are advised to make their own estimates or determination of existing surface material thickness for bidding purposes.

Fill Soils and Former Topsoil

Fill soils were only encountered in test boring BB-4 to a depth of 4 feet below ground surface (BGS). The fill soils were generally comprised of sandy silt with lesser amounts of gravel and rootlets noted.

Underlying the fill soils at the BB-4 location, an apparent former topsoil layer was encountered from 4 to 4.3 feet BGS. Laboratory organic content testing performed on a representative sample from the 4 to 6-foot split spoon sample indicated the organic content percentage was 12 percent.

Native Soils and Weathered Bedrock

Underlying the surface materials or former topsoil layer at BB-4, native fine-grained or coarse-grained soils were encountered. The fine-grained soils were primarily comprised of silt with varying amounts of sand and gravel, with rootlets noted. The coarse-grained soils were primarily comprised of silty sand with varying amounts of gravel and schist fragments noted. These soil deposits extended to depths of 2 to 15 feet BGS. Boring ST-6 terminated within this layer. The soils were noted to be soft to very stiff in consistency where essentially fine-grained and very loose to dense in relative density where essentially coarse-grained on the basis of measured SPT 'N' values.

Underlying the fine-grained/coarse-grained soil deposits, glacial till was encountered. The glacial till was primarily comprised of sand with varying amounts of silt and gravel. Schist fragments, cobbles and boulders were also noted within this deposit. The glacial till soils were noted to be medium dense to very dense in relative density on the basis of measured SPT 'N' values. The glacial till, where encountered, extended through the depths explored of each boring, the deepest of which was 34.4 feet BGS.

Weathered bedrock was only encountered at 2 of the 23 test borings, R-3 and R-4, at depths of 6 and 15 feet respectively. Schist fragments were recovered from the split spoon samplers and the rock was penetrable with augers. The borings terminated with split spoon refusal at depths of 15.1 and 20.8 feet respectively. It should be noted these borings were located along the eastern limits of the site at the lowest elevations explored.

Groundwater Conditions

Groundwater observations and measurements were made as the boreholes were completed. It should be noted that, in some instances, these measurements may not reflect actual groundwater depth as adequate time may not have passed upon completion of sampling for groundwater to achieve a static level in the augers prior to the measurements being taken.

Measurable groundwater was recorded in 9 of the 23 test borings. It should be noted that in seven of these test borings, the driller indicated that the water level did not stabilize in the borehole at completion of drilling, and therefore we believe these water levels to be perched. The approximate depth to groundwater, where encountered, and corresponding groundwater elevation at each of these locations are tabulated below.

Exploration Number	Approximate Ground Surface Elevation (ft)	Approximate Depth to Groundwater on Date Drilled (ft)	Approximate Groundwater Elevation (ft)
BB-1	362	5.8[1]	356.2
P-1	356	4.2[1]	351.8
P-3	356	4.0[1]	352.0
R-1	336	3.4[1]	332.6
R-3	292	7.3	284.7
R-4	292	6.0	284.0
ST-2	355	4.0[1]	351.0
ST-6	306	4.3[1]	301.7
ST-7	312	5.8[1]	306.2

1. Indicates that the groundwater level encountered and measured is likely indicative of a perched water level.

As indicated above, the groundwater conditions were variable across the site with static groundwater only believed to be encountered in test borings R-3 and R-4 between elevations 284 and 285 feet. We do anticipate that perched water levels will be encountered at various locations and disparate depths. Perched water levels develop when surface water (i.e., precipitation or runoff) enters the subsurface through surficial soils and becomes trapped, or perched, on top of less permeable strata such as fills, fine-grained soils or dense glacial till, each of which were encountered at the site. Mottling, a common indicator of perched/seasonal groundwater levels, was noted in several of the borings and is indicated on the subsurface logs.

In general, the groundwater table is assumed to follow a west to east downward gradient towards Sing Song Brook.

Although not specifically encountered in the test borings at this site, artesian ground water conditions may occur within glacial till deposits, most commonly at the interface of the glacial till and underlying bedrock surface, or where granular seams and/or layers are present within the glacial till stratum.

Groundwater conditions, and the extent of any perched water, should be expected to vary with seasonal fluctuations in precipitation and runoff. Additionally, grade adjustments on and around the site, as well as surrounding drainage improvements, may affect the water table. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

Infiltration Testing

Infiltration tests were performed adjacent to test borings I-1 and I-2 and numbered correspondingly. The tests were conducted in general accord with the procedures outlined in Appendix D of the New York State (NYS) Stormwater Management Design Manual. Results of this testing are presented for your use in the **Exploration Results** attachment to this report and summarized in tabular form below.

Infiltration Test No.	Soil Classification	Approx. Test Depth (ft)	Observed Infiltration Rate[1] (in/hr)
I-1	Silty Sand (SM), trace gravel (Glacial Till)	10.0	0
I-2	Silty Sand (SM), trace gravel (Glacial Till)	10.0	0

1. Rate of final trial.

Seismic Site Class

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Assignment of Site Class is required to determine the Seismic Design Category for a structure. The Site Class is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance or undrained shear strength in accordance with Section 20.4 of ASCE 7 and the International Building Code (IBC).

Seismic Site Classification

Based on the soil properties observed at the site during this exploration and previous explorations made by Terracon at the site and general project vicinity, it is our professional opinion that the seismic Site Class is D. Subsurface explorations for this project were extended to a maximum depth of 34.4 feet. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions in the site locale. Additional deeper borings or geophysical testing may be performed to confirm the conditions below the current boring depth, if desired.

Geotechnical Overview

As previously referenced in the **Project Description**, the borings completed for this study were based on the Original Plan and test boring locations selected by CPL. Generally, the proposed building location and size as indicated on the Updated Plan remained the same as the Original Plan, and the test borings are therefore judged representative of the subsurface conditions expected in the building footprint. The northern parking lot layout was revised between plan iterations, however, the borings advanced for this study generally remain with the newly configured parking lot area and are judged representative of the subsurface conditions expected in this area. Following issuance of the Original Plan and completion of the test borings, preliminary grading of the recreation area has been provided in the Updated Plan. Only one of the test borings advanced within the updated recreation area extended below the anticipated cut depths. In order to better define the subsurface soil and groundwater conditions in this area, supplemental investigations are recommended. Additionally, supplemental investigations may be warranted as site plans are further developed.

Generally, the subsurface conditions encountered at the project site are considered suitable for the new building and site improvements with the caveat that additional test borings should be advanced as the site and grading plans are further developed. Based on the conditions disclosed by our investigation, we offer the following general conclusions.

- New foundations and floor slabs may be supported on undisturbed native soils, or on imported Structural Fill which is placed over the native soils after any existing fill, former topsoil, remains of former structures or otherwise unsuitable materials which may be found are removed. Existing fills should not be relied upon for new foundation or floor slab support.

- If existing fill throughout the site is similar in composition to that found in the test borings, consideration may be given to support of new pavements over the existing fill provided the subgrade surfaces are proof-rolled and stabilized as may be required. It should be understood the proof-rolling will lessen, but not

eliminate, the possibility that settlement of pavements constructed over the existing fill may occur over time and require periodic maintenance.

- We expect the soils excavated on site will be excessively silty and considered unsuitable for reuse as fill or backfill in and around the building. It should be assumed that an imported granular material will be required for the purposes of backfill about the structure's foundations and floor slabs, unless otherwise noted. The excavated soils may be considered for general subgrade fills as described below, reused in non-sloping landscape areas, or wasted off-site.

- Due to the appreciable amount of cut and fill required to level proposed development areas, economic site development may be dependent on the reuse of the cut soils as subgrade fill in the recreation area and some pavement areas. The high fines content (% passing the US #200 sieve) of the onsite materials will require careful moisture control during their reuse. Conditional reuse of the excavated soils may be considered for general grade increases in the recreation and pavement areas, provided the limitations of its use are understood. At a minimum, the material should be kept to an elevation of 3 feet or more below finished pavement grades.

- As previously noted, reuse of excavated site soils may be considered for general fills in the proposed recreation area. However, it should be noted that the soils will be silty and inhibit infiltration. An imported granular material should be considered if infiltration is required. Additionally, the excavated soils should not be reused in sloping landscape areas.

- The static groundwater level is generally anticipated to be below foundation excavation depths for the proposed building. However, perched water should be anticipated in places, this dependent on the time of construction and the prevailing weather conditions during construction. In general, we anticipate the use of sump and pump methods for control of groundwater will be feasible provided the contractor prepares foundation bearing grades in accordance with the recommendations outlined in the Foundation Construction Considerations section herein. Dewatering is a means and methods consideration for the contractor.

- Proposed site grading was in the preliminary stage at the time this report was prepared. Whatever cuts, fills, slopes, retaining walls, stormwater management and infiltration practices which are planned must consider the global stability of the sloping site grades. Additional subsurface investigations and analysis should be performed to verify that the global stability of the proposed site geometry meets or exceeds industry standard factors of safety, and that the planned site improvements will not negatively impact slope stability.

The following sections of this report provide more specific recommendations to assist in planning for the geotechnical aspects of the project. We should be provided with the opportunity to review plans and specifications prior to their release for bidding to confirm that our recommendations were properly understood and implemented, and to allow us to refine our recommendations, if warranted, based upon the final design.

The **General Comments** section provides an understanding of the report limitations.

Earthwork

Earthwork is anticipated to include clearing and grubbing, stabilization of subgrade surfaces as necessary, foundation excavation and associated site fill and backfill.

The following sections provide recommendations for use in the preparation of specifications for the work. The recommendations include critical quality criteria as necessary to render the site in the state considered suitable in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Construction site safety is the sole responsibility of the contractor, who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety or the contractor's activities; such responsibility is neither implied nor shall it be inferred.

Site Preparation

Site preparation should begin with stripping of existing topsoil, surficial organic matter, and pavements as applicable from the proposed building, pavement, and recreation areas.

Any existing fills should be removed in their entirety from beneath the proposed building area, extending at least five feet beyond its perimeter. Should the owner elect to leave the existing fills in place beneath new pavements, proof-rolling and stabilization of the subgrades as described below will lessen but cannot eliminate the risk of settlement. If this risk cannot be accepted, the existing fills should be removed and replaced in their entirety beneath new pavements as part of the site preparation.

Prior to placing new fills to raise site grades, and/or after cuts are made to the plan subgrade elevations, the subgrades should be proof-rolled using a steel drum roller with a static weight of at least seven tons. The roller should operate in its vibratory mode, unless requested otherwise by the Geotechnical Engineer observing the work, and travel at a speed not exceeding three feet per second (two miles per hour). The roller/compactor should complete at least two passes over all subgrade surfaces in

opposing directions. The method of proof-rolling may be modified by the Geotechnical Engineer based upon the conditions revealed at the time of construction.

We caution that the subgrade soils at this site will be sensitive to construction activities, especially if perched waters are not eliminated, or the subgrades are allowed to pond water and saturate. Subgrade areas that become saturated and unstable should be undercut to reestablish stable soil subgrade conditions. The Geotechnical Engineer should observe the proof-rolling, excavation of uncontrolled fills and the subgrade conditions immediately prior to the placement of structural fill as applicable within the building, pavement, and recreation areas.

Bulk Cut and Fill Considerations

Should plans call for reuse of excavated on-site soils as new subgrade fills for the recreation or pavement areas, the challenges and limitations associated with their reuse should be understood. The onsite soils contain appreciable quantities of silt and will therefore require careful control of moisture content within narrow limits to achieve requisite in-place density as the material is placed. It may be necessary to either dry the soil in windrows or add water prior to placement and compaction depending on the prevailing weather conditions at the time of construction or the natural moisture content of the soils as they are excavated. Should site development proceed during seasonally wet or cold periods, it will likely be difficult to adequately dry the siltier cut soils and it may be necessary to stabilize these soils with lime or kiln dust, or to use an imported granular fill.

Topsoil, vegetation and other surface materials should be stripped from all cut/fill areas prior to earth moving operations. The subgrade fill should be firm and stable after it is placed and compacted, and should not "pump", "weave" or otherwise exhibit instability during construction. Soils should be undercut and replaced where unsatisfactory. The fill subgrades should also be properly graded, drained, sealed and/or protected from moisture and frost as necessary. Placement of fill over wet, soft, snow covered, or frozen subgrades should not be permitted. All bulk fill placement and compaction should be monitored and tested by a representative of the Geotechnical Engineer on a full-time basis.

In general, permanent cuts or embankment fills should be sloped no steeper than one vertical on three horizontal (1V:3H). Steeper slopes may be considered subject to review on a case-by-case basis. The allowable configuration of steeper slopes will be dependent on location specific conditions, overall slope height and other factors. Runoff should not be allowed to traverse either the filled or excavated slopes at any time. All soil slopes should be thickly vegetated soon after grading or otherwise protected from erosion. Cut slopes may require stone slope protection in places if chronic seepage is encountered.

Based on the findings of the subsurface investigation, bulk cuts across the site are not expected to encounter a generalized groundwater condition, however, further investigations in the recreation area are recommended to provide subsurface conditions at more locations and deeper depths. Perched and/or artesian groundwater may be intercepted in places, and any resulting seepage may necessitate stone slope protection, or the construction of fabric lined and stone filled drainage trenches upon the overburden slopes. Swales should be provided along the toe of all excavated slopes to collect and dispose of such waters. All slopes should be vegetated or otherwise protected from erosion, with runoff diverted away from their faces.

Based on the soil and bedrock conditions encountered, global stability of the eastern slope is not anticipated to be a significant concern for the development of the project. As finalized grading plans are developed for the site, further analyses and potential additional investigation may be required to confirm these assumptions. We can provide these services for a fee if requested.

Fill Material Types

As described in the section above, native soils which are excavated in cut portions of the site may be considered for limited reuse to raise site grades in the recreation and pavement areas, if approved by the Geotechnical Engineer and pending the conditions encountered at the time of construction. That said, we recommend that material within 3 feet of finished grade in the pavement areas consist of imported Structural Fill as described below.

For the purposes of fill/backfill within the proposed building, imported Structural Fill should be used. The Structural Fill should consist of imported sand and gravel which meets the limits of gradation given below. Any imported materials should be free of recycled concrete, asphalt, bricks, glass, and pyritic shale rock.

Imported Structural Fill	
Sieve Size	**Percent Finer**
3”	100
¼”	30 to 75
No. 40	5 to 40
No. 200	0 to 10

Fill Compaction Requirements

New fill placed to raise site grades or for foundation backfill should be placed in uniform loose layers no more than about one-foot thick where heavy vibratory compaction equipment is used. Thinner lifts should be used where hand operated equipment is required for compaction. Each lift should be compacted to no less than 95 percent of the material's maximum dry density as determined by the Modified Proctor Compaction Test, ASTM D1557. In landscape areas, the compaction requirement may be relaxed to 90 percent of maximum dry density.

Additionally, new fill should have a moisture content within +/-2 percent of its optimum moisture content when placed and compacted.

Grading and Drainage

All proposed grades should be configured to provide effective drainage away from the proposed structures during and after construction, with such drainage maintained throughout the life of the structures. Water retained next to structures can result in soil movements greater than those outlined in this report, which may in turn lead to unsatisfactory differential floor slab and/or foundation displacements, cracked slabs and walls, or roof leaks.

Temporary Excavations

Excavations must be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P and its appendices, along with any state and local codes, as applicable. The contractor should be aware that slope height, slope inclination, and excavation depth should in no instance exceed OSHA regulations. Flatter slopes than those stipulated by the regulations or temporary shoring may be required depending upon the excavation depth, soil/groundwater conditions encountered and other external factors. OSHA regulations are strictly enforced and if they are not followed, the owner, contractor, and/or earthwork and utility subcontractor could be liable and subject to substantial penalties.

Additionally, excavations should be completed so as not to undermine adjacent buildings, pavements, utilities or other such infrastructure that is to remain in place. In general, excavations should not encroach within a zone of influence defined by a line extending out and down from any existing structures at an inclination of 1V:1.5H. Excavations that encroach within this zone should be sheeted, shored and/or braced as required to support the soil and adjacent structure loads, or the structure should be underpinned to establish bearing at a deeper level.

If groundwater is encountered, construction dewatering should be conducted as required to allow the work to proceed in relatively dry conditions. Surface water should be

intercepted and diverted outside the limits of work to minimize runoff into excavations, and excavated subgrades should be shaped and sloped to shed precipitation as appropriate. The means and methods of dewatering should be made the contractor's responsibility.

Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer. Monitoring should include documentation of adequate removal of surface materials and any unsuitable fills, proof-rolling, and mitigation of any areas identified as needing improvement through proof-rolling. Each lift of new subgrade fill or Structural Fill should be satisfactorily placed and compacted prior to placement of additional lifts.

The monitoring should also include evaluation of foundation bearing grades along with subgrades for floor slabs and pavements. If unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

It should be understood that subsurface conditions will be more fully known when the site is excavated. The continuation of the Geotechnical Engineer into the construction phase of the project will allow for validation of the subsurface conditions assumed to exist for this study and in the development of the design recommendations in this report, along with assessing any variations, providing interim recommendations as necessary and reviewing associated design changes.

Shallow Spread Foundations

If the site has been prepared in accordance with the recommendations outlined previously in the **Earthwork** section and under the **Foundation Construction Considerations** below, the following parameters may be assumed in the design of conventional shallow spread foundations for the proposed building.

Design Parameters – Compressive Loads

Item	Description
Maximum Net Allowable Bearing Pressure [1, 2, 3]	■ Native fine- or coarse-grained soils (GeoModel Layers 2 or 3) – 3,000 pounds per square foot (psf) ■ Glacial Till (GeoModel Layer 4) – 4,000 psf
Required Bearing Stratum [4]	■ Native fine- or coarse-grained soils (GeoModel Layers 2 or 3) ■ Glacial Till (GeoModel Layer 4) ■ Structural Fill over undisturbed native soils
Minimum Foundation Dimensions	Columns: 36 inches Continuous: 24 inches
Ultimate Coefficient of Sliding Friction [5]	■ 0.35 (concrete on GeoModel Layer 2) ■ 0.40 (concrete on GeoModel Layer 3) ■ 0.45 (concrete on GeoModel Layer 4) ■ 0.45 (concrete on Structural Fill over undisturbed native soils)
Minimum Embedment below Finished Grade [6]	Exterior footings: 48 inches Interior footings in heated areas: 24 inches Interior footings in unheated areas: 48 inches
Estimated Total Settlement from Structural Loads [3]	Less than about (1) inch.
Estimated Differential Settlement [3, 7]	About 3/4 of total settlement.

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. Values assume that exterior grades are no steeper than 20 percent within 10 feet of structure.
2. Values provided are for maximum loads noted in **Project Description** (as applicable).
3. Weathered bedrock is not anticipated to be encountered at foundation bearing elevations.
4. The bearing grades should be prepared per the recommendations presented below in the **Foundation Construction Considerations**.
5. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be disregarded for foundations subject to net uplift conditions.
6. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure. Interior footings in heated areas may be seated at the 24-inch depth if allowed by local building codes.
7. Differential settlements are noted for equivalent-loaded foundations and bearing elevation as measured over a span of 50 feet.

Spread Foundation Construction Considerations

The foundations may be seated directly on undisturbed native soils, or on imported Structural Fill which is placed over the native soils after all topsoil and existing fill is removed, along with whatever remains of former structures or otherwise unsuitable materials that may be found. If over-excavation is required beneath the foundations to remove unsuitable material, the excavation should extend horizontally beyond each side of the foundation a distance equal to at least one-half the depth of the undercut below the final bearing grade elevation. Replacement material should meet the specification and compaction guidelines for Structural Fill as outlined herein.

Foundation bearing grades should be proof-compacted using a mechanical or large reversible plate tamper to densify the soils loosened by the excavation process unless otherwise directed by the Geotechnical Engineer observing the grades. If fine-grained soils are present and/or groundwater seepage occurs, proof-compacting should be eliminated, and a minimum six-inch thick base of clean crushed stone placed over a geotextile fabric should be provided to establish a more uniform and stable base for construction and to assist in dewatering. The stone should be an ASTM C33 Blend 57 aggregate and the fabric a non-woven synthetic filter fabric meeting NYSDOT standard specifications section 737-01C for drainage geotextile.

All final bearing grades should be relatively firm, stable, and free of loose soil, mud, water and frost. The Geotechnical Engineer should approve the condition of the foundation bearing grades immediately prior to placement of reinforcing steel and concrete.

Floor Slabs

Floor Slab Design Parameters

New floor slabs should be constructed upon a minimum six-inch thick subbase course which conforms to the requirements for NYSDOT Type 2 Subbase or ASTM C33 Blend 57 aggregate. Consideration should be given to using a thicker subbase course in areas subject to heavier loads and/or use, or those exposed to freezing temperatures, as may be applicable (see the Frost Considerations section herein).

The use of a vapor retarder along with a base course of ASTM C33 Blend 57 aggregate should be considered beneath concrete slabs-on-grade to be covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding its use and placement.

Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual.

Floor slab subgrades should be prepared as outlined in the **Earthwork** section herein. Under these conditions, a modulus of subgrade reaction equal to 150 pounds per cubic inch (psi/in) may be assumed at the top of the stone base layer for slab design purposes.

Floor Slab Construction Considerations

Even with the base course recommended above, we caution that the subgrades may not support repeated heavy construction traffic or telehandlers without suffering rutting and weaving that may be especially severe during wet seasons. If the grades are to be repeatedly traversed by these types of equipment, they should be reinforced as necessary to support them. Areas which become disturbed should be excavated and stabilized accordingly.

The Geotechnical Engineer should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab subbase course. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

Earth Retaining Wall Design

As previously referenced, the earth retaining walls indicated on the Original Plan were eliminated on the Updated Plan provided immediately prior to preparation of this report. However, earth retaining wall recommendations were still requested. The following general parameters and recommendations may be considered for earth retaining wall design. If earth retaining walls are included as the plans/designs progress, additional investigations may be warranted to facilitate design.

Design Parameters

All permanent earth-retaining foundation walls or structures should be designed to resist the lateral pressures generated by earth backfill along with any temporary or permanent surcharge loads. Active earth pressures may be assumed for site walls that are free to deflect as the backfill is placed. At-rest earth pressures should be assumed for all building walls and site walls that are braced prior to backfilling or applying surcharge loads. The following design parameters are provided to assist in calculating lateral earth pressures, whichever apply, and to analyze the stability of unbraced walls by sliding and overturning.

- Soil angle of internal friction - 30 degrees
- Coefficient of At-Rest earth pressure (k_o) - 0.50
- Coefficient of Active earth pressure (k_a) - 0.33
- Coefficient of Passive earth pressure (k_p) - 3.0
- Total unit weight of compacted soil - 120 pcf
- Coefficient of sliding friction - 0.35 (concrete on GeoModel Layer 2)
  - 0.40 (concrete on GeoModel Layer 3)
  - 0.45 (concrete on GeoModel Layer 4)
  - 0.45 (concrete on Structural Fill over undisturbed native soils)

The recommended design parameters assume that backfill consists of imported Structural Fill as described in the **Earthwork** section herein, idealized non-sloping conditions on each side of the wall, and that the backfill remains permanently well-drained. Water must not be allowed to collect against the wall unless the wall is designed to accommodate the added hydrostatic pressure. Drainage system recommendations are provided below.

The Structural Fill backfill material should occupy the entire backfill zone wedge formed by a line extending up and away from a point two feet outside the base of the wall (intersection of stem and base) at an angle no less than 45° off the vertical.

Options to Limit Lateral Earth Pressure

There are several options that may be considered if it is necessary to reduce the lateral loads acting against earth retaining or foundation walls. These include the use of engineered or lightweight materials such as crushed aggregate, expanded shale or expanded polystyrene (geofoam) within the foundation wall backfill zone. Whichever material is selected, the engineered backfill material should occupy the entire backfill zone wedge formed by a line extending up and away from a point two feet outside the base of the wall at an angle no less than 45 degrees off the vertical.

The following parameters may be assumed in the evaluation of engineered wall backfill materials. Note that the parameters are presented unfactored (i.e., they do not include a factor of safety) and assume the backfill remains drained at all times.

Engineered Material	Total Unit Weight (pcf)	Coefficient of Lateral Pressure
ASTM C33 Blend 57 Crushed Aggregate	95	0.23
Nominal 3/8" Expanded Shale Aggregate	65	0.33
Foamed Glass Aggregate	20	0.29
Geofoam (ASTM D6817)	2	N/A

Subsurface Drainage for Earth Retaining Walls

Earth retaining walls should be provided with a foundation level drain which may consist of a nominal 4-inch diameter perforated PVC or corrugated HDPE pipe embedded at the base of a minimum 12-inch wide column of clean crushed stone (e.g., ASTM C33 Blend 57 stone). The stone should be enveloped in an appropriate non-woven filter fabric (meeting NYSDOT standard specifications table 737-01C for drainage geotextile) to inhibit siltation. Backfill soils behind the crushed stone drainage layer should consist of imported Structural Fill. The drain line should be sloped to provide positive gravity drainage to daylight, a stormwater system, or to a sump pit and pump.

Pavements

Flexible Pavement Design

The pavement sections presented below were developed in general accord with AASHTO procedures using a reduced subgrade strength and local experience to account for frost, and to keep the anticipated pavement heave and cracking within generally tolerable limits. A subgrade resilient modulus (M_r) equal to 4,000 psi has been assumed for design purposes.

Two conventional pavement sections were developed, a Light Duty section for automobile parking areas, and a Heavy Duty section for entrance drives or areas subject to occasional truck and bus traffic. For design purposes, it has been assumed that the pavement design life is 20 years, and that daily equivalent single axle loads (ESALs) are equal to 1 for the Light Duty section and 25 for the Heavy Duty section. If the traffic loads vary from these, we should be provided the opportunity to refine the pavement section accordingly.

All materials should meet the requirements specified in the latest edition of the New York State Department of Transportation (NYSDOT) Standard Specifications for Construction and Materials.

Flexible Pavement Design				
Layer	**Material Description**	**NYSDOT Item Number**	**Thickness (inches)**	
			Light Duty	**Heavy Duty**
Top	Asphaltic Concrete	402.127303	1.5	1.5
Binder	Asphaltic Concrete	402.257903	2.0	3.0
Subbase	Crusher-Run Stone	Section 733.04, Type 2	8	12
Fabric	Stabilization Geotextile	Section 737-01, Table E	Single Ply	Single Ply

Rigid concrete pavements, if any, should be provided with a minimum six-inch thick base of crusher-run stone (NYSDOT section 733-04, Type 2 material) placed over a stabilization geotextile. The pavements may be designed assuming a modulus of subgrade reaction equal to 150 pounds per cubic inch at the top of the base layer.

Temporary Construction Access Roadways

The recommended pavement sections are not intended to support heavy construction equipment loads which may require thicker sections. The contractor should construct temporary haul routes and construction roadways on site as appropriate for the weather conditions and the equipment in use, with consideration of the soil conditions encountered in specific areas. Construction traffic should not be routed across the recommended pavement sections unless augmented accordingly.

Pavement Drainage

Accumulation of water on pavement subgrades should be avoided by grading the subgrade to a slope of at least two percent, and/or by providing edge swales or underdrains. Failure to provide adequate drainage will shorten pavement life. Given the subsurface and perched groundwater conditions observed at the site, effective drainage will be critical to the long-term performance and service life of the pavements.

Pavement Maintenance

All pavements require periodic care, and preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Maintenance consists of both localized maintenance (e.g., crack and joint sealing and patching) and global maintenance (e.g., surface sealing). Settlement of pavements due to consolidation of the existing fills may also occur and require periodic maintenance.

Frost Considerations

Frost may penetrate beneath sidewalks and pavements (or building slabs in unheated areas) and cause them to heave, and resulting displacements may be differential, particularly where sidewalks and pavements meet building doorways and along curbs. To limit heave and the creation of such uneven joints to generally tolerable magnitudes for most winters, a 16 inch thick base of ASTM C33 Blend 57 crushed stone should be placed beneath sensitive sidewalk or pavement areas, along with an underdrain to relieve any collected waters. The crushed stone should be separated from the surrounding soils with a non-woven synthetic filter fabric meeting the requirements of NYSDOT standard specifications table 737-01C for drainage geotextile.

General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include, either specifically or by implication, any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in

accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use of or reliance on the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating, including excavation support and dewatering requirements/design, are the responsibility of others.

Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider performing a preconstruction/precondition survey of surrounding development. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

Exploration and Testing Procedures

Field Exploration

Number of Borings	Approximate Boring Depth (feet)	Location
4	17.4 to 29.1	Building area (BB-series)
4	9.7 to 10	Pavement areas (P-series)
4	15.1 to 34.4	Retaining wall areas (R-series)
7	10	Storm soil profile (ST-series)
2	10.1 to 12	Infiltration test locations (I-series)

Boring Layout and Elevations: The test boring locations were selected by CPL and were established in the field by Terracon using a hand-held GPS unit (estimated horizontal accuracy of ±10 feet), taped measurements and/or visual reference from existing site features within the limitations of access, existing structures and underground/overhead utilities.

Existing ground surface elevation at each borehole location was estimated based upon our interpolation between the topographic contours shown on the site plan provided to us. If more precise locations and/or elevations are desired, the as-completed test locations should be surveyed.

Subsurface Exploration Procedures: The test borings were completed using a standard rotary drill rig equipped with hollow stem augers. As the augers were advanced, the soils were sampled at intervals of five feet or less in accordance with the Standard Method for Penetration Test and Split-Barrel Sampling of Soils, ASTM D1586. Upon completion of drilling the boreholes were backfilled with auger cuttings, sand and/or concrete cylinders.

Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual descriptions of the materials encountered during drilling and our interpretation of the subsurface conditions between samples. The sampling depths, penetration distances, water level measurements and other information as applicable were recorded on the field boring logs.

The soil samples were placed in appropriate containers and taken to our laboratory for visual classification by a geologist or geotechnical engineer. The soils were described based on the material's color, texture, plasticity, moisture condition, etc. Soil classifications are in general accordance with the Unified Soil Classification System (USCS) as summarized herein. Final boring logs were prepared, and they represent the

Geotechnical Engineer's interpretation based on the field logs and visual classifications, along with any laboratory testing performed.

Laboratory Testing

Selected samples recovered from the test borings were submitted for laboratory testing as part of the subsurface investigation, to confirm the visual classifications and to provide quantitative index properties for use in the geotechnical evaluation. This testing was performed in general accordance with the following standard methods:

- ASTM D2216 - Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D422 - Standard Test Method for Particle-Size Analysis of Soils (w/o hydrometer)

INFILTRATION TEST RESULTS					
Project: Ossining UFSD			**Project No.: JB245223**		
Project Location: Ossining, NY			**Tester: BG**		
Test Date: 3/12/25			**Weather: Sunny**		
Test Location	**Test Depth (feet)**	**Trial No.**	**Water Drop (inches)**	**Elapsed Time (hours)**	**Infiltration Rate (inches/hour)**
I-1	10.0	1	2.5	1.0	2.5
		2	2.5	1.0	2.5
		3	2	1.0	2
		4	0	1.0	0
		NOTE: Rate of final trial: 0 in/hr, Average of four trials: 1.8 in/hr			
I-2	10.0	1	0	1.0	0
		2	0	1.0	0
		3	0	1.0	0
		4	0	1.0	0
		NOTE: Rate of final trial: 0 in/hr, Average of four trials: 0 in/hr			

Notes:

1. Test pipes were installed in boreholes made adjacent to test borings I-1 and I-2.
2. According to the driller, it was difficult to seal the bottom of the test pipe at I-1. The infiltration measured in the first 3 runs at I-1 are likely unrepresentative of actual conditions considering the material type (Glacial Till) present at the test depth.

Soil Classification at Test Depth:

Test Location I-1: Silty Sand (SM), trace gravel, (Glacial Till)

Test Location I-2: Silty Sand (SM), trace gravel, (Glacial Till)

General Notes

Sampling	Water Level	Field Tests
Split Spoon	Water Initially Encountered Water Level After a Specified Period of Time Water Level After a Specified Period of Time Cave In Encountered Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

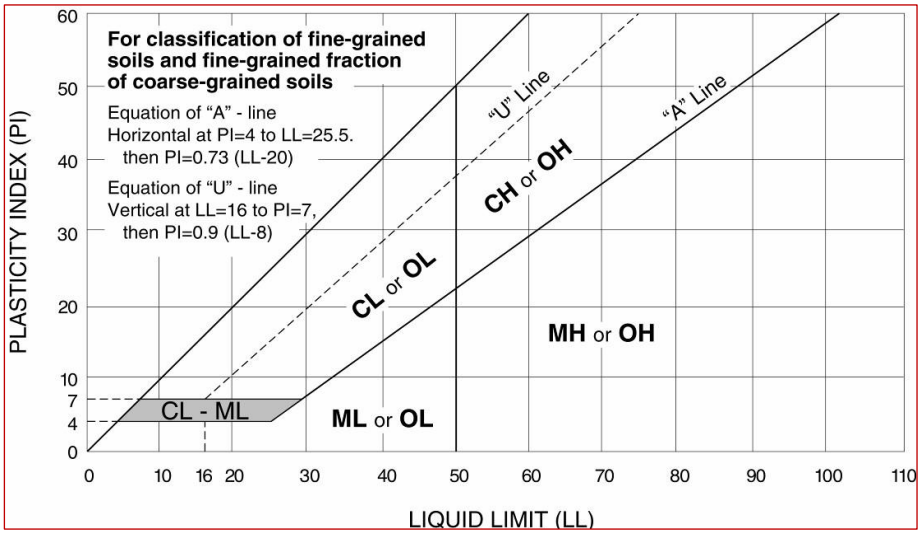
Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)
Very Loose	0 - 3
Loose	4 - 9
Medium Dense	10 - 29
Dense	30 - 50
Very Dense	> 50

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)
Very Soft	less than 0.25	0 - 1
Soft	0.25 to 0.50	2 - 4
Medium Stiff	0.50 to 1.00	5 - 8
Stiff	1.00 to 2.00	9 - 15
Very Stiff	2.00 to 4.00	16 - 30
Hard	> 4.00	> 30



Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N] Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P] Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $\quad Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

Re: Recreation Field Slope Stability Analysis and Commentary
Ossining UFSD
100 Van Cortlandt Ave
Ossining, New York
Terracon Project No. JB245223

Dear Mr. Moot:

At the request of CPL, Terracon has performed additional subsurface investigations, global stability analyses, and review of CPL design documents associated with the proposed site development for the new school building and site improvements planned at Ossining UFSD. This correspondence summarizes our findings, the results of our analyses, and provides commentary for use by CPL in continued preparation of site plans. Our services were performed in general accordance with the scope of services described in our Change Order No. 2 which was authorized via email by CPL on November 11, 2025, and formally authorized on July 16, 2026, with one revision. Terracon was requested by CPL in a teleconference with Bryce Reecer on July 7, 2026, to review and comment on CPL design details rather than provide a separate reinforced slope design document as the project approach and planned grading were not finalized.

Background

Terracon previously performed a geotechnical investigation for the new 7th/8th grade building and site development, and prepared a geotechnical report issued on June 11, 2025. As the site plans were being developed by CPL, Terracon was requested to provide supplemental geotechnical consulting, specifically related to the recreational field and stormwater treatment/detention area planned east of the new school building. Terracon provided these services under Change Order No. 1 and issued a geotechnical letter on March 5, 2026. In consideration of the recommendations offered in the letter, an additional subsurface investigation and design level global stability analyses were requested by CPL.

Our analyses under Change Order No. 2 were performed using "Work Area 'B' – Utility Plan," drawing number 7&8/C222 by CPL last revised June 18, 2026, and emailed to

Terracon on June 24, 2026. Additionally, "Site Details – 7," drawing number 7&8/C807 by CPL dated April 9, 2026, was emailed to Terracon on July 8, 2026, for use in our analyses.

To assist the reader's understanding of the following discussion, a Project Feature Reference Plan has been included as **Appendix A**. The plan identifies the primary grading features and areas evaluated as part of this analysis. References to these areas throughout this correspondence correlate with the locations shown on the Project Feature Reference Plan.

Additional Subsurface Investigation

Three borings were advanced as part of the Change Order No. 2 additional subsurface investigation, C-1, C-2, and C-3, for the purposes of providing additional subsurface and groundwater information along the proposed cut slope (*Field Cut Slope*). The borings were advanced to depths ranging between 18 and 25.7 feet below existing ground surface (BGS). Subsurface conditions were in general similar to those previously encountered on the site, with silty sand/sandy silt soil overlying glacial till. An additional boring, C-4, was originally planned but was deleted due to accessibility issues at the time of investigation. Refer to the attached Exploration Plan **(Appendix B)** and Supplemental Investigation Boring Logs **(Appendix C)** for approximate boring locations and individual subsurface boring logs.

Additionally, four groundwater monitoring wells were installed. Two were installed within borehole C-2 and two were installed within borehole C-3. A deeper monitoring well was installed to allow subsequent measurement of static groundwater level while a shallower monitoring well was installed to determine the presence of and measure perched groundwater levels. Each monitoring well consisted of one-inch diameter PVC pipe with a slotted screen section at the bottom of the well and solid riser pipe to and extending above the ground surface. The well annulus was backfilled with filter sand within the screened section and bentonite and auger cuttings above the sand to seal the well from surface water infiltration. At C-2, the deeper monitoring well was screened from 15.7 to 25.7 feet BGS, and the shallower monitoring well was screened from 3 to 13 feet BGS. At C-3, the deeper monitoring well was screened from 12 to 22 feet BGS, and the shallower monitoring well was screened from 1 to 11 feet BGS.

After their initial installation and development, groundwater levels in the wells were measured on April 30, 2026, and May 8, 2026. No measurable groundwater was encountered within the shallow wells during either visit. Measurable groundwater was encountered in the deeper wells, and those levels are summarized in the table below:

Observation Well Water Level Summary						
Date Measured	Approximate Water Level in Well (ft)					
	C-2 (deep)			C-3 (deep)		
	Approx. GS[1] Elevation	Depth Below Grade	Groundwater Elevation	Approx. GS[1] Elevation	Depth Below Grade	Groundwater Elevation
4/30/2026	349	17.1	331.9	352	16.6	335.4
5/8/2026		16.7	332.3		14.8	337.2

1. GS = Ground Surface

Groundwater measurements during the monitoring period indicated groundwater elevations ranging between approximately 332 and 337 feet within the *Field Cut Slope* area. While not identified in the shallow groundwater monitoring wells of this additional investigation, locally perched or trapped groundwater has been encountered in our previous investigations and may at times be encountered during construction. Groundwater conditions and the extent of any perched water should be expected to vary with seasonal fluctuations in precipitation and runoff. Additionally, grade adjustments on and around the site, as well as surrounding drainage improvements, may affect the water table.

Understanding of Proposed Grading and Analysis Approach

As described in our Mach 5, 2026 letter, we performed a preliminary slope stability analysis of the cut and fill slopes that are planned to develop the recreational field using the subsurface information gathered during our initial site investigations. We used the additional subsurface and groundwater information to refine our analysis as part of this Change Order No. 2 scope. Referring to the C222 plan, the proposed site grading includes the *Field Cut Slope* which is approximately 22 feet in maximum height on the western limits of the field, and the *Field Fill Slope* which is approximately 30 feet in maximum height on the eastern limits of the field. The *Field Cut Slope* ranges in maximum inclination between about 1V (Vertical):2.2H (Horizontal) and 1V:2.4H. The *Field Fill Slope* has an approximate maximum inclination of 1V:2H.

An underground stormwater detention system *(Detention System)* within the field and a stormwater pond *(Pond)* east of the field are indicated.

The *Detention System* is planned to have an invert elevation of 324.0 feet. We understand this system will be lined with an impermeable HDPE liner to prevent groundwater from

infiltrating into the surrounding soils and slopes. Generally, we understand that the stormwater piping in the field area will collect water and direct it towards structure CB-24 which then outlets into the *Pond* east of the field. The *Detention System* is planned to be utilized as additional storage if structures overflow during heavier storm events. If groundwater enters the *Detention System*, the system will collect the water and discharge it back into the piping system through structure OS-2 when the water levels stabilize.

The *Pond* is planned to have a bottom elevation of 281 feet and be lined with either with a 12-inch thick natural clay liner or HDPE liner to elevation 295 feet to prevent groundwater from infiltrating into the surrounding soils and slopes. We understand the pond is designed to reach a maximum water surface elevation of 293 feet during the 100-year storm event, where water from the *Pond* will enter structure OS-1 and outlet through FES-1 at elevation 274 feet. The outlet follows a natural ravine feature towards Sing Song Creek.

Grading to develop the *Pond* is planned immediately east of the *Field Fill Slope*. A cut slope (*Pond Approach Slope*) with a maximum height of about 20 feet will be required to create the western *Pond* grading and *Pond Crest* elevation of 296 feet. The *Pond Crest* will be about 10 feet in width. Beyond the crest, the *Pond* slope will continue to be cut to a bottom elevation of 281 feet. The maximum inclination of the *Pond Approach Slope* and *Pond* slopes are 1V:3H. An embankment fill will be required on the eastern side of the pond (*Eastern Embankment*) to create grades along the east side of the *Pond*. The *Eastern Embankment* slope will have a maximum height of 13 feet and maximum inclination of 1V:2H.

In order to facilitate our analyses, six subsurface profiles were developed using the existing and proposed grading indicated on the C222 plan provided. The subsurface profiles utilized the initial and supplemental subsurface information obtained in the test borings advanced by Terracon at the project site. The soil strata identified and included in our analysis are native silty sand/sandy silt, glacial till, weathered bedrock, and reused screened onsite soils. Engineering design parameters were estimated for these soil materials based on information obtained from the investigation, laboratory testing of select samples and our local experience.

The inferred subsurface profiles were modeled in the slope stability software, SLOPEW, to determine global stability factors of safety. The generally accepted industry standard minimum factor of safety for slope stability is between 1.3 and 1.5 for the intended site usage. The SLOPEW outputs are provided in **Appendix D.** The analysis and recommendations for the *Field Cut Slope* and *Field Fill Slope*, *Pond Approach Slope*, *Pond*, *Eastern Embankment*, general comments and geotechnical recommendations are further discussed below.

Field Cut Slope Analysis and Recommendations

The additional subsurface investigations advanced for this study provided site specific subsurface soil and groundwater information for the proposed *Field Cut Slope*. This information was used to further analyze the global slope stability of the proposed grading. Through our additional analyses, it was determined that the slope grading has an adequate

factor of safety for slope stability as currently designed. Refer to Profiles 1 through 4 of **Appendix B** and corresponding SLOPEW outputs in **Appendix D** for more information.

Slope stability can be impacted by many factors, including but not limited to the presence of water in the slope. In order to protect the slope and planned site grades, and maintain the factor of safety indicated in our analysis, the following are recommended to be considered in the design:

- A swale should be included at the top of the slope where slopes are greater than 1V:3H in inclination. The swale should be lined with a low permeability material, such as natural clay, HDPE or asphalt, to limit infiltration into the slope and direct runoff from traversing the slope face.
- Based on groundwater elevations measured in the monitoring wells, the toe of the *Field Cut Slope* may encounter groundwater. A French drain should be included along the toe of slope to intercept and collect groundwater and direct it away from the field playing surface and into a closed storm drainage system. It is recommended the French drain trench be a minimum 2 feet wide and 2 feet deep. A minimum 4-inch diameter perforated pipe should be installed at the bottom of the trench to collect water, and the trench backfilled with NYSDOT #1 and #2 clean crushed stone enveloped in a filter fabric of Mirafi 140N type or equivalent. The stone could be held down about six inches from the surface and topsoil or similar material be used to establish the finished surface.
- Refer to the **General Comments and Recommendations** section for additional considerations applicable to slope construction.

Field Fill Slope Analysis and Recommendations

Our analyses prepared for the *Field Fill Slope* indicate that where slopes exceed a 1V:3H inclination, improvements are required to achieve an adequate factor of safety for slope stability. Refer to Profiles 5 and 6 of **Appendix B** and corresponding SLOPEW outputs in **Appendix D** for more information. Note Profile 6 also analyzes the *Pond Approach Slope*, *Pond*, and *Eastern Embankment* described in the next section. As indicated on the attached Marked Up Slope Protection – Fill Slope Detail **(Appendix F)**, geogrid reinforcing is required to be installed at maximum 2 feet vertical spacing, with the lowest geogrid layer installed a maximum of 1 foot below the slope toe elevation. The geogrid layers are to be uni-axial, Mirafi Miragrid 3XT type or equivalent with a minimum Long Term Design Strength (LTDS) of 2195 lbs/ft. The minimum geogrid embedment length should be 15 feet as measured from the face of the slope, excluding the topsoil.

We have attached Typical Reinforced Slope Notes **(Appendix E)** which provides typical notes that may be useful in preparation of the site design documents. Further we recommend the following be considered in the design:

- Reinforced Zone backfill (area of geogrid reinforcing) is to be comprised of onsite materials or imported Structural Fill. Onsite materials should contain no particles larger than 3 inches and should be free of organics, oversized particles, and/or unsuitable foreign matter, pending review and approval by Terracon. Refer to our

geotechnical report for Structural Fill gradation recommendations if utilized as Reinforced Zone backfill.

- Terracon must observe slope subgrades prior to placement of backfill and geogrid reinforcing. The subgrades are to be proof-rolled under observation by Terracon using a smooth drum roller with a static weight of at least 7 tons.
- A swale should be included at the top of the slope where slopes are greater than 1V:3H in inclination. The swale should be lined with a low permeability material, such as natural clay, HDPE or asphalt, to limit infiltration into the slope and direct runoff from traversing the slope face.
- If fencing and/or guiderails are required by local code, their posts should be installed using sonotubes or HDPE pipe segments during construction of the reinforced slopes to allow the geogrid to be cut around the forms.
- Refer to **Appendices E and F** for more information.
- Refer to the **General Comments and Recommendations** section for additional considerations applicable to slope construction.

Pond Approach Slope, Pond, and Eastern Embankment Analysis and Recommendations

The proposed *Pond* grading was evaluated as part of our slope stability analyses utilizing the subsurface profiles described previously. Based on our analyses, the *Pond Approach Slope*, *Pond* slopes, and *Eastern Embankment* slope have an adequate factor of safety for slope stability as currently designed. It was noted during our analyses that portions of the lower *Pond* slopes and *Eastern Embankment* were identified as more critical based on the assumed groundwater conditions and steeper slope inclinations. Refer to Profile 6 of **Appendix B** and corresponding SLOPEW outputs in **Appendix D** for more information.

It should be understood that no borings were advanced specifically for proposed *Pond* design as that stormwater management system and proposed grading were added to the project after our supplemental investigation program. Subsurface conditions utilized in our analyses were inferred from nearby explorations that were advanced during the initial project phase for other purposes and may vary across the *Pond* area. As such, bedrock and groundwater conditions may be encountered at elevations differing from those assumed in the analyses. Accordingly, the following recommendations and considerations should be incorporated into the design:

- Groundwater conditions within the *Pond* were inferred from nearby exploratory borings and groundwater observations. Actual groundwater conditions may vary seasonally and during wet periods. The proposed *Pond* bottom is planned at Elevation 281 feet, which may be below the existing groundwater table based on available subsurface information. The *Pond* liner system and associated appurtenances should be designed by others to resist groundwater uplift and buoyancy forces associated with groundwater levels above the *Pond* bottom elevation. Ballast may be utilized to counteract these forces. The type, extent, and

configuration of any ballast should be coordinated with the civil design and pond liner requirements.

- Some rock excavation may be necessary to establish the proposed *Pond* grades in places. While much of the anticipated rock is expected to be weathered and should be rippable to an extent with suitably sized excavation equipment, it should be understood that bedrock will be more excavation resistant than soil and generally becomes more excavation resistant with depth. Use of a hoe ram or other means of loosening harder rock may be necessary in places to achieve the proposed *Pond* grades.
- The *Eastern Embankment*, which is planned at inclinations up to approximately 1V:2H, marginally exceeded the minimum 1.3 slope stability factor of safety based on the assumptions in our analysis. Consideration should be given to armoring the lower half of the slope with a riprap counterweight up to Elevation 288 feet. The addition of the riprap was shown to increase the slope stability factor of safety from 1.3 to 1.4. Riprap should not extend above this elevation as it will tend to increase driving forces and negatively affect the slope stability. Riprap should meet the requirements for medium stone filling (Item 733-2103) and gradation requirements of Table 733-21A as stipulated in section 733-21 of the NYSDOT Standard Specifications. An appropriate bedding fabric should be considered for the material type proposed.
- The *Pond* outlet should be protected with riprap or another suitable outfall protection measure to control discharge and reduce the risk of erosion.

General Comments and Recommendations

The following recommendations and considerations are generally applicable to the proposed slope construction and should be incorporated into the design and construction, as applicable:

- Slope grades must be permanently stabilized with perennial vegetation or riprap at completion of construction. Refer to Site Civil Drawings for more information.
- Surface water should be directed away from slope crests and uncontrolled discharge onto slope faces should not be permitted.
- Snow, soil, or other materials must not be stockpiled at the top of the slopes or grades within the vicinity of the slopes, either during construction or in the final condition.

We understand that further design changes are being considered to the grading plans including potentially raising the field grades, lessening slope inclinations, and modifying the recreational field location. As plans are further developed, Terracon should continue to be consulted to evaluate whether revisions affect our analyses or recommendations. Additional analysis may be required as warranted. Also, unless addressed otherwise in this correspondence, the recommendations outlined in our geotechnical report and previous correspondences apply.

We appreciate the opportunity to be of service on this project. Please contact us at your convenience if you have any questions or if anything further is needed.

Sincerely,
Terracon Consultants - NY, Inc.

Appendix E – Typical Reinforced Slope Notes

The following typical reinforced slope notes are provided for consideration by the civil designer during preparation of the site design documents. Final incorporation, modification, and coordination of these notes should be performed by the design team, as applicable to the project plans and specifications.

General Notes

- Work should be completed in general accordance with the design drawings, details, notes, and specifications prepared for the reinforced slope improvements.
- The contractor is responsible for protecting the work area from runoff and erosion during the construction period.
- Terracon should be retained to provide construction-period observation and testing services to evaluate whether the slopes are constructed in accordance with the design drawings, details, notes, and specifications.
- Snow should not be stockpiled at the top of the slopes or grades within the vicinity of the slopes, either during construction or in the final condition.
- The reinforced slope section pertains to fill slopes steeper than 1V:3H. The maximum slope inclination is 1V:2H.
- Slope grades should be permanently stabilized with perennial vegetation at completion of construction. Refer to the site civil drawings for additional information.

Materials

- Substitutions for specified materials should be reviewed and approved by Terracon.
- Materials used for construction should meet the minimum requirements of the recommended manufacturer, as approved by Terracon.
- In reinforced slope areas, geogrid reinforcement should consist of Mirafi Miragrid 3XT uni-axial type or equivalent, as specified on the drawings.

Technical Requirements

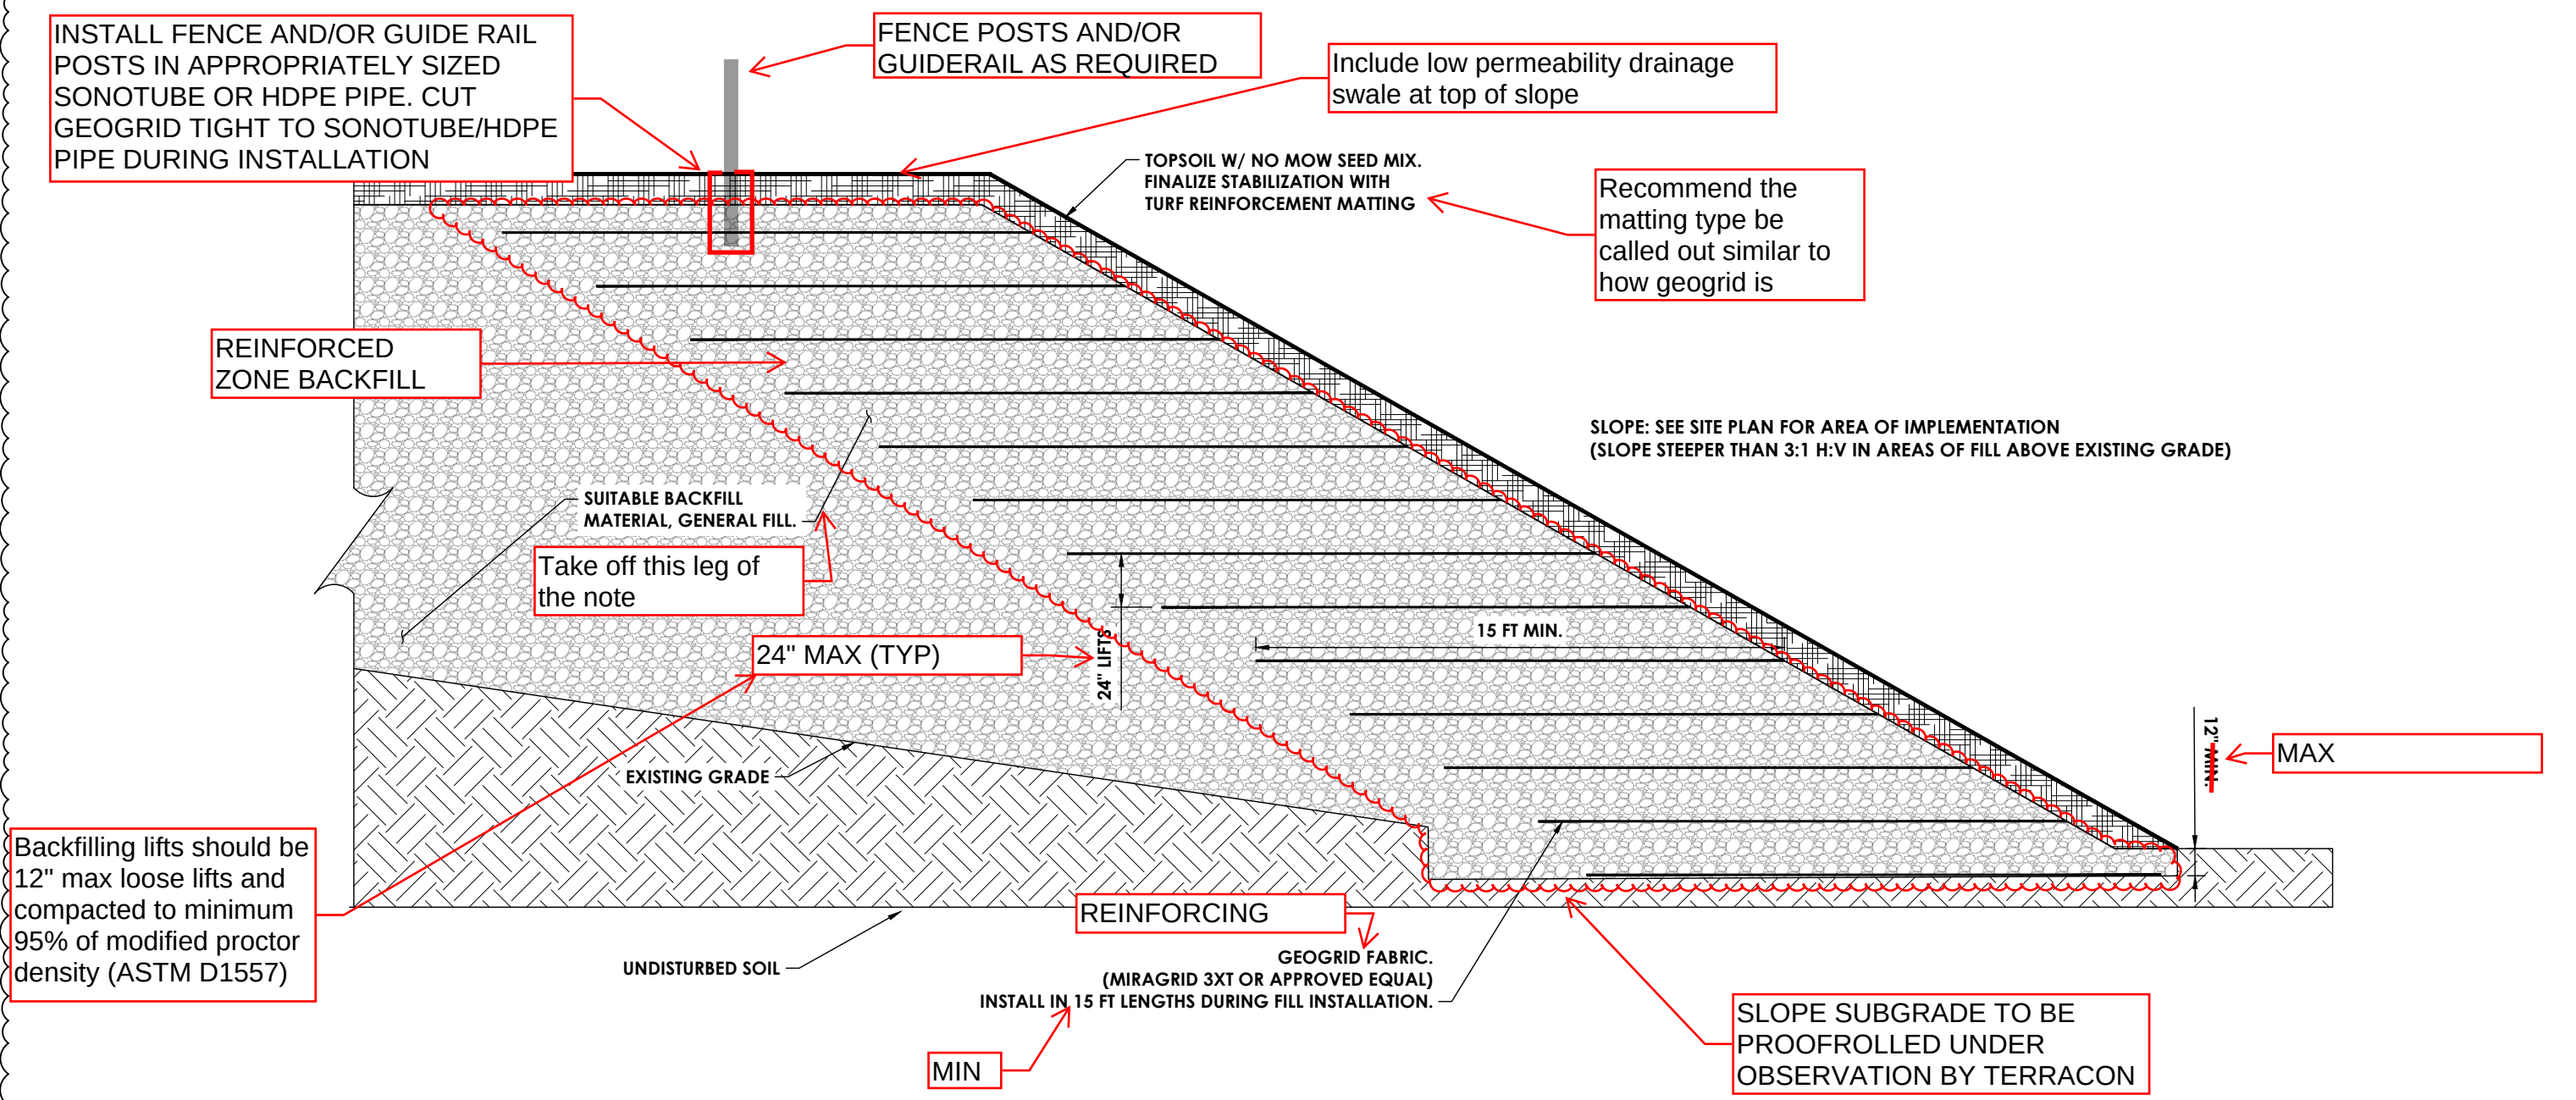
- Backfill should be placed from the slope face toward the ends of the geogrid so the geogrid remains in tension.
- The slope face should be compacted using light mechanical or hand-operated equipment to compact the face and limit material from sloughing down the slope. Means and methods should be demonstrated to Terracon in the field and adjusted as warranted.

Geogrid Requirements for Reinforced Slope

- Geogrids should be placed at the locations within the slope profile, and at the lengths and spacings shown on the contract drawings, in accordance with the manufacturer's recommendations.
- Geogrid reinforcement should be continuous throughout its embedment.
- Prior to fill placement, geogrids should be laid flat and pulled taut to remove slack.
- Tracked construction equipment should not be operated directly on the geogrid. A minimum fill thickness of 6 inches should be provided before operating tracked vehicles

30 Corporate Circle, Suite 201
Albany, NY 12203
p (518) 266-0310
f (518) 805-6001
Terracon.com

over the geogrid. Turning of tracked vehicles should be kept to a minimum to reduce the potential for displacement of fill and/or geogrid.



- Rubber-tired vehicles may pass over the geogrid reinforcement at slow speeds less than 5 mph. Sudden braking and sharp turning should be avoided.
- Geogrids should be rolled out with the machine direction perpendicular to the slope face.
- Changes to the geogrid layout, including but not limited to length, geogrid type, or spacing, should not be made without Terracon's review and consent.

Reinforced Zone Backfill

- If onsite material is planned to be reused as Reinforced Zone backfill, the material should contain no particles larger than 3 inches and should be free of organics, oversized particles, and/or unsuitable foreign matter, pending review and approval by Terracon. If Imported Structural Fill is planned to be used refer to our geotechnical report for gradation recommendations.
- Backfill should be placed in maximum 12-inch loose lifts and compacted using equipment capable of satisfying the in-place density requirements specified below.
- Backfill should be uniformly and thoroughly compacted to at least 95 percent of the maximum dry density and within +/- 2 percent of optimum moisture content as determined by the Modified Proctor test, ASTM D1557, unless otherwise recommended by Terracon.
- Backfill within 3 feet of the slope face should be compacted with light mechanical or hand-operated compaction equipment. Fill should be compacted until firm and unyielding to the satisfaction of the Terracon representative.
- At the end of each workday, backfill should be graded away from the slope crest and rolled to reduce the potential for ponding of water and erosion of the slope face.

1 INTRODUCTION

The purpose of this report is to present erosion & sediment control measures and stormwater management practices that will be implemented as part of the multiphase project including access improvements (new driveway), drainage improvements (new collection, treatment & detention systems) and ultimately a new middle school building with numerous parking lots, sidewalks, various utilities and external recreational spaces (The Project). The Project is located at the parcel, Tax ID: 89.07-3-68, located on Stormytown Road in the Town of Ossining, County of Westchester and State of New York. The site is located on the neighboring parcel from the current Ossining Union Free School District's Anne M. Dorner Middle School Campus which is located at 100 Van Cortlandt Ave, Ossining NY, as shown in Figure 1. The Ossining Union Free School District (Applicant) is proposing to construct a new driveway primarily to allow a secondary means of access to the school's campus. This driveway and its improvements will also support the new 7/8 middle school building that is to be built in a second phase of construction. The complete development will include but is not limited to the following; stormwater management facilities, concrete sidewalks, asphalt parking lots for teachers, staff and parents, recreational spaces for students and site lighting. The following Stormwater Pollution Prevention Plan (SWPPP) has been completed to mitigate any increase in stormwater peak flow rates and while providing runoff water quality associated with the proposed improvements at the site. Mitigation measures will include standard management practices as outlined in the New York State Stormwater Management Design Manual and the New York State Standards and Specifications for Erosion and Sediment Control.

Owner/Operator Contact Information:

Mary Fox-Alter
District Superintendent
Ossining Union Free School District
400 Executive Boulevard
Ossining, NY 10562

1.1 DESIGN REQUIREMENTS

Pursuant to Section 401 of the Clean Water Act, Stormwater discharges from construction activities to surface waters of the United States are unlawful unless they are authorized by a Pollution Discharge Elimination System permit. Given the scope of the project, coverage under the New York State Pollution Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity (GP-0-25-001) is required, and is attached in Appendix A. As such, a Notice of Intent (NOI) is required to be filed with the New York State Department of Environmental Conservation (NYSDEC). The NOI Acceptance Letter will be inserted in Appendix A once it is obtained.

This Stormwater Pollution Prevention Plan (SWPPP) for the Project was prepared in accordance with the following:

- NYSDEC SPDES General Permit for Stormwater Discharges from Construction Activity (Permit No. GP-0-25-001)
- New York State Stormwater Management Design Manual, July 2024
- New York State Standards and Specifications for Erosion and Sediment Control, York State Department of Environmental Conservation, November 2016.

The SWPPP outlines site specific guidelines for preventing stormwater runoff and potential pollutants from adversely impacting water resources during and following site construction. The three components of a SWPPP are the control of erosion and sediment, water quantity control, and water quality control. The objective of the SWPPP is to comply with the NYSDEC SPDES Permit GP-0-25-001 guidelines for the following practices:

- Prevention of sediment to receiving waters during construction,
- Prevention of adverse effects to the stormwater quality impacts upon receiving waters during and after construction,
- Attenuation of peak runoff rates following development when compared to pre-developed rates,
- Maintenance of stormwater facilities during and after construction.
- Demonstrate consideration of the future physical risks due to climate change pursuant to the CRRA, 6 NYCRR Part 490, and associated guidance per Part III.A.2. of GP-0-25-00

The SWPPP, as contained herein, may be revised based upon site conditions observed during or following construction. All proposed modifications shall be in accordance with the NYSDEC technical standards as outlined in GP-0-25-001 and shall be approved prior to implementation. This plan represents the minimum measures required to prevent erosion and sediment loss and control stormwater runoff and water quality. The contractor is responsible for installing additional measures as directed by the Engineer-in-Charge to prevent water quality violations and maintain compliance with the SPDES permit conditions. Revisions to the SWPPP should be noted.

1.2 EXISTING CONDITIONS

The project site is located on the border between the Town of Ossining and the Village of Ossining. The site currently is home to the Ossining Union Free School District's (The District) Anne M. Dorner Middle School. That campus sits between Van Cortlandt Ave and the Dale Cemetery. The site has two individual tax parcels. The middle school campus sits on the southerly parcel, Tax ID: 89.11-2-27 (Parcel 2). The project will have work on said parcel as well as the northerly parcel, Tax ID: 89.07-3-68 (Parcel 1) which is currently houses several buildings and equipment for the Facilities and Grounds Department, the rest of the lot is mature forest. This parcel is bordered by various commercial and residential properties on the north and west. The western border also includes Stormytown Road. The eastern border of the site is the Sing Sing Kill. New & redevelopment activities will occur on Parcel 1 while redevelopment activities will occur on Parcel 2. The general topography of the site slopes west to east (Stormytown Road to the Sing Sing Kill). Starting with relatively mellow slopes (1%-10%) throughout the site until around the middle of the property where the slope begins to drop and slopes increase to steep slopes 30%+. Ultimately, draining a majority of the site towards the Sing Sing Kill. The Sing Sing Kill discharges to the Hudson River.

Review of Flood Insurance Rate Maps (FIRM) prepared by FEMA the project site sits within the Zone X (Area of Minimal Flood Hazard). The project area can be found on map panel 36119C0136F, included as Figure 5 of this report.

According to the USGS Web Soil Survey, there are eleven (11) soil types present at the site. The Hydrologic Soil Group (HSG) ratings vary throughout with a combination of B's, C's and D's (see Appendix F). The following is a list of those soil types within the project area.

Table 1: Project Site Hydrologic Soil Groups

Map Unit Symbol	Map Unit Name	Rating	Acres
ChE	Charlton loam, 25 to 35 percent slopes	B	9.7
CrC	Charlton-Chatfield complex, 0 to 15 percent slopes, very rocky	B	0.5
CsD	Chatfield-Carlton complex, 15 to 35 percent slopes, very rocky	B	1.6
Ff	Fluvaquents-Udifluvents complex, frequently flooded	A/D	0.8
LcB	Leicester loam, 3 to 8 percent slopes, stony	A/D	0.4
PnC	Paxton fine sandy loam, 8 to 15 percent slopes	C	15.8
PnD	Paxton fine sandy loam, 15 to 25 percent slopes	C	0.0
RdB	Ridgebury complex, 3 to 8 percent slopes	D	8.5
Sh	Sun loam	C/D	1.8
Ub	Udorthents, smoothered	B	6.1
WdB	Woodbridge loam, 3 to 8 percent slopes	CD	13.0

1.3 PROPOSED CONDITIONS

The proposed construction activities (all phases) will disturb a total of approximately fifteen (15) acres. The overall development is broken into two phases (Phase 1 – AMD Driveway Project & Phase 2 – New 7/8 Building Project). Phase 1 is going to have more than 5 acres of soil disturbance but will not go over the 5 acre maximum without receiving a waiver from the NYSDEC. Phase 2 has approximately 15.5 acres of soil disturbance, however, soil disturbance activities will be phased to keep under the 5 acre maximum to avoid the need to request a waiver. Tree clearing activities will include temporary stabilization to keep disturbed areas under the 5 acre threshold. Phase 1 includes a heavy-duty asphalt driveway to connect Ossining Middle School and other District buildings to Stormytown road with concrete sidewalks for site navigation as well as a new staff parking lot. There will be some stormwater conveyance and treatment/detention facilities installed as well as some street lighting. Phase 2 includes the installation of the New Building Campus; 140,000 SF building, concrete sidewalks, asphalt parking lot, grass recreation play areas, additional stormwater conveyance and treatment/detention facilities as needed, and other necessary utilities for the operation of the new building (water, sanitary sewer, electric, natural gas etc.). At the end of each phase all areas of disturbance will be permanently stabilized.

In general, the construction activities for both phases to be performed include but aren't limited to:

- Installation of erosion and sediment control measures/fencing,
- Tree clearing and bulk grading
- Clearing, grubbing and stripping of topsoil,
- Establish soil stockpile areas,
- Begin Site Utility (water, sewer, storm, elec etc.) installations.
- Begin excavations for retaining walls and building foundations.
- Backfill areas of excavation.
- Construct new buildings.
- Installation of Sidewalk, fencing and areas adjacent to building construction.
- Installation of stormwater management areas.
- Final grading and pavement/concrete.
- Stabilization of disturbed areas, as necessary throughout construction.
- Permanent stabilization of disturbed areas.

The main purpose of this study is to analyze the stormwater runoff generated by the developed conditions while providing improved stormwater quality. The stormwater runoff under proposed conditions will maintain existing drainage patterns and ultimately drain into the Sing Sing Kill, following the eastern property line.

The proposed onsite improvements have been designed to limit their impact on natural features. The areas draining to the analysis points have been delineated using topographic maps, aerial and field surveys, and proposed grading plans.

2 HYDROLOGIC STORMWATER MANAGEMENT

2.1 HYDROLOGIC ANALYSIS METHODOLOGY

The quantity of stormwater runoff generated from a watershed can be affected by land development and site improvement projects. Construction activities that change surface vegetation, grades and amounts of impervious areas can decrease the groundwater infiltration. This reduction in infiltration will result in an increase in overland stormwater runoff rates. As a result, hydrologic modeling analyses are performed to evaluate the net effect the proposed site improvements will have on the existing site.

Guidelines outlined by USDA Soil Conservation Services were followed while calculating the runoff curve number and time of concentration for each subarea. The runoff curve numbers (CN) are based on weighted averages of ground cover and soil types. Topographic maps, soils surveys and site visits were used to determine ground cover and underlying soils.

Time of concentration (Tc) represents the time it takes for surface runoff to travel from the most hydraulically distant point within the watershed to the point of analysis. Surface slope, roughness, channel slope and shape, flow patterns and runoff velocities are factors that directly affect the time of concentration. Runoff velocities are based on ground characteristics and flow type. Stormwater runoff flows through drainage areas as sheet flow, shallow concentrated flow, open channel flow or flow in storm sewers. Runoff often begins as sheet flow in the upper limits of the subarea and can be characterized as flow over a broad surface area such as short stretches of grass and/or pavement. Sheet flow then gradually develops into shallow concentrated flow. Open channel flow or concentrated flow occurs when shallow concentrated flow converges into well-defined ditches or storm sewers. The sum of each travel time over the individual surfaces within the subarea determines the time of concentration.

To determine net changes in hydrologic conditions from proposed construction at the site, it was necessary create a model of how the site currently exists and compare that with proposed site conditions. Below are descriptions of how modeling was performed.

2.2 HYDROLOGIC STORM EVENTS

HydroCAD V10 software was used to create hydrologic models and using synthetic storm events to calculate runoff hydrographs. These synthetic storm events are based on statistical analysis of actual storm events for different durations over a broad geographical area. The Soil Conservation Services categorizes rainfall by distribution type associated to a geographical area and by the total number of inches of precipitation that is assumed to occur over a 24-hour duration.

The proposed project lies within the geographical boundary of the Type III rainfall distribution area. The following table lists the rainfall depth for each design storm event to be analyzed, which were obtained through the NRCC & NRCS Extreme Precipitation in New York & New England web service and included in Appendix B for reference. As part of the Stormwater Management Design Manual, July 2024 (Design Manual), specifically section 4.9 Rainfall Data, Distribution Curves and Hydrologic Modeling speaks to creating project specific rainfall distribution curves versus using the pre-established rainfall distributions (Type I, II, III, IV). These steps were followed and project specific rainfall distribution curves were used to analyze the runoff for the project. Table 2, below, indicates rainfall depth from each storm event.

Table 2: Rainfall Data

Design Storm Event	Total Rainfall Depth (Inches)
1-Year	2.78
2-Year	3.41
10-Year	5.14
25-year	6.50
50-year	7.77
100-Year	9.29
200-Year	11.13

3 HYDROLOGIC ANALYSIS OF EXISTING CONDITIONS – PHASE 1

3.1 EXISTING CONDITIONS

For the purposes of this analysis, the extent of the hydrologic model was limited to those areas impacted by the proposed improvement areas. All areas within the project limits currently drain to four design points defined to characterize the natural drainage pattern of the watershed.

Design Point 1 (DP-1) is a low point along the northern property boundary where runoff leaves the site. DP-1 consists of one contributing catchement identified as 1E. Drainage catchment 1E is approximately 2.23 acres in size and mainly consists of mature forest, an old gravel access drive and a federal wetland. Runoff from this area begins with sheet flow from a high spot, continues as shallow concentrated flow through the mature forest with varying understory into the Woodland Federal wetland until it reaches DP-1. Design Point 2 (DP-2) is a low point along the western property line, north of the Van Cortlandt Avenue Cul-da-sac, where runoff leaves the site. DP-2 consists of one contributing catchment identified as 2E. Drainage catchment 2E is approximately 6.02 acres in size and mainly consists of mature forest, with its western boundary acting as the low points within the isolated federal wetland. There is also a portion of the gravel access drive passing through catchment 2E. Runoff from this area begins with sheet flow from a high spot through dense woods, continues as sheet flow across the gravel path, and then continues as sheet flow through more dense mature forest. The runoff then changes to shallow concentrated flow through wooded area and ends with channel flow through a wetland until it reaches DP-2. Design Point 3 (DP-3) is manhole rim & outlet pipe of an existing structure within the Middle School Property. Runoff flows west and south from the existing building and collected and transported through a series of existing pipes and structures until ultimately reaching DP-3 and going into the municipal drainage system. DP-3 consists of one contributing catchment identified as 3E. Drainage catchment 3E is approximately 3.62 acres in size and consists of woods, grassed areas, paved areas for parking & recreational activities, paved roads with curbs and storm sewers, and buildings. Runoff from this area begins with sheet flow near the school gym. It begins to flow through grass, continues across some concrete sidewalk and continues as sheet flow across grass. The runoff then changes to shallow concentrated flow through grassed areas, continues through pavement where it ultimately is collected into the stormwater collection system via an existing catch basin. From there, runoff continues with pipe flow until it reaches DP-3. Design Point 4 (DP-4) is a low point along the eastern property boundary where runoff leaves the site via the Sing Sing Kill. DP-4 consists of one contributing catchment identified as 4E. Drainage catchment 4E is approximately 18.56 acres in size and mainly consists of mature forest. In addition, some of the area consists of gravel impervious surfaces as well as some grass lawn. Runoff from this area begins with sheet flow through a light wooded area, continues as shallow concentrated flow through woods, then crosses a utility access road traveling east down the hill. It continues as shallow concentrated flow through mature forest again. Runoff leaves the site as channel flow in the Sing Sing Kill ultimately at DP-4.

The limits of the drainage boundaries were defined based on surveyed topography, additional Lidar contours from NYS and USGS maps. A copy of the existing conditions drainage map is included as Figure 2.

See Table 3 below for a summary of the existing subareas.

Table 3: EXISTING CONDITIONS - DRAINAGE AREAS

Design Point	Drainage Area	Area (Acres)	Weighted CN	Tc (mins)
DP-1	Drainage Area – 1 DA-1/1E	2.226	80	19.1
DP-2	Drainage Area – 2 DA-2/2E	6.017	83	47.3
DP-3	Drainage Area – 3 DA-3/3E	3.612	93	13.4
DP-4	Drainage Area – 4 DA-4/4E	18.56	75	26.4

3.2 EXISTING CONDITIONS – HYDROLOGIC ANALYSIS RESULTS

The following table (Table 4) summarizes the peak flows generated from the watershed for the existing site for the various storm events (see Appendix for HydroCAD calculations and results).

Table 4: RUNOFF – EXISTING CONDITIONS

DESIGN POINT	1-YEAR STORM	10-YEAR STORM	100-YEAR STORM
DP-1	1.90 cfs	4.87 cfs	9.74 cfs
DP-2	3.75 cfs	9.10 cfs	17.92 cfs
DP-3	6.99 cfs	12.58 cfs	20.96 cfs
DP-4	9.47 cfs	29.36 cfs	64.64 cfs

4 HYDROLOGIC ANALYSIS OF PROPOSED CONDITIONS – PH 1 & 2

4.1 PROPOSED CONDITIONS (PH 1 – COMPLETE)

The proposed project involves the construction of a heavy-duty asphalt driveway to connect Ossining Middle School buildings to Stormytown road with sidewalks for site navigation, there will also be one parking lot installed to promote staff to park on the property and not along Van Cortlandt Avenue. Stormwater runoff from the construction will be directed to the proposed stormwater collection & management facilities. The stormwater management facilities, along with green infrastructure techniques (where applicable), will provide the required runoff reduction volume, water quality volume, and water quantity mitigation as outlined in the New York State Stormwater Management Design Manual.

The proposed onsite improvements have been designed to limit their impact on natural features when practical. To comply with the water quality and quantity requirements of the General Permit GP-0-25-001, the stormwater runoff from portions of the proposed site will be directed to the stormwater management facilities. Portions of the site will be re-contoured to accommodate the proposed site improvements. To analyze the proposed site improvements, the stormwater management plan utilizes the same four design points as discussed from the existing conditions (see Figure 3).

Design Point 1 (DP-1) is a low point along the northern property boundary where runoff leaves the site. DP-1 consists of one contributing catchement identified as Drainage Area – 1 (DA-1/1P). Drainage catchment 1P is approximately 1.75 acres in size and mainly consists of mature forest and a federal wetland. Runoff from this area begins with sheet flow from a high spot, continues as shallow concentrated flow through the mature forest with varying understory into the Woodland Federal wetland until it reaches DP-1. Design Point 2 (DP-2) is a low point along the western property line, north of the Van Cortlandt Avenue Cul-da-sac, where runoff leaves the site. DP-2 consists of one contributing catchment identified as Drainage Area – 2 (DA-2/2P). Drainage catchment 2P is approximately 2.72 acres in size and mainly consists of mature forest, with its western boundary acting as the low points within the isolated federal wetland. The drainage area starts along the back of the curbline of the new roadway. Runoff from this area begins with sheet flow from a high spot of the driveway through grass/meadow & dense woods. The runoff then changes to shallow concentrated flow through wooded area and ends with channel flow through a wetland until it reaches DP-2. Design Point 3 (DP-3) is manhole rim & outlet pipe of an existing structure within the Middle School Property. Runoff flows west and south from the existing building and collected and transported through a series of existing pipes and structures until ultimately reaching DP-3 and going into the municipal drainage system. DP-3 consists of one contributing catchment identified as Drainage Area – 3 (DA-3/3P). Drainage catchment 3P is approximately 3.68 acres in size and consists of grassed areas, paved areas for parking & recreational activities, paved roads with curbs and storm sewers, and buildings. Runoff from this area begins with sheet flow near the school gym. It begins to flow through grass, continues across some concrete sidewalk and continues as sheet flow across grass. The runoff then changes to shallow concentrated flow through grassed areas, continues through pavement where it ultimately is collected into the stormwater collection system via a new catch basin. From there, runoff continues with pipe flow until it reaches DP-3.

Design Point 4 (DP-4) is a low point along the eastern property line where runoff leaves the site via the Sing Sing Kill. DP-4 consists of three contributing catchments identified as Drainage Area – 4A, Drainage Area – 4B, and Drainage Area – 4C (DA-4A/4AP, DA-4B/4BP, DA-4C/4CP). Drainage

catchment 4AP is 4.528 acres in size and consists of mature forest, grassed area/sediment basin and a portion of the new driveway. Runoff from this area begins with sheet flow from a high spot located in the forested area. It then changes to a shallow concentrated flow through woods and onto the proposed roadway. Next, the runoff changes to pipe flow through 12" pipes. Lastly, it ends in pipe flow through an 18" pipe and discharges into the sediment basin. This basin collects and detains runoff for the duration of construction of Phase 1. Drainage catchment 4BP is 1.403 acres in size and consists of woods, paved parking, and some grassed areas. Runoff from this area begins with sheet flow from a high spot located in the mature forested area, continues through grassed area, and across the sidewalk/asphalt roadway. Then, it continues as shallow concentrated flow across the parking lot where it is collected via a catch basin. It continues as pipe flow in a 15" pipe that discharges to a flared end section with rip rap. Drainage catchment 4CP is 16.601 acres in size and consists mainly of mature forest, some gravel surfaces and wetlands surrounding the Sing Sing Kill. Runoff from this area begins with sheet flow from a high spot located in the mature forest. Then, it changes to shallow concentrated flow through the woods, crossing the utility driveway, and continues back through the mature forest. Finally, it switches to channel flow in the Sing Sing Kill and ultimately leaves the site at DP-4. 4AP & 4BP reach through 4CP to the ultimate outlet of DP-4 via some nature channels and shallow concentrated flow down the existing slope.

See Table 5 for a summary of the proposed subareas.

Table 5: PROPOSED CONDITIONS – DRAINAGE AREAS

Design Point	Drainage Area	Area (Acres)	Weighted CN	Tc(min)
DP-1	Drainage Area – 1 DA-1/1P	1.096	79	19.1
DP-2	Drainage Area – 2 DA-2/2P	2.715	84	31.7
DP-3	Drainage Area – 3 DA-3/3P	3.684	93	13.2
DP-4	Drainage Area – 4A DA-4A/4AP	4.528	84	21.6
	Drainage Area – 4B DA-4B/4BP	1.403	95	21.2
	Drainage Area – 4C DA-4C/4CP	16.601	74	26.4

4.2 PROPOSED CONDITIONS – HYDROLOGIC ANALYSIS RESULTS

The following table summarizes the peak flows generated from the proposed site for the various storm events at the analysis point (see Appendix D for hydrologic calculations and results).

Table 6: RUNOFF – PROPOSED CONDITIONS

DESIGN POINT	1-YEAR STORM	10-YEAR STORM	100-YEAR STORM
DP-1	1.39 cfs	3.70 cfs	7.53 cfs
DP-2	2.24 cfs	5.21 cfs	9.97 cfs
DP-3	7.17 cfs	12.89 cfs	21.47 cfs
DP-4	14.28 cfs	39.14 cfs	82.22 cfs

Using the same design points as defined under existing conditions, stormwater flows have been reviewed to ensure the peak flows are mitigated per the SPDES General Permit. Table 6 summarizes the peak flows generated from the site under existing and proposed conditions for the various storm events at each design point. The stormwater filtering practices, and underground stormwater detention and respective outlet structures have been designed to limit the projects impact on natural features and to reduce the peak flow rates from the site for the 1-year, 10-year and 100-year 24-hour storm events to comply with the water quantity requirements of the General Permit GP-0-25-001 (see Appendix C and D for computer calculations and results).

Table 7: RUNOFF – EXISTING, PROPOSED & MITIGATED CONDITIONS

DESIGN POINT 1	1-YEAR STORM EVENT	10-YEAR STORM EVENT	100-YEAR STORM EVENT
Existing Conditions	1.90 cfs	4.87 cfs	9.74 cfs
Proposed Conditons	1.39 cfs	3.70 cfs	7.53 cfs
Mitigated Conditions	1.39 cfs	3.70 cfs	7.53 cfs

DESIGN POINT 2	1-YEAR STORM EVENT	10-YEAR STORM EVENT	100-YEAR STORM EVENT
Existing Conditions	3.75 cfs	9.10 cfs	17.92 cfs
Proposed Conditons	2.24 cfs	5.21 cfs	9.97 cfs
Mitigated Conditions	2.24 cfs	5.21 cfs	9.97 cfs

Existing Conditions	6.99 cfs	12.58 cfs	20.96 cfs
Proposed Conditons	7.17 cfs	12.89 cfs	21.47 cfs
Mitigated Conditions	7.17 cfs	12.89 cfs	21.47 cfs

DESIGN POINT 4	1-YEAR STORM EVENT	10-YEAR STORM EVENT	100-YEAR STORM EVENT
Existing Conditions	9.47 cfs	29.36 cfs	64.64 cfs
Proposed Conditons	14.28 cfs	39.14 cfs	82.22 cfs
Mitigated Conditions	8.81 cfs	28.64 cfs	62.95 cfs

4.3 PROPOSED CONDITIONS (PH 2)

The proposed phase of the project involves the construction of a new middle school building (77,000 SF three-story building) along with but not limited to parking lots, access roadways (operational use and emergency use), sidewalks, recreational areas, building underground utilities as well as stormwater collection/detention facilities. Stormwater runoff from the construction will be directed to the proposed stormwater collection & management facilities. The stormwater management facilities, along with green infrastructure techniques (where applicable), will provide the required runoff reduction volume, water quality volume, and water quantity mitigation as outlined in the New York State Stormwater Management Design Manual.

The proposed onsite improvements have been designed to limit their impact on natural features when practical. To comply with the water quality and quantity requirements of the General Permit GP-0-25-001, the stormwater runoff from portions of the proposed site will be directed to the stormwater management facilities. Portions of the site will be re-contoured to accommodate the proposed site improvements. To analyze the proposed site improvements, the stormwater management plan utilizes the same four design points as discussed from the existing conditions (see Figure 3).

Design Point 1 (DP-1) is a low point along the northern property boundary where runoff leaves the site. DP-1 consists of one contributing catchement identified as Drainage Area – 1 (DA-1/1P). Drainage catchment 1P is approximately 1.09 acres in size and mainly consists of mature forest and a federal wetland. Runoff from this area begins with sheet flow from just off of Stormytown Road in the northwest corner of the DA, continues as shallow concentrated flow through the mature forest with varying understory into the Woodland Federal wetland until it reaches DP-1.

Design Point 2 (DP-2) is a low point along the western property line, north of the Van Cortlandt Avenue Cul-da-sac, where runoff leaves the site. DP-2 consists of one contributing catchment identified as Drainage Area – 2 (DA-2/2P). Drainage catchment 2P is approximately 2.45 acres in size and mainly consists of mature forest, with its western boundary acting as the low points within the isolated federal wetland. The drainage area starts along the back of the curbline of the new roadway. Runoff from this area begins with sheet flow from a high spot of the driveway through grass/meadow & dense woods. The runoff then changes to shallow concentrated flow through wooded area and ends with channel flow through a wetland until it reaches DP-2.

Design Point 3 (DP-3) is manhole rim & outlet pipe of an existing structure within the Middle School Property. Runoff flows west and south from the existing building and collected and transported through a series of existing pipes and structures until ultimately reaching DP-3 and going into the municipal drainage system. DP-3 consists of one contributing catchment identified as Drainage Area – 3 (DA-3/3P). Drainage catchment 3P is approximately 3.68 acres in size and consists of grassed areas, paved areas for parking & recreational activities, paved roads with curbs and storm sewers, and buildings. Runoff from this area begins with sheet flow near the school gym. It begins to flow through grass, continues across some concrete sidewalk and continues as sheet flow across grass. The runoff then changes to shallow concentrated flow through grassed areas, continues through pavement where it ultimately is collected into the stormwater collection system via a new catch basin. From there, runoff continues with pipe flow until it reaches DP-3.

Design Point 4 (DP-4) is a low point along the eastern property line where runoff leaves the site via the Sing Sing Kill. DP-4 consists of four (4) contributing catchments identified as Drainage Area – 4A, Drainage Area – 4B, Drainage Area – 4C and Drainage Area – 4D (DA-4A/4AP, DA-4B/4BP, DA-4C/4CP, DA-4D/4DP). Drainage catchment 4AP is 6.65 acres in size and consists of the New Building, the new parking lot, access driveways, sidewalks, portions of the existing driveway, grass areas and some remaining mature forest. Runoff from this area begins at the face of building on the southwestern corner as sheet flow, traveling across grass and sidewalk before turning to shallow concentrated flow. The Runoff shortly after continues into the pavement of the existing driveway as shallow concentrated flow. Finally, entering a catch basin where the runoff continues as pipe flow through the conveyance system ultimately entering the Stormwater Pond. Drainage catchment 4BP is 7.47 acres in size and consists of a recreation field for students use, asphalt pathways to get from the building to the rec field and a meadow embankment. Runoff from this area begins in the center of the rec field which is graded with a crown. From there the runoff travels via sheet flow and eventually as shallow concentrated flow through the grassed rec field until it enters a catch basin at

the corner of the field. The perimeter catch basins each have perimeter ditch lines directing runoff to the various inlet structures. The runoff continues to the Stormwater Pond via pipe flow.

Drainage catchment 4CP is approximately 9.72 acres in size and consists mainly of mature forest, some gravel surfaces and wetlands surrounding the Sing Sing Kill. Runoff from this area begins with sheet flow from a high spot located on the embankment of the rec field. Then, it changes to shallow concentrated flow through the woods, crossing the utility driveway, and continues back through the mature forest. Finally, it switches to channel flow in the Sing Sing Kill and ultimately leaves the site at DP-4. 4AP, 4BP & 4DP all get conveyed and detained within the stormwater pond which then reaches through 4CP to the ultimate outlet of DP-4 via an armored natural channel.

Drainage catchment 4DP is 1.36 acres in size and consists of paved parking, sidewalks, and some grassed areas. Runoff from this area begins with sheet flow from the crown in the existing access road, flows to the east via sheet flow into an existing catch basin. Then from that point runoff is conveyed via pipe flow until it reaches an intermediate detention/infiltration system. Runoff from this system is released via a control structure into the stormwater conveyance system that leads to the Stormwater Pond and Design Point – 4.

See Table 8 for a summary of the proposed subareas.

Table 8: PROPOSED CONDITIONS – DRAINAGE AREAS

Design Point	Drainage Area	Area (Acres)	Weighted CN	Tc(min)
DP-1	Drainage Area – 1 DA-1/1P	1.096	80	12.2
DP-2	Drainage Area – 2 DA-2/2P	1.473	83	36.4
DP-3	Drainage Area – 3 DA-3/3P	3.684	93	13.2
DP-4	Drainage Area – 4A DA-4A/4AP	6.651	93	12.6
	Drainage Area – 4B DA-4B/4BP	7.473	74	17.1
	Drainage Area – 4C DA-4C/4CP	9.715	71	12.4
	Drainage Area – 4D DA-4D/4DP	1.363	95	6

The following table summarizes the peak flows generated from the proposed site for the various storm events at the analysis point (see Appendix D for hydrologic calculations and results).

Table 9: RUNOFF – PROPOSED CONDITIONS

DESIGN POINT	1-YEAR STORM	10-YEAR STORM	100-YEAR STORM
DP-1	1.15 cfs	2.93 cfs	5.78 cfs
DP-2	1.77 cfs	4.26 cfs	8.31 cfs
DP-3	7.17 cfs	12.89 cfs	21.47 cfs
DP-4	22.70 cfs	56.62 cfs	114.75 cfs

Using the same design points as defined under existing conditions, stormwater flows have been reviewed to ensure the peak flows are mitigated per the SPDES General Permit. Table 6 summarizes

the peak flows generated from the site under existing and proposed conditions for the various storm events at each design point. The stormwater filtering practices, and underground stormwater detention and respective outlet structures have been designed to limit the projects impact on natural features and to reduce the peak flow rates from the site for the 1-year, 10-year and 100-year 24-hour storm events to comply with the water quantity requirements of the General Permit GP-0-25-001 (see Appendix C and D for computer calculations and results).

Mitigated Conditions	5.47 cfs	28.64 cfs	62.95 cfs

5 STORMWATER MANAGEMENT FACILITY - HYDRAULIC SUMMARY

5.1 STORMWATER MANAGEMENT FACILITY RESULTS (PHASE 1)

Stormwater management facilities will be constructed at the site and receive drainage from the developed impervious areas. The stormwater management facilities are designed to mitigate the increased stormwater runoff generated from the addition of impervious cover. The stormwater management facilities will decrease the rate at which the stormwater is discharged from the site.

The stormwater management facilities have been sized using the criteria set forth within the NYS Stormwater Management Design Manual and the computer modeling software "HydroCAD." This software analyzes the peak inflow from the watershed areas and calculates discharge based upon storage characteristics such as depth, area, volume, and outlet structure controls (computer calculations and results are included in Appendix D).

As part of Phase 1, two management facilities are being installed. One is a permanent facility, that being an underground infiltration system. The second is a temporary sediment basin which will be installed and maintained throughout Phase 1 construction and during the beginning of Phase 2's construction. At that point it will be demolished/relocated as necessary.

The following stormwater management facilities have been designed to mitigate the 10-year and 100-year storm events as required by the SPDES General Permit. Additionally, the facilities have been designed to provide 24-hour extended detention volume of the post-development 1-year storm (Channel Protection Volume, CPv).

The facilities provide more than the 4,500 cubic-feet of storage needed to provide extended detention of the 1-year storm. The channel protection volume release rate is controlled by the outlet structures. Required outlet size to meet the required release rate was however smaller than three (3) inches in diameter so the outlet sizes have defaulted to three (3) inch diameter openings. The total storage provided is approximately 15,856 cubic-feet.

The peak outflows and ponding elevations from the stormwater management facilities during the various storm events is summarized in Table 8.

Table 11: UNDREGROUND DETENTION SYSTEM

Design Storm Event	Post-Dev. Inflow (cfs)	Post Dev Outflow (cfs)	Time to Peak Outflow (hrs)	Ponding Elevation (ft)	Storage Volume Used (cf)
1-Year	2.33	0.24	13.20	348.18	5,227
10-Year	4.10	1.60	12.66	349.05	8,843
100-Year	6.81	3.33	12.42	350.22	12,632
Chamber Bottom Elev.	347.50'				
Outlet Pipe Elev.	347.00'				
Outlet Str. Top Elev.	356.78'				

Table 12: SEDIMENT BASIN

Design Storm Event	Post-Dev. Inflow (cfs)	Post Dev Outflow (cfs)	Time to Peak Outflow (hrs)	Ponding Elevation (ft)	Storage Volume Used (cf)
1-Year	4.59	0.24	13.20	341.89	14,767
10-Year	10.52	1.54	13.30	343.96	40,449
100-Year	19.88	5.26	12.89	346.66	56,497
Basin Bottom Elev.	338.00’				
Outlet Pipe Elev.	336.00’				
Outlet Str. Top Elev.	347’.00’				
Overflow Spillway	349.00’				

These stormwater management facilities mitigate the 10-year (Qp) and 100-year (Qf) storm events and provide the Channel Protection Volumes (CPv) as required by the New York State Pollutant Discharge Elimination System (SPDES) General Permit # GP-0-25-001.

5.2 STORMWATER MANAGEMENT FACILITY RESULTS (PHASE 2)

Stormwater management facilities will be constructed at the site and receive drainage from the developed impervious areas. The stormwater management facilities are designed to mitigate the increased stormwater runoff generated from the addition of impervious cover. The stormwater management facilities will decrease the rate at which the stormwater is discharged from the site.

The stormwater management facilities have been sized using the criteria set forth within the NYS Stormwater Management Design Manual and the computer modeling software “HydroCAD.” This software analyzes the peak inflow from the watershed areas and calculates discharge based upon storage characteristics such as depth, area, volume, and outlet structure controls (computer calculations and results are included in Appendix D).

Phase 2 incorporates one large stormwater permanent micropool extended detention pond to mitigate the peak inflow in the proposed development conditions. This system has been designed to appropriately treat both necessary water quality volume as well as detain the larger storm events effectively.

The following stormwater management facility has been designed to mitigate the 10-year and 100-year storm events as required by the SPDES General Permit. Additionally, the facility has been designed to provide 24-hour extended detention volume of the post-development 1-year storm (Channel Protection Volume, CPv).

The facility provides more than the 59,720 cubic-feet of storage needed to provide extended detention of the 1-year storm. The channel protection volume release rate is controlled by the outlet structure. The outlet size required to meet the required release rate is four (4) inches in diameter. The total storage provided is approximately 217,293 cubic-feet.

The peak outflows and ponding elevations from the stormwater management facilities during the various storm events is summarized in Table 8.

Table 13: MICROPOOL EXTENDED DETENTION POND (MEDP-1)

Design Storm Event	Post-Dev. Inflow (cfs)	Post Dev Outflow (cfs)	Time to Peak Outflow (hrs)	Ponding Elevation (ft)	Storage Volume Used (cf)
1-Year	15.06	0.68	12.15	289.27	48,975
10-Year	30.01	8.65	12.13	291.05	89,681
100-Year	56.31	29.72	12.14	292.45	125,758

Basin Bottom Elev.	280.5’
Outlet Pipe Elev.	279.50’
CPv Device Elev.	286.50’
Weir (24” W x 12” H) x 3	290.50’
Outlet Str. Top Elev.	292.50’
Overflow Spillway	293.50’

These stormwater management facilities mitigate the 10-year (Qp) and 100-year (Qf) storm events and provide the Channel Protection Volumes (CPv) as required by the New York State Pollutant Discharge Elimination System (SPDES) General Permit # GP-0-25-001.

5.3 ON-SITE SEWER DESIGN METHODOLOGY

The proposed onsite stormwater drainage pipes are designed to capture the stormwater runoff associated with the proposed buildings, parking lots, sidewalks, bus loop and access road and then direct it to the stormwater chambers. HydroCAD was used to size the full flow capacities for the proposed storm sewer system using Smooth Interior Corrugated Polyethylene Pipe (HDPE) with a Manning’s roughness coefficient of 0.013.

Calculations for stormwater conveyance are included within Appendix E.

6 STORMWATER QUALITY MANAGEMENT

6.1 STORMWATER QUALITY ANALYSIS METHODOLOGIES

The quality of runoff generated within a watershed can be affected by land development and site improvement projects. Pollutants carried by surface runoff can degrade the water quality downstream.

The minimum threshold for mitigating water quality has been established within the NYS SPDES General Permit requirements for stormwater discharges from construction disturbances greater than one (1) acre. The technical standards associated with the SPDES General Permit require the capture and treatment of 90% of the average annual stormwater runoff volume.

Water quality can be further enhanced by meeting the runoff reduction volume requirement. The intent of the requirement is to utilize green infrastructure techniques and standard stormwater management practices to replicate pre-development hydrology. Runoff reduction volume is a function of the Hydrologic Soil Group Specific Reduction Factor and can be calculated using the methods given in the NYS DEC Stormwater Management Design Manual. The Uniform Stormwater Sizing Criteria within the manual was used to calculate the required water quality volume and runoff reduction volume for the project. The calculations are included in **Appendix E**.

6.2 STORMWATER QUALITY & RUNOFF REDUCTION ANALYSIS DATA

New development projects require water quality volume (WQv) treatment for 100% of the new impervious cover if standard stormwater practices are utilized. Required water quality volume is adjusted based on the amount of new impervious cover. Redevelopment projects require different levels of water quality volume treatment depending on what category the project falls under while also treating 100% of all new impervious area that is included in the project. Redevelopment Projects are not required to meet the Run Off Reduction component as it sometimes is difficult due to existing site conditions.

As this project is being constructed in multiple phases, as previously discussed, installation of all necessary water quality practices wasn't practical during each phase. To ensure the best practices for stormwater water quality treatment for the entire project site a portion of the Phase 1 WQv will not be treated as part of the first phase and will be treated through various practices installed during Phase 2. In Phase 1, an underground infiltration system is going to be installed to treat a sub-catchment that includes both new development and redevelopment. There will also be an alternative practice (flow based) device installed as part of Phase 1 containing redevelopment areas.

To begin to meet the full water quality volume (WQv) and minimum runoff reduction volume (RRv) criteria for the entire project, stormwater devices are proposed to be used at the site as described below:

Phase 1 – AMD Driveway & Parking Lot

The project is a redevelopment project that contains portions of new developed impervious areas, redeveloped impervious areas and redeveloped impervious to pervious areas. Due to this fact, 100% Water Quality Volume is required for all the new impervious areas. For the areas of redevelopment, they fall into one of the various options, for this project specifically Option II & Option IV as described in Chapter 9 of the Design Manual. As the project is a redevelopment project, Run Off Reduction isn't required in the redevelopment areas.

Due to the phased nature of the project, installing all final SMPs for WQv treatment isn't practical, this specifically applies to Drainage Area – 4 that contains three (3) subcatchments. Catchment 4BP includes about 50% redeveloped impervious area and 33% new impervious area, with the remaining 17% being new pervious grassed areas. This catchment will be collected via a stormwater collection system and then treated by an underground infiltration system. This system will treat both the necessary WQv for all areas and the RRv for the new impervious areas. Subcatchment 4AP includes mostly new impervious areas with a small amount of redeveloped impervious area, grassed areas adjacent to the driveway and the mature forested area that's remaining. This areas have been collected and sent to the Temporary Sediment Basin that will be used during Phase 1 and continuing into Phase 2. With the earth work necessary to build the system it was not practical to install the underground infiltration system as it will need to function with the site as designed in Phase 2. With this being the case the WQv will be accounted for in practice installed as part of Phase 2. Subcatchment 4CP is undeveloped and is to remain mostly that way throughout Phase 2.

Drainage Area – 3 has one subcatchment that includes mostly redeveloped impervious area and some new impervious areas. As this basically the existing school campus (driveway, parking areas, maintenance/garage buildings) there is not a lot of space and head to construction a SMP that would treat the necessary WQv for both new impervious and redeveloped impervious as well as the necessary RRv. With those conditions, a proprietary flow through practice is being proposed. This unit has been approved by the necessary agencies to be used not only for redevelopment projects but for new development projects as well. The sizing criteria for the Contech Jellyfish Unit (or approved equal) was based off of the Design Manual Appendix B. DP-3 will have runoff flow across redeveloped hardscapes and be collected with new drainage structures with sumps promoting solids to settle out of the system. Ultimately, runoff will flow through a proprietary practice (proprietary filter unit). Device will be an online practice with an internal bypass.

DP-1 & DP-2 have reductions in impervious area and will receive soil restoration as necessary to create new pervious areas.

The water quality and runoff reduction requirements for the project site were analyzed for the disturbed development area and are summarized below for DP-3 and DP-4:

Table 14: Required & Provided WQv (Phase 1)

DESIGN POINT	Total Req. WQv	Total Provided WQv	Practice Used
DP-3	5,722 cf	5,722> cf	Flow Through Practice
DP-4	4,084 cf	15,849.6 cf	Underground Infiltration (Phase 1)
	4,614 cf	111,339.5 cf	Underground Infiltration (Phase 2)

The following section discusses the techniques used to reduce the RRv and measures reviewed to achieve the RRv.

Soil Restoration

Soil restoration is required for this project for the pervious areas located within the development area where soils have been disturbed and will be vegetated after construction. This process will restore the original properties and porosity of the soil by deep till and amendment as detailed in the Stormwater Management Design Manual.

The potential Green infrastructure techniques used for Runoff Reduction are discussed below based on the site limitations and constraints.

Sheet flow to Filter Areas/Strips

Areas that are undeveloped that do not flow to the stormwater management practices will continue to flow to undisturbed areas such as surrounding vegetation and the existing drainage swales.

Tree Planting/Tree Pit

A landscaping plan has not been developed for this phase. Should a landscaping plan be developed under a future project, tree planting/tree pits will be considered.

Green Infrastructure

The proposed underground infiltration system has been designed to provide treatment to meet the requirements for WQv & RRv. The system has been sized to reduce 4,084 cf. The WQv not treated as part of phase will be accounted for in the sizing of the underground infiltration system that is proposed as part of phase 2. Calculations will indicate that as such and will account for the impervious area that is to be built in Phase 1 as new impervious in Phase 2.

Alternative Proprietary Devices

As previously discussed due to limiting site conditions a proprietary practice is being proposed in the place of a standard SMP. This practice is a filter unit and is sized as such. The Jellyfish (Contech) or Bayfilter (ADS) or an approved equal, will be used for this project. The filter unit has individual cartridges that allow water to flow throw them, adding the additional cartridges allows for more surface area to be obtained in a relatively small area allowing the unit to be placed in a completely developed area that would typically not be able to have a water quality practice. This unit is sized to treat the remainder of the required water quality volume, 3,590 cf.

Phase 2 – New Building, Parking Lot and Recreational Field Project

During the continued design of the phased project it was determined that a singular large infiltration system was not going to be practical to provide the necessary treatment of a new building, parking lots and a new recreational field area plus the required WQv from Phase 1 that could not be treated during that construction project. Phase 2 incorporates three practices to treat all of the requirements for RRv and WQv. They are the following, Conservation of Natural Areas (RR-1), Filtration Bioretention (F-5) and Micropool Extended Detention (P-1). Between these three practices all Run Off Reduction and Water Quality Volume was met. In a good faith effort to meet the greatest intent of the General Permit, Phase 2 was designed as a New Development Project even though it a continuation of the original Phase 1 project, that was in fact a redevelopment project of an existing school site.

Phase 2 focuses on Drainage Area – 4 to provide the necessary Water Quality Volume and Run Off Reduction for the New Building Site Development. DA-4 is made up of four sub-catchments. Catchment 4AP & 4DP incorporate both new development/redevelopment from Phase 1 as well as

the new development of the building and its associated parking, sidewalks, pathways, grassed play areas and landscaping. Catchment 4BP consists mostly of the recreational play area (grassed field) and it includes the asphalt pathway to get to the field. Catchment 4CP is mostly undeveloped and as such has minimal WQv. Overall DP-4 has approximately 24.7 acres of contributing area and is about 27% impervious. The Required Water Quality Volume for Phase 2 of this Project is 39,111 cubic feet or 0.90 acre-feet.

DP-1, DP-2 & DP-3 have either no work associated to them in Phase 2 or they have reductions in impervious area and will receive soil restoration as necessary to create new pervious areas.

Table 15: Required & Provided WQv & RRv (Phase 2 Revised)

DESIGN POINT	Total Req. WQv	Total Provided RRv	Total Provided WQv	Provided RRv	Provided WQv	Practice Used
DP-4	39,111 cf	9,140 cf	35,392	6,545 cf	-	Conservation of Natural Areas (RR-1) – RRv
				2,595 cf	1,745 cf	Filtration Bioretention (F-5)
				-	33,647 cf	Micropool Extended Detention Pond (P-1)

6.3 CLIMATE CHANGE CONSIDERATIONS

This report presents the consideration for future physical risks due to climate change, in accordance with Part III.A.2 of the permit. Overall site planning, control measures and practices, conveyance systems and detention systems were evaluated against the seven (7) physical risks identified by NYSDEC due to climate change pursuant to the Community Risk and Resiliency Act (CRRA), 6 NYCRR 490, and associated guidance. Appendix J provides a description of each consideration, specific to the project.

7 EROSION AND SEDIMENT CONTROL MEASURES

7.1 SUMMARY OF EROSION AND SEDIMENT CONTROL MEASURES

Temporary erosion and sediment control features have been incorporated into the design of the proposed site improvements. These measures shown on the plans and in the SWPPP indicate the suggested minimum measures required by the NYS SPDES General Permit. Site conditions may warrant the installation of additional measures and/or the modification of existing measures. Erosion and sediment control is an ever-changing process that is dependent on-site conditions and construction methods employed.

A temporary construction entrance and staging areas will be established for the project area to prevent sediment and debris from being transported by vehicles off the construction site. Stockpile areas will be surrounded with a silt fence to prevent the movement of soil. The permanent erosion and sediment control features include the re-establishment of permanent grass, a turf field that drains through sand and an isolator row within the underground chamber facility.

The erosion and sediment control plans have been developed to prevent the unwanted movement of soil during the construction phase. Temporary filter fabric inlet protection will be placed around

drainage structures, silt fence will be installed throughout the site, and check dams will be placed within the any swales.

7.2 SUMMARY OF POLLUTION PREVENTION MEASURES

All construction materials (oils, hydraulic fluids, etc.) shall be stored within a storage trailer to prevent exposure to stormwater, thus preventing the materials from becoming a pollutant source. Additionally, the contractor shall review the site daily and collect all waste material. All waste material shall be immediately removed from the site to prevent exposure to stormwater. On the occasion where the material cannot be immediately removed, silt fence and trenches shall be installed immediately. Any spills shall be immediately removed from the site and disposed of in a legal and environmentally sensitive manner.

The contractor will be required to be familiar with the requirements of the SPDES General Permit, the construction documents and this Stormwater Pollution Prevention Plan. Conditions may require amendments to the Stormwater Pollution Prevention Plan, but only with the authorization from a qualified professional.

7.3 CONSTRUCTION SEQUENCE SCHEDULE

A detailed construction sequence has been included on the site plans and summarized below;

Construction Sequence

Step 1 – Pre-Construction Actions

The stabilized construction entrances shall be established to capture mud and debris from entering the public highways, clear and grub areas as necessary. All bare areas shall be stabilized within 14 days with gravel or vegetative cover. Construction ditches, silt fence, and orange construction fencing shall be installed as shown on the construction drawing prior to work. Sediment Basin Installation is to be a primary focus before tree clearing efforts being.

Step 2 – Tree Clearing & Grubbing & Bulk Grading

Clear and grub areas indicated for tree removal. Mulch and stabilize as necessary to keep the total soil disturbance at any given time to 5 acres or less. Bulk Grade and stabilize as necessary.

Step 3 – Site Staging and Coordination

Coordinate staging areas with Owner, Architect, Engineer, and Construction Manager as necessary.

Step 4 – Runoff and Drainage Control

Divert offsite stormwater runoff from disturbed areas. All temporary and permanent ditches shall be installed and lined with stone/rock or seeded (as needed). Install sediment basin and stabilize area.

Step 5 – Demolition, Excavation, Drainage & Grading

Demolition, Excavation, Backfill and Temporary Stabilization

Once the sediment basin is in place, new drainage is to be installed along the road corridor. Subsequently, grade and stockpile surplus soils at indicated locations. Throughout bulk grading, demolition and any excavation work maintained a maximum of 5 acres of soil disturbance. All drainage trenches to be backfilled and temporarily stabilized.

Step 6 – Grading

Limit the initial clearing to areas where sediment control measures need to be installed. Once all sediment control measures are installed, excavation and fill activities associated with the with bulk grading for the parking areas and access driveway can begin. As fill is being brought to the site, wall

foundations and building slabs should be installed to protect all subgrades from weathering or erosion. Unsuitable soils will have to be removed and replaced with structural fill. All topsoil shall be stockpiled, protected, and stabilized. The asphalt areas shall be stabilized with their subbase to prevent erosion. Limit all grading and clearing activities to under 5 acres. Stabilize disturbed areas with temporary or permanent erosion control measures before starting additional disturbance.

Step 7 – Erosion Control

All perimeter areas and slopes shall be stabilized immediately. If construction activities cease during construction, stockpiles and exposed areas shall be stabilized by seed, mulch or other appropriate measures as soon as possible, but in no case more than 14 days after construction activity has ended. All areas shall be temporarily or permanently stabilized if work is delayed.

Step 8 – Sediment Control

All temporary silt fencing shall be in place to prevent sediment from being transported offsite. All areas shall be stabilized with stone fill or seeded as shown on the construction drawings. All sediment from the temporary inlet protection areas shall be removed as necessary. All necessary controls shall be kept in place and maintained to prevent sediment entering existing municipal infrastructure until the site is stabilized.

Step 9 – Maintenance and Inspection

During construction, inspection shall be performed every 7 calendar days by an owner retained qualified professional and recorded in the inspection schedule. Two inspections every 7 calendar days will be required once greater than 5 acres of earth has been disturbed. All practices shall be adequately operational, maintained and sediment removed as needed. All inspections shall look for evidence of erosion on the site, sediment entering the drainage systems, and signs of soil and mud transported from the site. All control measures shall be routinely maintained and whenever a problem is identified. All paperwork shall be kept on-site.

Step 10 – Building Pad, Driveways, Parking Lot, Site Improvements & Utility Construction

Once all erosion and sediment controls are in place and bulk grading has been completed contractor is to start fine grading for building pad (including excavations for foundations), driveways & parking lot construction and storm utilities. All excavations are to be backfilled with suitable material (general fill in unpaved areas and subbase/structural fill in areas of pavement and concrete. Keep all un-stabilized soil disturbance to a maximum of five (5) acres at a given time.

Step 11 – Grading and Landscaping

All disturbed areas shall be stabilized with either stone or the appropriate seed mixture as defined in the contract documents. All stabilization shall be completed no later than 14 days after construction activity has ended. All temporary measures shall be removed once grass, etc. has been established. Install all plantings within stream bank and within the stormwater planters.

Step 12 – Final Restoration and Stabilization

Once all project components are installed all areas are to receive final stabilization (seed and mulch mix or impervious surface). Sediment basin to be converted to permanent stilling basin. Remove all temporary erosion and sediment control devices.

7.4 POST CONSTRUCTION MAINTENANCE PLAN

Maintenance of the stormwater management facilities and storm sewer system will be part of the annual maintenance completed by the Owner and Operator of the property. The stormwater management facilities should be inspected every five years and periodically cleaned to remove the

accumulation of sediment. Trash and debris should be removed from the stormwater structures as needed.

8 SUMMARY OF FINDINGS

The proposed Stormwater Management Plan provides water quality treatment with opportunities for infiltration of surface runoff and reduces the potential for soil erosion.

8.1 SUMMARY OF PROPOSED HYDROLOGIC STORMWATER MANAGEMENT

The stormwater management facilities have been designed to utilize detention to attenuate the peak runoff rates. The impacts of the proposed improvements are evaluated by comparing the proposed and existing peak discharge rates at the analysis point located at the final discharge point for stormwater runoff generated from each subarea. The SPDES General Permit for Stormwater Discharges identifies the 10-year and 100-year storm frequencies as the desired design storm events in which the existing peak stormwater discharge rate represents the peak allowable discharge rate under developed conditions. The water quality volume (WQv) components have also been met through the application of an underground infiltration system and a proprietary treatment unit.

8.2 SUMMARY OF PROPOSED EROSION AND SEDIMENT CONTROL

The Stormwater Management Plan for the proposed site improvements utilizes best management practices outlined in New York State Stormwater Management Design Manual and New York Standards and Specifications for Erosion and Sediment Control. Disturbance to areas within the project work limits will be minimized. Those areas to be disturbed by construction activities are mitigated using methods outlined on the Erosion and Sediment Control Plan and Detail Sheets. Additionally, all the general recording requirements for inspections outlined within the SPDES General Permit shall be followed accordingly.

9 OWNER RESPONSIBILITY

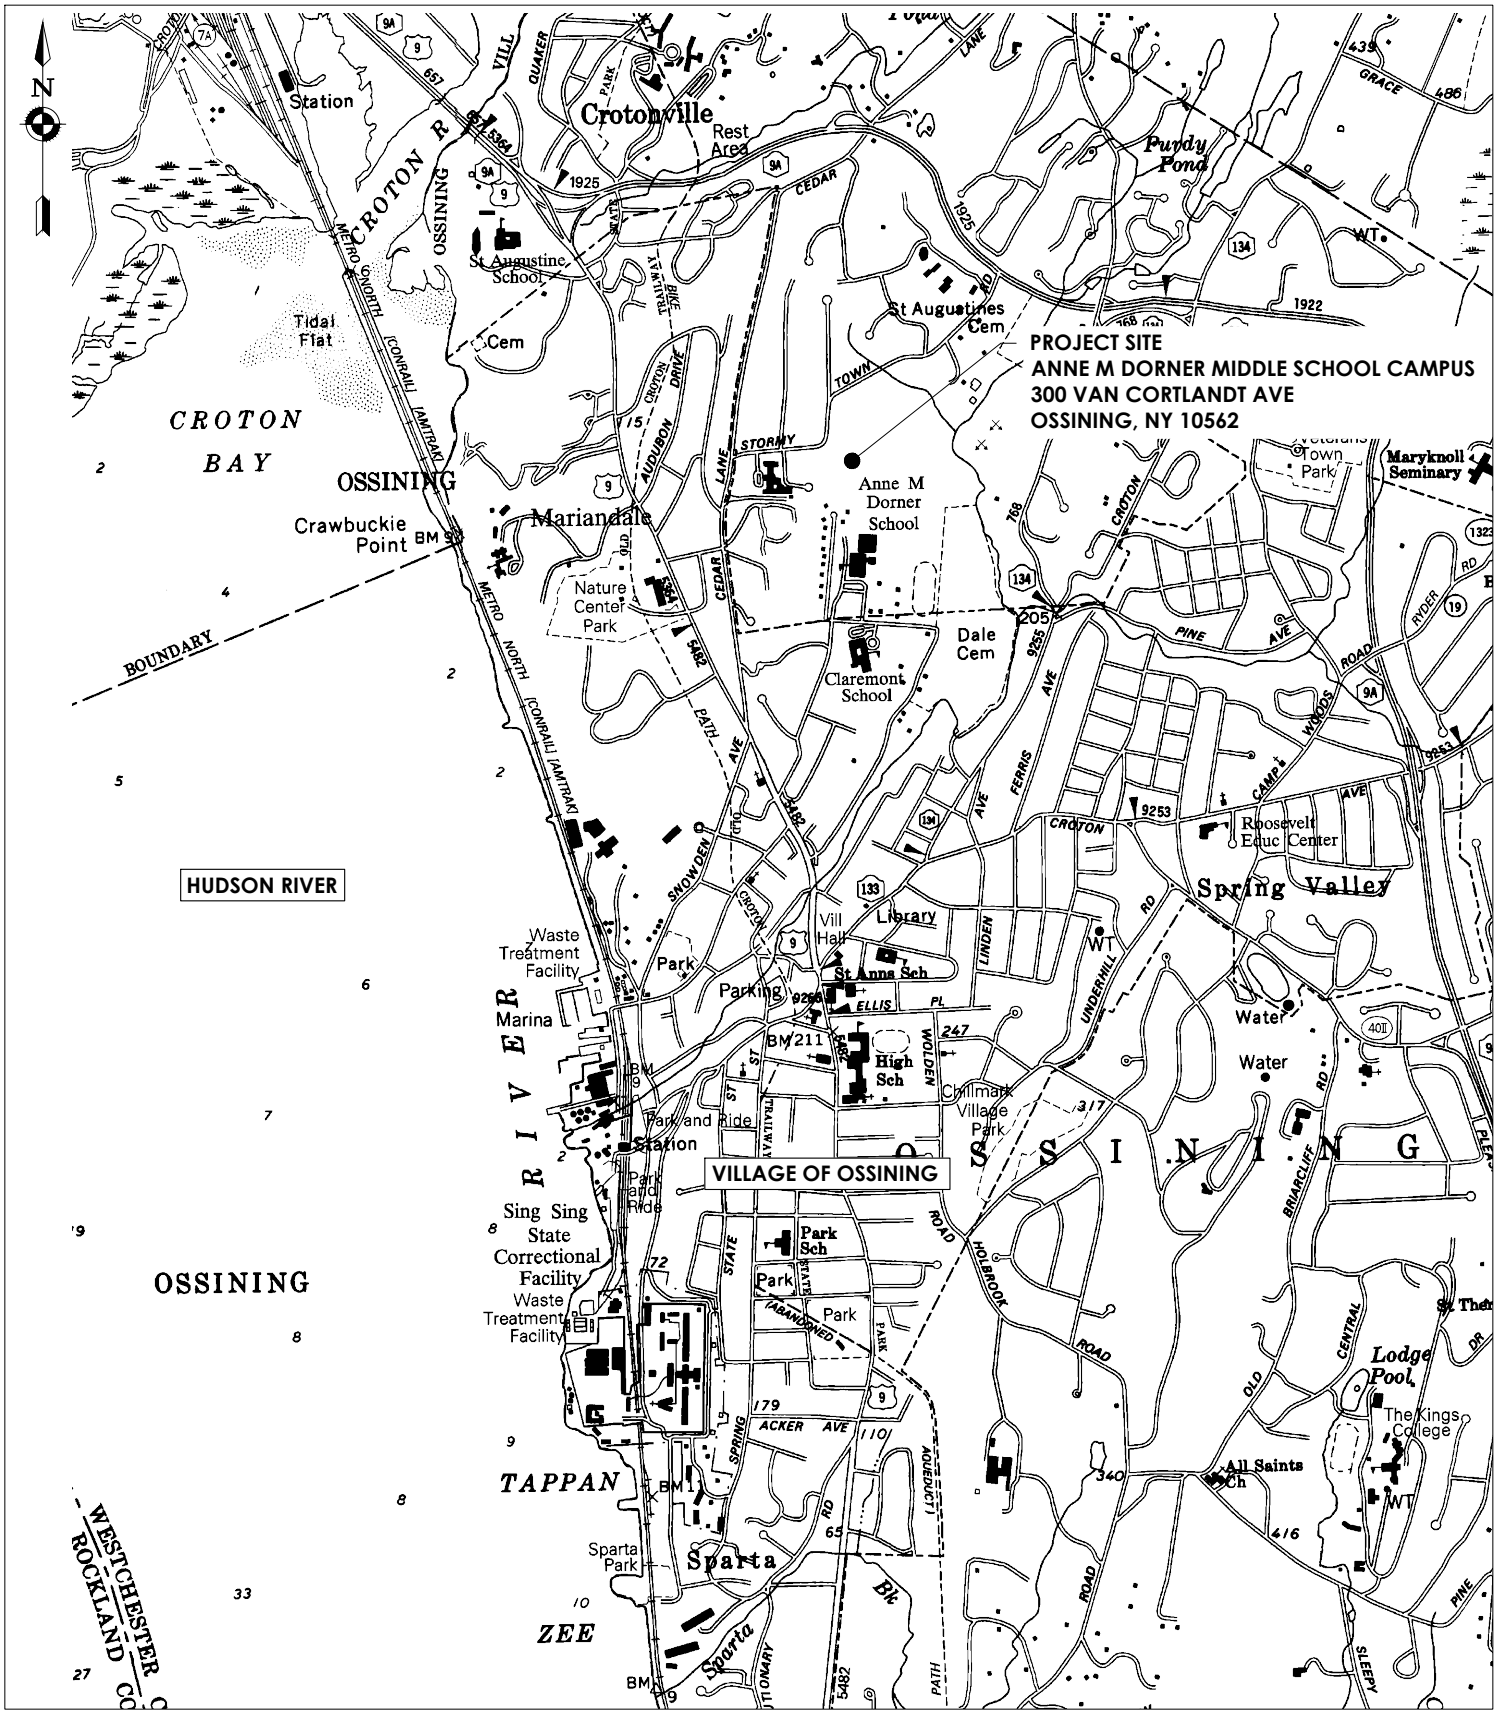
9.1 SITE ASSESSMENT AND INSPECTIONS

The following requirements set forth apply to all permittees applying for coverage under the SPDES General Permit for Stormwater Runoff from Construction Activities, GP-0-25-001 and are contained within said permit. **The requirements detailed below are only a partial list and are the sole responsibility of the Operator/Owner. For a complete list of Operator/Owner responsibilities and requirements, please refer to GP-0-25-001.**

The operator/owner shall:

- In accordance with the requirements in the most current version of the technical standard, New York Standards and Specifications for Erosion and Sediment Control, inspect the erosion and sediment controls identified in the SWPPP to insure they are being maintained in effective operating condition always.
- For construction sites where soil disturbance activities have been temporarily suspended (winter shutdown, etc.) and temporary stabilization measures have been applied to all disturbed areas, the owner or operator can stop conducting inspections. The owner or operator shall begin conducting inspections in accordance with Part IV.B.1 as soon as soil disturbance activities resume.
- For construction sites where soil disturbance activities have been shut down with partial project completion, the owner or operator can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved final stabilization and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.
- Have a qualified professional (professional engineer, certified professional in erosion and sediment control or soil scientist) conduct an assessment of the site prior to the commencement of construction and certify in an inspection report that the appropriate erosion and sediment controls described in the SWPPP and have been installed or implemented to ensure the overall preparedness of the site for commencement of construction.
- For construction sites where soil disturbance activities are on going, the qualified inspector shall conduct a site inspection at least once every seven (7) calendar days.
- For construction sites where soil disturbance activities are on going and the owner or operator has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. When performing just two (2) inspections every seven (7) calendar days, the inspection shall be separated by a minimum of two (2) full calendar days.
- For construction sites where soil disturbance activities have been temporary suspended (winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the qualified inspector shall conduct a site inspection at least once every thirty (30) calendar days. The owner or operator shall notify the Regional Office stormwater contact person in writing prior to reducing the frequency of inspections.
- For construction sites where the soil disturbance activities have been shut down with partial project completion, the qualified inspector can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved final stabilization and all

post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The owner or operator shall notify the Regional Office stormwater contact person in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown the owner or operator shall have a qualified inspector(s) perform a final inspection and certify that all disturbed areas have achieved final stabilization, all temporary, structural erosion and sediment control measures have been removed, and all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice" certification statements on the Notice of Termination (NOT). The owner or operator shall then submit the competed NOT form to the address in Part II.B.1.



- At a minimum, the qualified inspector shall inspect all erosion and sediment control practices to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved final stabilization, and all points of discharge from the construction site.
- The qualified inspector shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include or address the following:
    - Date and time of inspection;
    - Name and title of person(s) performing inspection;
    - A description of the weather and soil conditions (dry, wet, saturated) at the time of the inspection;
    - A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any discharge of sediment from the construction site. Include discharges from conveyance systems (pipes, culverts, ditches, etc.) and overland flow;
    - Identification of all erosion and sediment control practices that need repair or maintenance;
    - Identification of all erosion and sediment control practices that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;
    - Description and sketch of areas that are disturbed at the time of the inspection and areas that have been stabilized (temporary and/or final) since the last inspection;
    - Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards; and
    - Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s).
    - Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching;
    - Document any excessive deposition of sediment or ponding of water along barrier or diversion systems;
    - Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water;

    - Maintain a record of all inspection reports.
- Within one (1) business day of the completion of an inspection, the qualified inspector shall notify the owner or operator and appropriate contractor (or subcontractor) identified in Part III.A.6 of any corrective actions that need to take place. The contractor (or subcontractor) shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.
- All inspection reports shall be signed by a qualified inspector. Pursuant to Part II.D.2, the inspection reports shall be maintained on site with the SWPPP.
- The operator shall initiate stabilization measures as soon as practicable in portions of the site where construction activities have temporarily or permanently ceased, but in no case more than 14 days after the construction activity in that portion of the site has temporarily or permanently ceased.
- The operator shall make all contractors and subcontractors sign a copy of the certification statement in Part III.A.6 of the Permit, GP-0-25-001. All certifications must be included in the SWPPP and all new contractors and subcontractors need to similarly certify;
- The operator shall retain copies of the SWPPP, NOI, NOI Acknowledgment Letter, MS4 SWPPP Acceptance form, Inspection Reports and any reports submitted in conjunction with this permit, and records of all data used to complete the NOI to be covered by this permit, for a period of five years from the date that the site is finally stabilized;
- The operator shall retain copies of the SWPPP required by this permit at the construction site from the date of initiation of construction activities to the date of final stabilization.

Additional requirements are listed in the SPDES General Permit, GP-0-25-001 and are the sole responsibility of the Operator/Owner.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Westchester County, New York
Survey Area Data: Version 20, Aug 26, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 21, 2022—Oct 27, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Totals for Area of Interest			**58.3**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/20/2025 at 1:05 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Status	Draft

Form Input

Eligibility

Disturbance Threshold

1. Will the construction activity involve soil disturbances listed in Part I.A.1 of GP-0-25-001?
Yes

1.a. Will any runoff from the site enter a sewer system classified as a combined sewer?
No

1.b. Is this a remediation project being done under a Department approved work plan (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) with a SWPPP which meets the substantive requirements of GP-0-25-001?
No

1.c. Is the construction activity related to a stormwater discharge that does not require a permit as described in 40 CFR 122.3(e), e.g. non-point source agriculture or silviculture activities?
No

Other SPDES Permits

2. Will the discharge from the construction activity meet all conditions listed in Part I.A.2 of GP-0-25-001?
Yes

Threatened and Endangered Species

3. Will the construction activity potentially adversely affect a species that is endangered or threatened per Part I.A.3.?
No

State Historic Preservation Act (SHPA)

4. Is the construction activity designated by the Commissioner of the Office of Parks, Recreation and Historic Preservation (OPRHP), pursuant to 9 NYCRR §§428.12 or 428.13 as exempt from the SHPA review (see Attachment 2 of the Letter of Resolution between NYSDEC and OPRHP, dated January 9, 2015)?
No

4.a. Will the construction activity:

a) occur within an archeologically sensitive area indicated on the sensitivity map, or

b) have the potential to affect a property that is listed or determined to be eligible for listing on the Na or State Registers of Historic Places, or

c) include a new permanent building on the construction site within the following distances from a building, structure, or object that is more than 50 years old and OPRHP, a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determinec historically/archeologically significant building, structure, or object:

- 1-5 acres of disturbance—20 feet
- 5-20 acres of disturbance—50 feet
- 20+ acres of disturbance—100 feet?

No

4.b. Is there documentation at the construction site demonstrating:

a) that the construction activity is not within an archeologically sensitive area indicated on the sensiti map, and that the construction activity is not immediately adjacent to a property listed or determined t eligible for listing on the National or State Registers of Historic Places, and

b) that there is no new permanent building to be built on the construction site within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the construction site within those parameters that OPRHP, a Historic Preserva Commission of a Certified Local Government, or a qualified preservation professional has determinec the building, structure, or object more than 50 years old is not historically/archeologically significant:

- 1-5 acres of disturbance – 20 feet
- 5-20 acres of disturbance – 50 feet
- 20+ acres of disturbance – 100 feet?

Yes

State Environmental Quality Review (SEQR)

5. Is the construction activity subject to SEQR (Part I.A.5.), or the equivalent environmental review from another NYS or federal agency (Part I.A.6.)?
Yes

5.a. Has the owner/operator obtained documentation that the project review pursuant to SEQR, or the equivalent, has been satisfied per Part I.A.5. or I.A.6. of GP-0-25-001?
Yes

Uniform Procedures Act (UPA) Permits

6. Has the owner/operator obtained all necessary UPA permits from NYSDEC, or the equivalent from another NYS or federal agency per Part I.A.7.a. of GP-0-25-001?
Yes

Steep Slope

7. Is the construction activity within the watershed of surface waters of the State classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website?
No

Owner/Operator Information

8. Owner/Operator Name
Ossining Union Free School District

9. Owner/Operator Contact Person Information

First and Last Name	Phone	E-mail
Mary Alter-Fox	914-941-7700	mfoxalter@ossiningufsd.org

10. Owner/Operator Mailing Address

400 Executive Boulevard
Ossining, NY 10562
USA

11. Is the billing contact different from the Owner/Operator Contact?
Yes

11.a. Billing Contact Person Information

First and Last Name	Phone	E-mail
Alita McCoy	914-941-7700	amccoy@ossiningufsd.org

11.b. Billing Mailing Address

400 Executive Boulevard
Ossining, NY 10562
USA

12. What type of organization is the owner/operator?
School District

Site Information

13. Project/Site Name
Anne M Dorner Middle School Driveway Project

14. Site Address

100 Van Cortlandt Ave
Ossining, NY 10562
Westchester

DEC Region
3

15. Site Latitude & Longitude

Project Details

16. This eNOI submission is for:
One or more phases of a common plan of development or sale in accordance with Part I.D.1.c.

16.a. Does the entire common plan of development or sale meet the eligibility requirements in Part I.A.5. or 6.?
Yes

16.b. Does the phase or phases meet all other eligibility requirements in Part I.A.?
Yes

> Per Part I.D.1.c.iii., the Required SWPPP Components by Project Type from Part III.C. is based on the entire common plan of development or sale, not the phases.

17. Does the project type fall under Table 1 or Table 2 of Appendix B of GP-0-25-001? If any portion of the construction activity falls under Table 2, regardless of the size of the disturbance, select "Table 2".
Table 2

18. Consistent with Part III.B.1.c.i. of GP-0-25-001, provide a concise overview of the project. Describe existing and proposed conditions, and include any other relevant information.
Existing Site has the District's Middle School Building, Maintenance and Facilities Buildings, parking areas, sports fields, sidewalks and other school related amenities.

Proposed Conditions will ultimately have a new driveway entrance off of the neighboring street (Stormytown Road) and connect to the existing parking lot by the Middle School. Project will disturb just under 5 acres of soil.

Enter the total project site acreage, the acreage to be disturbed, and the future impervious area (acreage) within the disturbed area, rounded to the nearest tenth of an acre.

19. Total Site Area (acres)
61.5

20. Total Area to be Disturbed (acres)
9.6

21. Existing Impervious Area to be Disturbed (acres)
2.3

22. Future Impervious Area Within Disturbed Area (acres)
4.1

Nature of the project:
Redevelopment with increase in impervious area

23. Do you plan to disturb more than 5 acres of soil at any one time?
No

---

24. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)
0

B (%)
33

C (%)
32

D (%)
35

25. Enter the planned start and end dates of the disturbance activities.

Start Date
11/03/2025

End Date
09/07/2026

26. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
Sing Sing Creek and tribs - 1301-0118

27. Type of waterbody identified in question 26?
Stream/Creek On Site
Wetland/Federal Jurisdiction On Site
Wetland/State Jurisdiction On Site

28. Has the surface waterbody in question 26 been identified as a 303(d) segment in Appendix D of GP-0-25-001?
No

29. Is this project located in one of the Watersheds identified in Appendix C of GP-0-25-001?
No

30. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
No

31. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
Yes

31.a. What is the name of the municipality/entity that owns the separate storm sewer system? If the separate sewer system is owned by an MS4 Operator, enter the MS4 Operator name.
Town of Ossining

32. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

33. Is this property owned by a state authority, state agency, federal government or local government?
No

Required SWPPP Components

General SWPPP Requirements

34. Has a SWPPP been developed in conformance with the requirements in Part III. of GP-0-25-001?
Yes

35. Does the SWPPP demonstrate consideration of the future physical risks due to climate change pursuant to the CRRA, 6 NYCRR Part 490, and associated guidance per Part III.A.2. of GP-0-25-001?
Yes

36. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?
Yes

37. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the NYS Stormwater Management Design Manual?
Yes

37.a. Which version of the NYS Stormwater Management Design Manual was used to develop the SWPPP?
2024

SWPPP Preparer

39. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:
Professional Engineer (P.E.)

40. Name of the person who prepared the SWPPP
James Basile, PE

41. SWPPP Preparer Organization Name
CPL Architects, Engineers, Landscape Architect, & Planners

42. SWPPP Preparer Contact Information

First and Last Name	Phone	E-mail
James Basile	585.324.0454	jbasile@cplteam.com
Bryce Recer	518.915.7457	brecer@cplteam.com

43. SWPPP Preparer Address

255 Woodcliff Drive

Fairport, NY 14450

Download SWPPP Preparer Certification Form

Please take the following steps to prepare and upload your preparer certification form:

1) Click on the link below to download a blank certification form
2) The certified SWPPP preparer should sign this form
3) Upload the completed form

44. Please upload the SWPPP Preparer Certification

SWPPP Preparer Certification Form_Signed.pdf - 09/17/2025 08:17 AM

Comment

James Basile, PE from CPL is the SWPPP Preparer.

44.a. Has the SWPPP Preparer Certification Form been signed by the SWPPP preparer in accordance with Part VII.J of GP-0-25-001?

Yes

Erosion & Sediment Control Criteria

45. Has a construction sequence schedule for the planned management practices been prepared?

Yes

Post-Construction Criteria

Site Planning and Soil Restoration

46. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

Reduction of Clearing and Grading
Cul-de-sac Reduction

47. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6 ("Soil Restoration") of the Design Manual.

All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

Water Quality Criteria

49. Water Quality Sizing Criteria

Total WQv required (acre-feet)	Total RRv provided (acre-feet)	Minimum RRv (acre-feet)	Total WQv provided (acre-feet)	Sum of RRv and WQv provided
.331	.2	.08	.131	0.331

Water Quantity Criteria

50. Per Section 9.2.1.C.VI and VII of the 2024 Design Manual, is there 0% change to hydrology that increases the discharge rate and volume from the project site?
Yes

Operation and Maintenance

53. Has a long-term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?
Yes

53.a. Identify the entity responsible for the long-term Operation and Maintenance.
Ossining Union Free School District

Post-Construction SMP Identification

54. Post-Construction RR Techniques and Standard SMPs

RR Techniques and SMPs	Contributing Impervious Area (acres)	Total Contributing Area (acres)
Underground Infiltration System (I-4)	1.440	

55. Alternative SMPs

Type of Alternative SMP	Manufacturer of the Alternative SMP	Name of the Alternative SMP	Contributing Impervious Area (acres)
Hydrodynamic	Contech	CDS	0.96

Other Permits

56. Identify other permits, existing and new, that are required for this project/facility.
Water Quality Certificate
USACE Wetland Permit

56.a. Indicate the Size of Impact from the USACE Wetland Permit, in acres, to the nearest tenth.
.1

57. Is this NOI for a change in owner/operator per Part I.G.?
No

MS4 SWPPP Acceptance

59. Will the construction activities be within the municipal boundary(ies) of Traditional Land Use Control MS4 Operator(s) and discharge to the MS4(s)?
Yes

400 Executive Boulevard
Ossining, NY 10562

RE: Letter of Authorization (LOA) for Coverage Under
SPDES General Permit for Stormwater Discharges from Construction Activity (CGP)
General Permit No. GP-0-25-001

Dear Owner or Operator,

The New York State Department of Environmental Conservation (NYSDEC) received a complete electronic Notice of Intent (eNOI) for coverage under GP-0-25-001 for construction activities located at:

Project Name: Anne M Dorner Middle School Driveway Project
Project Address: 100 Van Cortlandt Ave
Ossining, NY 10562 Project County: Westchester

Through submission of the eNOI on September 17, 2025, the owner or operator certified that the eligibility requirements in Part I.A. of GP-0-25-001 have been met, where required.

As a reminder, the owner or operator must meet the requirements in Part I.E.6. of GP-0-25-001 prior to disturbing greater than five acres of soil at any one time. Further, this LOA is not the permit document. The owner or operator is required to comply with all requirements in GP-0-25-001, which is accessible on NYSDEC's website: dec.ny.gov

The project is authorized to commence construction activity in accordance with Part I.D.3.b. of GP-0-25-001 as follows:

- Project Name: Anne M Dorner Middle School Driveway Project
- eNOI Submission ID: HQF-F325-446MW
- Date authorized to commence construction activity: September 17, 2025

Note that the NYSDEC SPDES Permit Identification No. (SPDES Permit ID) for this project will be sent in a separate correspondence. Also, please be advised there is an annual regulatory fee of $110, which is billed by NYSDEC in the late fall. The regulatory fee covers a period of one calendar year. In addition, there is an initial authorization fee of $110 per acre of land disturbed and $675 per acre of future impervious area. The initial authorization fee covers the duration of the authorized disturbance.

If there are any questions regarding the requirements in GP-0-25-001, please contact me.

Sincerely,

John Muthersbaugh

John Muthersbaugh

Assistant Engineer

MS4 No Jurisdiction Form

for construction activities seeking authorization under the

SPDES General Permit for Stormwater Discharges from Construction Activity, GP-0-25-001 (CGP)

(In accordance with CGP Part I.D.2.b., the completed form must be attached to the eNOI and submitted to NYSDEC electronically.)

I. Project Owner/Operator Information

a. Owner/Operator Name: Ossining Union Free School District

b. Contact Person: Mary C. Fox-Alter, Superintendent of Schools

c. Street Address: 400 Executive Blvd.

d. City/State/Zip: Ossining, NY 10562

II. Project Site Information

a. Project/Site Name: Anne M. Dorner Middle School

b. Street Address: 100 Van Cortlandt Ave.

c. City/State/Zip: Ossining, NY 10562

d. eNOI Submission ID:

III. Traditional Land Use Control MS4 Operator Information

a. Name of MS4 Operator: Town of Ossining (Jon Turnquist, Stormwater Management Officer)

b. MS4 SPDES Permit ID Number: NYR20A370

c. Street Address: 16 Croton Avenue

d. City/State/Zip: Ossining, NY 10562

e. Telephone Number: 914-762-8419

IV. Certification Statement

In accordance with CGP Part I.D.2.b.ii.3., I hereby certify that the Traditional Land Use Control MS4 Operator identified in section III. of this form does not have review authority over the construction project identified in section II. of this form, which is owned/operated by the entity identified in section I. of this form. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

a. Printed name of the principal executive officer or ranking elected official for the MS4 Operator or their duly authorized representative in accordance with CGP Part VII.J.2.:
Elizabeth R. Feldman

b. Title/Position: Town Supervisor

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

PREFACE

Pursuant to Section 402 of the Clean Water Act (CWA), and 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), *stormwater discharges* from certain *construction activities* are unlawful unless they are authorized by a National Pollutant Discharge Elimination System (NPDES) permit or by a state permit program. New York State administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7 and 8, and Article 70, as well as 6 NYCRR Parts 621 and 750.

C*onstruction activities* constitute construction of a *point source* and, therefore, pursuant to ECL sections 17-0505, 17-0701, and 17-0803, the *owner or operator* must have coverage under a SPDES permit prior to *commencement of construction activities*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part I. How to Obtain Coverage and General Requirements

To be covered under this permit, the *owner or operator* must meet all eligibility requirements in Part I.A. and follow the requirements for obtaining permit coverage in Part I.D., F., or G.

A. Eligibility Requirements

For a *common plan of development or sale*, the *phase(s)* that meet the eligibility requirements in Part I.A. may obtain coverage under this permit even if other *phase(s)* of the same *common plan of development or sale* do not meet the eligibility requirements and require an individual SPDES permit.

1. The *owner's or operator's construction activities* involve soil disturbances of:

    a. one or more acres; or

    b. less than one acre which are part of a *common plan of development or sale* that will ultimately disturb one or more acres; or

    c. less than one acre where NYSDEC has determined that a SPDES permit is required for *stormwater discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of pollutants to *surface waters of the State*.

        i. 5,000 square feet or more, but less than one acre, and are in the New York City Watershed located east of the Hudson River, Appendix C Figure 1; or

        ii. 20,000 square feet or more, but less than one acre, within the municipal boundaries of the City of New York (NYC); or

        iii. less than 20,000 square feet which are part of a *common plan of development or sale* that will ultimately disturb 20,000 square feet or more, but less than one acre, within the municipal boundaries of NYC; or

        iv. that creates 5,000 square feet or more of *impervious area* within the municipal boundaries of NYC.

2. *Discharges* from the *owner's or operator's construction activities* are/were not:

    a. already covered by a different SPDES permit; or

    b. covered under a different SPDES permit that was denied, terminated, or revoked; or

    c. identified in an expired individual SPDES permit that was not renewed; or

    d. required to obtain an individual SPDES permit or another general SPDES permit in accordance with Part VII.K.

3. If *construction activities* may adversely affect a species that is endangered or threatened, the *owner or operator* must obtain a:

    a. permit issued pursuant to 6 NYCRR Part 182 for the project; or

    b. letter issued by NYSDEC of non-jurisdiction pursuant to 6 NYCRR Part 182 for the project.

4. If *construction activities* have the potential to affect an *historic property*, the *owner or operator* must obtain one of the following:

    a. documentation that the *construction activity* is not within an archeological buffer area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant:

        i. 1-5 acres of disturbance - 20 feet; or

        ii. 5-20 acres of disturbance - 50 feet; or

iii. 20+ acres of disturbance - 100 feet.

b. NYSDEC consultation form sent to OPRHP,[1] and copied to NYSDEC's Agency Historic Preservation Officer (APO), and

i. the State Environmental Quality Review Act (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or

ii. documentation from OPRHP that the *construction activity* will result in No Impact; or

iii. documentation from OPRHP providing a determination of No Adverse Impact; or

iv. a Letter of Resolution signed by the *owner or operator*, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA).

c. documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

i. No Affect; or

ii. No Adverse Affect; or

iii. Executed Memorandum of Agreement.

d. documentation that SHPA Section 14.09 has been completed by NYSDEC or another state agency.

5. If *construction activities* are subject to SEQR, the *owner or operator* must obtain documentation that SEQR has been satisfied.

6. If *construction activities* are not subject to SEQR, but subject to the equivalent environmental review from another New York State or federal agency, the

[1] The consultation form can be submitted, along with other project information, through OPRHP's Cultural Resource Information System (CRIS) portal. If submitted through CRIS, paper copies of the consultation form need not be mailed.

owner or operator must obtain documentation that project review, pursuant to a process equivalent to SEQR from another New York State or federal agency, has been satisfied.

7. If *construction activities* require Uniform Procedures Act (UPA) Permits (see 6 NYCRR Part 621) from NYSDEC, or the equivalent from another New York State or federal agency, the *owner or operator* must:

a. obtain all such necessary permits; or

b. receive notification from NYSDEC pursuant to 6 NYCRR 621.3(a)(4) excepting Part I.A.7.a.

8. *Construction activities* are not eligible if they meet the following criteria in Part I.A.8.a. or b.:

a. For linear transportation and linear utility project types, the *construction activities*:

i. are within the watershed of *surface waters of the State* classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website; and

ii. are undertaken on land with no existing *impervious cover*; and

iii. disturb two or more acres of *steep slope*.

b. For all other project types, the *construction activities*:

i. are within the watershed of *surface waters of the State* classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website; and

ii. are undertaken on land with no existing *impervious cover*; and

iii. disturb one or more acres of *steep slope*.

B. Types of *Discharges* Authorized

1. The following *stormwater discharges* are authorized under this permit:

   a. *Stormwater discharges*, including *stormwater* runoff, snowmelt runoff, and surface runoff and drainage, associated with *construction activity*, are authorized under this permit provided that appropriate *stormwater* controls are designed, installed, and maintained in accordance with Part II. and Part III.

   b. *Stormwater discharges* from construction support activities at the *construction site* (including concrete or asphalt batch plants, equipment staging yards, material storage areas, excavated material disposal areas, and borrow areas) if the following requirements are met:

      i. The support activity is directly related to the *construction site* required to have permit coverage for *stormwater discharges*; and

      ii. The support activity is not a commercial operation, nor does it serve multiple unrelated *construction sites*; and

      iii. The support activity does not continue to operate beyond the completion of the *construction activity* at the site it supports; and

      iv. *Stormwater* controls are implemented in accordance with Part II. and Part III. for *discharges* from the support activity areas.

2. The following non-*stormwater discharges* associated with *construction activity* are authorized under this permit:

   a. Non-*stormwater discharges* listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "*Discharges* from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; and

   b. Non-*stormwater discharges* of waters to which other components have not been added that are used in accordance with the *SWPPP* to control dust or irrigate vegetation in stabilized areas; and

   c. Uncontaminated *discharges* from *dewatering* operations

3. Authorized *discharges* of *stormwater* or authorized *discharges* of non-*stormwater*, commingled with a *discharge* authorized by a different SPDES permit and/or a *discharge* that does not require SPDES permit authorization, are also authorized under this permit.

C. Prohibited *Discharges*

1. Non-*stormwater discharges* prohibited under this permit include but are not limited to:

   a. Wastewater from washout of concrete; and

   b. Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds, and other construction materials; and

   c. Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance; and

   d. Soaps, solvents, or detergents used in vehicle and equipment washing or external building washdown; and

   e. Toxic or hazardous substances from a spill or other release.

D. Electronic Notice of Intent (eNOI) Submittal

To receive authorization in accordance with Part I.D.3.b., the *owner or operator* must submit a complete eNOI in accordance with the requirements in Part I.D. The eNOI contains questions to: ensure eligibility requirements in Part I.A. have been met; obtain *owner or operator* contact information; obtain the total area to be disturbed and the existing/future *impervious areas* (rounded to the nearest tenth of an acre); confirm *Traditional Land Use Control MS4 Operator* jurisdiction over construction projects; satisfy the EPA eRule requirements; confirm that the Water Quality-Based Effluent Limitations in Part II. have been met; demonstrate consideration of the future risks due to climate change in accordance with Part III.A.2.; and confirm that the other *Stormwater Pollution Prevention Plan (SWPPP)* requirements in Part III. have been met.

1. An eNOI may be submitted for:

   a. *construction activities* that are not part of a *common plan of development or sale*; or

b. an entire *common plan of development or sale*; or

c. separate *phase(s)* of a *common plan of development or sale* if the following requirements are met:

   i. the *common plan of development or sale* meets the eligibility requirements of Part I.A.5. or 6.; and

   ii. the *phase(s)* meet(s) all other eligibility requirements of Part I.A.; and

   iii. Part III.C. Required *SWPPP* Components by Project Type is based on the *common plan of development or sale*, not the *phase(s)*; or

d. *tree clearing* that is associated with, or will support, a *renewable energy* generation, transmission, or storage project that meets Part I.A.5. and 6., if the *tree clearing*:

   i. meets all other eligibility requirements of Part I.A.; and

   ii. will occur in NYSDEC's Regions 3-9; and

   iii. is not within ¼ mile of a bat hibernaculum protected pursuant to 6 NYCRR Part 182; and

   iv. will occur between November 1st and March 31st.

2. As prerequisites for submitting an eNOI, the *owner or operator* must:

   a. prepare a *SWPPP* for Part I.D.1.a., b., c., or d. in accordance with Part III.; and

   b. based on the following criteria, upload the following signature forms signed in accordance with Part VII.J. to the eNOI prior to submission:

      i. for all eNOIs:

         1. the SWPPP Preparer Certification Form, Appendix F, signed by the *SWPPP* preparer; and

         2. the Owner/Operator Certification Form, Appendix J, signed by the *owner or operator*; and

      ii. if an eNOI includes *construction activities* within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)* that will *discharge* to the *MS4(s)*:

         1. determine if the *Traditional Land Use Control MS4 Operator(s)* have review authority. A *Traditional Land Use Control MS4 Operator* does not have review authority where:

            a. the *owner or operator* of the *construction activities* in Part I.D.2.b.ii. is the same entity as the *Traditional Land Use Control MS4 Operator* identified in Part I.D.2.b.ii.; or

            b. there is a statute exempting the *owner or operator* from zoning review by the *Traditional Land Use Control MS4 Operator*; or

            c. there is no such statute per Part I.D.2.b.ii.1.b., the *Traditional Land Use Control MS4 Operator* concludes, after public hearing, that it does not have zoning review authority in accordance with Legal Memorandum LU14 Updated January 2020 "Governmental Immunity from Zoning and Other Legislation"; and

         2. if the *Traditional Land Use Control MS4 Operator(s)* have review authority, submit the *SWPPP* to the *Traditional Land Use Control MS4 Operator(s)* for review and have:

            a. if outside the municipal boundaries of NYC: the MS4 SWPPP Acceptance Form, Appendix G, signed by the principal executive officer or ranking elected official from the *Traditional Land Use Control MS4 Operator,* or by a duly authorized representative of that person in accordance with Part VII.J.2.; or

b. if within the municipal boundaries of NYC: The City of New York Department of Environmental Protection (NYCDEP) SWPPP Acceptance/Approval Form, Appendix H, signed by the principal executive officer or ranking elected official from the Traditional Land Use Control MS4 Operator, or by a duly authorized representative of that person in accordance with Part VII.J.2.; and

3. if the *Traditional Land Use Control MS4 Operator* does not have review authority, have the MS4 No Jurisdiction Form, Appendix I, signed by the principal executive officer or ranking elected official from the *Traditional Land Use Control MS4 Operator,* or by a duly authorized representative of that person in accordance with Part VII.J.2.

3. Submitting an eNOI:

a. The *owner or operator* must submit a complete Notice of Intent electronically using a NYSDEC approved form.[2]

b. The *owner or operator* is authorized to *commence construction activity* as of the authorization date indicated in the Letter of Authorization (LOA), which is sent by NYSDEC after a complete eNOI is submitted.

i. If an eNOI is received for a *SWPPP* that deviates from one of the technical standards but demonstrates *equivalence* in accordance with Part III.B.1.a.ii. or Part III.B.2.b.ii., if the *SWPPP* includes *construction activities* that are not within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)*, and/or if the *SWPPP* includes *construction activities* within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)* that do not have review authority in accordance with Part I.D.2.b.ii.1., the authorization date indicated in the LOA will be 60 business days after the eNOI submission date.

[2] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

c. If *Traditional Land Use Control MS4 Operator(s)* have review authority in accordance with Part I.D.2.b.ii.2., the *owner or operator* must, within five business days of receipt of the LOA, send an electronic copy of the LOA to the *Traditional Land Use Control MS4 Operator(s)* with review authority.

E. General Requirements for *Owners or Operators* with Permit Coverage

1. As of the date the LOA is received, the *owner or operator* must make the eNOI, *SWPPP*, and LOA available for review and copying in accordance with the requirements in Part VII.H. When applicable, as of the date an updated LOA is received, the *owner or operator* must make the updated LOA available for review and copying in accordance with the requirements in Part VII.H.

2. The *owner or operator* must ensure compliance with all requirements of this permit and that the provisions of the *SWPPP*, including any changes made to the *SWPPP* in accordance with Part III.A.5., are properly implemented and maintained from the *commencement of construction activity* until:

a. all areas of disturbance have achieved *final stabilization;* and

b. the owner's or operator's coverage under this permit is terminated in accordance with Part V.A.5.a.

3. As of the date of the *commencement of construction activities* until Part I.E.2.a. and b. have been met, the *owner or operator* must maintain at the *construction site*, a copy of:

a. all documentation necessary to demonstrate eligibility with this permit; and

b. this permit; and

c. the *SWPPP*; and

d. the signed SWPPP Preparer Certification Form; and

e. the signed MS4 SWPPP Acceptance Form or signed NYCDEP SWPPP Acceptance/Approval Form or signed MS4 No Jurisdiction Form (when applicable); and

f. the signed Owner/Operator Certification Form; and

g. the eNOI; and

h. the LOA; and

i. the LOA transmittal to the Traditional Land Use Control MS4 Operator in accordance with Part I.D.3.c. (when applicable).

4. The *owner or operator* must maintain at the *construction site*, until Part I.E.2.a. and b. have been met, as of the date the documents become final or are received, a copy of the:

   a. responsible contractor's or subcontractor's certification statement(s) in accordance with Part III.A.7.; and

   b. inspection reports in accordance with Part IV.C.4. and 6.; and

   c. Request to Disturb Greater Than Five Acres and the Authorization Letter to Disturb Greater Than Five Acres in accordance with Part I.E.6. (when applicable); and

   d. Request to Continue Coverage and the Letter of Continued Coverage (LOCC) in accordance with Part I.F.2. and 4. (when applicable); and

   e. The updated LOA(s) in accordance with Part I.E.9. (when applicable).

5. The *owner or operator* must maintain the documents in Part I.E.3. and 4. in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection. The documents must be paper documents unless electronic documents are accessible to the inspector during an inspection to the same extent as a paper copy stored at the site would be. If electronic documents are kept on site, the *owner or operator* must maintain functional equipment on site available to an inspector during normal hours of operation such that an inspector may view the electronic documents in a format that can be read in a similar manner as a paper record and in a legally dependable format with no less evidentiary value than their paper equivalent.

6. The *owner or operator* must meet the following requirements prior to disturbing greater than five acres of soil at any one time:

   a. The *owner or operator* must submit a written Request to Disturb Greater Than Five Acres to:

   i. NYSDEC's Regional Office Division of Water staff based on the project location, Appendix E, if a *Traditional Land Use Control MS4 Operator* does not have review authority in accordance with Part I.D.2.b.ii.1.; or

   ii. the *Traditional Land Use Control MS4 Operator*, if a *Traditional Land Use Control MS4 Operator* has review authority in accordance with Part I.D.2.b.ii.1.; or

   iii. NYSDEC's Regional Office Division of Water staff based on the project location, Appendix E, and each involved *Traditional Land Use Control MS4 Operator*, if the project spans multiple municipalities with more than one *Traditional Land Use Control MS4 Operator* involved with review authority in accordance with Part I.D.2.b.ii.1.

   b. The written Request to Disturb Greater Than Five Acres must include:

      i. The SPDES permit identification number (Permit ID); and

      ii. Full technical justification demonstrating why alternative methods of construction that would result in five acres of soil disturbance or less at any one time are not feasible; and

      iii. The phasing plan for the project and sequencing plans for all *phases* from the *SWPPP* in accordance with Part III.B.1.d.; and

      iv. Plans with locations and details of erosion and sediment control practices such that the heightened concern for erosion when disturbing greater than five acres at one time has been addressed; and

      v. Acknowledgment that "the *owner or operator* will comply with the requirements in Part IV.C.2.b."; and

      vi. Acknowledgment that "the *owner or operator* will comply with the requirements in Part II.B.1.b."

   c. The *owner or operator* must be in receipt of an Authorization Letter to Disturb Greater Than Five Acres, which will include when the

authorization begins and ends and indicate a maximum area (acres) of soil disturbance allowed at any one time, from:

i. NYSDEC, if Part I.E.6.a.i. or iii. apply; or

ii. the *Traditional Land Use Control MS4 Operator*, if Part I.E.6.a.ii. applies.

7. Upon a finding of significant non-compliance with the practices described in the *SWPPP* or violation of this permit, NYSDEC may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order must be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

8. If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE).[3] *Construction activity* shall not resume until written permission to do so has been received from the RWE.

9. To be authorized to implement modifications to the information previously submitted in the eNOI, the *owner or operator* must:

   a. notify NYSDEC via email at Stormwater_info@dec.ny.gov requesting access to update the eNOI; and

   b. update the eNOI to reflect the modifications and resubmit the eNOI in accordance with Part I.D.; and

   c. receive an updated LOA.

10. The eNOI, *SWPPP*, LOA, updated LOAs (when applicable), and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

[3] The Regional Water Manager where a DEC Region does not have a RWE.

F. Permit Coverage for *Discharges* Authorized Under GP-0-20-001

When applicable:

1. Upon the effective date of this permit, an *owner or operator* of *a construction activity*, with coverage under GP-0-20-001, will have interim coverage under GP-0-25-001 for 45 calendar days starting on the effective date of GP-0-25-001 so long as the *owner or operator* maintains compliance with all applicable requirements of this permit.

2. Within 30 calendar days of the effective date of this permit, the *owner or operator*, with coverage under GP-0-20-001, must submit a complete Request to Continue Coverage electronically using a NYSDEC approved form,[4] which contains the information identified in Part I.F.3. below, if:

   a. the *owner or operator* continues to implement the SMP component in conformance with the technical standards in place at the time of initial project authorization; and

   b. the *owner or operator* will comply with all non-design requirements of GP-0-25-001.

3. The Request to Continue Coverage form contains questions to: ensure eligibility requirements in Part I.A. have been met; verify *owner or operator* contact information; verify the permit identification number; verify the original eNOI submission ID, if applicable; verify Part I.F.2.a. and b.; verify the version of the Design Manual that the technical/design components conform to; and receive an updated Owner/Operator Certification Form, Appendix I.

4. The *owner or operator* has obtained continued coverage under GP-0-25-001 as of the date indicated in the LOCC, which is sent by NYSDEC after a complete Request to Continue Coverage form is submitted.

5. If the owner or operator does not submit the Request to Continue Coverage form in accordance with Part I.F.2. and 3., coverage under this permit is automatically terminated after interim coverage expires.

[4] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

G. Change of *Owner or Operator*

When applicable:

1. When property ownership changes, or when there is a change in operational control over the construction plans and specifications, the following process applies:

   a. The new *owner or operator* must meet the applicable prerequisites for submitting an eNOI in accordance with Part I.D.2.; and

   b. The new *owner or operator* must submit an eNOI in accordance with Part I.D.3.; and

   c. Permit coverage for the new *owner or operator* will be effective upon receipt of the LOA in accordance with Part I.D.3.b.; and

   d. The new *owner or operator*, upon receipt of their LOA, must provide their Permit ID to the original *owner or operator*; and

   e. If the original *owner or operator* will no longer be the *owner or operator* of the *construction activity* identified in the original *owner's or operator's* eNOI, the original *owner or operator*, upon receipt of the new *owner's or operator's* Permit ID in accordance with Part I.G.1.d., must submit to NYSDEC a completed eNOT in accordance with Part V. that includes the name and Permit ID of the new *owner or operator*; or

   f. If the original *owner or operator* maintains ownership of a portion of the *construction activity*, the original *owner or operator* must maintain their coverage under the permit by modifying their eNOI; modifications to the eNOI must include:

      i. the revised area of disturbance and/or *impervious area(s)*; and

      ii. the revised SMP information, if applicable; and

      iii. a narrative description of what has changed; and

      iv. the new *owner's or operator's* Permit ID for the portion of the project removed from the eNOI.

   Owners or operators must follow Part I.E.9. to modify the eNOI.

Part II. Water Quality-Based Effluent Limitations

A. Maintaining Water Quality

NYSDEC expects that compliance with the requirements of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any *discharge* to either cause or contribute to a violation of the following *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York:

1. There must be no increase in turbidity that will cause a substantial visible contrast to natural conditions; and

2. There must be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There must be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the *stormwater discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standard,* the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this permit and document in accordance with Part IV.C.4. of this permit. To address the *water quality standard* violation the *owner or operator* must include and implement appropriate controls in the *SWPPP* to correct the problem or obtain an individual SPDES permit.

If, despite compliance with the requirements of this permit, it is demonstrated that the *stormwater discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if NYSDEC determines that a modification of this permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit, and the *owner or operator* must obtain an individual SPDES permit prior to further *discharges* from the *construction site*.

B. Effluent Limitations Applicable to *Discharges* from *Construction Activities*

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part II.B.1.a., b., c., d., and e. These limitations represent the

degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement, and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part II.B.1.a., b., c., d., and e. and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control (BB), dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in *SWPPP* the reason(s) for the deviation, or alternative design, and provide information in the *SWPPP* demonstrating that the deviation or alternative design is *equivalent* to the technical standard.

    a. **Erosion and Sediment Controls.** At a minimum, erosion and sediment controls must be selected, designed, installed, implemented, and maintained to:

        i. *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s; and

        ii. Control *stormwater discharge*s, including both peak flow rates and total *stormwater* volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points; and

        iii. *Minimize* the amount of soil exposed during *construction activity*; and

        iv. *Minimize* the disturbance of *steep slope*; and

        v. *Minimize* sediment *discharge*s from the site; and

        vi. Provide and maintain *natural buffers* around surface waters, direct *stormwater* to vegetated areas and maximize *stormwater* infiltration to reduce *pollutant discharge*s, unless *infeasible*; and

        vii. *Minimize* soil compaction. *Minimizing* soil compaction is not required

where the intended function of a specific area of the site dictates that it be compacted; and

        viii. Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

        ix. *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of *pollutants* that could be discharged from the site.

    b. **Soil Stabilization**. In areas where soil disturbance activity has ceased, whether permanently or *temporarily ceased*, the application of soil stabilization measures must be initiated by the end of the next business day and completed within 14 calendar days from the date the current soil disturbance activity ceased. For *construction sites* that *directly discharge* to one of the 303(d) segments listed in Appendix D, or are located in one of the watersheds listed in Appendix C, or are authorized to disturb greater than five acres in accordance with Part I.E.5.a.viii., the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven calendar days from the date the soil disturbance activity ceased.

    c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

    d. **Pollution Prevention Measures**. Select, design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be selected, designed, installed, implemented, and maintained to:

        i. *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. Soaps, detergents and solvents cannot be used; and

        ii. *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation

and to *stormwater*. *Minimization* of exposure is not required in cases where the exposure to precipitation and to *stormwater* will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of *stormwater* contamination (such as final products and materials intended for outdoor use); and

iii. Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Surface Outlets.** When discharging from basins and impoundments, the surface outlets must be designed, constructed, and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-Construction Stormwater Management Practice (SMP) Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction SMPs, in accordance with Part III.C., must select, design, install, implement, and maintain the SMPs to meet the *performance criteria* in the New York State Stormwater Management Design Manual, dated July 31, 2024 (DM), using sound engineering judgment. Where SMPs are not designed in conformance with the *performance criteria* in the DM, the *owner or operator* must include in the *SWPPP* the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity*, that requires SMPs in accordance with Part III.C., must design the practices to meet the applicable *sizing criteria* in Part II.C.2.a., b., c., or d.

a. Sizing Criteria for *New Development*

i. Runoff Reduction Volume (RRv) and Water Quality Volume (WQv):

1. Reduce the total WQv by application of RR techniques and standard SMPs with RRv capacity. The total WQv must be calculated in accordance with the criteria in Section 4.2 of the DM; or

2. Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the requirements in Part II.C.2.a.i.1. due to *site limitations* must direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv must be documented in the *SWPPP*. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the *SWPPP* must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible*.

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 4.4 of the DM. The remaining portion of the total WQv that cannot be reduced must be treated by application of standard SMPs.

ii. Channel Protection Volume (CPv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event, remaining after runoff reduction. Where a CPv control orifice is provided, the minimum orifice size must be 3 inches, with acceptable external trash rack or orifice protection. The CPv requirement does not apply when:

1. Reduction of the entire CPv is achieved by application of runoff reduction techniques or infiltration systems; or

2. The 1-year post-development peak *discharge* is less than or equal to 2.0 cfs without detention or velocity controls; or

3. The site *directly discharges* into a fifth order or larger water body (stream, river, or lake), or tidal waters, where the increase in smaller flows will not impact the stream bank or channel integrity. However, the point of *discharge* must be adequately protected against scour and erosion by the increased peak *discharge*.

iii. *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams, or

2. A downstream analysis reveals that *overbank* control is not required.

iv. Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams, or

2. A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watersheds

i. Runoff Reduction Volume (RRv) and Water Quality Volume (WQv):

1. Reduce the WQv by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24-hour design storm over the post-developed watershed and must be calculated in accordance with the criteria in Section 4.3 of the DM; or

2. Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part II.C.2.b.i.1. due to *site limitations* must direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv must be documented in the *SWPPP*. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the *SWPPP* must include

documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible*.

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 4.5 of the DM. The remaining portion of the total WQv that cannot be reduced must be treated by application of standard SMPs.

ii. Channel Protection Volume (CPv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event, remaining after runoff reduction. Where a CPv control orifice is provided, the minimum orifice size must be 3 inches, with acceptable external trash rack or orifice protection. The CPv requirement does not apply when:

1. Reduction of the entire CPv is achieved by application of runoff reduction techniques or infiltration systems; or

2. The 1-year post-development peak *discharge* is less than or equal to 2.0 cfs; or

3. The site *directly discharges* to tidal waters, or a fifth order or larger water body (stream, river, or lake) where the increase in smaller flows will not impact the stream bank or channel integrity. However, the point of *discharge* must be adequately protected against scour and erosion by the increased peak *discharge*.

iii. *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams; or

2. A downstream analysis reveals that *overbank* control is not required.

iv. Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams; or

2. A downstream analysis reveals that *overbank* control is not required.

c. *Sizing Criteria* for *Redevelopment Activity*

i. Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* must be addressed by one of the following options, as outlined in Section 9.2.1. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C) must calculate the WQv in accordance with Section 4.3 of the DM. All other *redevelopment activities* must calculate the WQv in accordance with Section 4.2 of the DM.

1. Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the DM must be applied to all newly created pervious areas; or

2. Capture and treat 100% of the required WQv, for a minimum of 25% of the disturbed redevelopment *impervious area*, by implementation of standard SMPs or reduced by application of runoff reduction techniques; or

3. Capture and treat 100% of the required WQv, for a minimum of 75% of the disturbed redevelopment *impervious area*, by implementation of a volume-based alternative SMP, as defined in Section 9.4 of the DM; or

4. Capture and treat 100% of the required WQv, for a minimum of 75% of the disturbed redevelopment *impervious area*, by implementation of a flow-through alternative SMP sized to treat the peak rate of runoff from the WQv design storm; or

5. Application of a combination of 1 through 4 above that provide a weighted average of at least two of the above methods. Application of this method must be in accordance with the criteria in Section 9.2.1(A)(V) of the DM; or

6. If there is an existing SMP located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 through 5 above.

ii. Channel Protection Volume (CPv) is not required if there is 0% change to hydrology that increases the *discharge* rate and volume from the project site.

iii. *Overbank* Flood Control (Qp) is not required if there is 0% change to hydrology that increases the *discharge* rate from the project site.

iv. Extreme Flood Control (Qf) is not required if there is 0% change to hydrology that increases the *discharge* rate from the project site.

d. *Sizing Criteria* for Combination of *Redevelopment Activity* and *New Development*

Construction projects, that include both *new development* and *redevelopment activity*, must use SMPs that meet the *sizing criteria* calculated as an aggregate of the *sizing criteria* in Part II.C.2.a. or b. for the *new development* portion of the project and Part II.C.2.c. for the *redevelopment activity* portion of the project.

Part III. Stormwater Pollution Prevention Plan (SWPPP)

A. General *SWPPP* Requirements

1. A *SWPPP* must be prepared and implemented by the *owner or operator* of all *construction activity* covered by this permit. All authorized *discharges* must be identified in the *SWPPP*. The *SWPPP* must document the selection, design, installation, implementation and maintenance of the control measures and

practices that will be used to meet the effluent limitations in Part II.B. and, where applicable, the SMP requirements in Part II.C.

2. The *SWPPP* must demonstrate consideration in narrative format of the future physical risks due to climate change pursuant to the Community Risk and Resiliency Act (CRRA), 6 NYCRR Part 490, and associated guidance.

    a. The owner or operator must consider:

        i. the following physical risks due to climate change:

            (i) increasing temperature; and

            (ii) increasing precipitation; and

            (iii) increasing variability in precipitation, including chance of drought; and

            (iv) increasing frequency and severity of flooding; and

            (v) rising sea level; and

            (vi) increasing storm surge; and

            (vii) shifting ecology.

        ii. for each of the following:

            (i) overall site planning; and

            (ii) location, elevation, and sizing of:

                a. control measures and practices; and

                b. conveyance system(s); and

                c. detention system(s).

3. The *SWPPP* must describe the erosion and sediment control practices and where required, SMPs that will be used and/or constructed to reduce the *pollutants* in *stormwater discharges* and to assure compliance with the

requirements of this permit. In addition, the *SWPPP* must identify potential sources of pollution which may reasonably be expected to affect the quality of *stormwater discharges*.

4. All *SWPPPs*, that require the SMP component in accordance with Part III.B.2., must be prepared by a *qualified professional*.

5. The *owner or operator* must keep the *SWPPP* current so that, at all times, it accurately documents the erosion and sediment control practices that are being used or will be used during construction, and all SMPs that will be constructed on the site. At a minimum, the *owner or operator* must modify the *SWPPP*, including construction drawings:

    a. whenever the current provisions prove to be ineffective in *minimizing pollutants* in *stormwater discharges* from the site; and

    b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*; and

    c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* NYSDEC, or other regulatory authority; and

    d. to document the final construction conditions in an as-built drawing.

6. NYSDEC may notify the *owner or operator* at any time that the *SWPPP* does not meet one or more of the minimum requirements of this permit. The notification must be in writing and identify the provisions of the *SWPPP* that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by NYSDEC, the *owner or operator* must make the required changes to the *SWPPP* and submit written notification to NYSDEC that the changes have been made. If the *owner or operator* does not respond to NYSDEC's comments in the specified time frame, NYSDEC may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4.

7. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting, and maintaining the erosion and sediment control practices included in the *SWPPP* and the

contractor(s) and subcontractor(s) that will be responsible for constructing the SMPs included in the *SWPPP*. The *owner or operator* must have each of the contractors and subcontractors identify at least one person from their company to be *trained contractor* that will be responsible for implementation of the *SWPPP*. The *owner or operator* must ensure that at least one *trained contractor* is on site daily when soil disturbance activities are being performed.

The *owner or operator* must have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before the *commencement of construction activities*:

> "I hereby certify under penalty of law that I understand and agree to comply with the requirements of the *SWPPP* and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with the requirements of the most current version of the New York State Pollutant Discharge Elimination System (SPDES) Construction General Permit (CGP) for Stormwater Discharges from Construction Activities and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the *SWPPP* that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for *SWPPP* implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* must attach the certification statement(s) to the copy of the *SWPPP* that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the *SWPPP* after the *commencement of construction activities*, they must also sign the certification statement and provide the information listed above prior to performing *construction activities*.

B. Required *SWPPP* Contents

1. Erosion and sediment control component - The *owner or operator* must prepare a *SWPPP* that includes erosion and sediment control practices.

    a. Erosion and sediment control practices must be designed:

        i. in conformance with the BB; or

        ii. *equivalent* to the BB if deviating from Part III.B.1.a.i.

    b. If the erosion and sediment control practices are designed in conformance with Part III.B.1.a.ii., the *SWPPP* must include a demonstration of *equivalence* to the BB.

    c. At a minimum, the erosion and sediment control component of the *SWPPP* must include the following:

        i. Background information about the scope of the project, including the location, type and size of project; and

        ii. A site map/construction drawing(s) with north arrows for the project, including a general location map. At a minimum, the site map must show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the *stormwater discharge*(s) and receiving surface water(s); and

        iii. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG); and

        iv. A phasing plan for the project and sequencing plans for all *phases*, both of which must address clearing and grubbing, excavation and grading, utility and infrastructure installation, *final stabilization*,

and any other *construction activity* at the site that will result in soil disturbance.

1. The phasing plan must include:

    a. a map delineating and labeling the limits of soil disturbance for all *phases* of a project; and

    b. a table identifying the order and intended schedule of when each *phase* will begin and end its sequencing plan. The table must identify the total disturbed area for each *phase* at any one time and the total disturbed area for the overall project at any one time all on one timeline showing all overlapping quantities of disturbed area at any one time; and

2. A sequencing plan for a specific *phase* must include:

    a. a table indicating the order and intended schedule of *construction activities* within a *phase*, and corresponding construction drawings with a description of the work to be performed; and

    b. all permanent and *temporary stabilization* measures; and

v. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented; and

vi. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice; and

vii. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any

temporary sediment basins and structural practices that will be used to divert flows from exposed soils; and

viii. A maintenance inspection schedule for the contractor(s) and subcontractor(s) identified in Part III.A.7. to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection schedule must be in accordance with the requirements in the BB technical standard; and

ix. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the *stormwater discharges*; and

x. A description and location of any *stormwater discharges* associated with industrial activity other than construction at the site, including, but not limited to, *stormwater discharges* from asphalt plants and concrete plants located on the *construction site*; and

xi. Identification of any elements of the design that are not in conformance with the design criteria in the BB technical standard. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. SMP component – The *owner or operator* of *construction activity* identified in Table 2 of Appendix B must prepare a *SWPPP* that includes SMPs.

    a. SMPs must be designed in conformance with the applicable *sizing criteria* in Part II.C.2.a., c., or d.; and

    b. SMPs must be designed in conformance with the *performance criteria*:

        i. in the DM; or

        ii. *equivalent* to the DM if deviating from Part III.B.2.b.i.; or

        iii. in the New York State Stormwater Management Design Manual, dated January 2015 (2015 Design Manual), or *equivalent* to it, if the following criteria are met:

1. The eNOI is submitted in accordance with Part I.D. before January 29, 2027 for *construction activities* that are either:

    a. subject to governmental review and approval:

        i. where the *owner or operator* made any application to that governmental entity prior to the effective date of this permit; and

        ii. such application included a *SWPPP* developed using the 2015 Design Manual or *equivalent* to it; or

    b. not subject to governmental review and approval:

        i. where a fiscal allocation for the *construction activities* has been developed and approved by a governmental entity; and

        ii. the *SWPPP* was developed using the 2015 Design Manual or *equivalent* to it; and

c. If SMPs are designed in conformance with Part III.B.2.b.ii., the *SWPPP* must include the reason(s) for the deviation or alternative design and a demonstration of *equivalence* to the DM; and

d. If SMPs are designed in conformance with Part III.B.2.b.iii., the *SWPPP* must include supporting information or documentation demonstrating that Part III.B.2.b.iii.1.a. or b. apply; and

e. The SMP component of the *SWPPP* must include the following:

    i. Identification of all SMPs to be constructed as part of the project, including which option the SMP designs conform to, either Part III.B.2.b.i., ii., or iii. Include the dimensions, material specifications and installation details for each SMP; and

    ii. A site map/construction drawing(s) showing the specific location and size of each SMP; and

iii. A Stormwater Modeling and Analysis Report that includes:

    (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points; and

    (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and SMPs; and

    (iii) Results of *stormwater* modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre- and post-development runoff rates and volumes for the different storm events; and

    (iv) Summary table, with supporting calculations, which demonstrates that each SMP has been designed in conformance with the *sizing criteria* included in the DM; and

    (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part II.C.; and

    (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the DM. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the DM.

iv. Soil testing results and locations (test pits, borings); and

v. Infiltration test results, when required in accordance with Part III.B.2.a.; and

vi. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each SMP. The plan must identify the entity

that will be responsible for the long-term operation and maintenance of each practice; and

3. Enhanced Phosphorus Removal Standards - The *owner or operator* of *construction activity* identified in Table 2 of Appendix B that is located in a watershed identified in Appendix C must prepare a *SWPPP* that includes SMPs designed in conformance with the applicable *sizing criteria* in Part II.C.2.b., c., or d. and the *performance criteria* Enhanced Phosphorus Removal Standards included in the DM. At a minimum, the SMP component of the *SWPPP* must meet the requirements of Part III.B.2.

C. Required *SWPPP* Components by Project Type

Owners or operators of *construction activities*, identified in Table 1 of Appendix B, are required to prepare a *SWPPP* that only includes erosion and sediment control practices designed in accordance with Part III.B.1. *Owners or operators* of the *construction activities*, identified in Table 2 of Appendix B, must prepare a *SWPPP* that also includes SMPs designed in accordance with Part III.B.2 or 3.

For the entire area of disturbance, including the entire *common plan of development or sale* if applicable, the owner or operator must evaluate every bullet from Appendix B Table 1 and Table 2 separately. If bullets from both Table 1 and Table 2 apply, the *SWPPP* must include erosion and sediment control practices for all *construction activities* but SMPs for only those portions of the *construction activities* that fall under Table 2 bullet(s).

Part IV. Inspection and Maintenance Requirements

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures), and all SMPs identified in the *SWPPP*, are inspected and maintained in accordance with Part IV.B. and C.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity*, identified in Tables 1 and 2 of Appendix B, must have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being

implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor must:

a. if the corrective action does not require engineering design:

   i. begin implementing corrective actions within one business day; and

   ii. complete the corrective actions within five business days; or

b. if the corrective action requires engineering design:

   i. begin the engineering design process within five business days; and

   ii. complete the corrective action in a reasonable time frame but no later than within 60 calendar days.

2. For *construction sites* where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections in accordance with Part IV.B.1. The *trained contractor* must begin conducting the maintenance inspections in accordance with Part IV.B.1. as soon as soil disturbance activities resume.

3. For *construction sites* where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections in accordance with Part IV.B.1. if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational.

C. *Qualified Inspector* Inspection Requirements

1. With the exception of the following *construction activities* identified in Tables 1 and 2 of Appendix B, a *qualified inspector* must conduct site inspections for all other *construction activities* identified in Tables 1 and 2 of Appendix B:

   a. the construction of a single-family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than or equal to five (5) acres and is

not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D; and

b. the construction of a single-family home that involves soil disturbances of one (1) or more acres but less than or equal to five (5) acres and is not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D; and

c. construction on *agricultural property* that involves soil disturbances of one (1) or more acres but less than five (5) acres; and

d. *construction activities* located in the New York City Watershed located east of the Hudson River, see Appendix C Figure 1, that involve soil disturbances of 5,000 square feet or more, but less than one acre.

2. The *qualified inspector* must conduct site inspections in accordance with the following timetable:

a. For *construction sites* where soil disturbance activities are on-going, the *qualified inspector* must conduct a site inspection at least once every seven (7) calendar days; or

b. For *construction sites* where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part I.E.6. to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* must conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections must be separated by a minimum of two (2) full calendar days; or

c. For *construction sites* where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* must conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* must notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix E) or, in areas under the jurisdiction of a *Traditional Land Use Control MS4 Operator,* the *Traditional Land Use Control MS4 Operator* (provided the *Traditional Land Use Control MS4 Operator* is not the *owner or operator* of the *construction activity*) by hard copy or email prior to reducing the inspections to this frequency and again by hard copy or email prior to re-commencing construction; or

d. For *construction sites* where soil disturbance activities have been shut down with partial project completion, the requirement to have the *qualified inspector* conduct inspections ceases if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational. The *owner or operator* must notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix E) or, in areas subject to the review authority of *Traditional Land Use Control MS4 Operator(s)* in accordance with Part I.D.2.b.ii.1., the *Traditional Land Use Control MS4 Operator(s)* (provided the *Traditional Land Use Control MS4 Operator(s)* are not the *owners or operators* of the *construction activity*) in writing prior to the shutdown and again in writing prior to resuming *construction activity*. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* must terminate coverage by meeting the requirements of Part V; or

e. For *construction sites* involving soil disturbance of one (1) or more acres that *directly discharge* to one of the 303(d) segments listed in Appendix D or is located in one of the watersheds listed in Appendix C, the *qualified inspector* must conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections must be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* must inspect:

a. all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness; and

b. all SMPs under construction to ensure that they are constructed in conformance with the *SWPPP*; and

c. all areas of disturbance that have not achieved *final stabilization*; and

d. all points of *discharge* to *surface waters of the State* located within, or immediately adjacent to, the property boundaries of the *construction site*; and

e. all points of *discharge* from the *construction site*.

4. The *qualified inspector* must prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report must include and/or address all of the following, for all *construction activities* except those listed in Part IV.C.1.:

   a. Permit identification number; and

   b. Date and time of inspection; and

   c. Name and title of person(s) performing inspection; and

   d. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection, including the temperature at the time of the inspection; and

   e. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This must include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow; and

   f. A description of the condition of all *surface waters of the State* located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This must include identification of any *discharges* of sediment to the *surface waters of the State*; and

   g. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance; and

   h. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced; and

   i. Description and sketch (map) of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection; and

   j. Estimates, in square feet or acres, of the following areas:

      i. Total area with active soil disturbance (not requiring either *temporary stabilization* or *final stabilization*); and

      ii. Total area with inactive soil disturbance (requiring either *temporary stabilization* or *final stabilization*); and

      iii. Total area that has achieved *temporary stabilization*; and

      iv. Total area that has achieved *final stabilization*; and

   k. Current stage of construction of all SMPs and identification of all *construction activity* on site that is not in conformance with the *SWPPP* and technical standards; and

   l. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the SMP(s); and

   m. Identification and status of all corrective actions that were required by previous inspection; and

   n. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* must attach color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* must also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* must attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* must notify the *owner or operator*, and appropriate contractor or subcontractor identified in Part III.A.7., of any corrective actions that need to be taken. The contractor or subcontractor must:

   a. if the corrective action does not require engineering design:

i. begin implementing corrective actions within one business day; and

ii. complete the corrective actions within five business days; or

b. if the corrective action requires engineering design:

i. begin the engineering design process within five business days; and

ii. complete the corrective action in a reasonable time frame but no later than within 60 calendar days.

6. All inspection reports must be signed by the *qualified inspector.* In accordance with Part I.E.3., the inspection reports must be maintained on site with the *SWPPP*.

Part V. How to Terminate CGP Coverage

A. Electronic Notice of Termination (eNOT) Submittal

The eNOT contains questions to ensure requirements in Part V.A. have been met.

1. An *owner or operator* must terminate coverage when one or more of the following requirements have been met:

a. Total project completion:

i. all *construction activity* identified in the *SWPPP* has been completed; and

ii. all areas of disturbance have achieved *final stabilization*; and

iii. all temporary, structural erosion and sediment control measures have been removed; and

iv. all SMPs have been constructed in conformance with the *SWPPP* and are operational; and

v. an as-built drawing has been prepared; or

b. Planned shutdown with partial project completion:

i. all soil disturbance activities have ceased; and

ii. all areas disturbed as of the project shutdown date have achieved *final stabilization*; and

iii. all temporary, structural erosion and sediment control measures have been removed; and

iv. all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational; and

v. an as-built drawing has been prepared; or

c. In accordance with Part I.G. Change of Owner or Operator; or

d. The *owner or operator* has obtained coverage under an alternative general SPDES permit or an individual SPDES permit.

2. For *construction activities* that require *qualified inspector* inspections in accordance with Part IV.C.1. and have met Part V.A.1.a. or b., the *owner or operator* must have the *qualified inspector* perform a final site inspection prior to submitting the eNOT. The *qualified inspector* must, by signing the “Final Stabilization” and “Post-Construction Stormwater Management Practice(s)” certification statements on the eNOT, certify that all the requirements in Part V.A.1.a. or b. have been achieved.

3. For *construction activities* that are subject to the review authority of *Traditional Land Use Control MS4 Operator(s)* in accordance with Part I.D.2.b.ii.1. and meet Part V.A.1.a. or b., the *owner or operator* must have the *Traditional Land Use Control MS4 Operator(s)* sign the “MS4 Acceptance” statement on the eNOT in accordance with the requirements in Part VII.J. A *Traditional Land Use Control MS4 Operator* official, by signing this statement, determined that it is acceptable for the *owner or operator* to submit the eNOT in accordance with the requirements of this Part. A *Traditional Land Use Control MS4 Operator* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*’s final site inspection certification(s) when required in Part V.A.2.

4. For *construction activities* that require SMPs and meet Part V.A.1.a. or b., the *owner or operator* must, prior to submitting the eNOT, ensure one of the following:

    a. for SMP(s) that were constructed by a private entity, but will be owned, operated, and maintained by a public entity, the SMP(s) and any right-of-way(s) needed to operate and maintain such practice(s) have been deeded to the municipality in which the practice(s) is located; or

    b. for SMP(s) that are privately owned, but will be operated and maintained by a public entity, an executed operation and maintenance agreement is in place with the municipality that will operate and maintain the SMP(s); or

    c. for SMP(s) that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record; or

    d. for SMP(s) that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility, the *owner or operator* has policies and procedures in place that ensure operation and maintenance of the practices in accordance with the operation and maintenance plan.

5. An *owner or operator* that has met the requirements of Part V.A.1., 2., 3., and 4. must request termination of coverage under this permit by submitting a complete Notice of Termination form electronically using a NYSDEC approved form.[5]

    a. The owner's or operator's coverage is terminated as of the termination date indicated in the Letter of Termination (LOT), which is sent by NYSDEC after a complete eNOT is submitted.

[5] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

Part VI. Record Retention and Reporting

A. Record Retention

The *owner or operator* must retain a copy of the documents listed in Part I.E.3. and a copy of the LOT for a period of at least five years from the date that NYSDEC accepts a complete NOT submitted in accordance with Part V.

B. Reporting

Except for the eNOI, the signature forms associated with the eNOI, and the eNOT, all other written correspondence requested by NYSDEC, including individual permit applications, must be sent to the address of the appropriate DOW (SPDES) Program contact at the Regional Office listed in Appendix E.

Part VII. Standard Permit Requirements

For the purposes of this permit, examples of contractors and subcontractors include: third-party maintenance and construction contractors.

A. Duty to Comply

The *owner or operator*, and all contractors or subcontractors, must comply with all requirements of this permit. Any non-compliance with the requirements of this permit constitutes a violation of the New York State Environmental Conservation Law (ECL), and its implementing regulations, and is grounds for enforcement action. Filing of a request for termination of coverage under this permit, or a notification of planned changes or anticipated non-compliance, does not limit, diminish or stay compliance with any requirements of this permit.

B. Need to Halt or Reduce Activity Not a Defense

The necessity to halt or reduce the *construction activity* regulated by this permit, in order to maintain compliance with the requirements of this permit, must not be a defense in an enforcement action.

C. Penalties

There are substantial criminal, civil, and administrative penalties associated with violating the requirements of this permit. Fines of up to $37,500 per day for each

violation and imprisonment for up to 15 years may be assessed depending upon the nature and degree of the offense.

D. False Statements

Any person who knowingly makes any false material statement, representation, or certification in any application, record, report, or other document filed or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance must, upon conviction, be punished in accordance with ECL §71-1933 and or New York State Penal Law Articles 175 and 210.

E. Re-Opener Clause

Upon issuance of this permit, a determination has been made on the basis of a submitted Notice of Intent, plans, or other available information, that compliance with the specified permit requirements will reasonably protect classified water use and assure compliance with applicable *water quality standards*. Satisfaction of the requirements of this permit notwithstanding, if operation pursuant to this permit causes or contributes to a condition in contravention of State *water quality standards* or guidance values, or if NYSDEC determines that a modification is necessary to prevent impairment of the best use of the waters or to assure maintenance of *water quality standards* or compliance with other provisions of ECL Article 17 or the Clean Water Act (CWA), or any regulations adopted pursuant thereto, NYSDEC may require such modification and the Commissioner may require abatement action to be taken by the *owner or operator* and may also prohibit such operation until the modification has been implemented.

F. Duty to Mitigate

The *owner or operator*, and its contractors and subcontractors, must take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

G. Requiring Another General Permit or Individual SPDES Permit

NYSDEC may require any *owner or operator* authorized to *discharge* in accordance with this permit to apply for and obtain an individual SPDES permit or apply for authorization to *discharge* in accordance with another general SPDES permit.

1. Cases where an individual SPDES permit or authorization to discharge in accordance with another general SPDES permit may be required include, but is not limited to the following:

   a. the *owner or operator* is not in compliance with the conditions of this permit or does not meet the requirements for coverage under this permit; and

   b. a change has occurred in the availability of demonstrated technology or practices for the control or abatement of *pollutants* applicable to the *point source*; and

   c. new effluent limitation guidelines or new source performance standards are promulgated that are applicable to *point sources* authorized to *discharge* in accordance with this permit; and

   d. existing effluent limitation guidelines or new source performance standards that are applicable to *point sources* authorized to *discharge* in accordance with this permit are modified; and

   e. a water quality management plan containing requirements applicable to such *point sources* is approved by NYSDEC; and

   f. circumstances have changed since the time of the request to be covered so that the *owner or operator* is no longer appropriately controlled under this permit, or either a temporary or permanent reduction or elimination of the authorized *discharge* is necessary; and

   g. the *discharge* is in violation of section 17-0501 of the ECL; and

   h. the *discharge(s)* is a significant contributor of *pollutants*. In making this determination, NYSDEC may consider the following factors:

      i. the location of the *discharge(s)* with respect to *surface waters of the State*; and

      ii. the size of the *discharge(s)*; and

      iii. the quantity and nature of the *pollutants discharged* to *surface waters of the State*; and

      iv. other relevant factors including compliance with other provisions of ECL Article 17, or the CWA.

2. When NYSDEC requires any *owner or operator* authorized by this permit to apply for an individual SPDES permit as provided for in this subdivision, it must notify the *owner or operator* in writing that a permit application is required. This notice must include a brief statement of the reasons for this decision, an application

form, a statement setting a time for the *owner or operator* to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from the *owner's or operator's* receipt of the notification letter, whereby the authorization to *discharge* under this permit must be terminated. NYSDEC may grant additional time upon demonstration, to the satisfaction of the RWE,[6] that additional time to apply for an alternative authorization is necessary or where NYSDEC has not provided a permit determination in accordance with 6 NYCRR Part 621.

3. When an individual SPDES permit is issued to an *owner or operator* authorized to *discharge* under this permit for the same *discharge(s)*, this permit authorization for *construction activities* authorized under the individual SPDES permit is automatically terminated on the effective date of the individual SPDES permit unless termination is earlier in accordance with 6 NYCRR Part 750.

H. Duty to Provide Information

The *owner or operator* must furnish to NYSDEC, within five business days, unless otherwise set forth by NYSDEC, any information that NYSDEC may request to determine whether cause exists to determine compliance with this permit or to determine whether cause exists for requiring an individual SPDES permit in accordance with 6 NYCRR 750-1.21(e) (see Part VII.G. Requiring Another General Permit or Individual Permit).

The *owner or operator* must make available to NYSDEC, for inspection and copying, or furnish to NYSDEC within 25 business days of receipt of a NYSDEC request for such information, any information retained in accordance with this permit.

Except for Part I.D.4. and 5. and Part I.G., the following applies: where the *owner or operator* becomes aware that it failed to submit any relevant facts on the Notice of Intent, or submitted incorrect information in a Notice of Intent or in any report to NYSDEC, the *owner or operator* must submit such facts or corrected information to NYSDEC within five business days.

I. Extension

In the event a new permit is not issued and effective prior to the expiration of this permit, and this permit is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, then the *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the requirements of this permit until a new permit is issued and effective.

[6] The Regional Water Manager where a DEC Region does not have a RWE.

J. Signatories and Certification

The Notice of Intent, Notice of Termination, and reports required by this permit must be signed as provided in 40 CFR §122.22.

1. All Notices of Intent and Notices of Termination must be signed as follows:

   a. For a corporation. By a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

      (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation; or

      (ii) the manager of one or more manufacturing, production or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for Notice of Intent or Notice of Termination requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

      Note: NYSDEC does not require specific assignments or delegations of authority to responsible corporate officers identified in 40 CFR §122.22(a)(1)(i). NYSDEC will presume that these responsible corporate officers have the requisite authority to sign the Notice of Intent or Notice of Termination unless the corporation has notified NYSDEC to the contrary. Corporate procedures governing authority to sign a Notice of Intent or Notice of Termination may provide for assignment or delegation to applicable corporate positions under 40 CFR §122.22(a)(1)(ii) rather than to specific individuals.

   b. For a partnership or sole proprietorship. By a general partner or the proprietor, respectively.

c. For a municipality, State, Federal, or other public agency. By either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

   1. the chief executive officer of the agency; or

   2. a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. All reports required by this permit, and other information requested by NYSDEC, must be signed by a person described in Part VII.J.1., or by a duly authorized representative of that person. A person is a duly authorized representative only if:

   a. The authorization is made in writing by a person described in Part VII.J.1. or using the Duly Authorized Form, found on the DEC website; and

   b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and

   c. The written authorization is submitted to NYSDEC.

3. Changes to authorization. If an authorization under Part VII.J.2. is no longer accurate because a different individual or position has responsibility for the overall operation of the *construction activity*, a new authorization satisfying the requirements of Part VII.J.2. must be submitted to NYSDEC prior to or together with any reports, information, or applications to be signed by an authorized representative.

4. Certification. Any person signing a document under Part VII.J.1. or 2. must make the following certification:

   I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who

manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

5. Electronic reporting. If documents described in Part VII.J.1. or 2. are submitted electronically by or on behalf of the *construction activity* with coverage under this permit, any person providing the electronic signature for such documents must meet all relevant requirements of this section, and must ensure that all of the relevant requirements of 40 CFR Part 3 (including, in all cases, subpart D to Part 3) (Cross-Media Electronic Reporting) and 40 CFR Part 127 (NPDES Electronic Reporting Requirements) are met for that submission.

K. Inspection and Entry

The *owner or operator* must allow NYSDEC, the USEPA Regional Administrator, the applicable county health department, or any authorized representatives of those entities, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the *discharge*, upon the presentation of credentials and other documents as may be required by law, to:

1. enter upon the *owner's or operator's* premises where a regulated facility or activity is located or conducted or where records must be kept under the requirements of this permit; and

2. have access to and copy at reasonable times, any records that must be kept under the requirements of this permit, including records required to be maintained for purposes of operation and maintenance; and

3. inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices or operations regulated or required under this permit; and

4. sample or monitor at reasonable times, for the purposes of assuring general SPDES permit compliance or as otherwise authorized by the CWA or ECL, any substances or parameters at any location; and

5. enter upon the property of any contributor to the regulated facility or activity under authority of the *owner or operator*.

L. Confidentiality of Information

The following must not be held confidential: this permit, the fact sheet for this permit, the name and address of any *owner or operator*, effluent data, the Notice of Intent, and information regarding the need to obtain an individual permit or an alternative general SPDES permit. This includes information submitted on forms themselves and any attachments used to supply information required by the forms (except information submitted on usage of substances). Upon the request of the *owner or operator*, NYSDEC must make determinations of confidentiality in accordance with 6 NYCRR Part 616, except as set forth in the previous sentence. Any information accorded confidential status must be disclosed to the Regional Administrator upon his or her written request. Prior to disclosing such information to the Regional Administrator, NYSDEC will notify the Regional Administrator of the confidential status of such information.

M. Other Permits May Be Required

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

N. NYSDEC Orders or Civil Decrees/Judgments

The issuance of this permit by the NYSDEC, and the coverage under this permit by the *owner or operator*, does not supersede, revoke, or rescind any existing order on consent or civil Decree/Judgment, or modification to any such documents or to any order issued by the Commissioner, or any of the terms, conditions, or requirements contained in such order or modification therefore, unless expressly noted.

O. Property Rights

Coverage under this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations, nor does it obviate the necessity of obtaining the assent of any other jurisdiction as required by law for the *discharge* authorized.

P. Compliance with Interstate Standards

If the *construction activity* covered by this permit originates within the jurisdiction of an interstate water pollution control agency, then the *construction activity* must also comply with any applicable effluent standards or *water quality standards* promulgated by that interstate agency and as set forth in this permit for such *construction activities*.

Q. Oil and Hazardous Substance Liability

Coverage under this permit does not affect the imposition of responsibilities upon, or the institution of any legal action against, the *owner or operator* under section 311 of the CWA, which must be in conformance with regulations promulgated pursuant to section 311 governing the applicability of section 311 of the CWA to *discharges* from facilities with *NPDES* permits, nor must such issuance preclude the institution of any legal action or relieve the *owner or operator* from any responsibilities, liabilities, or penalties to which the *owner or operator* is or may be subject pursuant to the Comprehensive Environmental Response, Compensation and Liability Act of 1980, 42 U.S.C. section 9601 et seq. (CERCLA).

R. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, must not be affected thereby.

S. NYSDEC Approved Forms

The *owner or operator* must provide all relevant information that is requested by NYSDEC, and required by this permit, on all NYSDEC approved forms.

Definitions

All definitions in this section are solely for the purposes of this permit. If a word is not italicized in the permit, use its common definition.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property – the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023).

Alter Hydrology from Pre- to Post-Development Conditions – the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer System – a sewer system which conveys sewage and *stormwater* through a single pipe system to a publicly owned treatment works.

Commence (Commencement of) Construction Activities – the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the *SWPPP*. See definition for "*Construction Activity(ies)*" also.

Common Plan of Development or Sale – a contiguous area where multiple separate and distinct *construction activities* are occurring, or may occur, under one plan. The "common plan" of development or sale is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQR) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating *construction activities* may occur on a specific plot. A *common plan of development or sale* is comprised of two or more *phases*.

Common plan of development or sale does not include separate and distinct *construction activities* that are occurring, or may occur, under one plan that are at least 1/4 mile apart provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Construction Activity(ies) – identified within 40 CFR 122.26(b)(14)(x), 122.26(b)(15)(i), and 122.26(b)(15)(ii), any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, mechanized logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal.

Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, which is excluded from the calculation of the soil disturbance for a project. Routine maintenance includes, but is not limited to:

- Re-grading of gravel roads or parking lots; and
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity of the ditch; and
- Replacement of existing culverts that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity of a ditch; and
- Replacement of existing bridges that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity beneath the bridges; and
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch); and
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*; and
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material; and
- Long-term use of equipment storage areas at or near highway maintenance facilities; and
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*; and
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts; and
- Maintenance of ski trails including brush hog use and mowing; and
- Above ground snowmaking pipe replacement; and
- Replacement of existing utility poles; etc.

Construction Site – the land area where *construction activity(ies)* will occur. See also the definitions for "*Commence (Commencement of) Construction Activities"* and "*Common Plan of Development or Sale."*

Dewatering – the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Directly Discharge(s)(ing) (to a specific surface waterbody) – runoff flows from a *construction site* by overland flow and the first point of *discharge* is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system and the first point of *discharge* from the separate storm sewer system is the specific surface waterbody.

Discharge(s)(d) – any addition of any *pollutant* to waters of the State through an outlet or *point source*.

Embankment – an earthen or rock slope that supports a road/highway.

Equivalent (Equivalence) – the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization – all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other *equivalent* stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

Historic Property – any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) – all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and compacted gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – not technologically possible, or not economically practicable and achievable considering best industry practices.

Minimize(ing)(ation) – reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer System (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

1. owned or operated by a State, city, town, village, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, *stormwater*, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA, that *discharges* to *surface waters of the State*; and

2. designed or used for collecting or conveying *stormwater*; and

3. which is not a *combined sewer system*; and

4. which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

Natural Buffer(s) – an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – any land disturbance that does not meet the definition of *Redevelopment Activity* included in this appendix.

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

Nonpoint Source(s) – any source of water pollution or *pollutants* which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank – flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator – the person, persons, or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit requirements.

Performance Criteria – the six performance criteria for each group of SMPs in Chapters 5 and 6 of the technical standard, New York State Stormwater Management Design Manual (DM), dated July 31, 2024. These include feasibility, conveyance, pretreatment, treatment, landscaping, and maintenance. It does not include the *Sizing Criteria* (i.e. WQv, RRv, CPv, Qp and Qf) in Part I.C.2. of the permit.

Phase – a defined area in which *construction activities* are occurring or will occur separate from other defined area(s).

Point Source – any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be *discharged*.

Pollutant(s) – dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast *discharged* into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq.

Qualified Inspector – a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, *New York State Erosion and Sediment Control Certificate Program* holder or other NYSDEC endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of NYSDEC endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any SMPs that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional – a person that is knowledgeable in the principles and practices of *stormwater* management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other NYSDEC endorsed individual(s). Individuals preparing *SWPPPs* that require the SMP component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the *SWPPP* that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – the disturbance and reconstruction of existing *impervious area*, including *impervious areas* that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Renewable Energy – electricity or thermal energy generated by renewable energy systems through use of the following technologies: solar thermal, photovoltaics, on land and offshore wind, hydroelectric, geothermal electric, geothermal ground source heat, tidal energy, wave energy, ocean thermal, and fuel cells which do not utilize a fossil fuel resource in the process of generating electricity.

Site Limitations – site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical *site limitations* include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of *site limitations* shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – the criteria included in Part I.C.2 of the permit that are used to size SMPs. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

Steep Slope – land area designated on the current United States Department of Agriculture (USDA) Soil Survey as Soil Slope Phase D, (provided the map unit name or description is inclusive of slopes greater than 25%), or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Stormwater – that portion of precipitation that, once having fallen to the ground, is in excess of the evaporative or infiltrative capacity of soils, or the retentive capacity of surface features, which flows or will flow off the land by surface runoff to waters of the State.

Streambank – the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – a project specific report, including construction drawings, that among other things: describes the *construction activity(ies)*, identifies the potential sources of pollution at the *construction site*; describes and shows the *stormwater* controls that will be used to control the *pollutants* (i.e. erosion and sediment controls; for many projects, includes SMPs); and identifies procedures the *owner or operator* will implement to comply with the requirements of the permit. See Part III of the permit for a complete description of the information that must be included in the *SWPPP*.

Surface Waters of the State – shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization – exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Load (TMDL) – the sum of the allowable loads of a single *pollutant* from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a *pollutant* that a waterbody can receive and still meet *water quality standards*, and an allocation of that amount to the *pollutant's* sources. A TMDL stipulates Waste Load Allocations (WLA) for *point source discharges*, Load Allocations (LA) for *nonpoint source*s, and a margin of safety (MOS).

Traditional Land Use Control MS4 Operator – a city, town, or village with land use control authority that is authorized to *discharge* under New York State DEC's SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Trained Contractor – an employee from the contracting (construction) company, identified in Part III.A.7., that has received four (4) hours of NYSDEC endorsed training

in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.7., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, *New York State Erosion and Sediment Control Certificate Program* holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of NYSDEC endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity).

The *trained contractor* is responsible for the day-to-day implementation of the *SWPPP*.

Tree Clearing – *construction activities* limited to felling and removal of trees.

Tree clearing does not include hand felling and leaving the trees in place with no support from mechanized equipment, which is not considered *construction activity* requiring coverage under this permit.

Water Quality Standard – such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

APPENDIX B – Required SWPPP Components by Project Type

Table 1

***CONSTRUCTION ACTIVITIES* THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS**

The following *construction activities* that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres: • Single-family home not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D • Single-family residential subdivisions with 25% or less *impervious cover* at total site build-out and not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D • Construction of a barn or other *agricultural building*, silo, stock yard or pen. • Structural agricultural conservation practices as identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023) that include construction or reconstruction of *impervious area* or *alter hydrology from pre- to post-development* conditions.
The following *construction activities* that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land: • All construction activities located in the New York City Watershed located east of the Hudson River, see Appendix C Figure 1, that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.
Within the municipal boundaries of NYC: • Stand-alone road reconstruction, where the total soil disturbance from only that road construction, is less than one (1) acre of land.
The following *construction activities*: • Installation of underground linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains • Environmental enhancement projects, such as wetland mitigation, *stormwater* retrofits, stream restoration, and resiliency projects that reconstruct shoreline areas to address sea level rise • Pond construction • Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an *impervious cover* • Cross-country ski trails, walking/hiking trails, and mountain biking trails, including a de minimis parking lot (maximum 10 spaces total, sized for passenger cars) with 35 feet minimum preservation of undisturbed area downgradient from the parking lot • Dam rehabilitation (the structure of the dam itself) • Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are not part of residential, commercial, or institutional development; • Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path, or walking path.

Table 1 (Continued)
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following *construction activities*:

- Slope stabilization
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics
- Spoil areas that will be covered with vegetation
- Vegetated open space (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) that do not *alter hydrology from pre- to post-development* conditions
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre- to post-development* conditions
- Demolition where vegetation will be established, and no *redevelopment activity* is planned[1]
- Installation or replacement of either an overhead electric transmission line or a ski lift tower that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*.
- Solar array field areas that have tables elevated off the ground, spaced one table width apart, do not *alter hydrology from pre- to post-development conditions*, and address water quality volume and runoff reduction volume by maintaining sheet flow on slopes less than 8%.
- Structural agricultural conservation practices as identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023) that do not include construction or reconstruction of *impervious area* and do not *alter hydrology from pre- to post-development* conditions.
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary *impervious areas* that will be restored to pre-construction conditions once the *construction activity* is complete (in this context, "temporary" means the *impervious area* will be in place for two years or less)
- Other *construction activities* that do not include the construction or reconstruction of *impervious area*, and do not *alter hydrology from pre- to post-development* conditions, and are not listed in Table 2.

1. If the site is redeveloped in the future, a new eNOI must be submitted.

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES (SMPS)

The following *construction activities*:

- Single-family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix D
- Single-family home that disturbs five (5) or more acres of land
- Single-family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix D
- Single-family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% *impervious cover* at total site build-out
- Single-family residential subdivisions that involve soil disturbances of between 20,000 square feet and one (1) acre of land within the municipal boundaries of NYC with greater than 25% *impervious cover* at total site build-out
- Single-family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single-family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a *common plan of development or sale* that will ultimately disturb five (5) or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Creation of 5,000 square feet or more of *impervious area* in the municipal boundaries of NYC
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of *impervious area* (>5% of disturbed area) or *alter the hydrology from pre- to post-development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) that involves soil disturbance greater than five acres.
- Structural agricultural conservation practices as identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023) that involves soil disturbance greater than five acres and include the construction or reconstruction of *impervious area* or *alter hydrology from pre- to post-development* conditions.
- Facility buildings, including ski lodges, restroom buildings, pumphouses, ski lift terminals, and maintenance and groomer garages
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills; including creation of landfills or capping landfills.
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTWs, water treatment plants, and water storage tanks
- Golf courses
- Office complexes

Table 2 (Continued)

***CONSTRUCTION ACTIVITIES* THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES (SMPS)**

The following *construction activities*:

- Permanent laydown yards and equipment storage lots
- Playgrounds that include the construction or reconstruction of *impervious area*
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surfaces
- Road construction or reconstruction, outside the municipal boundaries of NYC
- Road construction within the municipal boundaries of NYC
- Stand-alone road reconstruction, within the municipal boundaries of NYC where the total soil disturbance from that road reconstruction involves soil disturbance of one (1) acre or more of land
- Parking lot construction or reconstruction (as with all Table 2 bullets, this includes parking lots constructed as part of the *construction activities* listed in Table 1, unless a Table 1 bullet specifies otherwise)
- Athletic fields (natural grass) that include the construction or reconstruction of *impervious area* (>5% of disturbed area) or *alter the hydrology from pre- to post-development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations, and well drilling pads, surfaced with *impervious cover,* and constructed as part of an overhead electric transmission line, wind-power, cell tower, oil or gas well drilling, sewer or water main, ski lift, or other linear utility project
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are part of a residential, commercial or institutional development
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are part of highway construction or reconstruction
- Solar array field areas on slopes greater than 8% that cannot maintain sheet flow using management practices identified in the BB or the DM
- Solar array field areas on slopes less than 8% that will *alter the hydrology from pre- to post-development* conditions
- Solar array field areas with tables that are not elevated high enough to achieve *final stabilization* beneath the tables
- Traditional *impervious areas* associated with solar development (e.g. roads, buildings, transformers)
- Utility pads surfaced with *impervious cover*, including electric vehicle charging stations
- All other *construction activities* that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre- to post-development* conditions, and are not listed in Table 1

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of *construction activities* identified in Table 2 of Appendix B must prepare a *SWPPP* that includes SMPs designed in conformance with the Enhanced Phosphorus Removal Standards included in the DM technical standard.

- Entire New York City Watershed located east of the Hudson River – Figure 1
- Onondaga Lake Watershed – Figure 2
- Greenwood Lake Watershed – Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Figure 1 - New York City Watershed East of the Hudson

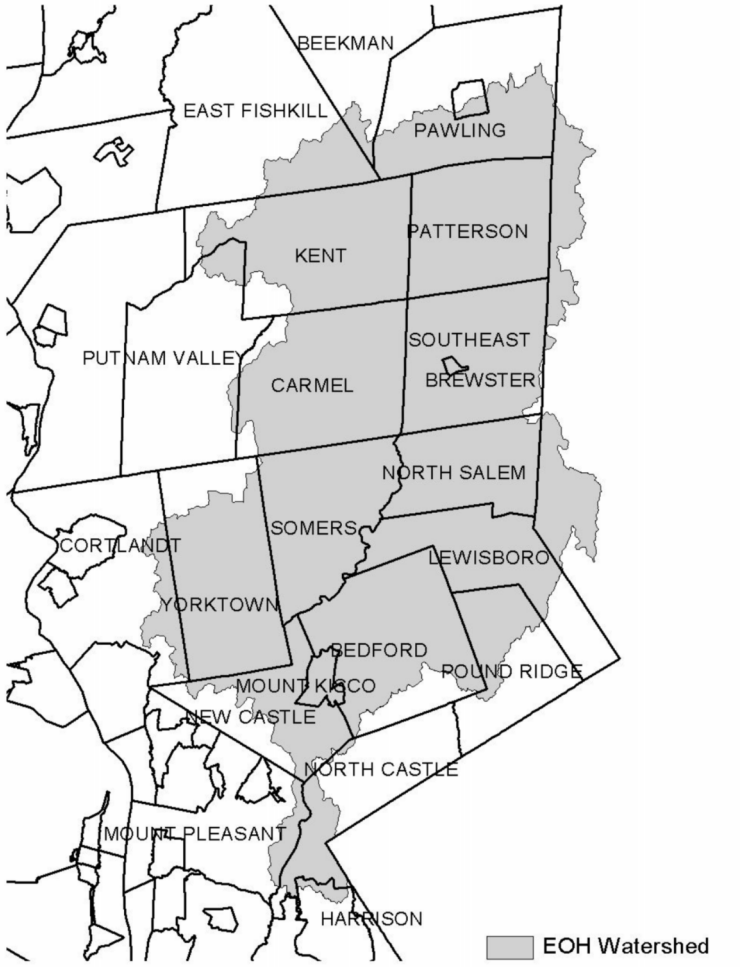

Figure 2 - Onondaga Lake Watershed

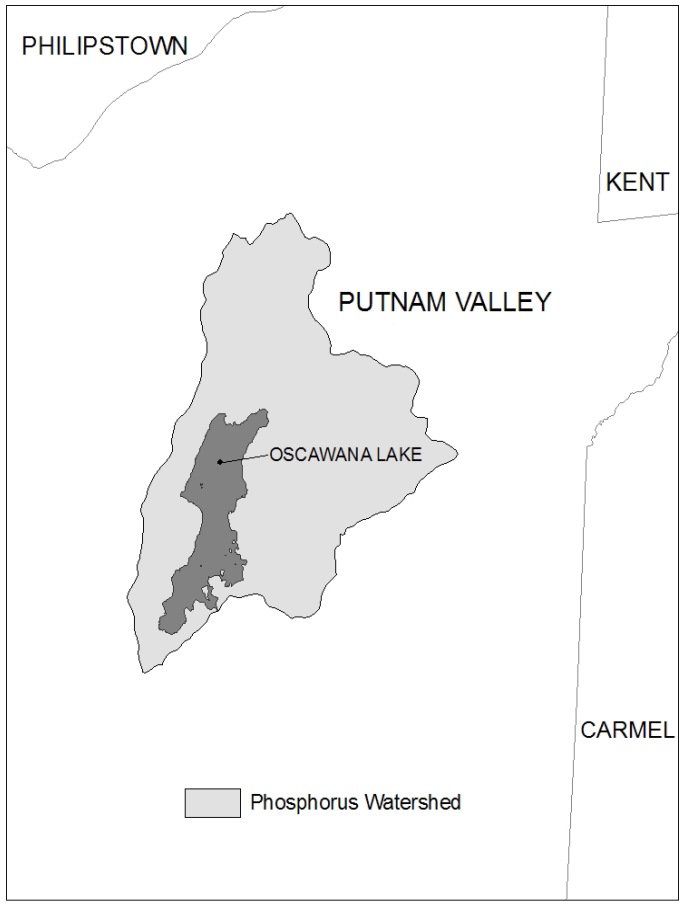
Figure 3 - Greenwood Lake Watershed

Figure 4 - Oscawana Lake Watershed



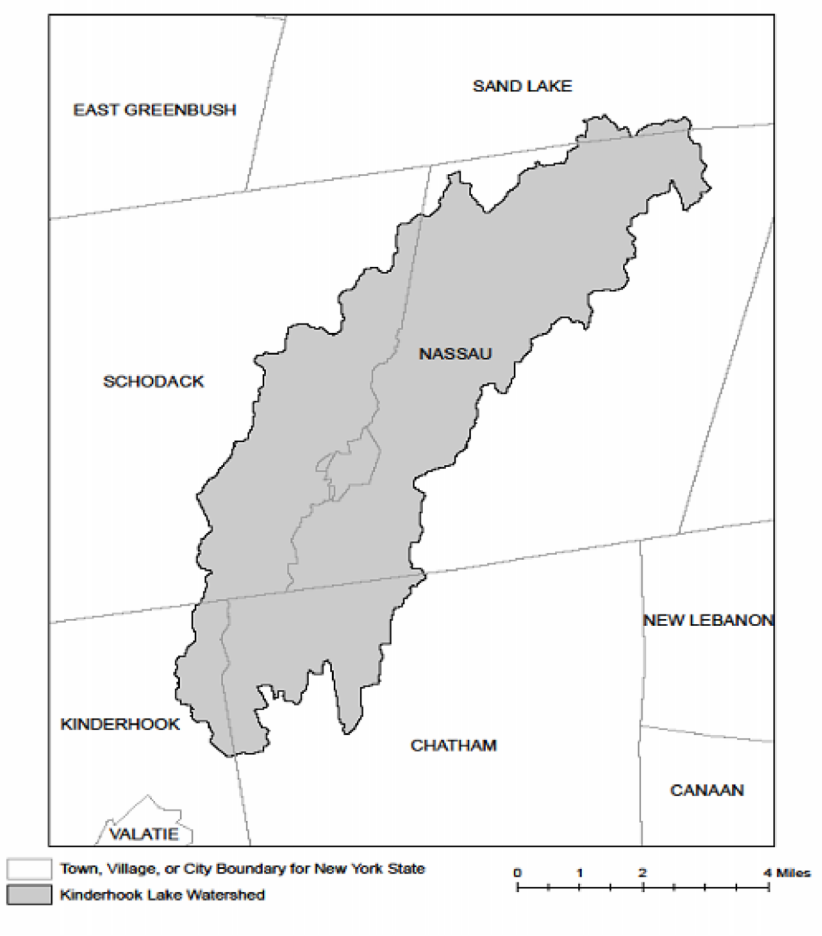


Figure 5 - Kinderhook Lake Watershed

APPENDIX D – Impaired Waterbodies (by Construction Related Pollutants)

List of waterbodies impaired by *pollutants* related to *construction activity*, including turbidity, silt/sediment, and nutrients (e.g. nitrogen, phosphorus). This list is a subset of "The Final New York State 2018 Section 303(d) List of Impaired Waters Requiring a TMDL" dated June 2020.

County	Waterbody	Pollutant
Albany	Ann Lee (Shakers) Pond, Stump Pond (1201-0096)	Phosphorus
Albany	Lawsons Lake (1301-0235)	Phosphorus
Allegany	Amity Lake, Saunders Pond (0403-0054)	Phosphorus
Allegany	Andover Pond (0403-0056)	Phosphorus
Bronx	Reservoir No.1/Lake Isle (1702-0075)	Phosphorus
Bronx	Van Cortlandt Lake (1702-0008)	Phosphorus
Broome	Blueberry, Laurel Lakes (1404-0033)	Phosphorus
Broome	Fly Pond, Deer Lake (1404-0038)	Phosphorus
Broome	Minor Tribs to Lower Susquehanna (0603-0044)	Phosphorus
Broome	Whitney Point Lake/Reservoir (0602-0004)	Phosphorus
Cattaraugus	Allegheny River/Reservoir (0201-0023)	Phosphorus
Cattaraugus	Beaver Lake/Alma Pond (0201-0073)	Phosphorus
Cattaraugus	Case Lake (0201-0020)	Phosphorus
Cattaraugus	Linlyco/Club Pond (0201-0035)	Phosphorus
Cayuga	Duck Lake (0704-0025)	Phosphorus
Cayuga	Owasco Inlet, Upper, and tribs (0706-0014)	Nutrients
Chautauqua	Chadakoin River and tribs (0202-0018)	Phosphorus
Chautauqua	Hulburt/Clymer Pond (0202-0079)	Phosphorus
Chautauqua	Middle Cassadaga Lake (0202-0002)	Phosphorus
Clinton	Great Chazy River, Lower, Main Stem (1002-0001)	Silt/Sediment
Columbia	Robinson Pond (1308-0003)	Phosphorus
Cortland	Dean Pond (0602-0077)	Phosphorus
Dutchess	Fallkill Creek (1301-0087)	Phosphorus
Dutchess	Hillside Lake (1304-0001)	Phosphorus
Dutchess	Wappingers Lake (1305-0001)	Phosphorus
Dutchess	Wappingers Lake (1305-0001)	Silt/Sediment
Erie	Beeman Creek and tribs (0102-0030)	Phosphorus
Erie	Delaware Park Pond (0101-0026)	Phosphorus
Erie	Ellicott Creek, Lower, and tribs (0102-0018)	Phosphorus
Erie	Ellicott Creek, Lower, and tribs (0102-0018)	Silt/Sediment
Erie	Green Lake (0101-0038)	Phosphorus
Erie	Little Sister Creek, Lower, and tribs (0104-0045)	Phosphorus
Erie	Murder Creek, Lower, and tribs (0102-0031)	Phosphorus

Erie	Rush Creek and tribs (0104-0018)	Phosphorus
Erie	Scajaquada Creek, Lower, and tribs (0101-0023)	Phosphorus
Erie	Scajaquada Creek, Middle, and tribs (0101-0033)	Phosphorus
Erie	Scajaquada Creek, Upper, and tribs (0101-0034)	Phosphorus
Erie	South Branch Smoke Cr, Lower, and tribs (0101-0036)	Phosphorus
Erie	South Branch Smoke Cr, Lower, and tribs (0101-0036)	Silt/Sediment
Genesee	Bigelow Creek and tribs (0402-0016)	Phosphorus
Genesee	Black Creek, Middle, and minor tribs (0402 0028)	Phosphorus
Genesee	Black Creek, Upper, and minor tribs (0402-0048)	Phosphorus
Genesee	Bowen Brook and tribs (0102-0036)	Phosphorus
Genesee	LeRoy Reservoir (0402-0003)	Phosphorus
Genesee	Mill Pond (0402-0050)	Phosphorus
Genesee	Oak Orchard Cr, Upper, and tribs (0301-0014)	Phosphorus
Genesee	Oatka Creek, Middle, and minor tribs (0402-0031)	Phosphorus
Genessee	Tonawanda Cr, Middle, Main Stem (0102-0002)	Phosphorus
Greene	Schoharie Reservoir (1202-0012)	Silt/Sediment
Greene	Sleepy Hollow Lake (1301-0059)	Silt/Sediment
Herkimer	Steele Creek tribs (1201-0197)	Phosphorus
Herkimer	Steele Creek tribs (1201-0197)	Silt/Sediment
Kings	Hendrix Creek (1701-0006) 18	Nitrogen
Kings	Prospect Park Lake (1701-0196)	Phosphorus
Lewis	Mill Creek/South Branch, and tribs (0801-0200)	Nutrients
Livingston	Christie Creek and tribs (0402-0060)	Phosphorus
Livingston	Conesus Lake (0402-0004)	Phosphorus
Livingston	Mill Creek and minor tribs (0404-0011)	Silt/Sediment
Monroe	Black Creek, Lower, and minor tribs (0402-0033)	Phosphorus
Monroe	Buck Pond (0301-0017)	Phosphorus
Monroe	Cranberry Pond (0301-0016)	Phosphorus
Monroe	Durand, Eastman Lakes (0302-0037)	Phosphorus
Monroe	Lake Ontario Shoreline, Western (0301-0069) 9	Phosphorus
Monroe	Long Pond (0301-0015)	Phosphorus
Monroe	Mill Creek and tribs (0302-0025)	Phosphorus 2
Monroe	Mill Creek/Blue Pond Outlet and tribs (0402-0049)	Phosphorus
Monroe	Minor Tribs to Irondequoit Bay (0302-0038)	Phosphorus
Monroe	Rochester Embayment - East (0302-0002) [9]	Phosphorus
Monroe	Rochester Embayment - West (0301-0068) 9	Phosphorus
Monroe	Shipbuilders Creek and tribs (0302-0026)	Phosphorus 2
Monroe	Thomas Creek/White Brook and tribs (0302-0023)	Phosphorus

Nassau	Bannister Creek/Bay (1701-0380)	Nitrogen
Nassau	Beaver Lake (1702-0152)	Phosphorus

APPENDIX F – SWPPP Preparer Certification Form

The SWPPP Preparer Certification Form required by this permit begins on the following page.

SWPPP Preparer Certification Form

SPDES General Permit for Stormwater Discharges from Construction Activity, GP-0-25-001 (CGP)

(In accordance with CGP Part I.D.2.b., the completed form must be attached to the eNOI and submitted to NYSDEC electronically.)

Project/Site Name:

eNOI Submission ID:

Owner/Operator Name:

Certification Statement – SWPPP Preparer

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) has been prepared in accordance with the requirements of GP-0-25-001. I certify under penalty of law that the SWPPP and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Project Notes

Defined 9 rainfall events from NY-Ossining AMD IDF
Copied 9 events from NY-Ossining AMD 24-hr S1 storm

Rainfall Events Listing (selected events)

Event#	Event Name	Storm Type	Curve	Mode	Duration (hours)	B/B	Depth (inches)	AMC
1	1-yr	NY-Ossining AMD 24-hr S1	1-yr	Default	24.00	1	2.78	2
2	2-yr	NY-Ossining AMD 24-hr S1	2-yr	Default	24.00	1	3.41	2
3	10-yr	NY-Ossining AMD 24-hr S1	10-yr	Default	24.00	1	5.14	2
4	100-yr	NY-Ossining AMD 24-hr S1	100-yr	Default	24.00	1	9.29	2
5	200-yr	NY-Ossining AMD 24-hr S1	200-yr	Default	24.00	1	11.13	2

Area Listing (selected nodes)

Area (acres)	CN	Description (subcatchment-numbers)
0.181	61	>75% Grass cover, Good, HSG B (4E)
0.023	80	>75% Grass cover, Good, HSG D (4E)
0.147	96	Gravel surface, HSG C (4E)
0.634	96	Gravel surface, HSG D (1E, 2E, 4E)
0.615	79	Pasture/grassland/range, Poor, HSG B (3E)
0.030	98	Paved parking, HSG B (3E)
2.118	98	Paved roads w/curbs & sewers, HSG D (3E)
0.255	98	Roofs, HSG D (3E)
0.071	98	Unconnected pavement, HSG B (3E)
2.363	79	Woods, Fair, HSG D (1E, 2E)
4.798	66	Woods, Poor, HSG B (4E)
10.704	77	Woods, Poor, HSG C (4E)
8.224	83	Woods, Poor, HSG D (2E, 3E, 4E)
0.252	82	Woods/grass comb., Fair, HSG D (1E)
30.415	**79**	**TOTAL AREA**

Soil Listing (selected nodes)

Area (acres)	Soil Group	Subcatchment Numbers
0.000	HSG A	
5.695	HSG B	3E, 4E

Project Notes

Defined 9 rainfall events from NY-Ossining AMD IDF
Copied 9 events from NY-Ossining AMD 24-hr S1 storm

Rainfall Events Listing (selected events)

Event#	Event Name	Storm Type	Curve	Mode	Duration (hours)	B/B	Depth (inches)	AMC
1	1-yr	NY-Ossining AMD 24-hr S1	1-yr	Default	24.00	1	2.78	2
2	2-yr	NY-Ossining AMD 24-hr S1	2-yr	Default	24.00	1	3.41	2
3	10-yr	NY-Ossining AMD 24-hr S1	10-yr	Default	24.00	1	5.14	2
4	100-yr	NY-Ossining AMD 24-hr S1	100-yr	Default	24.00	1	9.29	2
5	200-yr	NY-Ossining AMD 24-hr S1	200-yr	Default	24.00	1	11.13	2
6	90% WQv	NY-Ossining AMD 24-hr S1	1-yr	Default	24.00	1	1.15	2

Area Listing (selected nodes)

Area (acres)	CN	Description (subcatchment-numbers)
12.016	74	>75% Grass cover, Good, HSG C (4AP, 4BP, 4CP)
0.233	80	>75% Grass cover, Good, HSG D (4DP)
0.147	96	Gravel surface, HSG B (4CP)
0.612	71	Meadow, non-grazed, HSG C (4BP)
0.363	80	Pasture/grassland/range, Good, HSG D (2P)
0.615	79	Pasture/grassland/range, Poor, HSG B (3P)
0.030	98	Paved parking, HSG B (3P)
1.130	98	Paved parking, HSG D (4DP)
2.118	98	Paved roads w/curbs & sewers, HSG D (3P)
1.683	98	Roofs, HSG C (4AP)
0.255	98	Roofs, HSG D (3P)
0.071	98	Unconnected pavement, HSG B (3P)
2.862	98	Unconnected pavement, HSG C (4AP, 4BP)
0.741	98	Unconnected pavement, HSG D (4AP)
0.755	79	Woods, Fair, HSG D (1P)
4.583	66	Woods, Poor, HSG B (4CP)
0.561	77	Woods, Poor, HSG C (4CP)
3.244	83	Woods, Poor, HSG D (2P, 3P, 4CP)
0.341	82	Woods/grass comb., Fair, HSG D (1P)

Summary for Pond 18P: Micropool Extended Detention (SWP-1)

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 1.35" for 1-yr event
Inflow = 15.06 cfs @ 12.15 hrs, Volume= 1.743 af
Outflow = 0.68 cfs @ 17.60 hrs, Volume= 1.733 af, Atten= 96%, Lag= 327.1 min
Primary = 0.68 cfs @ 17.60 hrs, Volume= 1.733 af
Routed to Link DP-4 : DP-4
Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
Routed to Link DP-4 : DP-4

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 289.27' @ 17.60 hrs Surf.Area= 48,921 sf Storage= 48,975 cf
Flood Elev= 296.50' Surf.Area= 60,676 sf Storage= 217,293 cf

Plug-Flow detention time= 891.8 min calculated for 1.733 af (99% of inflow)
Center-of-Mass det. time= 888.0 min (1,727.7 - 839.6)

Volume	Invert	Avail.Storage	Storage Description

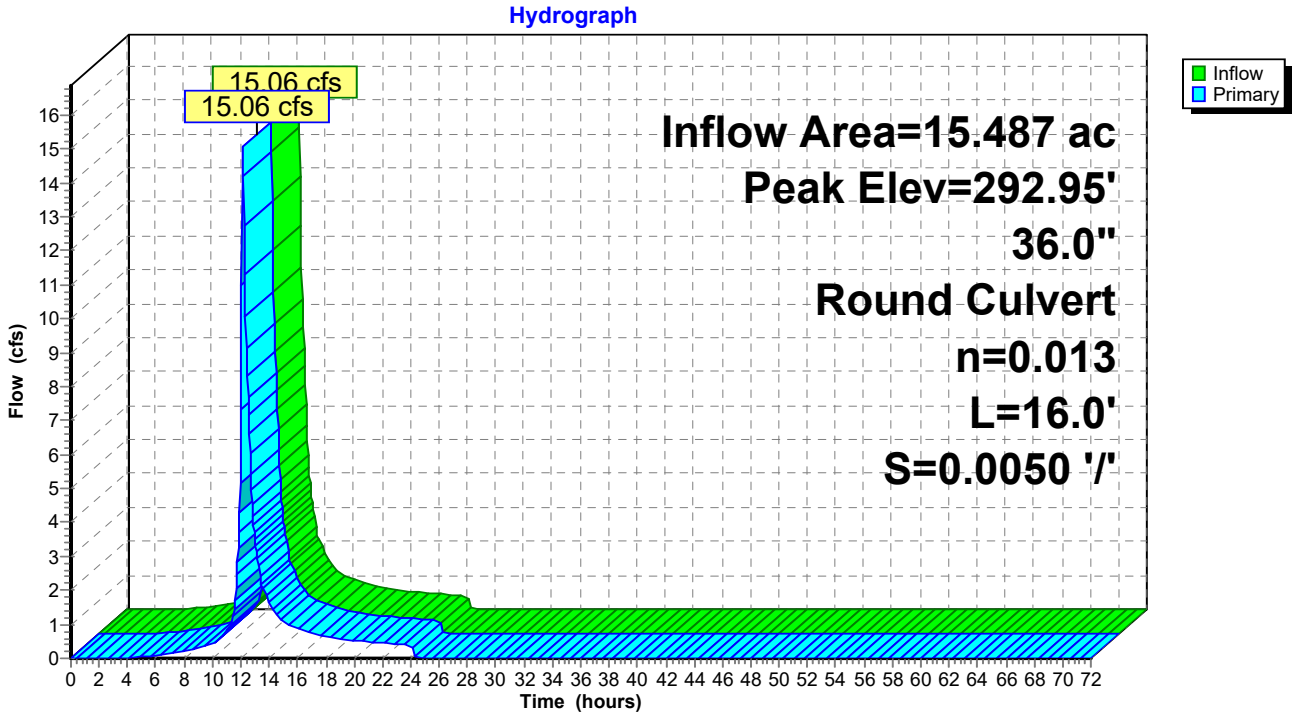
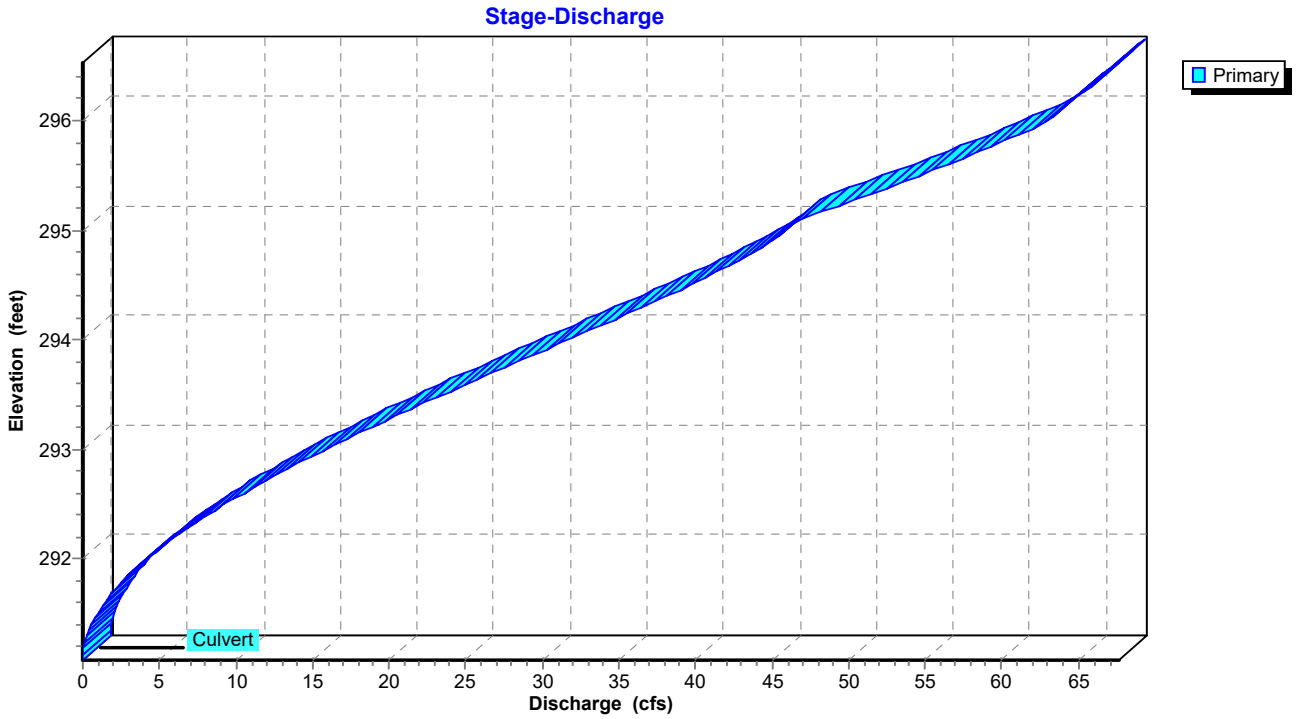
Summary for Pond 22P: DMH-11

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 1.35" for 1-yr event
Inflow = 15.06 cfs @ 12.15 hrs, Volume= 1.743 af
Outflow = 15.06 cfs @ 12.15 hrs, Volume= 1.743 af, Atten= 0%, Lag= 0.0 min
Primary = 15.06 cfs @ 12.15 hrs, Volume= 1.743 af
Routed to Pond 18P : Micropool Extended Detention (SWP-1)



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 292.95' @ 12.15 hrs
Flood Elev= 296.53'

Device	Routing	Invert	Outlet Devices
#1	Primary	291.08'	**36.0" Round Culvert** L= 16.0' CPP, square edge headwall, Ke= 0.500 Inlet / Outlet Invert= 291.08' / 291.00' S= 0.0050 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf



Primary OutFlow Max=15.04 cfs @ 12.15 hrs HW=292.95' TW=287.69' (Dynamic Tailwater)
1=Culvert (Barrel Controls 15.04 cfs @ 4.66 fps)

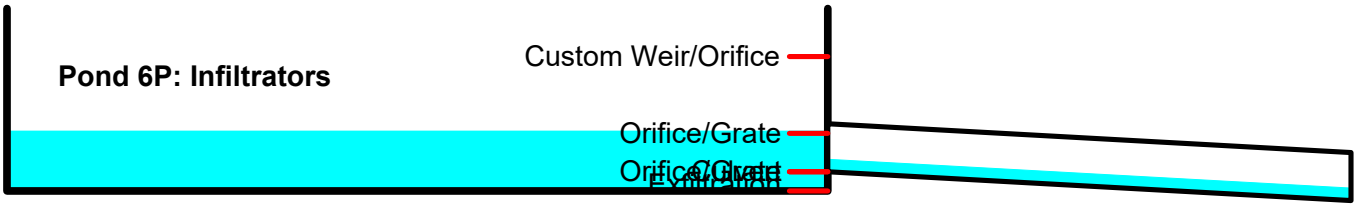
Summary for Pond 6P: Infiltrators

Inflow Area = 1.363 ac, 82.91% Impervious, Inflow Depth = 2.85" for 2-yr event
Inflow = 4.67 cfs @ 12.04 hrs, Volume= 0.324 af
Outflow = 0.96 cfs @ 12.43 hrs, Volume= 0.324 af, Atten= 79%, Lag= 23.2 min
Discarded = 0.07 cfs @ 8.85 hrs, Volume= 0.134 af
Primary = 0.89 cfs @ 12.43 hrs, Volume= 0.190 af
Routed to Pond 19P : DMH-7

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 348.06' @ 12.43 hrs Surf.Area= 0.132 ac Storage= 0.114 af

Plug-Flow detention time= (not calculated: outflow precedes inflow)
Center-of-Mass det. time= 120.0 min (905.0 - 785.0)



Volume	Invert	Avail.Storage	Storage Description

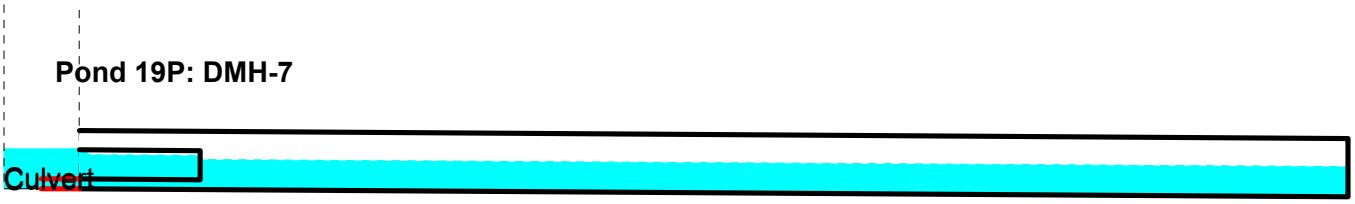
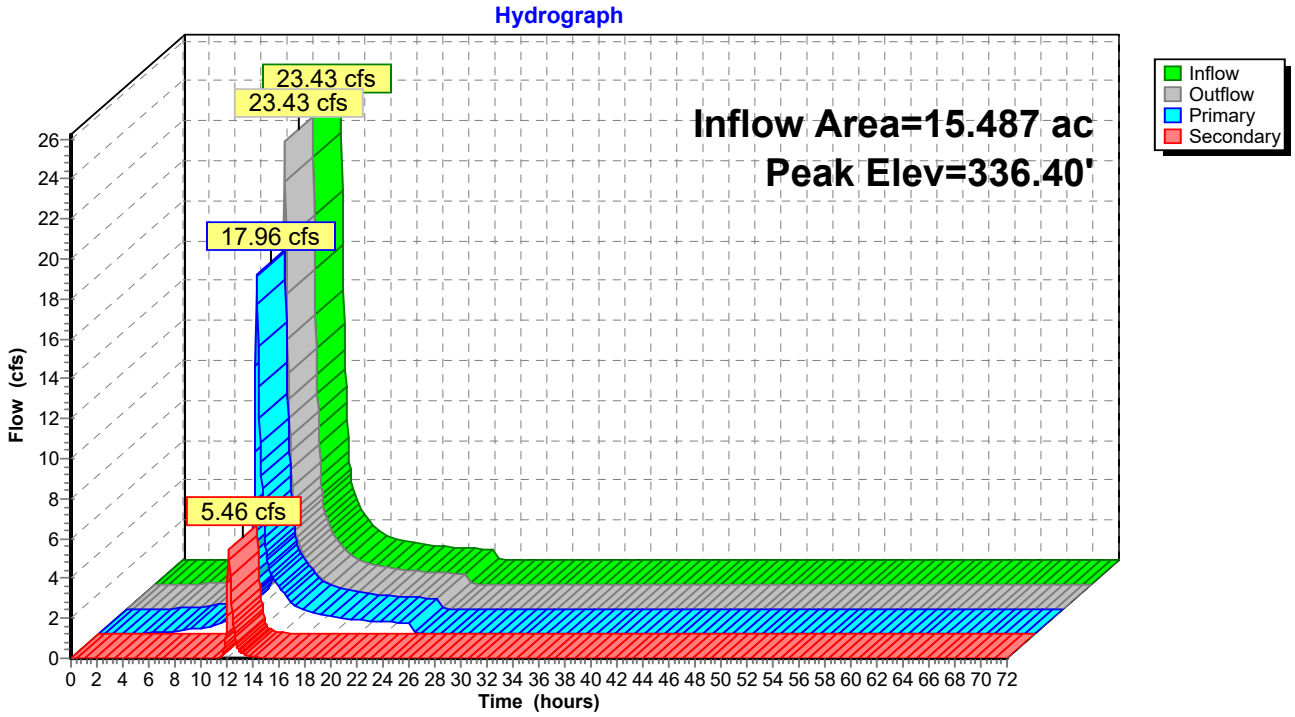
Summary for Pond 19P: DMH-7



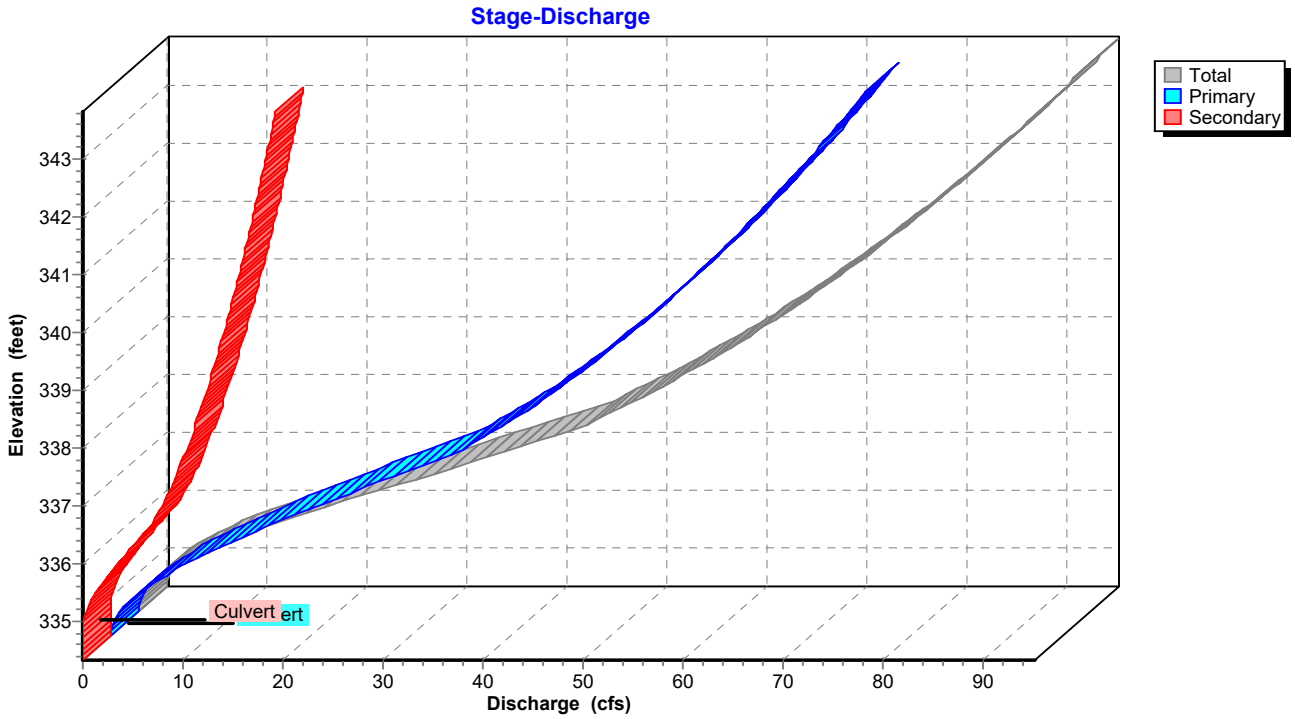
Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 1.85" for 2-yr event
Inflow = 23.43 cfs @ 12.14 hrs, Volume= 2.391 af
Outflow = 23.43 cfs @ 12.14 hrs, Volume= 2.391 af, Atten= 0%, Lag= 0.0 min
Primary = 17.96 cfs @ 12.14 hrs, Volume= 2.172 af
Routed to Pond 20P : DMH-8
Secondary = 5.46 cfs @ 12.14 hrs, Volume= 0.219 af
Routed to Pond 9P : Detention Piping - 48"

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 336.40' @ 12.14 hrs
Flood Elev= 343.83'



Device	Routing	Invert	Outlet Devices
#1	Primary	334.34'	**36.0" Round Culvert** L= 84.0' CPP, projecting, no headwall, Ke= 0.900 Inlet / Outlet Invert= 334.34' / 333.92' S= 0.0050 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf
#2	Secondary	334.84'	**18.0" Round Culvert** L= 8.0' CPP, projecting, no headwall, Ke= 0.900 Inlet / Outlet Invert= 334.84' / 334.80' S= 0.0050 '/' Cc= 0.900 n= 0.013 Cast iron, coated, Flow Area= 1.77 sf

Primary OutFlow Max=17.83 cfs @ 12.14 hrs HW=336.39' TW=332.45' (Dynamic Tailwater)
└**1=Culvert** (Barrel Controls 17.83 cfs @ 4.90 fps)



Secondary OutFlow Max=5.42 cfs @ 12.14 hrs HW=336.39' TW=332.60' (Dynamic Tailwater)
└**2=Culvert** (Barrel Controls 5.42 cfs @ 3.69 fps)

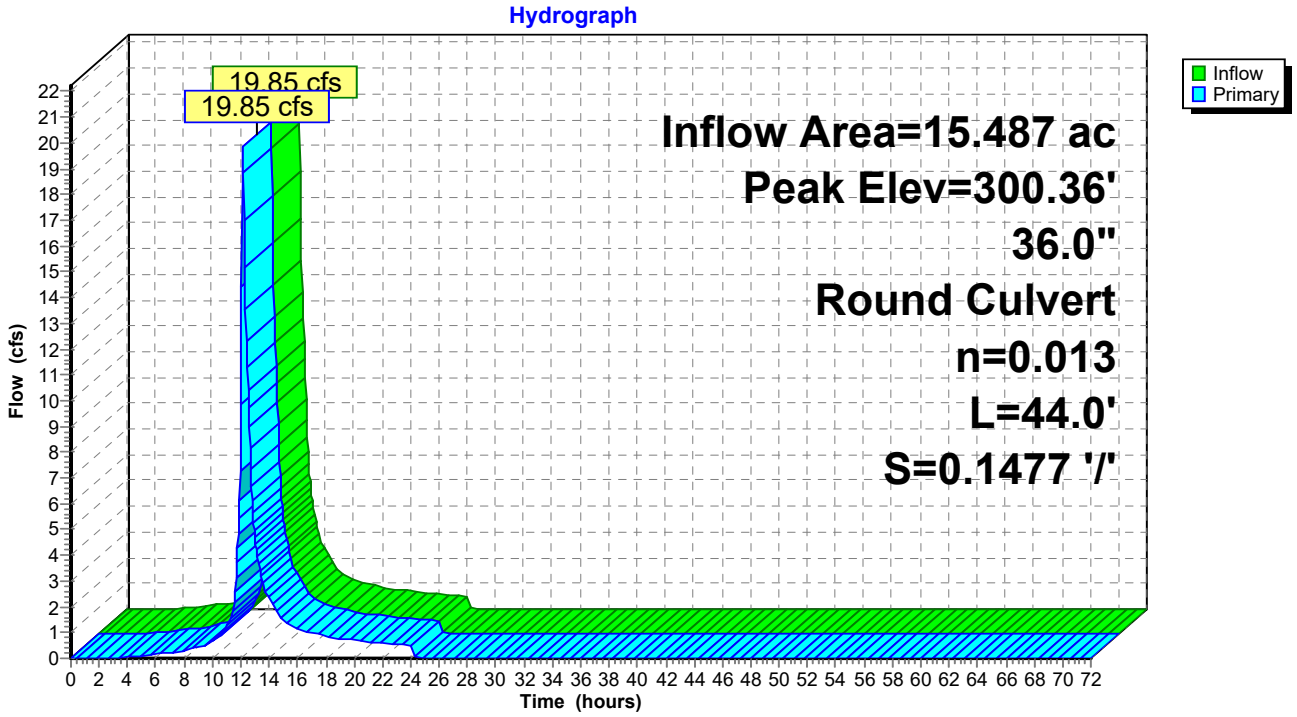
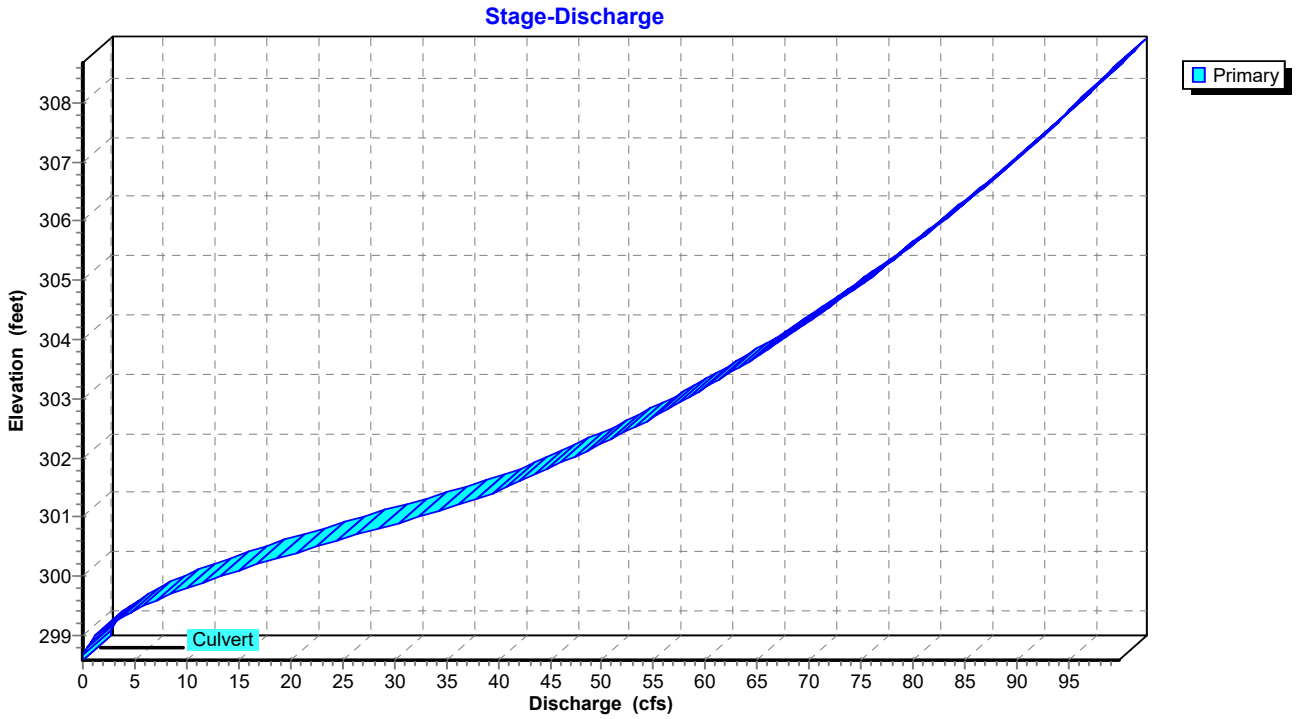
Summary for Pond 23P: DMH-10

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 1.85" for 2-yr event
Inflow = 19.85 cfs @ 12.15 hrs, Volume= 2.392 af
Outflow = 19.85 cfs @ 12.15 hrs, Volume= 2.392 af, Atten= 0%, Lag= 0.0 min
Primary = 19.85 cfs @ 12.15 hrs, Volume= 2.392 af
Routed to Pond 22P : DMH-11



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 300.36' @ 12.15 hrs
Flood Elev= 308.68'

Device	Routing	Invert	Outlet Devices
#1	Primary	298.58'	**36.0" Round Culvert** L= 44.0' CPP, end-section conforming to fill, Ke= 0.500 Inlet / Outlet Invert= 298.58' / 292.08' S= 0.1477 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf



Primary OutFlow Max=19.78 cfs @ 12.15 hrs HW=300.36' TW=293.27' (Dynamic Tailwater)
└**1=Culvert** (Inlet Controls 19.78 cfs @ 4.54 fps)

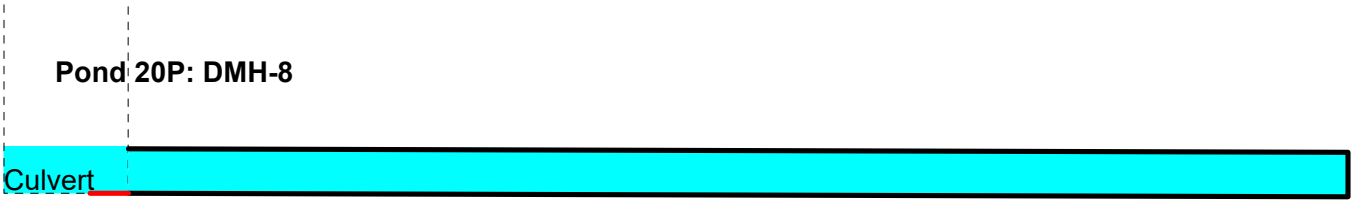
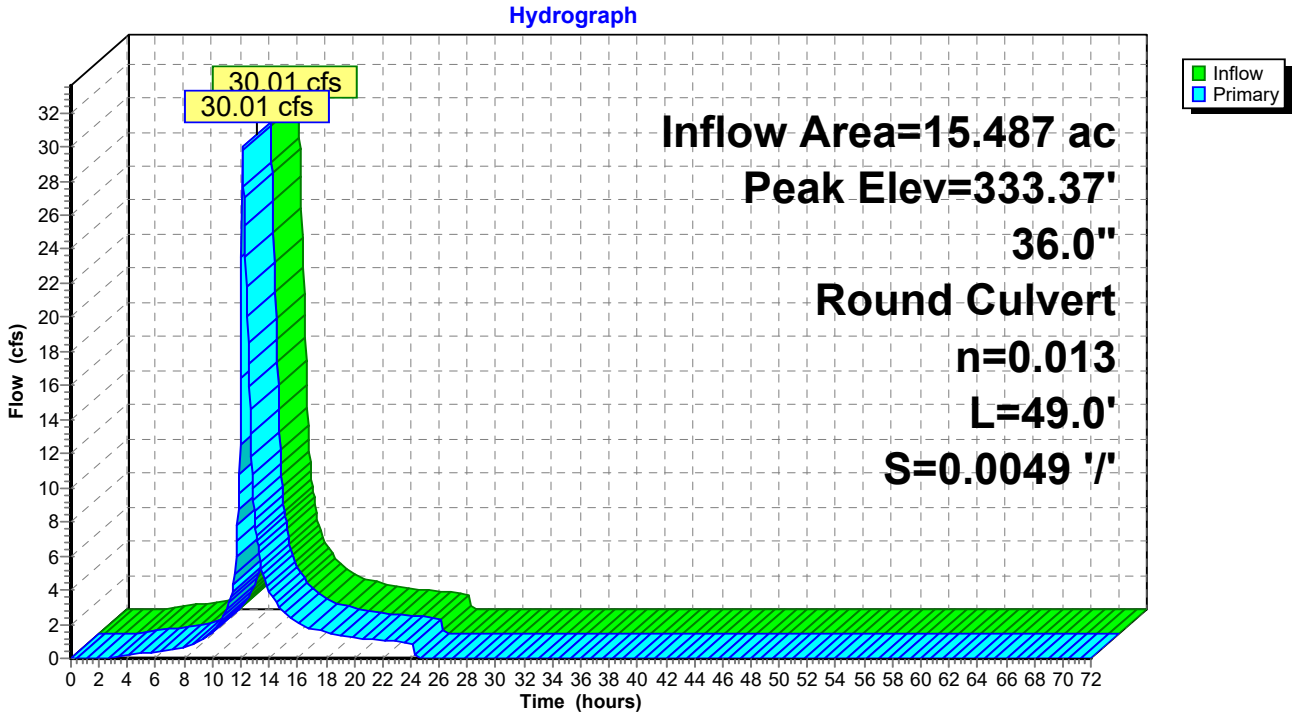
Summary for Pond 20P: DMH-8



[80] Warning: Exceeded Pond 9P by 0.37' @ 12.15 hrs (5.19 cfs 0.048 af)

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 3.34" for 10-yr event
Inflow = 30.01 cfs @ 12.13 hrs, Volume= 4.314 af
Outflow = 30.01 cfs @ 12.13 hrs, Volume= 4.314 af, Atten= 0%, Lag= 0.0 min
Primary = 30.01 cfs @ 12.13 hrs, Volume= 4.314 af
Routed to Pond 21P : DMH-9



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 333.37' @ 12.16 hrs
Flood Elev= 342.95'

Summary for Pond 18P: Micropool Extended Detention (SWP-1)

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 7.21" for 100-yr event
Inflow = 56.31 cfs @ 12.14 hrs, Volume= 9.302 af
Outflow = 29.72 cfs @ 12.63 hrs, Volume= 9.277 af, Atten= 47%, Lag= 29.7 min
Primary = 29.72 cfs @ 12.63 hrs, Volume= 9.277 af
Routed to Link DP-4 : DP-4
Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
Routed to Link DP-4 : DP-4

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 292.45' @ 12.63 hrs Surf.Area= 54,602 sf Storage= 125,758 cf
Flood Elev= 296.50' Surf.Area= 60,676 sf Storage= 217,293 cf

Plug-Flow detention time= 381.1 min calculated for 9.270 af (100% of inflow)
Center-of-Mass det. time= 381.0 min (1,189.0 - 808.0)

Volume	Invert	Avail.Storage	Storage Description

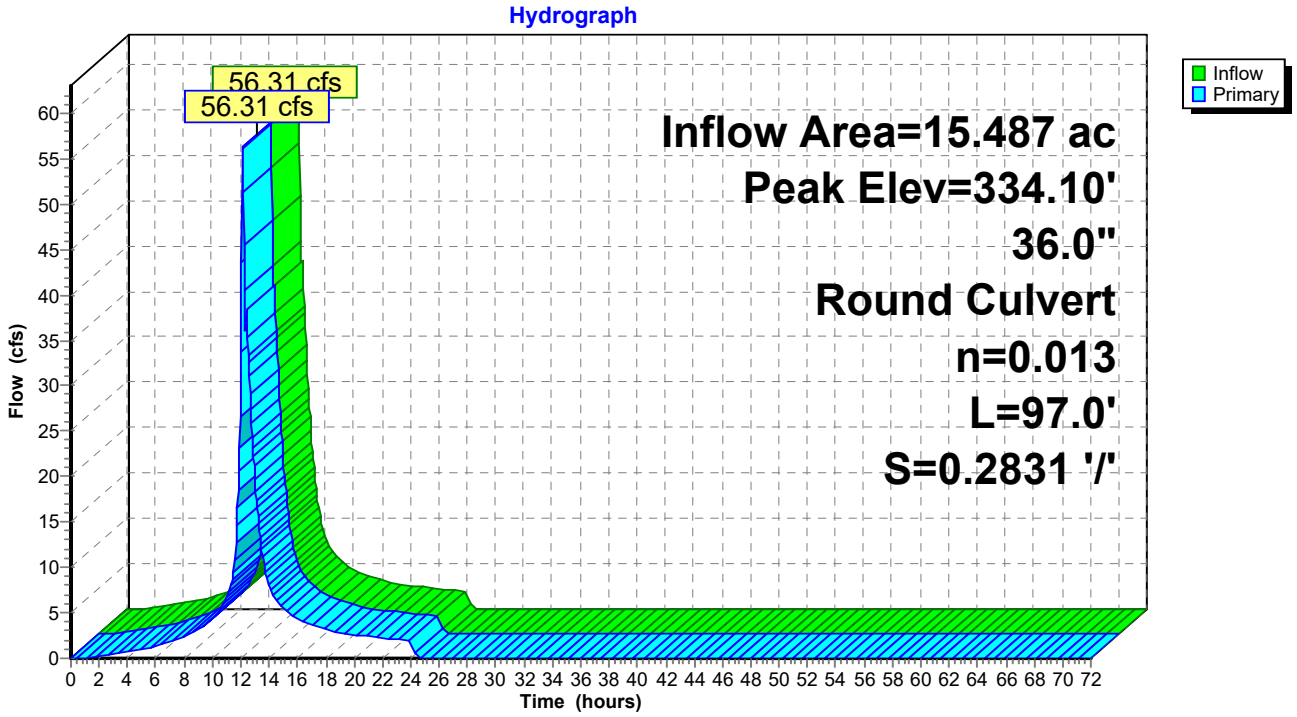
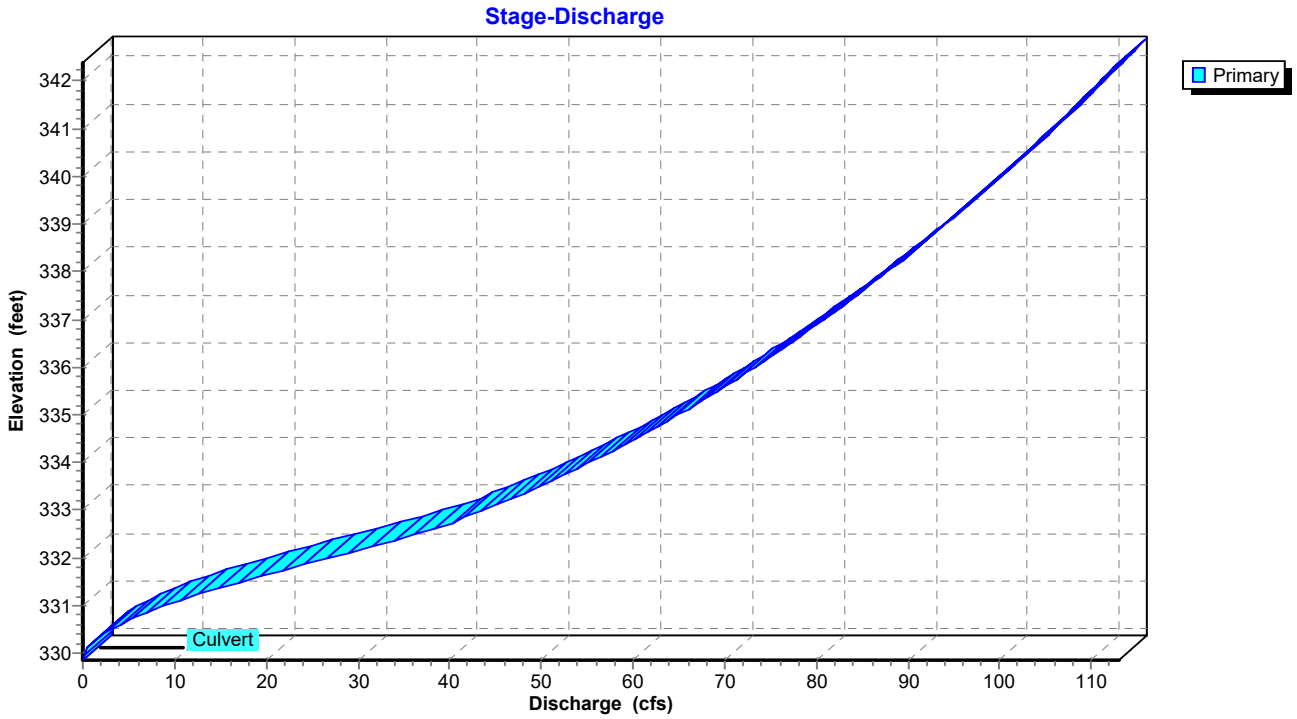
Summary for Pond 21P: DMH-9

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 7.21" for 100-yr event
Inflow = 56.31 cfs @ 12.14 hrs, Volume= 9.302 af
Outflow = 56.31 cfs @ 12.14 hrs, Volume= 9.302 af, Atten= 0%, Lag= 0.0 min
Primary = 56.31 cfs @ 12.14 hrs, Volume= 9.302 af
Routed to Pond 23P : DMH-10



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 334.10' @ 12.14 hrs
Flood Elev= 342.38'

Device	Routing	Invert	Outlet Devices
#1	Primary	329.86'	**36.0" Round Culvert** L= 97.0' CPP, square edge headwall, Ke= 0.500 Inlet / Outlet Invert= 329.86' / 302.40' S= 0.2831 '/' Cc= 0.900 n= 0.013 Cast iron, coated, Flow Area= 7.07 sf



Primary OutFlow Max=55.72 cfs @ 12.14 hrs HW=334.04' TW=302.76' (Dynamic Tailwater)
└**1=Culvert** (Inlet Controls 55.72 cfs @ 7.88 fps)

Summary for Pond 18P: Micropool Extended Detention (SWP-1)

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 8.98" for 200-yr event
Inflow = 65.70 cfs @ 12.13 hrs, Volume= 11.585 af
Outflow = 30.76 cfs @ 12.71 hrs, Volume= 11.559 af, Atten= 53%, Lag= 34.6 min
Primary = 30.76 cfs @ 12.71 hrs, Volume= 11.559 af
Routed to Link DP-4 : DP-4
Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af
Routed to Link DP-4 : DP-4

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 293.32' @ 12.71 hrs Surf.Area= 56,279 sf Storage= 150,087 cf
Flood Elev= 296.50' Surf.Area= 60,676 sf Storage= 217,293 cf

Plug-Flow detention time= 323.0 min calculated for 11.551 af (100% of inflow)
Center-of-Mass det. time= 323.3 min (1,126.0 - 802.7)

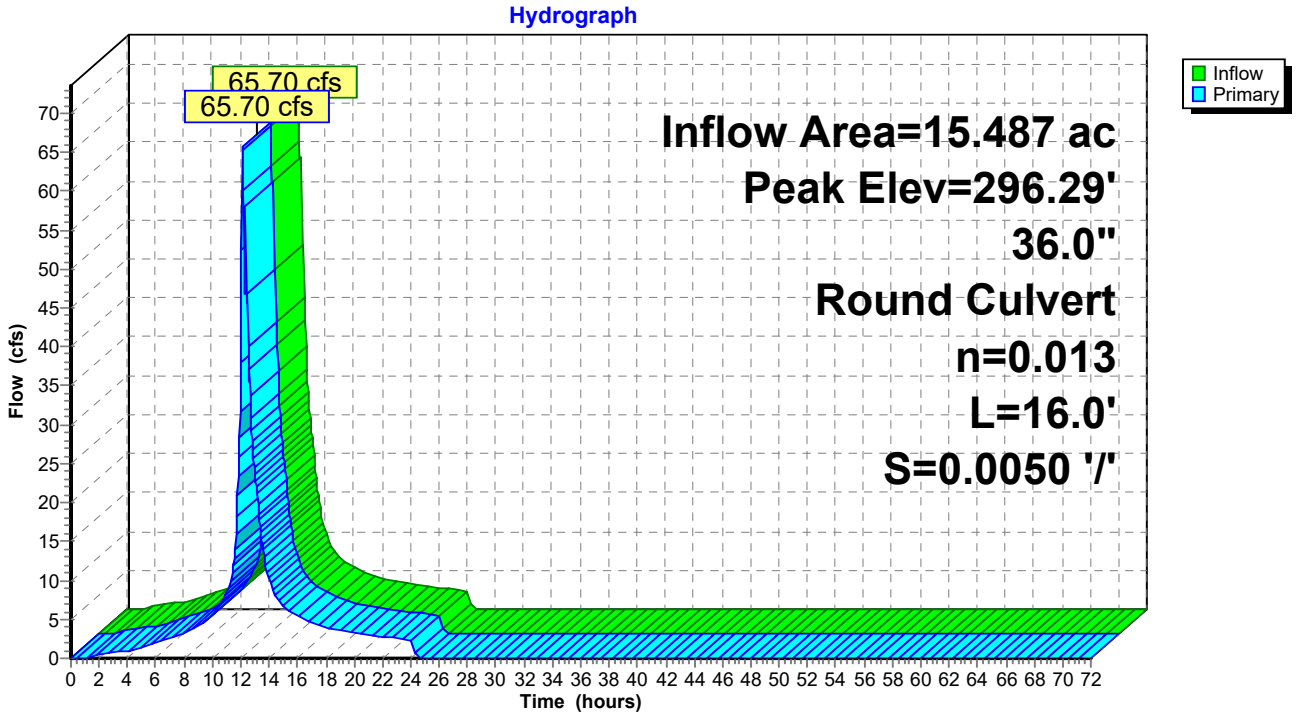
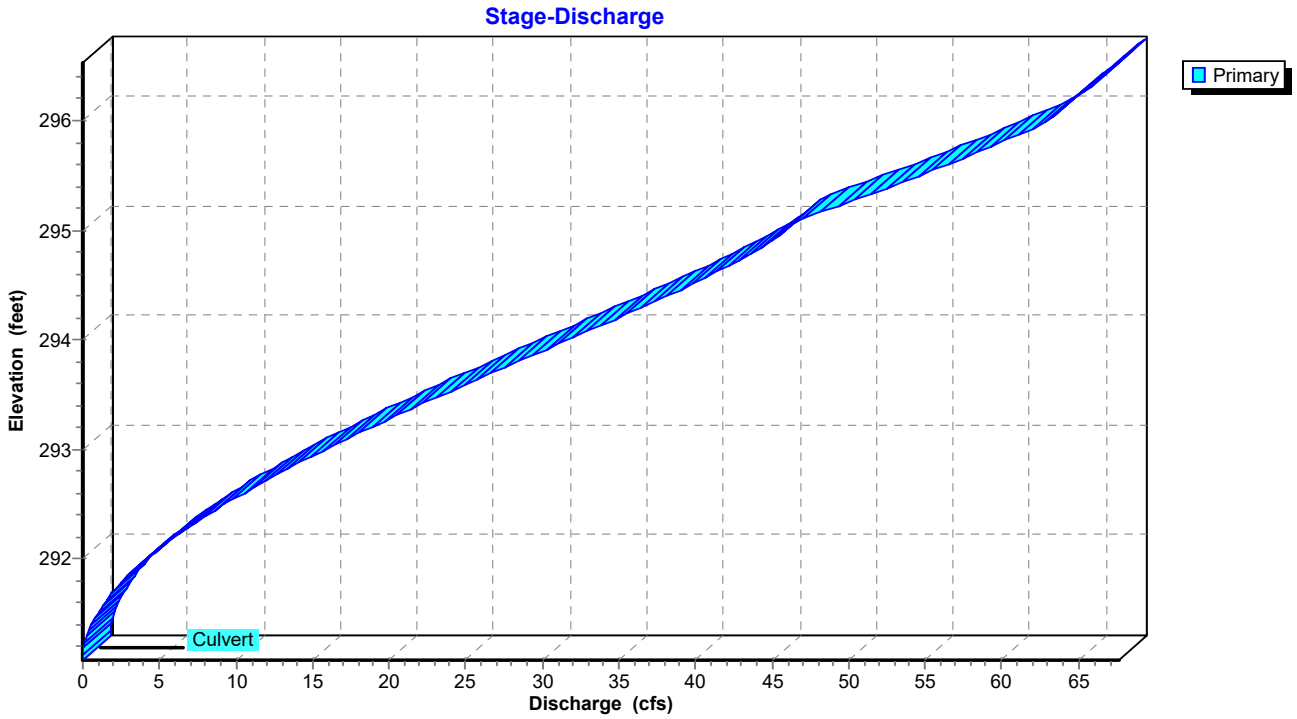
Summary for Pond 22P: DMH-11

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 8.98" for 200-yr event
Inflow = 65.70 cfs @ 12.13 hrs, Volume= 11.585 af
Outflow = 65.70 cfs @ 12.13 hrs, Volume= 11.585 af, Atten= 0%, Lag= 0.0 min
Primary = 65.70 cfs @ 12.13 hrs, Volume= 11.585 af
Routed to Pond 18P : Micropool Extended Detention (SWP-1)



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 296.29' @ 12.13 hrs
Flood Elev= 296.53'

Device	Routing	Invert	Outlet Devices
#1	Primary	291.08'	**36.0" Round Culvert** L= 16.0' CPP, square edge headwall, Ke= 0.500 Inlet / Outlet Invert= 291.08' / 291.00' S= 0.0050 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf



Primary OutFlow Max=64.99 cfs @ 12.13 hrs HW=296.23' TW=292.12' (Dynamic Tailwater)
1=Culvert (Inlet Controls 64.99 cfs @ 9.19 fps)

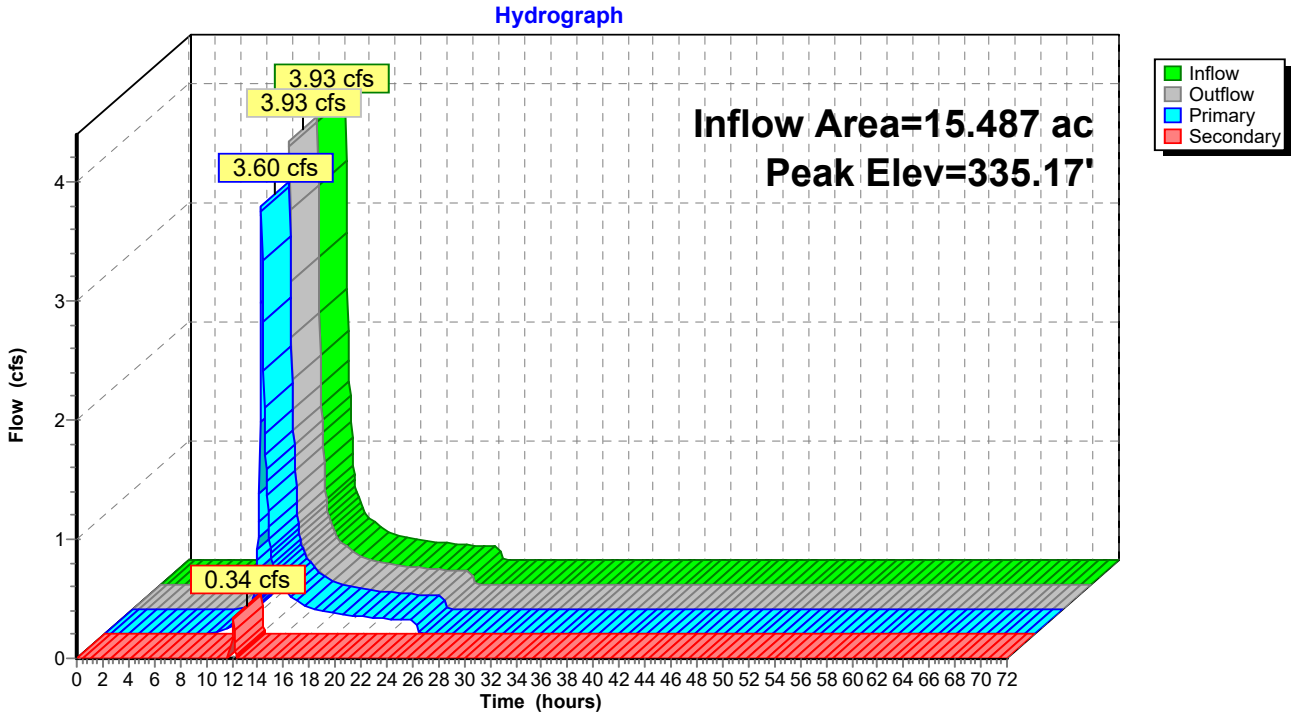
Summary for Pond 19P: DMH-7

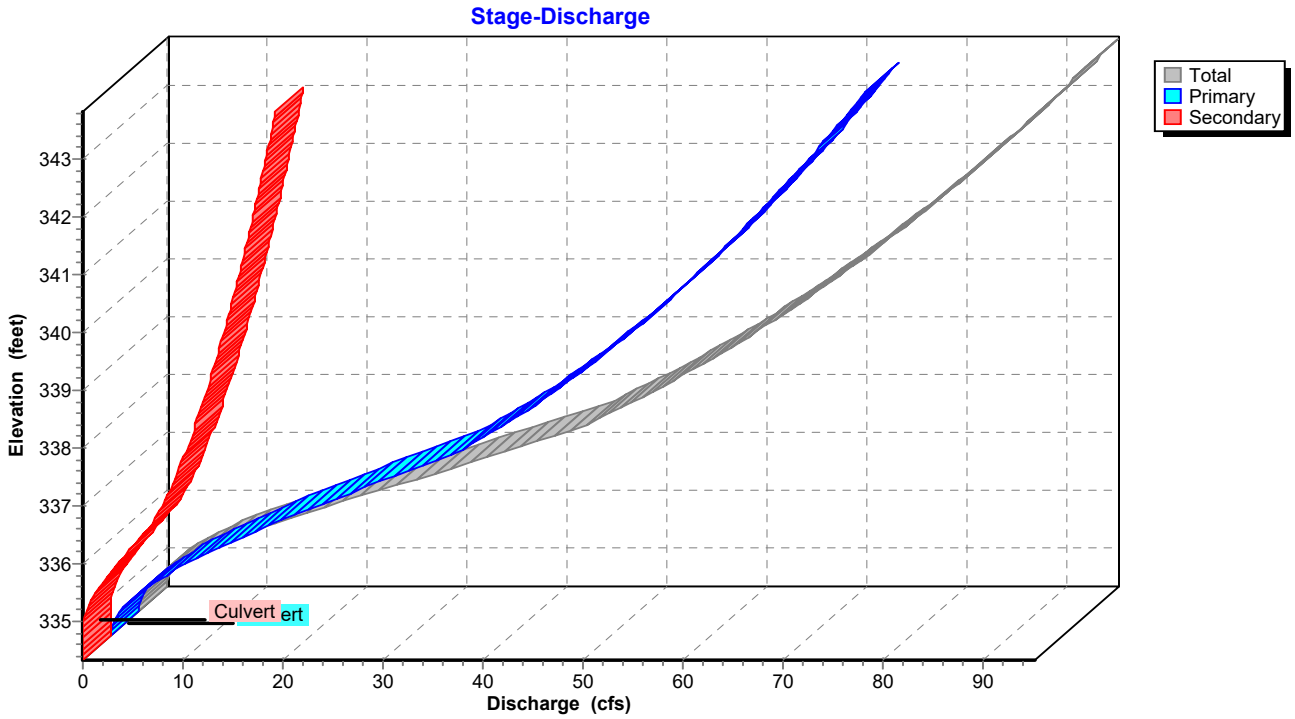
Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 0.29" for 90% WQv event
Inflow = 3.93 cfs @ 12.13 hrs, Volume= 0.376 af
Outflow = 3.93 cfs @ 12.13 hrs, Volume= 0.376 af, Atten= 0%, Lag= 0.0 min
Primary = 3.60 cfs @ 12.13 hrs, Volume= 0.371 af
Routed to Pond 20P : DMH-8
Secondary = 0.34 cfs @ 12.13 hrs, Volume= 0.005 af
Routed to Pond 9P : Detention Piping - 48"

Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 335.17' @ 12.13 hrs
Flood Elev= 343.83'



Device	Routing	Invert	Outlet Devices
#1	Primary	334.34'	**36.0" Round Culvert** L= 84.0' CPP, projecting, no headwall, Ke= 0.900 Inlet / Outlet Invert= 334.34' / 333.92' S= 0.0050 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf
#2	Secondary	334.84'	**18.0" Round Culvert** L= 8.0' CPP, projecting, no headwall, Ke= 0.900 Inlet / Outlet Invert= 334.84' / 334.80' S= 0.0050 '/' Cc= 0.900 n= 0.013 Cast iron, coated, Flow Area= 1.77 sf

Primary OutFlow Max=3.54 cfs @ 12.13 hrs HW=335.16' TW=331.08' (Dynamic Tailwater)
└**1=Culvert** (Barrel Controls 3.54 cfs @ 3.41 fps)



Secondary OutFlow Max=0.32 cfs @ 12.13 hrs HW=335.16' TW=332.12' (Dynamic Tailwater)
└**2=Culvert** (Barrel Controls 0.32 cfs @ 1.79 fps)

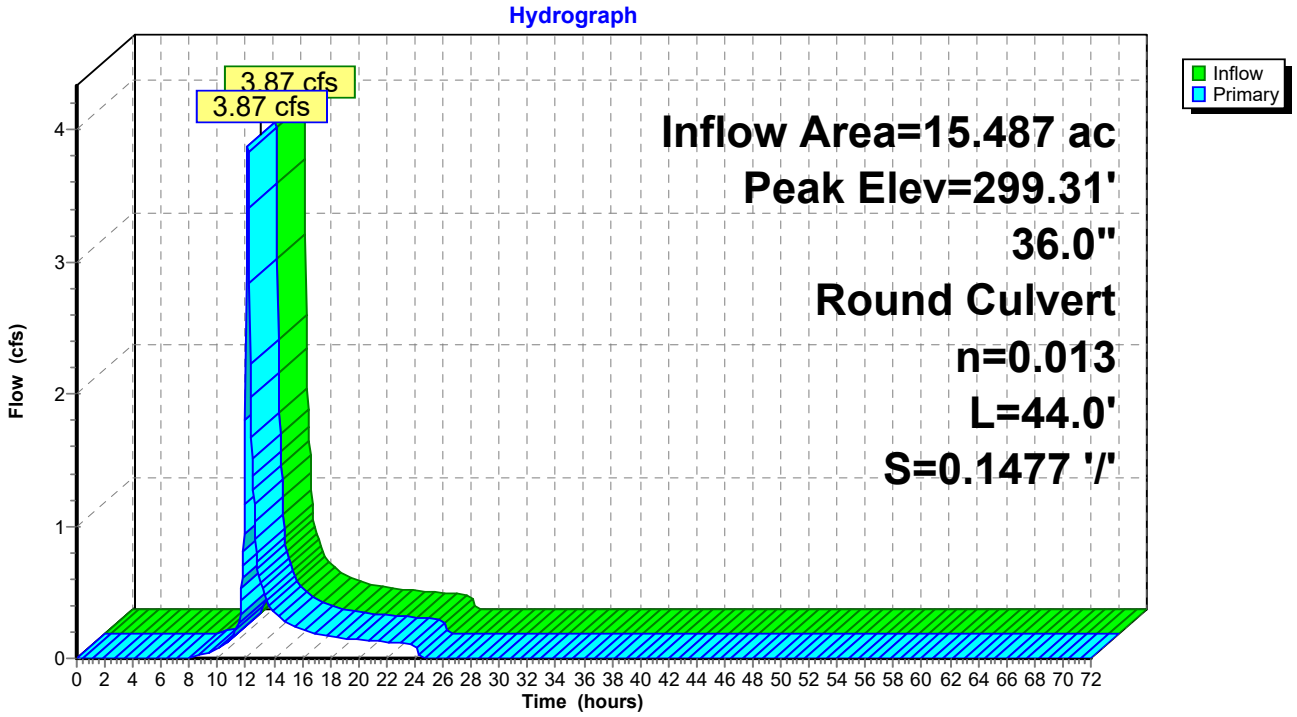
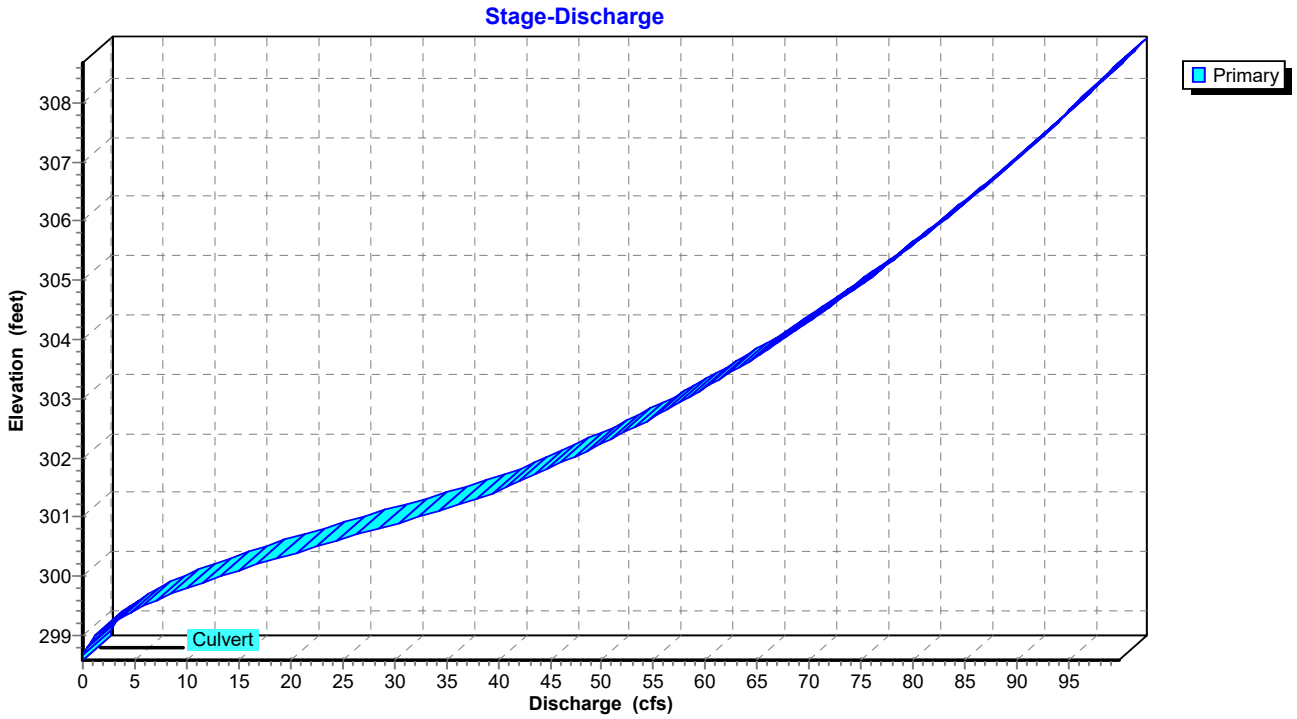
Summary for Pond 23P: DMH-10

Inflow Area = 15.487 ac, 41.43% Impervious, Inflow Depth = 0.29" for 90% WQv event
Inflow = 3.87 cfs @ 12.13 hrs, Volume= 0.376 af
Outflow = 3.87 cfs @ 12.13 hrs, Volume= 0.376 af, Atten= 0%, Lag= 0.0 min
Primary = 3.87 cfs @ 12.13 hrs, Volume= 0.376 af
Routed to Pond 22P : DMH-11



Routing by Dyn-Stor-Ind method, Time Span= 0.00-72.00 hrs, dt= 0.05 hrs
Peak Elev= 299.31' @ 12.13 hrs
Flood Elev= 308.68'

Device	Routing	Invert	Outlet Devices
#1	Primary	298.58'	**36.0" Round Culvert** L= 44.0' CPP, end-section conforming to fill, Ke= 0.500 Inlet / Outlet Invert= 298.58' / 292.08' S= 0.1477 '/' Cc= 0.900 n= 0.013 Corrugated PE, smooth interior, Flow Area= 7.07 sf



Primary OutFlow Max=3.81 cfs @ 12.13 hrs HW=299.30' TW=291.96' (Dynamic Tailwater)
1=Culvert (Inlet Controls 3.81 cfs @ 2.90 fps)

APPENDIX E

WATER QUALITY VOLUME CALCULATIONS, RUNOFF REDUCTION VOLUME CALCULATIONS & CHANNEL PROTECTION CALCULATIONS

(Revised to Only Include Phase 2 Information)

NOI QUESTIONS

#	eNOI Question 49	Reported Value	
		cf	af
49	Total Water Quality Volume (WQv) Required	39111	0.898
49	Total RRV Provided	9140	0.210
49	Is RRv Provided ≥WQv Required?	No	
49	Minimum RRv	7797	0.179
49	Is RRv Provided ≥ Minimum RRv Required?	Yes	
49	Total WQv Treated	35392	0.812
49	Sum of Volume Reduced & Treated	44532	1.022
49	Is Sum RRv Provided and WQv Provided ≥WQv Required?	Yes	

Step 1 - Site Planning

	Practice	Description	Applicable	Project Specific Evaluation
Preservation of Natural Features and Conservation Design	**Preservation of Undisturbed Areas**	Delineate and protect undisturbed forests, native vegetated areas, riparian corridors, water bodies, wetlands, and natural terrain.	Yes	The project does propose permanent conservation of this area at this time. Owner will be putting existing undevelopable land into a conservation easement.
	Preservation of Buffers	Delineate and protect naturally vegetated buffers along perennial streams, rivers, shorelines, and wetlands.	No	
	Reduction of Clearing and Grading	Limit clearing and grading to the minimum amount needed for roads, driveways, foundations, utilities and stormwater management facilities.	Yes	Clearing and grading will be limited to the area of disturbance and will be minimized to the greatest extent practical. The limits of all proposed clearing will be demarcated in the field with orange construction fencing, prior to construction, to prevent unnecessary removal of trees.
	Locating Development in Less Sensitive Areas	Avoid sensitive resource areas such as floodplains, steep slopes, erodible soils, wetlands, mature forests and critical habitats by locating development to fit the terrain in areas that will create the least impact.	No	
	Open Space Design	Use clustering, conservation design or open space design to reduce impervious cover, preserve more open space and protect water resources.	No	
	Soil Restoration	Restore the original properties and porosity of the soil by deep till and amendment with compost to reduce the generation of runoff and enhance the runoff reduction performance of post construction practices.	Yes	All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual.
	Roadway Reduction	Minimize roadway widths and lengths, below local requirements, to reduce site impervious area	No	

Step 1 - Site Planning

Reduction of Impervious Cover	**Sidewalk Reduction**	Minimize sidewalk lengths and widths, below local requirements, to reduce site impervious area	No	
	Driveway Reduction	Minimize driveway lengths and widths, below local requirements, to reduce site impervious area	No	
	Cul-de-sac Reduction	Minimize the number of cul-de-sacs and incorporate landscaped areas to reduce their impervious cover.	Yes	No cul-de-sacs are proposed as part of this project.
	Building Footprint Reduction	Reduce the impervious footprint of residences and commercial buildings by using alternate or taller buildings while maintaining the same floor to area ratio.	No	
	Parking Reduction	Reduce imperviousness on parking lots by eliminating unneeded spaces, providing compact car spaces and efficient parking lanes, reducing stall dimensions below local requirements, using porous pavement surfaces in overflow parking areas, and using multi-storied parking decks where appropriate.	No	

Step 2 - Calculate Water Quality Volume

Is this project subject to Section 4.3 of the NYS Design Manual for Enhanced Phosphorus Removal?	No
What is the nature of this construction project?	Redevelopment with increase in impervious area

Design Point:	DP-4		
P=	1.50	inches	*Enter 90% Rainfall Event as P*

Calculate Required WQv

Step 3 - Evaluation of RR Techniques and Standard SMPs with RRv Capacity

Practice		Description	Applicable	Project Specific Evaluation
RR Techniques	**Conservation of Natural Areas (RR-1)**	Retain the pre-development hydrologic and water quality characteristics of undisturbed natural areas by permanently conserving these areas on a site. Undisturbed natural areas include: forest retention areas; reforestation areas; stream and river corridors; shorelines; wetlands, vernal pools, and associated vegetated buffers; and undisturbed open space.	Yes	Existing lands unable to developed in the future are to remain wild and protect the natural landscape that remains on property. Existing Federal Wetlands exist on property and are to be protected as part of the project.
	Sheet Flow to Riparian Buffer/Filter Strip (RR-2)	Undisturbed natural areas such as forested conservation areas and stream buffers or vegetated filter strips and riparian buffers can be used to treat and control stormwater runoff from some areas of a development project.	No	Sheet flow to riparian buffers or grass filter strips is not proposed at this time. The project proposes treatment by RR techniques, Standard SMPs with RRv capacity, or Standard SMPs without RRv capacity.
	Tree Planting/Tree Pit/Tree Trench (RR-3)	Plant or conserve trees to reduce stormwater runoff, increase nutrient uptake, and provide bank stabilization. Trees can be used for applications such as landscaping, stormwater management practice areas, conservation areas and erosion and sediment control.	No	
	Disconnection of Rooftop Runoff (RR-4)	Direct runoff from rooftop areas and upland overland runoff flow to designated pervious areas to reduce runoff volumes and rates.	No	
	Vegetated Swale (RR-5)	The natural drainage paths, or properly designed vegetated channels, can be used instead of constructing underground storm sewers or concrete open channels to increase time of concentration, reduce the peak discharge, and provide infiltration.	No	
	Rain Garden (RR-6)	Manage and treat small volumes of stormwater runoff using a conditioned planting soil bed and planting materials to filter runoff stored within a shallow depression.	No	

Step 3 - Evaluation of RR Techniques and Standard SMPs with RRv Capacity

RR Techniques	**Stormwater Planter (RR-7)**	Small landscaped stormwater treatment devices that can be designed as infiltration or filtering practices. Stormwater planters use soil infiltration and biogeochemical processes to decrease stormwater quantity and improve water quality.	No	
	Rainwater Harvesting System (RR-8)	Capture and store stormwater runoff to be used for irrigation systems or filtered and reused for non-contact activities.	No	
	Porous Pavement (RR-9)	Pervious types of pavements that provide an alternative to conventional paved surfaces, designed to infiltrate rainfall through the surface, thereby reducing stormwater runoff from a site and providing some pollutant uptake in the underlying soils.	No	
	Green Roof (RR-10)	Capture runoff by a layer of vegetation and soil installed on top of a conventional flat or sloped roof. The rooftop vegetation allows evaporation and evapotranspiration processes to reduce volume and discharge rate of runoff entering conveyance system.	No	
	Stream Daylighting (RR-11)	Stream Daylight previously-culverted/piped streams to restore natural habitats, better attenuate runoff by increasing the storage size, promoting infiltration, and help reduce pollutant loads.	No	
	Infiltration Trench (I-1)	An infiltration practice that stores the water quality volume in the void spaces of a gravel trench before it is infiltrated into the ground.	No	
	Infiltration Basin (I-2)	An infiltration practice that stores the water quality volume in a shallow depression, before it is infiltrated it into the ground.	No	
	Dry Well (I-3)	An infiltration practice similar in design to the infiltration trench, and best suited for treatment of rooftop runoff.	No	

Step 3 - Evaluation of RR Techniques and Standard SMPs with RRv Capacity

Standard SMPs with RRv Capacity	**Underground Infiltration System (I-4)**	An infiltration practice below grade that stores the water quality volume in pre-manufactured pipes, vaults or other modular structures, before it is infiltrated into the ground.	No	Site Soils are not appropriate for underground infiltration for RRv or WQv treatment.
	Infiltration Bioretention (F-4)	A shallow depression that treats stormwater as it flows through a soil matrix, before it is infiltrated into the ground.	No	
	Filtration Bioretention (F-5)	A shallow depression that treats stormwater as it flows through a soil matrix and is returned to the storm drain system.	Yes	Fitration Bioretention is treating the runoff from the bus loop and the area around the front of the new building.
	Bioslope (F-6)	Permeable engineered soil media that is installed along embankments or other slopes, designed to capture and treat stormwater runoff from adjacent paved areas.	No	
	Dry Swale (O-1)	An open drainage channel or depression explicitly designed to detain and promote the filtration of stormwater runoff into the soil media.	No	

Steps 3 and 5 - Apply RR Techniques and Standard SMPs

Stormwater Pond Sizing

SWP-1:

Water Quality Volume, WQv, to be Treated (acre-ft) =	0.772
Water Quality Volume, WQv, to be Treated, (ft^3) =	33647.4

Type of Pond to be Used:

MICROPOOL EXTENDED DETENTION POND (P-1)

Pre-Treatment Volume: Size of Forebay

Volume Required by Forebay (acre-ft) =	0.077
Volume Required by Forebay (ft^3) =	3364.7

$$SizeofForebay = 10\% * WQ_v$$

Permanent Pool Volume:

Percent of WQ_v to be contained by Permanent Pool = **(see Table 6.1 in the NYS Stormwater Design Manual)**		**68%**
Permanent Pool Volume (acre-ft) =	0.525	
Permanent Pool Volume (ft^3) =	22880.2	

$$PermanentPoolVolume = \%ofWQ_vTreated * WQ_v$$

Extended Detention Volume:

Percent of WQ_v to be contained by Extended Detention = **(see Table 6.1 in the NYS Stormwater Design Manual)**		**31%**
Extended Detention Volume (acre-ft) =	0.239	
Extended Detention Volume (ft^3) =	10430.7	

$$ExtendedDetentionVolume = \%ofWQ_vTreated * WQ_v$$

Set Forebay W_{sel} (ft) =	**286.50**	Provided		Required	* all values of provided must be greater than
Volume of Forebay at W_{sel} (acre-ft) =		**0.155**	**> or =**	0.077	or equal to the required, or additional measures
Volume of Permanent Pool at W_{sel} (ft^3) =		**6767.0**	**> or =**	3364.7	are required

Set Permanent Pool W_{sel} (ft) =	**286.50**	Provided		Required	* all values of provided must be greater than
Cum. Volume at Permanent Pool W_{sel} (acre-ft) =	**0.421**	**> or =**		0.603	or equal to the required, or additional measures
Cum. Volume at Permanent Pool W_{sel} (ft^3) =	**18337.0**	**> or =**		22880.2	are required

Set Extended Detention W_{sel} (ft) =	**287.50**	Provided		Required	* all values of provided must be greater than
Cum. Volume at Ext. Detention W_{sel} (acre-ft) =	**0.855**	**> or =**		0.842	or equal to the required, or additional measures
Cum. Volume at Ext. Detention W_{sel} (ft^3) =	**37243.0**	**> or =**		33310.9	are required

**Refer to HydroCAD output for weir & orifice sizing*

Orifice Sizing:

$$AverageEDReleaseRate = \frac{EDvolume * 43560}{24 * 3600}$$

WQv - ED Orifice to release =	0.239	acre-ft over 24 hours
Average ED release rate (ft^3/s) =	0.121	
Invert of WQv - ED Orifice set W_{sel} of (ft) =		**286.50**
Average Head (ft) =		0.5

$$AverageHead = \frac{ExtendedDetentionW_{sel} - InvertofWQ_vED_{orifice}}{2}$$

Cross-Sectional Area of Orifice, A (ft^2) =	0.035
Diameter of Orifice, D (ft) =	0.213
Diameter of Orifice, D (inches) =	0.426

Rounded Diameter of Orifice, D (inches) =	1.0

* Use a 4" Diameter Orifice with a Gate Valve to achieve equivalent diameters for orifices less than 4" in diameter use the same methodology for odd sized orifices.

$$A = \frac{Q}{C * (2gh)^{0.5}}$$

Where:
A = Cross-Sectional Area, ft^2
Q = Average ED release rate, ft^3/s
C = Discharge Coefficient, 0.6
G = Gravitational Acceleration, 32.174 ft/s^2
H = Average Head, ft

$$D = \sqrt{\frac{4 * A}{\pi}}$$

Where:
D = Diameter of Orifice, ft
A = Cross-Sectional Area, ft^2

APPENDIX F

SOIL REPORT & GEOTECHNICAL REPORTS

(Updated with Additional Geotechnical Information)

Engineering Properties

This table gives the engineering classifications and the range of engineering properties for the layers of each soil in the survey area.

Hydrologic soil group is a group of soils having similar runoff potential under similar storm and cover conditions. The criteria for determining Hydrologic soil group is found in the National Engineering Handbook, Chapter 7 issued May 2007(http://directives.sc.egov.usda.gov/OpenNonWebContent.aspx?content=17757.wba). Listing HSGs by soil map unit component and not by soil series is a new concept for the engineers. Past engineering references contained lists of HSGs by soil series. Soil series are continually being defined and redefined, and the list of soil series names changes so frequently as to make the task of maintaining a single national list virtually impossible. Therefore, the criteria is now used to calculate the HSG using the component soil properties and no such national series lists will be maintained. All such references are obsolete and their use should be discontinued. Soil properties that influence runoff potential are those that influence the minimum rate of infiltration for a bare soil after prolonged wetting and when not frozen. These properties are depth to a seasonal high water table, saturated hydraulic conductivity after prolonged wetting, and depth to a layer with a very slow water transmission rate. Changes in soil properties caused by land management or climate changes also cause the hydrologic soil group to change. The influence of ground cover is treated independently. There are four hydrologic soil groups, A, B, C, and D, and three dual groups, A/D, B/D, and C/D. In the dual groups, the first letter is for drained areas and the second letter is for undrained areas.

The four hydrologic soil groups are described in the following paragraphs:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

Depth to the upper and lower boundaries of each layer is indicated.

Texture is given in the standard terms used by the U.S. Department of Agriculture. These terms are defined according to percentages of sand, silt, and clay in the fraction of the soil that is less than 2 millimeters in diameter. "Loam," for example, is soil that is 7 to 27 percent clay, 28 to 50 percent silt, and less than 52 percent sand. If the content of particles coarser than sand is 15 percent or more, an appropriate modifier is added, for example, "gravelly."

Classification of the soils is determined according to the Unified soil classification system (ASTM, 2005) and the system adopted by the American Association of State Highway and Transportation Officials (AASHTO, 2004).

The Unified system classifies soils according to properties that affect their use as construction material. Soils are classified according to particle-size distribution of the fraction less than 3 inches in diameter and according to plasticity index, liquid limit, and organic matter content. Sandy and gravelly soils are identified as GW, GP, GM, GC, SW, SP, SM, and SC; silty and clayey soils as ML, CL, OL, MH, CH, and OH; and highly organic soils as PT. Soils exhibiting engineering properties of two groups can have a dual classification, for example, CL-ML.

The AASHTO system classifies soils according to those properties that affect roadway construction and maintenance. In this system, the fraction of a mineral soil that is less than 3 inches in diameter is classified in one of seven groups from A-1 through A-7 on the basis of particle-size distribution, liquid limit, and plasticity index. Soils in group A-1 are coarse grained and low in content of fines (silt and clay). At the other extreme, soils in group A-7 are fine grained. Highly organic soils are classified in group A-8 on the basis of visual inspection.

If laboratory data are available, the A-1, A-2, and A-7 groups are further classified as A-1-a, A-1-b, A-2-4, A-2-5, A-2-6, A-2-7, A-7-5, or A-7-6. As an additional refinement, the suitability of a soil as subgrade material can be indicated by a group index number. Group index numbers range from 0 for the best subgrade material to 20 or higher for the poorest.

Percentage of rock fragments larger than 10 inches in diameter and 3 to 10 inches in diameter are indicated as a percentage of the total soil on a dry-weight basis. The percentages are estimates determined mainly by converting volume percentage in the field to weight percentage. Three values are provided to identify the expected Low (L), Representative Value (R), and High (H).

Percentage (of soil particles) passing designated sieves is the percentage of the soil fraction less than 3 inches in diameter based on an ovendry weight. The sieves, numbers 4, 10, 40, and 200 (USA Standard Series), have openings of 4.76, 2.00, 0.420, and 0.074 millimeters, respectively. Estimates are based on laboratory tests of soils sampled in the survey area and in nearby areas and on estimates made in the field. Three values are provided to identify the expected Low (L), Representative Value (R), and High (H).

Liquid limit and *plasticity index* (Atterberg limits) indicate the plasticity characteristics of a soil. The estimates are based on test data from the survey area or from nearby areas and on field examination. Three values are provided to identify the expected Low (L), Representative Value (R), and High (H).

Report—Engineering Properties

Absence of an entry indicates that the data were not estimated. The asterisk '*' denotes the representative texture; other possible textures follow the dash. The criteria for determining the hydrologic soil group for individual soil components is found in the National Engineering Handbook, Chapter 7 issued May 2007(http://directives.sc.egov.usda.gov/OpenNonWebContent.aspx?content=17757.wba). Three values are provided to identify the expected Low (L), Representative Value (R), and High (H).

BOARD OF EDUCATION
OSSINING UNION FREE SCHOOL DISTRICT
Ossining, New York

Regular Meeting
Anne M. Dorner Middle School – Cafeteria **June 12, 2024**
100 Van Cortlandt Avenue **7:30 P.M.**
Ossining, NY 10562

MINUTES

Present: Ms. Katherin Crossling, Ms. Christine Mangiamele, Vice President, Ms. Melissa Banta, Mr. Roger Battacharia, Ms. Annie Gomez, Mr. Robert Melstein, Mr. Frank Schnecker

Others Present: Ms. Mary Fox-Alter, Interim Superintendent of Schools, Ms. Kimberly Mauricio, Assistant Superintendent for Student Services, Dr. Donald Marra, Assistant Superintendent for Human Resources, Ms. Maria Angélica Meyer, Assistant Superintendent for Curriculum and Instruction, Ms. Jessica Turner, Executive Director for Instructional Support, Ms. Alita Zuber, Assistant Superintendent for Business

1. Call to Order - Board President

1.1 Call to Order

President of the Board, Katherin Crossling, called the Regular meeting of June 12, 2024, to order at 7:34 p.m.

1.2 Pledge of Allegiance

Board Trustee Frank Schnecker led all those present in the pledge of allegiance.

2. Work Session

2.1 Special Recognition: Tenure Recipients

The following individuals received tenure and were acknowledged and recognized by the administrators named below:

Tenure Recipient	Administrator
• Christopher DeMattia	Maria Angélica Meyer
• Kimberly Mauricio	Mary Fox-Alter
• Jessica Turner	Mary Fox-Alter
• Holly Freehill	Kimberly Mauricio
• Krystle Roth	Kimberly Mauricio
• Alexis Nichols	Nicole Nover
• Jaden de Guzman	Kate Mathews
• William Garone	Maria Angélica Meyer
• Lillian Savastano	Maria Angélica Meyer
• Kenny Taveras	Maria Angélica Meyer
• James Langelotti	Nicole Nover

Board Trustees congratulated the newly tenured staff members and wished them well.

Board Trustee Mr. Roger Battacharia arrived at 7:41 p.m.

Board President Katherin Crossling requested a motion to move up resolutions 7.1 and 7.2 for Board action.

Roger Battacharia moved and Christine Mangiemele seconded the motion to move up resolutions 7.1 and 7.2 for Board action.

7.1 Resolution Regarding Administrative Staff Tenure Appointment(s)

I move that upon recommendation of the Superintendent of Schools the Board of Education grant tenure to the Administrative Staff member(s) so noted.

Last Name	First Name	Building	Tenure Area	Date of Prob. Appointment	Tenure Date
DeMattia	Christopher	Central Office	Director of Science, Technology, Engineering & Math	7/2/2024	7/2/2024
Mauricio	Kimberly	Central Office	Assistant Superintendent of Student Services	7/1/2021	7/1/2024
Turner	Jessica	Central Office	Executive Director of Student Services	7/30/2021	7/30/2024

7.2 Resolution Regarding Professional Staff Tenure Appointment(s)

I move that upon recommendation of the Superintendent of Schools the Board of Education grant tenure to the Professional Staff member(s) so noted.

Last Name	First Name	Building	Tenure Area	Date of Prob. Appointment	Tenure Date
Freehill	Holly	Brookside School	Special Education	8/28/2019	8/28/2024
Roth	Krystle	Anne M. Dorner Middle School	Deaf/ Hearing Impaired Teacher	8/31/2021	8/31/2024
Nicholas	Alexis	Ossining High School	Foreign Language	9/1/2020	9/1/2024
de Guzman	Jaden	Claremont	Music	9/1/2020	9/1/2024
Garone	William	Ossining High School	Social Studies	9/1/2020	9/1/2024
Savastano	Lillian	Ossining High School	Math	9/1/2020	9/1/2024
Taveras	Kenny	Ossining High School	Guidance Counselor	9/1/2020	9/1/2024
Langelotti	James	Anne M. Dorner Middle School	Elementary	9/1/2020	9/1/2024

Motion carried: 6-0

At 8:16 p.m., Board President Katherin Crossling paused the meeting for a photo opportunity for the tenure recipients and their families.

At 8:22 p.m., the Board meeting resumed.

2.2 Superintendent's Update

Ms. Mary Fox-Alter, Interim Superintendent of Schools, shared the following:

- OHS Engineering Club is collecting Legos for students in Guatemala. Drop off is at the Ossining Public Library.
- Park School students took part in a story walk. Thank you to Ossining MATTERS for supporting this project.
- The Brookside School Song Share took place.
- Peekskill Superintendent and administrators visited our OHS Media Studio to tour our space and learn more about our media programs.

- Excellent Jazz benefit concert held on Monday to raise funds for our OHS Marching Band as they prepare to perform at Pearl Harbor Day in Hawaii.
- Thank you to our AMD student leaders that took part in our incoming 6th grade orientation.
- Park School held field day.
- AMD held their Senior Awards night.
- OHS held their Cultural Arts Awards night.
- AMD 8th grade dance was a great success.
- OHS Prom is tonight at Villa Berone.

2.3 Equity: Ossining Matters Update

Ms. Gina Marie Balog-Sartario, Chairperson and Ms. Rebecca Raymond, Grants Chair, provided an overview of their various fund-raising activities and community events and encouraged anyone who wanted to participate and volunteer their time at Ossining Matters is welcome!

The following grants were awarded to the Ossining School District:

1. Printmaking for Community Outreach
Applicant: Elizabeth Boushell
School: OHS
Amount Requested/Proposed Funding: $2,739/**$409**
Use: Linocut Press

2. Fabric Choice
Applicant: Adria Ingegneri
School: OHS
Amount Requested/Proposed Funding: $500/**$500**
Use: Fabric

3. Author Study with Kwame Alexander
Applicant: Sudha Narsipur
School: OHS (and AMD)
Amount Requested/Proposed Funding: $600/**$600**
Use: 2 Author Talks

4. Science Department Seismograph
Applicant: Rich Sicignano
School: OHS
Amount Requested/FC Award: $658/**$658**
Use: Seismograph

5. Brookside School Inclusive Sensory Table
Applicant: Liza Boland
School: Brookside
Amount Requested/Proposed Funding: $1,000/**$1,000**
Use: Materials to refill a sensory table they already have

6. Hudson River Sloop Clearwater Sailing Classroom
Applicant: Emily Nastasi
School: OHS
Amount Requested/Proposed Funding: $1095/**$1095**
Use: Hudson River Sloop Clearwater Class Instruction

7. Science Models for Energy
Applicant: Aaron Mace
School: Claremont
Amount Requested/Proposed Funding: $1,320/**$1,320**
Use: 20 Newton's Cradles and 20 Stirling Engines

8. Story Walkway

Applicant: Greta Ringel
School: Park
Amount Requested/Proposed Funding: $3,121.35/**$1,561**
Use: planning time for teachers, storybooks, art materials, and graphic designer

9. Business Club

Applicant: Mariana Pavic
School: AMD
Amount Requested/Proposed Funding: $5,000/**$2,500**
Use: materials to create things to sell for fundraisers, Pizza, DECA blazers, DECA chords, an etiquette class

10. Cameras for Film students

Applicant: Ron Whitehead
School: OHS
Amount Requested/Proposed Funding: $4, 870.37/**$4,870.37**
Use: 6 Canon EOS Rebel DSLR cameras

Board President Katherin Crossling thanked Ms. Balog-Sartario and Ms. Raymond for their update and expressed the Board's appreciation of all that they do on behalf of our students and staff, and for their very many years of support and for their valuable partnership with the district to help programs become a reality.

At 8:33 p.m. Board President Katherin Crossling called for a pause of the meeting for a photo opportunity with Ms. Balog-Sartario and Ms. Raymond.

At 8:36 p.m. the Board meeting resumed.

Board President Katherin Crossling requested a motion to move up resolution 4.2 for Board action.

Frank Schnecker moved and Christine Mangiamele seconded the motion to move up resolution 4.2.

4.2 Resolution Regarding the Hilda Bonavist Distinguished Service Award

I move that the Board of Education congratulate Ms. Lisa Wheeler on receiving the Hilda Bonavist Distinguished Service Award and thank her for her years of dedicated service.

Motion carried: 6-0

Assistant Superintendent for Human Resources, Dr. Donald Marra, took a few minutes to recognize Ms. Lisa Wheeler, recipient of the Hilda Bonavist Distinguished Service Award. Ms. Wheeler was unable to attend tonight's meeting.

Dr. Marra provided a brief overview of the Award and congratulated Ms. Wheeler on this special recognition and thanked her for over 30 years of service to the district.

2.4 Facilities Update

Interim Superintendent Mary Fox-Alter provided an overview of the proposed capital improvement plan. In 2020, the district began creating a "Facilities Framework", taking into account instructional needs, space limitations, and looked at maximizing NYS building aid and capital reserves to minimize the local impact to taxpayers. Discussions took place about the major and significant space constraints within the buildings, dire

shortage of support spaces (i.e., related spaces, school counseling), and compromised and substandard common spaces.

The proposed capital improvement plan is "Focused and Future Ready". It takes into account the many varied space challenges experienced in the classrooms, hallways, stairwells, landing areas, stages, outdated and undersized cafeterias (impacts lunch periods and recess), as well as safety concerns and the anxiety and stress levels that impact students and staff on a daily basis.

The plan is a transformative plan to renovate and expand school facilities to meet the 21st century needs of our students and staff; to build and improve district facilities to support the growth and success of everyone within our educational community.

The initial plan was presented in the spring of 2023-24 and has since been refined. The plan has been *restructured at the request of the Board of Education so that the tax impact is zero while maintaining program needs front and center.*

During the 2023-24 school year, various engagement opportunities took place – information and updates were provided and dialogue took place:

- Board of Education meetings and updates
- Website
- District facilities committee meetings – 7 meetings held this year
- School-based faculty meetings and evening events
- Saturday Explore & Learn events
- PTA meetings
- Community survey (sent out in the fall)
- Feedback from staff at AMD and OHS
- Traffic Study
- Capital projects and the 2024-25 budget process

Tonight's work session will focus on facilities, including a capital improvement plan review. Important Board decisions will be made tonight, such as a Lead Agency declaration, including consideration of an alternative/contingent option for the bond referendum tentatively scheduled for September 24, 2024.

Mr. Christopher Colby, architect at CPL, provided an overview of the proposed plans for Ossining High School, church renovation and STEAM addition, new building for 7th and 8th grade on the AMD property, plans for the overall AMD campus, and Claremont School.

Mr. Paul Tozzi of Arris Contracting provided an overview of the proposed financial information for the bond project (cost per project – OHS additions and renovations, 7th and 8th grade new construction, and Claremont School additions and renovations).

Ms. Alita McCoy Zuber, Assistant Superintendent for Business, provided an overview of the budget appropriations projects at Park School, Brookside School, access drive to Stormytown Road, air conditioning at AMD, and district-wide energy performance contract. If the Board approves proposition #1, it is a flexible plan.

The district's fiscal advisors provided financial information for the proposed $210M Bond Project from 2023-24 through 2055-56.

An alternate plan known as proposed proposition #2 (contingent) would result in a slight tax increase of 0.38% and includes athletic improvements for the 7th and 8th grade new construction in the form of fields, in the amount of an additional $7,964,897M.

At the conclusion of the presentations, Board discussion took place. Board Trustees asked questions and made comments. Board President Katherin Crossling asked each Board Trustee for their thoughts on the two proposals. The Board was unanimous in it's decision to go with the first proposition of $210M with 0% tax increase.

Ms. Crossling thanked the presenters and members of the facilities committee.

3. Audience Recognition - Agenda Items Only

There were no attendees in person or attending virtually who wished to be recognized.

4. Consent Agenda: Business of the Board

Roger Battacharia moved and Annie Gomez seconded the motion to move resolution 4.1.

4.1 Resolution Regarding Intention to Serve as SEQRA Lead Agency - Bond for Capital Work at Claremont Elementary School, Anne M. Dorner Middle School, and Ossining High School Campus

WHEREAS, the Board of Education of the Ossining Union Free School District (the "BOE") is considering a proposed 2024 Bond for capital work to be undertaken at the Claremont Elementary School, Anne M. Dorner Middle School, and the Ossining High School Campus for the purpose of addressing space, programming, recreational and parking needs, as well routine renovations (the "Project"); and

WHEREAS, the Project includes the following work at the Claremont Elementary School, as described more fully in the associated Full Environmental Assessment Form ("FEAF"): (1) two-story, 12,600 square foot classroom addition over an existing asphalt area, (2) addition for elevator, and (3) various interior renovations and reconfigurations; and

WHEREAS, the Project includes the following work at the Anne M. Dorner Middle School, as described more fully in the associated FEAF: (1) 66,000 square foot (footprint), three-story new building with related site improvements, (2) stormwater facilities, (3) 125-space parking lot, (4) two-story, 12,600 square foot addition to the existing building, and (5) various interior renovations and rehabilitation; and

WHEREAS, the Project includes the following work at the Ossining High School Campus, including the recently acquired parcels at 1 Emwilton Place and 3 Emwilton Place, as described more fully in the associated FEAF: (1) 19,600 gross square foot, two-story locker room overbuild, (2) 8,200 square foot, one-story overbuild, (3) various interior renovations and reconfigurations, and (4) demolition of the former rectory building and construction of a 18,500 square foot, three-story addition; and

WHEREAS, through the assistance of CPL Architecture, Engineering and Planning, the BOE has reviewed the completed Full Environmental Assessment Forms, Part 1 and supplemental information for the Project; and

WHEREAS, while separate EAFs have been prepared for work proposed to be funded at each of the three school campuses, review of the Project will include a cumulative look at the totality of the improvements proposed to be funded by the Bond; and

WHEREAS, the BOE wishes to notify potentially involved agencies and known interested parties of its intent to act as lead agency under the State Environmental Quality Review Act ("SEQRA") for the Project.

NOW, THEREFORE, BE IT RESOLVED, that the BOE classifies the Project as a Type I Action, as defined by the SEQRA regulations; and

BE IT FURTHER RESOLVED, that the BOE declares its intent to become Lead Agency for the Project for SEQRA purposes; and

BE IT FURTHER RESOLVED, that the BOE hereby directs CPL Architecture, Engineering and Planning to circulate a notice of the BOE's intention to serve as SEQRA Lead Agency for the Project, together with Part 1 of

the EAF to involved agencies and to circulate a notice to interested agencies of the BOE's intention to serve as SEQRA Lead Agency for the Project; and

BE IT FURTHER RESOLVED, that the BOE shall become the SEQRA Lead Agency for the Project if no objection to such Lead Agency status is received from any other involved agency within thirty (30) days of circulation of the aforementioned notice of intention.

4.3 Resolution to Appoint a Consultant for the 2024-2025 School Year

RESOLVED, that the Board of Education hereby authorizes the Superintendent of Schools to engage the services of the following consultant for the 2024-25 school year at fees not to exceed the amount noted below.

Name of Consultant	Brief Description of Expertise	Descriptive Need for Consultant	Fees Not to Exceed (note if grant funded)
Center for Curriculum Renewal LLC Judy Carr, Director/Consultant	Consultant who collaborates strategy identification, gap analysis and develops next steps for improving in areas related to instructional support as we deepen our implementation so that all students benefit, and performance improves.	Four (4) days consultant to work with Executive Director on: ● The Dynamics of the Change Process ● Systems Development for Instructional Excellence ● Models for Instructional Support/MTSS ● Approaches to Program Review	$8,000

4.4 Resolution to Affirm the Results of the Annual District Budget Vote and Board of Education Elections Held on May 21, 2024

7.14 Resolution Regarding Approval of School Volunteers

I move that the persons listed on the following page be appointed by the Board of Education as school volunteers for the 2023-2024 school year.

Last Name	First Name	Volunteer Title	Start	End	Type
Chillemi	Rachelle	Non-Parent	6/20/2024	6/21/2024	Observe Speech Therapist @ AMD
Tagliavia	Claudia	Non-Parent	7/3/2024	8/27/2024	Student Teacher @ Park
Gomez	Melanie	Non-Parent	7/3/2024	8/27/2024	Student Teacher @ Park
Arevalo Delgado	Denise	Non-Parent	7/3/2024	8/27/2024	Student Teacher @ Park Fridays Only

7.15 Resolution Regarding Support Staff Request for a Leave of Absence

I move that upon recommendation of the Superintendent of Schools the Board of Education approve the Support Staff Leave Request for the person(s) so noted.

Last Name	**First Name**	**Building**	**Category or Tenure Area**	**Leave Start**	**Leave End**	**Reason**
Carone	Nicholas	Roosevelt	Teaching Assistant	9/3/2024	12/20/2024	Personal

7.16 Resolution Regarding APPR (Annual Professional Performance Review) Accountability

I move that upon recommendation of the Superintendent of Schools the Board of Education approve the Substitute appointments, for the purpose of APPR accountability, so noted.

Per Diem Sub Name	Building	Teacher Name	Start Date	Per Diem Sub Certification
Petrillo, Ava	Ossining High School	Emily Nastasi	5/13/2024	Social Studies

Motion carried: 7-0

7.17 Resolution Regarding Professional Staff Request(s) for Leave of Absence (For Information Only)

The matter is presented here for Board of Education information and no action is necessary.

Last Name	First Name	Building	Category or Tenure Area	Leave Start	Leave End	Reason
Guardino	Joanna	Anne M. Dorner Middle School	Special Education	5/22/2024	10/17/2024	FMLA
Estrada	Roxana	Ossining High School	Science	5/15/2024	10/16/2024	FMLA
Testa	Elizabeth	Ossining High School	ENL	3/4/2024	5/31/2024	FMLA

7.18 Resolution Regarding Civil Service Staff Request(s) for Leave of Absence (For Information Only)

The matter is presented here for Board of Education information and no action is necessary.

Last Name	First Name	Building	Category or Tenure Area	Leave Start	Leave End	Reason
Hall	Jasmine	Central Office	Purchase Clerk	7/3/2024	9/2/2024	Child Rearing

8. Enrollment Report - For Information Only

The matter is presented here for Board of Education information and no action is necessary.

9. Audience Recognition

There were no attendees in person or attending virtually who wished to be recognized.

10. Board Reports and Dialogue

Board Trustees share the following:

- The Board of Education Summer Retreat is scheduled for all day on Thursday, July 25th at PNW BOCES in Yorktown Heights.
- The Board Governance Committee met and drafted a checklist of ideas to review at the Retreat
- The Board Handbook is almost finalized.
- Board President Katherin Crossling announced that she is interested in the Vice President position on the Board
- Board Vice President Christine Mangiamele announced that she is interested in the President position on the Board
- The Annual Reorganization meeting of the Board is scheduled for Wednesday, July 10th at 7:30 p.m.

- Robert Melstein questioned whether the All-Day Saturday Budget Workshop in March is needed. The Board deferred to Mary Fox-Alter and Alita Zuber for thoughts. The Board will decide depending on budget discussions.
- The next Policy Committee meeting is virtual and is scheduled for June 20th at noon.

11. Executive Session

At 10:59 p.m., Christine Mangiamele moved, and Roger Battacharia seconded the motion to go into Executive Session to discuss the employment history of a particular person or corporation, or matters leading to the appointment, employment, promotion, discipline, suspension, dismissal, or removal of a particular person, collective bargaining agreement and contracts.

Motion carried: 7-0

No formal action was taken.

At 11:19 p.m., Melissa Banta moved, and Roger Battacharia seconded the motion to reconvene the Regular meeting for the purpose of adjournment.

Motion carried: 7-0

12. Adjournment

At 11:20 p.m., Robert Melstein moved, and Christine Mangiamele seconded the motion to adjourn the Regular meeting of June 12, 2024.

Motion carried: 7-0

CPLteam.com

Focused and Future Ready

Creating a Facilities Framework Started in 2020

What 21st century instructional needs are not being addressed sufficiently?

What compromises are being made that can no longer should be made and are in danger of no longer working?

Are school building limitations driving the instructional program or are student needs?

What is the financial plan to leverage and maximize significant NYS building aid and capital reserves to minimize the local impact to taxpayers?

Focused and Future Ready

Deep Conclusions for Discussion

We have major and significant space constraints.

We have key misalignment between needs and dedicates spaces.

We have a significant, dire shortage of support spaces (related services, school counseling).

We have compromised and substandard common spaces.

Focused and Future Ready

"We need space" - space challenges and space demands permeate the PreK-12 conversations and decisions

- We have compromised spaces
- Cramped classrooms, shared classrooms
- Instructional time and opportunities are lost due to space challenges
- Learning environments in hallways, stairwells, landing areas, stages
- Very dense hallways and stairwells
- Room utilization rates that significantly impeded the ability to schedule program around students needs
- Outdated and dramatically undersized cafeterias and kitchens - impacts lunch and recess
- Space needs generate student safety concerns, anxiety and stress level impacts for students and staff.

OSSINING UNION FREE SCHOOL DISTRICT

Capital Improvement Plan

Focused and Future Ready

A transformative plan to renovate and expand school facilities to meet the 21st century needs of our students and staff.

Plan Vision

To build and improve district facilities to support the growth and success of everyone within our educational community.

Initial Plan presented last spring
23-24 school year - engagement and refinement.

BOE updated charge
Restructure the plan so that the tax impact is zero while keeping the program needs front and center.

CONSTRUCTION SITE INSPECTION AND MAINTENANCE LOGBOOK

APPENDIX F
CONSTRUCTION SITE INSPECTION AND MAINTENANCE LOG BOOK

STATE POLLUTANT DISCHARGE ELIMINATION SYSTEM FOR CONSTRUCTION ACTIVITIES

SAMPLE CONSTRUCTION SITE LOG BOOK

Table of Contents

I. Pre-Construction Meeting Documents
   a. Preamble to Site Assessment and Inspections
   b. Pre-Construction Site Assessment Checklist

II. Construction Duration Inspections
   a. Directions
   b. Modification to the SWPPP

I. **PRE-CONSTRUCTION MEETING DOCUMENTS**

Project Name _____

Permit No. _____ **Date of Authorization** _____

Name of Operator _____

Prime Contractor _____

a. **Preamble to Site Assessment and Inspections**

The Following Information To Be Read By All Person's Involved in The Construction of Stormwater Related Activities:

The Operator agrees to have a qualified inspector[1] conduct an assessment of the site prior to the commencement of construction[2] and certify in this inspection report that the appropriate erosion and sediment controls described in the SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction.

Prior to the commencement of construction, the Operator shall certify in this site logbook that the SWPPP has been prepared in accordance with the State's standards and meets all Federal, State and local erosion and sediment control requirements. A preconstruction meeting should be held to review all of the SWPPP requirements with construction personnel.

When construction starts, site inspections shall be conducted by the qualified inspector at least every 7 calendar days. The Operator shall maintain a record of all inspection reports in this site logbook. The site logbook shall be maintained on site and be made available to the permitting authorities upon request.

Prior to filing the Notice of Termination or the end of permit term, the Operator shall have a qualified inspector perform a final site inspection. The qualified inspector shall certify that the site has undergone final stabilization[3] using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls (such as silt fencing) not needed for long-term erosion control have been removed. In addition, the Operator must identify and certify that all permanent structures described in the SWPPP have been constructed and provide the owner(s) with an operation and maintenance plan that ensures the structure(s) continuously functions as designed.

1 Refer to "Qualified Inspector" inspection requirements in the current SPDES General Permit for Stormwater Discharges from Construction Activity for complete list of inspection requirements.
2 "Commencement of construction" means the initial removal of vegetation and disturbance of soils associated with clearing, grading or excavating activities or other construction activities.
3 "Final stabilization" means that all soil-disturbing activities at the site have been completed and a uniform, perennial vegetative cover with a density of eighty (80) percent has been established or equivalent stabilization measures (such as the use of mulches or geotextiles) have been employed on all unpaved areas and areas not covered by permanent structures.

b. Pre-construction Site Assessment Checklist
(NOTE: Provide comments below as necessary)

1. Notice of Intent, SWPPP, and Contractors Certification:

Yes No NA

[ ] [ ] [ ] Has a Notice of Intent been filed with the NYS Department of Conservation?
[ ] [ ] [ ] Is the SWPPP on-site? Where?_____
[ ] [ ] [ ] Is the Plan current? What is the latest revision date?_____
[ ] [ ] [ ] Is a copy of the NOI (with brief description) onsite? Where?_____
[ ] [ ] [ ] Have all contractors involved with stormwater related activities signed a contractor's certification?

2. Resource Protection

Yes No NA

[ ] [ ] [ ] Are construction limits clearly flagged or fenced?
[ ] [ ] [ ] Important trees and associated rooting zones, on-site septic system absorption fields, existing vegetated areas suitable for filter strips, especially in perimeter areas, have been flagged for protection.
[ ] [ ] [ ] Creek crossings installed prior to land-disturbing activity, including clearing and blasting.

3. Surface Water Protection

Yes No NA

[ ] [ ] [ ] Clean stormwater runoff has been diverted from areas to be disturbed.
[ ] [ ] [ ] Bodies of water located either on site or in the vicinity of the site have been identified and protected.
[ ] [ ] [ ] Appropriate practices to protect on-site or downstream surface water are installed.
[ ] [ ] [ ] Are clearing and grading operations divided into areas <5 acres?

4. Stabilized Construction Access

Yes No NA

[ ] [ ] [ ] A temporary construction entrance to capture mud and debris from construction vehicles before they enter the public highway has been installed.
[ ] [ ] [ ] Other access areas (entrances, construction routes, equipment parking areas) are stabilized immediately as work takes place with gravel or other cover.
[ ] [ ] [ ] Sediment tracked onto public streets is removed or cleaned on a regular basis.

5. Sediment Controls

Yes No NA

[ ] [ ] [ ] Silt fence material and installation comply with the standard drawing and specifications.
[ ] [ ] [ ] Silt fences are installed at appropriate spacing intervals
[ ] [ ] [ ] Sediment/detention basin was installed as first land disturbing activity.
[ ] [ ] [ ] Sediment traps and barriers are installed.

6. Pollution Prevention for Waste and Hazardous Materials

Yes No NA

[ ] [ ] [ ] The Operator or designated representative has been assigned to implement the spill prevention avoidance and response plan.
[ ] [ ] [ ] The plan is contained in the SWPPP on page _____
[ ] [ ] [ ] Appropriate materials to control spills are onsite. Where? _____

II. CONSTRUCTION DURATION INSPECTIONS

a. Directions:

Inspection Forms will be filled out during the entire construction phase of the project.

Required Elements:

1) On a site map, indicate the extent of all disturbed site areas and drainage pathways. Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 14-day period;

2) Indicate on a site map all areas of the site that have undergone temporary or permanent stabilization;

3) Indicate all disturbed site areas that have not undergone active site work during the previous 14-day period;

4) Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of sediment storage volume (for example, 10 percent, 20 percent, 50 percent);

5) Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (earthen berms or silt fencing) and containment systems (sediment basins and sediment traps). Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching. Document any excessive deposition of sediment or ponding water along barrier or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water; and

6) Immediately report to the Operator any deficiencies that are identified with the implementation of the SWPPP.

SITE PLAN/SKETCH

Inspector (print name)	**Date of Inspection**
Qualified Inspector (print name)	**Qualified Inspector Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA

[ ] [ ] [ ] Is there an increase in turbidity causing a substantial visible contrast to natural conditions at the outfalls?
[ ] [ ] [ ] Is there residue from oil and floating substances, visible oil film, or globules or grease at the outfalls?
[ ] [ ] [ ] All disturbance is within the limits of the approved plans.
[ ] [ ] [ ] Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions

Yes No NA

[ ] [ ] [ ] Is construction site litter, debris and spoils appropriately managed?
[ ] [ ] [ ] Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?
[ ] [ ] [ ] Is construction impacting the adjacent property?
[ ] [ ] [ ] Is dust adequately controlled?

2. Temporary Stream Crossing

Yes No NA

[ ] [ ] [ ] Maximum diameter pipes necessary to span creek without dredging are installed.
[ ] [ ] [ ] Installed non-woven geotextile fabric beneath approaches.
[ ] [ ] [ ] Is fill composed of aggregate (no earth or soil)?
[ ] [ ] [ ] Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

3. Stabilized Construction Access

Yes No NA

[ ] [ ] [ ] Stone is clean enough to effectively remove mud from vehicles.
[ ] [ ] [ ] Installed per standards and specifications?
[ ] [ ] [ ] Does all traffic use the stabilized entrance to enter and leave site?
[ ] [ ] [ ] Is adequate drainage provided to prevent ponding at entrance?

Runoff Control Practices

1. Excavation Dewatering

Yes No NA

[ ] [ ] [ ] Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
[ ] [ ] [ ] Clean water from upstream pool is being pumped to the downstream pool.
[ ] [ ] [ ] Sediment laden water from work area is being discharged to a silt-trapping device.
[ ] [ ] [ ] Constructed upstream berm with one-foot minimum freeboard.

Runoff Control Practices (continued)

2. Flow Spreader

Yes No NA

[ ] [ ] [ ] Installed per plan.
[ ] [ ] [ ] Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
[ ] [ ] [ ] Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales

Yes No NA

[ ] [ ] [ ] Installed per plan with minimum side slopes 2H:1V or flatter.
[ ] [ ] [ ] Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.
[ ] [ ] [ ] Sediment-laden runoff directed to sediment trapping structure

4. Stone Check Dam

Yes No NA

[ ] [ ] [ ] Is channel stable? (flow is not eroding soil underneath or around the structure).
[ ] [ ] [ ] Check is in good condition (rocks in place and no permanent pools behind the structure).
[ ] [ ] [ ] Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

[ ] [ ] [ ] Installed per plan.
[ ] [ ] [ ] Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

[ ] [ ] [ ] Stockpiles are stabilized with vegetation and/or mulch.
[ ] [ ] [ ] Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

[ ] [ ] [ ] Temporary seedings and mulch have been applied to idle areas.
[ ] [ ] [ ] 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control Practices

1. Silt Fence and Linear Barriers

Yes No NA

[ ] [ ] [ ] Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
[ ] [ ] [ ] Joints constructed by wrapping the two ends together for continuous support.
[ ] [ ] [ ] Fabric buried 6 inches minimum.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.
Sediment accumulation is ___% of design capacity.

Sediment Control Practices (continued)

2. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated; Filter Sock or Manufactured practices)

Yes No NA

[ ] [ ] [ ] Installed concrete blocks lengthwise so open ends face outward, not upward.
[ ] [ ] [ ] Placed wire screen between No. 3 crushed stone and concrete blocks.
[ ] [ ] [ ] Drainage area is 1acre or less.
[ ] [ ] [ ] Excavated area is 900 cubic feet.
[ ] [ ] [ ] Excavated side slopes should be 2:1.
[ ] [ ] [ ] 2" x 4" frame is constructed and structurally sound.
[ ] [ ] [ ] Posts 3-foot maximum spacing between posts.
[ ] [ ] [ ] Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.
[ ] [ ] [ ] Manufactured insert fabric is free of tears and punctures.
[ ] [ ] [ ] Filter Sock is not torn or flattened and fill material is contained within the mesh sock.

Sediment accumulation ___% of design capacity.

3. Temporary Sediment Trap

Yes No NA

[ ] [ ] [ ] Outlet structure is constructed per the approved plan or drawing.
[ ] [ ] [ ] Geotextile fabric has been placed beneath rock fill.
[ ] [ ] [ ] Sediment trap slopes and disturbed areas are stabilized.

Sediment accumulation is ___% of design capacity.

4. Temporary Sediment Basin

Yes No NA

[ ] [ ] [ ] Basin and outlet structure constructed per the approved plan.
[ ] [ ] [ ] Basin side slopes are stabilized with seed/mulch.
[ ] [ ] [ ] Drainage structure flushed and basin surface restored upon removal of sediment basin facility.
[ ] [ ] [ ] Sediment basin dewatering pool is dewatering at appropriate rate.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design. All practices shall be maintained in accordance with their respective standards.

Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS

b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:

1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
   a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
   b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

STORMWATER MANAGEMENT CONSTRUCTION DURATION INSPECTION REPORT

SITE: **PERMIT #** **DATE:**

CPL PROJECT # **WEEKLY/RAINFALL/MISC:**

STABILIZATION CONTROL (See Attached Site Plan/Sketch ☑)

1a. Indicate the location and size of all disturbed site areas and drainage pathways;

1b. Indicate the location and size of areas that are expected to undergo initial disturbance or significant site work within the next 14-day period;

1c. Indicate the location and size of areas of the site that have undergone temporary or permanent stabilization;

1.d Indicate the location and size of disturbed site areas that have not undergone active site work during the previous 14-day period;

1.e Indicate the location and size of rill or gully erosion or loss of stabilizing vegetation or seeding/mulching or any erosion near outlet structures.

SEDIMENT AND RUNOFF CONTROL - SUMMARY

2.a Indicate the type, location, degree of sediment accumulation and required maintenance of each sediment and runoff control practice.

2.b Document any excessive deposition of sediment or ponding water along barrier or diversion systems.

2.c Indicate the ability of rock filters around perforated riser pipes to pass water

SWPPP COMPLIANCE - SUMMARY

3a. Indicate any deficiencies that are identified with the implementation of the SWPPP

3b. Indicate any modifications or actions required to implement the SWPPP.

☐	☐	☐	4 inches minimum of topsoil has been applied under permanent seedings.
☐	☐	☐	**Maintenance required:**

8. SEDIMENT CONTROL PRACTICES

A. Stabilized Construction Entrance

Yes	No	N/A	
☐	☐	☐	Stone is clean enough to effectively remove mud from vehicles.
☐	☐	☐	Installed per standards and specifications?
☐	☐	☐	Does all traffic use the stabilized entrance to enter and leave the site?
☐	☐	☐	Is adequate drainage provided to prevent ponding at the entrance?
☐	☐	☐	**Maintenance required:**

B. Silt Fence

Yes	No	N/A	
☐	☐	☐	Installed on contour, 10 feet from toe of slope (not across conveyance channels).
☐	☐	☐	Joints constructed by wrapping the two ends together for continuous support.
☐	☐	☐	Fabric buried 6 inches minimum.
☐	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.
☐	☐	☐	**Maintenance required:**

Sediment accumulation is _____% of design capacity.

C. Temporary Sediment Trap

Yes	No	N/A	
☐	☐	☐	Outlet structure is constructed per the approved plan or drawing.
☐	☐	☐	Geotextile fabric has been placed beneath rock fill.
☐	☐	☐	**Maintenance required:**

Sediment accumulation is_____% of design capacity.

8. SEDIMENT CONTROL PRACTICES - Continued

D. Storm Drain Inlet Protection (Use for stone & block, filter fabric, curb, or excavated practices).

Yes	No	N/A	
☐	☐	☐	Installed concrete blocks lengthwise so open ends face outward, not upward.
☐	☐	☐	Placed wire screen between No. 3 crushed stone and concrete blocks.
☐	☐	☐	Drainage area being 1 acre or less.
☐	☐	☐	Excavated area is 900 cubic feet.
☐	☐	☐	Excavated side slopes should be 2:1.
☐	☐	☐	2" x 4" frame is constructed and structurally sound.
☐	☐	☐	Maximum post spacing is 3 feet.
☐	☐	☐	Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
☐	☐	☐	Posts are stable, fabric is tight and without rips or frayed areas.
☐	☐	☐	**Maintenance required:**

Sediment accumulation is_____% of design capacity.

E. Temporary Sediment Basin

Yes	No	N/A	
☐	☐	☐	Basin and outlet structure constructed per the approved plan.
☐	☐	☐	Basin side slopes are stabilized with seed/mulch.
☐	☐	☐	Drainage structure flushed, and basin surface restored upon removal of sediment basin facility.
☐	☐	☐	**Maintenance required:**

Sediment accumulation is_____% of design capacity.

STORMWATER POLLUTION PREVENTION PLAN DATED OCTOBER 2026

CHANGES REQUIRED FOR STORM WATER POLLUTION PREVENTION PLAN

The SWPPP must be amended whenever there is a change in design, construction, operation, or maintenance at the construction site that has a significant effect on the discharge of pollutants to the Waters of the United States that has not been previously addressed in the SWPPP, if inspections or investigations by site staff, local, state or federal officials determine that discharges are causing water quality exceedances or the SWPPP is ineffective in eliminating or significantly minimizing pollutants in storm water discharges from the construction site, or based on the results of an inspection, or there is a release containing a Hazardous Substance or Oil in an amount equal to or in excess of a reportable quantity established under either 40 CFR Part 110, 40 CFR Part 117, or 40 CFR Part 302 occurs during a 24 hour period, the SWPPP must be modified to include additional or modified BMPs designed to correct identified problems. Revisions to the SWPPP must be completed within seven (7) calendar days following the inspection. Modifications that are the result of inspections shall be initialed within 24 hours and completed within 48 hours. All modifications are to be referenced on both the forms and on a Progress Drawing.

STORM WATER POLLUTION PREVENTION PLAN
REPORTABLE QUANTITY RELEASE FORM

CONSTRUCTION SITE – OSSINING NEW 7/8 MIDDLE SCHOOL – 2024 BOND
300 VAN CORTLANDT AVE.
OSSINING, NY 10562

STORMWATER POLLUTION PREVENTION PLAN DATED OCTOBER 2026

The discharges of Hazardous Substances or Oil in storm water discharges from construction sites must be prevented or minimized in accordance with the SWPPP. Where a release containing a Hazardous Substance or Oil in an amount equal to or in excess of a reportable quantity established under 40CFR Part 110, 40CFR Part 117 and 40CFR Part 302 occurs, the following steps must be taken:

1. **All measures must be taken to contain and abate the spill and to prevent the discharge of Hazardous Substances or Oil to storm water or off-site.**

2. **Contact the Project Manager or Operator's Engineer immediately upon knowledge of release.**

3. **If a release is equal to or in excess of a reportable quantity, the SWPPP must be modified within seven (7) calendar days of knowledge of the discharge to provide a description of the release, the circumstances leading to the release, and the date of the release. The plans must identify measures to prevent the recurrence of such releases and to respond to such releases**

Topic	Discussed	Further action or Information Required (Yes or No)
Overview of SPDES Permit Program		
General Discussion of SWPPP and Records Retention Requirements		
Phasing of Project		
Review of Erosion and Sediment Control Plans (to include all temporary and permanent structural and stabilization measures)		
Locating solid waste containers, portable toilets, concrete washout areas, fueling areas and tank storage area on Progress Drawing		
Posting the Progress Drawing (marked on the Erosion and Sediment Control Plans) at job trailer		
Posting requirements for the Notice of Intent (NOI), Must be posted at Project entrance and inside job trailer wall.		
Allowable non-storm water discharges and handling procedures		
Materials management to include proper material storage, etc.		
Signatory Authorization Delegation		
Contractor's Certification		
Subcontractor's Certification		
Inspection form and required inspection timeframe		
Stabilization schedule		
Implementation schedule		
Modification report and modifying plans		
Final stabilization		
Reportable quantity release procedures		
Rain gage requirement and rainfall logs		
State specific requirements		
Import/Export – Fill and Spoil Materials		
SWPPP accessibility to regulatory officials		
Inspections – assisting and cooperating with regulatory officials – inspection reports and notices of violation (any response must be coordinated through Project Manager)

STORM WATER POLLUTION PREVENTION PLAN
CLIMATE CHANGE CONSIDERATIONS

CONSTRUCTION SITE – OSSINING NEW 7/8 BUILDING - OSSINING UNION FREE SCHOOL DISTRICT – '24 BOND – PHASE 4
300 VAN CORTLANDT AVE
OSSINING NY 10562

Physical Risk	Project Site Considerations			
	Overall Site Planning	**Location, Elevation and Sizing of Control Measures and Practices**	**Location, Elevation and Sizing of Conveyance System(s)**	**Location, Elevation and Sizing of Detention System(s)**
Increasing Temperature	Due to site constraints and limited available useful soil, infiltration was not a viable option for stormwater treatment and detention.	SMP(s) have been sized for the 90% storm event. The elevation of ponding controls in the practice is limited by the requirements in the design manual.	Conveyance systems have been sized to safely convey the 10-year & 100-year 24-hour storm event.	System(s) have been designed to keep all runoff on-site with one singular discharge to existing swales to the stream..
Increasing Precipitation	The project proposes runoff reduction techniques to reduce the volume discharging from the project site and promoting groundwater recharge. Detention systems sized to handle the 200 year storm event.	SMP(s) have been sized for the 90% storm event. The elevation of ponding controls in the practice is limited by the requirements in the design manual.	Conveyance systems have been sized to safely convey the 10-year & 100 year 24-hour storm event.	System(s) have been designed to keep all runoff on-site with one singular discharge to existing swales to the stream..
Increasing Precipitation Variability				
Increasing Frequency and Severity of Flooding				
Rising Sea Level	Due to the site location, the property is not expected to be directly impacted by sea levels rising.	Not applicable	Not applicable	Not applicable
Increasing Storm Surge	Due to the site location, the property is not expected to be directly impacted by storm surge.	Due to the site location, the property is not expected to be directly impacted by storm surge.	Due to the site location, the property is not expected to be directly impacted by storm surge.	Due to the site location, the property is not expected to be directly impacted by storm surge.
Shifting Ecology	The plantings selected for the project consider adaptability.	The SMPs selected will utilize hardy species tolerant to both drought and inundation.	The conveyance system proposed does not discharge any runoff off-site. Therefore, this risk is not applicable to the conveyance system.	Detention System has been designed with Local Flora and Fauna in mind. Native wetland plans proposed in pond.

A. Specified Allowance as indicated in Specification Section 012100. This amount is to be included in the Base Bid above.
   1. Allowance No. SC-00; (General Allowance)
      $ (Insert Amount)
   2. Allowance No. SC-01; (Trench Rock Removal & Replacement)
      $ (Insert Amount)
   3. Allowance No. SC-02; (Unsuitable Soil Removal & Replacement)
      $ (Insert Amount)
   4. Allowance No. SC-03; (Mass Rock Removal & Replacement)
      $ (Insert Amount)

1.06 UNIT PRICES (REFERENCE SPECIFICATION SECTION 012200)

A. Enter in unit prices from spec section 012200. (Unit prices are used in anticipation that there will be additional quantities of materials and labor not expressly indicated on the contract documents.)
   1. Unit Price No. SC-01; (Trench Rock Removal & Replacement)
      $ per
   2. Unit Price No. SC-02; (Unsuitable Soil Removal & Replacement)
      $ per
   3. Unit Price No. SC-03; (Mass Rock Removal & Replacement)
      $ per

1.07 BID SECURITY

A. Bid Security in the form of a Certified or Cashier's Check or a Bid Bond in the form required by the Contract Documents is attached to and made a part of this Proposal.

1.08 IRAN DIVESTMENT ACT CERTIFICATION

A. Contractor to submit with the bid, Iran Divestment Act Certification which hereto is made a part of this Form of Proposal and is attached at the end of this Form of Proposal.

1.09 CERTIFICATION UNDER EXECUTIVE ORDER NO. 16

A. Contractor to submit with the bid, Certification under Executive Order No. 16 which hereto is made a part of this Form of Proposal and is attachd at the end of this Form of Proposal.

1.10 NEW YORK STATE DEPARTMENT OF LABOR CONTRACTOR REGISTRY

A. Pursuant to New York State Department of Labor requirements, Contractor to submit with the bid, a copy of their Contractor Certificate of Registration along with, Labor Law 220-i Certification Form which hereto is made a part of this Form of Proposal and is attached at the end of this Form of Proposal.

1.11 REPRESENTATIONS

A. By submitting this Proposal the Bidder represents and certifies to the Owner and the Architect that
   1. It has examined the Contract Documents, the site of the proposed Work, is familiar with the local conditions at the place where the Work is to be performed and fully comprehends the requirements and intent of the plans and specifications for this Project in accordance with the drawings, specifications and other Contract Documents prepared by CPL the Owners Consultant, for this Project.

2. It has examined and reviewed, where applicable, all information and data in the Contract Documents related to existing underground facilities at or contiguous to the site. Bidder shall require of the Owner or Architect no further investigations, explorations, tests or reports with respect to such underground facilities in order for the Bidder to perform the Work of the Proposal within the Contract Time and in accordance with the Contract Documents.
3. It has given notice to the Architect, as required by the Contract Documents of any and all discrepancies it has discovered and accepts the resolution of those discrepancies offered by the Architect.
4. Pursuant to New York State General Municipal Law section 103-d, by submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
   a. The prices in this bid have been arrived at independently without collusion, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
   b. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not be knowingly disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or competitor; and
   c. No attempt has been made or will be made by bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.
   d. The proposal is based upon the materials, equipment and systems required by the Contract Documents, without exception, unless otherwise set forth in this Proposal in detail.

1.12 CHANGE ORDERS

A. We propose and agree that the above lump sum shall be adjusted for changes in the Contract Work not included in unit prices by addition of the following costs:
   1. Profit and overhead as permitted in the General Conditions.

1.13 NON-COLLUSIVE BIDDING CERTIFICATION

A. By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
   1. The prices in this bid have been arrived at independently without collusion, consultation, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
   2. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not knowingly be disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or to any competitor; and
   3. No attempt has been made or will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

1.14 ACCEPTANCE

A. When this Proposal is accepted, the undersigned agrees to enter into a Contract with the Owner as provided in the Form of Agreement.

1.15 AFFIRMS

A. The undersigned affirms and agrees that this Proposal is a firm one which remains in effect and will be irrevocable for a period of forty-five (45) days after opening of Bids.

1.16 TYPE OF BUSINESS

A. The undersigned hereby represents that it is a (select with circle):
   1. Corporation, Partnership, Individual.
   2. If a Corporation, then the undersigned further represents that it is duly qualified as a Corporation under the laws of New York State and it is authorized to do business in this State.

1.17 PLACE OF BUSINESS

A. The following is the name and address of the person to whom all notices required in connection with this Proposal may be telephoned, mailed, or delivered.

Name of Contact Person:	
Name of Business or Firm:	
Address:	
Address:

CERTIFICATION UNDER EXECTUIVE ORDER NO. 16

PROHIBITING STATE AGENCIES AND AUTHORITIES FROM CONTRACTING WITH BUSINESSES CONDUCTING BUSINESS IN RUSSIA

Executive order No. 16 provided that"all Affected State Entities are directed to refrain from entering into any new contract or renewing any existing contract with an entity conducting business operations in Russia." The complete text of the Executive Order No. 16 can be found at the following website; https://ogs.ny.gov/EO-16.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from ward becasue of current businees operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case the sanctions are lifted during a solicitation or even after award in the case of some solicitations.

As defined in Exectuive Order No. 16, an entity conducting business operation in Russia" means an institution or company, wherever located, conducting any cmmerical activity in Russia or transacting business with the Russian Government or with commerical entities headquartered in Russia or with their prinicipal place of business in Russia in the form of contracting, sales, purchasing, investment, or any business partnership.

Is vender an entity conducting business operations in Russia, as defined above? Please answer by circling one of the following numbers:

1.	No, Vender does not conduct business operations in Russia within the meaning of Executive Order No. 16
2.a.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but has taken steps to wind down business operations in Russia or is in the process of winding down business operations in Russia. (Please provide a detailed description of the wind down process and a schedule for completion).
2.b.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but only to the extend necessary to provide vital health and safety services within Russia or to comply with federal law, regulations, executive orders, or directives. (Please provide a detailed description of the services being procided or the revelant laws, regulations, etc.).
3.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16.

The undersigned certifies under penalties of perjury that they are knowledgeable about the Vendor's business and operations and that the answer provided herein is true to the best of their knowledge and behalf.

	DOLLARS
($	)
BASE BID	

1.03 BID GUARANTEE

A. The undersigned Bidder agrees to execute a contract for this Work in the above amount and to furnish surety as specified within 10 days after a written Notice of Award, if offered within 45 days after receipt of bids, and on failure to do so agrees to forfeit to Owner the attached cash, cashier's check, certified check, U.S. money order, or bid bond, as liquidated damages for such failure, in the following amount constituting five percent (5%) of the Base Bid.

1. In the event Owner does not offer Notice of Award within the time limits stated above, Owner will return to the undersigned the cash, cashier's check, certified check, U.S. money order, or bid bond.

1.04 TIME OF COMPLETION

A. It is agreed by the undersigned that after receipt of a Notice of Award and a consummation of a Contract Agreement in accord with the terms of the Contract Documents, he or she will start work within 10 consecutive calendar days of the notice to proceed and fully complete the work by as indicated in the Contract Documents.

1.05 ALLOWANCES (REFERENCE SPECIFICATION SECTION 012100)

A. Specified Allowance as indicated in Specification Section 012100. This amount is to be included in the Base Bid above.
   1. Allowance No. MC-00; (General Allowance)

$	(Insert Amount)

1.06 BID SECURITY

A. Bid Security in the form of a Certified or Cashier's Check or a Bid Bond in the form required by the Contract Documents is attached to and made a part of this Proposal.

1.07 IRAN DIVESTMENT ACT CERTIFICATION

A. Contractor to submit with the bid, Iran Divestment Act Certification which hereto is made a part of this Form of Proposal and is attached at the end of this Form of Proposal.

1.08 CERTIFICATION UNDER EXECUTIVE ORDER NO. 16

A. Contractor to submit with the bid, Certification under Executive Order No. 16 which hereto is made a part of this Form of Proposal and is attachd at the end of this Form of Proposal.

1.09 NEW YORK STATE DEPARTMENT OF LABOR CONTRACTOR REGISTRY

A. Pursuant to New York State Department of Labor requirements, Contractor to submit with the bid, a copy of their Contractor Certificate of Registration along with, Labor Law 220-i Certification Form which hereto is made a part of this Form of Proposal and is attached at the end of this Form of Proposal.

1.10 REPRESENTATIONS

A. By submitting this Proposal the Bidder represents and certifies to the Owner and the Architect that
   1. It has examined the Contract Documents, the site of the proposed Work, is familiar with the local conditions at the place where the Work is to be performed and fully comprehends the requirements and intent of the plans and specifications for this Project in accordance with the drawings, specifications and other Contract Documents prepared by CPL the Owners Consultant, for this Project.
   2. It has examined and reviewed, where applicable, all information and data in the Contract Documents related to existing underground facilities at or contiguous to the site. Bidder shall require of the Owner or Architect no further investigations, explorations, tests or reports with respect to such underground facilities in order for the Bidder to perform the Work of the Proposal within the Contract Time and in accordance with the Contract Documents.
   3. It has given notice to the Architect, as required by the Contract Documents of any and all discrepancies it has discovered and accepts the resolution of those discrepancies offered by the Architect.
   4. Pursuant to New York State General Municipal Law section 103-d, by submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
      a. The prices in this bid have been arrived at independently without collusion, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
      b. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not be knowingly disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or competitor; and
      c. No attempt has been made or will be made by bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

d. The proposal is based upon the materials, equipment and systems required by the Contract Documents, without exception, unless otherwise set forth in this Proposal in detail.

1.11 CHANGE ORDERS

A. We propose and agree that the above lump sum shall be adjusted for changes in the Contract Work not included in unit prices by addition of the following costs:
   1. Profit and overhead as permitted in the General Conditions.

1.12 NON-COLLUSIVE BIDDING CERTIFICATION

A. By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
   1. The prices in this bid have been arrived at independently without collusion, consultation, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
   2. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not knowingly be disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or to any competitor; and
   3. No attempt has been made or will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

1.13 ACCEPTANCE

A. When this Proposal is accepted, the undersigned agrees to enter into a Contract with the Owner as provided in the Form of Agreement.

1.14 AFFIRMS

A. The undersigned affirms and agrees that this Proposal is a firm one which remains in effect and will be irrevocable for a period of forty-five (45) days after opening of Bids.

CERTIFICATION UNDER EXECTUIVE ORDER NO. 16

PROHIBITING STATE AGENCIES AND AUTHORITIES FROM CONTRACTING WITH BUSINESSES CONDUCTING BUSINESS IN RUSSIA

Executive order No. 16 provided that"all Affected State Entities are directed to refrain from entering into any new contract or renewing any existing contract with an entity conducting business operations in Russia." The complete text of the Executive Order No. 16 can be found at the following website; https://ogs.ny.gov/EO-16.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from ward becasue of current businees operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case the sanctions are lifted during a solicitation or even after award in the case of some solicitations.

As defined in Exectuive Order No. 16, an entity conducting business operation in Russia" means an institution or company, wherever located, conducting any cmmerical activity in Russia or transacting business with the Russian Government or with commerical entities headquartered in Russia or with their prinicipal place of business in Russia in the form of contracting, sales, purchasing, investment, or any business partnership.

Is vender an entity conducting business operations in Russia, as defined above? Please answer by circling one of the following numbers:

1.	No, Vender does not conduct business operations in Russia within the meaning of Executive Order No. 16
2.a.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but has taken steps to wind down business operations in Russia or is in the process of winding down business operations in Russia. (Please provide a detailed description of the wind down process and a schedule for completion).
2.b.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but only to the extend necessary to provide vital health and safety services within Russia or to comply with federal law, regulations, executive orders, or directives. (Please provide a detailed description of the services being procided or the revelant laws, regulations, etc.).
3.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16.

The undersigned certifies under penalties of perjury that they are knowledgeable about the Vendor's business and operations and that the answer provided herein is true to the best of their knowledge and behalf.

1.09 NEW YORK STATE DEPARTMENT OF LABOR CONTRACTOR REGISTRY

A. Pursuant to New York State Department of Labor requirements, Contractor to submit with the bid, a copy of their Contractor Certificate of Registration along with, Labor Law 220-i Certification Form which hereto is made a part of this Form of Proposal and is attached at the end of this Form of Proposal.

1.10 REPRESENTATIONS

A. By submitting this Proposal the Bidder represents and certifies to the Owner and the Architect that
   1. It has examined the Contract Documents, the site of the proposed Work, is familiar with the local conditions at the place where the Work is to be performed and fully comprehends the requirements and intent of the plans and specifications for this Project in accordance with the drawings, specifications and other Contract Documents prepared by CPL the Owners Consultant, for this Project.
   2. It has examined and reviewed, where applicable, all information and data in the Contract Documents related to existing underground facilities at or contiguous to the site. Bidder shall require of the Owner or Architect no further investigations, explorations, tests or reports with respect to such underground facilities in order for the Bidder to perform the Work of the Proposal within the Contract Time and in accordance with the Contract Documents.
   3. It has given notice to the Architect, as required by the Contract Documents of any and all discrepancies it has discovered and accepts the resolution of those discrepancies offered by the Architect.
   4. Pursuant to New York State General Municipal Law section 103-d, by submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
      a. The prices in this bid have been arrived at independently without collusion, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
      b. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not be knowingly disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or competitor; and
      c. No attempt has been made or will be made by bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

d. The proposal is based upon the materials, equipment and systems required by the Contract Documents, without exception, unless otherwise set forth in this Proposal in detail.

1.11 CHANGE ORDERS

A. We propose and agree that the above lump sum shall be adjusted for changes in the Contract Work not included in unit prices by addition of the following costs:
   1. Profit and overhead as permitted in the General Conditions.

1.12 NON-COLLUSIVE BIDDING CERTIFICATION

A. By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:
   1. The prices in this bid have been arrived at independently without collusion, consultation, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other bidder or with any competitor;
   2. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not knowingly be disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or to any competitor; and
   3. No attempt has been made or will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition.

1.13 ACCEPTANCE

A. When this Proposal is accepted, the undersigned agrees to enter into a Contract with the Owner as provided in the Form of Agreement.

1.14 AFFIRMS

A. The undersigned affirms and agrees that this Proposal is a firm one which remains in effect and will be irrevocable for a period of forty-five (45) days after opening of Bids.

1.15 TYPE OF BUSINESS

A. The undersigned hereby represents that it is a (select with circle):
   1. Corporation, Partnership, Individual.
   2. If a Corporation, then the undersigned further represents that it is duly qualified as a Corporation under the laws of New York State and it is authorized to do business in this State.

CERTIFICATION UNDER EXECTUIVE ORDER NO. 16

PROHIBITING STATE AGENCIES AND AUTHORITIES FROM CONTRACTING WITH BUSINESSES CONDUCTING BUSINESS IN RUSSIA

Executive order No. 16 provided that"all Affected State Entities are directed to refrain from entering into any new contract or renewing any existing contract with an entity conducting business operations in Russia." The complete text of the Executive Order No. 16 can be found at the following website; https://ogs.ny.gov/EO-16.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from ward becasue of current businees operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case the sanctions are lifted during a solicitation or even after award in the case of some solicitations.

As defined in Exectuive Order No. 16, an entity conducting business operation in Russia" means an institution or company, wherever located, conducting any cmmerical activity in Russia or transacting business with the Russian Government or with commerical entities headquartered in Russia or with their prinicipal place of business in Russia in the form of contracting, sales, purchasing, investment, or any business partnership.

Is vender an entity conducting business operations in Russia, as defined above? Please answer by circling one of the following numbers:

1.	No, Vender does not conduct business operations in Russia within the meaning of Executive Order No. 16
2.a.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but has taken steps to wind down business operations in Russia or is in the process of winding down business operations in Russia. (Please provide a detailed description of the wind down process and a schedule for completion).
2.b.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but only to the extend necessary to provide vital health and safety services within Russia or to comply with federal law, regulations, executive orders, or directives. (Please provide a detailed description of the services being procided or the revelant laws, regulations, etc.).
3.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16.

The undersigned certifies under penalties of perjury that they are knowledgeable about the Vendor's business and operations and that the answer provided herein is true to the best of their knowledge and behalf.

CERTIFICATION UNDER EXECTUIVE ORDER NO. 16

PROHIBITING STATE AGENCIES AND AUTHORITIES FROM CONTRACTING WITH BUSINESSES CONDUCTING BUSINESS IN RUSSIA

Executive order No. 16 provided that"all Affected State Entities are directed to refrain from entering into any new contract or renewing any existing contract with an entity conducting business operations in Russia." The complete text of the Executive Order No. 16 can be found at the following website; https://ogs.ny.gov/EO-16.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from ward becasue of current businees operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case the sanctions are lifted during a solicitation or even after award in the case of some solicitations.

As defined in Exectuive Order No. 16, an entity conducting business operation in Russia" means an institution or company, wherever located, conducting any cmmerical activity in Russia or transacting business with the Russian Government or with commerical entities headquartered in Russia or with their prinicipal place of business in Russia in the form of contracting, sales, purchasing, investment, or any business partnership.

Is vender an entity conducting business operations in Russia, as defined above? Please answer by circling one of the following numbers:

1.	No, Vender does not conduct business operations in Russia within the meaning of Executive Order No. 16
2.a.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but has taken steps to wind down business operations in Russia or is in the process of winding down business operations in Russia. (Please provide a detailed description of the wind down process and a schedule for completion).
2.b.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16 but only to the extend necessary to provide vital health and safety services within Russia or to comply with federal law, regulations, executive orders, or directives. (Please provide a detailed description of the services being procided or the revelant laws, regulations, etc.).
3.	Yes, Vendor conducts business operations in Russia within the meaning of Executive Order No. 16.

The undersigned certifies under penalties of perjury that they are knowledgeable about the Vendor's business and operations and that the answer provided herein is true to the best of their knowledge and behalf.

AIA® Document A305® – 2020 Exhibit B

Financial and Performance Information

This Exhibit is part of the Contractor's Qualification Statement, submitted by and dated the day of in the year
(In words, indicate day, month and year.)

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

§ B.1 FINANCIAL

§ B.1.1 Federal tax identification number:

§ B.1.2 Attach financial statements for the last three years prepared in accordance with Generally Accepted Accounting Principles, including your organization's latest balance sheet and income statement. Also, indicate the name and contact information of the firm that prepared each financial statement.

§ B.1.3 Has your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, been the subject of any bankruptcy proceeding within the last ten years?

§ B.1.4 Identify your organization's preferred credit rating agency and identification information.
(Identify rating agency, such as Dun and Bradstreet or Equifax, and insert your organization's identification number or other method of searching your organization's credit rating with such agency.)

§ B.2 DISPUTES AND DISCIPLINARY ACTIONS

§ B.2.1 Are there any pending or outstanding judgments, arbitration proceedings, bond claims, or lawsuits against your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, or any of the individuals listed in Exhibit A, Section 1.2, in which the amount in dispute is more than $75,000?
(If the answer is yes, provide an explanation.)

§ B.2.2 In the last five years has your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management:
(If the answer to any of the questions below is yes, provide an explanation.)

.1 failed to complete work awarded to it?

.2 been terminated for any reason?

AIA® Document A305® – 2020 Exhibit C

Project Specific Information

This Exhibit is part of the Contractor's Qualification Statement, submitted by and dated the day of in the year
(In words, indicate day, month and year.)

PROJECT:
(Name and location or address.)

CONTRACTOR'S PROJECT OFFICE:
(Identify the office out of which the contractor proposes to perform the work for the Project.)

TYPE OF WORK SOUGHT
(Indicate the type of work you are seeking for this Project, such as general contracting, construction manager as constructor, design-build, HVAC subcontracting, electrical subcontracting, plumbing subcontracting, etc.)

CONFLICT OF INTEREST
Describe any conflict of interest your organization, its parent, or a subsidiary, affiliate, or other entity having common ownership or management, or any of the individuals listed in Exhibit A Section 1.2, may have regarding this Project.

§ C.1 PERFORMANCE OF THE WORK

§ C.1.1 When was the Contractor's Project Office established?

§ C.1.2 How many full-time field and office staff are respectively employed at the Contractor's Project Office?

§ C.1.3 List the business license and contractor license or registration numbers for the Contractor's Project Office that pertain to the Project.

§ C.1.4 Identify key personnel from your organization who will be meaningfully involved with work on this Project and indicate (1) their position on the Project team, (2) their office location, (3) their expertise and experience, and (4) projects similar to the Project on which they have worked.

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

User Notes: (1802467143)

§ C.1.5 Identify portions of work that you intend to self-perform on this Project.

§ C.1.6 To the extent known, list the subcontractors you intend to use for major portions of work on the Project.

§ C.2 EXPERIENCE RELATED TO THE PROJECT

§ C.2.1 Complete Exhibit D to describe up to four projects performed by the Contractor's Project Office, either completed or in progress, that are relevant to this Project, such as projects in a similar geographic area or of similar project type. If you have already completed Exhibit D, but want to provide further examples of projects that are relevant to this Project, you may complete Exhibit E.

§ C.2.2 State the total dollar value of work currently under contract at the Contractor's Project Office:

§ C.2.3 Of the amount stated in Section C.2.2, state the dollar value of work that remains to be completed:

§ C.2.4 State the average annual dollar value of construction work performed by the Contractor's Project Office during the last five years.

§ C.2.5 List the total number of projects the Contractor's Project Office has completed in the last five years and state the dollar value of the largest contract the Contractor's Project Office has completed during that time.

§ C.3 SAFETY PROGRAM AND RECORD

§ C.3.1 Does the Contractor's Project Office have a written safety program?

§ C.3.2 List all safety-related citations and penalties the Contractor's Project Office has received in the last three years.

§ C.3.3 Attach the Contractor's Project Office's OSHA 300a Summary of Work-Related Injuries and Illnesses form for the last three years.

§ C.3.4 Attach a copy of your insurance agent's verification letter for your organization's current workers' compensation experience modification rate and rates for the last three years.

§ C.4 INSURANCE

§ C.4.1 Attach current certificates of insurance for your commercial general liability policy, umbrella insurance policy, and professional liability insurance policy, if any. Identify deductibles or self-insured retentions for your commercial general liability policy.

§ C.4.2 If requested, will your organization be able to provide property insurance for the Project written on a builder's risk "all-risks" completed value or equivalent policy form and sufficient to cover the total value of the entire Project on a replacement cost basis?

SECTION 005200
A132 AGREEMENT COVER(CMA)

PART 1 GENERAL

1.01 SUMMARY

A. The following is a “Standard Form of Agreement Between Owner and Contractor – Stipulated Sum, Construction Manager-Adviser Edition,” AIA Document A132 - 2019, is bound with this Section. AIA Document A232 – 2019 is a standard form of agreement between Owner and Contractor for use on projects where the basis of payment is a stipulated sum (fixed price), and where, in addition to the Contractor and the Architect, a Construction Manager assists the Owner in an advisory capacity during design and construction. The document has been prepared for use with A232 – 2019 , General Conditions of the Contract for Construction, Construction Manager-Adviser Edition. This integrated set of documents is for use on projects where the Construction Manager only serves in the capacity of an adviser to the Owner, rather than as constructor.

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION (NOT APPLICABLE)

END OF SECTION 005200

This page intentionally left blank

AIA® Document A132® – 2019

Standard Form of Agreement Between Owner and Contractor, Construction Manager as Adviser Edition

AGREEMENT made as of the day of in the year
(In words, indicate day, month, and year.)

BETWEEN the Owner:
(Name, legal status, address, and other information)

Ossining Union Free School District
400 Executive Boulevard
Ossining, NY 10562

and the Contractor:
(Name, legal status, address, and other information)

for the following Project:
(Name, location, and detailed description)

OUFSD 2024 Bond – New 7-8 Building
300 Van Cortlandt Ave
Ossining, NY 10562

SED No.: 66-14-01-03-0-028-001

CPL Project No.: R24.16941.00

The Construction Manager:
(Name, legal status, address, and other information)

Arris Contracting Company, Inc.
189 Smith Street
Poughkeepsie, NY 12601

The Architect:
(Name, legal status, address, and other information)

CPL Architects, Engineers and Landscape Architect, D.P.C.
d/b/a CPL
26 IBM Road
Poughkeepsie, NY 12601

The Owner and Contractor agree as follows.

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

This document is intended to be used in conjunction with AIA Documents A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition; B132™–2019, Standard Form of Agreement Between Owner and Architect, Construction Manager as Adviser Edition; and C132™–2019, Standard Form of Agreement Between Owner and Construction Manager as Adviser. AIA Document A232™–2019 is adopted in this document by reference. Do not use with other general conditions unless this document is modified.

EXHIBIT A INSURANCE AND BONDS

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), Drawings, Specifications, Addenda issued prior to execution of this Agreement, other documents listed in this Agreement, and Modifications issued after execution of this Agreement, all of which form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. An enumeration of the Contract Documents, other than Modifications, appears in Article 9.

ARTICLE 2 THE WORK OF THIS CONTRACT

The Contractor shall fully execute the Work described in the Contract Documents, except as specifically indicated in the Contract Documents to be the responsibility of others.

ARTICLE 3 DATE OF COMMENCEMENT AND DATES OF SUBSTANTIAL COMPLETION

§ 3.1 The date of commencement of the Work shall be:
(Check one of the following boxes.)

[X] The date of this Agreement.

[ ] A date set forth in a notice to proceed issued by the Owner.

[ ] Established as follows:
(Insert a date or a means to determine the date of commencement of the Work.)

If a date of commencement of the Work is not selected, then the date of commencement shall be the date of this Agreement.

§ 3.2 The Contract Time shall be measured from the date of commencement of the Work.

§ 3.3 Intentionally Omitted.

(Paragraphs deleted)

§ 3.4 When the Work of this Contract, or any Portion Thereof, is Substantially Complete

§ 3.4.1 Subject to adjustments of the Contract Time as provided in the Contract Documents, the Contractor shall substantially complete the entire Work of this Contract:
(Check one of the following boxes and complete the necessary information.)

[ ] Not later than ( ) calendar days from the date of commencement of the Work.

[X] By the following date: See Section 01 11 00

§ 3.4.2 Subject to adjustments of the Contract Time as provided in the Contract Documents, if portions of the Work of this Contract are to be substantially complete prior to when the entire Work of this Contract shall be substantially complete, the Contractor shall substantially complete such portions by the following dates:

Portion of Work	Date to be substantially complete
Not Applicable	

§ 3.4.3 If the Contractor fails to substantially complete the Work of this Contract, or portions thereof, as provided in this Section 3.4, liquidated damages, if any, shall be assessed as set forth in Section 4.5.

ARTICLE 4 CONTRACT SUM

§ 4.1 The Owner shall pay the Contractor the Contract Sum in current funds for the Contractor's performance of the Contract. The Contract Sum shall be one of the following:
(Check the appropriate box.)

[X] Stipulated Sum, in accordance with Section 4.2 below

[ ] Cost of the Work plus the Contractor's Fee, in accordance with Section 4.3 below

[ ] Cost of the Work plus the Contractor's Fee with a Guaranteed Maximum Price, in accordance with Section 4.4 below

(Based on the selection above, complete Section 4.2, 4.3 or 4.4 below.)

§ 4.2 Stipulated Sum

§ 4.2.1 The Contract Sum shall be ($), subject to additions and deductions as provided in the Contract Documents.

§ 4.2.2 Alternates

§ 4.2.2.1 Alternates, if any, included in the Contract Sum:

Item	Price

§ 4.2.2.2 Subject to the conditions noted below, the following alternates may be accepted by the Owner following execution of this Agreement. Upon acceptance, the Owner shall issue a Modification to this Agreement.
(Insert below each alternate and the conditions that must be met for the Owner to accept the alternate.)

Item	Price	Conditions for Acceptance

§ 4.2.3 Allowances, if any, included in the Contract Sum:
(Identify each allowance.)

Item	Price

See section 8.4 of the AIA Document A232-2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, as revised for this Project.

§ 4.6 Other: Not Applicable
(Insert provisions for bonus, cost savings or other incentives, if any, that might result in a change to the Contract Sum.)

ARTICLE 5 PAYMENTS

§ 5.1 Progress Payments

§ 5.1.1 Based upon Applications for Payment submitted to the Construction Manager by the Contractor, and Certificates for Payment issued by the Construction Manager and Architect, the Owner shall make progress payments on account of the Contract Sum, to the Contractor, as provided below and elsewhere in the Contract Documents.

§ 5.1.2 The period covered by each Application for Payment shall be one calendar month ending on the last day of the month.

§ 5.1.3 Provided that an Application for Payment is received by the Construction Manager not later than the 5th day of a month with all required supporting information and documentation required by the Contract Documents, the Owner shall make payment of the amount certified to the Contractor not later than the 7th day of the subsequent month. If an Application for Payment is received by the Construction Manager after the application date fixed above, the Application for Payment will be deemed late. A late Application for Payment will be considered complete on the 5th day of the subsequent month and the Owner shall make payment of the amount certified to the Contractor not later than the 7th day of the following month.
(Federal, state or local laws may require payment within a certain period of time.)

§ 5.1.4 Progress Payments Where the Contract Sum is Based on a Stipulated Sum

§ 5.1.4.1 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work. The schedule of values shall be prepared in such form, and supported by such data to substantiate its accuracy, as the Construction Manager and Architect may require. This schedule of values shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 5.1.4.2 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.4.3 In accordance with AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition, as revised for this Project, and subject to other provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

§ 5.1.4.3.1 The amount of each progress payment shall first include:

.1 That portion of the Contract Sum properly allocable to completed Work;

.2 That portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction, or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing; and

.3 That portion of Construction Change Directives that the Architect determines, in the Architect's professional judgment, to be reasonably justified.

§ 5.1.4.3.2 The amount of each progress payment shall then be reduced by:

.1 The aggregate of any amounts previously paid by the Owner;

.2 The amount, if any, for Work that remains uncorrected and for which the Architect has previously withheld a Certificate for Payment as provided in Article 9 of AIA Document A232–2019;

.3 Any amount for which the Contractor does not intend to pay a Subcontractor or material supplier, unless the Work has been performed by others the Contractor intends to pay;

.4 For Work performed or defects discovered since the last payment application, any amount for which the Architect may withhold payment, or nullify a Certificate of Payment in whole or in part, as provided in Article 9 of AIA Document A232–2019;

.5 Retainage withheld pursuant to Section 5.1.7;

.6 The sum required by law to be held by the Owner for any lien(s) on public improvement filed against the Contract Sum that has not been released or discharged; and

.7 The sum required to be withheld by order of the NYSDOL or its commissioner or designated hearing officers.

(Paragraphs deleted)

§ 5.1.7 Retainage

§ 5.1.7.1 For each progress payment made prior to when the Work of this Contract is substantially complete, the Owner may withhold the following amount, as retainage, from the payment otherwise due:
(Insert a percentage or amount to be withheld as retainage from each Application for Payment. The amount of retainage may be limited by governing law.)

five percent (5%)

§ 5.1.7.1.1 The following items are not subject to retainage:
(Insert any items not subject to the withholding of retainage, such as general conditions, insurance, etc.)

Not Applicable

§ 5.1.7.2 Reduction or limitation of retainage, if any, shall be as follows:
(If the retainage established in Section 5.1.7.1 is to be modified prior to when the entire Work of this Contract is substantially complete, including modifications for completion of portions of the Work as provided in Section 3.4.2, insert provisions for such modifications.)

Not Applicable

§ 5.1.7.3 Except as set forth in this Section 5.1.7.3, when the Work of this Contract is substantially complete, the Contractor may submit an Application for Payment that includes the retainage withheld from prior Applications for Payment pursuant to this Section 5.1.7. The amount of this Application for Payment certified for payment shall not exceed the unpaid contract balance less (a) two times the value of any remaining items to be completed or corrected as determined by the Architect in consultation with the Construction Manager; (b) the sum required by law to be held for any lien(s) on

public improvement filed against the Contract Sum of this Contractor that has not been released or discharged; (c) any sum required to be withheld by order or direction of the NYSDOL or its Commissioner or designated Hearing officer(s); and (d) an amount necessary to satisfy any other claims, liens or judgments against the Contractor or the Contract Sum that have not been suitably released or discharged.
(Insert any other conditions for release of retainage when the Work of this Contract is substantially complete, or upon Substantial Completion of the Work of all Contractors on the Project or portions thereof.)

§ 5.2 Final Payment
§ 5.2.1 Final Payment Where the Contract Sum is Based on a Stipulated Sum
§ 5.2.1.1 Final payment, constituting the entire unpaid balance of the Contract Sum less any sum required by law to be withheld due to a lien(s) on public improvement filed with Owner against the Contractor that has not been released or discharged and less any sum required to be withheld by order or direction of the NYSDOL or its Commissioner or designated Hearing officer(s), shall be made by the Owner to the Contractor when

.1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Article 12 of AIA Document A232–2019, and to satisfy other requirements, if any, which extend beyond final payment;

.2 the Contractor has submitted all close-out documents and materials and complied with all close-out requirements; and

.3 a final Certificate for Payment or Project Certificate for Payment has been issued by the Architect.

§ 5.2.1.2 The Owner's final payment to the Contractor less any sum required by law to be withheld due to a lien(s) on public improvement filed with Owner against the Contractor that has not been released or discharged and less any sum required to be withheld by order or direction of the NYSDOL or its Commissioner or designated Hearing officer(s) shall be made no later than 30 days after the issuance of the final Certificate for Payment or Project Certificate for Payment. After final payment, payment of any sums withheld due to a lien against a public improvement filed with the Owner against the Contractor will be made to the Contractor when the lien is discharged or released and payment of any sum withheld by order or direction of NYSDOL shall be paid as ordered or directed by the NYSDOL or its Commissioner or designated Hearing officer(s) or by court order.

(Paragraphs deleted)
§ 5.3 Payments due and unpaid under the Contract shall bear interest from the date payment is due at the rate stated below, or in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.
(Insert rate of interest agreed upon, if any.)

two percent (2%) per annum

ARTICLE 6 DISPUTE RESOLUTION
§ 6.1 Initial Decision Maker
The Architect will serve as Initial Decision Maker pursuant to Article 15 of AIA Document A232–2019, as revised for this Project, unless the parties appoint by mutual agreement another individual, not a party to this Agreement, to serve as Initial Decision Maker.
(If the parties mutually agree, insert the name, address and other contact information of the Initial Decision Maker, if other than the Architect.)

§ 6.2 Binding Dispute Resolution
For any Claim subject to, but not resolved by, mediation pursuant to Article 15 of AIA Document A232–2019, the method of binding dispute resolution shall be as follows:

AIA Document A132 – 2019. Copyright © 1975, 1980, 1992, 2009, and 2019. All rights reserved. (Check the appropriate box.)

[ ] Arbitration pursuant to Article 15 of AIA Document A232–2019.

[X] Litigation in a court of competent jurisdiction in Westchester County, New York.

[ ] Other: *(Specify)*

If the Owner and Contractor do not select a method of binding dispute resolution, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, Claims will be resolved by litigation in a court of competent jurisdiction.

ARTICLE 7 TERMINATION OR SUSPENSION

§ 7.1 Where the Contract Sum is a Stipulated Sum

§ 7.1.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A232–2019, as revised for this Project.

§ 7.1.1.1 If the Contract is terminated in whole or in part for the Owner's convenience in accordance with Article 14 of AIA Document A232–2019, as revised for this Project, then the Owner shall pay the Contractor for work executed in compliance with the Contract Documents prior to the date of termination as well as any costs incurred by the Contractor to implement Owner directed work to protect and preserve the Work completed by the Contractor prior to the notice of termination. The Contractor will not be entitled to payment of any other sums. The Contractor will not be entitled to any payment for the terminated portion of the Work and waives and forfeits any claim of damages, overhead and/or loss profits for the terminated portion of the Work.

§ 7.1.2 The Work may be suspended, in whole or in part, by the Owner as provided in Article 14 of AIA Document A232–2019, as revised for this Project.
(Paragraphs deleted)
§ 7.1.3 The Contract may be terminated, in whole or in part, by the Owner for cause in accordance with Article 14 of AIA Document A232-2019, as revised for this Project.

ARTICLE 8 MISCELLANEOUS PROVISIONS

§ 8.1 Where reference is made in this Agreement to AIA Document A232-2019, it refers to it, as revised for this Project. Where reference is made in this Agreement to a provision of AIA Document A232–2019 or another Contract Document, the reference refers to that provision as amended or supplemented by other provisions of the Contract Documents.

§ 8.2 The Owner's representative:
(Name, address, email address, and other information)

Jared Mance
Director of School Facilities, Operations & Maintenance
Ossining Union Free School District
400 Executive Boulevard
Ossining, NY 10562

§ 8.3 The Contractor's representative:
(Name, address, email address, and other information)

(Name, legal status, and address)

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

This document is intended to be used in conjunction with AIA Document A232™–2019, General Conditions of the Contract for Construction. Article 11 of A232™–2019 contains additional insurance provisions

TABLE OF ARTICLES

A.1 GENERAL

A.2 OWNER'S INSURANCE

A.3 CONTRACTOR'S INSURANCE AND BONDS

A.4 SPECIAL TERMS AND CONDITIONS

ARTICLE A.1 GENERAL

The Owner and Contractor shall purchase and maintain insurance, and provide bonds, as set forth in this Exhibit. As used in this Exhibit, the term General Conditions refers to AIA Document A232™–2019, General Conditions of the Contract for Construction as revised for this Project.

ARTICLE A.2 OWNER'S INSURANCE

§ A.2.1 General

Prior to commencement of the Work, the Owner shall secure the insurance, and provide evidence of the coverage, required under this Article A.2 and, upon the Contractor's request, provide a copy of the property insurance policy or policies required by Section A.2.3. The copy of the policy or policies provided shall contain all applicable conditions, definitions, exclusions, and endorsements.

§ A.2.2 Liability Insurance
The Owner shall be responsible for purchasing and maintaining the Owner's usual general liability insurance.

§ A.2.3 Required Property Insurance
§ A.2.3.1 Unless this obligation is placed on the Contractor pursuant to Section A.3.3.2.1, the Owner shall purchase and maintain, from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located, property insurance written on a builder's risk "all-risks" completed value or equivalent policy form and sufficient to cover the total value of the entire Project on a replacement cost basis. The Owner's property insurance coverage shall be no less than the amount of the initial Contract Sum, plus the value of subsequent Modifications and labor performed and materials or equipment supplied by others. The property insurance shall be maintained until Substantial Completion and thereafter as provided in Section A.2.3.1.3, unless otherwise provided in the Contract Documents or otherwise agreed in writing by the parties to this Agreement. This insurance shall include the interests of the Owner, Contractor, Subcontractors, and Sub-subcontractors in the Project as insureds. This insurance shall include the interests of mortgagees as loss payees.

§ A.2.3.1.1 Causes of Loss. The insurance required by this Section A.2.3.1 shall provide coverage for direct physical loss or damage, and shall not exclude the risks of fire, explosion, theft, vandalism, malicious mischief, collapse, earthquake, flood, or windstorm. The insurance shall also provide coverage for ensuing loss or resulting damage from error, omission, or deficiency in construction methods, design, specifications, workmanship, or materials. Sub-limits, if any, are as follows:
(Indicate below the cause of loss and any applicable sub-limit.)

Causes of Loss	Sub-Limit

§ A.2.3.1.2 Specific Required Coverages. The insurance required by this Section A.2.3.1 shall provide coverage for loss or damage to false work and other temporary structures, and to building systems from testing and startup. The insurance shall also cover debris removal, including demolition occasioned by enforcement of any applicable legal requirements, and reasonable compensation for the Architect's, Construction Manager's, and Contractor's services and expenses required as a result of such insured loss, including claim preparation expenses. Sub-limits, if any, are as follows:
(Indicate below type of coverage and any applicable sub-limit for specific required coverages.)

Coverage	Sub-Limit

§ A.2.3.1.3 Unless the parties agree otherwise, upon Substantial Completion, the Owner shall continue the insurance required by Section A.2.3.1 or, if necessary, replace the insurance policy required under Section A.2.3.1 with property insurance written for the total value of the Project that shall remain in effect until expiration of the period for correction of the Work set forth in Section 12.2.2 of the General Conditions.

§ A.2.3.1.4 Deductibles and Self-Insured Retentions. If the insurance required by this Section A.2.3 is subject to deductibles or self-insured retentions, the Owner shall be responsible for all loss not covered because of such deductibles or retentions.

§ A.2.3.2 Occupancy or Use Prior to Substantial Completion. The Owner's occupancy or use of any completed or partially completed portion of the Work prior to Substantial Completion shall not commence until the insurance company or companies providing the insurance under Section A.2.3.1 have consented in writing to the continuance of coverage. The Owner and the Contractor shall take no action with respect to partial occupancy or use that would cause cancellation, lapse, or reduction of insurance, unless they agree otherwise in writing.

§ A.2.3.3 Insurance for Existing Structures
If the Work involves remodeling an existing structure or constructing an addition to an existing structure, the Owner shall purchase and maintain, until the expiration of the period for correction of Work as set forth in Section 12.2.2 of the General Conditions, "all-risks" property insurance, on a replacement cost basis, protecting the existing structure

(Paragraphs deleted)
§ A.2.5
(Paragraphs deleted)
Intentionally Omitted.

(Paragraphs deleted)
ARTICLE A.3 CONTRACTOR'S INSURANCE AND BONDS
§ A.3.1 General
§ A.3.1.1 Certificates of Insurance. The Contractor shall provide certificates of insurance acceptable to the Owner evidencing compliance with the requirements in this Article A.3 at the following times: (1) prior to commencement of the Work; (2) upon renewal or replacement of each required policy of insurance; and (3) upon the Owner's written request. These certificates and the insurance policies required by this Section shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least 30 days prior written notice has been given to the Owner. Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from the date of commencement of the Work until the date of final payment and termination of any coverage required to be maintained after final payment. An additional certificate evidencing continuation of commercial liability coverage, including coverage for completed operations, shall be submitted with the final Application for Payment and thereafter upon renewal or replacement of such coverage until the expiration of the periods required by Section A.3.2.1 and Section A.3.3.1. The certificates will show the Owner, Architect and Construction Manager as an additional insured on the Contractor's Commercial General Liability, Auto Liability and excess or umbrella liability policy or policies. The certificate of insurance must describe all services provided by the contractor (e.g., roofing, carpentry or plumbing) that are covered by the liability policies. A fully completed New York Construction Certificate of Liability Insurance Addendum (ACORD 855 2014/15) must be included with the certificates of insurance. For any "Yes" answers on Items G through L on this Addendum, additional details must be provided in writing. Policy exclusions may not be accepted. At the Owner's request, the Contractor shall provide a copy of the declaration page of the liability and umbrella/excess policies with a list of endorsements and forms. If requested, the Contractor will provide a copy of the policy endorsements and forms. There will be no coverage restrictions and/or exclusions involving New York State Labor Law statutes or gravity related injuries. No policies containing escape clauses or exclusions contrary to the Owner's interests will be accepted.

§ A.3.1.1.1 Notice of Cancellation or Expiration of Contractor's Required Insurance Within not less than twenty (20) business days of the date the Contractor becomes aware of an impending or actual cancellation or expiration of any insurance required by the Contract Documents, the Contractor shall provide notice directly to the Owner, and separately to the Construction Manager, of such impending or actual cancellation or expiration. Upon receipt of notice from the Contractor, the Owner shall, unless the lapse in coverage arises from an act or omission of the Owner, have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by the Contractor. The furnishing of notice by the Contractor shall not relieve the Contractor of any contractual obligation to provide any required coverage.

§ A.3.1.2 Deductibles and Self-Insured Retentions. The Contractor shall disclose to the Owner any deductible or self-insured retentions applicable to any insurance required to be provided by the Contractor and indemnify the Owner, Architect and Construction Manager for applicable deductibles and self-insured retentions.

§ A.3.1.3 Additional Insured Obligations. To the fullest extent permitted by law, the Contractor shall cause the commercial general liability coverage to include (1) the Owner, the Architect and the Architect's consultants, and the Construction Manager and the Construction Manager's consultants, as additional insureds for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's operations; and (2) the Owner and Construction Manager as an additional insured for claims caused in whole or in part by the Contractor's negligent acts or omissions for which loss occurs during completed operations. The additional insured coverage shall be primary and

non-contributory to any of the Owner's, Architect's and Construction Manager's general liability, auto liability and umbrella/excess insurance policies and shall apply to both ongoing and completed operations and provide coverage for the Owner, its Board of Education, employees and volunteers, Architect and Construction Manager, including a waiver of subrogation in favor of the Owner, Architect and Construction Manager for all coverages including Workers Compensation. Additional insured status for General Liability coverage shall be provided by standard or other endorsements that extend coverage to the Owner, Architect and Construction Manager for on-going operations (CG 20 38 or equivalent) and products and completed operations (CG 20 37 or equivalent). The decision to accept an endorsement rests solely with the Owner. A completed copy of the endorsements must be attached to the Certificate(s) of Insurance to include General Liability, Auto Liability and Umbrella/Excess coverages. To the extent commercially available, the additional insured coverage shall be no less than that provided by Insurance Services Office, Inc. (ISO) forms CG 20 38, CG 20 37 07 04, and, with respect to the Architect and the Architect's consultants, and the Construction Manager and the Construction Manager's consultants, CG 20 32 07 04. All insurance policies provided by the Contractor are required to include Primary and Non-contributory Additional Insured coverage to the Owner, Architect & Construction Manager, except for OCP, Workers Compensation and New York State Disability. All insurance policies provided by the Contractor are required to include a Waiver of Subrogation in favor of the Owner, Architect & Construction Manager, including Workers Compensation and excepting OCP..

§ A.3.2 Contractor's Required Insurance Coverage

§ A.3.2.1 The Contractor shall purchase and maintain the following types and limits of insurance from an A.M. Best A- rated or better insurance company or insurance companies licensed and admitted to conduct business in New York State and to issue insurance in New York State. A New York licensed and admitted insurer is required. The specific insurance requirements shall be written for not less than limits of liability specified by the Owner or required by law, whichever coverage is greater. A New York licensed and admitted insurer is required. Contractor acknowledges that failure to obtain the insurance required herein on behalf of the Owner constitutes a material breach of contract and subjects it to liability for damages, indemnification and all other legal remedies available to the Owner. The Contractor is to provide the Owner with a certificate of insurance, evidencing the requirements herein have been met, prior to the commencement of the Contractor's work. The failure of the Owner to object to the contents of the certificate or the absence of same shall not be deemed a waiver of any rights held by the Owner. The Contractor shall maintain the required insurance until the expiration of the period for correction of Work as set forth in Section 12.2.2 of the General Conditions, unless a different duration is stated below:

(If the Contractor is required to maintain insurance for a duration other than the expiration of the period for correction of Work, state the duration.)

§ A.3.2.1.2 Subcontractors are subject to the same terms and conditions of insurance as Contractors as stated in this AIA Document A132-2019 Exhibit A and must submit same to the Owner for approval prior to the start of any work.

.1 In the event a Contractor fails to obtain the required certificates of insurance from their Subcontractors and a claim is made or suffered, the Contractor shall indemnify, defend, and hold harmless the Owner, its Board of Education, employees, volunteers, Architect and Construction Manager from any and all claims for which the insurance required of the Subcontractor(s) would have provided coverage. This indemnity obligation is in addition to any other indemnity obligation provided in the Contract.

§ A.3.2.2 Commercial General Liability

§ A.3.2.2.1 Commercial General Liability insurance for the Project written on an occurrence form with policy limits of not less than one million dollars ($ 1,000,000.) each occurrence, 2,000,000. ($ two million dollars) general aggregate, and 2,000,000. ($ two million dollars) aggregate for products-completed operations hazard, one million dollars ($ 1,000,000.) personal and advertising injury, one hundred thousand dollars ($ 100,000.) fire damage, ten thousand dollars ($ 10,000.) medical expense, providing coverage for claims including

.1 damages because of bodily injury, sickness or disease, including occupational sickness or disease, and death of any person;

.2 personal injury and advertising injury;

.3 damages because of physical damage to or destruction of tangible property, including the loss of use of such property;

.4 bodily injury or property damage arising out of completed operations; and

.5 the Contractor's indemnity obligations under Section 3.18 of the General Conditions.

User Notes: (1097748304)

.6 the general aggregate shall apply on a per-project basis.

Products and completed operations coverage must remain in effect for three years after Project completion and acceptance of the work performed by the Contractor.

§ A.3.2.2.2 The Contractor's Commercial General Liability policy under this Section A.3.2.2 shall not contain an exclusion or restriction of coverage for the following:

.1 Claims by one insured against another insured, if the exclusion or restriction is based solely on the fact that the claimant is an insured, and there would otherwise be coverage for the claim.

.2 Claims for property damage to the Contractor's Work arising out of the products-completed operations hazard where the damaged Work or the Work out of which the damage arises was performed by a Subcontractor.

.3 Claims for bodily injury other than to employees of the insured.

.4 Claims for indemnity under Section 3.18 of the General Conditions arising out of injury to employees of the insured.

.5 Claims or loss excluded under a prior work endorsement or other similar exclusionary language.

.6 Claims or loss due to physical damage under a prior injury endorsement or similar exclusionary language.

.7 Claims related to residential, multi-family, or other habitational projects, if the Work is to be performed on such a project.

.8 Claims related to roofing, if the Work involves roofing.

.9 Claims related to exterior insulation finish systems (EIFS), synthetic stucco or similar exterior coatings or surfaces, if the Work involves such coatings or surfaces.

.10 Claims related to earth subsidence or movement, where the Work involves such hazards.

.11 Claims related to explosion, collapse and underground hazards, where the Work involves such hazards.

§ A.3.2.3 Automobile Liability covering vehicles owned, hired, borrowed and non-owned vehicles used, by the Contractor, with combined single policy limits of not less than one million dollars ($ 1,000,000.) per accident, for bodily injury, death of any person, and property damage arising out of the ownership, maintenance and use of those motor vehicles along with any other statutorily required automobile coverage.

§ A.3.2.4 The Contractor may achieve the required limits and coverage for Commercial General Liability and Automobile Liability through a combination of primary and excess or umbrella liability insurance, provided such primary and excess or umbrella insurance policies result in the same or greater coverage as the coverages required under Section A.3.2.2 and A.3.2.3, and in no event shall any excess or umbrella liability insurance provide narrower coverage than the primary policy. The excess policy shall not require the exhaustion of the underlying limits only through the actual payment by the underlying insurers.

§ A.3.2.4.1 Umbrella Excess Liability:

$5,000,000 each Occurrence and Aggregate for general construction and no work at elevation (1 story or 10 feet) and contract values less than or equal to $1,000,000.

$10,000,000 each Occurrence and Aggregate for construction contract values greater than $1,000,000.

$10,000,000 each Occurrence and Aggregate for high-risk construction, work at elevation (>1 story or 10 feet).

Umbrella/Excess coverage shall be on a follow-form basis or provide broader coverage over the General Liability and Auto Liability coverages.

§ A.3.2.5 Workers' Compensation and NYS Disability Insurance

Statutory Workers' Compensation (C-105.2 or U-26.3); and NYS Disability Insurance (DB-120.1) for all employees. Proof of coverage must be on the approved specific form, as required by the New York State Workers' Compensation Board. ACORD certificates are not acceptable. A person seeking an exemption must file a CE-200 Form with the state. The form can be completed and submitted directly to the WC Board online.

§ A.3.2.6 Employers' Liability with policy limits not less than ($ 1,000,000) per each accident, and ($ 1,000,000) each employee.

§ A.3.2.7 Jones Act, and the Longshore & Harbor Workers' Compensation Act, as required, if the Work involves hazards arising from work on or near navigable waterways, including vessels and docks

§ A.3.2.8 If the Contractor is required to furnish professional services as part of the Work, the Contractor shall procure Professional Liability insurance covering performance of the professional services, see Section A.3.3.2.6.1.

§ A.3.2.9 If the Work involves the transport, dissemination, use, or release of pollutants, the Contractor shall procure Pollution Liability insurance, see Section A.3.3.2.3.

(Paragraphs deleted)

§ A.3.3 Contractor's Other Insurance Coverage

§ A.3.3.1 Insurance selected and described in this Section A.3.3 shall be purchased from an insurance company or insurance companies licensed and admitted to issue insurance in the jurisdiction where the Project is located. The Contractor shall maintain the required insurance until the expiration of the period for correction of Work as set forth in Section 12.2.2 of the General Conditions, unless a different duration is stated below:
(If the Contractor is required to maintain any of the types of insurance selected below for a duration other than the expiration of the period for correction of Work, state the duration.)

§ A.3.3.2 The Contractor shall purchase and maintain the following types and limits of insurance in accordance with Section A.3.3.1.
(Select the types of insurance the Contractor is required to purchase and maintain by placing an X in the box(es) next to the description(s) of selected insurance. Where policy limits are provided, include the policy limit in the appropriate fill point.)

[ ] **§ A.3.3.2.1** If there is only one Contractor performing the Work on the Project, property insurance of the same type and scope satisfying the requirements identified in Section A.2.3, which, if selected in this section A.3.3.2.1, relieves the Owner of the responsibility to purchase and maintain such insurance except insurance required by Section A.2.3.1.3 and Section A.2.3.3. The Contractor shall comply with all obligations of the Owner under Section A.2.3 except to the extent provided below. The Contractor shall disclose to the Owner the amount of any deductible, and the Owner shall be responsible for losses within the deductible. Upon request, the Contractor shall provide the Owner with a copy of the property insurance policy or policies required. The Owner shall adjust and settle the loss with the insurer and be the trustee of the proceeds of the property insurance in accordance with Article 11 of the General Conditions unless otherwise set forth below:
(Where the Contractor's obligation to provide property insurance differs from the Owner's obligations as described under Section A.2.3, indicate such differences in the space below. Additionally, if a party other than the Owner will be responsible for adjusting and settling a loss with the insurer and acting as the trustee of the proceeds of property insurance in accordance with Article 11 of the General Conditions, indicate the responsible party below.)

[ ] **§ A.3.3.2.2 Railroad Protective Liability Insurance**, with policy limits of not less than ($) per claim and ($) in the aggregate, for Work within fifty (50) feet of railroad property.

[X] **§ A.3.3.2.3 Asbestos Abatement/Lead Abatement/Pollution Liability Insurance**, if applicable. Such insurance shall include products and completed operations and coverage for the Contractor's operations including, but not limited to, removal, replacement, enclosure, encapsulation and/or disposal of asbestos, or any other hazardous material, along with any related pollution events, including coverage for third-party liability claims for bodily injury, property damage and clean-up costs. If a retroactive date is used, it shall pre-date the inception of the Contract. The limits applicable shall be the greater of the amounts indicated or the amounts carried by the Contractor:
.1 If covered by the Contractor's umbrella/excess liability policy, two million ($2,000,000) each occurrence and two million ($2,000,000) aggregate
.2 If NOT covered by the Contractor's umbrella/excess liability policy, six million ($6,000,000) each occurrence and six million ($6,000,000) aggregate
.3 If the Contractor is using motor vehicles for transporting hazardous materials, the Contractor shall

maintain pollution liability broadened coverage (ISO Endorsement CA 9948 or CA 01 12), as well as proof of MCS 90. Coverage shall fulfill all requirements of these specifications and shall extend for a period of three (3) years following acceptance by the Owner of the Certificate of Completion.

[ ] **§ A.3.3.2.4** Insurance for physical damage to property while it is in storage and in transit to the construction site on an "all-risks" completed value form.

[ ] **§ A.3.3.2.5** Property insurance on an "all-risks" completed value form, covering property owned by the Contractor and used on the Project, including scaffolding and other equipment.

[X] **§ A.3.3.2.6 Other Insurance**

§ A.3.3.2.6.1 Testing Company Errors and Omission Insurance, if applicable, for the testing and other professional acts of the Contractor performed under the Contract with the Owner.
With policy limits not less than $1,000,000 per occurrence/$2,000,000 aggregate.

[X] § A.3.3.2.6.2 Cyber Insurance The Contractor must carry coverage applicable to first- and third-party claims, arising from a cyber incident that could impact the Owner's data that the Contractor may have in their possession. Limits shall be the greater of those carried by the Contractor or $250,000 per incident and $250,000 in the aggregate. If coverage is on a claims-made basis, coverage must have a retroactive date no later than the date of agreement with the Owner and provide coverage for two years following the date of Final Completion of the Project. The Cyber policy must be with a NYS licensed carrier.

[X] § A.3.3.2.6.3 Owners Contractors Protective (OCP) Insurance

.1 For projects less than or equal to $1,000,000 and work on 1 story (10 feet) only:
$1,000,000 per occurrence, $2,000,000 aggregate with the Owner as the Named Insured, no Additional Insureds on any OCP Policies.

.2 For projects greater than $1,000,000 or work over 1 story (10 feet):
$2,000,000 per occurrence, $4,000,000 aggregate with the Owner as the Named Insured, no Additional Insureds on any OCP Policies.

.3 The OCP Policy must be with a New York State licensed and admitted carrier.

(Table deleted)

§ A.3.4 Performance Bond and Payment Bond

§ A.3.4.1 The Contractor shall provide surety bonds, from a company or companies lawfully authorized to issue surety bonds in the jurisdiction where the Project is located. The Contractor shall furnish a Performance Bond and Labor and Material Payment Bond meeting all statutory requirements of the jurisdiction where the Project is located, in form and substance satisfactory to the Owner and, without limitation, complying with the following specific requirements:

.1 Except as otherwise required by statute, the form and substance of such bonds shall be satisfactory to the Owner in the Owner's sole judgment.

.2 Bonds shall be executed by a responsible surety licensed in the jurisdiction where the Project is located, with a Best's rating of no less than A/XII, and shall remain in effect for a period not less than two (2) years following the date of Substantial Completion or the time required to resolve any items of incomplete Work and the payment of any disputed amounts, whichever time period is longer.

.3 The Performance Bond and the Labor and Material Payment Bond shall each be in an amount equal to the Contract Sum and shall be adjusted during the Project to reflect increases in the Contract Sum.

.4 The Contractor shall require the attorney-in-fact who executes the required bonds on behalf of the surety to affix thereto a certified and current copy of his power-of-attorney indicating the monetary limit of such power.

.5 Every Bond provided pursuant to this Subparagraph A3.4.1 must display the Surety's Bond Number and be modified to include the following text or shall incorporate the following text through a Rider attached to each Bond:

(i) The Surety hereby agrees that it consents to and waives notice of any addition, alteration, omission, change, or other modification of the Contract Documents. Any addition, alteration, change, extension of time, or other modification of the Contract Documents, or a forbearance on the part of either the Owner or the Contractor to the other, shall not release the Surety of its obligations hereunder, and notice to the Surety of such matters is hereby waived.

(Table deleted)

User Notes: (1097748304)

(ii) The Surety agrees that it is obligated under the bonds to any successor, grantee, or assignee of the Owner.

(iii) Surety further agrees that in event of any default by the Owner in the performance of the Owner's obligations to the Contractor under the Contract, the Contractor or Surety shall cause written notice of such default (specifying said default in detail) to be given to the Owner, and the Owner shall have fourteen (14) days from receipt of such notice within which to cure such default, or such additional reasonable period of time as may be required if the nature of such default is such that it cannot be cured within fourteen (14) days. Such Notice of Default shall be sent by certified or registered U.S. mail, return receipt requested, first class postage prepaid, to the Owner.

.6 Bonds shall be written on the most recent edition of the AIA Document 312, Payment Bond and Performance Bond.

.7 If the surety on any Bond furnished by Contractor is declared bankrupt or becomes insolvent or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirements of paragraph 11.4.1 Contractor shall within ten days thereafter substitute another Bond and surety, both of which must be acceptable to Owner.

.8 Contractor shall deliver Bonds to the Construction Manager or Architect together with executed Construction Contract (A132-2019) and the Bonds shall be dated the same date as Contract or a date later than the date of the Contract.

§ A.3.4.2 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

ARTICLE A.4 SPECIAL TERMS AND CONDITIONS

SECTION 006000
PROJECT FORMS AND RELATED DOCUMENTS

PART 1 GENERAL

1.01 SUMMARY

A. This Section lists the project forms used for administration of the project as well as documents used for administration and logistics.

1.02 FORMS

A. The following forms are contained within the conditions of the contract section:
   1. FRONT END SUBMISSION LOG
   2. REQUEST FOR INFORMATION (RFI) FORM
   3. SUBCONTRACTOR LIST
   4. ALLOWANCE DISBURSEMENT AUTHORIZTION FORM
   5. SUBSTITUTION REQUEST FORM
   6. SUBMITTAL COVER
   7. INFORMATION BULLETIN
   8. ELECTRONIC DOCUMENT TRANSFER AGREEMENT
   9. AIA FORMS (Forms provided are samples. Original AIA Documents shall be used):
      a. Performance Bond (AIA Document A312-2010).
      b. Payment Bond (AIA Document A312-2010).
      c. Application and Certificate for Payment, Construction Manager as Adviser Edition (AIA G732).
      d. Continuation Sheet (Document G703-1992)
      e. Contractor's Affidavit of Payment of Debts and Claims (AIA Document G706).
      f. Contractor's Affidavit of Release of Liens (AIA Document G706A).
      g. Consent of Surety to Final Payment (AIA Document G707).
      h. Work Changes Proposal Request (AIA Document G709).
      i. Architect's Supplemental Instructions (AIA Document G710).
      j. Change Order, Construction Manager Edition (AIA Document G731-2019)
      k. Construction Change Directive, Construction Manager as Adviser Edition (AIA Document G733-2019)
      l. Certificate of Substantial Completion, Construction Manager as Adviser Edition (AIA Document G734-2019)

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 PROCEDURES

A. **Front End Submission Log**: This document is a checklist of the required submissions. Refer to Bidding Requirements, Section entitled “Instructions to Bidders” and Division 1, Specification Section entitled “SUBMITTAL PROCEDURES” for submission procedures.

B. **Request For Information (RFI) Form:** This form is to be used for information requests. The forms are filled out by any party to the contract and sent to the Architect/Engineer. The Architect/Engineer shall number RFI before processing.

C. **Subcontractor List:** This document is to be used identify subcontractors. The forms are filled out by each Prime Contractor for all proposed subcontractors and sent to the Architect/Engineer in accordance with. Division 1, section entitled “SUBMITTAL PROCEDURES”

D. **Allowance Disbursement Authorization Form:** the Architect/Engineer shall issue this document after all parties have agreed to the conditions of change to be charged to the Allowance Amount in accordance with Division 1, section entitled “ALLOWANCES”, if required.

E. **Substitution Request Form:** This document is to be used for a Contractor to propose substitutions. The forms are filled out by each Prime Contractor and sent to the Architect/Engineer in accordance with. Division 1, section entitled “SUBMITTAL PROCEDURES” and “PRODUCT REQUIREMENTS”.

F. **Submittal Cover:** This document is to be used for submittal submissions. The forms are filled out by each Prime Contractor and sent to the Architect/Engineer in accordance with. Division 1, section entitled “SUBMITTAL PROCEDURES”

G. **Information Bulletin:** The Architect/Engineer shall issue this document for 3 actions.
   1. PROPOSAL REQUEST: A quotations for changes in the Contract Sum and / or proposed modifications to the Contract Documents
   2. SUPPLEMENTAL INSTRUCTIONS: Instructions for changes to the Contract Documents without additional cost or time
   3. CONSTRUCTION CHANGE AUTHORIZATION: A directive to immediately proceed with changes to the work of the contract and to submit final cost for inclusion into a Change Order

H. **Electronic Document Transfer Agreement:** This document is used by a Contractor to request the transfer of electronic files, other than PDF's, for purposes including, but not limited to, creating coordination drawings.

Corrections or comments made on the shop drawings during this review do not relieve the Contractor from compliance with the requirements of the drawings and specifications. This check is only for review of general conformance with the design concept of the project and general compliance with the information given in the contract documents. The Contractor is responsible for: confirming and correlating all quantities and dimensions; selecting fabrication processes and techniques of construction; coordinating his work with that of all other trades; and performing his work in a safe satisfactory manner.

ELECTRONIC DOCUMENT TRANSFER AGREEMENT

DATE:		**PROJECT #:**	R24.16941.00
PROJECT NAME	Ossining UFSD_24BD_NEW 7-8 BUILDING	**CLIENT / LOCATION**	Ossining Union Free School District
COMPANY REQUESTING AND RECEIVING FILES:		**PERSON REQUESTING:**	
DESCRIPTION OF FILES:		**REASON FOR FILES:**	

1. The requested electronic file(s) (the "Files") remain the property of and are owned by CPL.
2. The Files are not Contract Documents. The use of the Files to alter or revise the scope of work is not permitted.
3. CPL makes no warranties or guarantees that the Files represent or reflect the complete scope of work and/or as-built condition, and CPL assumes no responsibility for data files supplied in electronic format. Such data is provided as a courtesy only.
4. The Company requesting the Files and users of the Files accept full responsibility for verifying the accuracy and completeness of the Files.
5. Files in Revit/Building Information Model format: Unless express written consent of CPL is given through the implementation of a Project Building Information Modeling Protocol Form (AIA® Document G202™ or similar); the information contained within the Files was compiled for the purposes of creating the contract documents and are graphic representations of approximate locations of materials. Therefore, information contained within these files should not be assumed to be accurate and users of the Files accept full responsibility for verifying the accuracy and completeness of the Files with field conditions and the contract documents.
6. Shop drawings shall not be based on reproduction of the contract documents or standard printed data. This includes reproductions of the Files, unless express written consent is given of CPL through the implementation of a Project Building Information Modeling Protocol Form.
7. The Company requesting the Files agrees to defend, indemnify and hold harmless CPL, its officers, employees, consultants, and agents from any claims or damages arising from the use of the Files.
8. In the event that any of the Files contain electronic copies of drawings with permits or professional seals, the Company requesting the Files shall immediately notify CPL and destroy such Files.
9. No use shall be made of the Files for any purpose other than that for which they were originally intended without the express written consent of CPL.
10. No retransmission of the Files in any form to third parties is permitted unless authorized in writing by CPL.
11. The handling fee for the time and effort it will take CPL Lee to deliver the requested Files is $150.00. Under no circumstances shall delivery of the Files be considered a sale by CPL.

Having read and understood the terms set forth in paragraphs 1-11 above, and in consideration of CPL providing electronic files, the undersigned agrees to be bound by these terms.

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner to pay for labor, materials and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference, subject to the following terms.

§ 2 If the Contractor promptly makes payment of all sums due to Claimants, and defends, indemnifies and holds harmless the Owner from claims, demands, liens or suits by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract, then the Surety and the Contractor shall have no obligation under this Bond.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation to the Owner under this Bond shall arise after the Owner has promptly notified the Contractor and the Surety (at the address described in Section 13) of claims, demands, liens or suits against the Owner or the Owner's property by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract and tendered defense of such claims, demands, liens or suits to the Contractor and the Surety.

§ 4 When the Owner has satisfied the conditions in Section 3, the Surety shall promptly and at the Surety's expense defend, indemnify and hold harmless the Owner against a duly tendered claim, demand, lien or suit.

§ 5 The Surety's obligations to a Claimant under this Bond shall arise after the following:

§ 5.1 Claimants, who do not have a direct contract with the Contractor,

- **.1** have furnished a written notice of non-payment to the Contractor, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and
- **.2** have sent a Claim to the Surety (at the address described in Section 13).

§ 5.2 Claimants, who are employed by or have a direct contract with the Contractor, have sent a Claim to the Surety (at the address described in Section 13).

§ 6 If a notice of non-payment required by Section 5.1.1 is given by the Owner to the Contractor, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Section 5.1.1.

§ 7 When a Claimant has satisfied the conditions of Sections 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:

§ 7.1 Send an answer to the Claimant, with a copy to the Owner, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and

§ 7.2 Pay or arrange for payment of any undisputed amounts.

§ 7.3 The Surety's failure to discharge its obligations under Section 7.1 or Section 7.2 shall not be deemed to constitute a waiver of defenses the Surety or Contractor may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Section 7.1 or Section 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

§ 8 The Surety's total obligation shall not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Section 7.3, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

§ 9 Amounts owed by the Owner to the Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, under any construction performance bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfy obligations of the Contractor and Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

Sample

AIA Document A312 – 2010 Payment Bond. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. To report copyright violations, e-mail docinfo@aiacontracts.com.

§ 10 The Surety shall not be liable to the Owner, Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to, or give notice on behalf of, Claimants or otherwise have any obligations to Claimants under this Bond.

§ 11 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 12 No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the project that is the subject of the Construction Contract is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Section 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 13 Notice and Claims to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, shall be sufficient compliance as of the date received.

§ 14 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 15 Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor and Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

§ 16 Definitions

§ 16.1 Claim. A written statement by the Claimant including at a minimum:

- **.1** the name of the Claimant;
- **.2** the name of the person for whom the labor was done, or materials or equipment furnished;
- **.3** a copy of the agreement or purchase order pursuant to which labor, materials or equipment was furnished for use in the performance of the Construction Contract;
- **.4** a brief description of the labor, materials or equipment furnished;
- **.5** the date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Construction Contract;
- **.6** the total amount earned by the Claimant for labor, materials or equipment furnished as of the date of the Claim;
- **.7** the total amount of previous payments received by the Claimant; and
- **.8** the total amount due and unpaid to the Claimant for labor, materials or equipment furnished as of the date of the Claim.

§ 16.2 Claimant. An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials or equipment for use in the performance of the Construction Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Project is located. The intent of this Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials or equipment were furnished.

§ 16.3 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and all changes made to the agreement and the Contract Documents.

§ 16.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 16.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 17 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

§ 18 Modifications to this bond are as follows:

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Section 3.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after

.1 the Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Section 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

.2 the Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

.3 the Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

§ 4 Failure on the part of the Owner to comply with the notice requirement in Section 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

§ 5 When the Owner has satisfied the conditions of Section 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

§ 5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

§ 5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

§ 5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Section 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

§ 5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances:

.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

§ 6 If the Surety does not proceed as provided in Section 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Section 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

Sample

AIA Document A312 – 2010 Performance Bond. All rights reserved. "The American Institute of Architects," "American Institute of Architects," "AIA," the AIA logo, and "AIA Contract Documents" are trademarks of The American Institute of Architects. To report copyright violations, e-mail docinfo@aiacontracts.com.

§ 7 If the Surety elects to act under Section 5.1, 5.2 or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication, for

.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

.2 additional legal, design professional and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Section 5; and

.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

§ 8 If the Surety elects to act under Section 5.1, 5.3 or 5.4, the Surety's liability is limited to the amount of this Bond.

§ 9 The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors and assigns.

§ 10 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 11 Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 12 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

§ 13 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 14 Definitions

§ 14.1 Balance of the Contract Price. The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made, including allowance to the Contractor of any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

§ 14.2 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

§ 14.3 Contractor Default. Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

§ 14.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 14.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 15 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

Certificate of Substantial Completion, Construction Manager as Adviser Edition

PROJECT: *(name and address)*:	**CONTRACT INFORMATION:** Contract For: Date:	**CERTIFICATE INFORMATION**: Certificate Number: Date:
OWNER: *(name and address):*	**ARCHITECT:** *(name and address):*	**CONSTRUCTION MANAGER:** *(name and address):*

CONTRACTOR(S):
(Enter names and addresses for all Contractors)

The Work identified below has been reviewed and found, to the Construction Manager's and Architect's best knowledge, information and belief, to be substantially complete. Substantial Completion is the stage in the progress of the Work when the Work of all of the Contractors, or designated portion thereof, is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. The date of Substantial Completion of the Project, or portion thereof designated below, is the date established by this Certificate
(Identify the Work of all of the Contractors, or portion thereof, that is substantially complete.)

For all Contractors, the date of Substantial Completion of the Project, or portion thereof, is:
(Insert the date of Substantial Completion for all Contractors of the Work described above.)

CONSTRUCTION MANAGER *(Firm Name)*	**SIGNATURE**	**PRINTED NAME AND TITLE**	**DATE**
ARCHITECT *(Firm Name)*	**SIGNATURE**	**PRINTED NAME AND TITLE**	**DATE**

WARRANTIES
The date of Substantial Completion of the Project, or portion designated above, is also the date of commencement of applicable warranties required by the Contract Documents, except as stated below:
(Identify warranties that do not commence on the date of Substantial Completion, if any, and indicate their date of commencement.)

WORK TO BE COMPLETED OR CORRECTED
A list of items to be completed or corrected by each of the Contractors, including a cost estimate, is attached hereto or transmitted as agreed upon by the parties, and identified as follows:
(Attach a list of items to be completed or corrected by each of the Contractors and provide an identification of each list.)

The failure to include any items on such list does not alter the responsibility of a Contractor to complete all Work in accordance with the Contract Documents. Unless otherwise agreed to in writing, the date of commencement of warranties for items on the attached lists will be the date of issuance of the final Certificate of Payment or the date of final payment, whichever occurs first. Each Contractor will complete or correct the Work on the appropriate list of items attached hereto within ( ) days from the above date of Substantial Completion.

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents. The Contract Documents consist of the Agreement between the Owner and Contractor (AIA A132-2019 Standard Form of Agreement as revised for this Project) together with Exhibit A thereto (AIA A132-2019 Exhibit A Insurance and Bonds as revised for this Project) (collectively, hereinafter the Agreement), Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, Instructions to Bidders (AIA A701-2018 as revised for this Project), Supplemental Instructions to Bidders (if any), Addenda issued prior to execution of the Agreement, other documents listed in the Agreement, and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive, or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, or the Contractor's bid or proposal.

§ 1.1.2 The Contract. The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and the Construction Manager or the Construction Manager's consultants, (3) between the Owner and the Architect or the Architect's consultants, (4) between the Contractor and the Construction Manager or the Construction Manager's consultants, (5) between the Owner and a Subcontractor or Sub-subcontractor (6) between the Construction Manager and the Architect, or (7) between any persons or entities other than the Owner and Contractor. The Construction Manager and Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of their duties.

§ 1.1.3 The Work. The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by the Contractor to fulfill the Contractor's obligations. The Work may constitute the whole or a part of the Project.

§ 1.1.4 The Project. The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by other Contractors (including but not limited to other Prime Contractors), and by the Owner's own forces and Separate Contractors.

§ 1.1.5 Contractors. Contractors are persons or entities, other than Separate Contractors, who perform Work under contracts with the Owner that are administered by the Architect and Construction Manager, including but not limited to other Prime Contractors. The term "Contractor" in this Section shall include the Contractor and the Contractor's officers, directors, owners, employees, agents, suppliers, and sub-contractors of any tier.

§ 1.1.6 Separate Contractors. Separate Contractors are persons or entities who perform construction under separate contracts with the Owner not administered by the Architect and Construction Manager.

§ 1.1.7 The Drawings. The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules, and diagrams.

§ 1.1.8 The Specifications. The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

The Specifications may describe (or the Drawings may show) the general placement required of materials or equipment, but the actual required placement may vary depending on the specific material or equipment used by the Contractor or the existing field conditions. The Contractor shall bear all direct and indirect costs associated with such variations.

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (1985375336)

Some Specifications may be written in a condensed outline form and omitted words shall be included by interference. If the Specifications identify a task, it shall mean the "Contractor shall furnish, install and complete" the identified task unless otherwise stated.

Reference to standard specifications, manuals or codes shall mean reference to the latest standard specification, manual or code in effect at the time of the execution of the Agreement, unless otherwise stated. When reference is made to a manufacturer, trade association, reference standard or similar source (such as ASTM, ASA, AISC, ACI, etc.) the standards or requirements of such entity shall be incorporated into the Specifications and have the force and effect as though they were set forth expressly. Upon entering into the Agreement, the Contactor acknowledges its familiarity with those references, codes, etc. The date of the referenced standard shall be the latest edition in effect at the time of the execution of the Agreement unless otherwise stated.

§ 1.1.9 Instruments of Service. Instruments of Service are representations, in any medium of expression now known or later developed, of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include, without limitation, studies, surveys, models, sketches, drawings, specifications, and other similar materials.

§ 1.1.10 Initial Decision Maker. The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2 of these General Conditions. The Initial Decision Maker shall not show partiality to the Owner or Contractor and shall not be liable for the results of interpretations or decisions rendered that are consistent with the Contract Documents.

§ 1.1.11 Provide. When the word "provide" (including derivatives thereof) is used, it shall mean to properly fabricate, complete, transport, deliver, install, erect, construct, test and furnish all labor, materials, equipment, apparatus, appurtenances, and all items and expenses necessary to properly complete in place ready for operation or use under the terms of the Specifications.

§ 1.1.12 Addenda. Addenda are written or graphic instruments issued prior to the execution of the Agreement that modify or interpret the bidding documents, including the Drawings and Specifications, by additions, deletions, clarification, corrections, or supplementary information.

§ 1.1.13 Furnish. "Furnish" shall mean purchasing and/or fabricate and deliver to the job site or other location when so designated.

§ 1.1.14 Install. "Install" shall mean build-in, mount in position, connect or apply the specified object(s) and, where applicable, adjust and start-in operation.

§ 1.1.15 Alternate. "Alternate" shall mean a variation in the requirements of the Contract on which a separate price is to be received by the Owner as part of the bid. If the Alternate is accepted in writing by the Owner, the variation is then a part of the Contract and the amount of money quoted to be added to or deleted from the base bid is taken into account in determining the Contract Sum.

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complimentary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results. In the event of inconsistencies within or between parts of the Contract Documents, the Contractor shall (1) provide a better quality or greater quantity of Work or (2) comply with the more stringent requirements; either or both in accordance with the Architect's interpretation at no additional cost to the Owner. The Contractor shall assume full responsibility and cost for proceeding with such work without obtaining the Architect's interpretations. The terms and conditions of this Subparagraph 1.2.1, however shall not relieve the Contractor of any of the obligations set forth elsewhere in the Contract Documents. All work shall conform to the Contract Documents. No significant change there from shall be made without prior written authorization by the Owner. Where only part of the Work is indicated, similar parts shall be considered repetition. When any detail is shown and the components therefore are fully described, similar details shall be construed and not mentioned in the other shall be of like effect as if shown or mentioned in both. Should the

To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (1985375336)

Specifications and Drawings fail to particularly describe a product or material shown to be used in any place, the Contractor shall furnish the product that would normally be used in that place.

§ 1.2.1.1 The invalidity of any provision of the Contract Documents shall not invalidate the Contract or its remaining provisions. If it is determined that any provision of the Contract Documents violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such case the Contract Documents shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Contract.

§ 1.2.1.2 Before ordering any materials or doing any Work, the Contractor and each Subcontractor shall verify measurements at the Project Site and shall be responsible for the correctness of such measurements. No extra charge or compensation shall be allowed on account of differences between actual dimensions and the dimensions indicated on the Drawings. Any difference which may be found shall be submitted to the Architect through the Construction Manager for resolution before proceeding with the Work.

§ 1.2.1.3 If a minor change in the Work is found necessary due to actual field conditions, the Contractor shall submit through the Construction Manager detailed drawings of such departure for approval by the Architect before making the change.

§ 1.2.1.4 All indications or notations on the Drawings which apply in one of a number of similar situations, materials or processes shall be deemed to apply to all such situations, material or processes wherever they appear in the Work, except where a contrary result is clearly indicated by the Contract Documents.

§ 1.2.1.5 The Contractor shall provide all labor, materials, equipment, appliances and services necessary to execute and complete all work as required by the Contract Documents and the applicable Building Codes. Whenever any additional materials and/or workmanship not shown or specified are required to complete the Work of the Contract Documents in accordance with the obvious intent thereof, the Contractor shall provide such materials and workmanship at no additional cost to the Owner.

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

§ 1.2.2.1 The organization of the Specifications into divisions, sections and articles and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of the Work to be performed by any trade. The organization of the Specifications into divisions, sections and articles and arrangement of Drawings is for the purpose of convenience, and ready reference only. The Contractor will be permitted to allocate the work of Subcontractors at his own discretion regardless of the grouping in the Specifications. It shall be the Contractor's responsibility to settle definitely with each Sub-contractor the portions of the Work, which each will be required to perform. The Contractor represents that the Subcontractors, manufacturers, vendors and suppliers engaged or to be engaged by it are and will be familiar with the requirements for the performance by them of their obligations. The Contractor shall provide each item listed, of quality noted and subject to qualifications noted, and shall perform operations prescribed according to the conditions stated, including specified operations, processes or methods, furnishing therefore all necessary labor, materials, equipment and incidentals required to complete the Work.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.2.4 All work mentioned or indicated in the Contract Documents shall be performed by the Contractor as part of this Contract unless it is specifically indicated in the Contract Documents that such Work is to be done by others.

§ 1.2.4.1 The Contractor and all Subcontractors shall refer to all of the Drawings, including those showing primarily the work of the plumbing, heating, ventilation, air conditioning, electrical, and other specialized trades, and to all of the sections of the Specifications, and shall perform all work reasonably inferable therefrom as being necessary to produce the indicated results.

User Notes: (1985375336)

§ 1.2.4.2 It is intended that all mechanical and electrical systems will be complete and in proper operation and that all construction components will be complete and in compliance with accepted construction practice upon completion of the Work. Even if items are missing from the Drawings and/or Specifications but are normally required for proper operation of mechanical and electrical systems, or to complete otherwise incomplete construction or to meet governing code requirements, they shall be included by the Contractor, unless the Contractor sought and received contradictory interpretation or clarification from the Architect.

§ 1.3 Capitalization

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation

§ 1.4 .1 In the interest of brevity the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.4.2 The terms "knowledge," "recognize" and "discover," their respective derivatives and similar terms in the Contract Documents, as used in reference to the Contractor, shall be interpreted to mean that which the Contractor knows (or should know), recognizes (or should recognize) and discovers (or should discover) in exercising the care, skill, and diligence required by the Contract Documents. The expression "reasonably inferable" and similar terms in the Contract Documents shall be interpreted to mean reasonably inferable by a contractor familiar with the Project and exercising the care, skill, and diligence required of the Contractor by the Contract Documents.

§ 1.4.3 Wherever required by the context, any gender shall include the other gender, the singular shall include the plural, and the plural shall include the singular. Each term defined in the Contract Documents may be used in its singular or plural form whether or not so defined.

§ 1.5 Ownership and Use of Drawings, Specifications, and Other Instruments of Service

§ 1.5.1 The Architect and the Architect's consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and retain all common law, statutory, and other reserved rights in their Instruments of Service, including copyrights. The Contractor, Subcontractors, sub-subcontractors, and suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with the Project is not to be construed as publication in derogation of the Architect's or Architect's consultants' reserved rights.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors, and suppliers are authorized to use and reproduce the Instruments of Service provided to them, subject to any protocols established pursuant to Sections 1.7 and 1.8 of these General Conditions, solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and suppliers may not use the Instruments of Service on other projects or for additions to the Project outside the scope of the Work without the specific written consent of the Owner, Architect, and the Architect's consultants.

§ 1.6 Notice

§ 1.6.1 Except as otherwise provided in Section 1.6.2 of these General Conditions, where the Contract Documents require one party to notify or give notice to the other party, such notice shall be provided in writing by (1) depositing the notice in the United States mail addressed to the authorized representative as specified in the Contract (or if no representative is specified for such party at the address stated in the Contract) of the party to be notified, postpaid and registered or certified with return receipt requested, (2) depositing the notice for overnight delivery (prepaid or billed to the party giving notice) with a nationally recognized overnight delivery service (e.g. Federal Express, USPS, UPS, etc.) addressed to the authorized representative of the party to be notified (or if no representative is specified for such party at the address stated in the Contract) or (3) by delivering the notice in person to the said authorized representative of the party (or if no representative is specified for such party at the address stated in the Contract). Notices may be made by the party giving the notice by the party's counsel, the authorized representative of the party as specified in the Contract, or by an officer of the party that has authority to bind the party. Notices are to be sent to the designated representative stated in this Agreement of the party to whom the notice is addressed at the address stated in the Agreement. Notice deposited in the mail in accordance with this Section 1.6.1 shall be effective unless otherwise stated in the Contract from and after the fourth (4th) day following the date deposited in a U.S. mail receptacle or when

User Notes: (1985375336)

actually received by the party to whom addressed, whichever is earlier. Notices transmitted by overnight delivery shall be effective the first business day (excluding holidays, Saturdays and Sundays) following the day of deposit with the nationally recognized overnight delivery service or when actually received by the party to whom addressed, whichever is earlier. Notice given by delivery in person shall be effective only if and when received by the party to be notified. By giving the other parties at least seven (7) days written notice thereof, the Contractor, Owner, Construction Manager and Architect have the right to change their respective designee and respective address to any address in the United States of America for receipt of notices.

§ 1.6.2 Notice of Claims as provided in Section 15.1.3 of these General Conditions shall be provided in writing and shall be deemed to have been duly served only if delivered to the designated representative of the party to whom the notice is addressed by certified or registered mail, or by courier providing proof of delivery.

§ 1.7 Digital Data Use and Transmission

The parties shall agree upon protocols governing the transmission and use of Instruments of Service or any other information or documentation in digital form.

§ 1.8 Confidentiality

§ 1.8.1 The Contractor warrants and represents that the Contractor shall not knowingly or negligently communicate or disclose at any time to any person or entity any materials or information with respect to the Work or the Project, including without limitation any promotional or marketing media or other material or information related to the Owner, the Work or the Project, except: (1) with prior written consent of the Owner, (2) information that was in the public domain prior to the date of the Agreement, (3) information which becomes part of the public domain by publication or otherwise not due to any unauthorized act or omission of the Contractor, (4) as may be required by the Contract or any applicable law, or (5) for purposes of coordination with other Contractors. The Contractor hereby agrees to indemnify and hold the Owner, the Construction Manager and Architect and their respective employees, consultants, volunteers and agents harmless from and against any cost, damage, liability, loss or claim arising from violation of the foregoing by the Contractor or the Contractor's officers, directors, employees, Subcontractors, Sub-subcontractors and agents.

§ 1.8.2 Upon request of the Owner, the Contractor shall immediately return and surrender to the Owner all copies of any materials, records, notices, memoranda, recordings, drawings, specifications, and mock-ups and any other documents furnished by the Owner, Construction Manager or the Architect to the Contractor.

§ 1.8.3 The Contractor shall specifically cause all Subcontractors or any other person or entity performing any services or furnishing any materials or equipment of the Work to warrant and represent that they will comply with the requirements forth in this Section 1.8.

§ 1.8.4 The indemnities, representations and warranties contained in this Section 1.8 shall be in addition to any other indemnities, representations and warranties provided in the Contract Documents and shall survive the complete performance of the Work or earlier termination of the Contract.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Section 4.2.1 of these General Conditions, the Construction Manager and the Architect do not have such authority. The term "Owner" means the Owner or the Owner's authorized representative.

(Paragraph deleted)

§ 2.2 Intentionally omitted

(Paragraphs deleted)

§ 2.3 Information and Services Required of the Owner

§ 2.3.1 Unless otherwise provided within the Contract Documents, the Owner, assisted by the Construction Manager and the Architect, shall secure and pay for the building permit. Unless otherwise provided within the Contract Documents, the Contractor shall comply with and obtain, at its expense, all other licenses and permits required by Federal, State and local laws, rules, and ordinances necessary for the Work.

§ 2.3.2 The Owner shall retain an architect lawfully licensed to practice architecture, or an entity lawfully practicing architecture, in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.3 The Owner shall retain a construction manager adviser lawfully practicing construction management in the jurisdiction where the Project is located. That person or entity is identified as the Construction Manager in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.4 Intentionally Omitted

§ 2.3.5 The Owner shall furnish surveys upon written request of the Contractor and to the extent same exist, describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site. The Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2.3.6 The Owner, through the Architect or Construction Manager, shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish, through the Architect or Construction Manager, any other information or services under the Owner's control and relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services. "Reasonable promptness" shall be measured from the time of the Owner's receipt of written request for such information or services.

§ 2.3.7 Unless otherwise provided in the Contract Documents, the Owner shall furnish to the Contractor one copy of the Contract Documents for purposes of making reproductions pursuant to Section 1.5.2 of these General Conditions.

§ 2.3.8 The Owner shall forward all communications to the Contractor through the Construction Manager. Other communication shall be made as set forth in Section 4.2.6 of these General Conditions.

§ 2.4 Owner's Right to Stop the Work

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 of these General Conditions or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity.

§ 2.5 Owner's Right to Carry Out the Work

§ 2.5.1 If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a three-day period after receipt of notice from the Owner, Architect or Construction Manager to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, after such three (3) day period and without prejudice to other remedies the Owner may have, correct such default or neglect at Contractor's expense. The Owner's reasonable cost of correcting such default or neglect shall be deducted from payments due the Contractor by Change Order, Construction Change Directive, back charge or other means. The Construction Manager or Architect may, pursuant to Section 9.5.1 of these General Conditions, withhold or nullify a Certificate for Payment in whole or in part, to the extent reasonably necessary to reimburse the Owner for the reasonable cost of correcting such deficiencies or neglect. The Owner's reasonable costs shall include the cost of labor and materials to complete the correction of such deficiencies or neglect, the Owner's expenses and compensation for the Construction Manager's and Architect's and their respective consultants' additional services made necessary by such default, neglect, or failure, and the Owner's reasonable attorney's fees arising from the Contractor's default, neglect or failure. If current and future payments due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner. If the Contractor disagrees with the actions of the Owner, the

Construction Manager or the Architect, or the amounts claimed as costs to the Owner, the Contractor may file a Claim pursuant to Article 15.

§ 2.5.2 The rights stated in this Article 2 and elsewhere in the Contract Documents are cumulative and not in limitation of any legal or equitable rights of the Owner or Contractor or of any rights provided to the Owner and Contractor in the Contract Documents.

§ 2.5.3 In no event shall the Owner have control over, charge of, or any responsibility for construction means, methods, techniques, sequences, or procedures or for safety precautions and programs in connection with the Work. The Owner assumes no responsibility for liability for the safety of the Project site. The Contractor shall be solely responsible for providing a safe place for the performance of the Work; provided that the Owner shall be responsible for, and the Contractor shall upon discovery notify the Owner of, any unsafe condition created by the Owner.

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under the Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall perform the Work in accordance with the Contract Documents. The Contractor shall refer to all of the Drawings and all sections of the Specifications and shall perform all work reasonably inferable therefrom as being necessary to produce the indicated results. See also Sub-Sections of Section 1.2 of these General Conditions.

§ 3.1.3 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Construction Manager or Architect in their administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.1.4 The Contractor shall attend progress meetings with the Construction Manager and such other persons the Owner may wish to have present. The progress meetings shall include Contractor designated representative(s) and representatives of the Contractor's Sub-contractors if requested by the Owner, Construction Manager or Architect.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents.

§ 3.2.1.1 The Contractor shall rely on its own knowledge and its review and interpretation of the Contract Documents and data provided in entering into the Contract and not the representations of the Owner or other persons. The Contractor acknowledges that quantities provided in the Contract Documents are estimates only and Contractor shall not seek additional compensation or adjustment in price based on a variation in actual quantities.

§ 3.2.1.2 Prior to execution of the Contract, the Contractor and each Subcontractor shall evaluate and satisfy themselves as to the conditions and limitations under which the Work is to be performed, including, without limitation, (i) the location, condition, layout, and nature of the Project site and surrounding areas, (ii) generally prevailing climatic conditions, (iii) anticipated labor supply and costs, (iv) availability and cost of materials, tools, and equipment, (v) any time restrictions for accessing or working at the Project site, and (6) the storage, handling and trucking of materials to be used on-site.

§ 3.2.1.3 The accuracy of grades, elevations, dimensions or locations given in the Contract Documents or the work installed by other contractors is not guaranteed by the Architect or the Owner. The Contractor shall satisfy itself as to the accuracy of all grades, elevations, dimensions, utilities and locations. Prior to connecting its Work to existing structures or other contractor's work, the Contractor shall verify all dimensions and the suitability of the existing structures or work to receive the Contractor's Work. Any errors due to the Contractor's failure to verify such grades, elevations, dimensions, or locations shall be rectified promptly by the Contractor without any additional cost to the Owner.

User Notes: (1985375336)

§ 3.2.1.3.1 The locations, depths and data as to underground conditions have been obtained from records, surface indications and data furnished by others. Information furnished is solely for the convenience of the Contractor without any warranty, expressed or implied as to its accuracy or completeness. The Contractor shall verify all existing conditions prior to commencing the Work. The Contractor shall make no claim against the Owner or Architect with respect to the accuracy or completeness of such information if the conditions found after commencement of the Work are different from those as indicated.

§ 3.2.1.4 The Contractor shall be solely responsible for the conditions which develop during construction and in the event any structure is dislocated, or over strained, or damaged so as to affect its usefulness, the Contractor shall correct or repair any dislocations, over strains or damages caused.

§ 3.2.1.5 The Contractor is responsible for restorations and/or repair of utilities, private property, buildings, pavement, walkways, roads, etc. damaged by its activities during the performance of its Work.

§ 3.2.1.6 The Contractor shall be responsible to remove and/or relocate all items that interfere with the new construction at no additional cost to the Owner.

§ 3.2.1.7 The Owner shall not be required to make any adjustment in the Contract Sum or Contract Time in connection with any failure by the Contractor or any Subcontractor to comply with the requirements of this Section 3.2 of these General Conditions and all of its sub-sections.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work and at frequent intervals during the progress of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.3.5 of these General Conditions, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the Contract Documents; however, the Contractor shall promptly report to the Construction Manager and Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information submitted to the Construction Manager in such form as the Construction Manager and Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents.

§ 3.2.2.1 The Contractor shall assume full responsibility for accuracy of measurements obtained at the site. No extra compensation will be allowed because of differences between actual measurements and dimensions indicated on the Drawings, nor for Contractor's failure to coordinate work with actual field measurements.

§ 3.2.2.2 Should the Contractor perform any construction activity knowing it involves an error, inconsistency or omission in the Contract Documents without reporting such error, inconsistency or omission in the Contract Documents to the Construction Manager and Architect, the Contractor shall be solely responsible for such performance and shall bear all costs of correction. No unreported error, inconsistency or omission will provide a basis for additional compensation from the Owner to complete the Contractor's Work or a basis to excuse the Contractor from the completion of its Work.

§ 3.2.3 The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, but the Contractor shall promptly report to the Construction Manager and Architect any nonconformity discovered by or made known to the Contractor as a request for information submitted to Construction Manager in such form as the Construction Manager and Architect may require.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to Sections 3.2.2 or 3.2.3 of these General Conditions, the Contractor shall submit Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those

AIA Document A232 – 2019. Copyright © 1992, 2009, and 2019. All rights reserved. User Notes: (1985375336)

obligations, the Contractor shall not be liable to the Owner, Construction Manager or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and shall be solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely notice to the Owner, the Construction Manager, and the Architect, and the Contractor shall propose alternative means, methods, techniques, sequences, or procedures that will preserve all applicable warranties, including the Contractor's general warranty. The Architect shall evaluate the proposed alternative solely for conformance with the design intent for the completed construction. The Construction Manager shall review the proposed alternative for sequencing, constructability, and coordination impacts on the other Contractors. Unless the Architect or the Construction Manager objects to the Contractor's proposed alternative, the Contractor shall perform the Work using its alternative means, methods, techniques, sequences, or procedures. All loss, damage, liability or cost of correcting defective work arising from the employment of specific (including but not limited to alternative) construction means, methods, techniques, sequences or procedures shall be born solely by the Contractor.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall be responsible for inspection of portions of the Project already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.3.3.1 The Contractor shall be responsible for and coordinate any and all inspections required by any governmental body having jurisdiction over the Project. Failure to obtain any permits, licenses or other approvals because of the failure of the Contractor to conform to this requirement shall not extend the Contract time, and the Contractor shall not be entitled to any increase in the contract sum therefore. In addition, any additional costs and/or expenses of any nature incurred by the Owner as a result of the Contractor's failure to conform to this requirement shall constitute a charge against the Contractor's contract.

§ 3.3.4 It is understood and agreed that the relationship between the Contractor and the Owner shall be that of an independent contractor. Nothing contained in or inferable from the Contract Documents shall be deemed or construed to (1) make the Contractor the agent, servant or employee of the Owner or (2) create any partnership, joint venture or other association between the Owner and Contractor. Any direction or instruction by the Owner regarding the Work shall be given solely to relate the results the Owner desires to obtain from the Work and shall not be construed as affecting the Contractor's independent contractor status.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work approved by the Architect in accordance with Section 3.12.8 of these General Conditions or ordered by the Architect in accordance with Section 7.4 of these General Conditions, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect, in consultation with the Construction Manager, and in accordance with a Change Order or Construction Change Directive.

After the Agreement has been executed, the Owner and Architect will consider requests for the substitution of products in place of those specified only if the Contractor satisfies the procedural requirements set forth in the General Requirements (Division 01) of the Specifications. By making requests for substitutions, the Contractor.

.1 Represents that it has personally investigated the proposed substitute product and determined that it is equal or superior in all respects to that specified.

.2 Represents that it will provide the same warranty for the substitution as it would have provided for the product specified;

.3 Certifies that the cost data presented is complete and includes all related costs for the substituted product ad for Work that must be changed as a result of the substitution, except for the Architect's redesign costs, and waives all claims for additional costs related to the substitution that may subsequently be incurred by the Contractor; and

.4 Shall coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects.

§ 3.4.2.1 The Owner shall be entitled to reimbursement from the Contractor for amounts paid to the Architect for reviewing the Contractor's proposed substitutions and making agreed upon changes in the Drawings and Specifications resulting from such substitutions. The Owner may seek reimbursement pursuant to the procedures set forth in § 9.5.1.

§ 3.4.2.2 The Contractor shall bear all expenses resulting from substitutions including the cost General Conditions as well as any structural, plumbing, mechanical and electrical trade costs made necessary by the substitution.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them. The Owner reserves the right to object to Contractor's use of persons who appear unfit or not skilled in the tasks assigned to them. Should any disorderly, incompetent, unfit or unskilled person be hired or employed by the Contractor, upon or about the premises of the Owner, for any purpose or in any capacity, upon request of the Owner, such person shall be removed from the Project and shall not be reassigned to the Project without the prior written permission of the Owner, through the Construction Manager.

§ 3.4.4 The Contractor shall be responsible for coordinating the work of its own forces and the work of subcontractors engaged by it to perform the Work of the Project on its behalf. The Contractor shall review any specified procedure(s) or installation procedure(s) with its employees and/or subcontractors, including those recommended by any product manufacturer, prior to the commencement of the relevant portion of the Work to be performed.

§ 3.4.5 Each Contractor shall be responsible for complying with applicable union regulations existing under current labor agreements in performing construction work on the Project. The Contractor shall make all necessary arrangements to reconcile, without delay, damage or cost to the Owner and without recourse to the Construction Manager, Architect or the Owner, any conflict between the Contractor's Contract with the Owner and any agreements or regulations of any kind at any time in force among members of a trade union or any councils that regulate the activities of a trade. The existing Construction Manager/Owner Contract is an agency contract and all construction contracts will be made directly with the Owner.

§ 3.4.6 The Contractor is solely responsible for managing labor and labor relations with respect to those engaged by it to perform the Work of the Project, including labor disputes or concerted activity, direct or indirect. No delay in the performance of the Work shall be excused by reason of labor problems affecting the Contractor or any subcontractor. There shall be no strikes, picketing, work stoppages, slowdowns or other disruptive activity at the Project sites for any reason by anyone employed or engaged by the Contractor to perform its portion of the Work.

§ 3.4.6.1 Should it become necessary to create a separate entrance for a Contractor involved in a dispute, all costs associated with creating such entrance shall be borne by the Contractor involved in the dispute. Such costs shall include but not be limited to signage, fencing, temporary roads and security personnel.

§ 3.4.6.2 The Contractor shall be liable to the Owner for all damages and additional costs incurred by the Owner as result of strikes, picketing, work stoppages, slowdowns or other disruptive activity at the Project sites.

§ 3.4.6.3 In the event of strikes or labor disputes by the Contractor's forces or other prime contractors, or separate contractors performing work for the Owner, the Contractor shall continue with its work and provide all necessary manpower as required to maintain the schedule and completion dates of the Project. The Contractor shall ensure that its Work continues uninterrupted during the pendency of a labor dispute.

§ 3.4.7 All products submitted for use and incorporated into this Project shall be asbestos free. The Contractor is obligated, by executing the Contract with the Owner, to ensure that absolutely no asbestos containing material is used in conjunction with the performance of its Work. It is the Contractor's sole responsibility to ensure that no asbestos containing material is built into the construction, or that any equipment or materials used in the construction contain any asbestos containing material. If asbestos containing material is found, at any time during or after the construction is completed, it shall be the responsibility of the Contractor who installed said material to remove it and replace it with new non-asbestos containing material, in accordance with federal, state and local mandates, and to indemnify all their employees, agents, or servants or any third parties including but not limited to the Owner, the Construction Manager and the Architect, and their respective Boards of Education, contractors, consultants, volunteers or employees for any costs or damages incurred on account of the presence, removal and remediation of such asbestos containing material. This provision will be limited only to the extent required by law, is in addition to the indemnities provided in Section 3.18 of these General Conditions and elsewhere in the Contract Documents and shall survive the termination or expiration of the Contract.

§ 3.4.8 Contractor shall furnish the Construction Manager in writing the names, addresses and telephone numbers of the members of Contractor's organization who can be contacted in the event of an off-hours emergency at the Project site.

§ 3.4.9 Unless otherwise specifically agreed in writing by the Owner for a specific purpose, the Owner shall not be responsible for any overtime charges or shift differential charges incurred by the Contractor during the course of this Project. Any and all costs associated with the Work performed at hours requiring the payment of overtime or shift differentials by the Contractor to its workers shall be the Contractor's responsibility. When the Owner specifically agrees in writing to be responsible for overtime costs incurred by the Contract, the Owner shall reimburse the Contractor or its Subcontractor on the basis of premium payment only, plus the cost of insurance and taxes based on the premium payment period.

§ 3.4.10 Applicable codes and standards for material furnished and work installed shall include all state laws, local ordinances, requirements of governmental agencies having jurisdiction, and requirements of state, federal and industry codes and standards that apply to the Project and its components, including but not limited to:

1. New York State Uniform Fire Prevention and Building Code and amendments thereto.
2. New York State Energy Conservation Construction Code.
3. State Education Department Manual of Planning Standards and 8 N.Y.C.R.R. § 155.5.
4. New York State Department of Transportation, Office of Engineering, Standard Specification, Construction and Materials, dated January 2, 1990, and latest addendum thereto.
5. Life Safety Code – NFPA 101-91.
6. National Electric Code
7. National Board of Fire Underwriters
8. Any other codes or standards referenced in the Specifications and Drawings.

§ 3.4.11 Where specific performance requirements are listed in the Specifications, it is the intent of this specification that all manufacturers, fabricators, suppliers, installers, contractors, subcontractors, specialty and sub-subcontractors will provide services satisfying these requirements whether mentioned by trade or manufacturer's name or submitted for approval as a substitute.

§ 3.4.12 Where no explicit quality or standards for materials or workmanship are established for work, such work shall be of quality consistent with industry standards and of the construction quality established for the Project generally.

§ 3.4.13 Welding. The Contractor shall ensure the safe handling and storage of all welding materials, acetylene and oxygen tanks, and other equipment required for welding and cutting work at the job site. All welding materials and equipment shall be removed promptly from the premises upon completion of the welding and cutting work.

§ 3.4.13.1 Appropriate fire extinguishing equipment shall be provided where welding or cutting is to be performed. Sprinklers subject to fusing from heat due to welding or cutting shall be temporarily shielded, with valves to remain open. Contractors will be back charged for all fines imposed for false fire alarms.

§ 3.4.13.2 Welding or cutting shall not be performed in or near rooms or locations where flammable gases, liquids or vapors, lint, dust or loose combustible stocks are present unless suitably protected when sparks or hot metal from welding or cutting operations may cause ignition or explosion of such materials.

§ 3.4.13.3 Combustible construction or material shall be wet down or protected by noncombustible shields or covers from possible sparks, hot metal or oxide.

§ 3.4.14 Ventilation During Construction. The General Contractor shall provide ventilation of enclosed areas during construction as may be required to permit proper curing and drying out and to prevent excessive humidity moisture and condensation. Ventilation shall be by natural or artificial means as required by conditions involved.

§ 3.4.15 Broken Glass. Each Prime Contractor shall be responsible for all broken, scratched, or damaged glass, which shall be replaced upon completion of the Work. Said Prime Contractor shall reimburse the General Contractor for replacement costs of all such damaged glass upon completion of the Work. The responsibility for all broken, scratched, or damaged glass, shall terminate upon acceptance of the Work by the Owner, except as provided in the Conditions of Contract (General, Supplementary and Other) and Specifications with respect to defective materials, workmanship, and guarantee/warranty provisions.

§ 3.5 Warranty

§ 3.5.1 The Contractor warrants to the Owner, Construction Manager, and Architect that materials and equipment furnished under the Contract will be of good quality, new and of recent manufacture unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements, including substitutions not properly approved and authorized, shall be considered defective and shall be removed and replaced at the Contractor's expense unless otherwise agreed to by the Owner. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Construction Manager or Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

§ 3.5.2 All material, equipment, or other special warranties required by the Contract Documents shall be issued in the name of the Owner, or shall be transferable to the Owner, and shall commence in accordance with Section 9.8.4 of these General Conditions. If not already in the name of the Owner, the Contractor shall assign to the Owner at the time of Substantial Completion of the Work, unless otherwise provided in the Certificate of Substantial Completion, any and all manufacturer's warranties relating to materials, equipment, fixtures and/or labor incorporated into the Work.

§ 3.5.3 The warranties in this Section 3.5 shall be in force for a minimum duration of one (1) year after the date of Final Completion of the Work or designated portion thereof, or after the date for commencement of warranties established in the Certificate of Substantial Completion or by terms of any applicable special or extended warranty required by the Contract Documents or as set forth in the Project Manual's technical specifications for warranties of equipment, whichever duration is longer. The warranty provided by the Contractor in this Section 3.5 is in addition to any warranty provided by equipment and material manufacturers. Notwithstanding anything to the contrary contained in the Contract Documents, all warranties shall be construed in the manner and duration most favorable to the Owner. The warranties in this Section 3.5 shall survive expiration and/or termination of the Contract.

§ 3.5.4 The Contractor shall perform its Work in such a manner as to preserve all manufacturer's warranties on materials, equipment, fixtures and/or labor incorporated into the Work. The Contractor will exercise its best efforts to service and to enforce for the benefit of the Owner all manufacturer's warranties on materials, equipment, fixtures and/or labor incorporated into the Work.

§ 3.5.5 The Contractor warrants good and legal title to all materials, equipment and fixtures installed or incorporated into the Work.

§ 3.5.6 All corrections to defective or deficient Work, material or equipment shall be made at the convenience of the Owner.

=

§ 3.6 Taxes

§ 3.6.1 Owner is exempt from payment of New York State, and Local Sales and Compensation Use Taxes on all supplies and materials incorporated into and becoming an integral component part of the structures, buildings, or real property pursuant to this Contract. Such taxes are therefore not to be included in the Contractor's bid or Contract Sum. This exemption does not apply to machinery, equipment, tools and other items purchased, leased, rented or otherwise acquired for the Contractor's use in part or entirely in connection with the Work and the Contractor and subcontractors shall be responsible for any and all applicable taxes, including sales and use taxes, on such items. The exemption only applies to materials, machinery and equipment fully incorporated into the Work of the Contractor as accepted by the Architect and the Owner. Upon request, Owner will furnish proof of its exemptions to the Contractor.

§ 3.7 Permits, Fees, Notices, and Compliance with Laws

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Owner, through and with the assistance of the Construction Manager and Architect, shall secure and pay for the building permit. The Contractor shall secure and pay for other permits, fees, licenses, and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and legally required at the time bids are received or negotiations concluded.

.1 The Contractor shall promptly deliver copies permits, fees, licenses, and inspections it obtains for its Work and/or the Project to the Construction Manager and Owner.

.2 If in connection with the Project, the Owner has obtained certain permits, licenses or agreements for the Project, the Owner will furnish copies of these documents to the Contractor. It is the Contractor's responsibility to comply with any conditions or limitations placed on the Project by these permits. The Contractor shall fully cooperate with the Owner in meeting the permit requirements and accommodations of regulatory inspections / directives.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work. If the Contractor fails to give such notices as applicable to the performance of the Work, the Contractor shall be liable for and shall indemnify and hold harmless the Owner against any and all resulting fines, penalties, judgments or damages, including reasonable attorney fees, imposed on or incurred by the parties indemnified, as a result of such failures by the Contractor.
