SECTION 00 11 16

INVITATION TO BID AND NOTICE TO BIDDERS

DATE: 01-02-2025

NOTICE IS HEREBY GIVEN THAT SEALED BIDS ARE SOUGHT AND REQUESTED FOR THE FOLLOWING:

BID NAME: ULSTER COUNTY GOVERNMENT OPERATIONS CENTER PROJECT

BID NUMBER: **RFB-UC24-148C**

PLACE OF OPENING: **Ulster County Purchasing**
100 Development Court, Suite 400
Kingston, NY 12401

DATE OF OPENING: **February 13, 2025**

TIME OF OPENING: **3:00 PM**

CONTACT PERSON: Peter Esposito; Deputy Director of Purchasing
Phone: 845-334-5575
Email: pesp@co.ulster.ny.us

SUBMISSION: Sealed bids will be received only by the Ulster County Purchasing Dept, Peter Esposito; Deputy Director of Purchasing on or before 3:00 PM EST, February 13, 2025. Bidders are urged to submit their bid early. The bidder assumes the risk of any delay in the mail or the handling of the mail by employees of the County. Late bids will not be accepted and will be returned unopened to the bidder.

Bidders MUST submit bid in a SEALED envelope.

Please print on the face of **OUTSIDE/ MAILING** envelope:

1) NAME & ADDRESS OF BIDDER

2) BID NAME & NUMBER

3) CONTRACT BID PACKAGE (1) Bid per Trade Submitted

DIGITAL DOCUMENTS: Complete digital sets of Bidding Documents, drawings and specifications, may be obtained online as a download at www.revplans.biddyhq.com under 'public projects' for a non-refundable reproduction fee of $49.00.

PRINTED DOCUMENTS:	Complete sets of Bidding Documents, Drawings and Specifications, may be obtained from Revplans / BiddyHQ, 28 Church Street, Suite#7, Warwick, NY 10990 Tel: 1-845-651-3845, upon depositing the sum of One Hundred dollars ($100) for each combined set of documents. Checks or money orders shall be made payable to Ulster County. Any bidder requiring documents to be shipped shall arrange with the printer and pay for all packaging and shipping costs.
IMPORTANT NOTICE:	Bid distribution - Copies of Bid Documents obtained from any source other than directly from Ulster County are not considered official copies. Only those bidders who obtain bidding documents from the designated plan house are guaranteed to receive addendum information if issued. **Prospective bidders who have obtained this document from a source other than the Designated Plan House or its website are recommended to obtain an official copy.**
PRE-BID CONFERENCE:	A pre-bid conference will be held at **10 AM local time on Monday, January 13, 2025**. Location: New Paltz Fire Department, 117 Henry W. Dubois Drive, New Paltz NY 12561. Attendance at the pre-bid conference is highly encouraged but is not mandatory.
DEPT OF LABOR REGISTRATION	**Note that Bidders are required to provide a Certification of Registration from the NYS Department of Labor in conformance with Article 8 of Labor Law Section 220-i for Public Work Projects bid on or after Dec 30, 2024** (and as directed in Section 002113 "Instructions for Bidders").

It is the Bidder's responsibility to read the attached Bid Specifications and General Conditions, which outline bidding rules of the Ulster County Purchasing Department**.** Upon submission of bid, it is understood that the Bidder has read, fully understands and will comply with said General Conditions and Specification requirements.

NOTICE

LEGAL PUBLICATIONS FOR BIDS - 2025

PLEASE BE ADVISED THAT FOR THE YEAR 2025 THE ULSTER COUNTY PURCHASING DEPARTMENT WILL PUBLISH ALL PUBLIC BIDS IN THE FOLLOWING NEWSPAPERS BY DIRECTIVE OF THE U.C. LEGISLATURE.

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 00 21 13

INSTRUCTIONS TO BIDDERS

PART 1 – GENERAL

1.1 SUMMARY

A. Multiple Prime Contracts are awarded for interrelated major elements of the Work that must be performed simultaneously. These projects are considered as related contracts and require close coordination of the work. Related contracts are identified in the Project Manual's Specification Section 011200 "Summary of Work – Multiple Prime Contracts."

1.2 DEFINITIONS

A. Bid Documents: Bidding Requirements and proposed Contract Documents supplemented with Invitation to Bid, Instructions to Bidders, Information available to Bidders, Bid Forms, Bid Security and Appendices.

B. Contract Documents: Include the Contract Forms between the Owner and contractor, Contractors executed bid form and supplementary Bid Forms, Conditions of the Contract (General, Supplemental and other Conditions), Drawings, Specifications and all Addenda issued prior to execution of the Contract.

C. Addenda: Written graphic instruments issued by the Architect prior to the execution of the Contract which modify or interpret the Bidding Documents by additions, deletions, clarifications or corrections.

D. Bid: A complete and properly executed proposal to do the work for the sum(s) stipulated therein, submitted in accordance with the Bidding Documents.

1. Whenever the word "Bid" occurs in the documents, it refers to the Bidders Proposal.

2. The term "Base Bid" is an amount stated in the Bid for which the Bidder offers to perform the work described in the Bidding Documents.

3. A Bidder is a person or entity who submits a Bid and who meets the requirements set forth in the Bidding Documents.

E. Unit Price: A dollar amount stated on the Bid Form as a price per unit of measurement for materials, equipment, labor to perform a service or portion of the work as described in the Bidding Documents.

1.3 ULSTER COUNTY REQUIREMENTS

A. Sustainability Requirements

1. Ulster County is firmly committed to sustainability and environmental responsibility. As directed By Executive Order #1 of 2023 (https://ulstercountyny.gov/environment/department-environment) issued by the County Executive, adherence to GreenNY sustainability requirements is now a fundamental aspect of our procurement process.

2. Ulster County has qualified to achieve certification as a New York State Green Purchasing Community. The County's sustainability initiative is designed to apply across a broad range of products and services. Suppliers are advised to review the GreenNY sustainability requirements (https://ogs.ny.gov/greenny-purchasing-requirements-and-tools), familiarize themselves with the County's initiatives aimed at mitigating the environmental footprint of its operations, and embrace the principles of environmental stewardship.

B. Compliance with Laws, Licenses, and Permits

1. The responder(s) agree that they will fully comply with all applicable Federal, State and County policies, procedures, standards and laws, rules, and regulations.

2. Vendors must submit construction documents, stamped plans, and/or specifications where required and in accordance with Title 19 NYCRR Part 1203 to the Authority Having Jurisdiction (Ulster County Safety Office).

3. Vendors must provide proof of compliance with the NYS Energy Code through a code approved Prescriptive or Performance based compliance path to the Authority Having Jurisdiction (Ulster County Safety Office).

C. Licenses and Certification

1. The contractor is responsible for ensuring all proper licenses and certifications are in-place for the workforce and equipment utilized. Any Electrical work performed, must be performed by a licensed electrician in Ulster County.

D. Apprentice Program

1. Ulster County has adopted Local Law 10 of 2022, amending the code of the County in relation to construction apprenticeships. Any contract with a value equal to or exceeding $750,000 to which the County of Ulster shall be a signatory and which involves the construction, reconstruction, improvement, rehabilitation, maintenance, repair, furnishing, equipping of or otherwise providing for any building, facility or physical structure of any kind. Contracts or subcontracts for security services are not a "construction contract" and shall not be included in the aggregate value of the contract.

2. The County of Ulster hereby requires any contractor, prior to entering into a high value construction contract with the County of Ulster, or any subcontractor entering into a contract with a contractor who has a high value construction contract with the County of Ulster, to have apprenticeship agreements appropriate for the type and scope of work to be performed, which have been registered with, and approved by, the New York State Commissioner of Labor in accordance with Article 23 of the New York State Labor Law. Such apprenticeship program must have a graduation rate of at least 30% over the last five years as determined by the New York State Department of Labor. In addition, each apprenticeship program must provide documentation verifying a minimum of three (3) trade-specific graduates per calendar year for the last five years.

3. If a specific trade required for performance of a construction contract, high value construction contract or project does not have a New York State Department of Labor-approved apprenticeship training program at the time of the opening bids for a construction contract, such contract is not subject to the provisions of this article.

4. If a single bid is received for a construction contract or high value construction contract subject to this article from a contractor that does not maintain an approved apprenticeship training program, the Director of Purchasing may elect, in his/her sole discretion, to award said contract to the single bidder rather than rebidding the construction contract or high value construction contract.

5. Notwithstanding anything in this article to the contrary, at his/her discretion, the Director of Purchasing reserves the right to accept any bid, in whole or in part, or reject all bids and readvertise in the manner outlined by §§ 101 and 103 of the General Municipal Law.

6. This article shall not apply to any construction contracts or high value construction contract utilizing federal, state, county, or other funding assistance to the extent the terms of such funding assistance precludes the application of this article.

7. This article shall not apply to any construction contract or high value construction contract where another governmental entity is also a signatory to the contract, or to an intermunicipal agreement relating to the contract, unless such other entity agrees to be bound by the provisions of this article.

E. Conflict of Interest

1. The successful bidder, by entering into a contract with Ulster County to perform or provide services or materials, covenants that it has no direct or indirect pecuniary or proprietary interest, and that it shall not acquire any such interest which conflicts in any manner or degree with the services or materials required to be performed and/or provided under the contract and that it shall not employ any person or agent having any such interests. In the event that the successful bidder or its agents, employees or representatives hereafter acquires such a conflict of

interest, it shall immediately disclose such interest to Ulster County and take action immediately to eliminate the conflict.

F. Disclosure of Ownership Interest:

Pursuant to Resolution Number 8 of 2023, the Ulster County Legislature approved a requirement of full transparency and disclosure of the name(s) of individual(s) and business entities holding ownership interest in business entities that enter into contract(s) with Ulster County. Therefore, the following information shall be disclosed, in writing, to the Ulster County Department of Purchasing and then be provided to the Chair of the Legislature and the Chair of the Ways and Means Committee, at the time a business entity submits a bid to the Ulster County Purchasing Department, or, prior to entering into written contract for such work, whichever is sooner:

1. The names of all individuals with an interest in, ownership or control of 10% or more of the profits or assets of such business entity, or of 10% of the stock in the case of a business entity that is a corporation for profit.

2. The names of all principals, partners, officers, or directors of the business entity and their immediate family members, and members of household as defined by Section 2(K) of the Ulster County Ethics Law.

3. The names of any subsidiary business entities directly or indirectly controlled by the business entity.

4. For business entities holding 10% or more of the profits or assets of a business entity seeking to do business with Ulster County, the names of all principals, partners, officers, or directors of the business entity and their immediate family members and members of household; and, be it further

RESOLVED, that the names of the individuals as set forth above shall be entered into the Ulster County financial software system, and shall be included when any resolution or contract is presented by any Ulster County department for approval by the Ulster County Legislature; and, be it further

RESOLVED, that nothing contained in this policy shall be construed as affecting the eligibility of any business entity to perform a public contract because that entity made a contribution to any committee during the one-year period immediately preceding the effective date of this act.

This information must be provided in the Disclosure of Ownership Interest Certification Form, which is included in the required forms in Section 004543 'Resolutions and Certifications.'

PART 2 – INVITATION

2.2 BID SUBMISSION

A. Sealed bids will be received only by the Ulster County Purchasing Dept, Peter Esposito; Deputy Director of Purchasing **on or before 3:00 PM EST, February 13, 2025**.

Bidders are urged to submit their bid early. The bidder assumes the risk of any delay in the mail or the handling of the mail by employees of the County. Late bids will not be accepted and will be returned unopened to the bidder.

B. Complete digital sets of Bidding Documents, drawings and specifications, may be obtained online as a download at www.revplans.biddyhq.com under 'public projects' for a non-refundable reproduction fee of $49.00.

Complete sets of Bidding Documents, Drawings and Specifications, may be obtained from Revplans / BiddyHQ, 28 Church Street, Suite#7, Warwick, NY 10990 Tel: 1-845-651-3845, upon depositing the sum of One Hundred dollars ($100) for each combined set of documents. Checks or money orders shall be made payable to Ulster County. Any bidder requiring documents to be shipped shall arrange with the printer and pay for all packaging and shipping costs.

C. A pre-bid conference will be held at 10 AM local time on Monday, January 13, 2025. Location: New Paltz Fire Dept., 117 Henry W. Dubois Drive, New Paltz, NY 12561.

Attendance at the pre-bid conference is highly encouraged but is not mandatory.

2.3 INTENT

A. The intent of this Bid request is to obtain an offer to perform work for Ulster County, NY for a Stipulated Sum contract, in accordance with the Contract Documents.

1. The CONTRACTOR(s) will be responsible for all materials and work depicted in the Contract Documents and as required to complete the project.

2.4 WORK IDENTIFIED IN THE CONTRACT DOCUMENTS

A. Work of this proposed Contract involves new construction for a Government Operations Center off Paradies Lane in the Town of New Paltz. This project involves the construction of a new 16,350 square-foot facility that will serve Ulster County's Department of Emergency Services and Data Center. The one-story facility will include an operations center that will be used as a command center as needed during disaster events and other regional emergencies. Aspects of the overall project include road and parking improvements, an extension of water services from the Town of New Paltz, a protective enclosure for emergency generator and other electrical equipment, rooftop PV array, and ground-source heating.

2.5 PREVAILING WAGE RATES

A. The successful bidder is required to adhere to the requirements of the Federal Davis-Bacon and Related Acts and NY State Prevailing Wage Rates, whichever are higher.

B. Please be advised of upcoming important NYS Department of Labor changes.

Starting December 30, 2024, all Prime Contractors submitting bids or performing construction work on public work projects or private projects covered by Article 8 of the Labor Law are required to register with the New York State Department of Labor (NYSDOL) under Labor Law Section 220-i.

Prime Contractors need to register before submitting any new bids after December 30, 2024. Subcontractors need to register before commencing new work on a covered project on or after December 30, 2024. NYSDOL encourages all contractors and subcontractors to register as soon as possible to obtain a Certificate of Registration to avoid negatively impacting a bidding period or project schedule.

In accordance with these requirements, our Public Work Projects receiving bids after 12/30/24 will require Bidders to submit a copy of their valid Certificate of Registration with their bid. Applications for registration cannot be accepted as a substitute and a Bid not accompanied by a valid NYS Department of Labor Certificate of Registration is subject to rejection.

More information on these new requirements, including NYSDOL's Contractor Registry portal, can be found on the DOL website here.
https://dol.ny.gov/contractor-and-subcontractor-landing

C. A Verified Statement of payment of Prevailing Rates (Certified Payroll Report) by the successful bidder MUST be attached to ALL invoices for payment to be made. No payments will be made for work completed if invoiced without this form.

D. NOTE: If this bid document is being downloaded from the Internet and/or if Prevailing Wage Rate information is not attached, a New York State Wage Schedule can be downloaded from
https://apps.labor.ny.gov/wpp/publicViewProject.do?method=showIt&id=1580024

PART 3 – BID DOCUMENTS AND CONTRACT DOCUMENTS

3.1 CONTRACT DOCUMENTS IDENTIFICATION

A. The Contract Documents are as prepared by Architect and Engineers for Bid Number RFB-UC24-148C.

3.2 EXAMINATION

A. Upon receipt of Bid Documents, the Bidder shall study and compare with work being done by other Contractors including those identified as contractors by owner to the extent that it relates to the work for which the bid is submitted. Each Bidder shall examine and verify that documents are complete. Immediately notify Architect of any errors, inconsistencies or ambiguities discovered. All reports of such findings shall be to the Architect in writing.

3.3 INQUIRIES / ADDENDA

A. There shall be no verbal interpretation of the meaning of the Contract Documents or the scope of work, as verbal answers are not binding on any party.

B. All Bidder questions for information (RFI) regarding the meaning of the plans, specifications, or other contract documents are to be made in writing, addressed to:

Owner:	Ulster County
Attention:	Peter J Esposito; Deputy Director of Purchasing
Email:	pesp@co.ulster.ny.us

NOTE: RFI's must be received no later than **February 6, 2025 at 4:00pm**. All RFI's subject line should indicate; "RFI No. – Ulster County Government Operations Center"

C. Requests for interpretations prior to receipt of bids must be presented, in writing, to the Director of Purchasing, 100 Development Court, Kingston, NY 12401, and to be given consideration must be received by the Deputy Director of Purchasing at least seven (7) days prior to the date set for the opening of bids.

D. Any interpretation and any additional information or instruction will, if issued, be in the form of a written Addenda sent to all known holders of Contract Documents at the addresses furnished therefor at least five (5) days prior to date set for the opening of bids.

E. Addenda will be transmitted to all that are known to have received a complete set of Bidding Documents. Addenda may be issued during the bidding period to answer Bidder RFI's, provide clarifications to or modifications of the Bidding Documents. Each Bidder shall include resultant costs in their Bid Amount accordingly. All Addenda shall become part of the Contract Documents and must be acknowledged on the Bid Form.

F. Failure of any bidder to receive any Addenda shall not relieve such bidder from any obligation under this bid as submitted.

PART 4 – BIDDING PROCEDURES

4.1 PREPARATION OF BIDS

A. Bids Shall be submitted on Bid Form provided within the project manual. Complete all requested information and appendices.

1. All blanks on the Bid Form shall be legible and executed in ink. Erasures or alterations shall be initiated in ink by the person signing the Bid Form.

2. A Bid price shall be indicated for each section, Bid item, Alternate, Unit Price and shall be expressed in both words and figures. In case of discrepancy, the amount written in words shall govern.

B. Each Bid shall be signed by the person or persons legally authorized to bind the Bidder to a Contract and shall be signed as follows:

1. Sole Proprietorship: Signature of sole proprietor in the presence of a witness who will also sign. Insert the words "Sole Proprietor" under the signature. Affix seal.

2. Partnership: Signature of all partners in the presence of a witness who will also sign. Insert the word "Partner" under each signature. Affix seal to each signature.

3. Corporation: Signature of a duly authorized signing officer(s) in their normal signatures. Insert the officer's capacity in which the signing officer acts. Under each signature. Affix the corporate seal. If the bid is signed by officials other than the president and secretary of the company, or the president and secretary/treasurer of the company, a copy of the by-law resolution of their board of directors authorizing them to do so, must also be submitted with the Bid Form in the bid envelope.

4. Joint Venture: Each party of the joint venture shall execute the Bid Form under their respective seals in a manner appropriate to such party as described above, similar to the requirements of a Partnership.

5. A Bid by a limited liability company shall be executed in the name of the firm by a member or other authorized person and accompanied by evidence of authority to sign. The state of formation of the firm and the firm's address for receiving notices shall be shown.

6. A Bid by an individual shall show the Bidder's name and address for receiving notices.

7. All names shall be printed in ink below the signatures.

8. The Bid shall contain an acknowledgement of receipt of all Addenda, the numbers of which shall be filled in on the Bid Form.

9. Postal and e-mail addresses and telephone number for communications regarding the Bid shall be shown.

10. The Bid shall contain evidence of Bidder's authority and qualification to do business in New York State, or Bidder shall covenant in writing to obtain such authority and qualification prior to award of the Contract and attach such covenant to the Bid. The bidder's state contractor license number, if any, shall also be shown on the Bid Form.

4.2 BID SECURITY

A. A Bid must be accompanied by Bid security made payable to Owner in an amount of five percent (5%) of Bidder's maximum Bid price (determined by adding the base bid and all alternates) and in the form of a certified check, bank money order, or a Bid bond (on the form included in the Bidding Documents) issued by an approved surety.

1. If a certified check or bank money order is utilized, the Bidder shall provide written confirmation from a licensed New York State Surety company that Performance and Payment Bonds will be available to said Bidder for this project.

2. If a Bid Bond is utilized, it shall be written on document AIA A310, and the attorney-in-fact that executes the bond on behalf of the surety shall affix to the bond a certified and current copy of the power of attorney.

B. The Bid security of the apparent Successful Bidder will be retained until Owner awards the contract to such Bidder, and such Bidder has executed the Contract Documents, furnished the required contract security, and met the other conditions of the notice of Award, whereupon the Bid security will be released. If the Successful Bidder fails or refuses to execute and deliver the required contract security and execute a contract within fifteen (15) days after the Notice of Acceptance or Award, The Owner may consider Bidder to be in default, annul the Notice of Award, and the Bid Security of that Bidder will be forfeited. Such forfeiture shall be Owner's exclusive remedy if Bidder defaults.

C. The Bid security of other Bidders that Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of seven (7) days after the Effective Date of the Contract or sixty (60) days after the Bid opening, whereupon Bid security furnished by such Bidders will be released.

D. If Bids are rejected by the owner, they will be released within seven (7) days after the bid opening date.

E. Bid Security of other Bidders that Owner believes do not have a reasonable chance of receiving the award will be released within seven days after the Bid opening.

F. Bonds must be obtained from acceptable sureties as specified in Title 31 CFR 223.

4.3 SUBMISSION OF BIDS

A. Bidders shall be solely responsible for the delivery of their bids in the manner and time prescribed.

1. Bids submitted by mail shall have a separate mailing envelope with the notation "SEALED BID ENCLOSED" on the face thereof.

2. If a Bidder submits for different Contracts, each shall be submitted individually and so labeled for that Contract.

B. Submit one copy of the executed offer on the Bid Forms provided, signed and sealed with the required security in a closed opaque envelope, clearly identified with bidder's name, project name, Contract Bid Package and Owner's name on the outside. Executed Bid forms to be submitted are as follows:

1.	Bid Form	(see section 004116-0# 'Bid Form')
2.	Supplemental Cost Breakdown	(see Section 004150)
3.	Bid Security	(see AIA form A310 / Section 004313)
4.	Corporate Resolution	(see Section 004543)
5.	Non-Collusive Bid Affidavit	(see Section 004570)
6.	Iran Divestment Affidavit	(see Section 004590)
7.	Disclosure of Ownership Interest Certification Form	(see Section 004543)
8.	Assumed Name Certification	(see Section 004543)
9.	MacBride Fair Employment Principles	(see Section 004543)
10.	Certification of Registration with NYS Dept. of Labor	(see Article 2.5 B above)

C. Double Envelope: Insert the closed and sealed Bid Form envelope plus requested security deposit, in a large opaque envelope and label this envelope as noted above.

D. Improperly completed or missing information and irregularities in security deposit, may be the cause not to open the Bid Form envelope and declare the bid invalid or informal.

4.4 MODIFICATION OR WITHDRAWAL OF BID

A. A Bid may not be modified, withdrawn or canceled by the bidder during the stipulated time period following the time and date designated for the receipt of Bids, and each Bidder so agrees in submitting a Bid. If a mistake was made by the Bidder and discovered after Bids were publicly opened, the Bidder shall notify the Architect and

Construction Manager immediately followed by a clear description of the mistake in writing for the Owner, Architect and Construction Manager to review for validation.

B. A Bid may be withdrawn or modified prior to the time and date designated for receipt of bids with notice given to the receiving party in writing. A withdrawn Bid can be resubmitted up to the time and date designated for receipt of Bids.

4.5 UNBALANCED BID

A. Ulster County reserves the right to reject any and all bids not deemed for the best interest of the County and to reject as informal such bids, as in its opinion, are incomplete, conditional, obscure, or which contain irregularities of any kind including unbalanced bids. An "unbalanced bid" refers to one in which the amount bid for one or more separate items is substantially out of line with current market prices for the materials and/or work covered thereby.

B. Bidders should be careful in figuring bids **prior to** submission.

4.6 ERRORS

A. Any errors in the bid award that are the fault of the County must be forwarded, in writing, to Ulster County within five (5) working days of the notification of award. No corrections will be made beyond that date. If errors on the part of the County are discovered too late to be corrected, we will issue a "no award" on those affected items and rebid or quote at a later date.

4.6 CONSIDERATION OF BIDS

A. Properly identified Bids received on time will be publicly opened and will be read aloud. An abstract of the Bids may be made available to Bidders.

B. The Owner shall maintain the right to reject any or all Bids. A Bid not accompanied by the required Bid Security or by other data required by the Bidding Documents, or which is in any way incomplete, or irregular may be subject to rejection.

C. It is the intent of the Owner to award Contracts to the lowest qualified Bidder provided the Bid has been submitted in accordance with the requirements of the Bidding Documents and does not exceed the funds available. The Owner shall have the right to waive informalities and irregularities in a Bid received and to accept the Bid which, in the Owner's judgment, is in the Owner's own best interest.

PART 5 – POST BID REQUIREMENTS

5.1 SUPPLEMENTARY BID FORMS

A. To demonstrate Bidder's qualifications to perform the Work, the Bidder shall submit written evidence establishing its qualifications within three (3) days following the Bid Opening time. The apparent two (2) low Bidders, shall furnish to the Owner through the Construction Manager and Architect the following information:

1. Complete Contractors Qualification Statement – AIA A305 (as per Section 004513)
2. NYS Vendor Responsibility Questionnaire – to be filed or updated online at:

   https://www.osc.ny.gov/state-vendors/vendrep/file-your-vendor-responsibility-questionnaire
3. Evidence of Bidder's authority to do business in New York State.
4. Subcontractor and Supplier list (see Sections 004333 and 004336)

5.2 INSURANCE REQUIREMENTS

A. Bidders are directed to the General and Supplementary Conditions, AIA A232 Article 11, Insurance and Bonds. In conjunction with various other requirements, a Bid will not be awarded if the conditions under Article 11 are not fully satisfied.

PART 6 – NOT USED

PART 7 – SITE AND OTHER AREAS; EXISTING SITE CONDITIONS; EXAMINATION OF SITE; OTHER WORK AT THE SITE

7.1 SITE AND OTHER AREAS

A. The site is identified in the Bidding Documents. By definition, the Site includes rights-of- way, easements, and other lands furnished by Owner for the use of the Contractor. Any additional lands required for temporary construction facilities, construction equipment, or storage of materials and equipment, and any access needed for such additional lands, are to be obtained and paid for by Contractor.

7.2 EXISTING SITE CONDITIONS

A. Subsurface and Physical Conditions; Hazardous Environmental Conditions

1. Those reports known to Owner of explorations and tests of subsurface conditions at or adjacent to the Site are provided with the Contract Documents.

2. Underground Facilities: Information and data shown or indicated in the Bidding Documents with respect to existing Underground Facilities at or adjacent to the Site are set forth in the Contract Documents and are based upon information and data furnished to Owner and Engineer by owners of such Underground Facilities, including Owner, or others.

7.3 SITE VISIT AND TESTING BY BIDDERS

A. Bidder is not required to conduct a pre-bid site visit but is strongly encouraged to do so.

B. Bidder is not required to conduct any subsurface testing, or exhaustive investigations of Site conditions.

C. On request, and to the extent Owner has control over the Site, and schedule permitting, the Owner will provide Bidder access to the Site to conduct such additional examinations, investigations, explorations, tests, and studies as Bidder deems necessary for preparing and submitting a successful Bid. Owner will not have any obligation to grant such access if doing so is not practical because of existing operations, security or safety concerns, or restraints on Owner's authority regarding the Site.

D. Bidder shall comply with all applicable Laws and Regulations regarding excavation and location of utilities, obtain all permits, and comply with all terms and conditions established by Owner or by property owners or other entities controlling the Site with respect to schedule, access, existing operations, security, liability insurance, and applicable safety programs.

E. Bidder shall fill all holes and clean up and restore the Site to its former condition upon completion of such explorations, investigations, tests, and studies.

PART 8 – BIDDER'S REPRESENTATIONS

8.1 BIDDER'S RESPONSIBILITY

A. Before submitting a Bid, it is the responsibility of each Bidder to:

1. Examine and carefully study the Bidding Documents, and any data and reference items identified in the Bidding Documents.

2. Visit the Site, conduct a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and satisfy itself as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

3. Become familiar with and satisfy itself as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

4. Carefully study all: (1) reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings, and (2) reports and drawings relating to Hazardous Environmental Conditions, if any, at or adjacent to the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings;

5. Consider the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on: (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder; and (3) Bidder's safety precautions and programs;

6. Agree, based on the information and observations referred to in the preceding paragraph, that at the time of submitting its Bid no further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of its Bid for performance of the Work at the price bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents;

7. Become aware of the general nature of the work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents;

8. Promptly give Architect and Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder discovers in the Bidding Documents and confirm that the written resolution thereof by Architect or Engineer is acceptable to Bidder;

9. Determine that the Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance and furnishing of the Work; and

10. Agree that the submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article, that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

PART 9 – CONTRACT TIMES

The number of days within which, or the dates by which, the Work is to be substantially completed and ready for final payment are set forth in the Agreement.

PART 10 – SUBSTITUTE AND "OR EQUAL" ITEMS

A. The Contract for the Work, if awarded, will be on the basis of materials and equipment specified or described in the Bidding Documents, and those "or-equal" or substitute materials and equipment subsequently approved by Architect or Engineer ("AEOR") prior to the submittal of Bids and identified by Addendum. No item of material or equipment will be considered by Engineer as an "or- equal" or substitute unless written request for approval has been submitted by Bidder and has been received by AEOR at least fifteen (15) days prior to the date for receipt of Bids in the case of a proposed substitute and five (5) days prior in the case of a proposed "or-equal." The burden of proof of the merit of the proposed item is upon Bidder. AEOR's decision of approval or disapproval of a proposed item will be final. If AEOR approve any such proposed item, such approval will be set forth in an Addendum issued to all prospective Bidders. Bidders shall not rely upon approvals made in any other manner.

B. All prices that Bidder sets forth in its Bid shall be based on the presumption that the Contractor will furnish the materials and equipment specified or described in the Bidding Documents, as supplemented by Addenda. Any assumptions regarding the possibility of post-Bid approvals of "or equal" or substitution requests are made at Bidder's sole risk.

C. If an award is made, Contractor shall be allowed to submit proposed substitutes and "or equals" in accordance with General Conditions.

PART 11: SUBCONTRACTORS, SUPPLIERS, AND OTHER

A. If required by the bid documents, the apparent Successful Bidder, and any other Bidder so requested, shall within three (3) days after Bid opening, submit to Owner a list of the Subcontractors or Suppliers proposed for the Work.

B. If requested by Owner, such list shall be accompanied by an experience statement with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier, or other individual or entity. If Owner or AEOR, after due investigation, has reasonable objection to any proposed Subcontractor, Supplier, individual, or entity, Owner may, before the Notice of Award is given, request apparent Successful Bidder to submit an acceptable substitute, in which case apparent Successful Bidder shall submit a substitute, Bidder's Bid price will be increased (or decreased) by the difference in cost occasioned by such substitution, and Owner may consider such price adjustment in evaluating Bids and making the Contract award.

C. If apparent Successful Bidder declines to make any such substitution, Owner may award the Contract to the next lowest Bidder that proposes to use acceptable Subcontractors, Suppliers, or other individuals or entities. Declining to make requested substitutions will constitute grounds for forfeiture of the Bid security of any Bidder. Any Subcontractor, Supplier, individual, or entity so listed and against which Owner or

Engineer makes no written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner and Engineer subject to subsequent revocation of such acceptance as provided in the General Conditions.

D. Contractor shall not be required to employ any Subcontractor, Supplier, individual, or entity against whom Contractor has reasonable objection.

E. The General Contractor shall not award work to Subcontractor(s) in excess of seventy-five percent (75%) of the contract price in aggregate without the written approval of the Owner.

F. The Mechanical Contractor, Electrical Contractor, Plumbing Contractor, and Site Contractor shall not award work to Subcontractor(s) in excess of fifty percent (50%) of the contract price in aggregate without the written approval of the Owner.

PART 12 – SALES & USE TAX

G. The Owner is exempt from New York State sales and use taxes on materials and equipment to be incorporated in the Work. Said taxes shall not be included in the bid.

PART 13 – PAYMENT PROVISIONS

A. The payment provisions in the project Specifications should allow the Owner a minimum of sixty (60) days to make payment to the Contract after the Design Professional has issued a certificate of payment.

PART 14 – WICKS LAW (GENERAL MUNICIPAL LAW SECTION 101)

A. When the entire cost of a contract for the erection, construction, reconstruction or alteration of a public building exceeds certain thresholds, the design professional must prepare the plans and specifications to allow for the independent and separate bidding and award of contracts for plumbing trade work, HVAC trade work and electrical trade work. In addition, a general construction trade contract is normally separated as well.

B. Currently, the Wicks Law's threshold amounts triggering the requirements of multiple prime contractors are:

1. $3 million in the counties of the Bronx, Kings, New York, Queens, and Richmond

2. $1.5 million in the counties of Nassau, Suffolk, and Westchester

3. $500,000 in all other counties.

C. In accordance with the provisions of Labor Law Section 222, projects that utilize a Project Labor Agreement are exempt from the multiple prime contracts' requirements of the Wicks Law.

D. For contracts that do not meet the Wicks Law threshold, the Project Specifications must require bidders to submit a separate sealed list that names each plumbing, HVAC and electrical subcontractor that the bidder will use in performance of the contract and the amount to be paid to each. This list is opened after the low bid is announced. After bid, the contractor may seek to change any listed subcontractor upon a showing of legitimate need.

SECTION 00 31 13

CONSTRUCTION SCHEDULE

PART 1 GENERAL

1.1 PROJECT SCHEDULE

A. This document is part of Procurement and Contracting Requirements for this Project. This Section is being provided to give information to Bidder's as an overview of hard milestone dates that must be adhered to by all Prime Contractors.

1.2 RELATED DOCUMENTS

A. All Contract Documents, including but not limited to, General and Supplementary Conditions of the Contract for Construction apply to this Section.

B. Refer specifically to Division 01 Sections "Multiple Contract Summary", "Submittals" and "Construction Progress Documentation" for administrative requirements.

1.3 SUMMARY

A. This Section includes a general Narrative for the Project Schedule and Project durations.

B. The Project Milestone Schedule and responsibility requirements provided under 011200, shall be used by each Prime Contractor to reference start and completion dates, and their respective durations, for each activity.

1.4 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

B. Critical Path: The longest continuous chain of activities through the network schedule that establishes the minimum overall Project duration.

C. Milestone: A key or critical point in time for reference or measurement within the schedule timeline.

1.5 SUBMITTALS

A. Coordinated Construction Schedule(s)

1. Each Prime Contractor shall provide a construction schedule inclusive of all work tasks and coordinate into one **Master Construction Schedule** per the requirements of section 0011200.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION

A. Work on site shall begin March 2025 and run continuously for 15 consecutive months through May 2026.

B. Systems Commissioning shall happen consecutively with the finishing activities of the project from April to May of 2026.

C. Contractor Punch List and Close out shall begin May 2026 through June 2026

D. Owner Vendor and Equipment Install shall take place May 2026 through July 2026

E. Refer to the Milestone Schedule at the end of Section 011200.

END OF SECTION 003113

SECTION 00 41 16.01

BID FORM – GENERAL CONTRACTOR

PART 1 – BID

1.1 TO: ULSTER COUNTY, NY

1.5 ADDENDA

A. The following Addenda have been received. The modifications to the Bid Documents noted below have been considered and all costs are included in the Bid Sum

Addendum #_____Dated_____ Addendum #_____Dated_____

Addendum #_____Dated_____ Addendum #_____Dated_____

Addendum #_____Dated_____ Addendum #_____Dated_____

1.6 OFFER:

A. Having examined the Place of the Work and all matters referred to in the Instructions to Bidders and the Contract Documents prepared by Urbahn Architects, PLLC, Alfandre Architecture, Greenman-Pederson Inc, and Cerami Associates for the above-mentioned project, we, the undersigned, hereby offer to enter into a Contract to perform the Work for the Sum of:

_____dollars ($_____),
in lawful money of the United States of America.

B. **Bid Security**: Attached hereto is Bid Security in the form of (circle correct form) Bid Bond or Certified Check in the amount of five percent (5%) of the written Base Bid amount. Bid security is irrevocable for sixty (60) days from the Bid opening date. Bid Security shall be returned to any Bids not accepted in accordance with the Instructions to Bidders.

C. **Time of Commencement and Completion**: The Bidder agrees to commence Work on the stipulated starting date(s) and will substantially complete the work in accordance with the project Milestone Schedule in specification section 003113. If the Bidder fails to obtain acceptable Insurance, Performance and Payment Bonds required to execute a Contract Agreement withing stipulated time frame under 1.5F below, the security deposit shall be forfeited as damages to Owner by reason of Bidder failure, limited in amount to the lesser of the face value of the security deposit or the difference between this bid and the bid upon which a Contract is signed.

D. **Rejection of Bids**: The Bidder acknowledges that the Owner reserves the right to waive any informality in, or to reject any or all Bids.

E. **Execution of Contract**: If notice of the acceptance of this Bid is mailed, telegraphed, emailed or otherwise delivered to the undersigned within forty-five (45) days after the date of the Bid Opening, or any time thereafter, the undersigned will, within ten (10) days after the receipt of the form of Agreement, execute and deliver the Contract.

F. **Wage Rates**: Bidder understands compliance with the Davis-Bacon Act and other Federal Labor Standards, is mandatory for this project and to pay New York State prevailing wage rates applicable to Ulster County.

G. **Project Labor Agreement**: The Bidder understands the work of this project will require being signatory with the Project Labor Agreement (PLA) in place for this project.

H. **Site Visit**: By initiating at the end of this paragraph the Bidder acknowledges visiting the project site as requested by the Bidding Documents.

AIA® Document A310™ – 2010

Bid Bond

CONTRACTOR:
(Name, legal status and address)

SURETY:
(Name, legal status and principal place of business)

OWNER:
(Name, legal status and address)

BOND AMOUNT:

PROJECT:
(Name, location or address, and Project number, if any)

This document has important le consequences. Consultation wi an attorney is encouraged with respect to its completion or modification.

Any singular reference to Contractor, Surety, Owner or other party shall be considered plural where applicable.

The Contractor and Surety are bound to the Owner in the amount set forth above, for the payment of which the Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. The conditions of this Bond are such that if the Owner accepts the bid of the Contractor within the time specified in the bid documents, or within such time period as may be agreed to by the Owner and Contractor, and the Contractor either (1) enters into a contract with the Owner in accordance with the terms of such bid, and gives such bond or bonds as may be specified in the bidding or Contract Documents, with a surety admitted in the jurisdiction of the Project and otherwise acceptable to the Owner, for the faithful performance of such Contract and for the prompt payment of labor and material furnished in the prosecution thereof; or (2) pays to the Owner the difference, not to exceed the amount of this Bond, between the amount specified in said bid and such larger amount for which the Owner may in good faith contract with another party to perform the work covered by said bid, then this obligation shall be null and void, otherwise to remain in full force and effect. The Surety hereby waives any notice of an agreement between the Owner and Contractor to extend the time in which the Owner may accept the bid. Waiver of notice by the Surety shall not apply to any extension exceeding sixty (60) days in the aggregate beyond the time for acceptance of bids specified in the bid documents, and the Owner and Contractor shall obtain the Surety's consent for an extension beyond sixty (60) days.

If this Bond is issued in connection with a subcontractor's bid to a Contractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Project, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

Signed and sealed this day of

SUPPLIMENT D – PREVAILING WAGE RATES

PART 1 PARTICULARS

1. All personnel performing work on Ulster County owned or operated facilities will be compensated as per the New York State Department of Labor's Schedule of Prevailing Wage Rates for Ulster County for the trades *I* worker classifications anticipated for this project work.

2. These wage rates apply to all public works contracting in the State of New York, in accordance with Article 8 (Section 220 - 223) and Article 9 (Section 230 - 239) of the New York State Labor Law.

3. Failure to pay the requisite prevailing wages or supplements may cause to be withheld from payment due the prime contractor an amount indicated by the Bureau of Public Work as sufficient to satisfy the unpaid wages and supplements, Including Interest and any civil penalty that may be assessed by the Commissioner of Labor.

4. Contractors are required to post the schedule of prevailing wage rates on the jobsite and provide copies of the schedule to all their contractors. Contactors must obtain affidavits from the subcontractors that schedules have been provided.

5. The Prevailing Rate Case number ISD PRC# 2024014555 – Ulster County Government Operations Center on https://apps.labor.ny.gov/wpp/publicViewProject.do?method=showIt&id=1580024

SECTION 00 43 60 – FEDERAL LABOR STANDARDS

HUD-4010
Federal Labor Standards Provisions

U.S. Department of Housing and Urban Development
Office of Davis-Bacon and Labor Standards

A. APPLICABILITY

The Project or Program to which the construction work covered by this Contract pertains is being assisted by the United States of America, and the following Federal Labor Standards Provisions are included in this Contract pursuant to the provisions applicable to such Federal assistance.

1. Minimum wages and fringe benefits

i. All laborers and mechanics employed or working upon the site of the work (or otherwise working in construction or development of the project under a development statute), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of basic hourly wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. As provided in 29 CFR 5.5(d) and (e), the appropriate wage determinations are effective by operation of law even if they have not been attached to the contract. Contributions made or costs reasonably anticipated for bona fide fringe benefits under the Davis-Bacon Act (40 U.S.C. 3141(2)(B)) on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(v) of these contract clauses; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics must be paid the appropriate wage rate and fringe benefits on the wage determination for the classification(s) of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: *Provided,* That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classifications and wage rates conformed under 29 CFR 5.5(a)(1)(iii)) and the Davis-Bacon poster (WH-1321) must be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

ii. Frequently recurring classifications

A. In addition to wage and fringe benefit rates that have been determined to be prevailing under the procedures set forth in 29 CFR part 1, a wage determination may contain, pursuant to § 1.3(f), wage and fringe benefit rates for classifications of laborers and mechanics for which conformance requests are regularly submitted pursuant to 29 CFR 5.5(a)(1)(iii), provided that:

1. The work performed by the classification is not performed by a classification in the wage determination for which a prevailing wage rate has been determined;

2. The classification is used in the area by the construction industry; and

3. The wage rate for the classification bears a reasonable relationship to the prevailing wage rates contained in the wage determination.

B. The Administrator will establish wage rates for such classifications in accordance with 29 CFR 5.5(a)(1)(iii)(A)(3). Work performed in such a classification must be paid at no less than the wage and fringe benefit rate listed on the wage determination for such classification.

iii. Conformance

A. The contracting officer must require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract be

classified in conformance with the wage determination. Conformance of an additional classification and wage rate and fringe benefits is appropriate only when the following criteria have been met:

1. The work to be performed by the classification requested is not performed by a classification in the wage determination; and

2. The classification is used in the area by the construction industry; and

3. The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

B. The conformance process may not be used to split, subdivide, or otherwise avoid application of classifications listed in the wage determination.

C. If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken will be sent by the contracting officer by email to DBAconformance@dol.gov. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30–day period that additional time is necessary.

D. In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer will, by email to DBAconformance@dol.gov, refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30–day period that additional time is necessary.

E. The contracting officer must promptly notify the contractor of the action taken by the Wage and Hour Division under 29 CFR 5.5 (a)(1)(iii)(C) and (D). The contractor must furnish a written copy of such determination to each affected worker or it must be posted as a part of the wage determination. The wage rate (including fringe benefits where appropriate) determined pursuant to 29 CFR 5.5 (a)(1)(iii)(C) or (D) must be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

iv. Fringe benefits not expressed as an hourly rate

Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor may either pay the benefit as stated in the wage determination or may pay another bona fide fringe benefit or an hourly cash equivalent thereof.

v. Unfunded plans

If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, *Provided,* That the Secretary of Labor has found, upon the written request of the contractor, in accordance with the criteria set forth in 29 CFR 5.28, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

vi. Interest In the event of a failure to pay all or part of the wages required by the contract, the contractor will be required to pay interest on any underpayment of wages.

2. Withholding

i. Withholding requirements

The U. S. Department of Housing and Urban Development may, upon its own action, or must, upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor so much of the accrued payments or advances as may be considered necessary to satisfy the liabilities of the prime contractor or any subcontractor for the full amount of wages and monetary relief, including interest, required by the clauses set forth in 29 CFR 5.5(a) for violations of this contract, or to satisfy any such liabilities required by any other Federal contract, or federally assisted contract subject to Davis-Bacon labor standards, that is held by the same prime contractor (as defined in 29 CFR 5.2). The necessary funds may be withheld from the contractor under this contract, any other Federal contract with the same prime contractor, or any other federally assisted contract that is subject to Davis-Bacon labor standards requirements and is held by the same prime contractor, regardless of whether the other contract was awarded or assisted by the same agency, and such funds may be used to satisfy the contractor liability for which the funds were withheld. In the event of a contractor's failure to pay any laborer or mechanic, including any apprentice or helper working on the site of the work (or otherwise working in construction or development of the project under a development statute) all or part of the wages required by the contract, or upon the contractor's failure to submit the required records as discussed in 29 CFR 5.5(a)(3)(iv), HUD may on its own initiative and after written notice to the contractor, sponsor, applicant, owner, or other entity, as the case may be, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

ii. Priority to withheld funds

The Department has priority to funds withheld or to be withheld in accordance with 29 CFR 5.5(a)(2)(i) or (b)(3)(i), or both, over claims to those funds by:

- **A.** A contractor's surety(ies), including without limitation performance bond sureties and payment bond sureties;
- **B.** A contracting agency for its reprocurement costs;
- **C.** A trustee(s) (either a court-appointed trustee or a U.S. trustee, or both) in bankruptcy of a contractor, or a contractor's bankruptcy estate;
- **D.** A contractor's assignee(s);
- **E.** A contractor's successor(s); or
- **F.** A claim asserted under the Prompt Payment Act, 31 U.S.C. 3901-3907.

3. Records and certified payrolls

i. Basic record requirements

- **A. Length of record retention.** All regular payrolls and other basic records must be maintained by the contractor and any subcontractor during the course of the work and preserved for all laborers and mechanics working at the site of the work (or otherwise working in construction or development of the project under a development statute) for a period of at least 3 years after all the work on the prime contract is completed.
- **B. Information required** Such records must contain the name; Social Security number; last known address, telephone number, and email address of each such worker; each worker's correct classification(s) of work actually performed; hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in 40 U.S.C. 3141(2)(B) of the Davis-Bacon Act); daily and weekly number of hours actually worked in total and on each covered contract; deductions made; and actual wages paid.
- **C. Additional records relating to fringe benefits**. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(v) that the wages of any laborer or mechanic include the amount of any

costs reasonably anticipated in providing benefits under a plan or program described in 40 U.S.C. 3141(2)(B) of the Davis-Bacon Act, the contractor must maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits.

D. Additional records relating to apprenticeship Contractors with apprentices working under approved programs must maintain written evidence of the registration of apprenticeship programs, the registration of the apprentices, and the ratios and wage rates prescribed in the applicable programs.

ii. Certified payroll requirements

A. Frequency and method of submission The contractor or subcontractor must submit weekly, for each week in which any DBA- or Related Acts-covered work is performed, certified payrolls to HUD if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the certified payrolls to the applicant, sponsor, owner, or other entity, as the case may be, that maintains such records, for transmission to HUD. The prime contractor is responsible for the submission of all certified payrolls by all subcontractors. A contracting agency or prime contractor may permit or require contractors to submit certified payrolls through an electronic system, as long as the electronic system requires a legally valid electronic signature; the system allows the contractor, the contracting agency, and the Department of Labor to access the certified payrolls upon request for at least 3 years after the work on the prime contract has been completed; and the contracting agency or prime contractor permits other methods of submission in situations where the contractor is unable or limited in its ability to use or access the electronic system

B. Information required The certified payrolls submitted must set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i)(B), except that full Social Security numbers and last known addresses, telephone numbers, and email addresses must not be included on weekly transmittals. Instead, the certified payrolls need only include an individually identifying number for each worker (*e.g.*, the last four digits of the worker's Social Security number). The required weekly certified payroll information may be submitted using Optional Form WH-347 or in any other format desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at *https://www.dol.gov/sites/dolgov/files/WHD/legacy/files/wh347.pdf* or its successor website. It is not a violation of this section for a prime contractor to require a subcontractor to provide full Social Security numbers and last known addresses, telephone numbers, and email addresses to the prime contractor for its own records, without weekly submission by the subcontractor to the sponsoring government agency (or the applicant, sponsor, owner, or other entity, as the case may be, that maintains such records).

C. Statement of Compliance Each certified payroll submitted must be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor, or the contractor's or subcontractor's agent who pays or supervises the payment of the persons working on the contract, and must certify the following:

1. That the certified payroll for the payroll period contains the information required to be provided under 29 CFR 5.5(a)(3)(ii), the appropriate information and basic records are being maintained under 29 CFR 5.5 (a)(3)(i), and such information and records are correct and complete;

2. That each laborer or mechanic (including each helper and apprentice) working on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly

from the full wages earned, other than permissible deductions as set forth in 29 CFR part 3; and

3. That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification(s) of work actually performed, as specified in the applicable wage determination incorporated into the contract.

D. Use of Optional Form WH-347 The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 will satisfy the requirement for submission of the "Statement of Compliance" required by 29 CFR 5.5(a)(3)(ii)(C).

E. Signature The signature by the contractor, subcontractor, or the contractor's or subcontractor's agent must be an original handwritten signature or a legally valid electronic signature.

F. Falsification The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under 18 U.S.C. 1001 and 31 U.S.C. 3729.

G. Length of certified payroll retention The contractor or subcontractor must preserve all certified payrolls during the course of the work and for a period of 3 years after all the work on the prime contract is completed.

iii. Contracts, subcontracts, and related documents The contractor or subcontractor must maintain this contract or subcontract and related documents including, without limitation, bids, proposals, amendments, modifications, and extensions. The contractor or subcontractor must preserve these contracts, subcontracts, and related documents during the course of the work and for a period of 3 years after all the work on the prime contract is completed.

iv Required disclosures and access

A. Required record disclosures and access to workers The contractor or subcontractor must make the records required under 29 CFR 5.5(a)(3)(i)–(iii), and any other documents that HUD or the Department of Labor deems necessary to determine compliance with the labor standards provisions of any of the applicable statutes referenced by 29 CFR 5.1, available for inspection, copying, or transcription by authorized representatives of HUD or the Department of Labor, and must permit such representatives to interview workers during working hours on the job.

B. Sanctions for non-compliance with records and worker access requirements If the contractor or subcontractor fails to submit the required records or to make them available, or refuses to permit worker interviews during working hours on the job, the Federal agency may, after written notice to the contractor, sponsor, applicant, owner, or other entity, as the case may be, that maintains such records or that employs such workers, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available, or to permit worker interviews during working hours on the job, may be grounds for debarment action pursuant to 29 CFR 5.12. In addition, any contractor or other person that fails to submit the required records or make those records available to WHD within the time WHD requests that the records be produced will be precluded from introducing as evidence in an administrative proceeding under 29 CFR part 6 any of the required records that were not provided or made available to WHD. WHD will take into consideration a reasonable request from the contractor or person for an extension of the time for submission of records. WHD will determine the reasonableness of the request and may consider, among other things, the location of the records and the volume of production.

C. Required information disclosures Contractors and subcontractors must maintain the full Social Security number and last known address, telephone number, and email address of each covered worker, and must provide them upon request to HUD if the agency is a party to

the contract, or to the Wage and Hour Division of the Department of Labor. If the Federal agency is not such a party to the contract, the contractor, subcontractor, or both, must, upon request, provide the full Social Security number and last known address, telephone number, and email address of each covered worker to the applicant, sponsor, owner, or other entity, as the case may be, that maintains such records, for transmission to HUD, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or other compliance action.

4. Apprentices and equal employment opportunity

i. Apprentices

A. Rate of pay Apprentices will be permitted to work at less than the predetermined rate for the work they perform when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship (OA), or with a State Apprenticeship Agency recognized by the OA. A person who is not individually registered in the program, but who has been certified by the OA or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice, will be permitted to work at less than the predetermined rate for the work they perform in the first 90 days of probationary employment as an apprentice in such a program. In the event the OA or a State Apprenticeship Agency recognized by the OA withdraws approval of an apprenticeship program, the contractor will no longer be permitted to use apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

B. Fringe benefits Apprentices must be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringe benefits must be paid in accordance with that determination.

C. Apprenticeship ratio The allowable ratio of apprentices to journeyworkers on the job site in any craft classification must not be greater than the ratio permitted to the contractor as to the entire work force under the registered program or the ratio applicable to the locality of the project pursuant to 29 CFR 5.5(a)(4)(i)(D). Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated in 29 CFR 5.5(a)(4)(i)(A), must be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under this section must be paid not less than the applicable wage rate on the wage determination for the work actually performed.

D. Reciprocity of ratios and wage rates Where a contractor is performing construction on a project in a locality other than the locality in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyworker's hourly rate) applicable within the locality in which the construction is being performed must be observed. If there is no applicable ratio or wage rate for the locality of the project, the ratio and wage rate specified in the contractor's registered program must be observed.

ii Equal employment opportunity The use of apprentices and journeyworkers under this part must be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

5 Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

6 Subcontracts. The contractor or subcontractor must insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (11), along with the applicable wage determination(s) and such other clauses or contract modifications as the U.S. Department of Housing and Urban Development may by appropriate instructions require, and a clause requiring the subcontractors to include these clauses and wage determination(s) in any lower tier subcontracts. The prime contractor is responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in this section. In the event of any violations of these clauses, the prime contractor and any subcontractor(s) responsible will be liable for any unpaid wages and monetary relief, including interest from the date of the underpayment or loss, due to any workers of lower-tier subcontractors, and may be subject to debarment, as appropriate.

7 Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

8 Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

9 Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

10. Certification of eligibility.

i. By entering into this contract, the contractor certifies that neither it nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of 40 U.S.C. 3144(b) or 29 CFR 5.12(a).

ii. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of 40 U.S.C. 3144(b) or 29 CFR 5.12(a).

iii. The penalty for making false statements is prescribed in the U.S. Code, Title 18 Crimes and Criminal Procedure, 18 U.S.C. 1001.

11 Anti-retaliation It is unlawful for any person to discharge, demote, intimidate, threaten, restrain, coerce, blacklist, harass, or in any other manner discriminate against, or to cause any person to discharge, demote, intimidate, threaten, restrain, coerce, blacklist, harass, or in any other manner discriminate against, any worker or job applicant for:

i. Notifying any contractor of any conduct which the worker reasonably believes constitutes a violation of the DBA, Related Acts, or 29 CFR parts 1, 3, or 5;

ii. Filing any complaint, initiating or causing to be initiated any proceeding, or otherwise asserting or seeking to assert on behalf of themselves or others any right or protection under the DBA, Related Acts, or 29 CFR parts 1, 3, or 5;

iii. Cooperating in any investigation or other compliance action, or testifying in any proceeding under the DBA, Related Acts, or 29 CFR parts 1, 3, or 5; or

iv. Informing any other person about their rights under the DBA, Related Acts, or 29 CFR parts 1, 3, or 5.

B. Contract Work Hours and Safety Standards Act (CWHSSA)

The Agency Head must cause or require the contracting officer to insert the following clauses set forth in 29 CFR 5.5(b)(1), (2), (3), (4), and (5) in full, or (for contracts covered by the Federal Acquisition Regulation) by reference, in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses must

be inserted in addition to the clauses required by 29 CFR 5.5(a) or 4.6. As used in this paragraph, the terms "laborers and mechanics" include watchpersons and guards.

1. **Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.
2. **Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in 29 CFR 5.5(b)(1) the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages and interest from the date of the underpayment. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchpersons and guards, employed in violation of the clause set forth in 29 CFR 5.5(b)(1), in the sum of $31 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in 29 CFR 5.5(b)(1).
3. **Withholding for unpaid wages and liquidated damages**

i. **Withholding process** The U.S Department of Housing and Urban Development or the recipient of Federal assistance may, upon its own action, or must, upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor so much of the accrued payments or advances as may be considered necessary to satisfy the liabilities of the prime contractor or any subcontractor for any unpaid wages; monetary relief, including interest; and liquidated damages required by the clauses set forth in 29 CFR 5.5(b) on this contract, any other Federal contract with the same prime contractor, or any other federally assisted contract subject to the Contract Work Hours and Safety Standards Act that is held by the same prime contractor (as defined in 29 CFR 5.2). The necessary funds may be withheld from the contractor under this contract, any other Federal contract with the same prime contractor, or any other federally assisted contract that is subject to the Contract Work Hours and Safety Standards Act and is held by the same prime contractor, regardless of whether the other contract was awarded or assisted by the same agency, and such funds may be used to satisfy the contractor liability for which the funds were withheld.

ii **Priority to withheld funds** The Department has priority to funds withheld or to be withheld in accordance with 29 CFR 5.5(a)(2)(i) or (b)(3)(i), or both, over claims to those funds by:

- **A.** A contractor's surety(ies), including without limitation performance bond sureties and payment bond sureties;
- **B.** A contracting agency for its reprocurement costs;
- **C.** A trustee(s) (either a court-appointed trustee or a U.S. trustee, or both) in bankruptcy of a contractor, or a contractor's bankruptcy estate;
- **D.** A contractor's assignee(s);
- **E.** A contractor's successor(s); or
- **F.** A claim asserted under the Prompt Payment Act, 31 U.S.C. 3901-3907.

4. ***Subcontracts.*** The contractor or subcontractor must insert in any subcontracts the clauses set forth in 29 CFR 5.5(b)(1) through (5) and a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor is responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in 29 CFR 5.5(b)(1) through (5). In the event of any violations of these clauses, the prime contractor and any subcontractor(s) responsible will be liable for any unpaid wages and monetary relief, including interest from the date of the underpayment or loss,

due to any workers of lower-tier subcontractors, and associated liquidated damages and may be subject to debarment, as appropriate.

5 **Anti-retaliation** It is unlawful for any person to discharge, demote, intimidate, threaten, restrain, coerce, blacklist, harass, or in any other manner discriminate against, or to cause any person to discharge, demote, intimidate, threaten, restrain, coerce, blacklist, harass, or in any other manner discriminate against, any worker or job applicant for:

- **i.** Notifying any contractor of any conduct which the worker reasonably believes constitutes a violation of the Contract Work Hours and Safety Standards Act (CWHSSA) or its implementing regulations in 29 CFR part 5;
- **ii.** Filing any complaint, initiating or causing to be initiated any proceeding, or otherwise asserting or seeking to assert on behalf of themselves or others any right or protection under CWHSSA or 29 CFR part 5;
- **iii.** Cooperating in any investigation or other compliance action, or testifying in any proceeding under CWHSSA or 29 CFR part 5; or
- **iv.** Informing any other person about their rights under CWHSSA or 29 CFR part 5.

C. **CWHSSA required records clause** In addition to the clauses contained in 29 CFR 5.5(b), in any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other laws referenced by 29 CFR 5.1, the Agency Head must cause or require the contracting officer to insert a clause requiring that the contractor or subcontractor must maintain regular payrolls and other basic records during the course of the work and must preserve them for a period of 3 years after all the work on the prime contract is completed for all laborers and mechanics, including guards and watchpersons, working on the contract. Such records must contain the name; last known address, telephone number, and email address; and social security number of each such worker; each worker's correct classification(s) of work actually performed; hourly rates of wages paid; daily and weekly number of hours actually worked; deductions made and actual wages paid. Further, the Agency Head must cause or require the contracting officer to insert in any such contract a clause providing that the records to be maintained under this paragraph must be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the (write the name of agency) and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview workers during working hours on the job.

D. **Incorporation of contract clauses and wage determinations by reference** Although agencies are required to insert the contract clauses set forth in this section, along with appropriate wage determinations, in full into covered contracts, and contractors and subcontractors are required to insert them in any lower-tier subcontracts, the incorporation by reference of the required contract clauses and appropriate wage determinations will be given the same force and effect as if they were inserted in full text.

E. **Incorporation by operation of law** The contract clauses set forth in this section (or their equivalent under the Federal Acquisition Regulation), along with the correct wage determinations, will be considered to be a part of every prime contract required by the applicable statutes referenced by 29 CFR 5.1 to include such clauses, and will be effective by operation of law, whether or not they are included or incorporated by reference into such contract, unless the Administrator grants a variance, tolerance, or exemption from the application of this paragraph. Where the clauses and applicable wage determinations are effective by operation of law under this paragraph, the prime contractor must be compensated for any resulting increase in wages in accordance with applicable law.

F. HEALTH AND SAFETY

The provisions of this paragraph (F) are applicable where the amount of the prime contract exceeds **$100,000**.

1. No laborer or mechanic shall be required to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his or her health and safety, as determined under construction safety and health standards promulgated by the Secretary of Labor by regulation.
2. The contractor shall comply with all regulations issued by the Secretary of Labor pursuant to 29 CFR Part 1926 and failure to comply may result in imposition of sanctions pursuant to the Contract Work Hours and Safety Standards Act, (Public Law 91-54, 83 Stat 96), 40 U.S.C. § 3701 et seq.
3. The contractor shall include the provisions of this paragraph in every subcontract, so that such provisions will be binding on each subcontractor. The contractor shall take such action with respect to any subcontractor as the Secretary of Housing and Urban Development or the Secretary of Labor shall direct as a means of enforcing such provisions.

SECTION 00 45 13 – QUALIFICATIONS STATEMENT

AIA® Document A305® – 2020

Contractor's Qualification Statement

THE PARTIES SHOULD EXECUTE A SEPARATE CONFIDENTIALITY AGREEMENT IF THEY INTEND FOR ANY OF THE INFORMATION IN THIS A305-2020 TO BE HELD CONFIDENTIAL.

SUBMITTED BY:
(Organization name and address.)

SUBMITTED TO:
(Organization name and address.)

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

TYPE OF WORK TYPICALLY PERFORMED
(Indicate the type of work your organization typically performs, such as general contracting, construction manager as constructor services, HVAC contracting, electrical contracting, plumbing contracting, or other.)

THIS CONTRACTOR'S QUALIFICATION STATEMENT INCLUDES THE FOLLOWING:
(Check all that apply.)

- ☐ Exhibit A – General Information
- ☐ Exhibit B – Financial and Performance Information
- ☐ Exhibit C – Project-Specific Information
- ☐ Exhibit D – Past Project Experience
- ☐ Exhibit E – Past Project Experience (Continued)

CONTRACTOR CERTIFICATION
The undersigned certifies under oath that the information provided in this Contractor's Qualification Statement is true and sufficiently complete so as not to be misleading.

MACBRIDE FAIR EMPLOYMENT PRINCIPLES

Ulster County Resolution 108 of March 8, 2001, in an attempt to prevent discrimination in all forms, provides the requirement that vendors who do business with Ulster County read, initial and return the attached statement as part of their official document.

Please read and initial **either** Statement #1 or Statement #2.

DO NOT INITIAL BOTH STATEMENTS.

___1. The Bidder, and any individual or legal entity in which the Bidder holds a 10% or greater ownership interest and any individual or legal entity that holds a 10% or greater ownership interest in the Bidder, has no business operations in Northern Ireland.

___2. The Bidder, and any individual or legal entity in which the Bidder holds a 10% or greater ownership interest and any individual or legal entity that holds a 10% or greater ownership interest in the Bidder shall take lawful steps in good faith to conduct any business operations they have in Northern Ireland in accordance with the MacBride Fair Employment Principles and shall permit the independent monitoring of their compliance with such principles.

NON-COLLUSIVE CERTIFICATION

General Municipal Law – Public Contracts, Article 5-A must be in the documents and paperclipped for review.

§103-d. Statement of non-collusion in bids and proposals to political subdivision of the state

Every bid or proposal hereafter made to a political subdivision of the state or any public department, agency or official thereof where competitive bidding is required by statute, rule, regulation or local law, for work or services performed or to be performed or goods sold or to be sold, shall contain the following statement subscribed by the bidder and affirmed by such bidder as true under the penalties of perjury: Non-collusive bidding certification.

"(a) By submission of this bid, each bidder and each person signing on behalf of any bidder certifies, and in the case of a joint bid each party thereto certifies as to its own organization, under penalty of perjury, that to the best of knowledge and belief:

1. The prices in this bid have been arrived at independently without collusion, consultation, communication, or agreement, for the purpose of restricting competition, at to any matter relating to such prices with any other bidder or with any competitor; and

2. Unless otherwise required by law, the prices which have been quoted in this bid have not been knowingly disclosed by the bidder and will not knowingly be disclosed by the bidder prior to opening, directly or indirectly, to any other bidder or to any competitor; and

3. No attempt has been made or will be made by the bidder to induce any other person, partnership or corporation to submit or not to submit a bid for the purpose of restricting competition."

SECTION 00 45 90

IRANIAN DIVESTMENT CERTIFICATION

CERTIFICATION OF COMPLIANCE WITH THE IRAN DIVESTMENT ACT

Pursuant to State Finance Law §165-a, on August 10, 2012 the Commissioner of the Office of General Services (OGS) posted a prohibited entities list of "persons" who are engaged in "investment activities in Iran" (both are defined terms in the law) on the OGS website at: http://www.ogs.ny.gov/about/regs/docs/ListofEntities.pdf

By submitting a bid in response to this solicitation or by assuming the responsibility of a Contract awarded hereunder, each Bidder/Contractor, any person signing on behalf of any Bidder/Contractor and any assignee or subcontractor and, in the case of a joint bid, each party thereto, certifies, under penalty of perjury, that once the Prohibited Entities List is posted on the OGS website, that to the best of its knowledge and belief, that each Bidder/Contractor and any subcontractor or assignee is not identified on the Prohibited Entities List created pursuant to SFL § 165-a(3)(b).

Additionally, Bidder/Contractor is advised that once the Prohibited Entities List is posted on the OGS Website, any Bidder/Contractor seeking to renew or extend a Contract or assume the responsibility of a Contract awarded in response to this solicitation must certify at the time the Contract is renewed, extended or assigned that it is not included on the Prohibited Entities List.

During the term of the Contract, should the County receive information that a Bidder/Contractor is in violation of the above-referenced certification, the County will offer the person or entity an opportunity to respond. If the person or entity fails to demonstrate that he/she/it has ceased engagement in the investment which is in violation of the Act within 90 days after the determination of such violation, then the County shall take such action as may be appropriate including, but not limited to, imposing sanctions, seeking compliance, recovering damages or declaring the Bidder/Contractor in default.

The County reserves the right to reject any bid or request for assignment for a Bidder/Contractor that appears on the Prohibited Entities List prior to the award of a contract and to pursue a responsibility review with respect to any Bidder/Contractor that is awarded a contract and subsequently appears on the Prohibited Entities List.

I, _____, being duly sworn, deposes and says that I am the

_____of the _____ Corporation and that neither the

Bidder / Contractor nor any proposed subcontractor is identified on the Prohibited Entities List.

AIA Document A232™–2019 is adopted in this document by reference. Do not use with other general conditions unless this document is modified.

ELECTRONIC COPYING of any portion of this AIA® Document to another electronic file is prohibited and constitutes a violation of copyright laws as set forth in the footer of this document.

TABLE OF ARTICLES

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), Drawings, Specifications, Addenda issued prior to execution of this Agreement, other documents listed in this Agreement, and Modifications issued after execution of this Agreement, all of which form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. An enumeration of the Contract Documents, other than Modifications, appears in Article 9.

ARTICLE 2 THE WORK OF THIS CONTRACT

§ 2.1 The Contractor shall fully execute the Work described in the Contract Documents, except as specifically indicated in the Contract Documents to be the responsibility of others or reasonably inferable by the Contractor as necessary to produce the results intended by the Contract Documents.

§ 2.2 Except as expressly provided for in the Contract Documents to the contrary, the Contractor, at its sole cost, risk, and expense, shall construct, equip, provide purchase, pay for, and furnish all of the Work in accordance with the Contract Documents and governmental codes and regulations as they apply to performance of the Work.

§ 2.3 The Owner shall retain the right to review and make revisions to any subcontracts entered into between the Contractor and any Subcontractors to ensure that the Work being provided for the project is consistent with the terms and obligations of the prime contract and the Owner's wishes for the project. The Owner also reserves the right to appoint a Construction Manager and/or Architect to make changes to the Work being provided for the project which may be necessary to satisfy the Owner's expectations or to keep the project's timetable.

ARTICLE 3 DATE OF COMMENCEMENT AND DATES OF SUBSTANTIAL COMPLETION

§ 3.1 The date of commencement of the Work shall be the date of this Agreement unless a different date is stated below or provision is made for the date to be fixed in a notice to proceed issued by the Owner.
(Insert the date of commencement, if it differs from the date of this Agreement or, if applicable, state that the date will be fixed in a notice to proceed.)

«Date of Commencement shall be fixed in the Owner's notice to proceed, which is anticipated to be on or about June 1, 2020.»

If, prior to the commencement of the Work, the Owner requires time to file mortgages, mechanics' liens and other security interests, the Owner's time requirement shall be as follows:

§ 3.2 The Contract Time shall be measured from the date of commencement..

§ 3.2.1 Substantial Completion occurs when the Architect certifies that the Owner can occupy or use the project and a certificate of occupancy has been issued.

§ 3.3 The Contractor shall achieve Substantial Completion of the entire Work not later than «_____» («») days from the date of commencement, or as follows:
(Insert number of calendar days. Alternatively, a calendar date may be used when coordinated with the date of commencement. If appropriate, insert requirements for earlier Substantial Completion of certain portions of the Work.)

Portion of the Work	Substantial Completion Date
Substantial Completion Phase of the Project /including Owner Occupancy Punchlist Phase Shall be complete within 30 days of receipt from the Architect/Engineer with the exception of weather dependent punch list items such as final seeding, asphalt, etc. All punchlist items shall be complete by Project Closeout Phase	

, subject to adjustments of this Contract Time as provided in the Contract Documents.
(Insert provisions, if any, for liquidated damages relating to failure to achieve Substantial Completion on time or for bonus payments for early completion of the Work.)

« »

ARTICLE 4 CONTRACT SUM

§ 4.1 The Owner shall pay the Contractor the Contract Sum in current funds for the Contractor's performance of the Contract. The Contract Sum shall be one of the following:
(Check the appropriate box.)

[X] Stipulated Sum, in accordance with Section 4.2 below

(Based on the selection above, complete Section 4.2, 4.3 or 4.4 below. Based on the selection above, also complete either Section 5.1.4, 5.1.5 or 5.1.6 below.)

§ 4.2 Stipulated Sum

§ 4.2.1 The Stipulated Sum shall be XXXX, AND 00/100 DOLLARS ($ XXXX), subject to additions and deletions as provided in the Contract Documents.

§ 4.2.2 The Stipulated Sum is based on the following alternates, if any, which are described in the Contract Documents and are hereby accepted by the Owner:

(State the numbers or other identification of accepted alternates. If the bidding or proposal documents permit the Owner to accept other alternates subsequent to the execution of this Agreement, attach a schedule of such other alternates showing the amount for each and the date when that amount expires.)

«

§ 4.2.3 Unit prices, if any:
(Identify and state the unit price, and state the quantity limitations, if any, to which the unit price will be applicable.)

§ 4.2.4 Allowances included in the Stipulated Sum, if any:
(Identify allowance and state exclusions, if any, from the allowance price.)

ARTICLE 5 PAYMENTS

§ 5.1 Progress Payments

§ 5.1.1 Based upon Applications for Payment (including all supporting documentation) submitted to the Owner, the Architect, and the Construction Manager by the Contractor, and upon certification of the Project Application and Project Certificate for Payment or Application for Payment and Certificate for Payment by the Construction Manager and Architect and issuance by the Architect, and review and approval by the Owner, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided below and elsewhere in the Contract Documents.

.1 The Contractor's invoice shall contain, or have attached, sufficient supporting detail as reasonably required by the County to verify the claim, including:

.1 Reporting of wages and salaries paid to employees of the Contractor and subcontractors providing services to the County which may be accessed electronically at https://ulstercountyny.gov/purchasing/salaries-wages (a hard copy will be provided upon the Contractor's request); and

.2 Certification of wages in accordance with Article 23 (Ulster County Living Wage Act) which may be accessed electronically at https://ulstercountyny.gov/purchasing/living-wage-act (a hard copy will be provided upon the Contractor's request).

§ 5.1.2 The period covered by each Application for Payment shall be one calendar month ending on the last day of the month, or as follows:

§ 5.1.3 Provided that an Application for Payment is received by the Owner, the Architect, and the Construction Manager not later than the twentieth (20th) day of a month, the Owner shall make payment of the certified amount in the Application for Payment to the Contractor not later than the thirty (30 days after the Owner's receipt of certification of the payment application . If an Application for Payment is received by the Owner, the Architect, and the Construction Manager after the application date fixed above, payment shall be made by the Owner not later than thirty (30) days after the Owner's receipt of the certification of the Payment Application .
(Federal, state or local laws may require payment within a certain period of time.)

§ 5.1.4 Progress Payments Where the Contract Sum is Based on a Stipulated Sum

§ 5.1.4.1 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work and be prepared in such form and supported by such data to substantiate its accuracy as the Construction Manager and Architect may require. This schedule, unless objected to by the Construction Manager or Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment.

All line items in the schedule of values and in each Application for Payment shall include corresponding subdivisions from the Construction Specifications institute ("CSI") codes a sample of which is listed in Schedule A of this Agreement.

§ 5.1.4.2 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.4.3 Subject to the provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

§ 5.1.4.3.1

.1 Take that portion of the Contract Sum properly allocable to completed Work as determined by multiplying the percentage completion of each portion of the Work by the share of the total Contract Sum allocated to that portion of the Work in the schedule of values, less retainage of five percent (5%). Pending final determination of cost to the Owner of changes in the Work, amounts not in dispute may be included as provided in Section 7.3.9 of the General Conditions;;

.2 Add that portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction (or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing), less retainage of five percent (5%); and

.3 Subtract the aggregate of previous payments made by the Owner; and

.4 Subtract amounts, if any, for which the Construction Manager or Architect has withheld or nullified a Certificate for Payment as provided in Section 9.5 of the General Conditions.,

§ 5.1.4.4 The progress payment amount determined in accordance with Section 5.1.4.3 shall be further modified under the following circumstances:

.1 Add, upon Substantial Completion of the Work, a sum sufficiently equal to two (2) times the item value of punchlist work remaining of the Contract Sum, plus such amounts as the Construction Manager recommends and the Architect determines for incomplete Work and unsettled claims; and

.2 Add, if final completion of the Work is thereafter materially delayed through no fault of the Contractor, any additional amounts payable in accordance with Section 9.10.3 of the General Conditions.

§ 5.1.4.5 Reduction or limitation of retainage, if any, shall be as follows:
(If it is intended, prior to Substantial Completion of the entire Work, to reduce or limit the retainage resulting from the percentages inserted in Sections 5.1.4.3.1 and 5.1.4.3.2 above, and this is not explained elsewhere in the Contract Documents, insert here provisions for such reduction or limitation.)

§ 5.2 Final Payment

§ 5.2.1 Final payment, constituting the entire unpaid balance of the Contract Sum, shall be made by the Owner to the Contractor when

.1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Section 12.2 of AIA Document A232–2019, and to satisfy other requirements, if any, which extend beyond final payment; and

.2 the Contractor has submitted a final accounting for the Cost of the Work, pursuant to Exhibit A, Determination of the Cost of the Work when payment is on the basis of the Cost of the Work, with or without a Guaranteed Maximum payment; and

.3 a final Certificate for Payment or Project Certificate for Payment has been issued by the Architect; such final payment shall be made by the Owner not more than sixty (60) days after the issuance of the final Certificate for Payment or Project Certificate for Payment, or as follows:.

ARTICLE 6 DISPUTE RESOLUTION

§ 6.1 Initial Decision Maker

The Architect will serve as Initial Decision Maker pursuant to Section 15.3 of AIA Document A232–2019, unless the parties appoint below another individual, not a party to this Agreement, to serve as Initial Decision Maker.
(If the parties mutually agree, insert the name, address and other contact information of the Initial Decision Maker, if other than the Architect.)

§ 6.2 Binding Dispute Resolution

For any Claim subject to, but not resolved by, mediation pursuant to Section 15.3 of AIA Document A232–2019, the method of binding dispute resolution shall be as follows:
(Check the appropriate box.)

[ ] Litigation in a court of competent jurisdiction.

[ ] Other: *(Specify)*

If the Owner and Contractor do not select a method of binding dispute resolution below, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, Claims will be resolved by litigation in a court of competent jurisdiction.

[« »] Arbitration pursuant to Section 15.4 of AIA Document A232–2009.

[« X »] Litigation in a court of competent jurisdiction.

[« »] Other: *(Specify)*

ARTICLE 7 TERMINATION OR SUSPENSION

§ 7.1 Where the Contract Sum is a Stipulated Sum

§ 7.1.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A232–2019.

§ 7.1.2 The Work may be suspended by the Owner as provided in Article 14 of AIA Document A232–2019.

.)

ARTICLE 8 MISCELLANEOUS PROVISIONS

§ 8.1 Where reference is made in this Agreement to a provision of AIA Document A232–2019 or another Contract Document, the reference refers to that provision as amended or supplemented by other provisions of the Contract Documents.

§ 8.2 Payments due and unpaid under the Contract shall bear interest from the date payment is due at the rate stated below, or in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.
(Insert rate of interest agreed upon, if any.)

Zero (0 %)

§ 8.3 The Owner's representative:
(Name, address, email address, and other information)

Jacob Blosser»
«Ulster County Department of Public Works »
«317 Shamrock Lane »
«Kingston, New York 12401 »
«Phone 845-340-3140»
«e-mail jblo@co.ulster.ny.us

§ 8.4 The Contractor's representative:
(Name, address, email address, and other information)

§ 8.5 Neither the Owner's nor the Contractor's representative shall be changed without ten(10) days' prior notice to the other party.

§ 8.6 Other provisions:

.1 **CORPORATE COMPLIANCE**

The Contractor agrees to comply with all federal, state, and local laws, rules, and regulations governing the provision of goods and/or Services under this Agreement. In particular, the Contractor agrees to comply with the laws, rules and regulations of Ulster County, as well as with its Compliance Plan (the "Plan"). The Plan can be viewed at https://ulstercountyny.gov/ulster-county-compliance-plan. Alternatively, a hard copy of the Plan will be provided upon the Contractor's request. The Plan relates to the County's compliance with relevant federal and state fraud and abuse laws. The Contractor represents and warrants that it has read and understands the Plan and agrees to abide by its terms when delivering Services under this Agreement. The County may terminate this Agreement, in whole or in part, at any time for Contractor's failure to comply with the County's Compliance Plan. The Contractor shall ensure that each individual who provides such Services under this Agreement is provided with a copy of the Plan or given access to the Plan. The County strongly encourages all healthcare providers contracting with the County to implement their own compliance programs that address each of the elements of compliance recommended by the Office of the Inspector General, as well as the elements as recommended and/or mandated by the New York State Office of the Medicaid Inspector General.

The County will conduct appropriate screening of providers, independent contractors, vendors, and agents to ensure and verify that they have not been sanctioned and/or excluded by any federal or state law enforcement, regulatory, or licensing authority. The County will also verify that entities and businesses that provide and/or

perform Services for the County have not been the subject of adverse governmental actions and/or excluded from the federal healthcare programs.

TheContractor understands that the County has established and implemented a Corporate Compliance Program and has developed "Standards of Conduct for Ulster County Vendors and Contractors" (the "Standards"). The Standards can be accessed electronically at any time by going to https://ulstercountyny.gov/ulster-county-compliance-plan. Alternatively, a hard copy of the Standards will be provided upon the Contractor's request. The Contractor represents that it has read, understands and agrees to comply with the Standards with respect to its performance pursuant to this Agreement. The hotline for reporting violations of the Standards is (877) 569-8777

ARTICLE 9 ENUMERATION OF CONTRACT DOCUMENTS

§ 9.1 The Contract Documents, except for Modifications issued after execution of this Agreement are comprised of the following documents:

.1 AIA Document A132™–2019, Standard Form of Agreement Between Owner and Contractor, Construction Manager as Adviser Edition

.2 AIA Document A132™–2019, Exhibit A, Insurance and Bonds Exhibit

.3 AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition

.4 Drawings

Number	Title	Date

.5 Specifications

Section	Title	Date	Pages

.6 Addenda, if any:

Number	Date	Pages

Portions of Addenda relating to bidding or proposal requirements are not part of the Contract Documents unless the bidding or proposal requirements are also enumerated in this Article 9.

.7 Other Exhibits:
(Check all boxes that apply and include appropriate information identifying the exhibit where required.)

[ ] AIA Document A132™–2019, Exhibit B, Determination of the Cost of the Work

[ ] AIA Document E235™–2019, Sustainable Projects Exhibit, Construction Manager as Adviser Edition, dated as indicated below:
(Insert the date of the E235-2019 incorporated into this Agreement.)

[ ] The Sustainability Plan:

Title	Date	Pages

[ ] Supplementary and other Conditions of the Contract:

Document	Title	Date	Pages

.8 Other documents, if any, listed below:
(List here any additional documents that are intended to form part of the Contract Documents. AIA Document A232–2019 provides that the bidding requirements such as the advertisement or invitation to bid, Instructions to Bidders, sample forms, and the Contractor's bid, are not part of the Contract Documents unless enumerated in this Agreement. Any such documents should be listed here only if intended to be part of the Contract Documents.)

ARTICLE 10 INSURANCE AND BONDS
The Contractor shall purchase and maintain insurance and provide bonds as set forth in Article 11 of AIA Document A232–2009.
(State bonding requirements, if any, and limits of liability for insurance required in Article 11 of AIA Document A232–2009.)

Type of Insurance or Bond	Limit of Liability or Bond Amount ($0.00)
AIA A310-2010 Bid Bond	Five Percent (5%) of attached bid.
AIA A312-2010 Performance and Payment Bond	Contract Price as Awarded

(Rev. 6-01-19)

PLEASE BRING THESE INSURANCE REQUIREMENTS TO YOUR INSURANCE AGENT TO ENSURE PROPER COVERAGE AND LIMITS ARE IN PLACE. FAILURE TO PROVIDE CERTIFICATE(S) OF INSURANCE EVIDENCING REQUIREMENTS BELOW, SHALL DELAY CONTRACT EXECUTION.

SCHEDULE C
COUNTY OF ULSTER CONTRACT INSURANCE REQUIREMENTS

I. CONDITIONS OF INSURANCE
Unless otherwise authorized by the Ulster County Insurance Officer, strict adherence to this schedule is required. Any deviation without prior authorization from the County's Insurance Department will result in a delay in the finalization of this Agreement.

The Contractor shall submit copies of any or all required insurance documents as and when requested by the County. Upon policy renewal, the Contractor shall submit updated insurance policy information.

II. CERTIFICATES OF INSURANCE
The Contractor shall file with the County's Insurance Department, prior to commencing work under this Agreement, all proper Certificates of Insurance.

The Certificates of Insurance shall include:

a. Name and address of Insured
b. Issue date of certificate
c. Insurance company name
d. Type of coverage in effect
e. Policy number
f. Inception and expiration dates of policies included on the certificate
g. Limits of liability for all policies included on the certificate
h. "Certificate Holder" for all certificates shall be the County of Ulster, P.O. Box 1800, Kingston, New York 12402-1800.

If the Contractor's insurance policies should be non-renewed or canceled, or should expire during the life of this Agreement, the County shall be provided with a new certificate indicating the replacement policy information as requested above. The County requires thirty (30) days prior written notice of cancellation [ten (10) days for non-payment of premium] from the Insurer, its agents or representatives.

The Contractor agrees to indemnify the County of Ulster for any applicable deductibles and self-insured retentions.

III. WORKERS' COMPENSATION AND DISABILITY INSURANCE

The Contractor shall take out and maintain during the life of this Agreement, Workers' Compensation (WC) Insurance and Disability Benefits (DB) Insurance, for all of its employees employed at the site of the project, and shall provide Certificates of Insurance evidencing this coverage to the County's Insurance Department.

If the Contractor is not required to carry such insurance, the Contractor must submit form CE-200 attesting to the fact that it is exempt from providing WC and/or DB Insurance coverage for all of its employees.

The manner of proof related to WC and DB Insurance is controlled by New York State Laws, Rules and Regulations. "ACORD" forms are not acceptable proof of WC and/or DB Insurance.

IV. WORKERS' COMPENSATION REQUIREMENTS

To assist the State of New York and municipal entities in enforcing WCL Section 57, a business entity (the Contractor) seeking to enter into a contract with a municipality (the County) must provide one of the following forms to the municipal entity with which it is entering into a contract including a Waiver of Subrogation Endorsement. The Contractor should contact their insurance agent to obtain acceptable proof of WC coverage:

- Form C-105.2 – "Certificate of NYS Workers' Compensation Insurance" **or**
- Form U-26.3 – "Certificate of Workers' Compensation Insurance" issued by the New York State Insurance Fund **or**
- Form SI-12 – "Affidavit Certifying that Compensation has Been Secured" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured **or**
- Form GSI-105.2 – "Certificate of Participation in Workers' Compensation Group Self-Insurance" issued by the Self-Insurance administrator of the group **or**
- Form GSI-12 – "Certificate of Group Workers' Compensation Group Self-Insurance" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured.

If the Contractor is not required to carry WC coverage, it must submit Form CE-200, "Certificate of Attestation of Exemption" from New York State Workers' Compensation and/or Disability Benefits Insurance Coverage. This form and the instructions for completing it are available at http://www.wcb.ny.gov

V. DISABILITY BENEFITS REQUIREMENTS

To assist the State of New York and municipal entities in enforcing WCL Section 220(8), a business entity (the Contractor) seeking to enter into a contract with a municipality (the County) must provide one of the following forms to the municipal entity it is entering into a contract with. The Contractor should contact their insurance agent to obtain acceptable proof of DB Insurance Coverage:

- Form DB-120.1 – "Certificate of Insurance Coverage Under the NYS Disability Benefits Law" **or**
- Form DB-155 – "Compliance with Disability Benefits Law" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured.

If the Contractor is not required to carry DB Insurance coverage, it must submit Form CE-200, "Certificate of Attestation of Exemption" from New York State Workers' Compensation and/or Disability Benefits Insurance Coverage. This form and the instructions for completing it are available at http://www.wcb.ny.gov

VI. COMMERCIAL GENERAL LIABILITY INSURANCE

The Contractor shall take out and maintain during the life of this Agreement, such bodily injury liability and property

damage liability insurance as shall protect it and the County from claims for damages for bodily injury including accidental death, as well as from claims for property damage that may arise from operations under this Agreement, whether such operations be by the Contractor, by any subcontractor, or by anyone directly or indirectly employed by either of them.

It shall be the responsibility of the Contractor to maintain such insurance in amounts sufficient to fully protect itself and the County, but in no instance shall amounts be less than the minimum acceptable levels of coverage set forth below:

- Bodily Injury and Property Damage Liability Insurance in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** for each occurrence, and in an amount not less than **FOUR MILLION AND 00/100 ($4,000,000.00) DOLLARS** general aggregate.

Other Conditions of Commercial General Liability Insurance:

a. Coverage shall be written on Commercial General Liability form.
b. Coverage shall include:
    1. Contractual Liability
    2. Independent Contractors
    3. Products and Completed Operations
    4. Pollution Liability when required
    5. Owners and Contractors Protective Liability
c. "Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York, 12402-1800", shown on the Commercial General Liability policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

VII. UMBRELLA LIABILITY OR EXCESS LIABILITY INSURANCE

Umbrella Liability or Excess Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS**.

NOTE: As long as all minimum underlying limits have been met, insurance limits may be a total combined limit of the Umbrella/Excess Liability limits and the underlying liability insurance limits.

The Umbrella/Excess Liability coverage MUST be written on a follow-form (drop down) basis to the underlying insurance coverage with no additional exclusions.

"Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York, 12402-1800", shown on the Umbrella policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

VIII. AUTOMOBILE LIABILITY INSURANCE

Automobile Bodily Injury Liability and Property Damage Liability Insurance shall be provided by the Cntractor, with a minimum Combined Single Limit (CSL) of **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS.**

Coverage shall include:

a. All owned vehicles
b. Any hired automobile
c. Any non-owned automobile
d. "Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York, 12402-1800", shown on the Auto Liability policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

IX. POLLUTION LIABILITY INSURANCE

[X] If this box is checked, Pollution Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000) DOLLARS** for each occurrence and in an amount of not less than **FIVE MILLION AND 00/100 ($5,000,000) DOLLARS** general aggregate.

X. PROFESSIONAL LIABILITY INSURANCE (e.g. MALPRACTICE, MEDIA LIABILITY, ERRORS & OMISSIONS INSURANCE)

[ ] If this box is checked, Professional Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS** for each occurrence and in an amount of not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS** general aggregate.

XI. RIGGERS LIABILITY INSURANCE

[X] If this box is checked, Riggers Liability Insurance shall be provided by the Contractor in an amount not less than **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS** for each occurrence and in an amount of not less than **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS** general aggregate.

XII XCU (Explosion, Collapse, and Underground) Endorsement/Commercial General Liability Coverage:

[ ] If this box is checked, an Explosion, Collapse, and Underground Endorsement shall be provided by the Contractor in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** for each occurrence, and in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** general aggregate.

This Agreement is entered into as of the day and year first written above.+

OWNER'S REPRESENTATIVE:
(Architect, Engineer or other party:)

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Section 3.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after

.1 the Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Section 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

.2 the Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

.3 the Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

§ 4 Failure on the part of the Owner to comply with the notice requirement in Section 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

§ 5 When the Owner has satisfied the conditions of Section 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

§ 5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

§ 5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

§ 5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Section 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

§ 5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances:

.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

§ 6 If the Surety does not proceed as provided in Section 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Section 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

§ 7 If the Surety elects to act under Section 5.1, 5.2 or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication, for

.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

.2 additional legal, design professional and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Section 5; and

.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

§ 8 If the Surety elects to act under Section 5.1, 5.3 or 5.4, the Surety's liability is limited to the amount of this Bond.

§ 9 The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors and assigns.

§ 10 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 11 Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 12 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

§ 13 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 14 Definitions

§ 14.1 Balance of the Contract Price. The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made, including allowance to the Contractor of any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

§ 14.2 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

§ 14.3 Contractor Default. Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

§ 14.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 14.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 15 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

§ 16 Modifications to this bond are as follows:

OWNER'S REPRESENTATIVE:
(Architect, Engineer or other party:)

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner to pay for labor, materials and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference, subject to the following terms.

§ 2 If the Contractor promptly makes payment of all sums due to Claimants, and defends, indemnifies and holds harmless the Owner from claims, demands, liens or suits by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract, then the Surety and the Contractor shall have no obligation under this Bond.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation to the Owner under this Bond shall arise after the Owner has promptly notified the Contractor and the Surety (at the address described in Section 13) of claims, demands, liens or suits against the Owner or the Owner's property by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract and tendered defense of such claims, demands, liens or suits to the Contractor and the Surety.

§ 4 When the Owner has satisfied the conditions in Section 3, the Surety shall promptly and at the Surety's expense defend, indemnify and hold harmless the Owner against a duly tendered claim, demand, lien or suit.

§ 5 The Surety's obligations to a Claimant under this Bond shall arise after the following:

§ 5.1 Claimants, who do not have a direct contract with the Contractor,

.1 have furnished a written notice of non-payment to the Contractor, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and

.2 have sent a Claim to the Surety (at the address described in Section 13).

§ 5.2 Claimants, who are employed by or have a direct contract with the Contractor, have sent a Claim to the Surety (at the address described in Section 13).

§ 6 If a notice of non-payment required by Section 5.1.1 is given by the Owner to the Contractor, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Section 5.1.1.

§ 7 When a Claimant has satisfied the conditions of Sections 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:

§ 7.1 Send an answer to the Claimant, with a copy to the Owner, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and

§ 7.2 Pay or arrange for payment of any undisputed amounts.

§ 7.3 The Surety's failure to discharge its obligations under Section 7.1 or Section 7.2 shall not be deemed to constitute a waiver of defenses the Surety or Contractor may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Section 7.1 or Section 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

§ 8 The Surety's total obligation shall not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Section 7.3, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

§ 9 Amounts owed by the Owner to the Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, under any construction performance bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfy obligations of the Contractor and Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

§ 10 The Surety shall not be liable to the Owner, Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to, or give notice on behalf of, Claimants or otherwise have any obligations to Claimants under this Bond.

§ 11 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 12 No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the project that is the subject of the Construction Contract is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Section 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 13 Notice and Claims to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, shall be sufficient compliance as of the date received.

§ 14 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 15 Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor and Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

§ 16 Definitions

§ 16.1 Claim. A written statement by the Claimant including at a minimum:

- **.1** the name of the Claimant;
- **.2** the name of the person for whom the labor was done, or materials or equipment furnished;
- **.3** a copy of the agreement or purchase order pursuant to which labor, materials or equipment was furnished for use in the performance of the Construction Contract;
- **.4** a brief description of the labor, materials or equipment furnished;
- **.5** the date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Construction Contract;
- **.6** the total amount earned by the Claimant for labor, materials or equipment furnished as of the date of the Claim;
- **.7** the total amount of previous payments received by the Claimant; and
- **.8** the total amount due and unpaid to the Claimant for labor, materials or equipment furnished as of the date of the Claim.

§ 16.2 Claimant. An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials or equipment for use in the performance of the Construction Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Project is located. The intent of this Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials or equipment were furnished.

§ 16.3 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and all changes made to the agreement and the Contract Documents.

§ 16.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 16.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 17 If this Bond is issued for an agreement between a Contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

§ 18 Modifications to this bond are as follows:

12 UNCOVERING AND CORRECTION OF WORK

13 MISCELLANEOUS PROVISIONS

14 TERMINATION OR SUSPENSION OF THE CONTRACT

15 CLAIMS AND DISPUTES

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents. The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement, and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive, or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid, Instructions to Bidders, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's bid or proposal, or portions of addenda relating to bidding requirements.

§ 1.1.2 The Contract. The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and the Construction Manager or the Construction Manager's consultants, (3) between the Owner and the Architect or the Architect's consultants, (4) between the Contractor and the Construction Manager or the Construction Manager's consultants, (5) between the Owner and a Subcontractor or Sub-subcontractor (6) between the Construction Manager and the Architect, or (7) between any persons or entities other than the Owner and Contractor. The Construction Manager and Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of their duties.

§ 1.1.3 The Work. The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by the Contractor to fulfill the Contractor's obligations. The Work may constitute the whole or a part of the Project.

§ 1.1.4 The Project. The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by other Multiple Prime Contractors, and by the Owner's own forces, including persons or entities under separate contracts not administered by the Construction Manager.

§ 1.1.5 The Drawings. The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules, and diagrams.

§ 1.1.6 The Specifications. The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

§ 1.1.7 Instruments of Service. Instruments of Service are representations, in any medium of expression now known or later developed, of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include, without limitation, studies, surveys, models, sketches, drawings, specifications, and other similar materials.

§ 1.1.8 Initial Decision Maker. The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2, and certify termination of the Agreement under Section 14.2.2.

1.1.9 Approved When the words "approved," "satisfactory," "proper," or "as directed" are used, approval by the Architect shall be understood.

1.1.10 Provide When the word "provide," including derivatives, is used, it shall mean to fabricate properly, complete transport, deliver, install, erect, construct, test, and furnish all labor, materials, equipment, apparatus, appurtenances, and all other items necessary to properly complete in place, ready for operations or use under the terms of the Specifications.

1.1.11 Addenda Addenda are written or graphic instruments issued prior to the execution of the Contract that modify or interpret the bidding documents, including the Drawings and Specifications, by additions, deletions, clarifications, or corrections.

1.1.12 Bulletins Bulletins are written or graphic instruments issued by the Architect after the execution of the Contract that request a proposal from the Contractor that, if accepted by the Owner, will cause the execution of a Change Order to modify the Contract Documents.

1.1.13 Knowledge The terms "knowledge," "recognize," and "discover," their respective derivatives, and similar terms in the Contract Documents, as used in reference to the Contractor, shall mean that which the Contractor knows (or should know), recognizes (or should recognize) and discovers (or should discover) in exercising the care, skill, and diligence required by the Contract Documents. Analogously, the expression "reasonably inferable" and similar terms in the Contract Documents shall be interpreted to mean reasonably inferable by a contractor exercising the care, skill, and diligence required of the Contractor by the Contract Documents.

1.1.14 Project Manual The Project Manual is a volume assembled for the work that includes the Instructions to Bidders, Supplementary Instructions to Bidders, General Conditions, Supplementary General Conditions, the Specifications, and all Addenda issued prior to execution of the Contract. When required by the Agreement, the Project Manual will additionally include bidding requirements and documents and sample forms

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

.1 In the event of conflicts or discrepancies among the Contract Documents, interpretations shall be based on the following priorities:

a) The Agreement
b) Addenda, with those of later date having precedence of those of earlier date.
c) The Supplementary Conditions
d) The General Conditions of the Contract for Construction.
e) Division 1 of the Specifications.
f) Drawings and other Divisions 2-34 the Specifications.
g) In the case of conflicts or discrepancies between Drawings and Divisions 2-34 the Specifications or within either Document not clarified by addendum, the higher quality and/or greater quantity shall govern.

.2 On the Drawings, given dimensions shall take precedence over scaled measurements and large-scale Drawings over small-scale Drawings.

.3 Before ordering any materials or doing any work, the Contractor and each Subcontractor shall verify measurements at the Project Site and shall be responsible for the correctness of such measurements. No extra charge or compensation will be allowed on account of differences between actual dimensions and the dimensions indicated on the drawings. Any difference which may be found shall be submitted to the Architect for resolution before proceeding with the Work.

.4 If a minor change in the Work is found necessary due to actual field conditions, the Contractor shall submit detailed drawings of such departure for the approval by the Architect before making the change

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

Instructions and other information furnished in the Specifications, including, without limitation, items in connection with prefabricated or pre-finished items, are not intended to supersede work agreements between employers and employees. Should the Specifications conflict with such work agreements, the work agreements shall be followed, provided such items are provided and finished as specified. If necessary, such Work shall be performed on the Project site, instead of at the shop, by appropriate labor and in accordance with the requirements of the Drawings and Specifications.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.2.4 The reference of the "Specifications" regarding the division or separation of the work among types of trades or occupations is only for the suggested purpose of coordinating the work of the different trades, etc. but it shall be the Contractor's entire responsibility for the proper coordination and completion of all the work described in the "Specifications" whether performed by the Contractor or Subcontractors, if any.

§ 1.3 Capitalization
Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation
In the interest of brevity the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.5 Ownership and Use of Drawings, Specifications, and Other Instruments of Service
§ 1.5.1 The Owner shall be deemed the sole author and owner of the Instruments of Service, including the Drawings and Specifications, and will retain all common law, statutory, and other reserved rights, including copyrights. The Contractor, Subcontractors, sub-subcontractors, and material or equipment suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with this Project is not to be construed as publication in derogation of the Owner's reserved rights.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors, and material or equipment suppliers are authorized to use and reproduce the Instruments of Service provided to them, solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and material or equipment suppliers may not use the Instruments of Service on other projects or for additions to this Project outside the scope of the Work without the specific written consent of the Owner, Architect, and the Architect's consultants.

§ 1.6 Transmission of Data in Digital Form
§ 1.6.1 The Architect may, at the Architect's sole discretion, furnish electronic versions of some of the Instruments of Service to the Contractor. The Contractor shall comply with any conditions set by the Architect for the use of these electronic documents, including compensation to the Architect or the Architect's consultants. The Contract Documents shall take precedence over any electronic versions of the Instruments of Service that are furnished to the Contractor. The Contractor shall be responsible for identifying and correlating any discrepancies between the Contract Documents, approved submittals, changes in the Work, field conditions and any electronic versions of the Instruments of Service.

§ 1.6.2 The Contractor shall not transfer or reuse electronic versions of the Instruments of Service in electronic or machine readable form without the prior written consent of the Architect and the Owner.

§ 1.7 Digital Data Use and Transmission
The parties shall agree upon written protocols governing the transmission and use of, and reliance on, Instruments of Service or any other information or documentation in digital form.

§ 1.8 Confidentiality
§ 1.8.1 For purposes of this section:

A. The term "Confidential Information" as used herein, means all material and information, whether written or oral, received by the Contractor from or through the Owner or any other person connected with the Owner, or developed, produced, or obtained by the Contractor in connection with its performance of Services under this Agreement. Confidential Information will include, but not be limited to: samples, substances and other materials, conversations, correspondence, records, notes, reports, plans, drawings, specifications and other documents in draft or final form, including any documentation or data relating to the results of any investigation, testing, sampling in laboratory or other analysis, and all conclusions, interpretations, recommendations, and/or comments relating thereto.

B. The term "Contractor" as used in this section includes all officers, directors, employees, agents, subcontractors, assignees, or representatives of the Contractor.

The Contractor shall keep all Confidential Information in a secure location within the Contractor's offices. The Owner will have the right, but not the obligation, to enter the Contractor's offices in order to inspect the arrangements of the Contractor for keeping Confidential Information secure. The Owner's inspection, or its failure to inspect, will not relieve the Contractor of its responsibilities pursuant to this section.

The Contractor shall hold Confidential Information in trust and confidence, and must not disclose Confidential Information, or any portion thereof, to anyone other than the Owner without the prior written consent of the Executive or the Purchasing Director, and must not use Confidential Information, or any portion thereof, for any purpose whatsoever except in connection with its performance of the Services under this Agreement.

The Contractor shall notify the Owner immediately upon its receipt of any request by anyone other than the Owner for, or any inquiry related to, Confidential Information. The Contractor is not prohibited from disclosing portions of Confidential Information if and to the extent that: (i) such portions have become generally available to the public other than by an act or omission of the Contractor, or (ii) disclosure of such portions is required by subpoena, warrant, or court order; provided, however, that in the event anyone other than the Owner requests all or a portion of Confidential Information, the Contractor shall oppose such request and cooperate with the Owner in obtaining a protective order or other appropriate remedy, unless and until the Executive or the Purchasing Director, upon consultation with the Ulster County Attorney, in writing, waives compliance with the provisions of this section, or determines that disclosure is legally required. In the event that such protective order or other remedy is not obtained, or the Owner waives compliance with this section, or determines that such disclosure is legally required, the Contractor shall disclose only such portions of Confidential Information that, in the opinion of the Owner, the Contractor is legally required to disclose, and the Contractor shall use its best efforts to obtain from the party to whom Confidential Information is disclosed, written assurance that confidential treatment will be given to any such Confidential Information disclosed, to the extent permitted by law.

Prior to the performance of any of the Services in connection with this Agreement, the Contractor shall obtain from each of its subcontractors, a confidentiality agreement running to the benefit of the Owner that is substantively identical to this section. Further, at any time, if requested by the Owner, the Contractor shall obtain such an agreement from the officers, directors, agents, representatives, or employees of the Contractor and/or any of its subcontractors.

§ 1.8.2 Notwithstanding any other provision herein to the contrary:

A. All Confidential Information, as defined in section § 1.8.1, including all copies thereof, is the exclusive property of the Owner regardless of whether or not it is delivered to the Owner. The Contractor shall deliver Confidential Information and all copies thereof to the Owner upon request.

B. To the extent that copies of Confidential Information are authorized by the Owner to be retained by the Contractor, such information shall be retained in a secure location in the Contractor's office for a period of six (6) years after completion of the Services, or termination of this Agreement, whichever occurs later, and thereafter disposed of at the Owner's direction

§ 1.8 Building Information Models Use and Reliance

Any use of, or reliance on, all or a portion of a building information model without agreement to written protocols governing the use of, and reliance on, the information contained in the model shall be at the using or relying party's sole risk and without liability to the other party and its contractors or consultants, the authors of, or contributors to, the building information model, and each of their agents and employees.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Article 4 the Construction Manager and the Architect do not have such authority. The term "Owner" means the Owner or the Owner's authorized representative.

§ 2.1.2 The Owner shall furnish to the Contractor, within fifteen days after receipt of a written request, information necessary and relevant for the Contractor to evaluate, give notice of, or enforce mechanic's lien rights. Such information shall include a correct statement of the record legal title to the property on which the Project is located, usually referred to as the site, and the Owner's interest therein.

§ 2.2 Information and Service Required of the Owner

§ 2.2.1 Prior to commencement of the Work, the Contractor may request in writing that the Owner provide reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract. Thereafter, the Contractor may only request such evidence if .(1) the Owner fails to make payments to the Contractor as the Contract Documents require; (2) a change in the Work materially changes the Contract Sum; or (3) the Contractor identifies in writing a reasonable concern regarding the Owner's ability to make payment when due. The Owner shall furnish such evidence as a condition precedent to commencement or continuation of the Work or the portion of the Work affected by a material change. After the Owner furnishes the evidence, the Owner shall not materially vary such financial arrangements without prior notice to the Contractor.

§ 2..2.2 Except for permits and fees that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner shall secure and pay for necessary approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities. Unless otherwise provided under the Contract Documents, the Owner, through the Construction Manager, shall secure and pay for the building permit.

§ 2.2.3 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site. The Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2..2.4 The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services.

§ 2..2.5 The Contractor shall be furnished, free of charge, electronic versions of the Contract Documents, including Drawings, Project Manuals, and Addenda, which the Contractor may use for printing purposes as needed for the execution of the work. .

§ 2..2.6 The Owner shall endeavor to forward all communications to the Contractor through the Construction Manager and shall provide, within a reasonable time thereafter, the same communications to the Architect about matters arising out of or relating to the Contract Documents.

§ 2.2.7 The Owner shall procure and bear costs of Special Inspections and any other testing or inspections indicated by the Contract Documents as the Owner's responsibility. The Owner shall not be responsible for the costs of any testing or inspections indicated by the Contract Documents as the Contractor's responsibility. All additional costs incurred by Owner for retesting of failed products, systems or installed Work shall be paid by contractor causing defects

§ 2.3 Owner's Right to Stop the Work

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents,as determined by the Construction Manager, Architect, or the Owner, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity, except to the extent required by Section 6.1.3.

§ 2.4 Owner's Right to Carry Out the Work

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a seven (7)day period after receipt of written notice from the Construction Manager, Architect, or Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such deficiencies. In such case an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the reasonable cost of correcting such

deficiencies, including Owner's expenses and compensation for the Construction Manager's and Architect's and their respective consultants' additional services made necessary by such default, neglect, or failure. Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect, after consultation with the Construction Manager. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner.

2.5 Extent of Owner Rights

2.5.1 The rights stated in this Article 2 and elsewhere in the Contract Documents are cumulative and not in limitation of any rights of the Owner or Construction Manager (i) granted in the Contract Documents, (ii) at law, or (iii) in equity.

2.5.2 In no event shall the Owner or Construction Manager have control over, charge of, or any responsibility for construction means, methods, techniques, sequences, or procedures or for safety precautions and programs in connection with the Work, notwithstanding any of the rights and authority granted the Owner or the Construction Manager in the Contract Documents.

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

In performing the Work and incurring expenses under this Contract, the Contractor shall operate as, and have the status of, an independent contractor and shall not act as agent, or be an agent of the Owner. As an independent contractor, the Contractor shall be solely responsible for determining the means and methods of performing the Work and shall have complete charge and responsibility for the Contractor's personnel engaged in the performance of the same.

In accordance with such status as independent contractor, the Contractor covenants and agrees that neither it, nor its employees or agents, will hold themselves out as, nor claim to be officers or employees of the Owner, or of any department, agency or unit thereof by reason hereof, and that they will not by reason hereof make any claim, demand or application to or for any right or privilege applicable to an officer or employee of the Owner including, but not limited to Workers' Compensation coverage, health coverage, Unemployment Insurance benefits, Social Security coverage or employee retirement membership or credit.

§ 3.1.2 The plural term "Multiple Prime Contractors" refers to persons or entities who perform construction under contracts with the Owner that are administered by the Construction Manager. The term does not include the Owner's own forces, including persons or entities under separate contracts not administered by the Construction Manager.

§ 3.1.3 The Contractor shall perform the Work in accordance with the Contract Documents. The Contractor specifically represents and covenants that it, its officers, employees, agents, servants consultants and sub-contractors have and shall possess the necessary and required licenses, experience, knowledge and character to qualify the Contractor and/or officers, employees, agents, servants consultants and sub-contractors for the particular duties they perform.

> **§ 3.1.3.1** Work performed by all Sub-Contractors of the General Construction Contractor shall be limited to 75% aggregate of the Prime Contract.
>
> **§ 3.1.3.2** Work performed by all Sub-Contractors of other trade Contractors shall be limited to 50% aggregate of the Prime Contract.

§ 3.1.4 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Construction Manager or Architect in their administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.1.5 The Contractor shall not assign any of its rights, interests or obligations for the Work without the prior express written consent of the Owner and the Architect. Any assignment, transfer, conveyance or other disposition without such prior consent shall be void and any Work provided thereunder will not be compensated. Any subcontract or assignment properly consented to by the Owner or Architect shall be subject to all of the terms and conditions of this Contract. Any

assignment of this Agreement shall not relieve the assignor of its obligations hereunder. All provisions shall be binding upon and inure to the benefit of the respective successors and assignees to the same extent as if each such successor or assignee were named as a party to this Agreement.

Failure of the Contractor to obtain any required consent to any assignment, shall be grounds for termination for cause at the option of the Owner, and if this Contract be so terminated, the Owner shall thereupon be relieved and discharged from any further liability and obligation to the Contractor, its assignees, or transferees; and all monies that may become due shall be forfeited to the Owner, except so much thereof as may be necessary to pay the Contractor's employees for past Work.

.1 Sale of stock constituting controlling interest of Contractor's company shall be deemed to be an assignment for purposes of this Agreement.

§ 3.1.6 The prior written approval of the Owner is required before the Contractor, or any of its employees, representatives, servants, agents, assignees or subcontractors may, at any time, either during or after completion or termination of this Contract, make any statement to the media or issue any material for publication bearing on the Work performed or data collected in connection with this Contract.

If the Contractor, or any of its employees, representatives, servants, agents, assignees or subcontractors desires to publish a work dealing with any aspect under this Contract, or of the results or accomplishments attained in such performance, they must first obtain the prior written permission of the Owner which, unless otherwise agreed to in said written permission, will entitle the Owner to have a royalty fee and a non-exclusive and irrevocable license to reproduce, publish or otherwise use, and to authorize others to use such publication.

§3.1.7 Owner may assign this Agreement to any subsequent owner of the Project, a construction lender, or any subsequent Architect or other person or entity fulfilling all or substantially all of the obligations of Owner.

§3.1.8 Contractor agrees to perform all of its obligations hereunder for any subsequent owner of the Project, any mortgagee in possession, construction lender, surety or other person designated by any such mortgage in possession, construction lender, surety or any of their assigns to complete the Project.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents.

Prior to execution of the Agreement, the Contractor and each Subcontractor have evaluated and satisfied themselves as to the conditions and limitations under which the Work is to be performed, including, without limitation, (i) the location, condition, layout, and nature of the Project site and surrounding areas, (ii) generally prevailing climatic conditions, (iii) anticipated labor supply and costs, (iv) availability and cost of materials, tools, and equipment, and (v) other similar issues. The Owner assumes no responsibility or liability for the physical condition or safety of the Project site or any improvements located on the Project site. Except as set forth in Section 10.3, the Contractor shall be solely responsible for providing a safe place for the performance of the Work. The Owner shall not be required to make any adjustment in either the Contract Sum or the Contract Time in connection with any failure by the Contractor or any Subcontractor to have complied with the requirements of this Section 3.2.1.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.2.3, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the design information contained in the Contract Documents; however, the Contractor shall promptly report to the Construction Manager and Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information submitted to the Construction Manager in such form as the Construction Manager and Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents. The Contractor shall be held responsible for any cost or delay resulting from the Contractor's failure to obtain or heed the Architect's clarifications or instructions concerning any discovered error, discovered omission, discovered discrepancy or discovered inconsistency

§ 3.2.2 1. The exactness of grades, elevations, dimensions, or locations given on any Drawings issued by the Architect, or the work installed by other contractors, is not guaranteed by the Construction Manager, Architect, or the Owner.

§ 3.2.2 2. The Contractor shall, therefore, satisfy itself as to the accuracy of all grades, elevations, dimensions, and locations. In all cases of interconnection of its Work with existing or other work, it shall verify at the site all dimensions relating to such existing or other work. Any errors due to the Contractor's failure to so verify all such grades, elevations, dimensions, or locations shall be promptly rectified by the Contractor without any additional cost to the Owner.

§ 3.2.3 The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, but the Contractor shall promptly report to the Construction Manager and Architect any nonconformity discovered by or made known to the Contractor as a request for information submitted to Construction Manager in such form as the Construction Manager and Architect may require.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to Sections 3.2.2 or 3.2.3, the Contractor shall make Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner, as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.

§ 3.2.5 The Owner shall be entitled to deduct from the Contract Sum any additional amounts paid to the Architect to evaluate and respond to the Contractor's requests for information where such information was readily available to the Contractor from a study and comparison of the Contract Documents, field conditions, or prior Project correspondence or documentation.

§ 3.2.6 Except as to any reported errors, inconsistencies or omissions, and except as to concealed or unknown conditions, by executing the Agreement, the Contractor represents the following to the Owner, Owner's Authorized Representative, Agent or the Architect:

.1 The Contract Documents are sufficiently complete and detailed for the contractor to perform the Work required and to comply with all the requirements of the Contract Documents.

.2 The Work required by the Contract Documents, including, without limitation, all construction details, construction means, methods, procedure and techniques necessary to perform the Work, use of materials, selection of equipment and requirements of product manufacturers are consistent with: (1) good and sound practices within the construction industry; (2) generally prevailing and accepted industry standards applicable to Work; (3) the requirements of any warranties applicable to the Work; and (4) all laws, ordinances, regulations, rules and orders which bear upon the Contractor's performance of the Work.

§ 3.2.7 If the Contractor, during the progress of the work, discovers any discrepancies between the Drawings and the Specifications, errors and/or omissions on the Drawings, or any discrepancies between physical condition of the work and the Drawings, he shall immediately notify the Architect in writing who shall promptly adjust same. Whether or not an error is believed to exist, deviations from the Drawings and dimensions given thereon shall be made only after approval in writing is obtained from the Architect. Any work performed after such discovery without the approval of the Architect shall be at the Contractor's risk and expense.

§ 3.2.8 Whenever the Drawings show existing or other construction not required as part of the Contract Work, it is understood that it is so shown as a matter of information and that the Owner, while believing such information to be substantially correct, assumes no responsibility thereof. The Contractor shall become familiar with all conditions affecting the nature and manner of conducting the work

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and, except as stated below, shall be fully and solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely written notice to the Owner, the Construction Manager, and the Architect, and shall not proceed with that portion of the Work without further written instruction from the Owner and Architect through the Construction Manager.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

§ 3.3.3 The Contractor shall be responsible for inspection of portions of the Project already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.3.4 Where equipment lines of piping and/or conduit are shown diagrammatically, the Contractor shall be responsible for the coordination and orderly arrangement of the various lines of exposed piping and conduit included in the Work of his/her Contract. The Contractor shall coordinate the work of several Subcontractors and prevent all interferences between equipment, lines of piping, architectural features, and avoid any unsightly arrangements in the exposed work.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work authorized by the Architect in accordance with Sections 3.12.8 or 7.4, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect, in consultation with the Construction Manager, and in accordance with a Change Order or Construction Change Directive. By making requests for substitution, the Contractor:

.1 represents that the Contractor has personally investigated the proposed substitute product and determined it is equal or superior in all respects to the specified;

.2 represents that the Contractor will provide the same warranty for the substitution that the Contractor would for that specified;

.3 certifies that the cost data represented is complete and includes all related costs under this Contract except the Architects redesign costs, and waives all claims for additional costs related to the substitution which subsequently become apparent;

.4 will coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects; and

.5 the Contractor understands the Owner shall be entitled to deduct from the Contract Sum amounts paid to the Architect to evaluate the Contractor's proposed substitutions and to make agreed-upon changes in the Drawings and Specifications made necessary by the Owner's acceptance of such substitutions. This amount will be determined by the Architect when submission is made and before any additional work is performed by the Architect in regards to the substitution to allow the Contractor the option of going forward with said proposal consideration or not.

.6 If a substitution effects the work of another trade contractor, the potential costs thereof shall be borne by the contractor requesting the substitution.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them.

§3.4.4 All material placed on the Project site by Contractor and not paid for by Owner prior to its incorporation into the Project shall be owned by Contractor. Materials placed on the site and not yet incorporated into the project by the Contractor which is paid for by Owner, shall be subject to the requirements in section 3.13.3.

§ 3.4.5 The Contractor shall only employ or use labor in connection with the Work capable of working harmoniously with all trades, crafts, and any other individuals associated with the Project. The Contractor shall also use best efforts to minimize the likelihood of any strike, work stoppage, or other labor disturbance.

.1 If the Work is to be performed by trade unions, the Contractor shall make all necessary arrangements to reconcile, without delay, damage, or cost to the Owner and without recourse to the Architect, the Construction Manager or the Owner, any conflict between the Contract Documents and any agreements or regulations of any kind at any time in force among members or councils that regulate or distinguish the activities that shall not be included in the work of any particular trade.

.2 In case the progress of the Work is affected by any undue delay in furnishing or installing any items or materials or equipment required under the Contract Documents because of such conflict involving any such labor agreement or regulation, the Owner may require that other material or equipment of equal kind and quality be provided pursuant to a Change Order or Construction Change Directive.

§ 3.4.6 Apprentice Program

For the purposes of this project, the County of Ulster requires that all contractors and subcontractors with contracts in excess of THREE HUNDRED THOUSAND AND 00/100 ($300,000.00) DOLLARS have trade specific Apprenticeship Agreements appropriate for the type and scope of work to be performed by each trade that is being utilized. These Apprenticeship Agreements must have been registered with, and adopted by, the New York State Commissioner of Labor, in accordance with Article 23 of the Labor Law. Satisfactory evidence of registration with the New York State Commissioner of Labor will be requested by the County prior to award of the contract.

§ 3.5 Warranty

The Contractor warrants to the Owner, Construction Manager, and Architect that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform with the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements shall be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Construction Manager or Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

The Contractor agrees to assign to the Owner at the time of final completion of the Work any and all manufacturer's warranties relating to materials and labor used in the Work and further agrees to perform the Work in such manner so as to preserve any and all such manufacturer's warranties.

If necessary as a matter of law, the Contractor may retain the right to enforce directly any such manufacturers' warranties during the one-year period following the date of Substantial Completion, referred to in Section 12.2.2

§ 3.6 Taxes

The Contractor shall pay sales, consumer, use and similar taxes for the Work or portions thereof provided by the Contractor that are legally enacted when bids are received or negotiations concluded, whether or not yet effective or merely scheduled to go into effect.

§ 3.6.1 The Owner is exempt from payment of sales and compensation use taxes of the State of New York and of cities, counties and other subdivisions of the State, for materials sold to it pursuant to the provisions of this contract.

§ 3.6.2 Contractor's purchase of tangible personal property which do not become an integral component part of the exempt organizations real property, and are consumed by the Contractor as well as purchases of taxable services, are subject to tax. The Contractor shall pay those taxes.

§ 3.7 Permits, Fees, Notices, and Compliance with Laws

§ 3.7.1. Except as set forth in Section 2.2.2, the Contractor shall secure, pay for, and as soon as practicable, furnish the Owner with copies or certificates of all permits, and fees, licenses, and inspections necessary for the proper execution and completion of the Work. All connection charges, assessment, or inspection fees as may be imposed by any municipal agency or utility company are included in the Contract Sum and shall be the Contractor's responsibility. .

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders and all other requirements of public authorities applicable to performance of the Work.

The Contractor shall procure and obtain all bonds required of the Owner or the Contractor by the municipality in which the Project is located or any other public or private body with jurisdiction over the Project. In connection with such bonds, the Contractor shall prepare all applications, supply all necessary backup material, and furnish the surety with any required personal undertakings. The Contractor shall also obtain and pay all charges for all approvals for street closings, parking meter removal, and other similar matters as may be necessary or appropriate from time to time for the performance of the Work

§ 3.7.3 If the Contractor performs Work knowing it to be contrary to applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

§ 3.7.4 Concealed or Unknown Conditions. If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall promptly provide notice to the Owner, Construction Manager, and the Architect before conditions are disturbed and in no event later than five (5) business days after first observance of the conditions. The Architect and Construction Manager will promptly investigate such conditions and, if the Architect, in consultation with the Construction Manager, determines that they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend an equitable adjustment in the Contract Sum or Contract Time, or both. If the Architect, in consultation with the Construction Manager, determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner, Construction Manager, and Contractor, in writing, stating the reasons. If the Owner or Contractor disputes the Architect's determination or recommendation, either party may proceed as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner, Construction Manager, and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Sum and Contract Time arising from the existence of such remains or features may be made as provided in Article 15.

§ 3.8 Allowances

§ 3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract Documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct, but the Contractor shall not be required to employ persons or entities to whom the Contractor has reasonable objection.

§ 3.8.2 Unless otherwise provided in the Contract Documents:

- **.1** allowances shall cover the cost to the Contractor of materials and equipment delivered at the site and all required taxes, less applicable trade discounts;
- **.2** whenever costs are more than or less than allowances, the Contract Sum shall be adjusted accordingly by Change Order. The amount of the Change Order shall reflect (1) the difference between actual costs and the allowances under Section 3.8.2.1 and (2) changes in Contractor's costs under Section 3.8.2.2.

§ 3.8.3 Materials and equipment under an allowance shall be selected by the Owner with reasonable promptness.
§ 3.8.4 The Contractor shall include installation costs in the allowance and exclude them from the allowance as and where required by the Contract Documents. In absence of any clarification in the Contract Documents in regards to installation costs, Contractor shall include the installation costs in the allowance amounts.

§ 3.9 Superintendent

§ 3.9.1 Prior to starting the work, the Contractor shall designate the Project Manager, Superintendent and other key individuals who shall be assigned to the Project through and including final completion. Such designations shall be in writing and provided to the Construction Manager, the Architect, and the Owner. The Superintendent shall be in attendance at the Project site throughout the work, remain on the Project site not less than eight hours per day, five days per week, until termination of the Contract, unless the job is suspended, work is stopped by the Owner, or no work is scheduled. The Superintendent shall be approved by the Owner in its sole discretion. Said representatives shall be qualified in the type of work to be undertaken and shall not be changed during the course of construction without the prior written consent of the Owner. Should a representative leave the Contractor's employ, the Contractor shall promptly designate a new representative. The Owner shall have the right, at any time, to direct a change in the Contractor's representatives if their performance is unsatisfactory. In the event of such a demand, the Contractor shall within seven days after notification thereof, replace said individual(s) with an individual(s) satisfactory to Owner, in Owner's sole discretion. If said replacement is disapproved, the Contractor may, at Owner's option, be terminated for cause. The superintendent shall represent the Contractor, and communications given to the superintendent shall be as binding as if given to the Contractor. The Owner shall have no obligation to direct or monitor the Contractor's employees. All references herein to the Superintendent shall be taken to mean the Contractor's superintending staff. Each Subcontractor shall designate the Project Manager, Superintendent and other key individuals who shall be assigned to the Project

§ 3.10 Contractor's Construction Schedules

§ 3.10.1 The Contractor, promptly after being awarded the Contract, shall prepare and submit for the Owner's and Architect's information, and the Owner and Construction Manager's approval a Contractor's construction schedule for the Work. The schedule shall not exceed time limits current under the Contract Documents, shall be revised at appropriate intervals as required by the conditions of the Work and Project, shall be related to the entire Project schedule to the extent required by the Contract Documents, and shall provide for expeditious and practicable execution of the Work.. . The Contractor shall cooperate with the Construction Manager in scheduling and performing the Contractor's Work to avoid conflict with, and as to cause no delay in, the work or activities of other Multiple Prime Contractors, or the construction or operations of the Owner's own forces.

§ 3.10.2 The Contractor, shall prepare a submittal schedule promptly after being awarded the Contract and thereafter update it as necessary to maintain a current submittal schedule, and shall submit the schedule(s) for the Construction Manager's, Architect's, and Owner's approval. The Architect's, Construction Manager's, and Owner's approval shall not unreasonably be delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Construction Manager, Architect and Owner reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall participate with other Contractors, the Construction Manager, and Owner in reviewing and coordinating all schedules for incorporation into the Project schedule that is prepared by the Construction Manager. The Contractor shall make revisions to the construction schedule and submittal schedule as deemed necessary by the Construction Manager to conform to the Project schedule.

§ 3.10.4 The Contractor shall perform the Work in general accordance with the most recent schedules submitted to the Owner, Construction Manager, and Architect and incorporated into the approved Project schedule. The Contractor shall coordinate its schedule with the Construction Manager, the Owner's operations and with the schedule of other contractors employed by the Owner. The Contractor shall modify its schedule as required to incorporate the activities of the Owner, the schedules of other contractors and the requirements of the Contract Documents. The Contractor shall cooperate with the Owner and the Owner's representatives to coordinate schedules and to complete the Project in a timely manner.

§ 3.10.5 Upon review and acceptance by the Owner, Architect and Construction Manager of the Contractor's construction schedule, the construction schedule shall be deemed part of the Contract Documents and attached to the Agreement as an Exhibit. If not accepted, the construction schedule shall be promptly revised by the Contractor in accordance with the recommendations of the Owner, the Architect, and the Construction Manager, and resubmitted for acceptance. The Contractor shall monitor the progress of the Work for conformance with the requirements of the Project schedule and shall promptly advise the Owner of any delays or potential delays. The accepted Project schedule shall be updated to reflect actual conditions (sometimes referred to in these Supplementary Conditions as "progress reports") as set forth in Section 3.10.1 or if requested by either the Owner or the Architect. In the event any progress report indicates any delays, the Contractor shall propose an affirmative plan to correct the delay, including overtime and/or additional labor, if necessary. In no event shall any progress report constitute an adjustment in the Contract Time, any Milestone Date, or the Contract Sum unless any such adjustment is agreed to by the Owner and authorized pursuant to Change Order.

3.10.6 In the event the Owner determines that the performance of the Work, as of a Milestone Date, has not progressed or reached the level of completion required by the Contract Documents, the Owner shall have the right to order the Contractor to take corrective measures necessary to expedite the progress of construction, including, without limitation, (i) working additional shifts or overtime, (ii) supplying additional manpower, equipment, and facilities, and (iii) other similar measures (hereinafter referred to collectively as "Extraordinary Measures"). Such Extraordinary Measures shall continue until the progress of the Work complies with the stage of completion required by the Contract Documents. The Owner's right to require Extraordinary Measures is solely for the purpose of ensuring the Contractor's compliance with the construction schedule.

.1 The Contractor shall not be entitled to an adjustment in the Contract Sum in connection with Extraordinary Measures required by the Owner under or pursuant to this Section 3.10.6.

.2 The Owner may exercise the rights furnished the Owner under or pursuant to this Section 3.10.6 as frequently as the Owner deems necessary to ensure that the Contractor's performance of the Work will comply with any Milestone Date or completion date set forth in the Contract Documents.

3.10.7 The Owner shall have the right to direct a postponement or rescheduling of any date or time for the performance of any part of the Work that may interfere with the operation of the Owner's premises or any tenants or invitees thereof. The Contractor shall, upon the Owner's request, reschedule any portion of the Work affecting operation of the premises during hours when the premises are not in operation. Any postponement, rescheduling, or performance of the Work under this Section 3.10.7 may be grounds for an extension of the Contract Time, if permitted under Section 8.3.1, and an equitable adjustment in the Contract Sum if (i) the performance of the Work was properly scheduled by the Contractor in compliance with the requirements of the Contract Documents, and (ii) such rescheduling or postponement is required for the convenience of the Owner

§ 3.11 Documents and Samples at the Site

The Contractor shall maintain, at the site for the Owner one (1) copy of the Drawings, Specifications, Addenda, , Change Orders,, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and one copy of approved Shop Drawings, Product Data, Samples, and similar required submittals. These documents shall be available to the Architect, and delivered to the Construction Manager for submittal to the Owner upon completion of the Work as a record of the Work as constructed.

§ 3.12 Shop Drawings, Product Data, and Samples

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules, and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the Work.

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment, or workmanship, and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples, and similar submittals are not Contract Documents. Their purpose is to demonstrate the way by which the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require

submittals. Review by the Architect and Construction Manager is subject to the limitations of Sections 4.2.9 through 4.2.11. Informational submittals upon which the Construction Manager and Architect are not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Construction Manager or Architect without action.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents, approve, and submit to the Construction Manager, Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents, in accordance with the Project submittal schedule approved by the Construction Manager and Architect or, in the absence of an approved Project submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of other Multiple Prime Contractors, or the Owner's own forces. The Contractor shall cooperate with the Construction Manager in the coordination of the Contractor's Shop Drawings, Product Data, Samples, and similar submittals with related documents submitted by other Multiple Prime Contractors.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner, Construction Manager, and Architect, that the Contractor has (1) reviewed and approved them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, and (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples, or similar submittals, until the respective submittal has been reviewed and approved by the Architect.

§ 3.12.8 The Work shall be in accordance with approved submittals except that the Contractor shall not be relieved of responsibility for deviations from requirements of the Contract Documents by the Architect's approval of Shop Drawings, Product Data, Samples, or similar submittals, unless the Contractor has specifically informed the Construction Manager and Architect in writing of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued authorizing the deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples, or similar submittals, by the Architect's approval thereof.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples, or similar submittals, to revisions other than those requested by the Construction Manager and Architect on previous submittals. In the absence of such written notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically required by the Contract Documents for a portion of the Work or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means, methods, techniques, sequences, and procedures. The Contractor shall not be required to provide professional services in violation of applicable law. If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. . The Contractor shall cause such services or certifications to be provided by a properly licensed design professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings, and other submittals prepared by such professional, and who shall comply with reasonable requirements of the Owner regarding qualifications and insurance. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled to rely upon the adequacy, accuracy and completeness of the services, certifications, and approvals performed or provided by such design professionals. Pursuant to this Section 3.12.10, the Architect will review approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The contractor shall not be responsible for the adequacy of the performance and design criteria specified in the Contract Documents.

§ 3.12.11 The Architect's review of Contractor's submittals will be limited to examination of an initial submittal and two (2) re-submittals. The Architect's review of additional submittals will be made only with the consent of the Owner after

notification by the Architect. The Owner shall be entitled to deduct from the Contract sum amounts paid to the Architect for evaluation of such additional re-submittals.

§ 3.13 Use of Site

§ 3.13.1 The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities, and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.13.2 The Contractor shall coordinate the Contractor's operations with, and secure the approval of, the Construction Manager before using any portion of the site.

3.13.3 Only materials and equipment that are to be used directly in the Work shall be brought to and stored on the Project site by the Contractor. After equipment is no longer required for the Work, it shall be promptly removed from the Project site. Protection of construction materials and equipment stored at the Project site from weather, theft, damage, and all other adversity is solely the responsibility of the Contractor. The Contractor shall ensure that the Work, at all times, is performed in a manner that affords reasonable access, both vehicular and pedestrian, to the site of the Work and all adjacent areas. The Work shall be performed, to the fullest extent reasonably possible, in such a manner that public areas adjacent to the site of the Work shall be free from all debris, building materials, and equipment likely to cause hazardous conditions.

3.13.4 The Contractor and any entity for whom the Contractor is responsible shall not erect any sign on the Project site without the prior written consent of the Owner, which may be withheld in the sole discretion of the Owner.

3.13.5 Without limitation of any other provision of the Contract Documents, the Contractor shall use best efforts to minimize any interference with the occupancy or beneficial use of (i) any areas and buildings adjacent to the site of the Work and (ii) the Building in the event of partial occupancy, as more specifically described in Section 9.9. Without prior approval of the Owner, the Contractor shall not permit any workers to use any existing facilities at the Project site, including, without limitation, lavatories, toilets, entrances, and parking areas other than those designated by the Owner.

.1 Without limitation of any other provision of the Contract Documents, the Contractor shall use its best efforts to comply with all rules and regulations promulgated by the Owner in connection with the use and occupancy of the Project site and the Building, as amended from time to time. The Contractor shall immediately notify the Owner in writing if during the performance of the Work, the Contractor finds compliance of any portion of such rules and regulations to be impracticable, setting forth the problems of such compliance and suggesting alternatives through which the same results intended by such portions of the rules and regulations can be achieved. The Owner may, in the Owner's sole discretion, adopt such suggestions, develop new alternatives, or require compliance with the existing requirements of the rules and regulations.

.2 The Contractor shall also comply with all insurance requirements and collective bargaining agreements applicable to use and occupancy of the Project site and the Building

§ 3.14 Cutting and Patching

§ 3.14.1 The Contractor shall be responsible for cutting, fitting, or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting, and patching shall be restored to the condition existing prior to the cutting, fitting, and patching, unless otherwise required by the Contract Documents.

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner's own forces, , or of other Multiple Prime Contractors by cutting, patching, or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter such construction by the Owner's own forces, or by other Multiple Prime Contractors except with written consent of the Construction Manager, Owner, and such other Multiple Prime Contractors; such consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold, from the, other Multiple Prime Contractors, or the Owner, the Contractor's consent to cutting or otherwise altering the Work.

§ 3.15 Cleaning Up

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials or rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste

materials, rubbish, the Contractor's tools, construction equipment, machinery, and surplus materials from and about the Project.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner, or Construction Manager with the Owner's approval, may do so and the Owner shall be entitled to reimbursement from the Contractor. Such reimbursement shall be deducted from the Contract Sum. In the event there are no monies owed by the Owner to the Contractor, the Contractor will reimburse Owner immediately upon receipt of an invoice.

§ 3.15.3 The Contractor shall dispose of all waste material, rubbish and debris properly and legally and shall be responsible for any costs and liability associated with such disposal.

§ 3.16 Access to Work

The Contractor shall provide the Owner, Construction Manager, and Architect access to the Work in preparation and progress wherever located.

§ 3.17 Royalties, Patents and Copyrights

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights and shall hold the Owner, Construction Manager, and Architect harmless from loss on account thereof, but shall not be responsible for such defense or loss when a particular design, process, or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications, or other documents prepared by the Owner, Architect, or Construction Manager. However, if the Contractor has reason to believe that the required design process or product is an infringement of a copyright or a patent, the Contractor shall be responsible for such loss unless such information is promptly furnished to the Architect through the Construction Manager.

§ 3.18 Indemnification

§ 3.18.1 The Contractor agrees to defend, indemnify and hold harmless the Owner, Construction Manager, Architect, and/or Construction Manager's and Architect's consultants, including each of their officials, employees and agents against all claims, liens, demands, losses, damages, liabilities, causes of action, costs or expenses (including without limitation, reasonable attorney fees and costs of litigation and/or settlement), whether incurred as a result of a claim by a third party or any other person or entity, arising out of the Work performed by the Contractor, its employees, representatives, subcontractors , assignees, or agents, pursuant to this Contract which the Owner, Construction Manager, Architect, and/or Construction Manager's and Architect's consultants or each of their officials, employees, or agents, may suffer by reason of any negligence, fault, act or omission of Contractor, its employees, representatives, subcontractors, assignees, or agents. . The Contractor agrees to investigate, handle, respond to, provide defense for, and defend any such claims, demands or suits at its sole expense and agrees to bear all other costs and expenses related thereto, even if such claims, demands or suits are groundless, false or fraudulent. Contractor further agrees to investigate, handle, respond to, provide defense for and defend any claims, demands or lawsuit(s) at its sole expense and agrees to bear all other costs and expenses related thereto. The foregoing provisions shall not be construed to indemnify the Owner, Construction Manager and Architect for damage arising out of bodily injury to persons or to property caused by or resulting from the sole negligence of the Owner's, Construction Managers, and Architect's employees. This indemnification section shall survive the expiration or termination of this Agreement.

In the event that any claim is made or any action is brought against the Owner, Construction Manager, Architect, and/or Construction Manager's and Architect's consultants arising out of the negligence, fault, act or omission of an employee, representative, subcontractor, assignee or agent of the Contractor, either within or without the scope of the respective employment, representation, subcontract, assignment or agency, or arising out of the Contractor's negligence, fault, act or omission, then the Owner shall have the right to withhold further payments hereunder for the purpose of set-off in sufficient sums to cover the said claim or action. The rights and remedies of the Owner, Construction Manager, Architect, and/or Construction Manager's and Architect's consultants provided for in this clause shall not be exclusive and are in addition to any other rights and remedies provided by law, in equity, or pursuant to the Contract and do not negate, abridge, or reduce other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18.

In the event of a claim or dispute arising under the Contract Documents, the Contractor shall be liable to the Owner for reasonable attorneys' fees, costs, expenses and disbursements incurred by the Owner in enforcing its legal and/or equitable rights pursuant to the Contract Documents by reason of the failure of the Contractor to comply with any of the terms, conditions or warranties of this Agreement, express or implied, and/or the exercise of Owner's remedies with

respect thereto, and/or any error, omission and/or professional negligence of the Contractor or its sub-consultants, including but not limited to all attorney's fees, costs, expenses and disbursements incurred by the Owner in: prosecuting a lawsuit against the Contractor; seeking indemnification; obtaining correction of deficiencies; termination; and/or, set-off rights. The Contractor shall further be liable to the Owner for all prejudgment interest on any award of attorneys' fees, costs, expenses and disbursements so awarded. This provision shall survive completion of the work and/or expiration or termination pursuant to the Contract Documents.

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable, the indemnification obligation under Section 3.18 shall not be limited by a limitation on amount or type of damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers' compensation acts, disability benefit acts, or other employee benefit acts.

§ 3.18.3 The Contractor shall require similar clauses in every contract between the Contractor and every subcontractor to the effect that every subcontractor, as a part of his/her subcontract, shall likewise be required to indemnify and hold harmless the Owner, Construction Manager, Architect, and Construction Manager's and Architect's consultants, and agents and employees of any of them against and from all suits, claims and actions of every name and description brought against the Owner, Construction Manager, and/or the Architect.

§ 3.18.4 The Contractor shall reimburse the Owner for any additional Architect and Construction Manager fees and expenses necessitated by the Contractor's performance or failure of performance.

§ 3.19 Existing Features and Underground Data – to be utilized in the future as needed.

§ 3.20.1 The location of existing features shown on plans is intended for general information only. The Contractor is responsible for making an accurate determination of the location of all structures which are reasonably observable, and shall not be entitled to any extra payment due to difficulties or distances encountered in the Work which would have been foreseeable thereby.

§ 3.20.2 The locations, depths and data as to underground conditions have been obtained from records, surface indications and data furnished by others, information furnished is solely for the convenience of the Contractor without any warranty, expressed or implied as to its accuracy or completeness.

ARTICLE 4 ARCHITECT AND CONSTRUCTION MANAGER

§ 4.1 General

§ 4.1.1 The Owner shall retain an architect lawfully licensed to practice architecture or an entity lawfully practicing architecture in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number. Any reference in the Contract Documents to the Architect's taking action or rendering a decision within a "reasonable time" is understood to mean no more than two (2) weeks.

In performing the Work and incurring expenses under this Contract, the Architect shall operate as, and have the status of, an independent contractor and shall not act as agent, or be an agent of the Owner. As an independent contractor, the Architect shall be solely responsible for determining the means and methods of providing Architectural and Engineering services and shall have complete charge and responsibility for the Architect's personnel engaged in the performance of the same.

In accordance with such status as independent contractor, the Architect covenants and agrees that neither it, nor its employees or agents, will hold themselves out as, nor claim to be officers or employees of the Owner, or of any department, agency or unit thereof by reason hereof, and that they will not by reason hereof make any claim, demand or application to or for any right or privilege applicable to an officer or employee of the Owner including, but not limited to Workers' Compensation coverage, health coverage, Unemployment Insurance benefits, Social Security coverage or employee retirement membership or credit.

§ 4.1.2 The Owner shall retain a construction manager lawfully licensed to practice construction management or an entity lawfully practicing construction management in the jurisdiction where the Project is located, to the extent the

applicable jurisdiction requires licensing for construction management services. That person or entity is identified as the Construction Manager in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 4.1.3 Duties, responsibilities, and limitations of authority of the Construction Manager and Architect as set forth in the Contract Documents shall not be restricted, modified, or extended without written consent of the Owner, Construction Manager, Architect, and Contractor. Consent shall not be unreasonably withheld.

§ 4.1.4 If the employment of the Construction Manager or Architect is terminated, the Owner shall employ a successor construction manager or architect as to whom the Contractor has no reasonable objection and whose status under the Contract Documents shall be that of the Construction Manager or Architect, respectively.

§ 4.1.5 The Architect agrees to retain all books, records and other documents relevant to this Contract for six (6) years after the final payment or termination of this Contract, whichever later occurs. The Owner, any State and/or Federal auditors, and any other persons duly authorized by the Owner, shall have full access and the right to examine any of said materials during said period.

§ 4.2 Administration of the Contract

§ 4.2.1 The Construction Manager and Architect will provide administration of the Contract as described in the Contract Documents until the date the Architect issues the final Certificate for Payment. The Construction Manager and Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become generally familiar with the progress and quality of the portion of the Work completed, and to determine in general if the Work observed is being performed in a manner indicating that the Work, as the Work progresses and when fully completed, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. On the basis of the site visits, the Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and report to the Owner and Construction Manager (1) known deviations from the Contract Documents and from the most recent Project schedule prepared by the Construction Manager, and (2) defects and deficiencies observed in the Work.

1 The Contractor shall reimburse the Owner for any additional Architect and Construction Manager fees and expenses necessitated by the Contractor's performance or failure of performance.

§ 4.2.3 The Construction Manager shall provide a staffing plan to include one or more representatives who shall be in attendance at the Project site whenever the Work is being performed. The Construction Manager will inspect the Work to determine if the same is being performed in accordance with the Contract Documents, will keep the Owner reasonably informed of the progress of the Work, and will report to the Owner and Architect (1)known deviations from the Contract Documents and the most recent Project schedule, and (2) defects and deficiencies observed in the Work.

§ 4.2.4 The Construction Manager will schedule and coordinate the activities of the Contractor and other Multiple Prime Contractors in accordance with the latest approved Project schedule.

§ 4.2.5 The Construction Manager, except to the extent required by Section 4.2.4, and Architect will not have control over, or charge of, construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents, except as provided in Section 3.3.1, and neither will be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. Neither the Construction Manager nor the Architect will have control over or charge of, or be responsible for acts or omissions of, the Contractor, Subcontractors, or their agents or employees, or of any other persons or entities performing portions of the Work.

§ 4.2.6 Communications Facilitating Contract Administration. Except as otherwise provided in the Contract Documents or when direct communications have been specially authorized, the Owner and Contractor shall endeavor to communicate with each other through the Construction Manager and shall within three (3) days thereafter provide the same communications to the Architect about matters arising out of or relating to the Contract Documents. Communications

by and with the Architect's consultants shall be through the Architect. Communications by and with Subcontractors and material suppliers shall be through the Contractor. Communications by and with other Multiple Prime Contractors shall be through the Construction Manager and shall within three (3) days thereafter be provided to the Architect if those communications are about matters arising out of or related to the Contract Documents. Communications by and with the Owner's own forces, shall be through the Owner or shall be communicated within three (3) days thereafter to the Architect and the Architect's consultants.

§ 4.2.7 The Construction Manager and Architect will review and certify all Applications for Payment by the Contractor, in accordance with the provisions of Article 9.

§ 4.2.8 The Architect and Construction Manager have authority to reject Work that does not conform to the Contract Documents, and will notify each other about the rejection. The Construction Manager shall determine in general whether the Work of the Contractor is being performed in accordance with the requirements of the Contract Documents and notify the Owner, Contractor and Architect of defects and deficiencies in the Work. Whenever the Construction Manager considers it necessary or advisable, the Construction Manager will have authority to require additional inspection or testing of the Work in accordance with Sections 13.5.2 and 13.5.3, upon written authorization of the Owner, whether or not such Work is fabricated, installed or completed. The foregoing authority of the Construction Manager will be subject to the provisions of Sections 4.2.18 through 4.2.20 inclusive, with respect to interpretations and decisions of the Architect. However, neither the Architect's nor the Construction Manager's authority to act under this Section 4.2.8 nor a decision made by either of them in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect or the Construction Manager to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees, or other persons performing any of the Work.

§ 4.2.9 The Construction Manager will receive and promptly review for conformance with the submittal requirements of the Contract Documents, all submittals from the Contractor such as Shop Drawings, Product Data, and Samples. Where there are Multiple Prime Contractors, the Construction Manager will also check and coordinate the information contained within each submittal received from Contractor and other Multiple Prime Contractors, and transmit to the Architect those recommended for approval. By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Construction Manager represents to the Owner and Architect that the Construction Manager has reviewed and recommended them for approval. The Construction Manager's actions will be taken in accordance with the Project submittal schedule approved by the Architect or, in the absence of an approved Project submittal schedule, with reasonable promptness while allowing sufficient time to permit adequate review by the Architect.

§ 4.2.10 The Architect shall receive and review for conformance with the submittal requirements of the Contract Documents all submittals from the Contractor such as Shop Drawings, Product Data, and Samples. The Architect shall independently review, evaluate, and approve or reject all Shop Drawings, Product Data, Samples, and similar submittals and make its recommendations to the Owner and the Construction Manager within seven (7) calendar days of receipt, by the Architect of such Shop Drawings, Product Data, Samples, and similar submittals. The Architect shall be independently responsible for its evaluation and approval or rejection of all Shop Drawings, Product Data, Samples, and similar submittals. Upon the Architect's completed review, the Architect shall transmit its submittal review to the Construction Manager.

§ 4.2.11 Review of the Contractor's submittals by the Architect is conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect will interpret and decide matters concerning the Contractor's performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Construction Manager's and Architect's review of the Contractor's submittals shall not relieve the Contractor of its obligations under Sections 3.3, 3.5, and 3.12. The Construction Manager and Architect's review shall not constitute approval of safety precautions or, , unless otherwise specifically stated by the Construction Manager and Architect, of any construction means, methods, techniques, sequences, or procedures. The Architect's approval of a specific item shall indicate approval of an assembly of which the item is a component.

§ 4.2.12 The Construction Manager, with the written approval of the Architect in accordance with Article 7 will prepare Change Orders and Construction Change Directives.

§ 4.2.13 The Construction Manager and the Architect will take appropriate action on Change Orders or Construction Change Directives in accordance with Article 7, and the Architect will have authority to order minor changes in the

Work as provided in Section 7.4. The Architect, in consultation with the Construction Manager, will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.14 Utilizing the documents provided by the Contractor, the Construction Manager will maintain at the site for the Owner one copy of all Contract Documents, approved Shop Drawings, Product Data, Samples, and similar required submittals, in good order and marked currently to record all changes and selections made during construction. These will be available to the Architect and the Contractor, and will be delivered to the Owner upon completion of the Project.

§ 4.2.15 The Construction Manager will be jointly responsible with the Architect for conducting inspections to determine the dates of Substantial Completion and the date of final completion; jointly issue Certificates of Substantial Completion in conjunction with the Architect pursuant to Section 9.8; and receive and forward to the Owner written warranties and related documents required by the Contract and assembled by the Contractor pursuant to Section 9.10. The Construction Manager will forward to the Architect a final Application and Certificate for Payment or final Project Application and Project Certificate for Payment upon the Contractor's compliance with the requirements of the Contract Documents.

§ 4.2.16 If the Owner and Architect agree, the Architect will provide one or more Project representatives to assist in carrying out the Architect's responsibilities at the site. The duties, responsibilities and limitations of authority of such project representatives shall be as set forth in an exhibit to be incorporated in the Contract Documents.

§ 4.2.17 The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of the Construction Manager, Owner, or Contractor through the Construction Manager. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 4.2.18 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either, and will not be liable for results of interpretations or decisions so rendered in good faith.

§ 4.2.19 The Architect's decisions on matters relating to aesthetic effect in connection with administration of the Contract will be final if consistent with the intent expressed in the Contract Documents.

§ 4.2.20 The Construction Manager will receive and review requests for information from the Contractor, and forward each request for information to the Architect, with the Construction Manager's recommendation. The Architect will review and respond in writing, to the Construction Manager, to requests for information about the Contract Documents. The Construction Manager's recommendation and the Architect's response to each request will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If appropriate, the Architect will prepare and issue supplemental Drawings and Specifications in response to the requests for information.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 Definitions

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include other Multiple Prime Contractors or subcontractors of other Multiple Prime Contractors.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 Award of Subcontracts and Other Contracts for Portions of the Work

§ 5.2.1 Unless otherwise stated in the Contract Documents or the bidding requirements, the Contractor, as soon as practicable after award of the Contract, shall furnish in writing to the Construction Manager, for review by the Owner, Construction Manager and Architect the names of persons or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for each principal portion. of the Work, the Construction Manager may reply within fourteen (14) days to the Contractor in writing stating (1) whether the Owner, the Construction

Manager or the Architect has reasonable objection to any such proposed person or entity or, (2) that the Construction manager, Architect, or Owner requires additional time for review. Failure of the Construction Manager, Owner, or Architect to reply within the 14-day period shall constitute notice of no reasonable objection.

.1 Refer to the "Information to Bidders" for requirements for delivery of Contractor's list of subcontractors to the Architect after receipt of bids and prior to the award of Contract.

.2 Subcontractors will not be acceptable unless, when requested by the Architect or the Owner, evidence is furnished that the proposed subcontractor has satisfactorily completed similar subcontracts as contemplated under this prime contract, and has the necessary experience, personnel, equipment, plant and financial ability to complete the subcontract in accordance with the intent of the Contract Documents.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner, Construction Manager or Architect has made reasonable and timely objection. The Contractor shall not be required to contract with anyone to whom the Contractor has made reasonable objection.

§ 5.2.3 If the Owner, Construction Manager or Architect has reasonable objection to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner, Construction Manager or Architect has no reasonable objection. If the proposed but rejected Subcontractor was reasonably capable of performing the Work, the Contract Sum and Contract Time shall be increased or decreased by the difference, if any, occasioned by such change, and an appropriate Change Order shall be issued before commencement of the substitute Subcontractor's Work. However, no increase in the Contract Sum or Contract Time shall be allowed for such change unless the Contractor has acted promptly and responsively in submitting names as required. No increase to the Contract Sum shall be allowed if the Owner and Architect both have reasonable objections to a proposed subcontractor.

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person, or entity previously selected if the Owner, Construction Manager or Architect makes reasonable objection to such substitution.

§ 5.3 Subcontractual Relations

By appropriate written agreement, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including responsibility for safety of the Subcontractor's Work, which the Contractor, by these Documents, assumes toward the Owner, Construction Manager and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner, Construction Manager and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies, and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

§ 5.4 Contingent Assignment of Subcontracts

§ 5.4.1 Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that

.1 assignment is effective only after termination of the Contract by the Owner for cause pursuant to Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor in writing; and

.2 assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract.

§ 5.4.2 Upon such assignment, if the Work has been suspended for more than 30 days, the Subcontractor's compensation shall be equitably adjusted for increases in cost resulting from the suspension.

§ 5.4.3 Upon such assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor Contractor or other entity. If the Owner assigns the subcontract to a successor Contractor or other entity, the Owner shall nevertheless remain legally responsible for all of the successor Contractor's obligations under the subcontract.

§ 5.4.4 The Contractor shall provide copies of written Subcontractor agreements to the Owner when requested.

ARTICLE 6 CONSTRUCTION BY OWNER OR BY OTHER CONTRACTORS

§ 6.1 Owner's Right to Perform Construction with Own Forces and to Award Other Contracts

§ 6.1.1 The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, which include persons or entities under separate contracts not administered by the Construction Manager, and to award other contracts in connection with other portions of the Project or other construction or operations on the site and Conditions of the Contract identical or substantially similar to these, including those portions related to insurance and waiver of subrogation. If the Contractor claims that a delay is involved because of such action by the Owner, the Contractor may make a Claim for an extension of time as provided in Article 15.1.5

§ 6.1.2 When the Owner performs construction or operations with the Owner's own forces including persons or entities under separate contracts not administered by the Construction Manager, the Owner shall provide for coordination of such forces with the Work of the Contractor, who shall cooperate with them.

§ 6.1.3 Unless otherwise provided in the Contract Documents, when the Owner performs construction or operations related to the Project with the Owner's own forces the Owner shall be deemed to be subject to the same obligations and to have the same rights that apply to the Contractor under the Conditions of the Contract, including, without excluding others, those stated in Article 3, this Article 6, and Articles 10, 11, and 12.

§ 6.1.4 The Contractor accepts assignment of, and liability for, all purchase orders and other agreements for procurement of materials and equipment that are identified as part of the Contract Documents. The Contractor shall be responsible for such pre-purchased items, if any, as if the Contractor were the original purchaser. The Contract Sum includes, without limitation, all costs and expenses in connection with delivery, storage, insurance, installation, and testing of items covered in any assigned purchase orders or agreements. All warranty and correction of the Work obligations under the Contract Documents shall also apply to any pre-purchased items, unless the Contract Documents specifically provide otherwise.

§ 6.2 Mutual Responsibility

§ 6.2.1 The Contractor shall afford the Owner's own forces, Construction Manager and other Multiple Prime Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities, and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner's own forces or other Multiple Prime Contractors , the Contractor shall, prior to proceeding with that portion of the Work, promptly report to the Construction Manager and Architect apparent discrepancies or defects in such other construction that would render it unsuitable for such proper execution and results. . Failure of the Contractor to report shall constitute an acknowledgment that the Owner's own forces or other Multiple Prime Contractors' completed or partially completed construction is fit and proper to receive the Contractor's Work, except as to defects not then reasonably discoverable

§ 6.2.3 The Contractor shall reimburse the Owner for costs the Owner incurs, including costs that are payable to a Separate Contractor or to other Multiple Prime Contractors, because of the Contractor's improper actions, improperly timed activities or defective construction. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of improper actions improperly timed activities, damage to the Work or defective construction by the Owner's own forces, or other Multiple Prime Contractors.

§ 6.2.4 The Contractor shall promptly remedy damage the Contractor wrongfully causes to completed or partially completed construction, or to property of the Owner, Separate Contractors, or other Multiple Prime Contractors as provided in Section 10.2.5.

§ 6.2.5 The Owner and other Multiple Prime Contractors shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.3 Owner's Right to Clean Up

If a dispute arises among the Contractor, other Multiple Prime Contractors, and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Construction Manager, with notice to the Architect, will allocate the cost among those responsible.

§ 6.4 Should the Contractor sustain any damage through any act or omission of any other contractor having a contract with the Owner, or through any act or omission of any Subcontractor of said other contractor, the Contractor shall have no claim against the Owner for said damage.

ARTICLE 7 CHANGES IN THE WORK

§ 7.1 General

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Construction Change Directive or order for a minor change in the Work, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 A Change Order shall be based upon agreement among the Owner, Construction Manager, Architect and Contractor.; a Construction Change Directive requires agreement by the Owner, Construction Manager and Architect and may or may not be agreed to by the Contractor; an order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents and the Contractor shall proceed promptly , unless otherwise provided in the Change Order, Construction Change Directive, or order for a minor change in the Work.

Except as permitted in Section 7.3 and Section 9.7, a change in the Contract Sum or the Contract Time shall be accomplished only by written Change Order. Accordingly, no course of conduct or dealings between the parties, nor express or implied acceptance of alterations or additions to the Work, and no claim that Owner has been unjustly enriched by any alteration of or addition to the Work, whether or not there is, in fact, any unjust enrichment to the Work, shall be the basis of any claim to an increase in any amounts due under the Contract Documents or a change in any time period provided for in the Contract Documents.

§ 7.1.4 The maximum combined overhead and profit included in the total cost to the Owner of a change in the Work shall be limited based on the following schedule:

.1 For the Contractor, Sub Contractor or Sub-Sub Contractors for Work performed shall be a maximum of 15 percent of the cost.

.2 Cost to which overhead and profit is to be applied shall be determined in accordance with Section7.3.7.

.3 In order to facilitate checking of quotations for extras or credits, all proposals, except those so minor that their propriety can be seen by inspection, shall be accompanied by a complete itemization of costs including labor, materials and Subcontracts. Labor and materials shall be itemized in the manner prescribed above. Where major cost items are Subcontracts, they shall be itemized also. In no case will a change involving over $2,000 be approved without such itemization.

.4 Contractor agrees to provide a complete breakdown of all costs or estimated costs in any level of detail requested by the Owner, Construction Manager, or Architect in regards to any change order item(s).

§ 7.1.5 Cost shall not be allowed in excess of usual rentals charged in area for similar equipment of like size and condition, including costs of necessary supplies and repairs for operating equipment on site in connection with other work unless its use incurs actual and additional costs to Contractor. If equipment not on site is required for change in work only, cost of transporting equipment to and from site will be allowed.

§ 7.1.6 Overtime, shall not be paid by the Owner.

§ 7.2 Change Orders

§ 7.2.1 A Change Order is a written instrument prepared by the Construction Manager and signed by the Owner, Construction Manager, Architect, and Contractor, stating their agreement upon all of the following:

.1 The change in the Work;
.2 The amount of the adjustment, if any, in the Contract Sum; and
.3 The extent of the adjustment, if any, in the Contract Time.

§ 7.2.2 Agreement on any Change Order shall constitute a final settlement of all matters relating to the change in the Work that is the subject of the Change Order, including, but not limited to, all direct and indirect costs and consequential damages associated with such change and any and all adjustments to the Contract Sum and the construction schedule.

§ 7.3 Construction Change Directives

§ 7.3.1 A Construction Change Directive is a written order prepared by the Construction Manager and signed by the Owner, Construction Manager and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions, or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods:

.1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;
.2 Unit prices stated in the Contract Documents or subsequently agreed upon;
.3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or
.4 As provided in Section 7.3.7.

§ 7.3.4 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed in a proposed Change Order or Construction Change Directive so that application of such unit prices to quantities of Work proposed will cause substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 7.3.5 Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Construction Manager and Architect of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time.

§ 7.3.6 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

> **§ 7.3.6.1** Costs for project management, estimating, main office personnel, field office personnel, warranty, hand tools, training programs, safety programs, insurances and bonds, and similar expenses may not be included in the direct costs of a change; they shall be considered overhead expenses.

§ 7.3.7 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Construction Manager shall determine the method and the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an allowance for overhead and profit as allowed in the Section 7.1.4, or if no such amount is set forth in the Agreement, a reasonable amount. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Construction Manager may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.7 shall be limited to the following:

.1 Costs of labor, including social security, old age and unemployment insurance, fringe benefits required by agreement or custom, and workers compensation insurance;

.2 Costs of materials, supplies and equipment, including cost of transportation, whether incorporated or consumed;

.3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others. Unless otherwise established in the Contract, (1) the rental value of the Contractor's own equipment shall be not more than ten percent (10%) above the rates in the current edition "Compilation of Rental Rates for Construction Equipment" prepared by Associated Equipment Distributors, Oak Brook, Illinois, and (2) the aggregate amounts charged to the owner for such equipment shall not exceed ten percent (10%) above the fair market value;

.4 Costs of premiums for all bonds and insurance, permit fees, and sales, use or similar taxes related to the Work; and

.5 Additional costs of supervision directly attributable to the change, excluding office personnel.

§ 7.3.8 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost as confirmed by the Construction Manager and Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for overhead and profit shall be figured on the basis of net increase, if any, with respect to that change. The Contractor shall provide a credit for the reduced costs of bond and insurance premiums related to any credits for deleting Work or reductions in cost.

§ 7.3.8.1 The Schedule of Values shall be as legitimate and as accurate as possible since it may be used to compute credits for the deletion of Contract Work and to determine unit prices. The Schedule of Values amounts for each item shall include the Contractor's overhead and profit for that line item.

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, the Contractor may request payment for Work completed under the Construction Change Directive in Applications for Payment. The Construction Manager and Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the amount that the Construction Manager and Architect determine to be reasonably justified. The interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

§ 7.3.10 When the Owner and Contractor agree with a determination made by the Construction Manager and Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and the Construction Manager shall prepare a Change Order. Change Orders may be issued for all or any part of a Construction Change Directive.

§ 7.3.11 The Contractor shall provide detailed documentation of the actual costs for any change, including increased costs for bond and insurance premiums, if requested by the Owner, Architect, or Construction Manager.

§ 7.4 Minor Changes in the Work

The Architect has authority to order minor changes in the Work not involving adjustment in the Contract Sum or extension of the Contract Time and not inconsistent with the intent of the Contract Documents. Such changes will be effected by written order issued through the Construction Manager and shall be binding on the Owner and Contractor.

ARTICLE 8 TIME

§ 8.1 Definitions

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 The date of commencement of the Work is the date established in the Agreement.

§ 8.1.3 The date of Substantial Completion is the date certified by the Architect in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined.

§ 8.2 Progress and Completion

§ 8.2.1 Time limits stated in the Contract Documents are of the essence of the Contract. By executing the Agreement, the Contractor confirms that the Contract Time is a reasonable period for performing the Work.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, prematurely commence operations on the site or elsewhere prior to the effective date of insurance required by Article 11 to be furnished by the Contractor and Owner. The date of commencement of the Work shall not be changed by the effective date of such insurance.

§ 8.2.2.1 The Contractor shall not commence Work on the site until two (2) certified copies of all insurance policies, as indicated in Article 11, attesting that the required coverage is in force, have been received and accepted by the Owner, Architect and Construction Manager.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the Contract Time.

§ 8.3 Delays and Extensions of Time

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by an act or neglect of the Owner, Owner's own forces, Construction Manager, Architect, any of the other Multiple Prime Contractors, or an employee of any of them; or by changes ordered in the Work; or by labor disputes, fire, unusual delay in deliveries, unavoidable casualties; or other causes beyond the Contractor's control; or by delay authorized by the Owner pending mediation and arbitration or by other causes that the Architect, based on the recommendation of the Construction Manager, determines may justify delay, then the Contract Time shall be extended by Change Order, to the extent such delay will prevent the Contractor from achieving Substantial Completion within the Contract Time and if the performance of the Work is not, was not, or would not have been delayed by any other cause for which the Contractor is not entitled to an extension in the Contract Time under the Contract Documents, for such reasonable time as the Architect may determine.

The Contractor further acknowledges and agrees that adjustments in the Contract Time will be permitted for a delay only to the extent such delay (i) is not caused, or could not have been anticipated, by the Contractor, (ii) could not be limited or avoided by the Contractor's timely notice to the Owner of the delay or reasonable likelihood that a delay will occur, and (iii) is of a duration not less than one (1) day.

§ 8.3.2 Claims relating to time shall be made in accordance with applicable provisions of Article 15.

§ 8.3.3 Notwithstanding anything to the contrary in the Contract Documents, an extension in the Contract Time, to the extent permitted under Section 8.3.1, shall be the sole remedy of the Contractor for any (i) delay in the commencement, prosecution, or completion of the Work, (ii) hindrance, interference, suspension or obstruction in the performance of the Work, (iii) loss of productivity, or (iv) other similar claims (items i through iv herein collectively referred to in this Section 8.3.3 as "Delays") whether or not such Delays are foreseeable, unless a Delay is caused by acts of the Owner constituting intentional interference with the Contractor's performance of the Work, and only to the extent such acts continue after the Contractor furnishes the Owner with notice of such interference. In no event shall the Contractor be entitled to any compensation or recovery of any damages, in connection with any Delay, including, without limitation, consequential damages, lost opportunity costs, impact damages, or other similar remuneration. The Owner's exercise of any of its rights or remedies under the Contract Documents (including, without limitation, ordering changes in the Work, or directing suspension, rescheduling, or correction of the Work), regardless of the extent or frequency of the Owner's exercise of such rights or remedies, shall not be construed as intentional interference with the Contractor's performance of the Work.

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 Contract Sum

The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

§ 9.2 Schedule of Values
Where the Contract is based on a stipulated sum or Guaranteed Maximum Price, the Contractor shall submit to the Construction Manager, within ten (10) days of full execution of this Agreement a schedule of values , allocating the entire Contract Sum to the various portions of the Work and prepared in such form, and supported by such data to substantiate its accuracy as, the Construction Manager and the Architect may require. This schedule, unless objected to by the Construction Manager or Architect, shall be used as a basis for reviewing the Contractor's Applications for Payment. In the event there is one (1) Contractor, the Construction Manager shall forward to the Architect the Contractor's schedule of values. If there are Multiple Prime Contractors responsible for performing different portions of the Project, the Construction Manager, shall forward the Multiple Prime Contractors' schedules of values

§ 9.3 Applications for Payment
§ 9.3.1 At least fifteen days before the date established for each progress payment, the Contractor shall submit to the Construction Manager an itemized Application for Payment prepared in accordance with the schedule of values, if required under Section 9.2, for completed portions of the Work. Such application shall be notarized, if required, and supported by such data substantiating the Contractor's right to payment as the Owner, Construction Manager or Architect may require, such as copies of requisitions, from Subcontractors and material suppliers, and shall reflect retainage if provided for in the Contract Documents. The form of Application for Payment, duly notarized, shall be a current authorized edition of AIA Document G702, Application and Certificate for Payment, supported by a current authorized edition of AIA Document G703, Continuation Sheet.

§ 9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Construction Change Directives, or by interim determinations of the Construction Manager and Architect, but not yet included in Change Orders.

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or material supplier, unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.1.3 Until Substantial Completion in accordance with Section 9.8, the Owner shall pay 95 percent of the amount due the Contractor on account of progress payments and withhold payment of 5% retainage. Any time during construction the Owner shall retain two (2) times the amounts required to satisfy any outstanding liens, claims, judgments or disputes plus the 5% contract retainage. The value of any such amounts shall be as determined by the Owner, Architect and Construction Manager. Following Substantial Completion, the Owner shall pay the entire amount retained from previous progress payments less two (2) times the amounts required to complete any outstanding items and to satisfy any outstanding liens, claims, judgments or disputes. The value of any such amounts shall be as determined by the Owner, Architect and Construction Manager. Owner also reserves the right to withhold any amounts required to offset any apparent cost impacts that are made known to the Owner through the Contractor's suppliers and or sub-contractors as well as Work discovered or suspected to be non-compliant with the Contract Documents, which Work may have been previously paid for.

§9.3.1.4 With each Application for Payment, the Contractor shall supply Certified Monthly Payrolls for the month prior, and shall supply releases of lien from all sub-contractors and suppliers.

§ 9.3.2 Unless otherwise provided in the Contract Documents, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the Owner, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage, and transportation to the site, for such materials and equipment stored off the site.

§ 9.3.2.1 All such materials and equipment stored on-site, but not yet incorporated into the Work, upon which partial payments have been made, shall become the property of the Owner, but the care and protection of such materials shall remain the responsibility of the Contractor until incorporation into the Work, including maintaining insurance coverage on a replacement cost basis without voluntary deductible.

§ 9.3.2.2 The Contractor shall provide copies of invoices and proof of insurance for any items that are stored off site along with any applications for payment requesting payment for such items.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the Owner shall, to the best of the Contractor's knowledge, information, and belief, be free and clear of liens, claims, security interests, or encumbrances, in favor of the Contractor, Subcontractors, material suppliers, or other persons or entities making a claim by reason of having provided labor, materials and equipment relating to the Work.

.1 The Contractor further expressly undertakes to defend the Indemnitees, at the Contractor's sole expense, against any actions, lawsuits, or proceedings brought against the Indemnitees as a result of liens filed against the Work, the site of any of the Work, the Project site and any improvements thereon, payments due the Contractor, or any portion of the property of any of the Indemnitees (referred to collectively as "liens" in this Section 9.3.3). The Contractor hereby agrees to indemnify and hold the Indemnitees harmless against any such liens or claims of lien and agrees to pay any judgment or lien resulting from any such actions, lawsuits, or proceedings.

.2 The Owner shall release any payments withheld due to a lien or claim of lien if the Contractor obtains security acceptable to the Owner or a lien bond that is (i) issued by a surety acceptable to the Owner, (ii) in form and substance satisfactory to the Owner, and (iii) in an amount not less than one hundred fifty percent (150%) of such lien claim or such other amount as required by applicable law. By posting a lien bond or other acceptable security, however, the Contractor shall not be relieved of any responsibilities or obligations under this Section 9.3.3, including, without limitation, the duty to defend and indemnify the Indemnitees. The cost of any premiums incurred in connection with such bonds and security shall be the responsibility of the Contractor and shall not be part of, or cause any adjustment to, the Contract Sum.

.3 The Contractor agrees to waive any right it may have to assert a mechanic's or other lien against the Project site and any improvements thereon, including, without limitation, the Work itself. Furthermore, the Contractor will cause a similar provision, waiving any right to a mechanic's or other lien against the property, to be included in all of its subcontracts, any sub-subcontracts, and all contracts and purchase orders with material suppliers. Notwithstanding the foregoing, the Owner reserves the right to settle any disputed mechanic's or material supplier's lien claim by payments to the lien claimant or by such other means as the Owner, in the Owner's sole discretion, determines is the most economical or advantageous method of settling the dispute. The Contractor shall promptly reimburse the Owner, upon demand, for any payments so made if the amount paid exceeds the amount remaining owed under the subcontract.

§ 9.4 Certificates for Payment

§ 9.4.1 Where there is only one Contractor, the Construction Manager will, within seven days after the Construction Manager's receipt of the Contractor's Application for Payment, review the Application, certify the amount the Construction Manager determines is due the Contractor, and forward the Contractor's Application and Certificate for Payment to the Architect with a copy to the Owner. Within seven (7) days after the Architect receives the Contractor's Application for Payment from the Construction Manager, the Architect will either issue to the Owner a Certificate for Payment, with a copy to the Construction Manager; for such amount as the Architect determines is properly due, or notify the Construction Manager and Owner in writing of the Architect's reasons for withholding certification in whole or in part as provided in Section 9.5.1; The Construction Manager will promptly forward to the Contractor and the Owner, the Architect's notice of withholding certification.

§ 9.4.2 Where there are multiple Prime Contractors performing portions of the Project, the Construction Manager will, within seven days after the Construction Manager receives the Multiple Prime Contractors' Applications for Payment: (1) review the Applications and certify the amount the Construction Manager determines is due each of the Multiple Prime Contractors'; (2) prepare a Summary of Contractors' Applications for Payment by combining information from each Multiple Prime Contractor's application with information from similar applications for progress payments from other Multiple Prime Contractors'; (3) prepare a Project Application and Certificate for Payment; (4) certify the amount the Construction Manager determines is due all Multiple Prime Contractors; and (5) forward the Summary of

Contractor's Applications for Payment and Project Application and Certificate for Payment to the Architect, with a copy to the Owner.

§ 9.4.3 Within seven days after the Architect receives the Project Application and Project Certificate for Payment and the Summary of Contractors' Applications for Payment from the Construction Manager, the Architect will either issue to the Owner a Project Certificate for Payment, with a copy to the Construction Manager; for such amount as the Architect determines is properly due, or notify the Construction Manager and Owner, in writing, of the Architect's reasons for withholding certification in whole or in part as provided in Section 9.5.1. The Construction Manager will promptly forward the Architect's notice of withholding certification to the Contractors.

§ 9.4.4 The Construction Manager's certification of an Application for Payment or, in the case of Multiple Prime Contractors, a Project Application and Certificate for Payment, shall be based upon the Construction Manager's evaluation of the Work and the information provided as part of the Application for Payment. The Construction Manager's certification will constitute a representation that, to the best of the Construction Manager's knowledge, information, and belief, the Work has progressed to the point indicated, and the quality of the Work is in accordance with the Contract Documents. The certification will also constitute a recommendation to the Architect and Owner, that the Contractor be paid the amount certified.

Nothing in this Section shall reduce, diminish, or otherwise affect the Architect's responsibilities to the Owner for the evaluation and certification of the applications for payment or evaluation and certification of the extent of the Work performed by the Multiple Prime Contractors.

§ 9.4.5 The Architect's issuance of a Certificate for Payment or, in the case of Multiple Prime Contractors, Project Application and Certificate for Payment, shall be based upon the Architect's evaluation of the Work, the recommendation of the Construction Manager, and information provided as part of the Application for Payment or Project Application for Payment. The Architect's certification will constitute a representation that, to the best of the Architect's knowledge, information, and belief, the Work has progressed to the point indicated, that the quality of the Work is in accordance with the Contract Documents, and that the Contractor is entitled to payment in the amount certified.

§ 9.4.6 The representations made pursuant to Sections 9.4.4 and 9.4.5 are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion, and to specific qualifications expressed by the Construction Manager or Architect.

§ 9.4.7 The issuance of a separate Certificate for Payment or a Project Certificate for Payment will not be a representation that the Construction Manager or Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed the Contractors' construction means, methods, techniques, sequences, or procedures; (3) reviewed copies of requisitions received from Subcontractors and material suppliers and other data requested by the Owner to substantiate the Contractor's right to payment; or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.5 Decisions to Withhold Certification

§ 9.5.1 The Construction Manager or Architect may withhold a Certificate for Payment or Project Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Construction Manager's or Architect's opinion the representations to the Owner required by Section 9.4.4 and 9.4.5 cannot be made. If the Construction Manager or Architect is unable to certify payment in the amount of the Application, the Construction Manager will notify the Contractor and Owner as provided in Section 9.4.1 and 9.4.3. If the Contractor, Construction Manager and Architect cannot agree on a revised amount, the Architect will promptly issue a Certificate for Payment or a Project Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Construction Manager or Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence or subsequent observations, may nullify the whole or a part of a Certificate for Payment or Project Certificate for Payment previously issued, to such extent as may be necessary in the Construction Manager's or Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from the acts and omissions described in Section 3.3.2 because of

- **.1** defective Work not remedied;
- **.2** third party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;

.3 failure of the Contractor to make payments properly to Subcontractors or suppliers for labor, materials or equipment;
.4 reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
.5 damage to the Owner or a Separate Contractor;
.6 reasonable evidence that the Work will not be completed within the Contract Time, and that the unpaid balance would not be adequate to cover actual for the anticipated delay;
.7 repeated failure to carry out the Work in accordance with the Contract Documents; or
.8 failure to maintain insurance as required by the Contract Documents.

§ 9.5.2 When the above reasons for withholding certification are removed, certification will be made for amounts previously withheld.

§ 9.5.3 If the Architect or Construction Manager withholds certification for payment under Section 9.5.1, the Owner may, at its sole option, issue joint checks to the Contractor and to any Subcontractor or material or equipment suppliers to whom the Contractor failed to make payment for Work properly performed or material or equipment suitably delivered. If the Owner makes payments by joint check, the Owner shall notify the Architect and the Construction Manager, and both will reflect such payment on the next Certificate for Payment.

§ 9.5.4 Notwithstanding anything above to the contrary, the Owner has the right to withhold payment to protect itself against damages incurred or which may be incurred as the result of the Contractor's breach of Contract or negligence, including, but not limited to, the items set forth in Section 9.5.1.

§ 9.6 Progress Payments

§ 9.6.1 After the Architect has issued a Certificate for Payment or Project Certificate for Payment, the Owner shall make payment in the manner and within the time provided in the Contract Documents, and shall so notify the Construction Manager and Architect.

§ 9.6.2 The Contractor shall pay each Subcontractor, no later than seven days after receipt of payment from the Owner, the amount to which the Subcontractor is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar manner.

§ 9.6.3 The Construction Manager will, on request, furnish to a Subcontractor, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Owner, Construction Manager and Architect on account of portions of the Work done by such Subcontractor.

§ 9.6.4 The Owner has the right to request written evidence from the Contractor that the Contractor has properly paid Subcontractors and material and equipment suppliers amounts paid by the Owner to the Contractor for subcontracted Work. If the Contractor fails to furnish such evidence within seven days, the Owner shall have the right to contact Subcontractors to ascertain whether they have been properly paid. Neither the Owner, Construction Manager nor Architect shall have an obligation to pay, or to see to the payment of money to, a Subcontractor, except as may otherwise be required by law.

§ 9.6.5 Contractor payments to material and equipment suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents.

§ 9.6.7 Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor for Work properly performed by Subcontractors and suppliers shall be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, shall create any fiduciary liability or tort liability on the part of the Contractor for breach of trust, or shall entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

§ 9.6.8 If the Owner is entitled to reimbursement or payment from the Contractor under or pursuant to the Contract Documents, such payment shall be made promptly upon demand by the Owner. Notwithstanding anything contained in the Contract Documents to the contrary, if the Contractor fails to promptly make any payment due the Owner, or if the Owner incurs any costs and expenses to cure, any default of the Contractor or to correct defective Work , the Owner shall have an absolute right to offset such amount against the Contract Sum and may, in the Owner's sole discretion, elect either to (i) deduct an amount equal to that which the Owner is entitled from any payment then or thereafter due the Contractor from the Owner, or (ii) issue a written notice to the Contractor reducing the Contract Sum by an amount equal to that which the Owner is entitled .

§ 9.7 Failure of Payment

If the Construction Manager and Architect do not issue a Certificate for Payment or a Project Certificate for Payment, through no fault of the Contractor, within fourteen (14) days after the Construction Manager's receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within thirty (30) days after the date established in the Contract Documents, the amount certified by the Construction Manager and Architect or awarded by binding dispute resolution, then the Contractor may, upon seven (7) additional days' written notice to the Owner, Construction Manager and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shut down, delay and start-up, plus interest as provided for in the Contract Documents.

§ 9.8 Substantial Completion

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the Work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so the Owner can occupy or utilize the Work for its intended use; provided, however, that as a condition precedent to Substantial Completion, the Owner has received all certificates of occupancy and any other permits, approvals, licenses, and other documents from any governmental authority having jurisdiction thereof necessary for the beneficial occupancy of the Project.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall notify the Construction Manager, and the Contractor and Construction Manager shall jointly prepare and submit to the Architect a comprehensive list of items to be completed or corrected prior to final payment, which shall identify all non-conforming, defective and incomplete Work and establish the date of commencement of warranties in connection with any such Work. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

§ 9.8.3 Upon receipt of the list, the Architect, assisted by the Construction Manager, will make an inspection to determine whether the Work or designated portion thereof is substantially complete. If the Architect's inspection discloses any item, whether or not included on the list, which is not sufficiently complete in accordance with the requirements of the Contract Documents so that the Owner can occupy or utilize the Work or designated portion thereof for its intended use, the Contractor shall, before issuance of the Certificate of Substantial Completion, complete or correct such item upon notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect, assisted by the Construction Manager, to determine Substantial Completion.

§ 9.8.3.1 Except with the consent of the Owner, the Architect will perform no more than two (2) inspections to determine whether the Work or a designated portion thereof has attained Substantial Completion in accordance with the Contract Documents. The Owner shall be entitled to deduct from the Contract Sum amounts paid to the Architect for any additional inspections.

§ 9.8.4 When the Architect, assisted by the Construction Manager, determines that the Work , or designated portion thereof, is substantially complete, the Architect will prepare, and the Construction Manager and Architect shall execute, a Certificate of Substantial Completion that shall establish the date of Substantial Completion, shall ;establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance, and shall fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in such Certificate. Upon such acceptance, and consent of surety if any, the Owner shall make payment sufficient to increase the total payments to one hundred percent (100%) of the Contract

Sum, less twice the amounts as the Owner, Architect and Construction Manager shall determine for incomplete Work and unsettled and un-bonded liens, claims, judgments, or disputes . Such payment shall be adjusted for Work that is incomplete or not in accordance with the requirements of the Contract Documents.

§ 9.9 Partial Occupancy or Use

§ 9.9.1 The Owner may occupy or use any completed or partially completed portion of the Work at any stage when such portion is designated by separate agreement with the Contractor, provided such occupancy or use is consented to by the insurer as required under Section 11.3.1.5 and authorized by public authorities having jurisdiction over the Project. Such partial occupancy or use may commence whether or not the portion is substantially complete, provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, retainage if any, security, maintenance, heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the Contract Documents. When the Contractor considers a portion substantially complete, the Contractor and Construction Manager shall jointly prepare and submit a list to the Architect as provided under Section 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect after consultation with the Construction Manager.

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Construction Manager, Contractor, and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.10 Final Completion and Final Payment

§ 9.10.1 Upon completion of the Work, the Contractor shall forward to the Construction Manager with a copy to the Owner a written notice that the Work is ready for final inspection and acceptance, and shall also forward to the Construction Manager a final Contractor's Application for Payment with a copy to the Owner. Upon receipt, the Construction Manager will evaluate the completion of Work of the Contractor and then forward the notice and Application with the Construction Manager's recommendations to the Architect, who will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, the Construction Manager and Architect will promptly issue a final Certificate for Payment or Project Certificate for Payment stating that to the best of their knowledge, information and belief, and on the basis of their on-site visits and inspections, the Work has been completed in accordance with terms and conditions of the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. The Construction Manager's and Architect's final Certificate for Payment or Project Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled.

§ 9.10.1.1 Except with the consent of the Owner, the Architect will perform no more than two (2) inspections to determine whether the Work or a designated portion thereof has attained Final Completion in accordance with the Contract Documents. The Owner shall be entitled to deduct from the Contract Sum amounts paid to the Architect for any additional inspections.

§ 9.10.1.2 If additional time is needed to complete Work identified in the final inspection, the Architect may set the date starting the one-year corrective or warranty period at his/her discretion, but in no case later than the date of final payment. This date established as acceptance and start of warranty period is to be honored by the Contractor regardless of the Contractor's agreements with the product manufacturers in regards to warranties.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect through the Construction Manager (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect and will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner, (3) a written statement that the Contractor knows of no substantial reason that the insurance will not be renewable to cover the period

required by the Contract Documents, (4) consent of surety, if any, to final payment and (5), if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts, releases and waivers of liens, claims, security interests, or encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor may furnish a bond satisfactory to the Owner to indemnify the Owner against such lien. If such lien, remains unsatisfied after payments are made, the Contractor shall refund to the Owner all money that the Owner may be compelled to pay in discharging such lien, , including all costs and reasonable attorneys' fees.

§ 9.10.2.1 In addition to the submittals required by Section 9.10.2, the Contractor shall submit other items as may be required by the Contract Documents and separate release or waivers of liens for each Subcontractor, material supplier, and others with lien rights against the property of the Owner, along with a list of all such parties.

§ 9.10.2.2 Upon demand by the Owner, Contractor shall provide and file bond for discharge of any lien, as required by Lien Law, State of New York, Section 21, Paragraph 5.

§ 9.10.3 If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Construction Manager and Architect so confirm, the Owner shall, upon application by the Contractor and certification by the Construction Manager and Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance for Work not fully completed or corrected is less than retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect through the Construction Manager prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

§ 9.10.4 The making of final payment shall constitute a waiver of Claims by the Owner except those arising from

- **.1** liens, Claims, security interests, or encumbrances arising out of the Contract and unsettled;
- **.2** failure of the Work to comply with the requirements of the Contract Documents; or
- **.3** terms of special warranties required by the Contract Documents.

§ 9.10.5 The acceptance by the Contractor, Subcontractor, material supplier or its assignees, of the final payment under this Contract whether by voucher, judgment of any court of competent jurisdiction, or administrative means, shall constitute and operate as a general release to the Owner from any and all claims of the Contractor arising out of the performance of this Contract.
.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 Safety Precautions and Programs

The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Contract. The Contractor shall submit the Contractor's safety program to the Construction Manager for review and coordination with the safety programs of other Contractors. The Construction Manager's responsibilities for review and coordination of safety programs shall not extend to direct control over or charge of the acts or omissions of the Contractors, Subcontractors, agents or employees of the Contractors or Subcontractors, or any other persons performing portions of the Work and not directly employed by the Construction Manager.

§ 10.1.1 The Contractor shall comply with any safety requirements included in the Contract Documents, including but not limited to the OSHA Standards as required by New York State Labor Department. However, these shall be deemed to be minimum requirements and shall not relieve the Contractor of the responsibility for other safety precautions and programs in accordance with the requirements of Article 10.

§ 10.2 Safety of Persons and Property

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury, or loss to

- **.1** employees on the Work and other persons who may be affected thereby;
- **.2** the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody, or control of the Contractor, or the Contractor's Subcontractor or Sub-subcontractors;

.3 other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures, and utilities not designated for removal, relocation, or replacement in the course of construction; and

.4 construction or operations by the Owner, or other Contractors.

§ 10.2.2 The Contractor shall comply with, and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities, bearing on safety of persons or property or their protection from damage, injury, or loss.

§ 10.2.3 The Contractor shall erect, and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards; promulgating safety regulations; and notifying owners and users of adjacent sites and utilities.

The Contractor shall also be responsible, at the Contractor's sole cost and expense, for all measures necessary to protect any property adjacent to the Project and improvements therein. Any damage to such property or improvements shall be promptly repaired by the Contractor.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel, and shall provide proof of relevant insurance coverage as may be required by Owner.

§ 10.2.4.1 When use or storage of hazardous materials, substances or equipment, or unusual methods are necessary for execution of the Work, the Contractor shall give the Owner reasonable advance notice. If the Contract Documents require the Contractor to handle materials or substances that under certain circumstances may be designated as hazardous, the Contractor shall handle such materials in an appropriate manner.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2, 10.2.1.3 and 10.2.1.4 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2, 10.2.1.3 and 10.2.1.4 except damage or loss. attributable to acts or omissions of the Owner, Construction Manager or Architect or anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable, and not attributable to the fault or negligence of the Contractor. The foregoing obligations of the Contractor are in addition to the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner, Construction Manager and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site to be loaded so as to cause damage or create an unsafe condition.

§ 10.2.8 Injury or Damage to Person or Property

If either party suffers injury or damage to person or property because of an act or omission of the other party, or of others for whose acts such party is legally responsible, written notice of such injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding 21 days after discovery. The notice shall provide sufficient detail to enable the other party to investigate the matter.

§ 10.2.9 When all or a portion of the Work is suspended for any reason, the Contractor shall securely fasten down all coverings and fully protect the Work, as necessary, from injury or damage by any cause.

§ 10.2.10 The Contractor shall promptly report in writing to the Owner and Architect all accidents arising out of or in connection with the Work that cause death, personal injury, or property damage, giving full details and statements of any witnesses. In addition, if death, serious personal injuries, or serious damages are caused, the accident shall be reported immediately by telephone or messenger to the Owner and the Architect.

§ 10.3 Hazardous Materials

§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent the contamination of any portion of the Project Site, property damage, or any foreseeable bodily injury or death to persons resulting from any material or substance, including but not limited to any material that may contain asbestos, lead, mercury, or polychlorinated biphenyl ("PCB"), encountered on the site by the Contractor, the Contractor shall immediately, upon recognizing any such potential condition, stop Work in the affected area and report the condition to the Owner and the Architect, both verbally and in writing.

§ 10.3.1.1 The Contractor shall thoroughly and carefully review the Project Site and any information available from the Owner to identify the known and potential locations of any known or suspected hazardous materials prior to commencing the Work. The Owner has provided in the Contract Documents a preconstruction survey by an independent testing company of the presence, location, and condition of hazardous materials.

§ 10.3.2 Upon receipt of the Contractor's written notice, the Owner shall obtain the services of a licensed laboratory to verify a presence or absence of the material or substance reported by the Contractor and, in the event such material or substance is found to be present, to cause it to be rendered harmless. Unless otherwise required by the Contract Documents, the Owner shall furnish in writing to the Contractor, Construction Manager and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of such material or substance or who are to perform the task of removal or safe containment of such material or substance. The Contractor, the Construction Manager and the Architect will promptly reply to the Owner in writing stating whether or not any of them has reasonable objection to the persons or entities proposed by the Owner. If the Contractor, Construction Manager or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor, the Construction Manager and the Architect have no reasonable objection. When the material or substance has been rendered harmless, Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately

§ 10.3.3 Intentionally Left Blank

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for materials or substances the Contractor brings to the site unless such materials or substances are required by the Contract Documents. The Owner shall be responsible for materials or substances required by the Contract Documents, except to the extent of the Contractor's fault or negligence in the use and handling of such materials or substances.

§ 10.3.5 The Contractor shall indemnify the Owner for the cost and expense the Owner incurs (1) for remediation of a material or substance the Contractor brings to the site and negligently handles, or (2) where the Contractor fails to perform its obligations under Section 10.3.1, except to the extent that the cost and expense are due to the Owner's fault or negligence.

§ 10.3.5.1 The Contractor shall be held liable for the costs of remediation of a hazardous material or substance if the Contractor failed to take reasonable precautions with any potentially hazardous material that was encountered during the course of the Work.

§ 10.3.6 Intentionally Left Blank .

§ 10.4 Emergencies

In an emergency affecting safety of persons or property, the Contractor shall act, at the Contractor's discretion, to prevent threatened damage, injury, or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency shall be determined as provided in Article 15 and Article 7.

ARTICLE 11 INSURANCE AND BONDS

§ 11.1 Contractor's Liability Insurance

§ 11.1.1 The Contractor shall purchase from and maintain with a company or companies lawfully authorized to do business in the State of New York, County of Ulster such insurance as will protect the Contractor from claims set forth below which may arise out of or result from the Contractor's operations and completed operations under the Contract, and for which the

Contractor may be legally liable, whether such operations be by the Contractor or by a Subcontractor or by anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable:

.1 Claims under workers' compensation, disability benefit and other similar employee benefit acts which are applicable to the Work to be performed;

.2 Claims for damages because of bodily injury, occupational sickness or disease, or death of the Contractor's employees;

.3 Claims for damages because of bodily injury, sickness or disease, or death of any person other than the Contractor's employees;

.4 Claims for damages insured by usual personal injury liability coverage;

.5 Claims for damages, other than to the Work itself, because of injury to or destruction of tangible property, including loss of use resulting therefrom;

.6 Claims for damages because of bodily injury, death of a person or property damage arising out of ownership, maintenance or use of a motor vehicle; and

.7 Claims for bodily injury or property damage arising out of completed operations; and

.8 Claims involving contractual liability insurance applicable to the Contractor's obligations under Section 3.18.

.9 Liability Insurance shall include all major divisions of coverage and be on a comprehensive basis including:

- **a) Premises Operations (including X, C and U coverage as applicable)**
- **b) Independent Contractor's Protective**
- **c) Products and Completed Operations**
- **d) Personal Injury Liability**
- **e) Contractual, including specified provisions for Contractor's obligations in Section 3.18**
- **f) Owner, Non-Owned and Hired Motor Vehicles**
- **g) Broad Form Property Damage, including Completed Operations.**

.10 General Liability coverage must be made on an occurrence basis.

§ 11.1.2 The insurance required by Section 11.1.1 shall be written for not less than limits of liability specified in the Contract Documents or required by law, whichever coverage is greater. Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from the date of commencement of the Work for the life of this Contract (which includes the warranty or guaranty period) and termination of any coverage required to be maintained after final payment and, with respect to the Contractor's completed operations coverage, until the expiration of the period for correction of Work or for such other period for maintenance of completed operations coverage as specified in the Contract Documents.

§11.1.2.1 The insurance required by Section 11.1.2 shall be written for not less than the limits in the following Clauses, or greater if required by law:

(Rev. 6-01-19)

PLEASE BRING THESE INSURANCE REQUIREMENTS TO YOUR INSURANCE AGENT TO ENSURE PROPER COVERAGE AND LIMITS ARE IN PLACE. FAILURE TO PROVIDE CERTIFICATE(S) OF INSURANCE EVIDENCING REQUIREMENTS BELOW, SHALL DELAY CONTRACT EXECUTION.

SCHEDULE C
COUNTY OF ULSTER CONTRACT INSURANCE REQUIREMENTS

I. CONDITIONS OF INSURANCE

Unless otherwise authorized by the Ulster County Insurance Officer, strict adherence to this schedule is required. Any deviation without prior authorization from the County's Insurance Department will result in a delay in the finalization of this Agreement.

The Contractor shall submit copies of any or all required insurance documents as and when requested by the County. Upon policy renewal, the Contractor shall submit updated insurance policy information.

II. CERTIFICATES OF INSURANCE

The Contractor shall file with the County's Insurance Department, prior to commencing work under this Agreement, all

proper Certificates of Insurance.

The Certificates of Insurance shall include:

a. Name and address of Insured
b. Issue date of certificate
c. Insurance company name
d. Type of coverage in effect
e. Policy number
f. Inception and expiration dates of policies included on the certificate
g. Limits of liability for all policies included on the certificate
h. "Certificate Holder" for all certificates shall be the County of Ulster, P.O. Box 1800, Kingston, New York 12402-1800.

If the Contractor's insurance policies should be non-renewed or canceled, or should expire during the life of this Agreement, the County shall be provided with a new certificate indicating the replacement policy information as requested above. The County requires thirty (30) days prior written notice of cancellation [ten (10) days for non-payment of premium] from the Insurer, its agents or representatives.

The Contractor agrees to indemnify the County of Ulster for any applicable deductibles and self-insured retentions.

III. WORKERS' COMPENSATION AND DISABILITY INSURANCE

The Contractor shall take out and maintain during the life of this Agreement, Workers' Compensation (WC) Insurance and Disability Benefits (DB) Insurance, for all of its employees employed at the site of the project, and shall provide Certificates of Insurance evidencing this coverage to the County's Insurance Department.

If the Contractor is not required to carry such insurance, the Contractor must submit form CE-200 attesting to the fact that it is exempt from providing WC and/or DB Insurance coverage for all of its employees.

The manner of proof related to WC and DB Insurance is controlled by New York State Laws, Rules and Regulations. "ACORD" forms are not acceptable proof of WC and/or DB Insurance.

IV. WORKERS' COMPENSATION REQUIREMENTS

To assist the State of New York and municipal entities in enforcing WCL Section 57, a business entity (the Contractor) seeking to enter into a contract with a municipality (the County) must provide one of the following forms to the municipal entity with which it is entering into a contract including a Waiver of Subrogation Endorsement. The Contractor should contact their insurance agent to obtain acceptable proof of WC coverage:

- Form C-105.2 – "Certificate of NYS Workers' Compensation Insurance" **or**
- Form U-26.3 – "Certificate of Workers' Compensation Insurance" issued by the New York State Insurance Fund **or**
- Form SI-12 – "Affidavit Certifying that Compensation has Been Secured" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured **or**
- Form GSI-105.2 – "Certificate of Participation in Workers' Compensation Group Self-Insurance" issued by the Self-Insurance administrator of the group **or**
- Form GSI-12 – "Certificate of Group Workers' Compensation Group Self-Insurance" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured.

If the Contractor is not required to carry WC coverage, it must submit Form CE-200, "Certificate of Attestation of Exemption" from New York State Workers' Compensation and/or Disability Benefits Insurance Coverage. This form and the instructions for completing it are available at http://www.wcb.ny.gov

V. DISABILITY BENEFITS REQUIREMENTS

To assist the State of New York and municipal entities in enforcing WCL Section 220(8), a business entity (the Contractor) seeking to enter into a contract with a municipality (the County) must provide one of the following forms to the municipal entity it is entering into a contract with. The Contractor should contact their insurance agent to obtain acceptable proof of DB Insurance Coverage:

- Form DB-120.1 – "Certificate of Insurance Coverage Under the NYS Disability Benefits Law" **or**
- Form DB-155 – "Compliance with Disability Benefits Law" issued by the Self-Insurance Office of the Workers' Compensation Board if the Contractor is self-insured.

If the Contractor is not required to carry DB Insurance coverage, it must submit Form CE-200, "Certificate of Attestation of Exemption" from New York State Workers' Compensation and/or Disability Benefits Insurance Coverage. This form and the instructions for completing it are available at http://www.wcb.ny.gov

VI. COMMERCIAL GENERAL LIABILITY INSURANCE

The Contractor shall take out and maintain during the life of this Agreement, such bodily injury liability and property damage liability insurance as shall protect it and the County from claims for damages for bodily injury including accidental death, as well as from claims for property damage that may arise from operations under this Agreement, whether such operations be by the Contractor, by any subcontractor, or by anyone directly or indirectly employed by either of them.

It shall be the responsibility of the Contractor to maintain such insurance in amounts sufficient to fully protect itself and the County, but in no instance shall amounts be less than the minimum acceptable levels of coverage set forth below:

- Bodily Injury and Property Damage Liability Insurance in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** for each occurrence, and in an amount not less than **FOUR MILLION AND 00/100 ($4,000,000.00) DOLLARS** general aggregate.

Other Conditions of Commercial General Liability Insurance:

a. Coverage shall be written on Commercial General Liability form.
b. Coverage shall include:
    1. Contractual Liability
    2. Independent Contractors
    3. Products and Completed Operations
    4. Pollution Liability when required
    5. Owners and Contractors Protective Liability
c. "Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York, 12402-1800", shown on the Commercial General Liability policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

VII. UMBRELLA LIABILITY OR EXCESS LIABILITY INSURANCE

Umbrella Liability or Excess Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS**.

NOTE: As long as all minimum underlying limits have been met, insurance limits may be a total combined limit of the Umbrella/Excess Liability limits and the underlying liability insurance limits.

The Umbrella/Excess Liability coverage MUST be written on a follow-form (drop down) basis to the underlying insurance coverage with no additional exclusions.

"Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York, 12402-1800", shown on the Umbrella policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

VIII. AUTOMOBILE LIABILITY INSURANCE

Automobile Bodily Injury Liability and Property Damage Liability Insurance shall be provided by the Contractor, with a minimum Combined Single Limit (CSL) of **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS.**

Coverage shall include:

a. All owned vehicles
b. Any hired automobile
c. Any non-owned automobile
d. "Additional Insured" status shall be granted to "County of Ulster, P.O. Box 1800, Kingston, New York,

12402-1800", shown on the Auto Liability policy, further stating that this insurance shall be primary and non-contributory with any other valid and collectable insurance.

IX. POLLUTION LIABILITY INSURANCE

[X] If this box is checked, Pollution Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000) DOLLARS** for each occurrence and in an amount of not less than **FIVE MILLION AND 00/100 ($5,000,000) DOLLARS** general aggregate.

X. PROFESSIONAL LIABILITY INSURANCE (e.g. MALPRACTICE, MEDIA LIABILITY, ERRORS & OMISSIONS INSURANCE)

[ ] If this box is checked, Professional Liability Insurance shall be provided by the Contractor in an amount not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS** for each occurrence and in an amount of not less than **FIVE MILLION AND 00/100 ($5,000,000.00) DOLLARS** general aggregate.

XI. RIGGERS LIABILITY INSURANCE

[X] If this box is checked, Riggers Liability Insurance shall be provided by the Contractor in an amount not less than **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS** for each occurrence and in an amount of not less than **ONE MILLION AND 00/100 ($1,000,000.00) DOLLARS** general aggregate.

XII XCU (Explosion, Collapse, and Underground) Endorsement/Commercial General Liability Coverage:

[ ] If this box is checked, an Explosion, Collapse, and Underground Endorsement shall be provided by the Contractor in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** for each occurrence, and in an amount not less than **TWO MILLION AND 00/100 ($2,000,000.00) DOLLARS** general aggregate.

§ 11.1.3 Certificates of insurance acceptable to the Owner shall be submitted to the Construction Manager for transmittal to the Owner with a copy to the Architect prior to commencement of the Work and thereafter upon renewal or replacement of each required policy of insurance. These certificates and the insurance policies required by this Section 11.1 shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner. An additional certificate evidencing continuation of liability coverage, including coverage for completed operations, shall be submitted with the final Application for Payment as required by Section 9.10.2 and thereafter upon renewal or replacement of such coverage until the expiration of the time required by Section 11.1.2. Information concerning reduction of coverage shall be furnished by the Contractor with reasonable promptness.

§ 11.1.4 The Contractor shall cause the commercial liability coverage required by the Contract Documents to include (1) the Construction Manager, the Construction Manager's consultants, the Owner, the Architect, and the Architect's consultants as additional insureds for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's operations; and (2) the Owner as an additional insured for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's completed operations; and (3) The Contractor's policies shall be with limits equal to or greater than the limits in Section 11.1.2.; and (4) insurers must provide 30-day notice of cancellation to all additional insureds.

§11.1.5 If the Contractor has an exclusion on his/her insurance policy for Pollution/Hazardous Materials that are part of this project then his/her Sub-Contractor performing the Work must provide that insurance.

§11.1.6 Both the binder and the insurance policy must be submitted prior to any Work being performed on the Owner's Site. The policy must match the binder.

§11.1.7 The Contractor's failure to take out or to maintain, or the taking out or maintenance of any required insurance, shall not relieve Contractor from any liability under this Agreement, nor shall the insurance requirements be construed to conflict with or limit Contractor's obligations concerning indemnification. All property losses shall be made payable to and adjusted with the Owner. All Certificates of Insurance shall be approved by Owner's Insurance Officer prior to commencement of any Work under this Contract.

§ 11.2 Owner's Liability Insurance

The Owner shall be responsible for purchasing and maintaining the Owner's usual liability insurance.

§ 11.3 Property Insurance

§ 11.3.1 Unless otherwise provided, the Owner shall purchase and maintain, in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located, property insurance written on a builder's risk "all risk" or equivalent policy form in the amount of the initial Contract Sum, plus value of subsequent Contract modifications and cost of materials supplied or installed by others, comprising total value for the entire Project at the site on a replacement cost basis without optional deductibles. Such property insurance shall be maintained, unless otherwise provided in the Contract Documents or otherwise agreed in writing by all persons and entities who are beneficiaries of such insurance, until final payment has been made as provided in Section 9.10 or until no person or entity other than the Owner has an insurable interest in the property required by this Section 11.3 to be covered, whichever is later. This insurance shall include interests of the Owner, the Contractor, Subcontractors and Sub-subcontractors in the Project.

§ 11.3.1.1 Property insurance shall be on an "all-risk" or equivalent policy form and shall include, without limitation, insurance against the perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood, windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for the Architect's, Contractor's, and Construction Manager's services and expenses required as a result of such insured loss. The form of policy for this coverage shall be Completed Value. Any loss under the property coverage will have a deductible payment of $10,000.00, which shall be the responsibility of the causing party.

§ 11.3.1.2 If the Owner does not intend to purchase such property insurance required by the Contract and with all of the coverages in the amount described above, the Owner shall so inform the Contractor in writing prior to commencement of the Work. The Contractor may then effect insurance that will protect the interests of the Contractor, Subcontractors and Sub-subcontractors in the Work, and by appropriate Change Order the cost thereof shall be charged to the Owner. If the Contractor is damaged by the failure or neglect of the Owner to purchase or maintain insurance as described above, without so notifying the Contractor in writing, then the Owner shall bear all reasonable costs properly attributable thereto.

§ 11.3.1.3 If the property insurance requires deductibles, the causing party shall pay costs not covered because of such deductibles.

§ 11.3.1.4 The Contractor shall provide insurance coverage acceptable to Owner for portions of the Work stored off site, in transit, and stored on site but not incorporated into the Work as full replacement cost basis without voluntary deductible.

§ 11.3.1.5 Partial occupancy or use in accordance with Section 9.9 shall not commence until the insurance company or companies providing property insurance have consented to such partial occupancy or use by endorsement or otherwise. The Owner and the Contractor shall take reasonable steps to obtain consent of the insurance company or companies and shall, without mutual written consent, take no action with respect to partial occupancy or use that would cause cancellation, lapse or reduction of insurance.

§ 11.3.2 Boiler and Machinery Insurance. The Owner shall purchase and maintain boiler and machinery insurance required by the Contract Documents or by law, which shall specifically cover such insured objects during installation and until final acceptance by the Owner; this insurance shall include interests of the Owner, Construction Manager, Contractor, Subcontractors and Sub-subcontractors in the Work, and the Owner and Contractor shall be named insureds.

§ 11.3.3 Intentionally Left Blank

§ 11.3.4 If the Contractor requests in writing that insurance for risks other than those described herein or other special causes of loss be included in the property insurance policy, the Owner shall, if possible, include such insurance, and the cost thereof shall be charged to the Contractor by appropriate Change Order.

§ 11.3.5 If during the Project construction period the Owner insures properties, real or personal or both, adjoining or adjacent to the site by property insurance under policies separate from those insuring the Project, or if after final payment property insurance is to be provided on the completed Project through a policy or policies other than those insuring the

Project during the construction period, the Owner shall waive all rights in accordance with the terms of Section 11.3.7 for damages caused by fire or other causes of loss covered by this separate property insurance. All separate policies shall provide this waiver of subrogation by endorsement or otherwise.

§ 11.3.6 Before an exposure to loss may occur, the Owner shall file with the Contractor a copy of each policy that includes insurance coverages required by this Section 11.3. Each policy shall contain all generally applicable conditions, definitions, exclusions and endorsements related to this Project. Each policy shall contain a provision that the policy will not be canceled or allowed to expire, and that its limits will not be reduced, until at least 30 days' prior written notice has been given to the Contractor.

§ 11.3.7 Waivers of Subrogation. The Owner and Contractor waive all rights against (1) each other and any of their subcontractors, sub-subcontractors, agents and employees each of the other, and (2) the Construction Manager, Architect, Architect's consultants, separate contractors described in Article 6, if any, and any of their subcontractors, sub-subcontractors, agents and employees, for damages caused by fire or other causes of loss to the extent covered by property insurance obtained pursuant to this Section 11.3 or other property insurance applicable to the Work, except such rights as the Owner and Contractor may have to the proceeds of such insurance held by the Owner as fiduciary. The Owner or Contractor, as appropriate, shall require of the Construction Manager, Construction Manager's consultants, Architect, Architect's consultants, Owner's separate contractors described in Article 6, if any, and the subcontractors, sub-subcontractors, agents and employees of any of them, by appropriate agreements, written where legally required for validity, similar waivers each in favor of other parties enumerated herein. The policies shall provide such waivers of subrogation by endorsement or otherwise. A waiver of subrogation shall be effective as to a person or entity even though that person or entity would otherwise have a duty of indemnification, contractual or otherwise, did not pay the insurance premium directly or indirectly, and whether or not the person or entity had an insurable interest in the property damaged.

§ 11.3.8 A loss insured under the Owner's property insurance shall be adjusted by the Owner as fiduciary and made payable to the Owner as fiduciary for the insureds, as their interests may appear, subject to requirements of any applicable mortgagee clause and of Section 11.3.10. The Contractor shall pay Subcontractors their just shares of insurance proceeds received by the Contractor, and by appropriate agreements, written where legally required for validity, shall require Subcontractors to make payments to their Sub-subcontractors in similar manner.

§ 11.3.9 If required in writing by a party in interest, the Owner as fiduciary shall, upon occurrence of an insured loss, give bond for proper performance of the Owner's duties. The cost of required bonds shall be charged against proceeds received as fiduciary. The Owner shall deposit in a separate account proceeds so received, which the Owner shall distribute in accordance with such agreement as the parties in interest may reach, or as determined in accordance with the method of binding dispute resolution selected in the Agreement between the Owner and Contractor. If after such loss no other special agreement is made and unless the Owner terminates the Contract for convenience, replacement of damaged property shall be performed by the Contractor after notification of a Change in the Work in accordance with Article 7.

§ 11.3.10 The Owner as fiduciary shall have power to adjust and settle a loss with insurers unless one of the parties in interest shall object in writing within five days after occurrence of loss to the Owner's exercise of this power; if such objection is made, the dispute shall be resolved in the manner selected by the Owner and Contractor as the method of binding dispute resolution in the Agreement. If the Owner and Contractor have selected arbitration as the method of binding dispute resolution, the Owner as fiduciary shall make settlement with insurers or distribution of insurance proceeds in accordance with the direction of the arbitrators.

§ 11.4 Performance Bond and Payment Bond

§ 11.4.1 The Contractor shall furnish bonds covering faithful performance of the Contract and payment of obligations arising hereunder. Bonds shall be obtained through a Surety satisfactory to the Owner and licensed to do business in the State of New York and the cost thereof shall be included in the Contract Sum. The amount of each bond shall be equal to 100 percent of the Contract Sum.

The Surety shall have, at a minimum a "Best Rating" of "AA+" as stated in the most current publication of "Best's Key Rating Guide, Property-Casualty". In addition, the Surety shall have a minimum "Best Financial Strength Category" of "Class V".

§ 11.4.1.1 The Contractor shall deliver the required bonds to the Owner, on AIA Document A312, not later than ten (10) days following the Notice of Award, or if the Work is to be commenced prior thereto in response to a letter of intent, the

Contractor shall, prior to the commencement of the Work, submit evidence satisfactory to the Owner that such bonds will be furnished.

§ 11.4.1.2 The Contractor shall require the attorney-in-fact who executes the required bonds on behalf of the surety to affix thereto a certified and current copy of the power of attorney.

§ 11.4.1.3 The insurance required by Section 11.4 is not intended to cover machinery, tools or equipment owned or rented by the Contractor that are utilized in the performance of the Work but not incorporated into the permanent improvements. The Contractor shall, at the Contractor's own expense, provide insurance coverage for owned or rented machinery, tools, or equipment, which shall be subject to the provisions of Section 11.3.7.

§ 11.4.2 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under the Contract, the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

§ 11.5 Maintaining Insurances

§ 11.5.1 The Contractor's failure to maintain any of the insurances required by Article 11 shall be cause for the Owner to withhold payment per Section 9.5.1.8.

§ 11.5.2 The Owner reserves the right to provide additional insurance at the Contractor's expense if the Contractor fails to update their insurance.

§ 11.5.3 The Contractor shall submit updated certificates of Insurance to the Construction Manager for transmittal to the Owner per Section 11.1.3.

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 Uncovering of Work

§ 12.1.1 If a portion of the Work is covered contrary to the Construction Manager's or Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by either, be uncovered for their observation and be replaced at the Contractor's expense without change in the Contract Time.

§ 12.1.2 If a portion of the Work has been covered which the Construction Manager or Architect has not specifically requested to observe prior to its being covered, the Construction Manager or Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, costs of uncovering and replacement shall by appropriate Change Order, be at the Owner's expense. If such Work is not in accordance with the Contract Documents, such costs, and the cost of correction, shall be at the Contractor's expense, unless the condition was caused by the Owner or one of the other Contractors in which event the Owner shall be responsible for payment of such costs.

§ 12.2 Correction of Work

§ 12.2.1 Before or After Substantial Completion

The Contractor shall promptly correct Work rejected by the Construction Manager or Architect or failing to conform to the requirements of the Contract Documents, whether discovered before or after Substantial Completion, and whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including, but not limited to, additional testing and inspections, the cost of uncovering and replacement, the cost of repairing work of other Contractor's damaged or destroyed by the Contractor, and compensation for the Construction Manager's and Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

If prior to the date of Substantial Completion the Contractor, a Subcontractor, or anyone for whom either is responsible uses or damages any portion of the Work, including, without limitation, mechanical, electrical, plumbing, and other building systems, machinery, equipment, or other mechanical device, the Contractor shall cause such item to be restored to "like new" condition at no expense to the Owner or Construction Manager. In addition, the Contractor shall promptly remedy damage and loss arising in conjunction with the Project caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or anyone for whose acts they may be liable or for which the Contractor is otherwise responsible.

§ 12.2.1.1 Should Contractor fail to remove and replace promptly any rejected Work, Owner shall have the right itself or through others to dismantle and remove the same and to purchase and install new materials and equipment in replacement thereof, and the cost thereof together with the cost of repairing all other Work destroyed or damaged by such removal or replacement may be deducted from any payment or payments due or to become due to Contractor. If such payment or payments shall be insufficient for such purpose or if Contractor shall have been fully paid, Contractor shall on demand pay such cost to Owner.

§ 12.2.1.2 Should Owner determine that such removal is inexpedient, Owner shall have the right to accept such defective Work and deduct from any payment or payments due or to become due to Contractor, an amount determined by Owner to be the equivalent of the difference in value between the portion of the Work as required by the Contract Documents and such portion as furnished by Contractor. If such payment or payments due or to become due shall be insufficient for such purpose or if Contractor shall have been fully paid, Contractor shall pay to Owner on demand any deficiency or difference in value.

§ 12.2.2 After Substantial Completion

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one (1) year after the date of Substantial Completion of the Work or designated portion thereof, or after the date for commencement of warranties established under Section 9.9.1, or by terms of an applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of written notice from the Owner to do so, unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition. During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.4.

§ 12.2.2.2 The one-year period shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

§ 12.2.2.3 Upon completion of any Work under or pursuant to this Section 12.2, the one (1)-year correction period in connection with the Work requiring correction shall be renewed and recommence. The obligations under Section 12.2 shall cover any repairs and replacement to any part of the Work or other property that is damaged by the defective Work.

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner.

§ 12.2.4 The Contractor shall bear the cost of correcting destroyed or damaged construction whether completed or partially completed, of the Owner or separate contractors or other Multiple Prime Contractors caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents. The obligations shall cover any repair and replacement to any part of the Work or other property caused by the defective Work.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work, nor the warranty period for any equipment provided in connection with the Work.

§ 12.3 Acceptance of Nonconforming Work

If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS

§ 13.1 Governing Law

This Contract shall be governed by the laws of the State of New York, except where the Federal Supremacy Clause requires otherwise.

§ 13.2 Successors and Assigns

§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns, and legal representatives to covenants, agreements, and obligations contained in the Contract Documents. Except as provided in Section 13.2.2, neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make such an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

§ 13.2.2 The Owner may, without consent of the Contractor, assign the Contract to a lender providing construction financing for the Project, if the lender assumes the Owner's rights and obligations under the Contract Documents. The Contractor shall execute all consents reasonably required to facilitate such assignment.

§ 13.3 Written Notice

§ 13.3.1 Legal Notice

Written notice shall be deemed to have been duly served if delivered in person to the individual, to a member of the firm or entity or to an officer of the corporation for which it was intended; or if delivered at or sent by registered or certified mail or by courier service providing proof of delivery to, the last business address known to the party giving notice. In addition to the methods of service allowed by New York State Law, Contractor consents to service of process by registered or certified mail, return receipt requested or by facsimile (fax) transmission. Service shall be complete and effective when deposited in a United States mailbox or post-office or when fax has connected. Contractor must promptly notify Owner, in writing, of each and every change of address or fax number to which service of process can be made. Service by Owner to the Contractor's last known address or fax number shall be sufficient. Contractor will have fifteen (15) calendar days after service is complete in which to respond.

§13.3.1.1 Contractor agrees that at least ninety (90) days prior to commencing suit against the Owner for any matter arising directly or indirectly out of this Contract, it shall provide to the Owner a sworn document listing the time, place and manner of any breach of this Contract, together with a list of any damages to which Contractor believes it is entitled.

§13.3.1.2 Owner shall have a right to conduct a deposition upon oral questions of an officer, employee or agent of the Contractor of the Owner's choice, as to any matter arising under this Contract, within the ninety (90) day period prescribed in Section13.3.1 above.

§13.3.1.3 Strict compliance with this Section 13.3 shall be a condition precedent to maintenance or institution of any action or proceeding, whether legal or administrative. This section shall not be construed to toll any applicable statute of limitations.

§13.3.1.4 Any action against Owner must be commenced within one year of the event that gives rise to liability.

§13.3.2 Other Than Legal Notice Any invoice, statement, notice or communication other than legal notice as provided for in Section 13.3.1 shall be made in writing at the addresses listed in the Contract.

§ 13.4 Rights and Remedies

§ 13.4.1 Except as expressly provided in the Contract Documents, duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights, and remedies otherwise imposed or available by law.

§ 13.4.2 No action or failure to act by the Owner, Construction Manager, Architect, or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach thereunder, except as may be specifically agreed in writing.

§13.4.3 The Owner shall have all of its common law, equitable and statutory rights of set off. These rights shall include, but not be limited to the Owner's option to withhold for the purpose of set-off any monies due Contractor under this Contract up to any amounts due and owing to Owner with regard to this Contract, any other Contract you may have or have had with the Owner or any of its departments or agencies. This right of set-off includes any agreement for a term

commencing prior to or subsequent to the term of this Contract. The right of set-off shall include any amounts due to the Owner for any reason including, without limitation, tax delinquencies, fee delinquencies, or monetary penalties relative thereto.

§ 13.5 Tests and Inspections

§ 13.5.1 Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by applicable laws, statutes, ordinances, codes, rules, and regulations or lawful orders of public authorities. Unless otherwise provided, the Contractor shall make arrangements for such tests, inspections, and approvals with an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and shall bear all related costs of tests, inspections, and approvals. The Contractor shall give the Construction Manager and Architect timely notice of when and where tests and inspections are to be made so that the Construction Manager and Architect may be present for such procedures. The Owner shall bear costs of (1) tests, inspections, or approvals that do not become requirements until after bids are received or negotiations concluded, and (2) tests, inspections, or approvals where building codes or applicable laws or regulations prohibit the Owner from delegating their cost to the Contractor.

§ 13.5.1.1 The Owner shall hire the Special Inspector, at the Owner's expense, to conduct all Special Inspections and related testing as outlined in the Contract Documents. The Contractor shall cooperate with the Special Inspector and shall coordinate his/her schedule and activities with the Construction Manager who will schedule the Special Inspector. The Contractor shall be responsible for the costs of any additional Special Inspections that are required for the re-inspection of Work that has failed to comply with requirements and for additional inspections required as a result of the Contractor's failure to properly coordinate its schedule with the Special Inspector.

§ 13.5.2 If the Construction Manager, Architect, Owner, or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection, or approval not included under Section 13.5.1, the Construction Manager and Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection, or approval, by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Construction Manager and Architect of when and where tests and inspections are to be made so that the Construction Manager and Architect may be present for such procedures. Such costs, except as provided in Section 13.5.3, shall be at the Owner's expense.

§ 13.5.3 If such procedures for testing, inspection, or approval under Sections 13.5.1 and 13.5.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary by such failure, including those of repeated procedures and compensation for the Construction Manager's and Architect's services and expenses, shall be at the Contractor's expense.

§ 13.5.4 Required certificates of testing, inspection, or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Construction Manager for transmittal to the Architect.

§ 13.5.5 If the Construction Manager or Architect is to observe tests, inspections, or approvals required by the Contract Documents, the Construction Manager or Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.5.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.5.7 Any material to be furnished shall be subject to inspections and tests in the shop and field by the Architect. Shop inspection shall not relieve the Contractor of the responsibility to furnish satisfactory materials and the right is reserved to reject any material at any time before final acceptance of the work, when in the opinion of the Architect the materials and workmanship do not conform to the Specification requirements.

§ 13.6 Intentionally Left Blank

§ 13.7 Time Limits on Claims

The Owner and the Contractor shall commence all claims and causes of action, whether in contract, tort, breach of warranty or otherwise, against the other arising out of or related to the Contract in accordance with the requirements of the final dispute resolution method selected in the Agreement within the time period specified by applicable law, but in

any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and the Contractor waive all claims and causes of action not commenced in accordance with this Section 13.7.

§ 13.8 Intentionally Left Blank

§ 13.9 Wage Rates

§ 13.9.1 The Contractor shall comply with the current Prevailing Wage Rates as issued by the State of New York Department of Labor for the location and duration of this Project.

§ 13.11 Certified Payroll Reports

§ 13.11.1 The Contractor shall submit certified copies of payroll records to the Owner concurrent with any Application for Payment. The payroll records shall comply with New York State Labor Law Article 8. The Owner shall not be required to make payment if the appropriate payroll records have not been received.

§ 13.12 No Oral Waiver

The provisions of the Contract Documents shall not be changed, amended, waived, or otherwise modified in any respect except by a writing signed by Owner. No person is authorized on behalf of Owner to orally change, amend, waive, or otherwise modify the terms of the Contract Documents or any of the Contractor's duties or obligations under or arising out of the Contract Documents. Any change, waiver, approval, or consent granted to the Contractor shall be limited to the specific matters stated in the writing signed by Owner, and shall not relieve Contractor of any other of the duties and obligations under the Contract Documents. No "constructive" changes shall be allowed.

§ 13.13 Notices Regarding Liens

13.13.1 Contractor shall provide and file, as required by law, all notices required or permitted by the laws of the state in which the Project is located for protection of Owner from liens and claims of lien if permitted or required by applicable law. Contractor shall be responsible for filing in the appropriate court or other governmental office records all such notices as required or permitted by the laws of the state in which the Project is located.

13.13.2 Contractor shall provide Owner with copies of all notices received by Contractor from subcontractors, sub-subcontractors, and/or suppliers to Contractor.

§ 13.14 General Provisions

13.14.1 Any specific requirement in this Contract that the responsibilities or obligations of the Contractor also apply to a Subcontractor is added for emphasis and are also hereby deemed to include a Subcontractor of any tier. The omission of a reference to a Subcontractor in connection with any of the Contractor's responsibilities or obligations shall not be construed to diminish, abrogate or limit any responsibilities or obligations of a Subcontractor of any tier under the Contract Documents or the applicable subcontract.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 Termination by the Contractor

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of ninety (90) consecutive days through no act or fault of the Contractor, or a Subcontractor, Sub-subcontractor, or their agents or employees, or any other persons or entities performing portions of the Work under direct or indirect contract with the contractor, for any of the following reasons:

- **.1** Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped; or
- **.2** An act of government, such as a declaration of national emergency, that requires all Work to be stopped;

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor, or a Subcontractor, Sub-subcontractor, or their agents or employees, or any other persons or entities performing portions of the Work, under direct or indirect contract with the Contractor, repeated suspensions, delays, or interruptions of the entire Work by the Owner as described in Section 14.3, constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon twenty-one (21) days' written notice to the Owner, Construction Manager and Architect, terminate the Contract and recover from the Owner payment for Work executed, including reasonable overhead and profit, and costs incurred by reason of such termination.

§ 14.1.4 If all of the Work is stopped for a period of sixty (60) consecutive days through no act or fault of the Contractor, or a Subcontractor, or their agents or employees, or any other persons performing portions of the Work under contract with the Contractor because the Owner has persistently failed to fulfill the Owner's obligations under the Contract Documents with respect to matters important to the progress of the Work, the Contractor may, upon seven (7) additional days' written notice to the Owner, Construction Manager and Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.2 Termination by the Owner for Cause

§ 14.2.1 The Owner may terminate the Contract if the Contractor

- **.1** repeatedly refuses or fails to supply enough properly skilled workers or proper materials;
- **.2** fails to make payment to Subcontractors for materials or labor in accordance with the respective agreements between the Contractor and the Subcontractors;
- **.3** repeatedly disregards applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of a public authority;
- **.4** otherwise is guilty of substantial breach of a provision of the Contract Documents.
- **.5** breaches any warranty made by the Contractor under or pursuant to the Contract Documents;
- **.6** fails to furnish the owner with assurances satisfactory to the Owner evidencing the Contractor's ability to complete the Work in compliance with all the requirements of the Contract Documents; or
- **.7** fails after commencement of the Work to proceed continuously with the construction and completion of the Work for more than ten (10) days, except as permitted under the Contract Documents.

§ 14.2.2 When any of the above reasons exist, the Owner after consultation with the Construction Manager, and upon certification by the Architect that sufficient cause exists to justify such action, may, without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven (7) days' written notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

- **.1** Exclude the Contractor from the site and take possession of all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;
- **.2** Accept assignment of subcontracts pursuant to Section 5.4; and
- **.3** Finish the Work by whatever reasonable method the Owner may deem expedient. Upon written request of the Contractor, the Owner shall furnish to the Contractor a detailed accounting of the costs incurred by the Owner in finishing the Work.

§ 14.2.3 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment until the Work is finished.

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Construction Manager's and Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid balance, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall, upon application, be certified by the Architect after consultation with the Construction Manager, and this obligation for payment shall survive termination of the Contract.

§ 14.3 Suspension by the Owner for Convenience

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work, in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 Intentionally Left Blank

§ 14.4 Termination by the Owner for Convenience

§ 14.4.1 The Owner may, at any time, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of written notice from the Owner of such termination for the Owner's convenience, the Contractor shall

.1 cease operations as directed by the Owner in the notice;
.2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and
.3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Contractor shall be entitled to receive payment for Work executed, including overhead and profit, and; costs incurred by reason of such termination.

ARTICLE 15 CLAIMS AND DISPUTES

§ 15.1 Claims

§ 15.1.1 Definition. A Claim is a demand or assertion by one of the parties seeking, as a matter of right, payment of money, or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim.

§ 15.1..2 Notice of Claims

Claims by either the Owner or Contractor must, be initiated by written notice to the other party and to the Initial Decision Maker with a copy sent to the Construction Manager and Architect, if the Construction Manager and or Architect is not serving as the Initial Decision Maker; provided, however, that the claimant shall use its best efforts to furnish the Initial Decision Maker and the other party, as expeditiously as possible, with notice of any Claim including, without limitation, those in connection with concealed or unknown conditions, once such claim is recognized, and shall cooperate with the Architect, the Construction Manager, and the party against whom the claim is made in any effort to mitigate the alleged or potential damages, delay, or other adverse consequences arising out of the condition that is the cause of such a Claim. Claims by either party must be initiated within twenty-one (21) days after occurrence of the event giving rise to such Claim or within 21 days after the claimant first recognizes the condition giving rise to the Claim, whichever is later. In addition to the methods of service allowed by New York State, Contractor consents to process by registered or certified mail, return receipt requested. Service shall be complete and effective when deposited in a United States mailbox or post transmission. Contractor must notify Owner and Architect promptly, in writing, of each and every change of address to which service can be made. Service by Owner at the last known address shall be sufficient. Owner will not accept service by Facsimile. The Contractor shall submit all claims for additional cost in writing to the Architect and the Construction Manager, and shall obtain a written response from the Architect prior to proceeding with the Work. Failure of the Contractor to provide written notice to both the Architect and the Construction Manager of any claim in accordance with these requirements shall constitute a waiver of the Contractor's rights to any additional cost or any extension of time related to such claim.

§ 15.1.3 Continuing Contract Performance

Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with performance of the Contract and the Owner shall continue to make payments in accordance with the Contract Documents. The Construction Manager will prepare Change Orders and the Architect will issue a Certificate for Payment or Project Certificate for Payment in accordance with the decisions of the Initial Decision Maker.

§ 15.1.4 Claims for Additional Cost. If the Contractor wishes to make a Claim for an increase in the Contract Sum, written notice as provided herein shall be given before proceeding to execute the Work. Prior notice is not required for Claims relating to an emergency endangering life or property arising under Section 10.3.. Failure of the Contractor to properly file a claim in accordance with the requirements of the Contract Documents shall constitute a waiver of that claim.

§ 15.1.4.1 The Owner shall not be liable to any Contractor or any subcontractor for any charges or claims for damages for any delays or hindrances, from any cause whatsoever, occurring during the progress of any portion of the Work. Such delays or hindrances shall be compensated for by an extension of time as provided in Section 15.1.5.

§ 15.1.5 Claims for Additional Time

§ 15.1.5.1 If the Contractor wishes to make a Claim for an increase in the Contract Time, written notice as provided herein shall be given. The Contractor's Claim shall include an estimate of cost and of probable effect of delay on progress of the Work. In the case of a continuing delay only one Claim is necessary.

§ 15.1.5.2 If adverse weather conditions are the basis for a Claim for additional time, such Claim shall be documented by data substantiating that weather conditions at the Project site were extremely abnormal for the period of time, could not have been reasonably anticipated and had an adverse effect on the scheduled construction.

§ 15.1.5.3 Claims for increase in the Contract Time shall set forth in detail the circumstances that form the basis for the Claim, the date upon which each cause of delay began to affect the progress of the Work, the date upon which each cause of delay ceased to affect the progress of the Work and the number of days' increase in the Contract Time claimed as a consequence of each such cause of delay. The Contractor shall provide such supporting documentation as the Owner may require including, where appropriate, any and all impacts known or being considered, a revised construction schedule indicating all the activities affected by the circumstances forming the basis of the Claim.

§ 15.1.5.4 The Contractor shall not be entitled to a separate increase in the Contract Time for each one of the number of causes of delay which may have concurrent or interrelated effects on the progress of the Work, or for concurrent delays due to the fault of the Contractor. Any claim for additional time must be supported by documentation showing how the delay contributed to the impact of any and all tasks that are or were in the "critical path" of the Project schedule in effect at the time of impact.

§ 15.1.6 Waiver of Consequential Damages. The Contractor waives Claims against the Owner, Construction Manager, and the Architect for consequential damages arising out of or relating to this Contract, with the exception of the loss of profit anticipated directly from this Project. This waiver includes, but is not limited to: damages incurred by the Contractor for principal office expenses including the compensation of personnel stationed there, for losses of financial, business and reputation, and for loss of profit from other projects.

§ 15.1.7 The Contractor shall provide detailed documentation for each claim that fully substantiates the amount for any additional cost or the extent of any extension of time. Such documentation shall be submitted in a timely manner, and in a detail and format acceptable to the Architect and Construction Manager.

§ 15.2 Initial Decision

§ 15.2.1 Claims, excluding those arising under Sections 10.3, 10.4, 11.3.9 and 11.3.10, shall be referred to the Initial Decision Maker for decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. Except for those Claims excluded by this Section 15.2.1, a decision by the Initial Decision Maker shall be required as a condition precedent to mediation of any Claim arising prior to the date final payment is due, unless sixty (60) days have passed after the Claim has been referred to the Initial Decision Maker with no decision having been rendered. Unless the Initial Decision Maker and all affected parties agree, the Initial Decision Maker will not decide disputes between the Contractor and persons or entities other than the Owner.

§ 15.2.2 The Initial Decision Maker will review Claims and within ten days of the receipt of a Claim take one or more of the following actions: (1) request additional supporting data from the claimant or a response with supporting data from the other party, (2) reject the Claim in whole or in part, (3) approve the Claim, (4) suggest a compromise, or (5) advise the parties that the Initial Decision Maker is unable to resolve the Claim if the Initial Decision Maker lacks sufficient information to evaluate the merits of the Claim or if the Initial Decision Maker concludes that, in the Initial Decision Maker's sole discretion, it would be inappropriate for the Initial Decision Maker to resolve the Claim.

§ 15.2.3 In evaluating Claims, the Initial Decision Maker may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Initial Decision Maker in rendering a decision. The Initial Decision Maker may request the Owner to authorize retention of such persons at the Owner's expense.

§ 15.2.4 If the Initial Decision Maker requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten (10) days after receipt of such request, and shall either (1) provide a response on the requested supporting data, (2) advise the Initial Decision Maker when the response or supporting data will be furnished, or (3) advise the Initial Decision Maker that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Initial Decision Maker will either reject or approve the Claim in whole or in part.

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties and, the Architect and Construction Manager, if the Architect or Construction

Manager is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties but subject to mediation and, if the parties fail to resolve their dispute through mediation, to binding dispute resolution.

§ 15.2.6 If a claim, dispute or other matter in question arises out of or relates to this Contract or its breach, the parties shall endeavor to settle the dispute first through direct discussion. If the dispute cannot be settled by direct discussion the parties agree that any action or proceeding arising under this Contract shall be brought in a New York State court of competent jurisdiction in Ulster County. It is expressly agreed that there will be no arbitration as to any matters arising out of or relating to the Contract Documents.

§ 15.2.6.1 Either party may, within thirty (30) days from the date of an initial decision, demand in writing that the other party file for mediation within sixty (60) days of the initial decision. If such a demand is made and the party receiving the demand fails to file for mediation within the time required, then both parties waive their rights to mediate or pursue binding dispute resolution proceedings with respect to the initial decision.

§ 15.2.7 In the event of a Claim against the Contractor, the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 15.2.8 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with applicable law to comply with the lien notice or filing deadlines.

§ 15.3 Intentionally Left Blank

§ 15.4 Intentionally Left Blank

SECTION 00 73 43.02

NYS DEPT OF LABOR OSHA TRAINING REQUIREMENTS

Requirements for OSHA 10 Compliance

Chapter 282 of the Laws of 2007, codified as Labor Law 220-h took effect on July 18, 2008. The statute provides as follows:

The advertised specifications for every contract for public work of $250,000.00 or more must contain a provision requiring that every worker employed in the performance of a public work contract shall be certified as having completed an OSHA 10 safety training course. The clear intent of this provision is to require that all employees of public work contractors, required to be paid prevailing rates, receive such training "prior to the performing any work on the contract."

The Bureau will enforce the statute as follows:

All contractors and sub contractors must attach a copy of proof of completion of the OSHA 10 course to the first certified payroll submitted to the contracting agency and on each succeeding payroll where any new or additional employee is first listed.

Proof of completion may include but is not limited to:

- Copies of bona fide course completion card (*Note: Completion cards do not have an expiration date.*)
- Training roster, attendance record of other documentation from the certified trainer pending the issuance of the card.
- Other valid proof

**A certification by the employer attesting that all employees have completed such a course is not sufficient proof that the course has been completed.

Any questions regarding this statute may be directed to the New York State Department of Labor, Bureau of Public Work at 518-485-5696.

LABOR STABILIZATION AGREEMENT

PROJECT LABOR AGREEMENT

COVERING CONSTRUCTION

OF

ULSTER COUNTY GOVERNMENT OPERATIONS CENTER

Table of Contents

PROJECT LABOR AGREEMENT

PREAMBLE

WHEREAS, County of Ulster ("County") desires to provide for the cost efficient, safe, quality, and timely completion of the ("ULSTER COUNTY GOVERNMENT OPERATIONS CENTER") project in a manner designed to afford the lowest reasonable costs to the County, and the public it represents, and the advancement of permissible statutory objectives;

WHEREAS, the County of Ulster engaged Arace & Company ("Arace") to undertake a study of which a copy is on file with the "County" of whether the use of a Project Labor Agreement will best serve the County's interest in obtaining the best work at the lowest possible price, preventing favoritism, fraud and corruption, and other considerations such as the impact of delay, the possibility of cost saving advantages, and any local history of labor unrest; and

WHEREAS, the Arace Due Diligence Assessment of the Impacts and Implementation of a Project Labor Agreement, (the "Study"), concluded that use of a Project Labor Agreement would provide the County with measurable economic benefits and would promote the County's interest in obtaining the best work at the lowest prices as well as preventing favoritism, fraud and corruption; and

WHEREAS, pursuant to resolution number 754 of December 2023, the County has carefully reviewed and considered the Study and determined, among other things, that the County's interest in obtaining the best work at the lowest possible price, preventing favoritism, fraud and corruption, preventing the impact of delay owing to labor unrest, obtaining cost savings advantages, and gaining measurable management flexibility and benefits are best met by requiring a Project Labor Agreement and, therefore, directs that a Project Labor Agreement be made part of the Project; and

WHEREAS, this Project Labor Agreement will foster the achievement of these goals, inter alia, by:

(1) expediting the construction process and otherwise minimizing the disruption to the project;
(2) avoiding the costly delays of potential strikes, slowdowns, and walkouts arising from work disputes and promoting labor harmony and peace for the duration of the project;
(3) standardizing the terms and conditions governing the employment of labor on the project;
(4) permitting flexibility in work scheduling where necessary at affordable pay rates;
(5) permitting adjustments to work rules and staffing requirements from those which otherwise might apply;
(6) providing comprehensive and standardized mechanisms for the settlement of work disputes, including those relating to jurisdiction;
(7) promoting work opportunities for those within the County of Ulster and surrounding areas.
(8) ensuring a reliable source of skilled and experienced labor;

WHEREAS, County of Ulster, has, through independent investigation and analysis, determined the likelihood of substantial cost savings to the Project will result from the application of this Agreement; and

WHEREAS, Hudson Valley Building & Construction Trades Council, and its affiliated Local Unions and their members, desire to provide for stability, security and work opportunities which are afforded by a Project Labor Agreement; and

WHEREAS, the Parties desire to maximize project safety conditions for both workers and others;

NOW, **THEREFORE,** the Parties enter into this Agreement:

ARTICLE 1 — PARTIES TO THE AGREEMENT

SECTION 1.1 PARTIES TO THE AGREEMENT

This is a Project Labor Agreement ("Agreement") entered into for all Project construction, as defined herein, as part of the ULSTER COUNTY GOVERNMENT OPERATIONS CENTER Project (as defined below) between (i) the Palombo Group on behalf of County of Ulster ("County") (ii) the Hudson Valley Building and Construction Trades Council ("Council") on behalf of itself and its affiliated Local Unions ("Local Unions"); and (iii) the signatory Local Unions on behalf of themselves and their members.

ARTICLE 2 - GENERAL CONDITIONS SECTION

SECTION 2.1 DEFINITIONS

Throughout this Agreement:

(A) "Contractor(s)" means any contractor and subcontractors of whatever tier engaged in Project Work within the scope of this Agreement as defined in Article 3, subject to exclusions defined in Section 3.3; 20.3 and 20.4.

(B) "Council" means the Hudson Valley Building & Construction Trades Council, AFL-CIO.

(C) "Local Union(s)" means the Local Unions signatory to this Agreement, individually and collectively.

(D) "Owner" means County of Ulster ("County").

(E) "Owner's Representative" means any Construction Manager or other individual or entity designated by the Owner to enter into this Agreement or otherwise act on its behalf.

(F) "The Project" means the work to be performed in connection with all construction

of the ULSTER COUNTY GOVERNMENT OPERATIONS CENTER project as more fully set forth in Article 3, Section 3.1, subject to exclusions defined in Sections 3.3, 20.3 and 20.4.

(G) "Project Work" means the work covered by this Agreement and fully defined in Article 3, Section 3.1, subject to exclusions defined in Section 3.3; 20.3 and 20.4.

(H) **"Schedule A"** means and refers to collective bargaining agreements of affiliated Local Unions.

(I) "Union Parties" and "Unions" means the Hudson Valley Building & Construction Trades Council, AFL-CIO and the signatory Local Unions to this Agreement, individually and collectively.

SECTION 2.2 CONDITIONS FOR AGREEMENT TO BECOME EFFECTIVE

This Agreement shall not become effective unless each of the following conditions are met: (1) the Agreement is signed by the Council and the Local Unions having jurisdiction over the Project Work; (2) the Agreement is approved by the NYS Building & Construction Trades Council (NYSBCTC); (3) the Agreement is approved by the Building & Construction Trades Department (BCTD); (4) the Agreement is authorized by the Owner and signed by the Owner and Construction Manager (CM).

SECTION 2.3 ENTITIES BOUND & ADMINISTRATION OF AGREEMENT

This Agreement shall be binding on all signatory Unions and their affiliates and all Contractors performing Project Work as defined in Article 3, subject to exceptions in Sections 3.3, 20.3 and 20.4. The Contractors shall include in any subcontract that they let for performance during the term of this Agreement a requirement that their Subcontractors, of whatever tier, become bound by this Agreement with respect to that subcontracted Project Work performed within the scope of Article 3, and require that each Subcontractor, of whatever tier, sign a Letter of Assent (Schedule B). This Agreement shall be administered by the Designee named by the Owner pursuant to Schedule C.

SECTION 2.4 SUPREMACY CLAUSE

This Agreement, together with the local Collective Bargaining Agreements appended hereto and referred to herein as "Schedule A" represents the complete understanding with respect to the Project and supersedes any national agreement, local agreement, or other collective bargaining agreement of any type which would otherwise apply to Project Work, in whole or in part, with the following exception: to the extent a Contractor is a signatory to the NTL Articles of Agreement, the National Stack/Chimney Agreement, the National Cooling Tower Agreement, the UA/IBEW Joint National Agreement for Instrument and Control Systems Technicians, and the National Agreement of the International Union of Elevator Constructors (the "National Agreements"), those National Agreements shall apply, except that when Contractor is also a signatory to an agreement listed in Schedule A hereof, Articles 7, 8, 9, and 10 of this Agreement

shall prevail over the applicable National Agreement and any Schedule A agreement . Where a subject covered by the provisions of this Agreement is also covered by a Schedule A agreement, the provisions of this Agreement shall prevail. If this Agreement is silent on any matter addressed in the applicable Schedule A agreement, the Schedule A agreement shall govern. It is understood that by virtue of having become bound by this Project Labor Agreement, the Contractors will not be obligated to sign any other local, area, or national agreement.

SECTION 2.5 LIABILITY

The liability of any Contractor and the liability of any Union under this Agreement shall be several and not joint. The Contractors, and Subcontractors shall not be liable for any violations of this Agreement by any other Contractor or Subcontractor; and the Council and Local Unions shall not be liable for any violations of this Agreement by any other Union. Notwithstanding the above, every signatory to the Agreement further acknowledges that it will be liable for its own breach, partial breach or otherwise, whether related or not to the breach of another signatory. The County as Owner is not a party to the Agreement and shall not be liable in any manner under this Agreement.

SECTION 2.6 THE BID SPECIFICATIONS

The Owner shall require in its bid specifications for all Project Work within the scope of Article 3 that all successful bidders and their Subcontractors of whatever tier (unless otherwise excepted under this Agreement) become bound by this Agreement. Every Contractor shall require its Subcontractors, of whatever tier, to execute the Letter of Assent in Schedule B and to become bound by this Agreement. It is understood that nothing in the Agreement shall be construed as limiting the sole discretion of the Owner in determining which Contractor shall be awarded contracts for Project Work.

SECTION 2.7 AVAILABILITY AND APPLICABILITY TO ALL SUCCESSFUL BIDDERS

This Agreement shall be binding on all signatory Unions and their affiliates, and all Contractors, Unions and/or non-Unions performing Project Work, unless otherwise excepted under this Agreement. Unless expressly provided for in this Agreement, this Agreement shall not apply to the work of any Contractor which is performed at any location other than the site of Project Work.

ARTICLE 3 - SCOPE OF THE AGREEMENT

SECTION 3.1 PROJECT WORK

This Agreement shall only apply to Project Work as defined in this Article.

Subject to the exclusions in this Article, Project Work means solely that work performed

in connection with construction of the ULSTER COUNTY GOVERNMENT OPERATIONS CENTER Project located at Paradies Lane, Town of New Paltz, New York. Project Work, unless otherwise excepted under Sections 3.3, 20.3 or 20.4, shall include all sitework, utilities, demolition, environmental work, MEP's and all construction related to the project.

SECTION 3.2 TIME LIMITATIONS

A. To be covered by this Agreement, Project Work must be awarded after the effective date of this Agreement.

B. This Agreement shall expire upon completion and acceptance by the Owner of this project.

C. The Agreement may be extended by written mutual agreement of the parties.

D. The Owner has sole discretion at any time to terminate, delay, or suspend the work, in whole or in part on the Project.

SECTION 3.3 EXCLUDED EMPLOYEES

Notwithstanding the provisions of Section 3.1 of this Article, the following person/entities are not subject to the provisions of this Agreement even though performing work on or in connection with the Project:

A. Superintendents, supervisors (excluding general and forepersons specifically covered by a craft's Schedule A), engineers, inspectors and testers, quality control/assurance personnel, design personnel, timekeepers, mail carriers, clerks, office workers, messengers, guards employed by Owner, technicians, non-manual employees, and all professional, engineering (except field surveyors), administrative and management persons;

B. Employees of the Project Owner;

C. Employees and entities engaged in off-site manufacture, modifications, repairs, maintenance, or painting, handling or fabrication of project components, materials, equipment, or machinery except for any local deliveries of materials such as fill, ready mix, asphalt, concrete and other aggregates and removal of non-contaminated construction debris, which shall be covered under this Agreement.

D. Employees of the Construction Manager, except that performing manual, onsite construction labor who will be covered by this Agreement.

E. Employees engaged in onsite equipment warranty work;

F. Employees engaged in geophysical testing (whether land or water) other than boring for core samples;

G. Employees engaged in laboratory or specialty testing or inspections, unless ordinarily done by a member of a Trade Union;

H. Employees engaged in ancillary Project Work performed by third parties such as electric utilities, gas utilities, telephone companies, and railroads. Utility work provided by gas, electric, and cable companies, which is not performed by utility company employees, shall be subject to the terms of this Agreement.

I. Employees of contractors or vendors listed in Schedule G as described.

ARTICLE 4 - UNION RECOGNITION AND EMPLOYMENT

SECTION 4.1 PRE-HIRE RECOGNITION

The Contractors recognize the signatory Unions as the sole and exclusive bargaining representatives of all craft employees who are performing Project Work within the scope of Article 3 of this Agreement.

SECTION 4.2 UNION REFERRAL

A. The Contractors agree to hire craft employees for Project Work covered by this Agreement through the job referral systems and hiring halls established in the Local Unions' area collective bargaining agreements (attached as Schedule A to this Agreement), where those referrals meet the qualifications set forth in items 1, 2, and 4 of subparagraph B. The Unions agree to provide such craft employees (including apprentices) to all Contractors on a non-discriminatory basis. Notwithstanding this, Contractors shall have sole right to determine the competency of all referrals; the number of employees required; and the selection of employees for layoff (subject to Article 5, Section 5.3). In the event that a Local Union is unable to fill any request for qualified employees within a 48-hour period after such requisition is made by a Contractor (Saturdays, Sundays and holidays excepted), a Contractor may employ qualified applicants from any other available source. In the event that the Local Union does not have a job referral system, the Contractor shall give the Local Union first preference to refer applicants, subject to the other provisions of this Article. The Contractor shall notify the Local Union of craft employees hired for Project Work within its jurisdiction from any source other than referral by the Union. The Local Unions will cooperate with Contractor requests for minority, women, or economically disadvantaged referrals to meet the goals of Article 4, Section 4.4. These workers may be delivered under a "Direct Entry" designation or by use of a Department of Labor waiver.

B. A Contractor may request by name, and the Local Union will honor, referral of persons who have applied to the Local Union for Project Work and who meet the following qualifications:

(1) possess any license required by New York State law for the Project Work to be performed;
(2) Have worked a total of at least 1000 hours in the construction craft during the prior two years, and
(3) Were on the Contractor's active payroll for at least 60 out of the 180 calendar days prior to the contract award.
(4) Have the ability to safely perform the basic functions of the applicable trade.

C With the exception of Section 4.2(g) below, no more than twelve and a half (12.5%) per centum of the employees covered by this Agreement, per Contractor by craft, shall be hired through the provisions of Paragraph B of this section (any fraction shall be rounded to the next highest whole number). Craft forepersons and/or general forepersons shall be included in these twelve and a half (12.5%) percent. If requested by the appropriate Union, a Contractor utilizing this provision for by-name referrals shall furnish the Union with a written certification that the individuals requested for referral meet the requirements of (1) - (5) above.

D The Local Unions shall exert their utmost efforts to recruit sufficient numbers of skilled craft workers to fulfill the manpower requirements of the Contractor. When a Contractor of any tier is contracted to perform Project Work and such Contractor is not signatory to a Schedule A agreement (not including signatory through this Agreement) and the Union cannot provide ample labor to support the construction schedule or project, then the Contractor shall hire outside the Union hiring halls and the Contractor shall, at their discretion, replace the non-Union or non-dispatched employee when notified by the Union that labor has become available through the Union. The Contractor shall use other employees affiliated with the Council before hiring except, where specifically addressed in this Agreement if those employees from the other Unions have the required trade skills to perform the Project Work. Those hired through this provision shall be laid off before those of an affiliated Union.

E. Notwithstanding the foregoing, the "County" shall have the sole discretion to request that a person be removed from working on this Project.

F Due to specialty work related to construction of communications tower, contractors or subcontractors involved directly in the erection of the tower up to fifty percent (50%) of the employees covered by this Agreement, by craft shall be hired through the provisions of Paragraph B of this section. Craft forepersons and/or general foreman shall be included in the fifty percent (50%). If requested by the appropriate Union, the contractor or subcontractor utilizing this provision shall furnish the Union with written certification that the individuals requested for referral meet the requirements of 4.2(B) (1-5). For clarity, this provision applies directly and only to those employees' installing the tower and does not

include other work associated with the tower including but not limited to, site work, excavation, concrete, backfilling, or associated non-tower work.

G Due to specialty work related to geothermal, contractors or subcontractors involved directly in installation of geothermal up to 33.3% of the employers covered by this Agreement, by craft shall be hired through the provisions of paragraph B of this section. Craft forepersons and/or general foreman shall be included in these fifty percent (33.3%). If requested by the appropriate Union, the contractor or subcontractor utilizing this provision shall furnish the Union with written certification that the individuals requested for referral meet the requirements of 4.2(B) (1-5). For clarity, this provision applies directly and only to those employees' installing pipework outside the building, grouting and drilling and does not include other work associated with geothermal including but not limited to, site work, excavation, backfilling, or associated work inside the building.

SECTION 4.3 NON-DISCRIMINATION IN REFERRALS

A. The Local Unions represent that their hiring halls and referral systems shall be operated in a non-discriminatory manner and in full compliance with all applicable federal, state and local laws and regulations which require equal employment opportunities. Referrals shall not be affected in any way by the rules, regulations, bylaws, constitutional provisions or any other aspects or obligations of Union membership, policies, or requirements and shall be subject to such other conditions as are established in this Article. No employment applicant shall be discriminated against by any referral system or hiring hall because of the applicant's Union membership, or lack thereof.

SECTION 4.4 WORKFORCE DIVERSITY UTILIZATION

A. The Unions recognize and acknowledge that workforce diversity of minorities and women are employment goals consistent with our values of fair play. The Local Unions agree and will strive to utilize their best efforts to provide qualified minority and female applicants.

SECTION 4.5 CROSS AND QUALIFIED REFERRALS

The Local Unions shall not knowingly refer to a Contractor an employee then employed by another Contractor working under this Agreement. The Local Unions shall exert their utmost efforts to recruit sufficient numbers of skilled and qualified crafts employees to fiilfill the requirements of each Contractor.

SECTION 4.6 UNION DUES

Nothing in this Agreement requires employees to join a Union or pay dues or fees to a Union as a condition of working on the Project. This Agreement is not, however, intended to supersede independent requirements in applicable Local Union Agreements as to Contractors that are otherwise signatory to those Agreements in relation to employees of such Contractors performing Project Work.

ARTICLE 5 — UNION REPRESENTATION

SECTION 5.1 LOCAL UNION REPRESENTATIVE

Each Local Union signatory to this Agreement shall be entitled to designate a representative and/or Business Manager who shall be afforded access to the Project site only during times when Project Work is being conducted.

SECTION 5.2 STEWARDS

A. Each Local Union shall have the right to designate from among those referred to the Project a working journey person as a Steward or Lead Engineer and one alternate per shift, and shall notify the Construction Manager of the identity of the designated Steward or Lead Engineer (and alternate) prior to the assumption of such duties. Stewards or Lead Engineer shall not exercise supervisory functions and shall receive the rate of pay for their craft classifications. There will be no non-working Stewards or Lead Engineer on the Project.

B In addition to his/her work as an employee, the Steward or Lead Engineer shall have the right to receive complaints or grievances and to discuss and assist in their adjustment with the Contractor's appropriate supervisor; such activities, however, are not to interfere with the Steward's work unless an emergency situation exists. Each Steward or Lead Engineer shall be concerned with the employees of the Steward's Contractor and, if applicable, Subcontractors of that Contractor, but not with the employees of any other Contractor. The Contractor will not discriminate against the Steward or Lead Engineer in the proper performance of Union duties.

C. Requirements for stewards or lead engineer shall be as per the applicable Schedule A agreement.

SECTION 5.3 LAYOFF OF A STEWARD

Contractors agree to notify the appropriate Union 24 hours prior to the layoff of a Steward or Lead Engineer, except in cases of discipline or discharge for just cause. If a Steward is protected against layoff by a Schedule A agreement, such provisions shall be recognized to the extent the Steward or Lead Engineer possesses the necessary qualifications to perform the Project Work

required. In any case in which a Steward or Lead Engineer is discharged or disciplined for just cause, the Local Union involved shall be notified immediately by the Contractor.

SECTION 5.4 UNION STANDARDS

A. The Council and its affiliates have a legitimate interest in preventing the undermining of the work opportunities and standards gained through collective bargaining and desire to preserve and protect work opportunities for its members.

B. The County, while recognizing this interest, must maintain its ability to utilize the services of off-site fabricators and those entities involved in deliveries of construction materials, except those materials included in Section 3.3, when not covered under New York State Labor Law 220.

C. While the scope of the Agreement is limited to Project Work as defined and subject to exceptions herein, Contractors should, whenever economically feasible, make reasonable efforts to use Union signatory vendors, which includes, but not limited to, UA Yellow Label and SMW Blue Label products for off-site assemblies or fabrications.

D. This Section does not refer to construction material normally purchased pre-assembled or manufactured, it references Project Work normally and historically done on-site or in Local Union fabrications shops.

E. If any dispute should arise with respect to this Section, the Contractors agree to install any off-site assemblies or fabricated items regardless of the source. The parties shall endeavor to settle such dispute in the Labor Management forum or appropriate sub-committee before a grievance is filed under Article 9.

ARTICLE 6 — MANAGEMENT RIGHTS

SECTION 6.1 RESERVATION OF RIGHTS

Except as expressly limited by a specific provision of this Agreement, Contractors retain full and exclusive authority for the management of their operations including, but not limited to: the right to direct the Project Work force, including determination as to the number to be hired and the qualifications therefore; the promotion, transfer, layoff of its employees; or the discipline or discharge for just cause of its employees; the assignment and schedule of Project Work; the promulgation of reasonable Project Work rules; and the requirement, timing and number of employees to be utilized for overtime Project Work. Nothing contained herein shall be construed so as to allow direction of an Employee to perform Project Work outside the jurisdiction of that Employee's Labor Union affiliation, if any. No rules, customs, or practices which limit or restrict productivity or efficiency of the individual (as determined by the Contractor) and/or joint working efforts with other employees shall be permitted or observed.

SECTION 6.2 MATERIALS, METHODS & EQUIPMENT

A. There shall be no limitation or restriction upon the Owner's choice of materials, techniques, methods, technology or design, or, regardless of source or location, upon the use and installation of equipment, machinery, package units, pre-cast, pre-fabricated, pre- finished, or pre-assembled materials, tools, or other labor-saving devices. Contractors may, without restriction, install or use materials, supplies or equipment regardless of their source, subject to the requirements of Section 6.2(B). The on-site installation or application of such items shall be performed by the craft having jurisdiction over such Project Work pursuant to an applicable collective bargaining agreement; provided, however, it is recognized that other personnel having special qualifications may participate, in a supervisory capacity, in the installation, check-off or testing of specialized or unusual equipment or facilities as designated by the Contractor.

B. All parties to this Agreement acknowledge that funding for this Project includes but is not limited to funds from the American Rescue Plan Act ("ARPA") State and Local Fiscal Recovery Funds ("SLFRF"), which are also governed by the "Uniform Guidance" requirements in 2 C.F.R. Part 200 and funds from the New York State Energy Research and Development Authority ("NYSERDA"). As a condition of contract, Project Contractors will be required to comply with all procurement requirements pertaining to such funding, including but not limited to Buy American requirements and Recovered/Recycled Product Content requirements.

ARTICLE 7 - WORK STOPPAGES AND LOCKOUTS

SECTION 7.1 NO STRIKES-NO LOCK OUT

There shall be no strikes, sympathy strikes, picketing, work stoppages, slowdowns, demonstrations or other disruptive activity on Project Work site for any reason by any signatory to this Agreement. There shall be no Union or concerted or employee activity which disrupts or interferes with the Project Work. Should any employee breach this provision, the Local Unions will use their best efforts to immediately end the breach and return all employees to work. There shall be no lockout by any signatory to this Agreement.

SECTION 7.2 DISCHARGE FOR VIOLATION

A Contractor may discharge any employee violating Section 7.1, above, and any such employee will not be eligible thereafter for referral under this Agreement for a period of 100 working days.

SECTION 7.3 NOTIFICATION

If a Contractor contends that any Union has violated this Article, it shall notify the Council of such fact, with copies of the notification to the Local Union involved. The Council and Local Union shall instruct, order, and otherwise use their best efforts to cause the employee(s) to

immediately cease and desist from any violation of this Article. The Council shall not be liable for the unauthorized acts of a Local Union or its members. Similarly, a Local Union and its members shall not be liable for any unauthorized acts of its members, the Council, or another Local Union.

SECTION 7.4 EXPEDITED ARBITRATION

Any Contractor or Union alleging a violation of Section 7.1 of this Article or Section 8.3(D)(ii) of Article 8 may utilize the expedited procedure set forth below (in lieu of, or in addition to, any actions at law or equity) that may be brought.

A. A party invoking this procedure shall notify J.J. Pierson, Neal M. Eiseman and Thomas Hines, in this order, who shall alternate as Arbitrator under this expedited arbitration procedure. If the Arbitrator next on the list is not available to hear the matter within 24 hours of notice, the next Arbitrator on the list shall be called. Copies of such notification will be simultaneously sent to all parties (the alleged violator, the Council, the Local Union, the Contractor, and the Owner).

B. The Arbitrator shall hold a hearing within 48 hours of receiving the notice invoking the procedure if it is contended that the violation still exists. The Arbitrator shall provide at least 24 hours' notice (excluding Sundays and holidays) to all parties as to time and place of the hearing.

C. All notices pursuant to this Article must be delivered to all parties (Local Union, Council, Contractor, alleged violator, and Owner) and may be provided by telephone, telegraph, hand delivery, fax, email, or confirmed overnight delivery. The hearing may be held on any day including Saturdays or Sundays. The hearing shall be completed in one session which shall not exceed 8 hours duration (no more than 4 hours being allowed to either side to present their case and conduct their cross examination) unless otherwise agreed. A failure of any party to attend the hearing shall not delay the hearing of evidence by those present or the issuance of an award by the Arbitrator.

D. (i) Section 7.1 hearings:
The sole issue at the hearing shall be whether a violation of Section 7.1 occurred. If a violation is found to have occurred, the Arbitrator shall issue a Cease-and-Desist Award restraining such violation and serve copies on all parties. The Arbitrator shall have no authority to consider any matter in justification, explanation or mitigation of such violation or to award damages (any damages issue is reserved solely for court proceedings, if any). The Award shall be issued in writing within 3 hours after the close of the hearing, and may be issued without an Opinion. If any involved party desires an Opinion, one shall be issued within 15 calendar days, but its issuance shall not delay compliance with, or enforcement of, the Award.

(ii) Section 8.3(D)(ii) hearings:

The sole issue at the hearing shall be whether a violation of Section 8.3(D)(ii) occurred. If a violation is found to have occurred, it shall be prima facie evidence of intentional mis-assignment, and the Arbitrator shall issue an immediate stop-work order with respect to the Project Work involved and reassign the Project Work as necessary. The Arbitrator is also authorized to (a) award damages or back pay in order to make the aggrieved trade whole, and (b) remove the offending Contractor from the job in egregious situations.

E. An Award issued under this procedure may be enforced by any court of competent jurisdiction upon the filing of this Agreement together with the Award. Notice of the filing of such enforcement proceedings shall be given to all parties. In any court proceeding to obtain a temporary or preliminary order enforcing the Arbitrator's Award as issued under this expedited procedure, the involved Union and Contractor waive their right to a hearing and agree that such proceeding may be commenced by order to show cause. Such agreement does not waive any party's right to participate in a hearing for a final court order of enforcement or in any contempt proceeding.

F Any rights created by statute or law governing arbitration proceedings which are inconsistent with the procedure set forth in this Article, or which interfere with compliance thereto, are hereby waived by the Contractors and Unions to whom they accrue.

G The fees and expenses of the Arbitrator shall be equally divided between the involved Contractor and Union. There shall be chargeback or cost to the county/owner.

SECTION 7.5 ARBITRATION OF DISCHARGES FOR VIOLATION

Procedures contained in Article 9 shall not be applicable to any alleged violation of this Article, with the single exception that an employee discharged for violation of Section 7.1, above, may have recourse to the procedures of Article 9 to determine only if the employee did, in fact, violate the provisions of Section 7.1 of this Article; but not for the purpose of modifying the discipline imposed where a violation is found to have occurred.

ARTICLE 8 — LABOR MANAGEMENT COMMITTEE

SECTION 8.1 SUBJECTS

The Project Labor Management Committee ("Committee") will meet as established by the Committee to: 1) promote harmonious relations among the Contractors and Unions; 2) enhance safety awareness, cost effectiveness and productivity of construction operations; 3) protect the public interest; 4) discuss matters relating to staffing and scheduling with safety and productivity as considerations; 5) review Affirmative Action and equal employment opportunity matters pertaining to the Project, if any and increase work opportunity within the County for County

residents.

SECTION 8.2 COMPOSITION

The Committee shall be jointly chaired by a designee of the Owner and the Council. It may include representatives of the Local Unions and Contractors involved in the issues being discussed. The Committee may conduct business through mutually agreed upon sub-committees.

SECTION 8.3 PRE-JOB CONFERENCE

A. So that the start and continuation of Project Work may progress without interruption, the Committee shall require each Contractor and Subcontractor of whatever tier to conduct a pre-job conference with the Council prior to commencing work. The Construction Manager or General Contractor shall be advised in advance of such conferences and may participate if they wish. This pre-job conference with the Council is in addition to any pre-job/pre-construction conferences required by the Project Contract Documents.

B. The purpose of the pre-job conference with the Council shall be for the parties to gain an understanding of each Contractor's proposed work assignments, the standard work day and work week, the number of employees to be employed, the method of referral, the applicable wage rates and fringe benefit contributions and any other matters in accordance with this Agreement.

C Proposed Trade Assignments. In conjunction with the pre-job conference with the Council required by this Section, each Contractor shall fill out the attached Schedule E — Proposed Trade Assignments identifying all Subcontractors and indicating what trades will be used to perform the Project Work. This form shall be submitted to the Council at least thirty (30) days in advance of the commencement of Project Work. If any Local Union(s) objects to or disagrees with the Proposed Trade Assignment of either the Contractor or Subcontractor, the Local Union will state its objection within three (3) days of the submission of the Proposed Trade Assignments and there shall be a good faith discussion among the Contractor or Subcontractor and the objecting Local Union and other affected Unions to resolve the matter. If no resolution is reached, any involved Local Union may submit their objection position in writing, together with support documentation, within seven (7) calendar days of the submission of the Proposed Trade Assignments to the Contractor or Subcontractor with a copy to all affected Local Unions. Failure of any objecting Local Union and/or other affected Unions to timely object or submit such objection positions in writing waives any objection to the Proposed Trade Assignments. The Contractor or Subcontractor will review all submitted supporting documentation regarding the Proposed Trade Assignments and will submit to the Construction Manager, the Council, and all affected Local Unions a "Final Trade Assignment" letter within fourteen (14) days calendar days of

the pre-job meeting at which the Proposed Trade Assignments were made.

D. Disputes and Violations.

(1) Unresolved disputes concerning trade assignments shall be handled in accordance with Section 10.1, 10.2, and 10.3 of Article 10 in accordance with the National Plan for Settlement of Jurisdictional Dispute in the Construction Industry established by the Building and Construction Trades Department, incorporated by reference in Schedule D, provided however, that disputes concerning intra-trade assignments (assignments between trades within the same International Union) will be determined by the applicable International Union.

(2) Contractor's failure to conduct a pre-job conference with the Council, failure to include all required parties in a pre-job conference with the Council, or failure to adhere to agreed-upon Schedule E trade assignments is a violation of this Agreement and prima facie evidence of intentional mis-assignment. Alleged violations of this provision shall be considered a lock-out and subject to the expedited arbitration procedures of Article 7, Section 7.4.

(3) All remaining unresolved issues shall be subject to the provisions of Article 9.

ARTICLE 9 - GRIEVANCE & ARBITRATION PROCEDURE

SECTION 9.1 CLOSE COOPERATION

The Contractors, Unions, and employees, collectively and individually, realize the importance to all parties to maintain continuous and uninterrupted performance of Project Work and agree to resolve disputes in accordance with the grievance-arbitration provisions set forth in this Article.

SECTION 9.2 PROCEDURE

Any question, dispute or claim arising during the term of this Agreement involving the interpretation or application of this Agreement (other than jurisdictional disputes and alleged violations of Section 7.1, and Section 8.3(D)(2)), shall be considered a grievance and shall be resolved pursuant to the following procedure.

Step 1:

A. When any employee covered by this Agreement feels aggrieved by a claimed violation of this Agreement, the employee shall give notice of the claimed violation to the Local Union representative or job steward, who shall notify the Project Work site representative of the involved Contractor and the Construction Manager. To be

timely, such notice must be in writing given within 7 calendar days after the act, occurrence or event giving rise to the grievance. Strict compliance with this 7-day notice is a condition precedent to proceeding with such grievance. The Local Union representative or the job steward shall meet with the Project Work site representative of the involved Contractor and the Construction Manager and endeavor to adjust the matter within 7 calendar days after timely notice has been given. The representative of the involved Contractor shall keep the minutes of the meeting and shall respond to the Union representative in writing, with copy to the Construction Manager, within twenty-four (24) hours after the conclusion of the meeting. If they fail to resolve the matter within the prescribed period, the grieving party, may, within 7 calendar days thereafter, pursue Step 2 of the grievance procedure by serving the involved Contractor with written copies of the grievance setting forth a description of the claimed violation, the date on which the grievance occurred, and the provisions of the Agreement alleged to have been violated. Grievances and disputes settled at Step 1 are non-precedential except as to the specific Local Union, employee and Contractor directly involved, unless the settlement is accepted in writing by the Labor-Management Committee as creating a precedent with respect to Project Work.

B. Should any signatory to this Agreement have a dispute [excepting jurisdictional disputes and alleged violations of Section 7.1 or Section 8.3(D)(i) or (ii) with any other signatory to this Agreement and, if after conferring, a settlement is not reached within 7 calendar days, the dispute may be reduced to writing and the grieving party may proceed to Step 2 in the same manner as outlined in subparagraph (a) for the adjustment of employee grievances.

Step 2:

Upon timely receiving a written grievance, the involved Contractor shall notify and schedule a meeting with the Business Manager of the involved Local Union, the Council, and the Construction Manager, and their respective representatives, for the purpose of arriving at a satisfactory settlement. Such meeting shall be held within 7 calendar days of the involved Contractor's receipt of the written grievance. Meeting minutes shall be kept by the Contractor with copies to the parties within twenty-four (24) hours.

Step 3:

A. If the grievance shall have been submitted but not resolved in Step 2, any of the participating Step 2 entities may, within 21 calendar days after the initial Step 2 meeting, submit the grievance in writing (copies to other participants, including the Construction Manager) along with copies of the minutes from Step 1 and Step 2, to the acting Arbitrator under this procedure (alternating between J.J. Pierson, Roger Moyer and Thomas Hines). The Labor Arbitration Rules of the American Arbitration Association shall govern the conduct of the arbitration hearing, at which

all Step 2 participants shall be parties. The decision of the Arbitrator shall be final and binding on the involved Contractor, Local Union, and employees, and the fees and expenses of such arbitrations shall be borne equally by the involved Contractor and Local Union.

B. Failure of the grieving party to adhere to the time limits set forth in this Article shall render the grievance null and void. These time limits may be extended only by written consent of the Construction Manager, the involved Contractor, and the involved Local Union at the particular step where the extension is agreed upon. The Arbitrator shall have authority to make decisions only on the issues presented to him and shall not have the authority to change, add to, delete or modify any provision of this Agreement.

ARTICLE 10 - JURISDICTIONAL DISPUTES

SECTION 10.1 ASSIGNMENT

The assignment of Project Work shall be solely the responsibility of the Contractor performing the Project Work involved, subject to the pre-job conference with the Council and the procedures set forth in Section 8.3(C), and such Project Work assignments shall be in accordance with the National Plan for the Settlement of Jurisdictional Disputes in the Construction Industry ("National Plan"), incorporated by reference into Schedule D, or any successor Plan approved by the Building & Construction Trades Department, AFL-CIO.

SECTION 10.2 PROCEDURE FOR SETTLEMENT OF JURISDICTIONAL DISPUTES

All jurisdictional disputes involving Project Work shall be settled according to the National Plan, provided however, that disputes concerning intra-trade assignments (assignments between trades within the same International Union) will be determined by the applicable International Union.

SECTION 10.3 NO DISRUPTIONS

There will be no strikes, work stoppages, or slowdowns, arising out of any jurisdictional dispute. Pending the resolution of the dispute, the Project Work shall continue uninterrupted and as assigned by each Contractor. No jurisdictional dispute shall excuse a violation of Article 7.

SECTION 10.4 AWARD

Any jurisdictional award pursuant to this Article shall be final and binding on the disputing Unions and the involved Contractor on this Project only and may be enforced in any court of competent jurisdiction. Such award or resolution shall not establish a precedent on any other construction work not covered by this Agreement.

SECTION 10.5. LIMITATIONS

Awards made under this Article shall determine only to whom the disputed Project Work belongs. The deciding person or group hereunder shall have no authority to (a) assign Project Work to a double crew, that is, to more employees than the minimum required by the Contractor to perform the Project Work involved; (b) assign work to employees who are not qualified to perform the work involved; or (c) assign Project Work being performed by non-Union employees to Union employees. This provision does not prohibit the establishment, with the agreement of the involved Contractor, of composite crews where more than (1) employee is needed for the job.

ARTICLE 11 - WAGES AND BENEFITS

SECTION 11.1 CLASSIFICATION AND HOURLY RATE

All employees covered by this Agreement shall be classified in accordance with the work performed and paid the wage rates applicable for those classifications as required by the Schedule A applicable to the work. The term "straight time" in this Agreement shall mean the hourly wage rate applicable for those classifications as required by the applicable New York State Labor Law Section 220 ("Section 220") prevailing wage determination.

SECTION 11.2 EMPLOYEE BENEFITS

A. Unless expressly provided differently in this Agreement, Contractors agree to pay employee benefits/supplements on behalf of all of their employees covered by this Agreement in the amounts required by the applicable Section 220 schedule in effect. Except as provided herein, the Contractors agree that such payments shall be made to those established jointly trusteed employee benefit funds designated in the applicable Schedule A agreement, and in the amounts so designated, to the extent such payments are required by and satisfy the Section 220 obligation. Bona fide jointly trusteed fringe benefit plans established or negotiated through collective bargaining during the life of this Agreement may be added if they similarly fall within Section 220. Contractors not otherwise contractually bound to do so, shall not be required to contribute to non-Section 220 benefits, trusts or plans; however, this provision does not relieve Contractors which are signatory to local collective bargaining agreements with any Local Union from complying with the benefit requirements for all funds contained in those collective bargaining agreements.

B Notwithstanding Section 11.2(A):

(1) Contractors who designate employees pursuant to Article 4, Section 4.2(B), may satisfy the above benefits obligation with respect to those employees by: (1) providing those employees with coverage under their private benefit plans for health, welfare, pension, annuity and 401(k); or (2) paying the full

amount of such benefit to the employee in employees' wages. The total benefit payments to be made on behalf of each such employee must equalthe total Section 220 benefit/supplement amount. If the Contractor's contribution into the private benefit plan for the above funds is less than the amount required by Section 220, the difference must be paid to the employee in cash. Payments of other benefits covered under Section 220 shall be paid to the respective Unions on behalf of each employee.

(2) This same option shall apply with respect to any other employee who is referred to the Contractor through the hiring hall process provided such employee was previously employed by the Contractor and was a participant in a bona fide private benefit plan maintained by the Contractor which satisfies the requirements of Section 220.

(3) The option for a private plan equivalent supplement shall not apply to contributions into Joint Apprentice Training Committee (JATC), or similar apprentice funds designated in the applicable Schedule A agreement, if the Contractor does not have an apprentice training program approved by the Department of Labor (However, all Contractors with contracts for this Project in excess of $500,000 must participate in apprenticeship training programs pursuant to New York State Labor Law §222(2)(e)). Upon request by the Council, any Contractor providing coverage under this provision will provide the Council with documentation of benefit payments made to individual employees during the term of their employment on the Project.

(4) Contractors who exercise the option under Section 11.2(B) of this Article to pay into their own private benefit plans rather than the applicable jointly trusteed funds designated in the applicable Schedule A agreement shall be responsible for and guarantee employee benefit/supplement payments and shall indemnify and hold harmless the jointly trusteed funds designated in the applicable Schedule A agreement against any and all benefit/supplement claims by its employees.

C Contractors who contribute to jointly trusteed funds under this Section agree to be bound by the written terms of the legally-established jointly trusteed Trust agreements specifying the detailed basis on which payments are to be paid into, and benefits paid out of, such trust funds but only with regard to Project Work done and only for those employees for whom this Agreement requires such benefit payments. Notwithstanding the foregoing, a Contractor's liability shall be at all times limited to the amount of contributions required to be made to the Trust Funds.

D. Each Contractor shall be responsible for and guarantee the payment of all required fringe benefits on the Project. The Local Unions and/or the Council

shall notify the Construction Manager within 120 hours excluding weekends whenever a Contractor or Subcontractor fails to make a required benefit payment and such delinquency remains outstanding after 30 days. Notification must be in writing and may be by email. If written notice of such a delinquency is received by the Construction Manager within that 120-hour period it shall withhold from any funds due to the delinquent Contractor the amount of that delinquency, up to the total amount due, until any dispute regarding the delinquency has been resolved. The Construction Manager shall have no other obligation with respect to contributions owed by any Contractor (or its Subcontractor); but that each Contractor shall continue to be obligated with respect to contributions based on Project Work done by that respective Contractor. If notice of a delinquency is not received by the Construction Manager within the required time periods, Owner shall have no basis upon which to withhold, with respect to that delinquency, any part of a payment which is otherwise due. Construction Manager shall require Contractors to submit proof of benefit payment with pay request.

ARTICLE 12 — HOURS OF WORK, PREMIUM PAYMENTS, SHIFTS AND HOLIDAYS

SECTION 12.1 WORK WEEK AND WORK DAY

C. Unless otherwise provided for in this Agreement, the standard work week shall be five days, Monday through Friday, eight hours per day plus k2 hour unpaid lunch period each day. The starting time for the standard work week shall start at either 6:00 a.m., 6:30 a.m., 7:00 a.m., 7:30 a.m. or 8:00 a.m. Multiple starting times shall be allowed.

B. Four-tens: notwithstanding any other provision of the Agreement, when working a four-day work week, the work shall consist of 4 days, Monday through Thursday, ten hours per day plus 1/2-hour unpaid lunch period at the straight time rate. The starting time for four-tens shall be 6:00 a.m. 6:30 a.m. 7:00 a.m. A three-day minimal notice shall be required for four-tens to the respective involved Unions.

C. On a 5-day work week, Saturday may be used as a make-up day at straight time to fulfill the 40-hour work week date to inclement weather. On a 4-day work week, Friday may be used as a make-up day at straight time to fulfill the 40-hour work week. Make-up days shall be scheduled for a minimum of 8 hours, except in the case of inclement weather in which Section 12.5 shall apply. This minimum shall also apply when more than one shift or multiple shifts are worked.

D. The changing of the regular starting time, except in the case of overtime and the switch from a 5- day and 4-day work weeks shall be a 4-week minimum.

SECTION 12.2 OVERTIME

Overtime pay for hours outside of the standard work week and work day, defined in Section 12.1, and all work on Saturdays shall be paid at time and one half the hourly rate and benefits will be paid on straight time. All work on Sundays shall be paid at two times the hourly rate and benefits will be paid at straight time.

SECTION 12.3 SHIFTS

A. Flexible Schedules — Scheduling of shift work, including Saturday and Sunday work, shall be within the discretion of the Contractor in order to meet Project Work schedules and existing Project Work conditions. Shifts must have prior approval of the Construction Manager and Owner and must be scheduled with not less than three work days' notice to the Local Union.

B. Second and/or Third Shifts — Saturday and/or Sunday Work.

The second shift shall start between 3 p.m. and 6 p.m. and the third shift shall start between 11 p.m. and 2 a.m. Shift differentials shall be straight time plus fifty percent (50%) of the applicable Schedule A agreement shift differential. No other premium or payments for such work shall be required unless such work is in excess of 40 hours during the week. There shall be no reduction in hours worked on a second and/or third shift, except that when 3 shifts are working together, the length of one or more shifts can be reduced to accommodate a 24-hour day and only actual hours worked will be paid. Work performed on Saturdays or Sundays shall be paid as provided in the applicable Schedule A agreement.

C. To clarify above, Schedule A Shift Differential designated percentage rates vary according to each trade's prevailing Collective Bargaining Agreement. Shift work as part of this Project Labor Agreement is 50% of the designated percentage of the shift percentages of each trade, for example if a trade's shift differential is 15% it would be 7.5%.

SECTION 12.4 HOLIDAYS

A. Schedule - There shall be seven (7) recognized holidays:

New Year's Day
President's Day
Memorial Day
Fourth of July
Labor Day
Thanksgiving Day
Christmas Day

All said holidays shall be observed on the dates designated by New York State Law. In the absence of such designation, they shall be observed on the calendar date, except that holidays which occur on Sunday shall be observed on the following Monday and holidays which occur on a Saturday shall be observed on the previous Friday.

B. Payment - Regular holiday pay, if any, for work performed on a recognized holiday shall be in accordance with the applicable Schedule A agreement. There will be no benefits paid on holidays unless worked.

C. Exclusivity - No holidays other than those listed in Section 12.4 shall be recognized or observed in relation to holiday pay and benefits.

SECTION 12.5 REPORTING PAY

A. When on a five-day work week, employees who report to the work location pursuant to a regular schedule and who are not provided with work for whatever reason, shall receive two (2) hours reporting pay, four (4) hours if work starts and (8) hours pay if work occurs after the 4th hour except in the case of inclement weather in which hours worked after the four hours shall be paid and when on a four-day work week with a 10-hour day, (3), (5) and (10) shall apply as per the same terms above.

B. When an employee who has completed his or her scheduled shift and has left the Project site is "called out" to perform special work of a casual, incidental, or irregular nature, the employee shall receive pay for actual hours worked at applicable straight time or overtime rates in accordance with this Agreement, but no less than a minimum guarantee of two (2) hours at the employee's straight time rate.

C. When an employee leaves the job or work location of their own volition, is discharged for cause, or is not working as a result of the Contractor's invocation of Section 12.8 below, he or she shall be paid only for the actual time worked.

D. There shall be no pay for time not actually worked except as specifically set forth in this Article 12 and where an applicable Schedule A agreement applies to Forepersons, Stewards and Lead Engineer in reference to pay.

SECTION 12.6 PAYMENT OF WAGES

A. Payday: Payment shall be made by check, drawn on a New York bank with branches located within commuting distance of the job site. Paychecks shall be issued by the Contractor at the job site by 3:00 p.m. on Thursdays. In the event that the following Friday is a bank holiday, paychecks shall be issued on Wednesday of that week. Not more than one week's wages shall be held back in any pay period. Paycheck stubs shall contain the name and business address of the Contractor, together with an itemization of deductions from gross wages.

B. Termination: Employees who are laid off or discharged for cause shall be paid in full for that which is due them at the time of termination. The Contractor shall also provide the employee with a written statement setting forth the date of layoff ordischarge.

SECTION 12.7 INJURY/DISABILITY

An employee who, after commencing Project Work, suffers a work-related injury or disability while performing Project Work duties, shall receive no less than eight (8) hours wages for that day. Further, the employee shall be rehired at such time as the employee is able to return to duties provided there is still Project Work available for which the employee is qualified and able to perform.

SECTION 12.8 EMERGENCY WORK SUSPENSION

A Contractor may, if considered necessary for the protection of life, property, and/or safety of employees or others, suspend all or a portion of Project Work. In such instances, employees shall be paid for actual time worked; provided however, that when a Contractor requests that employees remain at the job site available for Project Work, employees shall be paid for "stand-by" time at their hourly rate of pay.

ARTICLE 13 - APPRENTICESHIP & HELMETS TO HARDHATS

SECTION 13.1 APPRENTICE RATIOS

Recognizing the need to maintain continuing supportive programs designed to develop adequate numbers of competent workers in the construction industry and to provide craft entry opportunities for minorities, women, and economically-disadvantaged non-minority males, Contractors will employ apprentices in their respective crafts to perform such Project Work as is within their capabilities and that is customarily performed by the craft in which they are indentured. Contractors may utilize apprentices and such other appropriate classifications as are contained in the applicable Schedule A agreement in a ratio of not less than twenty-five percent (25%) of the work force by craft (without regard to whether a lesser ratio is set forth in the applicable Schedule A agreement), unless the applicable Schedule A agreement provides for a higher percentage. The first person assigned to the job shall be a Journeyman. The second person assigned may be an apprentice. Subsequent assignments shall be Journeymen until the applicable ratio is achieved. This assignment shall be repeated until staffing needs are satisfied. Apprentices and such other classifications as are appropriate will be employed in a manner consistent with the provisions of the applicable Schedule A agreement.

SECTION 13.2 NYS DEPARTMENT OF LABOR- APPRENTICESHIP

To assist the Contractors in attaining a maximum effort on this Project, the Unions agree to work in close cooperation with, and accept monitoring by, the New York State Department of

Labor to ensure that minorities and women are afforded every opportunity to participate in apprenticeship programs that result in the placement of apprentices on this Project.

SECTION 13.3 WICKS LAW

Pursuant to General municipal law §101(5) a contract letting agency (Ulster County) can use the Wicks Law exemption on this project as an option. This would allow for a single prime or general contractor which would include all mechanical, electrical, and plumbing under one contract. This would be at the discretion of the County and the Construction Manager and not Union.

SECTION 13.4 Ulster County Law No. 5 of 2023

Attached as Appendix 1.

SECTION 13.5 NEW YORK HELMETS TO HARDHATS

The Contractors and the Unions desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The Contractors and the Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (the "Center") and the Center's "New York Helmets to Hardhats" program as a resource for preliminary orientation and assessment of construction aptitude; referral to apprenticeship programs or hiring halls; counseling and mentoring; and support networks, employment opportunities, and other needs as identified by the parties.

The Unions and the Contractors agree to work with the Center to create and maintain an integrated database of veterans interested in working on the Project as well as information about apprenticeship and employment opportunities related to this Project. To the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

SECTION 13.6 PARTICIPATION GOALS (MBE, WBE, SDVOB, DBE, LABOR SURPLUS AREA)

A. The County, Construction Manager, Contractors, the Hudson Valley Building and Construction Trades Council and its affiliated Unions are committed to meeting federal and New York State Participation Goals, if any are applicable to the Project, and shall be in alignment with the current goals or standards set for by federal or New York State requirements for Minority Business Enterprises (MBE), Woman Owned Business Enterprise (WBE), Service-Disabled Veteran Owned Business (SVDOB), Disadvantaged Business Enterprises (DBE), and federal Labor Surplus Area requirements, to ensure participation on the project by MBE, WBE

and SVDOB firms and job-seekers from federal Labor Surplus Areas while maintaining fiscal responsibility.

B. Outreach by the Construction Manager, Contractors, Hudson Valley Building and Construction Trades and affiliated Unions and contractor associations to ensure participation goals of NYS Certified MBE, WBE and SDVOB firms and Labor Surplus Area recruitment are met will be required through the project,

ARTICLE 14 — NO DISCRIMINATION

SECTION 14.1 COOPERATIVE EFFORTS

The Contractors and Unions agree that they shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, national origin, marital status, age, Union or non-Union status, real or perceived sexual orientation or any other status protected by law, in any manner prohibited by law or regulation. It is recognized that special procedures may be established by Contractors and Local Unions and the New York State Department of Labor for the training and employment of persons who have not previously qualified to be employed on construction projects of the type covered by this Agreement. The parties to this Agreement shall assist in such programs and agree to use their best efforts to ensure that the goals for female and minority employment are met on this Project. Nothing in this section shall be grieveable.

SECTION 14.2 LANGUAGE OF AGREEMENT

The use of the masculine or feminine gender in this Agreement shall be construed as including all genders.

ARTICLE 15— GENERAL TERMS SECTION

SECTION 15.1 PROJECT RULES

A. The Construction Manager and Contractors may establish from time to time such reasonable Project rules as are necessary for the good order of the Project. These rules shall be outlined at the pre-job conference with the Council, detailed in the contract documents, posted at the Project site, and may be amended thereafter as necessary.

B. Security Protocols — The Construction Manager with Owner's approval and in their sole discretion, will determine security protocols for the entire Project Site. Strict

compliance by all Contractors and subcontractors of all tiers and their respective personnel with security procedures, protocols, and directives issued by these entities or its delegated, is required at all times.

SECTION 15.2 TOOLS OF THE TRADE

The welding/cutting torch and chain fall are tools of the trade having jurisdiction over the Project Work performed. Employees using these tools shall perform any of the Project Work of the trade. There shall be no restrictions on the emergency use of any tools or equipment by any qualified employee or on the use of any tools or equipment for the performance of Project Work within the employee's jurisdiction.

SECTION 15.3 SUPERVISION

Employees or other personnel shall work under the supervision of the craft foreperson or general foreperson for the applicable hiring or subcontracting Contractor.

SECTION 15.4 FULL WORKDAY

A. Employees shall be at their Project Work area at the starting time established by the Contractor.

B. The signatories to this Agreement reaffirm their policy of a fair day's work for a fair day's wage.

ARTICLE 16 - SAFETY PROTECTION OF PERSON AND PROPERTY

SECTION 16.1 SAFETY REQUIREMENTS

Each Contractor will ensure that applicable OSHA and New York State mandated safety requirements are at all times maintained on the Project and the employees and Unions agree to cooperate fully with these efforts. Employees must perform their Project Work at all times in a safe manner and protect themselves and the property of the Contractor from injury or harm. Failure to do so may be grounds for discipline, including discharge. Prevention of accidents at the site is the responsibility of the Contractors, its employees, subcontractors and suppliers, persons, and entities at the Project Site. The Contractors shall establish their own safety programs implementing safety measures, policies, and standards conforming to those required or recommended by governmental and quasi-governmental authorities having jurisdiction. The Construction Manager is not responsible for identifying unsafe practices, nor for failure to stop the Contractors' unsafe practices; and the Construction Manager's failure to stop the Contractors' unsafe practices shall not relieve the Contractors of the responsibility thereof.

SECTION 16.2 CONTRACTOR RULES

Employees covered by this Agreement shall at all times be bound by the reasonable safety, security, and visitor rules as established by the Owner. Such rules will be referenced in the Contract Documents and may be distributed to Contractors for further distribution to personnel and/or posted in conspicuous places throughout the Project.

SECTION 16.3 INSPECTIONS

The Contractors, Owner, Architect/Engineer, and Construction Manager retain the right to inspect incoming shipments of equipment, apparatus, machinery, and construction materials of every kind.

ARTICLE 17 — TEMPORARY SERVICES

Temporary light, power, cooling, ventilation and other services shall only be required on the specific request of a Contractor and when requested shall be assigned in accordance with the Contract Documents. Temporary coverage may be provided by the supplying Contractor's employees already working under this Agreement during regular work hours. The supplying Contractor will determine the need for temporary coverage requirements during non-work hours. For safety reasons, temporary light and power panels will only be accessed by employees of the Contractor responsible for supplying the temporary light and power panels. Coverage requirements shall not require a standby employee who is not performing Project Work. There shall be no stacking of trades on temporary services. In the event temporary services are claimed by multiple trades, the matter shall be resolved pursuant to Article 10.

ARTICLE 18 - SAVINGS AND SEPARABILITY

SECTION 18.1 THIS AGREEMENT

In the event that the application of any provision of this Agreement is enjoined, on either an interlocutory or permanent basis, or is otherwise determined to be in violation of law, the provision involved (and/or its application to a particular part of the Project, as necessary) shall be rendered, temporarily or permanently, null and void, but the remainder of the Agreement shall remain in full force and effect to the extent allowed by law. In the event a court of competent jurisdiction finds any portion of the Agreement to be invalid, the parties will immediately enter into negotiations concerning the substance affected by such decision for the purpose of achieving conformity with the court determination and the intent of the parties hereto for contracts to be let in the future.

SECTION 18.2 NON-WAIVER

Nothing in this Agreement is intended to be or shall be construed as a waiver by any Union(s) of any prevailing wage determination or schedule that is applicable to their trade for any public work that has been or may be performed in the future on any work outside the scope of this Agreement. Nothing contained in this Agreement is intended to be or shall be construed as a waiver

by any Union(s) of any more favorable term or condition of employment that may be contained in any collective bargaining agreement applicable to work outside the scope of this Agreement.

ARTICLE 19 - FUTURE CHANGES IN SCHEDULE A AREA CONTRACTS

SECTION 19.1 CHANGES TO AREA CONTRACTS

Each Schedule A agreement incorporated by reference into this Agreement by Schedule A shall continue in full force and effect until the Contractor and/or Union parties to the area collective bargaining agreements which are the basis for the applicable Schedule A agreement, notify the Owner and Constriction Manager in writing of the agreed upon changes in the Schedule A agreement which is applicable to the Project, and their effective dates. Such changes shall only be effective to the extent consistent with this Agreement. Any disagreement between signatories to this Agreement over the incorporation into Schedule A of provisions agreed upon in the renegotiation of area collective bargaining agreements shall be resolved in accordance with the procedure set forth in Article 9 of this Agreement.

SECTION 19.2 LABOR DISPUTES DURING AREA CONTRACT NEGOTIATIONS

The Unions agree that there shall be no strikes, work stoppages, sympathy actions, picketing, slowdowns or other disruptive activity or other violations of Article 7 affecting the Project by any Local Union involved in the renegotiation of area local collective bargaining agreements, nor shall there be any lock-out on this Project affecting a Local Union during the course of such renegotiations.

ARTICLE 20 — PROJECT SPECIFIC

SECTION 20.1 WORKERS COMPENSATION ADR

At the written option of the Contractor and with the written approval of the Building and Construction Trades Council of Westchester and Putnam Counties New York, all Local Unions, Contractors and subcontractors working on this Project agree to be bound by the Collectively Bargained Workers Compensation Alternative Dispute Resolution Agreement (ADR Agreement), and to the ADR program set forth therein, by and between the Construction Industry Council of Westchester and the Hudson Valley, Inc., and the Building and Construction Trades Council of Westchester and Putnam County, New York, on file with and approved by the New York State Workers Compensation Board February 17, 2022 as amended.

SECTION 20.2 HUDSON VALLEY BUILDING AND CONSTRUCTION TRADES LABOR MANAGEMENT ALLIANCE

If not prohibited by law and there are no direct or additional costs to the parties to this Agreement, the parties agree to participate in the Hudson Valley Building and Construction Trades Labor Management Alliance. The contribution rate will be .06 per hour borne equally between the employee and employer. Contributions will be submitted monthly.

SECTION 20.3 CLEAN UP

A clean work site results in a safe and more productive job site. All cleanup during construction shall be performed by the trades having jurisdiction for cleanup in accordance with the Project Contract Documents. The Owner will ensure a clean and safe workplace. The Owner or Construction Manager may back charge Contractors accordingly if clean up becomes unsatisfactory.

Once construction is complete and a building, section or floor is turned over to a professional cleaning company for final cleaning, including but not limited to, windows and floor prep, up to 33.3% of the Employees may be a direct employee of the cleaning company. Those direct employees shall be exempt from this Agreement.

SECTION 20.4 FURNITURE, FIXTURES AND EQUIPMENT (FFE)

Except for furniture, fixtures and equipment specifically in Schedule G. Project Work related to furniture, fixtures and equipment that is free standing and requires no onsite assembly and is not fastened, mounted or anchored to any part of the building structure

by glue, screws, nails, mechanical fastener or by other means is excluded from this Agreement. Accordingly, for the avoidance of doubt, all unloading, handling, assembly, installation and cleanup of all furniture, fixtures and equipment which requires fastening, mounting or anchoring to any part of the building structure by glue, nails, screws, mechanical fasteners or by other means, or requires any onsite assembly, shall be included Project Work under this Agreement.

IN WITNESS WHEREOF the parties have caused this Agreement to be executed and effective as of the 1st day of June 2024.

SCHEDULE B - LETTER OF ASSENT

The undersigned party confirms that it agrees to be bound to the ULSTER COUNTY GOVERNMENT OPERATIONS CENTER Project Labor Agreement ("PLA") entered into between Hudson Valley Building and Construction Trades Council ("Council") and the County of Ulster ("County"), to the same extent as if it were a party thereto and understands that such Agreement may, from time to time, be amended by the parties or interpreted pursuant to its terms. The terms of the Agreement and its Schedules are hereby incorporated by reference herein.

The undersigned, as a Contractor or Subcontractor ("Contractor") on the Project known as the ULSTER COUNTY GOVERNMENT OPERATIONS CENTER project and located within the County (the "Project"), for and in consideration of the award to it of a contract to perform work on the Project, and in further consideration of the mutual promises made in the PLA, a copy of which was received and is acknowledged, hereby:

(1) Accepts and agrees to be bound by the terms and conditions of the PLA, together with any and all schedules, amendments, and supplements now existing or which are later made thereto;

(2) Agrees to be bound by, and incorporates and adopts the legally established collective bargaining agreements in Schedule "A" of the PLA and local trust agreements referred to Article 11 of the PLA and this Letter of Assent for this Project;

(3) Authorizes the parties to such local trust agreements to appoint trustees and successor trustees to administer the trust funds and hereby ratifies and accepts the trustees so appointed as if made by the Contractor;

(4) Certifies that it has no commitments or agreements that would preclude its full and complete compliance with the terms and conditions of the PLA. The Contractor agrees to employ labor that can work in harmony with all other labor on the Project and shall require labor harmony from every lower tier Subcontractor it engages to work on the Project. Labor harmony disputes/issues shall be subject to Articles 7, 8, 9 and 10 of the PLA;

(5) Agrees to secure from any Contractor(s) (as defined in the PLA) which is or becomes a Subcontractor (of any tier) on the Project, a duly executed Agreement identical to this document;

(6) Agrees that it will not invoke any "Most Favored Nations Clause" that may be

contained in any of its Collective Bargaining Agreements with affiliated Unions as a result of the application of the PLA to this Project.

SECTION 01 12 00

SUMMARY OF WORK – MULTIPLE PRIME CONTRACTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Division 0 & 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Project Locations: 10 Paradies Lane, New Paltz, NY 12561

B. Owner: Ulster County

C. Owner's Representative: To be determined during construction.

D. Architect Identification: Urbahn Architects – Christopher Young, Associate

E. Construction Manager: The Palombo Group, 22 Noxon Street, Poughkeepsie, NY 12601

1. Construction Manager Representative: Luis Rodriguez, President.

2. Construction Manager has been engaged for this Project to serve as an advisor to Owner and to provide assistance in administering the Contract for Construction between Owner and each Contractor, according to a separate contract between Owner and Construction Manager.

F. Project Identification: Ulster County Government Operations Center

1.3 SUMMARY OF WORK – LIST OF CONTRACTS

A. The work will be constructed under multiple prime contracts. One set of contract documents is issued covering multiple contracts. Each Prime Contract/Contractor is defined as:

1. CONTRACT 1: GENERAL CONSTRUCTION WORK
   a. Also referred to as: "General Contractor" or "GC"
2. CONTRACT 2: MECHANICAL CONSTRUCTION WORK
   a. Also referred to as: "Mechanical Contractor" or "MC"
3. CONTRACT 3: ELECTRICAL CONSTRUCTION WORK
   a. Also referred to as: "Electrical Contractor" or "EC"
4. CONTRACT 4: PLUMBING CONSTRUCTION WORK
   a. Also referred to as: "Plumbing Contractor" or "PC"
5. CONTRACT 5: SITE CONSTRUCTION WORK
   a. Also referred to as: "Site Contractor", "SC" or "Contractor responsible for Site Work"
6. CONTRACT 6: FIRE ALARM AND SECURITY CONSTRUCTION WORK
   a. Also referred to as: "Fire Alarm and Security Contractor" or "FSC"
7. CONTRACT 7: AUDIO VISUAL CONSTRUCTION WORK
   a. Also referred to as: "Audio-Visual Contractor" or "AVC"
8. CONTRACT 8: FURNITURE CONSTRUCTION WORK
   a. Also referred to as "Furniture Contractor" or "FC"

1.4 GENERAL REQUIREMENTS FOR WORK UNDER SEPARATE CONTRACTS TO BE INCLUDED IN EACH CONTRACT:

A. GENERAL REQUIREMENTS

1. The project will be constructed under a multiple-prime contracting arrangement with the Owner awarding and holding separate Contracts. Each contractor shall furnish all labor, material, tools, equipment, access equipment, supervision, layout, delivery, trucking, material handling equipment, shop drawings, submittals, coordination, etc. necessary to complete the work described in the Division of Work of their respective Contracts and based upon a complete set of Contract Documents.
2. One set of documents is issued covering all multiple contracts. Each contractor is to review all drawings and specifications for complete understanding and knowledge of the work.
3. The following Contract Documents are specifically included and defined as integral to each Contract.
    a. Bidding Requirements
    b. Performance and Payment Bonds
    c. Conditions of the Contract, including
        1) General Conditions
        2) Insurance Requirements
        3) NYS Prevailing Wage Rates.
        4) Project Labor Agreement (For Contracts 1-5)
4. Unless otherwise indicated, the Work described in this Section for each contract shall be complete systems and assemblies, including products, components, accessories, and installation required by the Contract Documents.
5. Termination, removal, and restoration of its temporary facilities shall be provided by each contract for its own Work.
6. All Contractors are responsible for reviewing Drawings and Specifications as they pertain to their scope of work mentioned in the contract documents. Scopes of work referenced may be found in multiple locations throughout the Drawings and Specifications. Each Contractor is responsible to review all Drawings and Specifications for every contract to gain a complete understanding and knowledge of the entire project, to determine how the work of each contract is to interface with every other contract.
7. **Each Prime Contractor must self-perform a minimum of 25% of their scope of work** (to be calculated based on contract values of subcontractors with respect to Prime Contract Total). This requirement will be verified prior to the contract award and monitored throughout the project.
8. Local customs and trade union jurisdictional settlements do not control the scope of work included in each prime contract. When a potential jurisdictional dispute or similar interruption of work is first identified or threatened, the affected prime contracts shall promptly negotiate a reasonable settlement to avoid or minimize the pending interruption and delays.
9. Each Contractor has been given the opportunity prior to bid to inspect the entire Project site for interferences to their Contract work and agrees to accept the site as it exists on the date of the bid opening.
10. Each Contractor shall submit a proposed subcontractors list within 14 days of the start of the Project with any additional qualifications as required per Specifications. An updated copy of this list is to be attached with each Application for Payment.

B. **SCHEDULE**

1. See Project Milestone Schedule.
2. **Contractor Construction Project Schedule**: Each Contractor is required to engage a qualified CPM Construction Scheduling Service to generate (or provide equivalent self-performed scheduling services with Construction Manager approval) and submit a construction schedule based on the dates of the Contract Milestone Schedule. See Construction Progress Documentation / Schedule Specifications for additional requirements.
   a. Each Contractor's construction schedule is to be submitted for review and comment no later than 3 weeks after a "Notice to Proceed" or "Intent to Award" for the work is issued.
   b. Contractor Project Schedules are to be assembled in compliance with the Contract Milestone Schedule.
   c. For the initial Construction Project Schedule, the Project Milestone Schedule is to be used as a basis for schedule activities and shall be used to figure any predecessor activities.
   d. If there is schedule information pending from other Contractors to schedule an activity on the Project Schedule, then the Contractor shall indicate on the schedule the duration and sequence of the activity and further indicate the item as pending and identify the predecessor activity required to schedule the pending activity.
   e. Include notes regarding activities that may impact other Contractor's activities.
   f. Each Contractor has the responsibility to respond to questions from other Contractors with regards to the sequence and completion dates/durations of activities.
   g. A copy of the updated Project schedule is to be included with each Application for Payment.
   h. Multiple Crews: To maintain the project schedule, each Contractor is to provide multiple crews. Each crew is to be furnished with its own supervision, equipment, and other means necessary to maintain the Project Schedule.
   i. If the Contractor fails to provide a detailed construction schedule within 14 days upon request by the Construction Manager, then the Owner retains the right to hire CPM Scheduling Services to review the work of the Contract and generate detailed schedule information to perform the work of the contract to meet the date of substantial completion and deduct costs from the Contractor who has failed to provide the contractual scheduling services. If the Construction Manager must perform these services on behalf of the Contractor after the Contractor has failed to provide the required schedule after notification and allotted time, then the Contractor will be required to pay the Construction Manager $125.00 per hour via deduct change order to provide the scheduling administrative services on behalf of the Contractor.
   j. If the Critical Path of the projected Substantial Completion Date exceeds the Substantial Completion Date of the Milestone Schedule or other dates listed in the Milestone Schedule, then the contractor designated as the entity responsible for producing the schedule is to identify the critical path items and notify the Construction Manager. If the conflict cannot be resolved, then a meeting is to be scheduled between each Contractor to review the resolution options which may require Contractors to provide additional Crews/Manpower.
3. **Master Construction Schedule:** The **General Contractor** is required to review all Construction Project Schedules submitted by the other Contractors and entities performing work on the Project and combine into a complete coordinated Master Construction schedule that has been coordinated with all other work on the Project. To be submitted no later than 2 weeks after all other Contractors have submitted their respective Construction Schedules.

4. **2 Week Look Ahead Schedule**: Each Contractor will be required to submit a detailed 2 week look ahead schedule that indicates which activities are scheduled each day for all periods each contractor is performing any amount of work. To be updated and submitted prior to each Project Meeting or Schedule Coordination Meeting.
5. **Submittal Schedule**: Each Contractor is required to review all Project Specifications and provide a list of all submittals and closeout documents expected to be submitted for the Project to be reviewed by the Architect/Construction Manager.
    a. Submittal Schedule to be submitted on form specified by the Project or as directed by Construction Manager.
    b. Submittal Schedule items to be broken down into a list by individual submittal document. **All expected individual closeout submittals** to also be included in the Submittal Schedule prior to approval. Closeout Submittals may include but are not limited to: Operation and Maintenance Manuals, Record Documents, Warranties, Start Up and Test Reports, Training Documentation, Material Transmittals.
    c. Submittals to be grouped into the following types: Product Data, Shop Drawings, Samples/Mockups, and Closeout Documents: Maintenance Manuals, Record Drawings/Specifications, Warranties, Test Reports, Training Agenda's, Training Sign in Sheets, Maintenance Materials; and type "other".
    d. If the Contractor fails to provide a detailed submittal schedule by due date on Milestone Schedule or within 14 days upon request by the Construction Manager, then the Owner retains the right to hire outside services to review the specifications and generate the initial list of expected submittal and closeout items and deduct costs from the Contractor who has failed to provide the contractual submittal schedule. If the Construction Manager must perform these services on behalf of the Contractor after the Contractor has failed to provide the required submittal schedule after notification and allotted time, then the Contractor will be required to pay the Construction Manager $125.00 per hour via deduct change order to provide these administrative services on behalf of the contractor.
6. **All contract scopes of work in unoccupied areas of work can be performed weekdays from 7:00 AM to 3:30 PM unless otherwise noted.** Work cannot be performed in occupied areas. Work shall be scheduled off-hours, vacations, and weekends for occupied areas. A Construction Manager Superintendent must be on site at all times that work is being performed.
    a. If a contractor fails to maintain the progress as indicated by the milestone schedule by no other fault but its own and requires overtime to complete the work; the contractor shall make arrangements with the Construction Manager 48 hours in advance and pay for a Construction Manager's superintendent at $125.00 per hour via deduct change order. If the cause for delay is multi-contract, then the costs shall be distributed evenly among contracts. Advise the Construction Manager 48 hours prior to commencing work inside the building.
7. When work is scheduled for second shift or off hours and occupied by the owner during the day; work areas and finishes must be restored back to original finished conditions at the end of each day for occupancy the following day.
8. Coordination of any utility and/or power interruption must be done with the Construction Manager. Shutdowns must occur during off-hours and on days as directed by the owner. Contractor overtime costs for off hours work to be included in Base Bid.
9. Schedule operations to avoid conflicts or interruptions to Owner's building operation as directed by the Construction Manager. Coordinate interruptions with the Construction Manager.

C. **SUPERVISION**

1. Each Contractor shall designate a full-time Field Superintendent to supervise the work of their own contract, who shall always be present on the job site when work is being performed; this person shall be familiar with Project and authorized to conclude matters relating to progress. In addition, each Contractor shall designate a single Project Manager to oversee all aspects of the Project.
    a. The proposed Field Superintendent and Project Manager for the project is to have at least five years of experience in the proposed position.
    b. Each Contractor shall submit resumes to the Construction Manager for the proposed Project Manager and Field Superintendent for the project. This information will be reviewed with the Owner, Architect and Construction Manager for approval.
    c. Should the Project Managers or Superintendent prove to be unqualified for the position at any point in the project, the Construction Manager shall issue a letter stating that the person is to be removed from involvement in the project. Action by the contractor must be made within seven working days of receipt of such letter.
    d. The Field Superintendent shall participate in providing scheduling information, Two Week Look Ahead Schedules, field coordination of layout when required, and provide quality control procedures of all work performed under the contract.
    e. **For Contracts #1, #2, #3, #4, and #5, provide a dedicated non-working non-trade supervisor to act as the Field Superintendent to supervise all work scheduled onsite. A working foreman is not sufficient to fulfill the role of the Field Superintendent.**
2. Each Prime contractor shall maintain within its field office a complete and current set of Contract Documents (including any Addenda, Change Orders, and Modifications thereto), Contract Record Drawings, approved shop drawings, samples, color schedules and other data pertinent to the Project.
3. Each Prime Contractor is to assemble an Employee List of all employees for all self-performed and subcontracted work and provide copies of OSHA cards for all employees on the Employee List.
4. Update the Employee List to add new employees which have been added to the project and include a copy of the employee list with each Application for Payment. Employee list with OSHA Cards to cross reference with the submitted Certified Payroll with each Application for Payment.
    a. When criminal background checks are specifically required on a Project, provide copies of Driver Licenses for Employee for background check purposes.
5. Any person in the Contractor's organization who conducts themselves in a manner that violates safety protocols, demonstrates insufficient professional/personal conduct, or behaviors deemed problematic or unprofessional on the Project can be directed to be removed immediately and permanently from the Project site by the Construction Manager or Owner.

D. **COORDINATION BETWEEN PRIME CONTRACTS**

1. Provide all Coordination responsibilities as indicated in COORDINATION Specification 013115.
2. Coordination Drawings in New Construction: Each Contractor is required to engage a qualified drafting agency capable of producing coordination drawings and models utilizing various industry standards and file formats including but not limited to: (Revit, AutoCAD, etc.).
3. The **Mechanical Contractor** will take on the additional responsibility of overseeing the coordination modeling/drawing process and provide additional clash detection reports of all models by other Contractors using the BIM Modeling Software for New Construction Building Work. The Mechanical Contractor is to communicate any issues that arise from other Contractors not fulfilling their obligations to the Construction Manager.
4. The **Construction Manager** will provide direction and communications between each Contractor and schedule coordination meetings as required.
5. **For ALL Construction: Each Contractor that requires preceding support work by others such as: openings, penetrations, structural support, utility trench layout, equipment pads, and any other work needed by a following Contractor, the following Contractor is required to provide a field mark out of their work** for any other Contractors who are to provide the preceding work for the following Contractor. Each Contractor is also to provide personnel onsite to supervise the installation of the preceding work as required. Layout to be based off the approved Shop Drawings generated from the Multi Trade approved Coordination Model/Drawings. Any roof openings/steel support required to be installed shall be marked out on the underside of the Roof Deck and on the Roof Exterior Surface by the contractor installing the items requiring the opening/support for the work of their own contract.
6. Access doors not shown on Architectural drawings and required for access to concealed systems for maintenance, access, or code requirements (valves, dampers, junction boxes) for the Work of each contract shall be furnished by each contract for its own Work to the **General Contractor** for installation in new wall, floor, or ceiling: construction. All access doors shall comply with Division 8 Section "Access Doors and Frames."

E. **OPENINGS, PENETRATIONS, EXISTING CEILINGS, PATCH TO MATCH RESTORATION, AND EMBEDDED ITEMS**

1. **Each Contractor** is to survey existing work and submit to the Construction Manager a list of damaged areas with preconstruction photos prior to commencing work. Any damage that occurs during construction and is not identified prior to the work shall be the responsibility of the contractor(s) working in that area to restore.
2. **Existing Ceilings (Ceiling Work):**
   a. In areas with existing suspended-drop-ceilings: **Each Contractor** shall provide ceiling removal/replacement/patching including ceiling grid for installation of new work, except for ceiling work specifically indicated on Architectural Drawings, in which case, the **General Contractor** shall be responsible for any Ceiling work indicated on Architectural Drawings. If Ceiling Types are not identified on drawings, then the Contractor shall figure drop ceiling removal and replacement. Replace damaged ceilings not identified as damaged prior to construction.
3. In **Renovation Construction:** (Existing: walls, partitions, floors, roofs, ceilings):
   a. **Each Contractor** shall provide: openings, sleeves, penetrations, lintels, round sleeves, roof steel reinforcement, concrete, masonry, cutting, patch to match after demolition, restoration, and painting as required to complete their respective work for a finished appearance, except when this work is specifically indicated on Architectural or Structural Drawings, in which case, the **General Contractor** shall provide the work indicated on Architectural or Structural Drawings. Each Contractor to reference typical details in Structural or Architectural Drawings for additional

requirements of this work. All exposed finishes must be patched to match adjacent finishes etc.; all concealed openings (piping, ductwork, conduit, etc.) must be repaired to comply with specified wall or deck conditions.

b. New roof openings and penetrations to be **provided by contractor responsible for Roofing** in that location as noted on Roofing or Architectural Drawings.

c. Round Penetrations larger than 8" will be considered an **Opening** with structural reinforcement to be **provided by the respective Contractor** requiring the opening.

4. In **New Construction** (New: walls, partitions, floors, ceilings, and roofs):

a. The **General Contractor** is required to review all Contract Drawings for all other Contractors to identify generally where Openings/Sleeves/Embed/Roof items will be required for ductwork, piping, and electrical/low voltage devices as depicted on all other Contract Drawings. Insulation thickness of the penetrating/opening item is to be considered for sizing of openings.

b. Notification of scheduling of new Wall, Floor, or Ceiling Construction is to be sent by the **General Contractor** at least 7 days prior to construction. Field Layout, Shop Drawings, Written Documentation, and onsite personnel are to be provided by the respective Contractor that requires the opening or sleeve during the new wall, floor, or ceiling construction. The **General Contractor** is to provide field layout of internal structural reinforcement to avoid conflict with new penetrations.

1) If the **General Contractor** does not notify the Construction Manager and contractors associated with new work, sleeves or openings of new wall or floor construction at least 7 days prior, then the GC is to provide the work needed to install these openings/penetrations once identified as missing. Submission of a Two-Week Schedule with specific locations sent directly to all Contractors and Construction Manager is sufficient for notification.

2) If Layout information and has not been provided to the **General Contractor** prior to scheduled installation of new wall/partition/floor (with 7-day notice), then the contractor that failed to provide the layout will be responsible for providing the new opening with any lintel, sleeve, or reinforcement required after the new wall or floor has been constructed.

c. **For new Masonry Walls, Concrete Walls, or Concrete floors**:

1) **Openings:** The **General Contractor** will provide all lintels, rebar, and other reinforcement for all through and recessed openings (rectangular, or as needed for round openings larger than 8" diameter) for all other contractors for work depicted on all other contract drawings associated with other contractors. **Each Contractor** is to provide sealing/fireproofing of these openings.

2) **Penetration Round Sleeves:** Each respective Contractor will furnish their own sleeves (when penetration is larger than 1-1/4") for their own work and turn them over to the **General Contractor** for installation.

a) **Round Openings larger than 8" Diameter in Masonry Walls will be considered an Opening** with reinforcement to be provided by **General Contractor.** Each respective Contractor requiring openings for round penetrations larger than 8" is still required to provide a sleeve for patching, firestopping, and sealing purposes.

b) Floor sleeves to be provided at sufficient height for "Water Dam".

c) Penetrations 1-1/4" or less shall be provided and installed by each respective contractor requiring penetration.

d) Each Contractor is to provide field layout of the installation location for their own sleeves.

e) Each Contractor is to provide sealing/fireproofing of penetrations and openings associated with their work. Escutcheons to be provided for all pipe penetrations in visible areas as needed.

3) **Embed Piping Conduits and back boxes:** Each respective Contractor requiring piping, conduits, device back boxes in walls or floors shall have manpower onsite during scheduled installation of new masonry walls, or concrete form assembly to install conduits, piping and back boxes as needed. Each Contractor is to provide sealing/fireproofing of penetrations and back boxes associated with their work.

d. **For <u>new</u> Stud Frame; Partitions, Walls, and Ceilings**:

1) **Openings**: The **General Contractor** will provide all stud wall reinforcement for all through and recessed openings for all other contractors for work depicted on all other contract drawings associated with other contractors. Each Contractor is to provide sealing/fireproofing of these openings.

2) **Penetration Round Sleeves:** Each respective Contractor will furnish and install sleeves for their own work. Each Contractor is to provide field layout of the installation location for their own sleeves. Each Contractor is to provide sealing/fireproofing of penetrations associated with their work. Escutcheons to be provided for all pipe penetrations in visible areas as needed.

3) **Embed Piping, Conduits, and back boxes:** Each respective Contractor requiring piping, conduits and device backboxes in walls, floors or ceilings shall have manpower onsite during scheduled installation of new stud framing assembly to install conduits, piping, and back boxes as needed. Each Contractor is to provide sealing/fireproofing of penetrations and back boxes associated with their work.

e. **For embed items in new floors and flooring finishes**:

1) The **General Contractor** shall provide field layout of finished floor elevations. Each respective Contractor shall install any items to be embedded in the floor at the correct elevation required.

2) Each respective Contractor shall provide product data/shop drawings of the embedded items to the **General Contractor**.

3) The **General Contractor** and the respective contractor installing the embed items shall review together the elevations of the installed embed items and check prior to floor install if all embed items are at the correct heights.

4) If the elevation of an embedded item is not at the correct height, then the **General Contractor** shall notify the construction Manager and associated contractor of the discrepancy and provide the associated contractor the opportunity to correct.

5) Written Documentation of the embed item height verification shall be recorded by each contractor and submitted to the Construction Manager prior to floor installation (finish floor or subfloor/slab).

5. **For Roof Construction:**

(**General Contractor** shall provide responsibilities of **Roofing Contractor** for locations where the **General Contractor** is responsible to provide <u>Roof Work</u>).

a. All blocking, flashing, and cutting of roof material/decking and installation is by the **Roofing Contractor**.

b. Structural Steel Support framing for all roof openings, roof penetrations, roof drains and roof equipment is to be furnished and installed **General Contractor**, review all contract drawings for all roof opening/equipment locations.

c. All Roof Curbs, Equipment Curbs, Duct curbs, roof drains, and pipe portals are to be furnished by **each respective contractor** associated with the new work and installed by the **Roofing Contractor**. Roof curbs to be placed on roof by the contractor furnishing the curb. Once curb/opening is installed, the **Roofing Contractor** is to provide temporary weathertightness of curb with plywood until new equipment/work is installed. Pipe boots for plumbing vents to be provided by **Roofing Contractor**.

d. Referenced Roof/Structural Work noted above shall be marked out on the underside of the Roof Deck and on the Roof Exterior Surface via Field Layout. Field Layout to be provided by **each respective Contractor** requiring the Roof/Structural Work to support the work of their own Contract.

6. Firestopping and penetration sealing for the Work of each contract shall be provided by each contractor for its own Work for all penetrations and openings. Firestopping shall comply with Division 7 Sections "Through-Penetration Firestop Systems". Products are to be submitted to the Architect for Approval.
   a. **Each contractor** is to provide acoustic sealants for all their respective penetrations, openings, and back boxes for items that do not require firestopping.
7. Each contractor shall return areas disturbed by their work activities to condition prior to start of work as initially documented by Contractor.

F. **CONCRETE PADS AND BASES FOR EQUIPMENT**

1. Concrete for the Work of each contract shall be provided by **each Contractor** as needed for completion of their own Work, unless specifically assigned to another Contract.
   a. Concrete Equipment Pads and Bases specifically shown to be provided on the Architectural or Structural Drawings are to be provided by the **General Contractor,** and if specifically shown to be provided on the Civil Drawings, then those pads or bases are to be provided by the **Contractor responsible for providing the Site Work or Site Contractor.**
   b. All other pads or bases are to be provided by the contractor providing the equipment associated with the concrete pad or base.

G. **TRENCHES, EXCAVATION, BACKFILL, AND INFILL FOR UTILITIES**

1. Utility Trench Excavation is considered: Trenching, Excavation, Dewatering, Shoring, Bracing, Concrete Utility Encasement (when specifically indicated), Detectable Marking Tape, and Back Fill for work of all other contractors as indicated on all Contract Drawings; Review all contract drawings for all locations requiring Utility Trench Excavation for underground utilities.
   a. Utility Trench Excavation shall be provided as assigned per "Scope Delineation Areas" below:
      1) **For New Construction under new floors within new building perimeter + 5-Foot Zone from foundation perimeter: The General Contractor** shall provide: Utility Trench Excavation for the underground work of all contracts as shown on all drawings.
      2) **For New Construction outside of the 5-foot zone from the new building foundation perimeter: The Contractor responsible for Site Work** shall provide: Utility Trench Excavation for the underground work of all contracts as shown on all drawings.
      3) **For Renovation Construction under existing floors within the existing building footprint: The General Contractor** shall provide: Utility Trench Excavation for the underground work of all contracts as shown on all drawings. **Floor infill and reinforcement shall be provided by the Contractor responsible for patching and providing new floor finishes.**
2. Utility Trench Excavation is to be provided for the following utilities (but not limited to):
   a. All underground Electrical/Telecom/Data/Fiber utilities and conduits shown on Electric/Civil/Telecommunications/Security Drawings.
   b. Underground Panel Feeder Conduits for each Electrical Panel shown on Electrical Drawings.
   c. Floor boxes and associated conduits indicated on Electrical Drawings.
   d. Domestic Water Supply indicated on Plumbing/Civil Drawings.
   e. Sanitary/Sewer indicated on Plumbing/Civil Drawings.

f. Sprinkler Piping indicated on Fire Protection/Civil Drawings
g. Storm/Sump/Footing Drain indicated on Plumbing/Civil Drawings.
h. Geothermal Piping indicated on Mechanical/Civil Drawings.
i. Underground Refrigerant piping indicated on Mechanical Drawings.

H. **SAFETY**

1. Lead Based Paint precautions for the Work of each contract shall be provided by each contract for its own Work. Each Contractor shall provide procedures for OSHA Lead precautions.
2. Provide OSHA 10-hour training certificate for all employees prior to starting work on the site. In addition, these certificates must be sent in with certified payroll as new employees are hired in accordance with NYS DOL.
3. Contractor to provide potable cooled drinking water for its own employees.
4. Contractor to provide: Secure lockup of its own tools, materials, and equipment. Provide temporary enclosures/storage containers of materials as needed.
5. Contractor to provide: Construction aids and miscellaneous services and facilities necessary exclusively for its own construction activities.
6. All OSHA Safety, NYS Department of Labor, and hazardous materials regulations will be enforced on this project. All Contractors must submit a site-specific safety plan, a hazardous materials program, (all required data must be maintained at the job site), designate contractor safety supervisor, and attend safety meetings.
   a. Safety Meetings with Toolbox Talks will be required from each contractor weekly.
   b. Each contractor to maintain on site Material Safety Data Sheets (MSDS) for all materials utilized on site.
7. All personnel working on site shall always wear personnel protective equipment as required. All construction personnel are required to wear high visibility vests and visible identification when onsite. Hard Hats are required to be worn per OSHA requirements.
   a. Those without identification will be removed from the site at once. If the same individual fails to wear the identification a second time they will be removed and not be allowed back on site.
8. Each Contractor shall adhere to current COVID 19 policies / protocols.
9. Provide material lifting equipment and licensed operators required for the completion of Contract requirements, and complying with NYS Labor Laws, OSHA requirements, and other Federal, State, and local laws. All lifting operations (i.e. rigging of rooftop equipment) will require a written lift plan and operator licenses to be submitted for record 2 weeks in advance of scheduled lift date.
10. Provide Fire Prevention materials and equipment for fire protection related to the work of their own Contract. Provide fire extinguishers, fire blankets, and fire watch supervision during all "Hot Work" operations and as required by OSHA requirements.
11. All existing Owner-occupied buildings need to always remain operational. The contractors are responsible for maintaining all systems, such as but not limited to communications, fire alarm, clocks, electric, public address system, gas service, heat, etc.
12. Active Smoke Detectors temporarily covered are to be uncovered at the end of each day. If smoke detectors are frequently found to be left covered, then the Owner reserves the right to schedule a Construction Management Superintendent on overtime to check all smoke detectors on the project to be free of obstructions at the end of each day and the responsible contractor is to bear this cost.
13. Each Contractor is responsible for cabling or roping off all roof openings created from their own work in an OSHA approved manner. Provide all necessary fall protection.
14. If another Contractor discovers building or site conditions do not meet OSHA requirements, then that Contractor must notify the Construction Manager and is to not proceed without having the condition corrected to meet OSHA requirements.

15. Each Contractor is to provide safety protections for conditions created by the installation of their own work as per OSHA Guidelines.

I. **SITE ACCESS AND MATERIAL STORAGE:**

1. It is the Owner's intention to continue to occupy the existing buildings and site for normal operations during the Construction process. The Contractors all agree to:
   a. Cooperate with the Owner's personnel in maintaining and facilitating access to the buildings and its facilities by the staff, Owner's agents, service consultants and the public, throughout the construction process.
   b. Keep driveways and entrances serving the occupied building clear and available to the Owner, the Owner's employees, the public, and to emergency vehicles. Do not obstruct access to, or use these areas for parking, staging of equipment or materials. All access through these existing areas must be coordinated in advance and in accordance with the Owner's usage and occupancy schedule.
   c. Schedule construction operations to minimize any conflicts or interruptions to the daily functions. Coordinate any necessary interruptions with the designated project representative.
2. Each Contractor shall be onsite to receive their own material deliveries, store onsite, and protect until the material is ready to be installed in the final locations. Do not deliver materials directly to the Owner for receipt without acceptance of material approved by the Architect.
   a. Additional costs for double handling will not be permitted. Provide secure lock up of materials and provide protection as needed.
   b. Store all materials in conditions that are in accordance with manufacturers recommendations and requirements.
   c. Provide Storage Containers as needed for materials, tools, and equipment delivered to the Site. Materials stored outside of the staging area are to be relocated as necessary or as directed by the Construction Manager to not impede the scheduled work of others.
      1) Long term storage of deliverable materials shall not be stored in building and shall be stored either offsite, in staging area, or containers outside of the building to not obstruct construction activities.
   d. The Contractor shall replace all lost or damaged materials that have not been turned over to the Owner via signed and legible transmittal.
3. Secure Lock Up of Building and Site.
   a. The **General Contractor** shall provide secure lockup of doors, windows, openings of the new building, and site gate/fence(s) at the end of each working day. If other contractors are working past the Project working hours preventing secure lock up, then the General Contractor is to notify the Construction Manager for further direction.
   b. If the **General Contractor** is not scheduled to be onsite, then it will be the responsibility of the Contractors working onsite that day to provide building and/or site lock up.
   c. Propping open locked doors and leaving unattended will not be allowed by any Contractors. Personnel observed leaving doorways unsecure/propped and unattended may be directed to be removed from site.
   d. If the **General Contractor** or other solely working contractor (with no GC onsite) fails to provide secure lock up of the building and/or site at the end of each day, and has been documented at minimum of 3 instances, then the Construction Manager / Owner may provide their own building site lock up and deduct the labor costs from the responsible Contractor's contract sum.

4. Construction access to the site shall be limited to those designated for the contractor's personnel, equipment, and deliveries by the Owner. Contractors' staging, parking and storage shall be coordinated by the Construction Manager.

J. **CLEANING, AND PROTECTION**

1. All Contractors are responsible for any debris caused by their work. A Daily Debris Cleaning and disposal are required by each Contractor for the time periods and areas in which that Contractor is performing work.
2. If Contractor Daily Debris Cleaning is deemed insufficient, then on a day selected by the Construction Manager, each trade will assign at least one person to the weekly clean-up until cleaning is complete. The name of this person is to be submitted to the Construction Manager. Any Contractor not providing personnel will be charged for cleaning labor provided by others or as supplied by the Construction Manager.
3. **The General Contractor** shall provide Final Cleaning Service of all spaces in the building scheduled on the Contract Documents for Construction by any of the other Contractor, and equipment provided immediately before the final inspection.
    a. Provide professional cleaning of all dust and debris beyond the general daily debris clean up responsible by each contractor to restore all surfaces to a dust free condition.
    b. This includes any dust that have resulted from Construction by other Contractors and is to be included in the final cleaning if there is work indicated in these associate spaces on the Contract Drawings.
    c. This clause does not alleviate the other Contractors responsibility for daily cleaning of debris/material.
    d. Close off cleaned spaces from entry by other Contractors with visible indication.
    e. Maintain or lock down areas in a clean condition until the Owner occupies the space.
    f. Personnel: Experienced workman or professional cleaners approved by the Construction Manager and submitted 2 weeks prior to scheduled cleaning.
4. **The Contractor Responsible for Site work (Site Contractor) or by General Contractor** when no Site Contractor is contracted) shall be responsible for performing a final cleaning of the exterior site areas.
5. If a Contractor fails to provide their contractually obligated debris cleaning or final cleaning, then the Owner reserves the right to hire an outside cleaning contractor to perform the work on behalf of the Contractor until the cleaning requirements have been met and as required to meet the schedule.
6. Protection to be installed on all new floor surfaces and maintained until final coatings/waxes are installed, and then continued to be maintained until turnover to the owner. Heavy Duty Ram board to be installed in high traffic areas/egress pathways into each space or in areas where lighter protections cannot be maintained.
7. Furniture and Equipment in work areas shall be protected with plastic sheeting and maintained dust free through the period of active construction in the space. Reinstall sheeting as necessary due to damage during construction. Cleaning of unprotected furniture or equipment shall be the responsibility of the Contractor working in the associated space if protection is not installed.
8. Each **Contractor** shall close and protect their installed equipment or plumbing fixtures to prevent use during construction until the equipment or space has been turned over to the owner.
9. The Building Ventilation system shall be disable by the **Contractor(s)** in areas under construction until the areas are cleaned and turned over to the owner. Dirty air filters from Construction are to be replaced with new filters and duct cleaning to be provided by Contractors who did not disable the Ventilation System during construction prior to Substantial Completion.

K. **EQUIPMENT AND SYSTEMS: START UP, DEMONSTRATION, AND TRAINING**

1. Each Contractor is required to provide Start Up and Test Documentation for all equipment and systems installed under its respective contract, to be witnessed by Owner's representative and Construction Manager.
   a. Submit Start Up and Test Documentation for approval prior to equipment acceptance and warranty start date.
2. Each Contractor is to provide Start-up Reports, any custom configurations of equipment, any observed issues/deficiencies with the equipment, and certification if equipment meets all per the Manufacturer and Engineer requirements.
   a. Documentation of Construction Manager/Owners Representative witness of equipment or systems startup/testing does not constitute as acceptance of equipment or system.
3. If Equipment or system failure is discovered during initial startup or testing, then the warranty for the failed equipment shall not start until the equipment is corrected.
4. The Contractor is to submit a Demonstration and Training Agenda with Operation and Maintenance Manual for Architect approval prior to scheduling Demonstration and Training.
5. Training for Equipment or Systems shall not be scheduled until the equipment or system is accepted by the Architect.
6. If Construction Manager is not notified 48 hours in advance and available to witness Equipment start up or training, then the Contractor shall pay all costs to repeat start up or training procedures again with the Construction Manager/Owner's representative as witness.
7. In addition to specific training required in each specification sections, each contractor is required to provide (1) session of general usage and maintenance training for all equipment, systems or work installed on the Project once the equipment, systems, or work is complete and accepted by the Engineer/Owner.
   a. Contractor to prepare a written agenda for the Training sessions and provide training duration as required to review all agenda items. Submit Training Agenda for Architect Approval prior to scheduling training. The Contractor is to provide a sign-in sheet and video recording of session, Operation and Maintenance Manuals, and any other training documentation associated with training. Submit this Documentation with the Closeout Documents.
   b. Provide Serial Numbers of all equipment with Maintenance Manuals.
8. If Equipment or system(s) being turned over to the owner for use prior to 100% completion and acceptance due to schedule and the equipment/system(s) is still not complete and accepted by the Engineer, then the Contractor is to provide additional training upon equipment turn over to owner to allow partial use of equipment without depleting original training sessions or hours required by contract for completed equipment.

L. **TEMPORARY FACILITIES RESPONSIBILITIES – DESIGNATED RESPONSIBLE CONTRACTORS.**

All sections shall be provided as referenced within Part 3 Execution Section of "011500 – Temporary Facilities and Controls."

1. **Temporary Portable Chemical Toilet Facilities:** The **General Contractor** shall provide Temporary Portable Chemical Toilet Facilities for all construction personnel, Construction Manager, and all other Contractors.
2. **Dumpsters:**
   a. Dumpsters for work associated with the New Building are to be provided by the **General Contractor** for use by all Contractors working within the building (including other contractors providing work associated with Contract Drawings).
   b. The Contractor responsible for the **Site Work (Site Contractor)** shall provide disposal/removal/dumpsters for work associated with the **Site/Civil Work**.
3. **Temporary Electric Power Service**: The **Electrical Contractor** shall provide and maintain the Temporary Electric Power Service for: New Building, Staging Area, and (5) Contractor + (1) CM Trailer Connections.
   a. **Each Contractor** shall provide Generators as needed for their own work until the Temporary Electric Power Service is scheduled to be installed.
4. **Temporary Lighting Service**: The **Electrical Contractor** shall provide the Temporary Lighting Service for use by all contractors.
   a. See Staging Area and Logistic Plan for additional requirements.
5. **Temporary Water Service**: The **Plumbing Contractor** shall provide the Temporary Water Service for use by all contractors.
   a. Provide supply and refill of temporary potable water supply until final water service is scheduled to be installed.
   b. See Staging Area and Logistic Plan for additional requirements.
6. **Temporary Heating Service**: The **General Contractor** shall provide Temporary Heating Service for the New Building.
   a. See Milestone Schedule for Scheduling of Building Enclosure and Final Cleaning permitting use of permanent HVAC.
7. **Temporary Barricades and Building Signage:** The **General Contractor** shall provide Temporary Barricades.
   a. See Staging and Logistics Plan for additional requirements.
8. **Temporary Building Storm Drainage**: The **Plumbing Contractor** to provide Temporary Building Storm Drainage.
9. **Temporary Staging Area, Access Roads, Site Signage, and Site Fence:** The Contractor responsible for **Site Work (or Site Contractor)** shall provide Temporary Staging Area, Access Roads, and Site Fence for use by all contractors.
   a. See Staging and Logistics Plan for requirements.
10. **Building & Site Maintenance:**
    a. The Contractor responsible for **Site Work (Site Contractor)** shall be responsible for Maintaining Temporary Access Roads and Existing Roads.
    b. The **General Contractor** shall be responsible for Snow/Ice Removal at Building/Adjacent sidewalks.
11. **Temporary Fire Extinguishers for Building Construction:** The **General Contractor** shall provide Building Fire Extinguishers for Construction.

1.5 CONTRACT 1 - GENERAL CONSTRUCTION WORK: (Also referred to as: "General Contractor" or "GC")

A. The Work of the General Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that together form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as General Construction Work.

a. Drawings:
   1) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
   2) All "A" Series Drawings (Architectural) – Provide all work shown.
   3) All "S" Series Drawings (Structural) – Provide all work shown.
   4) All "C" Drawings (Civil) for details within Site/building delineation)
   5) For Coordination purposes:
      a) Review All "M" (Mechanical), "E" (Electrical), "P" (Plumbing), "FP" (Fire Protection), "FF" (Furniture), "TN" (Telecommunications), "TY" (Security), TA (Audio Visual) series drawings as it relates to the work of this contract.

b. Specifications:

   1) Division 0 –Procurement and Contracting Requirement, all Sections.
   2) Division 1 –General Requirements, all Sections,
      a) Provide Coordination / Coordination Drawing responsibilities indicated in 01 31 15 - Coordination Between Multiple Prime Contractors.
   3) Division 2 –Existing Conditions, all sections.
   4) Division 3 –Concrete, all Sections. (Per General Contractor/Site Contractor delineation)
   5) Division 4 – Masonry, all sections.
   6) Division 5 – Metals, all Sections.
   7) Division 6 – Woods and Plastics, all Sections.
   8) Division 7 – Thermal and Moisture Protection, all Sections.
   9) Division 8 – Openings, all Sections.
   10) Division 9 – Finishes, all Sections.
   11) Division 10 – Specialties, all sections except exclusions noted below.
      a) Excludes: 101453 – Traffic Signage, and 107500 – Flag Poles.
   12) Division 11 – Equipment: Includes **113100 Kitchen Appliances only.**
   13) Division 12 – Furniture, all sections except exclusions noted below.
      a) Excludes: 125000 Furniture Provided by Others, and 129300 – Site Furnishings.
   14) Division 31 – Earthwork - (Per General Contractor/Site Contractor delineation).
   15) Division 32 – Exterior Improvements (Per General Contractor/Site Contractor delineation).
   16) Division 33 – Utilities (Per General Contractor/Site Contractor delineation).

B. Coordination:
   1. Provide Coordination with the work of all other contractors with documented communication to other Prime Contractors. Some specific coordination items include but are not limited to:
      a. Provide all Coordination Responsibilities per 011315 Coordination between Multiple Prime Contractors.
      b. Project Master Schedule development and submissions of 2-week look-ahead schedules.
      c. Final Cleaning Schedule.
      d. MEP work.
      e. Casework with other wall mounted items.
      f. Underground Utilities and Trench Locations.
      g. Blocking for Wall Mounted Equipment.
         1) Including AV Displays indicated on "TA" Drawings.
      h. Wall, Floor, Roof, Foundation: Penetrations, Openings, and Reinforcements.
      i. Electrical Requirements and connections for Equipment.
      j. Access Door locations.
      k. Embed Floor Items: floor boxes, floor drains/sinks/clean outs, etc.
      l. Door Hardware Material Prep and Coordination with Security Contractor.
      m. Temporary Enclosures and Building Access.
      n. Temporary Facilities for use by other Contractors.

C. Temporary Facilities
   1. Provide Temporary Facility responsibilities indicated in "011200 - Multiple Contract Summary: "Temporary Facilities Responsibilities – Designated Responsible Contractors" Section.
      a. Additional Requirements indicated in "011500 - Temporary Facilities and Controls."

D. Common General Construction Requirements:
   1. Provide removal and disposal of miscellaneous materials and equipment including materials not shown if impacting work to be demolished.
   2. Access Doors
      a. Furnish Access Doors as needed for access of concealed items installed under this contract to be installed by General Contractor as required for maintenance, service, or code.
      b. Provide installation of Access Doors furnished by other contractors in new wall or ceiling construction.
      c. Include in base bid to furnish and install the following access doors beyond those already shown on drawings:
         1) (5) 18" x 18" fire-rated stainless steel access doors for either gypsum or masonry construction.
   3. Provide structural support of all wall or ceiling hung equipment from Building Super Structure.
   4. Provide Submittal of finishes for color selections of all exposed finished products or equipment:
      a. Includes Equipment Finishes and any other pre-painted finished items or devices prior to ordering of material.
   5. Provide blocking/reinforcement as needed for all wall/ceiling mounted items indicated on Contract Drawings.

E. Project Specific Requirements:
   1. Concrete Equipment Pads:
      a. **General Contractor** shall provide Concrete Pads for Plumbing Equipment in Water Room 157 as indicated on A-111. Plumbing Contractor to provide Layout.
      b. **General Contractor** shall provide Concrete Pads for Mechanical Equipment in Mechanical Room 156 as indicated on A-111. Mechanical Contractor to provide Layout.
      c. **General Contractor** shall provide Concrete Pads for Electrical Equipment in 154 and 155 as indicated on A-111, and Generator Transformer Equipment as indicated on A-060. Electrical Contractor to provide Layout.
   2. Provide inwall reinforcement/blocking as required for wall mounted displays indicated on "TA" Drawings.
   3. "Remedial Action Work Plan – Appendix C"
      a. The **Site Contractor** shall provide management and removal or relocation of layer of contaminated soils per "Remedial Action Work Plan – Appendix C".
      b. "Remedial Action Work Plan – Appendix C" Procedures and additional requirements for Contaminated Soils are **not** required by the **General Contractor**.
      c. The Site Contractor will provide removal of contaminated soils that overlap into the portion of the zone defined as: "The New Building and Generator/Energy Storage Enclosure locations + 5-foot zone from perimeter of foundations of locations".
         1) See Figure 6: Extent of Contamination in Soils Map and Drum Carcass Area within "Remedial Action Work Plan – Appendix C" for locations.

F. Identification and Labeling: Provide Labeling of all equipment.
   1. Equipment Labelling shall be sized to be visible from ground level.
   2. Provide complete schedules of the following items:
      a. Equipment Label Schedule with Equipment Model and Serial Numbers.
      b. Maintenance and Test Interval Schedule of all equipment.
      c. Replaceable Maintenance Item Schedule with part numbers for all equipment.
         1) (Filters, Belts, Seals, Fluids, etc.)
   3. Provide additional labels for equipment above ceilings or behind an Access Door and install Labels on Ceiling or Access Door.

G. Electrical Wiring of Equipment and Devices:
   1. Provide all control wiring for equipment and devices installed under this Contract utilizing a licensed Electrician for a fully functioning system except when control wiring is specifically indicated to be provided by the Electrical Contractor on Electrical Drawings.
      a. See "Electrified Door Hardware Wiring" Section of Electrical Contractor's Contract Summary for wiring supplied by **others** for Electrified Door Hardware.

H. Electrified Door Hardware Wiring:
   1. Electrified Door Hardware listed on Hardware Schedule to be furnished and mounted by the **General Contractor**.
      a. Line Voltage Power wiring to be provided by **Electrical Contractor** to Electrified Door Hardware or Door Hardware Equipment
      b. Low Voltage Control wiring for electrified hardware to be provided by **others**.
   2. The **General Contractor** is to provide start up, configuration, programing of all electrified door hardware and/or ADA Hardware equipment listed in Hardware Schedule/furnished under this Contract.
      a. If a portion of the Door Security System (Card Readers/Door Contacts) is being provided by **others**, then the Contractor providing that equipment shall provide start up, configuration, programing of these systems.

3. The **General Contractor** shall provide continuous internal raceways/pathways within new doors and frames for wiring all electric hardware or devices indicated on: Contract Documents or Hardware Schedule to an accessible location for future wiring (General Contractor to install Access Door if needed).
    a. The General Contractor shall provide pull string from all device locations to the accessible location.

I. **Site/Civil work Scope Delineation between General Contract (Contract #1) and Site Contractor (Contract #5): Civil/Site Work provided by <u>General Contractor (Contract #1)</u> indicated below:**

1. Site/Civil work "Scope Delineation Areas": The **New Building** and **Generator/Energy Storage Enclosure locations** + 5-foot zone from perimeter of foundations of locations are designated as responsible by: **General Contractor (Contract #1)**. All other Site/Civil work outside these areas is designated by **Site Contractor (Contract #5).**
2. Survey and Layout (per respective designated "<u>Scope Delineation Areas</u>"):
    a. Provide services of a licensed surveyor to provide layout required for all new work.
    b. For areas within new building footprints, provide field markings of: new building layout, column line layout, finished floor elevations, and as-built point of reference locations.
    c. Provide existing utility mark out of any existing utilities on site.
    d. Provide maintenance of surveyor layout and existing utility markings throughout the duration of the project and restore markings if disturbed during construction.
    e. Provide surveyed as-built locations and elevations of all underground utilities installed under this contract or excavated by this contract when utility install is by others, all to be recorded and supplied on CAD and PDF As-Built Drawings.
3. Earthwork: The **General Contractor** or **Site Contractor** (per their respective designated "<u>Scope Delineation Areas</u>") are to provide all site earthwork, excavation, bedding, backfill, subbase, and base material, including dewatering as required for the installation of work of this Contract:
    a. General Excavation: Excavations shall be in conformance with current OSHA regulations. Structure Excavation shall be made to the elevations, slopes and limits shown on the plans. Bottom of excavations shall be level and in firm, solid material; where soft or otherwise unsuitable material is encountered, such material shall be removed and replaced with properly compacted earth material, stone or flowable fill, as directed by the Architect or Construction Manager. Excavated material suitable for fill or backfill shall be stockpiled on the site to be turned over to **Site Contractor** for future use. Excess Material shall be properly disposed of by **Site Contractor.**
    b. Backfill: Provide specified backfill including when indicated Structural Fill under Building areas as indicated by Drawings and Specifications.
    c. Dewatering: An adequate dewatering system shall be provided at all structure excavations and elsewhere as directed by the Architect or Construction Manager. The system shall be capable of removing any water that accumulates in the excavation and maintaining the excavation in a dry condition while construction is in progress.
        1) Dewatering shall remain in place until directed to be removed by the Construction Manager.
        2) Excavated areas shall be kept free of water during construction. Where necessary, excavations shall be protected by shoring, sheeting, cofferdams, or other suitable methods.
        3) The surface of the ground shall be sloped away from the excavation or piping provided to prevent surface water from entering the excavation.

4) Disposal of water resulting from the dewatering operation shall be done in a manner that does not interfere with normal drainage and does not cause damage to any portion of the work or adjacent property.
5) All drains, culverts, storm sewers and inlets subject to the dewatering operation shall be kept clean and open for normal surface drainage.
6) The dewatering system shall be maintained until backfilling is complete.
7) All damages resulting from the dewatering shall be repaired by the Contractor to the satisfaction of the Architect and at no cost to the Owner.

4. Utility Trench Excavation: For all underground utilities shown on any Contract Drawings, the **General Contractor** or **Site Contractor** (per their respective designated "Scope Delineation Areas") are to provide: Trenching, Excavation, Dewatering, Shoring, Bracing, Concrete Utility Encasement (when specifically indicated), Detectable Marking Tape, and Back Fill for work of all other contractors as indicated on all contract Drawings; Review all contract drawings for all locations requiring Utility Trench Excavation for underground utilities.
   a. Provide for the following utilities:
      1) All underground Electrical/Telecom/Data/Fiber utilities and conduits shown on Electric/Civil/Telecommunications/Security Drawings.
      2) Underground Panel Feeder Conduits for each Electrical Panel shown on Electrical Drawings.
      3) Floor boxes and associated conduits indicated on Electrical Drawings.
      4) Domestic Water Supply indicated on Plumbing/Civil Drawings.
      5) Sanitary/Sewer indicated on Plumbing/Civil Drawings.
      6) Sprinkler Piping indicated on Fire Protection/Civil Drawings
      7) Storm/Sump/Footing Drain indicated on Plumbing/Civil Drawings.
      8) Geothermal Piping indicated on Mechanical/Civil Drawings.
      9) Underground Refrigerant piping indicated on Mechanical Drawings.
   b. **General Contractor** is to provide any foundation footing drains indicated on Architectural Drawings at the foundation, and Site Contractor to provide footing drain piping from 5 feet outside building perimeter.
5. Site Demolition: The **Site Contractor** is to provide **all** demolition as indicated on Civil Drawings, including within areas designated as responsibility by **General Contractor within "Scope Delineation Areas"**. Including Removing Existing Vegetation, Clearing and Grubbing, Stripping and Stockpiling Topsoil (Topsoil to be turned over to the **Site Contractor)**, removal of existing above/below grade site features and improvements and backfill after removal, removal of existing utilities and backfill after removal, and all other demolition indicated on Civil Demolition Drawings.
6. Site Landscaping: Landscaping, Topsoil, Turfs and Grasses, Plantings, Restoration, shall be provided by the **Site Contractor** as indicated on Civil Drawings including within areas designated as responsibility by **General Contractor within "Scope Delineation Areas"**.
7. Site Concrete:
   a. The **General Contractor** will provide all foundation walls, retaining walls, and staircases (including landings at each end of the staircase) as specifically indicated in Structural Drawings, even if depicted on exterior of building. Sidewalks or Slabs within these retaining walls, foundation walls, or staircase landings shall be provided by the **General Contractor**.
   b. The **General Contractor** shall provide the first exterior concrete landing or sidewalk panels outside of all exterior doors to the first exterior expansion or control joint.
      1) Expansion Joints between interior and exterior slabs at doorways shall transition under each building exterior door transition or threshold.

c. **Site Contractor** to provide all concrete stairs, sidewalks, slabs, pads, retaining walls, and other concrete features/concrete work indicated on Civil Drawings that are not specifically indicated to be provided by General Contractor or Others.
d. Provide shop drawings for all concrete work including field measurements and elevations of any existing connection locations prior to installation. General Contractor and Site Contractor shall coordinate concrete transitions prior to performing any concrete work.
e. Each Contractor is to provide their own concrete wash out areas and restoration as required for their own work.

J. Concrete and Masonry:
1. Provide interior equipment pads when indicated on Architectural or Structural Contract Drawings.
2. Provide all concrete and masonry work indicated on structural/Architectural Drawings. Coordinate with all other Contractors for openings and penetrations.
3. Install concrete and masonry sleeves as provided and marked out by other contractors prior to new concrete/masonry construction.
4. Loose Masonry lintels are furnished, installed, and grouted by General Work Contractor for openings required for their own work and openings required by other Prime Contractors for work shown on other Contract Drawings.
5. Provide frost protection during excavation; protect concrete slab and masonry from cold temperatures during and after pour.

K. Metals:
1. Provide all steel beams / columns and associated lintels at new openings as shown.
2. Install miscellaneous metal fabrications furnished by other contractors but scheduled to be installed under the General Construction Contract as shown and/or specified in the contract documents.

L. Louvers:
1. Furnish and install Louvers indicated in new window/curtainwall systems only and were indicated on Architectural Drawings. All other louvers not specifically indicated to be provided on Architectural Drawings are to be provided and installed by others.

M. Roofing:
1. Provide all roofing work for new building. Roof blocking and plywood, including:
2. For cutting holes through new deck, the following shall apply:
a. Temporary and final roofing and weather-tight protection for roof at new building shall be by the General Construction Contractor.
b. Flashing and counter flashing for all penetrations.
3. On Flat Roofs, provide roof walkway pads entirely around roof mounted mechanical equipment even if not indicated on Roofing/Architectural Drawings.

N. Doors, Frames, and Hardware:
1. The GC is required field verify and measure all existing conditions and openings prior to ordering Door/Frame/Hardware material. The GC is to coordinate hardware selections to confirm there are no interference between selected hardware and/or recessed/morticed hardware prep or glazing in doors. The GC is to coordinate and confirm there will be no conflicts between glazing, closers, overhead stops, coordinators, door holders,
2. The GC is required to verify closer type/configuration/mounting position submitted is coordinated with installation conditions and includes sufficient swing radius for electromagnetic door holders, or closer stop position where wall stop will not properly stop door and overhead stop is not included in hardware schedule. Coordinate with adjacent wall conditions. Provide blocking at all Door Wall Stops.

3. The GC is to provide adjustment of Door Hardware until all hardware functions properly and accepted by the Owner/Architect.

O. Finishes: Provide all finishes indicated in Division 9. Review existing conditions and confirm acceptable substrates prior to installing new finishes.
1. Provide self-leveling underlayment where required to allow for an acceptable flooring installation.
2. If conditions/substrates are not acceptable for finish work installation, notify the Construction Manager/Architect and/or submit an RFI requesting direction if further action is needed. Do not install finishes if existing conditions are not acceptable per manufacturers requirements.

P. **Furniture Scope of work between Furniture Contractor, General Contractor, Electrical Contractor, and Owner:**
1. **Furniture Contractor** to provide: Shop Drawings, Coordination Drawings, and Product Submittals to **Electrical Contractor** for all work relating to the electrical or low voltage scope of the Furniture Work.
    a. **Furniture Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors for Fire Alarm and Security work.
2. **Furniture Contractor** to provide all Furniture indicated as by "XYBIX" on "FF" Drawings.
3. **Owner** to provide all Furniture indicated as by "OWNER" on FF Drawings.
4. **General Contractor** to provide all other Casework, Cabinets, and Furniture indicated on Architectural Drawings.
    a. See items tagged as "Y" under GC on Architectural "A" Elevation Drawings for additional information.
5. **Furniture Contractor** to provide Internal Connection Hub for Electrical Contractor to Terminate Telecommunications wiring to with exception to data lines shown to run directly to devices on furniture.
    a. Furniture Contractor to review "TA" Drawings for Audio-Visual Devices.
    b. Furniture Contractor to review "TN" Drawings for Telecommunications Wiring.
6. **Electrical Contractor** to provide Data/Telecommunications wiring for connection to Furniture Communication Hub(s) as shown on Electrical/Furniture Drawings.
7. **Electrical Contractor** to provide outlets mounted in "XYBIX Furniture" and wiring from Floor Boxes outlets to outlets Mounted in "XYBIX" Furniture as shown on Electrical Drawings.
8. **Furniture Contractor** to exclude all work specifically provided by **Other Contractors.**
9. **General Contractor** to exclude all work specifically provided by **Furniture Contractor.**

Q. Provide owner training of systems installed. In addition to Training required by other spec sections, provide at minimum the following training upon equipment/system completion and acceptance (per 018200 Demonstration Training Specification):
1. Door Hardware Training.
2. Maintenance of Roof Training.
3. Finish Training for Maintenance of all installed finishes.
4. Residential Appliances

1.6 CONTRACT 2 -MECHANICAL CONSTRUCTION WORK: (Also referred to as: "Mechanical Contractor" or "MC")

A. The Work of the Mechanical Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Heating, ventilating, cooling, and controls work.

a. Drawings:
   1) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
   2) All "M" Mechanical Series Drawings – Provide all work.
   3) For Coordination purposes:
      a) Review All "A" (Architectural), "S" Structural, "C" (Civil), "E" (Electrical), "P" (Plumbing), "FF" (Furniture), "FP" (Fire Protection), "TN" (Telecommunications), "TY" (Security), "TA" (Audio Visual) series drawings as it relates to the work of this contract.

b. Specifications:

   1) Division 0 –Procurement and Contracting Requirement, all sections.
   2) Division 1 –General Requirements all sections.
   3) Division 2 – Section 024119, Selective Structure Demolition.
   4) Division 7 – Sections relating to: Penetration / Joint Firestopping and Joint Sealants, as required for the Work of this Contract.
   5) Division 8 – Access Doors as required.
   6) Division 23 – HVAC, all sections.
   7) Division 25 – Integrated Automation, all sections
   8) Division 26 - All sections as they relate to this contract for power connections to equipment.

B. Coordination:
1. Provide Coordination with the work of all other contractors with documented communication to other Prime Contractors. Some specific coordination items include but are not limited to:
   a. Provide all Coordination Responsibilities per 011315 Coordination between Multiple Prime Contractors.
   b. Project Master Schedule development assistance and submissions of 2-week look-ahead schedules.
   c. Final Cleaning Schedule.
   d. MEP work.
   e. Blocking for Wall Mounted Equipment.
   f. Casework with other wall mounted items.
   g. Underground Utilities and Trench Locations.
   h. Wall, Floor, Roof, Foundation: Penetrations, Openings, and Reinforcements.
   i. Electrical Requirements and connections for Equipment.
   j. Access Door locations.
   k. Temporary Enclosures and Building Access.
   l. Temporary Facilities for use by other Contractors.

C. Temporary Facilities

1. Provide Temporary Facility responsibilities indicated in "011200 - Multiple Contract Summary: "Temporary Facilities Responsibilities – Designated Responsible Contractors" Section.
    a. Additional Requirements indicated in "011500 - Temporary Facilities and Controls."

D. Common Mechanical requirements:
1. Provide removal and disposal of miscellaneous materials and equipment including materials not shown if impacting work to be demolished.
2. Access Doors: Furnish Access Doors as needed for access of concealed items installed under this contract to be installed by **General Contractor** as required for maintenance, service, or code.
3. Provide structural support of all wall or ceiling hung equipment from Building Super Structure.
4. Provide Submittal of finishes for color selections of all exposed finished products or equipment:
    a. Includes Equipment Finishes and any other pre-painted finished items or devices prior to ordering of material.
5. Furnish motor controllers, equipment disconnects, and variable frequency drives to Electrical Contract for installation and wiring where not indicated on Electrical Drawings.
6. Furnish HVAC equipment roof supports, curbs, and pipe portals.
7. Provide insulation of all modified piping, ductwork, and equipment.
8. Provide complete finished installation of equipment, duct work, metal chases with all paint as needed to provide a complete finished system. Provide Duct painting of all exposed ductwork not covered by a ceiling unless indicated painting of exposed ceiling system / mechanical systems by **General Contractor** per Architectural Drawings / Architectural Finish Schedule.
9. Provide additional isolation valves as needed for contractor's convenience or as needed to maintain project schedule via means and methods.
10. For Equipment provided with Packaged Controls, provide Equipment devices and accessories to all the Controls Contractor (or Subcontractor) the ability to perform complete integration of Equipment's functions into Building Management System.
    a. Provide Package Controls Integration Control Points and Equipment Sequence of Operations to Engineer as Submittal for Engineer approval prior to ordering equipment.
11. Filters: Provide at minimum: (1) replacement set of filters for all equipment to be turned over to the owner with equipment filter schedule that includes all information/sizes/models/quantities needed for the owner to purchase new filters for all equipment.
    a. Provide replacement filters for any equipment that ran during construction. Provide duct cleaning for any ductwork utilized during construction as needed.

E. Project Specific Requirements:
1. Concrete Equipment Pads:
    a. General Contractor shall provide Concrete Pads for Mechanical Equipment in Mechanical Room 156 as indicated on A-111. Mechanical Contractor to provide Layout. All other Mechanical Pads by Mechanical Contractor.

F. Identification and Labeling: Provide Labeling of all piping, duct work, equipment, valves, control valves, dampers, junction boxes, panels, electrical devices, and electrical connections.
1. For electrical connection labelling: Indicate Panel and Circuit of all electrical devices, outlets, or other power connections for all equipment.

2. Equipment, Piping, Control Valve, and Duct Labelling shall be sized to be visible from ground level.
3. Provide complete schedules of the following items:
   a. Equipment Label Schedule with Equipment Model and Serial Numbers.
   b. Maintenance and Test Interval Schedule of all equipment.
   c. Replaceable Maintenance Item Schedule with part numbers for all equipment.
      1) (Filters, Belts, Seals, Fluids, etc.)
   d. Valve Tag / Valve Label Schedule. (Indicate Normal Position (Open or Closed), and Valve Function)
   e. Panel Schedules for all new or modified Electrical/Control Panels by this Contract.
4. Provide additional labels for valves, dampers, devices, or equipment above Ceilings or behind an Access Door, and install Labels on Ceiling or Access Door.

G. Electrical Wiring of Equipment and Devices:
1. Provide all control wiring for equipment and devices installed under this Contract utilizing a licensed Electrician for a fully functioning system except when control wiring is specifically indicated to be provided by the Electrical Contractor on Electrical Drawings.

H. **Controls by Mechanical Contractor: Mechanical Contractor** to provide complete Building Management System Controls per **230923 (Direct Digital Control System and Sequence of Operations for HVAC Controls)**.
1. Acceptable Controls Supplier/Manufacturer: Automated Logic (Eastern Heating & Cooling) or Approved Equal.
2. Mechanical Contractor to install all Control Valves and Automatic Dampers provided by the Controls Contractor (Subcontracted to Mechanical Contractor). Provide pipe and duct fittings for controls sensors and other controls items as required.
3. Provide all electrical work required for Controls Systems in compliance with respective sections of Division 26/27 – Electrical/Communication for wiring, cables, boxes, conduits, breakers, thermostats, identification.

I. Commissioning: Provide onsite commissioning assistance all other responsibility required by Mechanical Contractor and Controls Contractor indicated in **230800 Commissioning by Owner – HVAC Systems.**

J. Testing, Adjusting, and Balancing: Provide Testing, Adjusting, balancing of all new HVAC systems to be included in this contract per **230594 Balancing of Systems**.

K. Provide owner training of systems installed. In addition to Training required by other spec sections, provide at minimum the following training upon equipment/system completion and acceptance (per 018200 Demonstration Training Specification):
1. Controls Training – Minimum 3 sessions to be completed within 1 year of Controls system final acceptance.
2. Mechanical Room with overview of Geothermal Well System.
3. Energy Recovery Units (w/ Humidifiers).
4. Pumps.
5. Water to Water Heat Pumps.
6. Water Source Heat Pumps.
7. Overall Piping and Valve locations within new building.

L. Geothermal work:
   a. All Geothermal work outside building foundation and branch piping penetrating through foundation (with caps and sufficient piping length for connection by Mechanical Contractor) to be provided by **Site Contractor.**
   b. **Site Contractor** to provide all pressure testing, flushing, and all other quality control requirements for piping installed by Site Contractor after Mechanical contractor has connected piping manifold.
   c. **Mechanical Contractor** to provide Pipe Manifold, connections to branch piping, provide piping specialties, valves, balance valves, additional valves for testing purposes of the geothermal system, foundation sleeves (see structural drawings), insulation, Fernco fittings, and all other piping accessories/connections shown on manifold detail section on M-401 and as needed for a complete balanced well system.
      1) **Mechanical Contractor** to provide final filling of fluid for the entire geothermal well system.
   d. **Site Contractor** to include handling and management of drill slurry/fluid to treated and managed to be reused onsite for proper compaction within landscape areas.
   e. See section in Summary of Work for "Geothermal Installation Sequence and Coordination".
   f. Provide written documentation of coordination of entire installation process, shop drawings, and products between Mechanical Contractor, General Contractor (for foundation penetration locations) and Site Contractor to be submitted to Construction Manager/Architect prior to start of all work.

M. Geothermal Installation Sequence and Coordination:
   1. Specific scope associated with Work at Geothermal Wells – This method appears to be the industry standard for Geothermal Well installation. If upon coordination of the entire Project Team, including the Architect, Construction Manager, Owner and all Prime Contractors, a more efficient and more practiced construction method exists, and does not incur any additional costs to any member of the Project Team; it may be submitted to the Construction Manager for review and approval prior to start of activity.
      a. Sequence:
         1) Site Contractor establishes benchmark and offset elevations including locating all wells.
         2) Site Construction Work Contractor installs all necessary site work management controls including all necessary erosion / wastewater controls.
         3) Site Contractor performs all removals and topsoil stockpiling.
         4) Site Contractor shall also remove top layer of contaminated Soils as indicated in Remedial Action Work Plan Appendix C of Specifications.
         5) Site Contractor excavates trench from all well areas to the manifold structure within the building through foundation.
         6) Geothermal Wells Contractor (under Site Contractor) drills geothermal wells.
         7) Site Contractor removes Well Drilling Fluid/Slurry per in Remedial Action Work Plan Appendix C of Specifications.
         8) Site Contractor installs all precast concrete structures and underground utilities, including light poles, storm water basins, and underground piping and conduits.
         9) Geothermal Wells Contractor (under Site Contractor) installs all piping loops, well casing and well grouting after all other nearby utilities are installed to avoid damage.
         10) Geothermal Wells Contractor (under Site Contractor) installs piping from wells to manifold structure location within the building footprint capped and prepared for connection by Mechanical Contractor.

a) Geothermal Wells Contractor (under Site Contractor) to allow time for building construction to proceed for Construction of Mechanical Room and Piping Manifolds prior to return to site.

11) Mechanical Contractor to install Piping Manifolds and Accessories.
12) Geothermal Wells Contractor (under Site Contractor) performs pressure test and flushing procedures on all piping and caps lines as necessary.
13) Site Construction Work Contractor backfills all well piping in bedding material as specified.
14) Site Contractor backfills all areas necessary to install remainder of Site Contractors Work according to specifications. Well pipes to remain pressurized until backfilling is complete. If pipes are damaged during backfilling operations, they are to be repaired immediately and re-pressurized.
15) Geothermal Wells Contractor (under Site Contractor) Flushes Geothermal System.
16) Mechanical Contractor to provide geothermal energy recovery piping from Manifold.
17) Site Contractor to backfills and compact trench with detectable warning tape from building to all wells.

1.7 CONTRACT 3 - ELECTRICAL CONSTRUCTION WORK: (Also referred to as: "Electrical Contractor" or "EC")

A. The Work of the Electrical Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Electrical Construction work.

a. Drawings:
   1) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
   2) All "E" Electrical Series Drawings – Provide all work.
   3) Electrical Work Scoped under Electrical Contract within "TN" (Telecommunications), "TY" (Security), "TA" (Audio Visual) series Drawings except for work specifically indicated to be provided by **Fire Alarm and Security Contractor or Audio-Visual Contractor**, which is to be excluded from the **Electrical Contract.**
   4) "C" Civil Drawings – For Dosing Tank Power and Control Wiring shown on C-511.
   5) "FF" Furniture Drawings: for Electrical Connections to Furniture.
   6) For Coordination purposes:
      a) Review All "A" (Architectural), "S" Structural, "C" (Civil), "M" (Mechanical), "P" (Plumbing), "FF" (Furniture), "FP" (Fire Protection), series drawings as it relates to the work of this contract.

b. Specifications:

   1) Division 0 –Procurement and Contracting Requirement, all Sections.
   2) Division 1 –General Requirements all Sections.
   3) Division 2 – Section 024119, Selective Demolition.
   4) Division 7 – Sections 078413 & 078443, Penetration & joint Firestopping as required for the Work of this Contract.
   5) Division 8 – Access Doors as needed.
   6) Division 9 – As needed for Electrified Hardware.
   7) Division 11 - 111136 - Vehicle Charging Equipment.
   8) Division 23 - All sections as relates to this contract for power connections to equipment.
   9) Division 26 – Electrical, all sections.
   10) Division 27 – Communications, all sections except as excluded below:
      a) See work scoped under **Audio Visual Contractor (AVC)** for Spec Sections 274116 Audiovisual Systems for exclusions.
   11) Division 28 – See below for exclusions:
      a) See Security & Fire Alarm Electrical Work Scoped under Electrical Contract per **Electrical Contractor**, see work scoped under **Fire Alarm and Security Contractor (FSC)** for exclusions.

B. Coordination:
1. Provide Coordination with the work of all other contractors with documented communication to other Prime Contractors. Some specific coordination items include but are not limited to:

a. Provide all Coordination Responsibilities per 011315 Coordination between Multiple Prime Contractors.
b. Project Master Schedule development assistance and submissions of 2-week look-ahead schedules.
c. Final Cleaning Schedule.
d. MEP work.
e. Blocking for Wall Mounted Equipment.
f. Casework with other wall mounted items.
g. Underground Utilities and Trench Locations.
h. Blocking for Wall Mounted Equipment Including AV Displays indicated on "TA" Drawings.
i. Wall, Floor, Roof, Foundation: Penetrations, Openings, and Reinforcements.
j. Electrical Requirements and connections for Equipment.
k. Access Door locations.
l. Embed Floor Items: floor boxes, floor drains/sinks/clean outs, etc.
m. Temporary Enclosures and Building Access.
n. Temporary Facilities for use by other Contractors.

C. Temporary Facilities
1. Provide Temporary Facility responsibilities indicated in "011200 - Multiple Contract Summary: "Temporary Facilities Responsibilities – Designated Responsible Contractors" Section.
a. Additional Requirements indicated in "011500 - Temporary Facilities and Controls."

D. Common Electrical Requirements:
1. Provide removal and disposal of miscellaneous materials and equipment including materials not shown if impacting work to be demolished.
2. Access Doors: Furnish Access Doors as needed for access of concealed items installed under this contract to be installed by **General Contractor** as required for maintenance, service, or code.
3. Provide structural support of all wall or ceiling hung equipment from Building Super Structure.
4. Provide Submittal of finishes for color selections of all exposed finished products or equipment:
a. Includes Equipment Finishes, cover plates, exposed conduits/wire mold, and any other pre-painted finished items or devices prior to ordering of material.
5. See Architectural Elevations for additional information for locations of wall mounted devices.
6. Provide all power wiring to all HVAC equipment.
a. (Install motor controllers or disconnects supplied by Mechanical Contractor when motor controllers or disconnects are not indicated on Electrical Drawings).

E. Project Specific Requirements:
1. Concrete Equipment Pads:
a. **General Contractor** shall provide Concrete Pads for Electrical Equipment in 154 and 155 as indicated on A-111, and Generator Transformer Equipment as indicated on A-060. Electrical Contractor to provide Layout. All other Electrical Pads by Electrical Contractor.
b. Concrete Transformer Vaults/Pads to be furnished by **Electrical Contractor** and set by **Site Contractor.**
2. Upon installation of Server/AV Racks, provide temporary air purification/air cleaning system in Server Room 152 and AV Room 151 to capture dust from construction to be

removed when Contractor Construction is completed. Provide Plastic Protection sealing Server/AV racks from dust during construction.

3. Provide Site Dosing Tank Control/Power Wiring and Device install by Electrical Contractor. Site Contractor to furnish Devices, Control Panel, Pumps, and Accessories for install by electrician. Control Panel Support and Enclosure to be installed by Site Contractor.
4. Provide Generator System. (Indicated in 263214 – Packaged Engine Generator System). Includes Generator Portable Work Platform on E-003.
5. Portable Generator indicated as "Not in Contract" on E401 shall be provided by Owner. Electrical Contract (Contract #3) shall provide Portable Generator Connection Box and Accessories as shown on Electrical Drawings.
6. Provide Battery Energy Storage System. (Indicated in Section 263317 – Battery Energy Storage System.
7. Provide complete Photovoltaic/Solar System. Indicated in 263100 Photovoltaic System and as shown on Electrical (E) Drawings.
8. See Civil Drawings for additional Light Pole Base/Camera Pole Base Details.
9. Provide complete grounding system at building and site as shown on Electrical Drawings and defined in 260451 – Building Grounding System.

F. Identification and Labeling: Provide Labeling of all equipment, junction boxes, panels, electrical devices, and electrical connections.
   1. For electrical connection labelling: Indicate Panel and Circuit of all electrical devices, outlets, or other power connections for all equipment.
   2. Equipment Labelling shall be sized to be visible from ground level.
   3. Provide complete schedules of the following items:
      a. Equipment Label Schedule with Equipment Model and Serial Numbers.
      b. Maintenance and Test Interval Schedule of all equipment.
      c. Replaceable Maintenance Item Schedule with part numbers for all equipment.
         1) (Filters, Belts, Seals, Fluids, etc.)
      d. Panel Schedules for all new or modified Electrical/Control Panels by this Contract.
   4. Provide additional labels for equipment above Ceilings or behind an Access Door and install Labels on Ceiling or Access Door.

G. Electrical Wiring of Equipment and Devices:
   1. Provide all control wiring for equipment and devices installed under this Contract utilizing a licensed Electrician for a fully functioning system when control wiring is specifically indicated to be provided by the Electrical Contractor on Electrical Drawings.

H. Electrified Door Hardware Wiring:
   1. Electrified Door Hardware listed on Hardware Schedule is to be furnished and mounted by the **General Contractor**.
      a. Line Voltage Power wiring to be provided by **Electrical Contractor** to Electrified Door Hardware or Door Hardware Equipment
      b. Low Voltage Control wiring for electrified hardware to be provided as indicated in:
         1) "Fire Alarm and Security Scope of work between Electrical Contractor Fire Alarm and Security Contractor".
   2. The **General Contractor** is to provide start up, configuration, programing of all electrified door hardware and/or ADA Hardware equipment listed in Hardware Schedule/furnished under this Contract.
      a. If a portion of the Door Security System (Card Readers/Door Contacts) is being provided by **others**, then the Contractor providing that equipment shall provide start up, configuration, programing of these systems.

3. The **General Contractor** shall provide continuous internal raceways/pathways within new doors and frames for wiring all electric hardware or devices indicated on: Contract Documents or Hardware Schedule to an accessible location for future wiring (General Contractor to install Access Door if needed).
    a. The General Contractor shall provide pull string from all device locations to the accessible location.

I. Electric Service:
1. Provide complete Electric Service as indicated on Electrical Drawings.

J. Telecommunications and Data Systems:
1. Provide All Building Interior Data Wiring, to be tested and terminated as shown on TN Drawings from Data Locations indicated on Plans/Server Room/AV Room.
2. Provide Site Data/Fiber as indicated on Site TN Drawings.
3. PoE Switch to be provided by Owner at Microwave Tower. Electrical Contractor to provide Fiber from IT Racks to PoE Switch, and device wire from PoE Switch to Site Devices: all as indicated on TN-100.
4. Provide Data Wiring to connect to Camera's installed Owner Security Contractor as indicated on TY Drawings.
5. Provide Site Fiber and Data as indicated on Telecommunication Site.
6. Provide Fire Alarm Panel Data Lines as indicated on E501.
7. Electrical to provide and install empty server racks per 271116 – Cabinets and Racks. Equipment and Devices within Server Rack to be provided and installed by Owner.
8. Provide all electrical power and data floor boxes as shown on Electrical Drawings. See Electrical Details for Floor Box Types.
9. For Floor boxes serving Furniture indicated on FF (Furniture Drawings) locations are to be coordinated and confirmed with Furniture Contractor for Data and Power Connections.
10. Provide Unitary Power Supply and UPS Floor Support System in Server Room, provide all work indicated in 263354 – Unitary Power Supply.
11. Provide all Commissioning Responsibilities as indicated 270800 Commissioning of Communications Systems for Communications work installed under the Electrical Contract.

K. **Audio Visual System:**
1. Owner to provide Audio Visual System via **Audio Visual Contractor (AVC)** who is to provide equipment, devices, programming, and commissioning. **Electrical Contractor** to providing wiring in building and support work for **Audio Visual Contractor (AVC)** as indicated below**.**
2. **Electrical Contractor** to provide as indicated on TA/TN Drawings:
    a. Shop Drawings, Coordination Drawings, and Product Submittals to Audiovisual Contractor for all work relating to the Audio-visual Scope that includes model numbers and layout locations on elevations and floor plans.
        1) Utilize Architectural Elevations for layout, coordinate with general notes on TA Drawings regarding placement of Displays and Speakers to be centered with respect to furniture or tables. Provide Submittal.
        2) **Electrical Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors.
    b. Data Wiring for terminated, tested, and labelled on both ends: data lines from AV Room 151 to all locations requiring AV Data Lines as indicated on **TN or TA Drawings**.
    c. Power outlets for all displays as indicated on TA Drawings.
    d. AV Racks in AV Room 151 as specified in 271116 – Cabinets and Racks.

e. Speaker Wires shown on TA-803- "Other Rack Devices" Detail: Cables from AV Racks in AV Room 151 to locations indicated on TA/TN Drawings:
   1) **Electrical Contractor** to furnish and install Ceiling Speakers indicated on TA Drawings Tagged as Items: "5-1".
   2) **Electrical Contractor** to figure product: "Manufacturer: QSC, Model: AD-C6T-LP" for speakers. Confirm product via submittal process during construction.

f. At Audio video Touch Panel locations, **Electrical Contractor** to provide data lines as indicated on TA-801, TA-802, TA-803
   1) For Tabletop Touch Panels, Electrical Contractor to provide data lines from AV Rack in Room 151 to Touch Panel location via floor box with sufficient length to reach Table Touch Panel as coordinated by Audio Visual and Furniture Contractor.
   2) For Wall Mounted Touch Panels, Electrical Contractor to provide data lines from AV Rack in Room 151 to touch panel location via conduit, back box, and fire stopped conduit stub above ceiling. Coordinate Surface mount vs recessed back box type via submittal process and coordination with **Audio Visual Contractor (AVC).**

g. **Electrical Contractor** to furnish and install In Wall Back Boxes for all displays indicated on TA Drawings. Coordinate with General Contractor for blocking Locations.
   1) Item Tags indicated on TA Drawings as P501, P526, P527 are to reference In Wall Back Boxes for Flat Panel Displays.
   2) Provide all junction boxes, fire stopped conduits, and back boxes indicated on TA Drawings.

h. Floor box Types serving AV Equipment to follow details on Electrical "E" Drawings for Floor Box types.

i. **Electrical Contractor** to provide Power Bus Duct as indicated on Detail 7 – E604 and as noted on TN-601 Detail 2 for power to AV rack devices. All other power cords from Bus Duct on E604 Detail 7 to devices to be provided by Audio Visual Contractor.

j. Exclude All work specifically indicated to be provided by **Audio Visual Contractor (AVC)** Scope.

k. **Audio Video Contractor (AVC)** to provide:
   1) Furnishment and Installation of Displays, Display Mounts, Video Walls, Video Bars, Sound Bars, Encoders, Decoders, Video DA's, Touch Panels, AV Rack Devices, local Power Supplies, local wiring at: (displays, encoders, monitors, video bars, soundbars, and video walls), and all local wiring and patch cabling within AV Room 151.
   2) Office Monitors to be provided by Owner.
      a) Connection and wiring of Owner provided Monitors to Audio Visual System by **Audio Visual Contractor.**
   3) Exclude all work specifically indicated to be provided by **Electrical Contractor (Contract #3).**
   4) Provide any other devices, equipment shown on TA Drawings or required per 274116 – Audio Visual Systems Specification Section (except as excluded by Electrical Contractor) or any other devices and equipment required to provide a complete and functioning system shall be provided by **Audio visual Contractor (AVC).**
   5) Provide all items indicated within 274116 – Audio Visual Systems Specification except as excluded and to be provided by **Electrical Contractor (Contract #3).**
   6) **Audiovisual Contractor (AVC)** to provide Start Up, Functional Testing, and Commissioning reports of all equipment and software: to be submitted as written reports.
      a) Include Electrical Contractor's Approved Test Reports for Data Cables with final commissioning report.

L. **Furniture Scope of work between Furniture Contractor, General Contractor, Electrical Contractor, and Owner:**
   1. **Furniture Contractor** to provide: Shop Drawings, Coordination Drawings, and Product Submittals to **Electrical Contractor** for all work relating to the electrical or low voltage scope of the Furniture Work.
      a. **Furniture Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors for Fire Alarm and Security work.
   2. **Furniture Contractor** to provide all Furniture indicated as by "XYBIX" on "FF" Drawings.
   3. **Owner** to provide all Furniture indicated as by "OWNER" on FF Drawings.
   4. **General Contractor** to provide all other Casework, Cabinets, and Furniture indicated on Architectural Drawings.
      a. See items tagged as "Y" under GC on Architectural "A" Elevation Drawings for additional information.
   5. **Furniture Contractor** to provide Internal Connection Hub for Electrical Contractor to Terminate Telecommunications wiring to with exception to data lines shown to run directly to devices on furniture.
      a. Furniture Contractor to review "TA" Drawings for Audio-Visual Devices.
      b. Furniture Contractor to review "TN" Drawings for Telecommunications Wiring.
   6. **Electrical Contractor** to provide Data/Telecommunications wiring for connection to Furniture Communication Hub(s) as shown on Electrical/Furniture Drawings.
   7. **Electrical Contractor** to provide outlets mounted in "XYBIX Furniture" and wiring from Floor Boxes outlets to outlets Mounted in "XYBIX" Furniture as shown on Electrical Drawings.
   8. **Furniture Contractor** to exclude all work specifically provided by **Other Contractors.**
   9. **General Contractor** to exclude all work specifically provided by **Furniture Contractor.**

M. **Fire Alarm and Security Scope of work between Electrical Contractor Fire Alarm and Security Contractor:**

1. Electrical Contractor to provide: Shop Drawings, Coordination Drawings, and Product Submittals to **Fire Alarm and Security Contractor** for all work relating to the Fire Alarm Scope that includes model numbers and layout locations on elevations and floor plans.
   a. **Electrical Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors for Fire Alarm and Security work.
   b. See 283100 - Addressable Fire Alarm for information on conduit requirements.
2. Fire Alarm and Security Wiring:
   a. **Fire Alarm and Security Contractor** to provide all wiring required for devices of the Fire Alarm System. Wiring to be installed prior to Ceiling Installation.
   b. Fire Alarm Wiring to HVAC Equipment to be provided by Fire Alarm Contractor.
   c. For the Security System: **Electrical Contractor** shall provide terminated, tested, and labelled: CAT6A & 18/4 Cable with sufficient length to all doors indicated with Electric Strike or Card Reader per TY-201 – Security Floor Plan, and TY-701 - Security Details.
   d. **At Automatic Operator/Opener Locations Only: Electrical Contractor** to provide control wiring and conduits for ADA Automatic Operators/Openers and any associated Electrified Hardware, Push Buttons, Electrified Panic Bars or Electrified Strikes. Connection to Security System for Card Reader Access to be connected by **Fire Alarm and Security Contractor** after ADA operator is commissioned.
   e. Any additional local wiring for doors/electric strikes/locksets/card readers, request to exit motion sensors to be provided and installed by **Fire Alarm and Security Contractor (FSC)** to provide a complete and functioning system per design.
   f. **Electrical Contractor** to provide Site Fiber Indicated on **TN-100.**
   g. All local wiring and connection to Equipment or racks in IT Room to be provided by **Fire Alarm and Security Contractor**.
   h. **Fire Alarm and Security Contractor** to provide all wiring for Emergency Call Stations including site wiring in site conduits. Utilize **Electrical Contractor** provided underground conduits indicated on Electrical Drawings.
   i. **Fire Alarm and Security Contractor** to provide all other wiring required for a complete system for wiring that is not specifically indicated as to be provided by **Electrical Contractor.**
3. Conduits and Support for Wiring:
   a. **Electrical Contractor** to provide for all **wall mounted** Fire Alarm and Security devices:
      1) Proper Device Back-box, Conduit ran to above ceiling height, stubbed for future wiring by Fire Alarm and Security Contractor.
      2) Coordinate with **General Contractor** for wall mounted devices to be installed recessed in Concrete, Masonry, or ICF Walls.
      3) **Electrical Contractor** to provide firestopping/sealing around the exterior of all conduits and sleeves installed.
      4) **Fire Alarm and Security Contractor** to provide firestopping/sealing of interior of conduit/sleeve after wiring has been installed**.**
      5) **Fire Alarm and Security Contractor** to provide Acoustic Sealant of all Fire Alarm and Security device back boxes.
   b. **Electrical Contractor** to provide fire-stopped/sealed sleeves in sufficient size and quantity to all partitions or walls to allow fire alarm wiring to terminate to all devices in all rooms within the building.
   c. **Electrical contractor** shall provide all conduits shown on TY-701 Security Details for all devices including but not limited to: Card Readers, Door Contacts, Request

to Exit Motion Sensors, Power Transfer Hinges, and Junction Boxes. Install Pull String through all conduits.

1) **Electrical Contractor** to review Door and Hardware Schedule indicate on A-911 Door Schedule and Specification Section 080671 Door Hardware Schedule to coordinate their own work.

d. Open Cable shall be allowed above ceilings and in "attics". "Open to Structure" Ceilings shall require conduits and back boxes by electrical Contractor.
   1) See A801 Reflected Ceiling Plan for Ceiling Type information.
   2) See 283100 - Addressable Fire Alarm for information on conduit requirements.

e. Devices mounted in Ceilings are to be wired and installed with proper back boxes and device support by:
   1) **Fire Alarm and Security Contractor** proper Ceiling device back box after ceiling framing or grid is installed.
   2) **Fire Alarm and Security Contractor** to install Ceiling Devices after ceiling tile install, cut drop ceiling tiles as needed for devices if required.

f. Site Conduits for Site Cameras shall be provided by Electrical Contractor.

4. Devices:
   a. The **General Contractor** shall provide and install/mount all electrified Hardware indicated within "080671" – "Door Hardware Schedule". Excludes Card/Fob Readers which are to be provided by Fire Alarm and Security Contractor.
   b. **Fire Alarm and Security Contractor** to provide and install all Fire Alarm and Security Devices indicated on Contract Drawings and connect to any wiring provided by Electrical Contractor.
      1) Fire Alarm devices include: All devices shown on E-301, and any other devices, relays, and accessories required for a fully functioning system to meet design requirements.
      2) Security Devices Include: All devices shown on TY Drawings with exclusion to electrified hardware indicated in "080671" – "Door Hardware Schedule" which is to be **excluded from the Fire Alarm and Security Contractor** and provided by **General Contractor**. Provide any other devices, equipment and accessories required for a fully functioning system to meet design requirements.
         a) **The Fire Alarm and Security Contractor** is to provide "**ACM**" Access Control Modules at Door Locations.
         b) **Site Emergency Call Stations** to be provided in their entirety by Fire Alarm and Security Contractor.
5. **Electrical Contractor** to provide power to Fire Alarm Control Panel and sufficient conduits from Fire Alarm Control Panel to above ceiling to support all fire alarm wiring. All other work and materials for the Installation of the Fire Alarm Control Panel Shall be by **Fire Alarm and Security Contractor.**
6. **Site Camera Poles and Bases** are to be provided by **Electrical Contractor**.
7. **Fire Alarm and Security Contractor** to exclude all work specifically provided by **Electrical Contractor.**
8. **Electrical Contractor** to exclude all work specifically provided by **Fire Alarm and Security Contractor.**

N. Identification of Electrical:
   1. Provide updated Panel Schedules and Labeling in Electrical Panels for all circuit breakers installed or changed under this contract.
   2. Provide Labelling all electrical junction boxes with Panel Labels and Circuit Breaker Number that feeds each Junction Box.
   3. Provide Labelling of all outlets, devices, and equipment indicating Panel Labels and Circuit Breaker Numbers.
   4. Provide Labelling of all Data/Telecommunication Lines installed under this Contract at each end of the line.

O. Commissioning: Provide Contractor Commissioning Responsibilities as indicated in 260995 – Commissioning of Electrical Systems.

P. Electrical Site Work:
   1. **General Contractor** or **Site Contractor** shall provide "Utility Trench Excavation" to the **Electrical Contractor** for:
      a. **Utility Trench Excavation**: For all underground utilities: **General Contractor or Site Contractor** is to provide Trenching, Excavation, Dewatering, Shoring, Bracing, Concrete Utility Encasement (when indicated), Detectable Marking Tape, and Back Fill for work of all other contractors as indicated on all contract Drawings; Review all contract drawings for all locations requiring Utility Trench Excavation for underground utilities.
      b. Provide **Utility Trench Excavation** for the following utilities:
         1) All underground Electrical/Telecom/Data/Fiber utilities and conduits shown on Electric or Civil Drawings.
         2) Underground Panel Feeder Conduits for each Electrical Panel shown on Electrical Drawings.
         3) Floor boxes and associated conduits indicated on Electrical Drawings.
   2. The following items shall be furnished by **Electrical Contractor (Contract #3)** and turned over to be set by **Site Contractor** as indicated on Electrical or Civil Drawings: Light Pole Bases, Camera Pole Bases, Electric Manholes, Electrical Hand Holes, Transformer Vaults, and Electric Vehicle Charging Station bases.

Q. Provide owner training of systems installed. In addition to Training required by other spec sections, provide at minimum the following training upon equipment/system completion and acceptance (per 018200 Demonstration Training Specification):
   1. Generator System.
   2. Unitary Power System (UPS)
   3. Photovoltaic System.
   4. Battery Energy Storage System (BESS).
   5. Panelboards.
   6. Exterior Lighting Control.
   7. Interior Lighting System and Control.
   8. Lightning Protection System
   9. Roof Deicing System.

1.8 CONTRACT 4 - PLUMBING CONSTRUCTION WORK: (Also referred to as: "Plumbing Contractor" or "PC")

A. The Work of the Plumbing Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Plumbing Construction work.

   a. Drawings:
      1) All "G" or "T" (General) and "A050" (Life Safety Drawings)
      2) All "P" Electrical Series Drawings – Provide all work.
      3) For Coordination purposes:
         a) Review All "A" (Architectural), "S" Structural, "C" (Civil), "M" (Mechanical), "E" (Electrical), "FF" (Furniture), "FP" (Fire Protection), TN (Telecommunications), "TY" (Security), "TA" (Audio Visual) series drawings as it relates to the work of this contract.

   b. Specifications:
      1) Division 0 – Procurement and Contracting Requirement, all Sections.
      2) Division 1 – General Requirements all Sections.
      3) Division 2 – Section 024119, Selective Demolition.
      4) Division 7 – Sections 078413 & 078443, Penetration & joint Firestopping as required for the Work of this Contract.
      5) Division 8 – Access Doors as needed.
      6) Division 22 – Plumbing, all sections.

B. Coordination:
   1. Provide Coordination with the work of all other contractors with documented communication to other Prime Contractors. Some specific coordination items include but are not limited to:
      a. Provide all Coordination Responsibilities per 011315 Coordination between Multiple Prime Contractors.
      b. Project Master Schedule development assistance and submissions of 2-week look-ahead schedules.
      c. Final Cleaning Schedule.
      d. MEP work.
      e. Blocking for Wall Mounted Equipment.
      f. Casework with other wall mounted items.
      g. Underground Utilities and Trench Locations.
      h. Wall, Floor, Roof, Foundation: Penetrations, Openings, and Reinforcements.
      i. Electrical Requirements and connections for Equipment.
      j. Access Door locations.
      k. Embed Floor Items: floor boxes, floor drains/sinks/clean outs, etc.
      l. Temporary Enclosures and Building Access.
      m. Temporary Facilities for use by other Contractors.

2. Site Utility Coordination:
    a. Provide Storm drain/Sump Drain water piping to 5' outside building foundation perimeter. Coordinate with Contract #5 Site Contractor.
    b. Provide all sanitary piping and sanitary system indicated in 221313 Facility Sanitary Sewers to 5' outside building line. Site Contractor to provide piping/sanitary work from outside 5' building line. Coordinate with Site Contract #5.

C. Temporary Facilities
1. Provide Temporary Facility responsibilities indicated in "011200 - Multiple Contract Summary: "Temporary Facilities Responsibilities – Designated Responsible Contractors" Section.
    a. Additional Requirements indicated in "011500 - Temporary Facilities and Controls."

D. Common Plumbing Requirements:
1. Provide removal and disposal of miscellaneous materials and equipment including materials not shown if impacting work to be demolished.
2. Access Doors: Furnish Access Doors as needed for access of concealed items installed under this contract to be installed by General Contractor (Contract #1) as required for maintenance, service, or code.
3. Provide structural support of all wall or ceiling hung equipment from Building Super Structure.
4. Provide Submittal of finishes for color selections of all exposed finished products or equipment:
    a. Includes Equipment Finishes, cover plates, exposed conduits/wire mold, and any other pre-painted finished items or devices prior to ordering of material.
5. See Architectural Elevations for additional information for locations of wall mounted fixtures and plumbing devices.
6. Provide single piece properly sized Piping Escutcheons on all exposed piping penetrations at plumbing fixtures that properly cover any exposed unfinished surfaces.
7. Provide all testing, balancing, and disinfection of all new and modified Plumbing Systems.
    a. Submit Documentation of procedures and results for approval.

E. Project Specific Requirements:
1. Concrete Equipment Pads:
    a. **General Contractor** shall provide Concrete Pads for Plumbing Equipment in Water Room 157 as indicated on A-111. Plumbing Contractor to provide Layout. All other Plumbing Pads by Plumbing Contractor.
2. Provide all plumbing equipment indicated in Water Room 157 shown on P202 Detail 1 and P301/P302.
3. Power wiring and Control wiring for Hot Water Time Clock for Recirculation pump on P302 by EC. Programing and commissioning of Time Clock by Plumbing Contractor.

F. Identification and Labeling: Provide Labeling of all piping, equipment, and valves.
1. Equipment, Piping, and Control Valve Labelling shall be sized to be visible from ground level.
2. Provide complete schedules of the following items:
    a. Equipment Label Schedule with Equipment Model and Serial Numbers.
    b. Maintenance and Test Interval Schedule of all equipment.
    c. Replaceable Maintenance Item Schedule with part numbers for all equipment.
        1) (Filters, Belts, Seals, Fluids, etc.)
    d. Valve Tag / Valve Label Schedule. (Indicate Normal Position (Open or Closed), and Valve Function)

3. Provide additional labels for valves, dampers, or equipment above Ceilings or behind an Access Door, and install Labels on Ceiling or Access Door.

G. Electrical Wiring of Equipment and Devices:
   1. Provide all control wiring for equipment and devices installed under this Contract utilizing a licensed Electrician for a fully functioning system except when control wiring is specifically indicated to be provided by the Electrical Contractor on Electrical Drawings.

H. Fire Protection System: Provide Fire Protection system as indicated on FP-101. Wiring of Clean Agent Fire Suppression System Control Panel by the Plumbing Contractor.
   1. Provide per 212200 Clean Agent Fire Suppression and 210500 Common Work Results for Fire Suppression.
   2. Coordinate with Fire Alarm Contractor for Connection of Fire Suppression System to Fire Alarm System.
   3. 120 VAC Power Supply provided by EC to Fire Protection Control Panel.
   4. Internal Control Wiring for Fire Protection System, Programing, and commissioning of Clean Agent Fire Suppression Control Panel by Plumbing Contractor.

I. Commissioning:
   1. Provide Contractor Commissioning Responsibilities as indicated in 220800 - Plumbing Commissioning.

J. Provide owner training of systems installed. In addition to Training required by other spec sections, provide at minimum the following training upon equipment/system completion and acceptance (per 018200 Demonstration Training Specification):
   1. Water Heaters
   2. Recirculating Pumps
   3. Plumbing Fixtures
   4. Hot Water Return Balancing Stations
   5. Domestic Water System Pressure Booster Pumps
   6. Fire Protection System

1.9 CONTRACT 5 - SITE CONSTRUCTION WORK: (Also referred to as: "Site Contractor" or "SC")

A. The Work of the Site Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that together form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.
   1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Site Construction Work.
      a. Drawings:
         1) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
         2) All "C" Civil Series Drawings – Provide all work.
         3) For Coordination purposes:
            a) Review All "A" (Architectural), "S" Structural, "M" (Mechanical), "E" (Electrical), "P" (Plumbing), "FF" (Furniture), "FP" (Fire Protection), TN (Telecommunications), "TY" (Security), "TA" (Audio Visual) series drawings as it relates to the work of this contract.
      b. Specifications:
         1) Division 0 – Procurement and Contracting Requirement, all Sections.
         2) Division 1 – General Requirements, all Sections,
         3) Division 2 – Existing Conditions, all sections.
         4) Division 3 – Concrete – as needed per Site/Building Delineation.
         5) Division 5 – Metals – as required per Site/Building Delineation.
         6) Division 7 – Joint Sealants – as needed per Site/Building Delineation.
         7) Division 10 – Only Include sections below:
            a) 101453 - Traffic Signage
            b) 107500 – Flag Poles
         8) Division 23 – 232000 – HVAC Piping (for Geothermal Well Piping)
            a) Include "232113 - Ground Loop Heat Pump Piping" Specification for Geothermal Work Requirements.
         9) Division 26 – Include sections below:
            a) 260024 Electrical Trenching, Backfill, and Compaction
         10) Division 31 – Earthwork, all sections.
         11) Division 32 – Site Improvements, all sections.
         12) Division 33 – Utilities, all sections.
         13) Division 34 - Transportation, all sections. Exclude 346013 – Electric Vehicle Charging Stations.

B. Unit Prices: Include in Base Bid Quantities as indicated in 012201 Unit Prices for:
   1. UP1 – Removal and Disposal offsite of contaminated Soils and replacement with satisfactory soil material. See Appendix C Remedial Action Workplan.
   2. UP2 – Installation Geothermal Steel Well Casings.

C. Coordination:
   1. Provide Coordination with the work of all other contractors with documented communication to other Prime Contractors. Some specific coordination items include but are not limited to:
      a. Provide all Coordination Responsibilities per 011315 Coordination between Multiple Prime Contractors.
      b. Project Master Schedule development assistance and submissions of 2-week look-ahead schedules.
      c. Final Cleaning Schedule.

d. MEP work.
e. Underground Utilities and Trench Locations.
f. Wall, Floor, Roof, Foundation: Penetrations, Openings, and Reinforcements.
g. Electrical Requirements and connections for Equipment.
h. Access Door locations.
i. Embed Floor Items: floor boxes, floor drains/sinks/clean outs, etc.
j. Temporary Enclosures and Building Access.
k. Temporary Facilities for use by other Contractors.

D. Temporary Facilities
1. Provide Temporary Facility responsibilities indicated in "011200 - Multiple Contract Summary: "Temporary Facilities Responsibilities – Designated Responsible Contractors" Section.
a. Additional Requirements indicated in "011500 - Temporary Facilities and Controls."

E. Common Site Work Requirements:
1. Provide removal and disposal of miscellaneous materials and equipment including materials not shown if impacting work to be demolished.
2. Provide concrete and asphalt paving, landscaping, site appurtenances, flag poles, concrete bollards, and curbing. The Site Contractor shall perform all necessary excavation, backfilling, compaction, and required concrete.
3. Contractor shall obtain and pay for any permits, inspections, or certifications from governing authorities having jurisdiction over the work to be performed, or over the finished product to be installed by this Contractor.
4. Review Geotechnical Report for existing soil conditions of site.

F. Project Specific Requirements:
1. Adhere to all requirements indicated in Appendix C: Remedial Action Work Plan
a. The Contractor's Project Supervisor must have successfully completed a 40 Hour Health and Safety Training Course for Hazardous Waste Operations, and an annual 8-hour Refresher Course.
b. Adhere to all other Safety Requirements indicated in Remedial Action Workplan.
2. Follow procedures in Appendix C: Remedial Action Workplan for management of contaminated soils. See 012201 - Unit Prices for Scope of this portion of work.
3. Provide Concrete Encasement of Electrical Conduits for specific conduits noted on E-002 and E-003 in general notes and notes on plan. See E603 for Concrete Encasement Details.
4. Set Concrete Transformer Vaults for Transformers.
5. Provide Concrete Bases for Emergency Call Stations shown on Electrical Site Drawings.
6. Remedial Action Workplan:
a. The Plesser property is a brownfield cleanup program (BCP) site (Site no. C356053) under the New York State Department of Environmental Conservation (NYSDEC).
b. The site is subject to a remedial action work plan (RAWP) to be implemented during site development activities to remediate soils contaminated with arsenic, dieldrin, lead and mercury in portions of the site.
c. A draft RAWP (Appendix C) is currently under review by NYSDEC. A NYSDEC-approved RAWP will be provided to the site contractor upon approval.
d. All work to be performed on-site shall be performed in accordance with approved RAWP.
e. Construction observation during remediation/site development activities to be conducted by a remediation engineer representative.

f. THE RAWP is to be used as a governing document for Contractor Procedures and Information for the areas. Contractor to follow all procedures within this document for management of soils.
   1) Dust Control and Management procedures to be performed by Site Contractor as described in "RAWP".
   2) The Site Contractor shall cooperate with Testing and Monitoring Agency and allow sufficient time for testing and sampling procedures as described in the "RAWP".
   3) Provide management of contaminated Ground Water within Project Limits as described in "RAWP".
   4) Provide Surveying Services as described in "RAWP" and additional surveying requirements described in "Quality Assurance Project Plan" of the "RAWP."

g. The Site Contractor shall attend a Preconstruction Meeting to review procedures with the Architect and Design Team, inclusive of Remediation Engineer.

h. The Site Contractor shall provide a site supervisor who maintains an OSHA 40 HAZWOPER Certification.

i. The select areas of remediation under this Contract shall be defined in this section:

j. **Dieldrin Removal:**
   1) See Unit Price SC-UP1 within "012200 - Unit Prices" for work required for this scope including offsite disposal.
   2) See "Remedial Action Work Plan – Appendix C" for procedures and other requirements to support this work.

k. **Management of Contaminated Soils within Project Limits:**
   1) See "Alternative No.3 Limited Excavation, Surface Cover, Institutional and Engineering Controls and Monitored Natural Attenuation of Groundwater Impacts" within a. "Remedial Action Work Plan – Appendix C" for the selected method of managing contaminated soils.
      a) Contaminated Soils to be reused onsite per RAWP procedures. Reuse of contaminated soils under a surface cover system to be approved by NYSDEC. No Soil to be disposed of offsite. Offsite disposal at an approved facility, if warranted, requires waste characterization and shall be performed in accordance with the RAWP.
   2) See "Figure 6: Extent of Contamination in Soils Map and Drum Carcass Area" within "Remedial Action Work Plan – Appendix C" for all locations of contaminated soils and depths to be managed by Alternative No. 3.
      a) The Site Contractor shall only remediate a portion of the contaminated soils on Figure 6 as defined in this section and not all contaminated soils outside the limits of disturbance or outside utility trench areas.
   3) See Civil Drawing's "Limits of Disturbance" for areas to be remediated within the Contaminated Soils Map under the Site Contract.
   4) See Electrical Drawings for Utility Trench Areas to be remediated within the Contaminated Soils Map under the Site Contract. Provide remediation for soils at the southern electrical conduit Duct Bank.
   5) The Contractor Staging Area shown on the "Staging Area and Logistics Plan" shall not extend the "Limits of Disturbance" for remediation requirements under Alternative No. 3. Contractor shall submit a Shop Drawing for the Staging Area Construction and materials used prior to installation. Proper Fabric and fill material shall be used to separate the Staging Area from any contaminated soils beneath.
   6) Remediated Soils to be placed in a berm to the south of the Detention Pond Area. No remediated soils under this section are to leave the site.

G. Identification and Labeling: Provide Labeling of all equipment.
   1. Equipment Labelling shall be sized to be visible from ground level.
   2. Provide complete schedules of the following items:
      a. Equipment Label Schedule with Equipment Model and Serial Numbers.
      b. Maintenance and Test Interval Schedule of all equipment.
      c. Replaceable Maintenance Item Schedule with part numbers for all equipment.
         1) (Filters, Belts, Seals, Fluids, etc.)
      d. Valve Tag / Valve Label Schedule. (Indicate Normal Position (Open or Closed), and Valve Function)

H. Electrical Wiring of Equipment and Devices:
   1. Provide all control wiring for equipment and devices installed under this Contract utilizing a licensed Electrician for a fully functioning system except when control wiring is specifically indicated to be provided by the Electrical Contractor on Electrical Drawings.

I. The **Site Contractor (Contract #5)** is responsible for installation of and maintenance of all Temporary Erosion / wastewater and Sediment Control measure for the duration of the project as specified in Plans and Specifications, "Erosion / waste-water Control."
   1. Address erosion control deficiency items within 7 days of notification.
   2. Provide written documentation of all Erosion Control Activities including corrective actions.

J. Electrical Site Work:
   1. **Site Contractor** shall provide "Utility Trench Excavation" to the **Electrical Contractor** for:
      a. Utility Trench Excavation: For all underground utilities shown on any Contract Drawings, the **General Contractor** or **Site Contractor** (per their respective designated "Scope Delineation Areas") are to provide: Trenching, Excavation, Dewatering, Shoring, Bracing, Concrete Utility Encasement (when specifically indicated), Detectable Marking Tape, and Back Fill for work of all other contractors as indicated on all contract Drawings; Review all contract drawings for all locations requiring Utility Trench Excavation for underground utilities.
      b. Provide **Utility Trench Excavation** for the following utilities:
         1) All underground Electrical/Telecom/Data/Fiber utilities and conduits shown on Electric or Civil Drawings.
         2) Underground Panel Feeder Conduits for each Electrical Panel shown on Electrical Drawings.
         3) Floor boxes and associated conduits indicated on Electrical Drawings.
   2. The following items shall be furnished by **Electrical Contractor** and turned over to be set by **Site Contractor** as indicated on Electrical or Civil Drawings: Light Pole Bases, Camera Pole Bases, Electric Manholes, Electrical Hand Holes, Transformer Vaults, and Electric Vehicle Charging Station bases.

K. Commissioning:
   1. Provide commissioning and startup of all equipment installed under this contract. Submit Documentation for approval prior to equipment acceptance and warranty start date.

L. Provide owner training of systems installed. In addition to Training required by other spec sections, provide at minimum the following training upon equipment/system completion and acceptance (per 018200 Demonstration Training Specification):
   1. Septic System and Dosing Tank Controls.
   2. Water Utility System
   3. Storm Drainage System
   4. Geothermal Well System

5. Turfs and Grasses
6. Plantings
7. Active Vehicle Barrier System

M. **Site/Civil work Scope Delineation between General Contract (Contract #1) and Site Contractor (Contract #5): Civil/Site Work provided by Site Contractor (Contract #5) indicated below:**

1. Site/Civil work "Scope Delineation Areas": The **New Building** and **Generator/Energy Storage Enclosure locations** + 5-foot zone from perimeter of foundations of locations are designated as responsible by: **General Contractor (Contract #1)**. All other Site/Civil work outside these areas is designated by **Site Contractor (Contract #5).**
2. Survey and Layout (per respective designated "Scope Delineation Areas"):
   a. Provide services of a licensed surveyor to provide layout required for all new work.
   b. For areas within new building footprints, provide field markings of: new building layout, column line layout, finished floor elevations, and as-built point of reference locations.
   c. Provide existing utility mark out of any existing utilities on site.
   d. Provide maintenance of surveyor layout and existing utility markings throughout the duration of the project and restore markings if disturbed during construction.
   e. Provide surveyed as-built locations and elevations of all underground utilities installed under this contract or excavated by this contract when utility install is by others, all to be recorded and supplied on CAD and PDF As-Built Drawings.
3. Earthwork: The **General Contractor** or **Site Contractor** (per their respective designated "Scope Delineation Areas") are to provide all site earthwork, excavation, bedding, backfill, subbase, and base material, including dewatering as required for the installation of work of this Contract:
   a. General Excavation: Excavations shall be in conformance with current OSHA regulations. Structure Excavation shall be made to the elevations, slopes and limits shown on the plans. Bottom of excavations shall be level and in firm, solid material; where soft or otherwise unsuitable material is encountered, such material shall be removed and replaced with properly compacted earth material, stone or flowable fill, as directed by the Architect or Construction Manager. Excavated material suitable for fill or backfill shall be stockpiled on the site to be turned over to **Site Contractor** for future use. Excess Material shall be properly disposed of by **Site Contractor.**
   b. Backfill: Provide specified backfill including when indicated Structural Fill under Building areas as indicated by Drawings and Specifications.
   c. Dewatering: An adequate dewatering system shall be provided at all structure excavations and elsewhere as directed by the Architect or Construction Manager. The system shall be capable of removing any water that accumulates in the excavation and maintaining the excavation in a dry condition while construction is in progress.
      1) Dewatering shall remain in place until directed to be removed by the Construction Manager.
      2) Excavated areas shall be kept free of water during construction. Where necessary, excavations shall be protected by shoring, sheeting, cofferdams, or other suitable methods.
      3) The surface of the ground shall be sloped away from the excavation or piping provided to prevent surface water from entering the excavation.
      4) Disposal of water resulting from the dewatering operation shall be done in a manner that does not interfere with normal drainage and does not cause damage to any portion of the work or adjacent property.
      5) All drains, culverts, storm sewers and inlets subject to the dewatering operation shall be kept clean and open for normal surface drainage.

6) The dewatering system shall be maintained until backfilling is complete.
7) All damages resulting from the dewatering shall be repaired by the Contractor to the satisfaction of the Architect and at no cost to the Owner.

4. Utility Trench Excavation: For all underground utilities shown on any Contract Drawings, the **General Contractor** or **Site Contractor** (per their respective designated "Scope Delineation Areas") are to provide: Trenching, Excavation, Dewatering, Shoring, Bracing, Concrete Utility Encasement (when specifically indicated), Detectable Marking Tape, and Back Fill for work of all other contractors as indicated on all contract Drawings; Review all contract drawings for all locations requiring Utility Trench Excavation for underground utilities.
   a. Provide for the following utilities:
      1) All underground Electrical/Telecom/Data/Fiber utilities and conduits shown on Electric/Civil/Telecommunications/Security Drawings.
      2) Underground Panel Feeder Conduits for each Electrical Panel shown on Electrical Drawings.
      3) Floor boxes and associated conduits indicated on Electrical Drawings.
      4) Domestic Water Supply indicated on Plumbing/Civil Drawings.
      5) Sanitary/Sewer indicated on Plumbing/Civil Drawings.
      6) Sprinkler Piping indicated on Fire Protection/Civil Drawings
      7) Storm/Sump/Footing Drain indicated on Plumbing/Civil Drawings.
      8) Geothermal Piping indicated on Mechanical/Civil Drawings.
      9) Underground Refrigerant piping indicated on Mechanical Drawings.
   b. **General Contractor** is to provide any foundation footing drains indicated on Architectural Drawings at the foundation, and Site Contractor to provide footing drain piping from 5 feet outside building perimeter.
5. Site Demolition: The **Site Contractor** is to provide **all** demolition as indicated on Civil Drawings, including within areas designated as responsibility by **General Contractor within "Scope Delineation Areas"**. Including Removing Existing Vegetation, Clearing and Grubbing, Stripping and Stockpiling Topsoil (Topsoil to be turned over to the **Site Contractor)**, removal of existing above/below grade site features and improvements and backfill after removal, removal of existing utilities and backfill after removal, and all other demolition indicated on Civil Demolition Drawings.
6. Site Landscaping: Landscaping, Topsoil, Turfs and Grasses, Plantings, Restoration, shall be provided by the **Site Contractor** as indicated on Civil Drawings including within areas designated as responsibility by **General Contractor within "Scope Delineation Areas"**.
7. Site Concrete:
   a. The **General Contractor** will provide all foundation walls, retaining walls, and staircases (including landings at each end of the staircase) as specifically indicated in Structural Drawings, even if depicted on exterior of building. Sidewalks or Slabs within these retaining walls, foundation walls, or staircase landings shall be provided by the **General Contractor**.
   b. The **General Contractor** shall provide the first exterior concrete landing or sidewalk panels outside of all exterior doors to the first exterior expansion or control joint.
      1) Expansion Joints between interior and exterior slabs at doorways shall transition under each building exterior door transition or threshold.
   c. **Site Contractor** to provide all concrete stairs, sidewalks, slabs, pads, retaining walls, and other concrete features/concrete work indicated on Civil Drawings that are not specifically indicated to be provided by General Contractor or Others.
   d. Provide shop drawings for all concrete work including field measurements and elevations of any existing connection locations prior to installation. General Contractor and Site Contractor shall coordinate concrete transitions prior to performing any concrete work.

e. Each Contractor is to provide their own concrete wash out areas and restoration as required for their own work.

N. Geothermal work:

a. All Geothermal work outside building foundation and branch piping penetrating through foundation (with caps and sufficient piping length for connection by Mechanical Contractor) to be provided by **Site Contractor.**

b. **Site Contractor** to provide all pressure testing, flushing, and all other quality control requirements for piping installed by Site Contractor after Mechanical contractor has connected piping manifold.

c. **Mechanical Contractor** to provide Pipe Manifold, connections to branch piping, provide piping specialties, valves, balance valves, additional valves for testing purposes of the geothermal system, foundation sleeves (see structural drawings), insulation, Fernco fittings, and all other piping accessories/connections shown on manifold detail section on M-401 and as needed for a complete balanced well system.

1) **Mechanical Contractor** to provide final filling of fluid for the entire geothermal well system.

d. **Site Contractor** to include handling and management of drill slurry/fluid to treated and managed to be reused onsite for proper compaction within landscape areas.

e. See section in Summary of Work for "Geothermal Installation Sequence and Coordination".

f. Provide written documentation of coordination of entire installation process, shop drawings, and products between Mechanical Contractor, General Contractor (for foundation penetration locations) and Site Contractor to be submitted to Construction Manager/Architect prior to start of all work.

O. Geothermal Installation Sequence and Coordination:

1. Specific scope associated with Work at Geothermal Wells – This method appears to be the industry standard for Geothermal Well installation. If upon coordination of the entire Project Team, including the Architect, Construction Manager, Owner and all Prime Contractors, a more efficient and more practiced construction method exists, and does not incur any additional costs to any member of the Project Team; it may be submitted to the Construction Manager for review and approval prior to start of activity.

a. Sequence:

1) Site Contractor establishes benchmark and offset elevations including locating all wells.

2) Site Construction Work Contractor installs all necessary site work management controls including all necessary erosion / wastewater controls.

3) Site Contractor performs all removals and topsoil stockpiling.

4) Site Contractor shall also remove top layer of contaminated Soils as indicated in Remedial Action Work Plan Appendix C of Specifications.

5) Site Contractor excavates trench from all well areas to the manifold structure within the building through foundation.

6) Geothermal Wells Contractor (under Site Contractor) drills geothermal wells.

7) Site Contractor removes Well Drilling Fluid/Slurry per in Remedial Action Work Plan Appendix C of Specifications.

8) Site Contractor installs all precast concrete structures and underground utilities, including light poles, storm water basins, and underground piping and conduits.

9) Geothermal Wells Contractor (under Site Contractor) installs all piping loops, well casing and well grouting after all other nearby utilities are installed to avoid damage.

10) Geothermal Wells Contractor (under Site Contractor) installs piping from wells to manifold structure location within the building footprint capped and prepared for connection by Mechanical Contractor.
    a) Geothermal Wells Contractor (under Site Contractor) to allow time for building construction to proceed for Construction of Mechanical Room and Piping Manifolds prior to return to site.
11) Mechanical Contractor to install Piping Manifolds and Accessories.
12) Geothermal Wells Contractor (under Site Contractor) performs pressure test and flushing procedures on all piping and caps lines as necessary.
13) Site Construction Work Contractor backfills all well piping in bedding material as specified.
14) Site Contractor backfills all areas necessary to install remainder of Site Contractors Work according to specifications. Well pipes to remain pressurized until backfilling is complete. If pipes are damaged during backfilling operations, they are to be repaired immediately and re-pressurized.
15) Geothermal Wells Contractor (under Site Contractor) Flushes Geothermal System.
16) Mechanical Contractor to provide geothermal energy recovery piping from Manifold.
17) Site Contractor to backfills and compact trench with detectable warning tape from building to all wells.

1.10 CONTRACT 6 - FIRE ALARM AND SECURITY CONSTRUCTION WORK (Also referred to as: "Fire Alarm and Security Contractor" or "FSC")

A. The Work of the Fire Alarm and Security Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that together form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Site Construction Work.

    a. Drawings:
        1) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
        2) All work shown on "E-301" – "Systems Plan", "E-501" – "Electrical Schedules", E-604" – Electrical Details. (For Fire Alarm and Security System work) drawings except as excluded and to be provided by **Electrical Contractor.**
        3) All "TY" (Security) series drawings except for work specifically indicated to be provided by **Electrical Contractor**, which is to be excluded from the **Fire Alarm and Security Contract**.
        4) For Coordination purposes:
            a) Review Architectural "A" Elevation Drawings for coordination purposes.
            b) Review "TN" (Telecommunications) Series Drawings for Data Infrastructure to support Security System.
            c) Review All "A" (Architectural), "LS or A" (Life Safety Drawings), "S" Structural, "M" (Mechanical), "E" (Electrical), "P" (Plumbing), "FF" (Furniture), "FP" (Fire Protection), "TY" (Security) series drawings as it relates to the work of this contract.
    b. Specifications:
        1) Division 0 – Procurement and Contracting Requirement, all Sections.
        2) Division 1 – General Requirements, all Sections
            a) Include all Contractual Requirements indicated in AIA 132 Contract and AIA 232 General Conditions.
            b) Payment, Performance, and Bid Bonds to be excluded from Fire Alarm and Security Contract.
        3) Division 28 – All Sections except for work specifically indicated to be provided by **Electrical Contractor**, which is to be excluded from the **Fire Alarm and Security Contract**.

B. **General Requirements for Fire Alarm and Security Contractor (FSC)**:

1. Provide Owner Training of Fire Alarm system with a minimum of (1) 4-Hour Training Sessions.
    a. Provide (1) additional Training Session if Fire Alarm system has not reached final completion acceptance by date required per Contract Milestone Schedule for temporary use of the system prior to final completion.
2. Provide Owner Training for Security System as indicated in 280500 – Common Work results for Elect. Safety and Security.
3. Warranties and Maintenance Schedules to start the date of Substantial Completion and extended for incomplete equipment or systems identified during Substantial Completion Inspection.
4. **Fire Alarm and Security Contractor** to provide Start Up, Functional Testing, and Commissioning reports of all equipment and software: to be submitted as written reports.

a. Include **Electrical Contractor's** Approved Test Reports for Data Cables with final commissioning report.

5. **Fire Alarm and Security Contractor** to provide coordination, wiring, and equipment needed to facilitate the integration of Camera Security System to Audio Visual System.

C. **Fire Alarm and Security Scope of work between Electrical Contractor Fire Alarm and Security Contractor:**

1. Electrical Contractor to provide: Shop Drawings, Coordination Drawings, and Product Submittals to **Fire Alarm and Security Contractor** for all work relating to the Fire Alarm Scope that includes model numbers and layout locations on elevations and floor plans.
   a. **Electrical Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors for Fire Alarm and Security work.
   b. See 283100 - Addressable Fire Alarm for information on conduit requirements.
2. Fire Alarm and Security Wiring:
   a. **Fire Alarm and Security Contractor** to provide all wiring required for devices of the Fire Alarm System. Wiring to be installed prior to Ceiling Installation.
   b. Fire Alarm Wiring to HVAC Equipment to be provided by Fire Alarm Contractor.
   c. For the Security System: **Electrical Contractor** shall provide terminated, tested, and labelled: CAT6A & 18/4 Cable with sufficient length to all doors indicated with Electric Strike or Card Reader per TY-201 – Security Floor Plan, and TY-701 - Security Details.
   d. **At Automatic Operator/Opener Locations Only: Electrical Contractor** to provide control wiring and conduits for ADA Automatic Operators/Openers and any associated Electrified Hardware, Push Buttons, Electrified Panic Bars or Electrified Strikes. Connection to Security System for Card Reader Access to be connected by **Fire Alarm and Security Contractor** after ADA operator is commissioned.
   e. Any additional local wiring for doors/electric strikes/locksets/card readers, request to exit motion sensors to be provided and installed by **Fire Alarm and Security Contractor (FSC)** to provide a complete and functioning system per design.
   f. **Electrical Contractor** to provide Site Fiber Indicated on **TN-100.**
   g. All local wiring and connection to Equipment or racks in IT Room to be provided by **Fire Alarm and Security Contractor**.
   h. **Fire Alarm and Security Contractor** to provide all wiring for Emergency Call Stations including site wiring in site conduits. Utilize **Electrical Contractor** provided underground conduits indicated on Electrical Drawings.
   i. **Fire Alarm and Security Contractor** to provide all other wiring required for a complete system for wiring that is not specifically indicated as to be provided by **Electrical Contractor.**
3. Conduits and Support for Wiring:
   a. **Electrical Contractor** to provide for all **wall mounted** Fire Alarm and Security devices:
      1) Proper Device Back-box, Conduit ran to above ceiling height, stubbed for future wiring by Fire Alarm and Security Contractor.
      2) Coordinate with **General Contractor** for wall mounted devices to be installed recessed in Concrete, Masonry, or ICF Walls.
      3) **Electrical Contractor** to provide firestopping/sealing around the exterior of all conduits and sleeves installed.
      4) **Fire Alarm and Security Contractor** to provide firestopping/sealing of interior of conduit/sleeve after wiring has been installed**.**
      5) **Fire Alarm and Security Contractor** to provide Acoustic Sealant of all Fire Alarm and Security device back boxes.

b. **Electrical Contractor** to provide fire-stopped/sealed sleeves in sufficient size and quantity to all partitions or walls to allow fire alarm wiring to terminate to all devices in all rooms within the building.

c. **Electrical contractor** shall provide all conduits shown on TY-701 Security Details for all devices including but not limited to: Card Readers, Door Contacts, Request to Exit Motion Sensors, Power Transfer Hinges, and Junction Boxes. Install Pull String through all conduits.

1) **Electrical Contractor** to review Door and Hardware Schedule indicate on A-911 Door Schedule and Specification Section 080671 Door Hardware Schedule to coordinate their own work.

d. Open Cable shall be allowed above ceilings and in "attics". "Open to Structure" Ceilings shall require conduits and back boxes by electrical Contractor.

1) See A801 Reflected Ceiling Plan for Ceiling Type information.
2) See 283100 - Addressable Fire Alarm for information on conduit requirements.

e. Devices mounted in Ceilings are to be wired and installed with proper back boxes and device support by:

1) **Fire Alarm and Security Contractor** proper Ceiling device back box after ceiling framing or grid is installed.
2) **Fire Alarm and Security Contractor** to install Ceiling Devices after ceiling tile install, cut drop ceiling tiles as needed for devices if required.

f. Site Conduits for Site Cameras shall be provided by Electrical Contractor.

4. Devices:

a. The **General Contractor** shall provide and install/mount all electrified Hardware indicated within "080671" – "Door Hardware Schedule". Excludes Card/Fob Readers which are to be provided by Fire Alarm and Security Contractor.

b. **Fire Alarm and Security Contractor** to provide and install all Fire Alarm and Security Devices indicated on Contract Drawings and connect to any wiring provided by Electrical Contractor.

1) Fire Alarm devices include: All devices shown on E-301, and any other devices, relays, and accessories required for a fully functioning system to meet design requirements.
2) Security Devices Include: All devices shown on TY Drawings with exclusion to electrified hardware indicated in "080671" – "Door Hardware Schedule" which is to be **excluded from the Fire Alarm and Security Contractor** and provided by **General Contractor**. Provide any other devices, equipment and accessories required for a fully functioning system to meet design requirements.

a) **The Fire Alarm and Security Contractor** is to provide "**ACM**" Access Control Modules at Door Locations.
b) **Site Emergency Call Stations** to be provided in their entirety by Fire Alarm and Security Contractor. See Electrical Drawings.

5. **Electrical Contractor** to provide power to Fire Alarm Control Panel and sufficient conduits from Fire Alarm Control Panel to above ceiling to support all fire alarm wiring. All other work and materials for the Installation of the Fire Alarm Control Panel Shall be by **Fire Alarm and Security Contractor.**
6. **Site Camera Poles and Bases** are to be provided by **Electrical Contractor**.
7. **Fire Alarm and Security Contractor** to exclude all work specifically provided by **Electrical Contractor.**
8. **Electrical Contractor** to exclude all work specifically provided by **Fire Alarm and Security Contractor.**

1.11 CONTRACT 7 – AUDIO-VISUAL CONSTRUCTION WORK: (Also referred to as: "Audio-Visual Contractor" or "AVC")

A. The Work of the Audio-Visual Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that together form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Site Construction Work.

a. Drawings:
   1) All work shown on "TA" (Audio-Visual) except for work specifically indicated to be provided by **Electrical Contractor**, which is to be excluded from the **Audio-Visual Contract.**
   2) For Coordination purposes:
      a) Review Architectural "A" Elevation Drawings for coordination purposes.
      b) Review TN (Telecommunications) Series Drawings for Data Infrastructure to support Audio Visual System.
      c) Review All "A" (Architectural), "A-050" (Life Safety Drawings), "S" Structural, "M" (Mechanical), "E" (Electrical), "P" (Plumbing), "FF" (Furniture), "FP" (Fire Protection), "TN" (Telecommunications), "TY" (Security) series drawings as it relates to the work of this contract.
   3) All "G" or "T" (General) and "LS or A" (Life Safety Drawings)

b. Specifications:
   1) Division 0 – Procurement and Contracting Requirement, all Sections.
   2) Division 1 – General Requirements, all Sections
      a) Include all Contractual Requirements indicated in AIA 132 Contract and AIA 232 General Conditions.
      b) Payment, Performance, and Bid Bonds to be excluded from Audio Visual Contract.
   3) Specification Section: 115223 AV Supports.
   4) Division 27 – To be followed as required to support the work of Audio-Visual Contract except for work specifically indicated to be provided by **Electrical Contractor**, which is to be excluded from the **Audio-Visual Contract.**
   5) Provide all items indicated within **274116 – Audio Visual Systems** Specification except for work specifically indicated to be provided by **Electrical Contractor,** which is to be excluded from the Audio-Visual Contract.

B. **General Requirements for Audio Visual Contractor (AVC)**:

a. Provide Owner Training of Audiovisual system with a minimum of (2) 4-Hour Training Sessions to be completed within a year after final completion and acceptance of System.
   1) Provide (1) additional Training Session if system has not reached final completion acceptance by date required per Contract Milestone Schedule for temporary use of the system prior to final completion.

b. Warranties and Maintenance Schedules to start the date of Substantial Completion and extended for incomplete equipment or systems identified during Substantial Completion Inspection.

c. Provide additional programming adjustments after a 6-month period from the date of final completion for changes as requested by Owner.

C. **Electrical Contractor** to provide as indicated on TA/TN Drawings:
   1. Shop Drawings, Coordination Drawings, and Product Submittals to Audiovisual Contractor for all work relating to the Audio-visual Scope that includes model numbers and layout locations on elevations and floor plans.
      a. Utilize Architectural Elevations for layout, coordinate with general notes on TA Drawings regarding placement of Displays and Speakers to be centered with respect to furniture or tables. Provide Submittal.
      b. **Electrical Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors.
   2. Data Wiring for terminated, tested, and labelled on both ends: data lines from AV Room 151 to all locations requiring AV Data Lines as indicated on **TN or TA Drawings**.
   3. Power outlets for all displays as indicated on TA Drawings.
   4. AV Racks in AV Room 151 as specified in 271116 – Cabinets and Racks.
   5. Speaker Wires shown on TA-803- "Other Rack Devices" Detail: Cables from AV Racks in AV Room 151 to locations indicated on TA/TN Drawings:
      a. **Electrical Contractor** to furnish and install Ceiling Speakers indicated on TA Drawings Tagged as Items: "5-1".
      b. **Electrical Contractor** to figure product: "Manufacturer: QSC, Model: AD-C6T-LP" for speakers. Confirm product via submittal process during construction.
   6. At Audio video Touch Panel locations, **Electrical Contractor** to provide data lines as indicated on TA-801, TA-802, TA-803
      a. For Tabletop Touch Panels, Electrical Contractor to provide data lines from AV Rack in Room 151 to Touch Panel location via floor box with sufficient length to reach Table Touch Panel as coordinated by Audio Visual and Furniture Contractor.
      b. For Wall Mounted Touch Panels, Electrical Contractor to provide data lines from AV Rack in Room 151 to touch panel location via conduit, back box, and fire stopped conduit stub above ceiling. Coordinate Surface mount vs recessed back box type via submittal process and coordination with **Audio-Visual Contractor (AVC).**
   7. **Electrical Contractor** to furnish and install In Wall Back Boxes for all displays indicated on TA Drawings. Coordinate with General Contractor for blocking Locations.
      a. Item Tags indicated on TA Drawings as P501, P526, P527 are to reference In Wall Back Boxes for Flat Panel Displays.
      b. Provide all junction boxes, fire stopped conduits, and back boxes indicated on TA Drawings.
   8. Floor box Types serving AV Equipment to follow details on Electrical "E" Drawings for Floor Box types.
   9. **Electrical Contractor** to provide Power Bus Duct as indicated on Detail 7 – E604 and as noted on TN-601 Detail 2 for power to AV rack devices. All other power cords from Bus Duct on E604 Detail 7 to devices to be provided by Audio Visual Contractor.
   10. Exclude all work specifically indicated to be provided by **Audio Visual Contractor (AVC)** Scope.

D. **Audio-Visual Contractor (AVC)** to provide:
   1. Furnishment and Installation of Displays, Display Mounts, Video Walls, Video Bars, Sound Bars, Encoders, Decoders, Video DA's, Touch Panels, AV Rack Devices, local Power Supplies, local wiring at: (displays, encoders, monitors, video bars, soundbars, and video walls), and all local wiring and patch cabling within AV Room 151.
   2. Office Monitors to be provided by Owner.
      a. Connection and wiring of Owner provided Monitors to Audio Visual System by **Audio-Visual Contractor.**
   3. Exclude all work specifically indicated to be provided by **Electrical Contractor.**
   4. Provide any other devices, equipment shown on TA Drawings or required per 274116 – Audio-Visual Systems Specification Section (except as excluded by Electrical Contractor)

or any other devices and equipment required to provide a complete and functioning system shall be provided by **Audio-Visual Contractor (AVC).**

5. Provide all other wiring required for the Audio-Visual System that is not already specifically indicated to be provided by **Electrical Contractor**.
6. Provide all items indicated within 274116 – Audio Visual Systems Specification except as excluded and to be provided by **Electrical Contractor.**
7. **Audio-Visual Contractor (AVC)** to provide Start Up, Functional Testing, and Commissioning reports of all equipment and software: to be submitted as written reports.
   a. Include Electrical Contractor's Approved Test Reports for Data Cables with final commissioning report.

1.12 CONTRACT 8 – FURNITURE CONSTRUCTION WORK (Also referred to as: "Furniture Contractor" or "FC")

A. The Work of the Furniture Construction Work Contract includes but is not limited to the Work that is specified in the Project Manual(s) and as shown on the drawings that together form the contract documents. The Contractor is directed to examine **ALL** drawings and specifications since certain details and/or notes may appear anywhere therein that apply to their work.

1. This prime contract is defined as, and includes, Drawings and Specifications as indicated by reference, and any other construction operations traditionally recognized as Site Construction Work.

   a. Drawings:
      1) All "FF" (Furniture) Series Drawings for Furniture indicated to be provided by "XYBIX".
      2) For Coordination purposes:
         a) Review Architectural "A", Telecommunication "TN", "TA" (Audio-Visual), and "E" (Electrical) Drawings for coordination of Floor box and Device Locations that are to be integrated with Furniture.
         b) Review All "A" (Architectural), "LS or A" (Life Safety Drawings), "S" Structural, "M" (Mechanical), "E" (Electrical), "P" (Plumbing), "FP" (Fire Protection), "TN" (Telecommunications), "TY" (Security), "TA" (Audio-Visual) series drawings as it relates to the work of this contract.
      3) All "G" or "T" (General) and "A-050" (Life Safety Drawings)
   b. Specifications:
      1) Division 0 – Procurement and Contracting Requirement, all Sections.
      2) Division 1 – General Requirements, all Sections
         a) Include all Contractual Requirements indicated in AIA 132 Contract and AIA 232 General Conditions.
         b) Payment, Performance, and Bid Bonds to be excluded from Fire Alarm and Security Contract.
      3) Divion 12 – Section 125000 – Furniture by Others.

B. **General Requirements for Furniture Contractor**:

1. Provide Owner Training of Furniture Installation with a minimum of (1) 2-Hour Training Session(s).
2. Warranties and Maintenance Schedules to start the date of Substantial Completion and extended for incomplete equipment or systems identified during Substantial Completion Inspection.
3. **Furniture Contractor** to provide Assembly Quality Control reports of all furniture assembled: To be submitted as written reports.
4. **Furniture Contractor** to provide Coordination / Dimensioned Shop Drawings as needed to provide proper layout of floor boxes referencing Architectural Column Lines.

C. **Furniture Scope of work between Furniture Contractor, General Contractor, Electrical Contractor, and Owner:**

1. **Furniture Contractor** to provide: Shop Drawings, Coordination Drawings, and Product Submittals to **Electrical Contractor** for all work relating to the electrical or low voltage scope of the Furniture Work.
    a. **Furniture Contractor** to provide Coordination Drawing information per 013115 Coordination between Multiple Prime Contractors for Fire Alarm and Security work.
2. **Furniture Contractor** to provide all Furniture indicated as by "XYBIX" on "FF" Drawings.
3. **Owner** to provide all Furniture indicated as by "OWNER" on FF Drawings.
4. **General Contractor** to provide all other Casework, Cabinets, and Furniture indicated on Architectural Drawings.
    a. See items tagged as "Y" under GC on Architectural "A" Elevation Drawings for additional information.
5. **Furniture Contractor** to provide Internal Connection Hub for Electrical Contractor to Terminate Telecommunications wiring to with exception to data lines shown to run directly to devices on furniture.
    a. Furniture Contractor to review "TA" Drawings for Audio-Visual Devices.
    b. Furniture Contractor to review "TN" Drawings for Telecommunications Wiring.
6. **Electrical Contractor** to provide Data/Telecommunications wiring for connection to Furniture Communication Hub(s) as shown on Electrical/Furniture Drawings.
7. **Electrical Contractor** to provide outlets mounted in "XYBIX Furniture" and wiring from Floor Boxes outlets to outlets Mounted in "XYBIX" Furniture as shown on Electrical Drawings.
8. **Furniture Contractor** to exclude all work specifically provided by **Other Contractors.**
9. **General Contractor** to exclude all work specifically provided by **Furniture Contractor.**

END OF SECTION 012200

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 01 14 00

WORK RESTRICTIONS

PART 1 GENERAL

1.1 SUMMARY

A. This section specifies restrictions on the Contractor's use of the premises and requirements for continued Owner occupancy and Owner occupancy of the Project before Substantial Completion

1.2 USE OF PREMISES

A. Use of Site: Limit use of premises to work in areas indicated. Do not disturb portions of site beyond areas in which the Work is indicated.

1. Limits: Confine constructions operations to areas dictated by the Owner or indicated on the Drawings. Refer to Sheet T-006 Logistics Plan

2. Occupancy: Allow full access for Owner vendors and occupancy in accordance with various Milestone Turnover dates.

3. Driveways and Entrances: Keep driveways and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize use of driveways and entrances. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

1.3 OCCUPANCY REQUIREMENTS

A. Full Owner Occupancy: Upon completion of all work and issuance of a certificate of completion, the Owner will exclusively occupy the building and site. Any work required for any reason beyond completion will need to be directly scheduled around the Owner’s daily program.

B. Partial Owner Occupancy: The Owner and or the owner’s vendors reserve the right to occupy portions of the building and site to facilitate Commissioning, Radio Tower, Furniture, IT and AV related work in completed or partially completed areas of the building or site before Substantial Completion. Such placement of owner provided items listed above shall not constitute acceptance of the total Work.

1. Architect will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied before Owner occupancy.

2. Obtain a Certificate of Occupancy from Authorities Having Jurisdiction before Owner occupancy.

3. Before partial Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will provide, operate, and maintain mechanical and electrical systems serving occupied portions of building.

4. On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of building.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION (Not Used)

END OF SECTION 01140

SECTION 01 21 00

ALLOWANCES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements governing allowances.

1. Certain items are specified in the Contract Documents by Allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when direction will be provided to the contractor.

B. Types of allowances include the following:

1. Contingency Allowances.

1.3 SELECTION AND PURCHASE

A. At Owner, Architect or Construction Manager's request, provide proposals for additional work for evaluation by the project team per section 1.4 below.

1.4 SUBMITTALS

A. Submit proposals for additional work with complete back up for the cost including labor, equipment, materials, sub-contractors, freight and delivery required to perform work requested and in accordance with Section 012600.

B. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each request.

C. Submit Time & Material sheets for each day additional work is being performed.

D. Coordinate and process submittals necessary for additional work in the same manner as all other portions of the work.

1.5 CONTINGENCY ALLOWANCES

A. Use the contingency allowance only as directed by Construction Manager and Architect for Owner's purposes and only by change documentation that indicate amounts to be charged to the allowance.

B. The Contingency Allowance listed by contract at the end of this section shall be included in the Base Bid. The entire value of a Prime Contractors proposal including costs for labor, materials, equipment, delivery, rentals, Overhead and Profit on any given change in work, will be deducted from the Contingency Allowance.

C. Allowance Authorization Forms: The Construction Manager will distribute and process Allowance Authorizations through Procore Management Software.

D. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by a credit Change Order.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine products covered by an Allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

A. GENERAL CONSTRUCTION **CONTRACT 1**

1. Allowance No. **GC-A1**: Include a lump sum allowance of **$300,000.00** for use according to the Owner's instructions.

B. PLUMBING CONSTRUCTION **CONTRACT 2**

1. Allowance No. **PC-A1**: Include a lump sum allowance of **$30,000.00** for use according to the Owner's instructions.

C. MECHANICAL CONSTRUCTION **CONTRACT 3**

1. Allowance No. **MC-A1**: Include a lump sum allowance of **$100,000.00** for use according to the Owner's instructions.

D. ELECTRICAL CONSTRUCTION **CONTRACT 4**

1. Allowance No. **EC-A1**: Include a lump sum allowance of **$150,000.00** for use according to the Owner's instructions.

E. SITE CONSTRUCTION **CONTRACT 5**

1. Allowance No. **SC-A1**: Include a lump sum allowance of **$150,000.00** for use according to the Owner's instructions.

END OF SECTION 012100

SECTION 01 22 00

UNIT PRICES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for unit prices.

B. Related Requirements:

1. Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.

1.3 DEFINITIONS

A. Unit price is an amount incorporated into the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.4 PROCEDURES

A. Authorization to proceed with Unit Price work must be provided by the Construction Manager or Architect. Unauthorized work will not be paid for.

B. The Contractor must provide Construction Manager 24 hours advanced notice when performing work utilizing a unit price. The contractor must accurately record quantities and report them daily when said work is being put in place. Failure to accurately track and communicate installed quantities may result in an omission of installed quantities.

C. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.

D. Unit prices include all necessary material, labor, equipment, cost for delivery, installation, insurance, applicable taxes, overhead, and profit.

E. Measurement and Payment: **Each Unit price will be directly correlated and derived by the provided quantity** in the Schedule of Unit Prices under Part 3 of this section. The provided quantity shall be carried in the Contractors' **Base Bid**. The actual documented quantity may be more or less than the provided Bid quantities indicated in the Schedule of Unit Prices. Upon completion of Unit Price related work, the Contractor shall submit all documentation to the Construction Manager for review and evaluation and a corresponding adjustment modification to the contract resulting in either an Add or Deduct change order to the contract amount will be made.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF UNIT PRICES

A. Unit Price **SC-UP1**: Removal and Disposal offsite of **500 US TONS** of contaminated soils and replacement with satisfactory soil material.

1. This Unit Price pertains to Contaminated Soils identified on the property located to the south of the development area. The soil identified in these three (3) locations will require offsite disposal to a facility which is licensed and permitted to accept the material. Complete soil removal and disposal in accordance with the procedures within Appendix C, Remedial Action Work Plan and reference Figure 13 as provided by CT Male Associates for locations. Figure 13 is attached to the end of this section.

2. The Site Contractor shall understand this remediation will be a process over multiple days to allow for testing of soil after initial excavation and potentially needing to excavate further until soil is below acceptable limits. Upon acceptable test results the excavation should be backfilled and stockpiled contaminated soils shall be disposed of offsite.

3. This work will be scheduled as directed by the Construction Manager between the months of May and October of 2025.

4. Replacement with satisfactory fill material or engineered fill from off-site, as required, in accordance with Section 312000 "Earth Moving."

5. Unit of Measurement: Cost for all work including but not limited to excavation, stockpiling, protection, haul off, disposal and backfill per **US Ton** as measured by the accepting permitted facility and reported on the trucking manifests.

B. Unit Price **SC-UP2**: Installation of **1,380 Linear Feet** of Geothermal Steel Well Casing.

1. This unit price pertains to the overall installation of steel well casing for the Geothermal Well field. The total linear feet of well casing used on any given well may differ from another. Each drilled well shall document the casing used and agreed upon with the Construction Manager.
2. Unit of Measurement: Cost for labor, material and equipment used to install **Linear Feet** of well casing.

3.3 ATTACHMENTS:

SECTION 01 25 00

SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for substitutions.

1.3 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailabilityof required warranty terms.

2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required to meet other Project requirements but may offer an advantage to Contractor or Owner.

1.4 ACTION SUBMITTALS

A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers andtitles.

1. Substitution Request Form: Use facsimile of form provided in Project Manual.

2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified product or fabrication, or installation cannot be provided, if applicable.

b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate the proposed substitution.

c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific

features and requirements indicated. Indicate deviations, if any, from the Work specified.

d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.

e. Samples, where applicable or requested.

f. Certificates and qualification data, where applicable or requested.

g. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.

h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.

i. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.

j. Cost information, including a proposal of change, if any, in the Contract Sum.

k. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.

l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within seven days of receipt of a request for substitution. Architect will notify Contractor through Construction Manager of acceptance or rejection of proposed substitution within 15 days of receipt of request, or seven days of receipt of additional information or documentation, whichever is later.

a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.

b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 PRODUCTS

2.1 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.

b. Substitution request is fully documented and properly submitted.

c. Requested substitution will not adversely affect Contractor's construction schedule.

d. Requested substitution has received necessary approvals of authorities having jurisdiction.

e. Requested substitution is compatible with other portions of the Work.

f. Requested substitution has been coordinated with other portions of the Work.

g. Requested substitution provides specified warranty.

h. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Not allowed.

PART 3 EXECUTION (Not Used)

END OF SECTION 0012500

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 01 26 00

CONTRACT MODIFICATION PROCEDURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for handling and processing Contract modifications.

1. The provisions of this section apply to the work of each Prime Contract.

1.3 MINOR CHANGES IN THE WORK

A. The Architect will issue supplemental instructions authorizing Minor Changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.4 PROPOSAL REQUESTS

A. Additional Work: The Prime Contractor shall not under any circumstances perform any work outside the contract sum that incurs additional costs without notifying the Architect and Construction Manager and receiving corresponding directive to proceed with the presumed additional work.

B. Owner-Initiated Proposal Requests: The Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Proposal Requests issued by Architect are for information only. Do not consider a proposal request as instructions either to stop work in progress or to execute the proposed change.

2. Within seven (7) days after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change. Include any potential equipment and material lead time.

3. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. All quotations shall be accompanied by a complete itemization of net costs, including labor (type,

quantity, and complete rate breakdown per hour), equipment both owned (in accordance with Blue Book rates) or rented (per the actual invoice) and material (type, quantity and unit cost). Copies of written quotations from subcontractors and suppliers itemized in the same manner. Include any related drawings, sketches, photographs etc.

4. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

5. The format of all the above costs should be subtotaled and followed by overhead and profit for Prime Contractor and or subcontractor as applicable then provide a TOTAL at the end of the proposal. There will be no increase for bond premium until the end of the project upon completion of all work.

6. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

7. Comply with requirements in Division 1 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.

C. Contractor-Initiated Proposals: If latent or unforeseen conditions require modifications to the Contract, Contractor may propose changes by submitting a request for a change to the Construction Manager.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change along with potential equipment and material lead time. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.

2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. All quotations shall be accompanied by a complete itemization of net costs (excluding overhead & profit), including labor (type, quantity, and complete rate breakdown per hour), equipment both owned (in accordance with Blue Book rates) or rented (per the actual invoice) and material (type, quantity and unit cost). Copies of written quotations from subcontractors and suppliers itemized in the same manner. Include any related drawings, sketches, photographs etc.

3. Indicate applicable taxes, delivery charges, and amounts of trade discounts.

4. The format of all the above costs should be subtotaled and followed by overhead and profit for Prime Contractor and or subcontractor as applicable then provide a TOTAL at the end of the proposal. There will be no increase for bond premium until the end of the project upon completion of all work.

5. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and

finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

6. Comply with requirements in Division 1 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.

D. All Prime Contractor Proposals will be submitted to Procore per the Procore Master Instructions.

1. Procore will automatically generate a form which requires specific fields to be filled in inclusive of proper PCO number, Title, Description, cost fields and the attachment field to upload Contractor's PCO with all supporting documentation.

E. Time & Material initiated Proposal Requests: The Construction Manager or Architect may authorize additional work to be completed on a Time & Material (T&M) basis or a Time & Material Not to Exceed basis. The Prime Contractor shall be responsible to provide a daily accounting (T&M ticket) indicating the date, description of work and quantities of labor, materials and / or equipment used to perform the work. This daily accounting must be presented to the Construction Manager daily for signature to verify the quantities listed.

F. Overhead and Profit (OH&P): A Prime Contractor and their subcontractor(s) will be authorized to include overhead and profit applied to Change Order work as follows.

1. Additional Work self-performed by a Prime Contactor will be allowed a maximum of fifteen percent (15%) combined OH&P on sub-totaled net cost of additional work.

2. Additional Work performed by subcontractors or multiple-tier subcontractors to a Prime Contractor will be allowed a total maximum of fifteen percent (15%) on sub-totaled net cost of additional work. An additional five percent (5%) OH&P for the Prime Contractor on the net cost of subcontracted work for a total maximum of twenty percent (20%) Overhead and Profit.

3. Change Orders containing both additional and deduct work items will result in the overhead and profit being applied to the net increase cost.

1.5 CONTINGENCY ALLOWANCE

A. The Construction Manager and/or the Architect will determine if a received and negotiated contractors' proposal will be processed as an Allowance Disbursement from the Prime Contractors contingency allowance. The Prime Contractor's cost for material, equipment, delivery, unloading, storage, handling and installation, and labor shall be included in the value of the contingency allowance authorization.

~~B.~~ Overhead and Profit (OH&P) costs including costs of bonds, insurance, administrative and supervision are to be included in the Base Bid. This includes Subcontractor OH&P for work performed by subcontractors and multi-tier subcontractors~~.~~

C. Contingency Allowance Adjustment: To adjust allowance amounts, base each Allowance Disbursement upon the written authorized amount of the Construction Manager and or the Architect.

1. Prepare explanation, documentation and itemization to substantiate distribution of costs claimed.

a. Submit invoices and delivery slips to show actual quantities of materials delivered to site for use in fulfillment of each allowance.

2. The owner or their representatives reserves the right to establish the quantity of work in place by independent quantity survey, measures, or counts.

D. The Construction Manager/Architect will create Allowance Disbursement forms through Procore Management Software.

1.6 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Proposal Request, the Construction Manager and or the Architect will issue a Change Order for signatures of Architect, Construction Manager, Owner and Contractor on the Change Order form.

1. All quotations shall be accompanied by a complete itemization of costs, including labor (type, quantity and unit cost per hour), materials (type, quantity and unit cost) and copies of written quotations from subcontractors and suppliers itemized in the same manner.

a. Overhead shall be deemed to include the cost of insurance, and similar contract requirements.

b. Indicate applicable delivery charges, equipment rental, taxes and amounts of trade discounts.

2. The combined overhead and profit included in the total cost to the Owner shall follow proceeding section 1.4F of this specification section.

3. Performance and Payment Bond Adjustments: Do not itemize increased bond premiums for each individual Change Order per General Conditions of the Contract.

B. The Construction Manager will create Change Order forms through Procore Management Software.

1.7 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: When the Owner or their representatives and Prime Contractor are not in agreement on terms of a Proposal Request, the Construction Manager or Architect may issue a Construction Change Directive via an email or letter clearly stated. The Construction Change Directive instructs the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

1. Construction Change Directive contains a complete description of change in the Work. It also designates a method to be followed to determine change in the Contract Sum or the Contract Time.

B. Prime Contractor Documentation: Maintain detailed records on a time and material basis of work required by the Work Change Directive.

1. After completion of change, submit an itemized account and supporting data necessary, or as requested by Architect or Construction Manager, to substantiate cost and time adjustments to the Contract.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION (Not Used)

END OF SECTION 012600

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 01 29 00

PAYMENT PROCEDURES

PART 1 GENERAL

1.1 SUMMARY

A. This Section specifies administrative and procedural requirements necessary to prepare and process Applications for Payment.

B. Related Sections include the following:

1. Division 01 Section "Allowances" for procedural requirements governing handling and processing of allowances.

2. Division 01 Section "Contract Modification Procedures" for administrative procedures for handling changes to the Contract.

3. Division 01 Section "Construction Progress Documentation" for administrative requirements governing preparation and submittal of Contractor's Construction Schedule and Submittal Schedule.

1.2 DEFINITIONS

A. Schedule of Values: A statement furnished by the Prime Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.3 SCHEDULE OF VALUES

A. Forms: Each Prime Contractor will be provided with a form with instructions by the Construction Manager to properly integrate into Procore Management Software.

B. Coordination: Each Prime Contractor shall coordinate preparation of its Schedule of Values for its portion of the Construction Schedule.

1. Correlate line items in the Schedule of Values with other required administrative forms and schedules, including the following:

a. Application for Payment forms with Continuation Sheets

b. Submittal Schedule

c. Material / Equipment status report

d. Contractor's Construction Schedule

2. Submit the Schedule of Values to the Construction Manager at earliest possible date but no later than fourteen (14) days before the date scheduled for submittal of initial Application for Payment.

C. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the Schedule of Values. Provide at least one line item for each Specification Section including but not limited to, those indicated within Prime Contract scope under Division 01 Section "Multiple Contract Summary".

1. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Provide several line items for principal subcontract amounts, where appropriate and as indicated.

2. General Requirements shall be broken down in the Schedule of Values in separate line items as follows:

a. Project Insurance – Actual Invoice Amount.

b. Performance & Payment Bonds – Actual Invoice Amount.

c. Mobilization value limited to 1.5% of the Contract Sum.

d. Temporary Facilities and Controls – Break out into sub items as needed.

e. Field Supervision – Minimum of 3% of Contract Sum.

f. Project Management & Administration - Minimum of 2% of Contract Sum.

g. Submittals and Shop Drawings – Minimum of 1% of Contract Sum.

h. Safety and Field Reports - Minimum of 3% of Contract Sum

i. Coordination / Coordination Drawings - Minimum of 1% of Contract Sum.

j. Project Schedule – Minimum of 1% of Contract Sum.

k. Meeting Attendance - Minimum of 1% of Contract Sum.

l. Testing and Balancing (if included in Contract) - Minimum of 2% of Contract Sum.

1) Punchlist - Minimum of 1% of Contract Sum – Not to be paid until the Substantial Completion Inspection Report is issued and Punchlist Work is being completed.

2) Final Demobilization – Minium of 0.5% of Contract Sum

3) Final Professional Cleaning (GC Package) – Minium of 0.5% of Contract Sum

4) Project Closeout – Total Value to be not less than 1% of Contract Sum

(a). Operation and Maintenance Manuals

(b). Warranties

(c). Project Record Documents

(d). Demonstration and Training

3. Provide line items for each applicable specification section. Where a large value for a single specification section occurs, the prime contractor may be required to break values down further as requested by the Construction Manager and / or Architect.

4. Round amounts to the nearest hundred dollars ($100); total shall equal the Contract Sum.

5. Itemize separate line-item cost for work required by each basic activity or operation by specification numbers.

   a. Each line-item cost shall be separated into Labor and Material.

6. Provide separate line items for Specification Sections that have construction that can be identified as a separate system, like structural steel, that will have separate line items for,

   a. Anchor Bolts

   b. Columns & Beams

   c. Loose lintels

   d. Miscellaneous Steel

   e. Fabrication

7. Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include progress payments for materials or equipment purchased or fabricated and stored, but not yet installed.

   a. Differentiate between items stored on-site and items stored off-site. Include evidence of insurance or bonded warehousing specific to the items being invoiced both in description and dollar value as required.

   b. Prime Contractor shall designate which line items in the SOV are materials stored on or off site and equal to but not more than the dollar value indicated within supplier invoices for provided materials as required for payment.

8. Provide separate line items in the Schedule of Values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

9. Allowances: Provide a separate line item in the Schedule of Values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit

cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.

10. Alternates: Each Alternate shall be separated into separate line items that total the value of the Alternate indicated on bid day. Larger Alternates may require extensive breakdown as directed by the Construction Manager and / or Architect.

11. Each item in the Schedule of Values and Applications for Payment shall be complete. Include total cost and proportionate share of general conditions, overhead, and profit for each item.

12. After review by the Construction Manager, Architect, and Owner, revise and resubmit Schedule of Values if required as many times as necessary to satisfy the Construction Manager, Architect, and Owner.

D. Schedule of Values Timeframe:

1. Submit initial Schedule of Values within fourteen (14) days of a Notice to Proceed.

2. Revise & Resubmit for Approval as required but no less than ten (10) days prior to the first Application for Payment. Payment will not be made without an Approval.

3. The Construction Manager will update each Prime Contractors Schedule of Values to include approved individual Allowance Disbursements drawn down from the Contingency Allowance. Additionally, the Construction Manager will update each Prime Contractors Schedule of Values to include all approved Change Orders or Construction Change Directives that result in a change in the Contract Sum. All adjustment to a Schedule of Values will be processed by the Construction Manager through Procore management software.

1.4 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by the Construction Manager, Architect and paid for by Owner.

1. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional requirements.

B. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal for the first Application for Payment include the following. The initial payment application will not be processed until all action submittals have been received by the Construction Manager.

1. Approved Schedule of Values

2. List of principal consultants and staff assignments working on the project

3. Site Specific Safety Program including Emergency Contracts

4. List of Subcontractors, Suppliers, and Major Products to be purchased
5. Payment & Performance Bonds Approved by the Owner
6. Certificate of Insurance meeting the requirements of the contract documents Approved by the Owner
7. Contractors Construction Schedule
8. Complete Submittal Schedule including any Substitutions

C. Payment-Application Times: The Submission of each Application **pay period** will begin with a Draft Application review on the 20th and end with a signed Executed Application submitted on the 30th day. ~~of each month~~ (or as designated by the Owner).

1. This date is the basis of the cycle time, and shall be confirmed at the Pre-Construction Conference, based on the owner's requirements for processing Applications for Payment. The owner reserves the right to adjust this sequence, if necessary, with payments executed net 30 days.

D. Payment-Application Forms: Each Prime Contractor will enter Payment Application values requested for each line item of work completed into **Procore** Management software provided by the Construction Manager.

1. Each Prime Contractor shall follow the specific instructions for entering payment values. Upon completion of entry activate the "Start" workflow. The review period by the Construction Manager, Architect, and Owner will then begin and all review comments will be provided and logged within Procore.
2. Upon completion of the application review, Prime Contractor shall make necessary adjustments and prepare application for execution.
3. During the application review period, if the Construction Manager, Architect, or Owner deem work put in place to be deficient and unacceptable, the contractor will be directed via a Deficiency Report and or Notification directing the contractor to correct the work. If the deficiency is unable to be corrected prior to the payment period closing, the Construction Manager, Architect, or Owner reserves the right to minimally withhold (2) Two times the value of the deficient item(s) inclusive of removal and reinstallation of the work. The value shall also cover the cost for an outside contractor to complete the deficient work if Prime Contractor does not comply within (15) fifteen days.

E. Application Preparation: Each Prime Contractor shall follow instructions provided by the Construction Manager to~~.~~ Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Construction Manager will return incomplete applications without action. The entire Application for Payment process will be electronically administered through Procore Management Software.

1. Entries shall match data on the Approved Schedule of Values.

2. Provide updated Construction & expected Material Schedules with each application. Additional Two Week Look Ahead schedules shall be supplemented in between overall Construction Schedule updates and will be required for payment distribution.

3. The Construction Manager will include any Approved Change Orders, Allowance Disbursements and Construction Change Directives issued prior to the last day of the construction period covered by the application.

F. Certified Payrolls: Provide copies of certified payrolls (including subcontractors) that are signed and notarized, documenting compliance with prevailing wage laws for the construction period covered by the application.

1. In accordance with Article 8, Section 220 of the New York State Labor Law, every contractor and subcontractor must keep original payrolls or transcripts subscribed and affirmed as true under penalty of perjury. Payrolls must be maintained for at least three years from project's date of completion. At a minimum, payrolls must show the following information for each person employed on a public work project:

   a. Name

   b. Classification(s) in which worker was employed

   c. Hourly wage rate(s) paid

   d. Supplements paid or provided

   e. Daily and weekly number of hours worked in each classification

2. Every contractor and subcontractor shall submit, within thirty (30) days after issuance of it's first payroll and every thirty (30) days thereafter, a transcript of the original payroll, subscribed and affirmed as true under penalty of perjury.

G. Waivers of Mechanics Lien: With each Application for Payment, submit waivers of mechanics liens from every entity who is lawfully entitled to file a mechanics lien arising out of the contract and related to the work. This includes subcontractors, sub-subcontractors and suppliers for the construction period covered by the previous application.

1. Lien Waiver forms acceptable for use on this project will be provided to each Prime Contractor for use and distribution to subcontractors and suppliers.

2. Each Prime Contractor must include with each application for payment the current up to date list of all subcontractors and suppliers. Additionally, indicate which subcontractor and supplier lien waivers are included with respect to the updated list.

3. Submit partial waivers on each item for the amount requested to be paid and the amount paid from previous application, after deduction for retainage, on each item.

4. When an application shows completion of an item, submit final or full waivers.

5. The Construction Manager, Architect, and Owner reserve the right to request additional substantiating data and designate which entities involved in the Work must submit waivers.

    a. Submit final monthly Applications for Payment with or preceded by final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.

H. Application for Payment at Substantial Completion: Each Prime Contractor must request, in writing, an inspection for Substantial Completion to the Construction Manager, Architect, and Owner. Following assurance of the Certificate of Substantial Completion, submit an Application for Payment.

1. This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

2. Administrative actions and submittals that shall precede or coincide with this application include:

    a. Occupancy permits and similar approvals

    b. Warranties (guarantees) and maintenance agreements

    c. Operation and Maintenance instructions / manuals

    d. Start-up performance reports

    e. Test/adjust/balance records

    f. As built and or Record Drawings

    g. Meter readings (if applicable)

    h. Change-over information related to Owner's occupancy, use, operation and maintenance

    i. Final cleaning

    j. Application for reduction of retainage and consent of surety (AIA G707a)

    k. Advice on shifting insurance coverages

    l. Final progress photographs

    m. List of incomplete Work and associated value of said work, recognized as exceptions to Architect's Certificate of Substantial Completion

    n. The Construction Manager, Architect, and Owner reserve the right to withhold two times (2x) the value of incomplete work.

I. Final Payment Application: Administrative actions and submittals that must precede or coincide with submittal of the final Application for Payment include the following:

1. Evidence of completion of Project closeout requirements including all "Attic" / "Extra" stock or "Maintenance Materials" have been turned over to the Owner via executed Transmittal.
2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
3. Updated final statement, accounting for final changes to the Contract Sum.
4. AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims."
5. AIA Document G706A, "Contractor's Affidavit of Release of Liens."
6. AIA Document G707, "Consent of Surety to Final Payment."
7. Evidence that claims have been settled.
8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
9. Ensure that incomplete Work is not accepted and will be completed without undue delay.
10. Transmittal of required Project construction records to the owner
11. Proof that taxes, fees, and similar obligations were paid
12. Removal of temporary facilities and services
13. Removal of surplus materials, rubbish, and similar elements
14. Change of door locks to Owner's access.

J. Final Payment will not be made unless all items in section "I" above are completed and approved.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION (Not Used)

END OF SECTION 01290

SECTION 01 31 00

PROJECT MANAGEMENT AND COORDINATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specifications Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1. Procore Management Software
2. General project coordination procedures.
3. Special Reports.
4. Requests for Interpretation (RFI)
5. Coordination Drawings.
6. Administrative and supervisory personnel.
7. Project meetings.

B. Each Prime Contractor shall participate in coordination requirements. Certain areas of responsibility will be assigned to a specific contractor.

1.3 DEFINITIONS

A. RFI: Request For Information – from Contractor seeking interpretation or clarification of the Contract Documents.

B. Coordination Drawings: Show relationship and integration of different construction elements that require careful coordination during fabrication or installation to fit in the space provided or to function as intended.

1.4 PROCORE MANAGEMENT SOFTWARE

A. This project will utilize Procore Management software for all aspects of the project including but not limited to:

1. Contractor Initiated Items:

a. Submittals

b. Requests for Information (RFI's)

c. Project Schedule & updates

d. Two Week Look-Ahead Schedules

e. Contractor change proposals

f. Payment Applications

2. Constrution Manager and Architect Initiated Items:

a. Architects contract document clarifications

b. Prime Contractor proposal Requests

c. Field Observation Reports

d. Construction Deficiency Reports

e. Substantial Completion Inspection / Punchlist

f. Processing Allowances and or Change Orders

g. Payment Applications

3. Prime Contractors are required to follow the Procore Master Instructions which will be provided electronically to each Prime Contractor. Additionally, the Construction Manager will assist contractors as needed.

a. Prime Contractors will be responsible to acknowledge, accept, and confirm receipt of all Construction Manager and or Architect initiated items.

1.5 COORDINATION

A. Coordination: Each contractor shall coordinate its construction operations with those of other contractors and entities to ensure efficient and orderly installation of each part of the Work. Each contractor shall coordinate its operations with operations, included in different Sections, that depend on each other for proper installation, connection, and operation.

1. Project meeting attendance shall facilitate open communications.

2. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation. At no time should a contractor prevent another contractor from installing their work.

3. Coordinate installation of different components with other contractors to ensure maximum accessibility for required maintenance, service, and repair including mechanical and electrical.

4. Make adequate provisions to accommodate items scheduled for later installation.

B. If necessary, prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

2. Each Prime Contractor shall prepare and distribute a "TWO WEEK LOOK AHEAD" Schedule (TWLAS). The TWLAS shall at a minimum be updated and distributed weekly at coordination or project meetings.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's Construction Schedule.

2. Preparation of the Schedule of Values.

3. Processing of Coordination drawings.

4. Installation and removal of temporary facilities and controls.

5. Delivery and processing of submittals.

6. Progress meetings.

7. Preinstallation conferences.

8. Startup and adjustment of systems.

9. Daily Cleaning and protection.

10. Project closeout activities.

D. Conservation: Each Prime Contractor shall coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Provide material and waste recycling methods.

1. Salvage materials and equipment involved in the performance of, but not actually incorporated into, the Work.

1.6 SPECIAL REPORTS

A. General: Submit special reports to the Construction Manager within one day of an occurrence. Submit a copy of the report to the Architect and any other entities affected by the occurrence.

B. Reporting Unusual Events: When an event of an unusual or significant nature occurs at the site, the Prime Contractor shall prepare and submit a special report. The report shall list data, observations of chain of events, persons affected, and participating response by Prime Contractor's personnel and similar pertinent information. An example of a special report could be due to an accident or incident, something discovered etc.

1.7 REQUEST FOR INTERPRETATION (RFI)

A. Procedure: Immediately on discovery of the need for interpretation of the Contract Documents, and if not possible to request interpretation at Project meeting, prepare and submit an RFI in the form specified.

1. RFIs shall originate with the Prime Contractor. RFIs submitted by entities other than Contractor will be returned with no response.

2. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing interpretation and the following submitted on the **Procore electronic form**:

1. Project name.

2. Date.

3. Name of Contractor.

4. Name of Architect.

5. RFI number, numbered sequentially.

6. Specification Section number and title and related paragraphs, as appropriate.

7. Drawing number and detail references, as appropriate.

8. Field dimensions and conditions, as appropriate.

9. Contractor's suggested solution(s). If Contractor's solution(s) impact the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.

10. Contractor's signature.

11. Attachments: Include drawings, descriptions, measurements, photos, Product Data, Shop Drawings, and other information necessary to fully describe items needing interpretation.

    a. Supplementary drawings prepared by Contractor shall include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments.

    b. Attachments shall be electronic files in Adobe Acrobat PDF format.

C. Architect and Construction Manager Action: Architect and Construction Manager will review each RFI, determine action required, and return it. Allow five (5) working days for Architect's response for each RFI. RFIs received after 3:00 p.m. will be considered as received the following working day.

1. The following RFIs will be returned without action:

    a. Requests for approval of submittals.

    b. Requests for approval of substitutions.

    c. Requests for coordination information already indicated in the Contract Documents.

    d. Requests for adjustments in the Contract Time or the Contract Sum.

    e. Requests for interpretation of Architect's actions on submittals.

    f. Incomplete RFIs or RFIs with numerous errors.

2. Architect's action may include a request for additional information, in which case Architect's time for response will start again.

3. Architect's action on RFIs that may result in a change to the Contract Time, or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Division 01 Section "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect and Construction Manager in writing within ten (10) days of receipt of the RFI response.

D. On receipt of Architect's and Construction Manager, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect and Construction Manager within seven (7) days if Contractor disagrees with response.

1.8 COORDINATION DRAWINGS

A. General: The Contract Drawings are diagrammatic in nature; performance by the Contractor shall be required to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the intended results. Where possible, the Contractor shall take field measurements and verify field

conditions and shall careful compare such field measurements and conditions and other information known to the Contractor with the Contract Documents before commencing coordination drawings.

1. Content: Project-specific information, drawn accurately to scale. Do not base Coordination Drawings on reproductions of the Contract Documents or standard printed data. Include the following information, as applicable.
    a. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
    b. Indicate required installation sequences.
    c. Indicate dimensions shown on the Contract Drawings and make specific note of dimensions that appear in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect for resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
2. Refer to Specification Section 013115 and other individual Specification Sections for Coordination Drawing requirements for work in those Sections.

1.9 ADMINISTRATIVE AND SUPERVISORY PERSONNEL

A. General: Each Prime Contractor is to provide a Non-working Project Superintendent with decision making authority.

B. Supervision: Each Prime Contractor's project manager and field superintendent throughout project duration shall have five (5) years of experience minimum in the proposed position.
    1. Two (2) years of the five years of experience for the position shall be with Prime Contractors firm.

C. Should the project managers or superintendents prove unqualified for the position at any point in the project, the Construction Manager shall issue a letter or email stating that the person is to be removed from involvement in the project.
    1. Action must be made by the Prime Contractor within seven (7) working days of receipt of such correspondence.

D. Staff Names: At the Pre-construction Conference each Prime Contractor shall submit a list of principal staff assignments, including superintendent and other personnel in attendance at project site. Identify individuals and their duties and responsibilities. List business addresses and telephone numbers, including business office, field office, and cellular.

1.10 PROJECT MEETINGS

A. General: The Construction Manager shall Schedule and conduct meetings and conferences at Project site, unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.

2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.

3. Minutes: Record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within 3 days of the meeting.

B. Preconstruction Conference: Architect / Construction Manager will schedule a preconstruction conference before starting construction, no later than fifteen (15) days after execution of the Agreement. The purpose of the meeting is to review responsibilities and personnel assignments.

1. Attendees: Authorized representatives of Owner, Architect, Construction Manager, and their consultants; each Prime Contractor and its superintendent; major subcontractors; manufacturers; suppliers; and other concerned parties shall attend the conference. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

2. Agenda: Discuss items of significance that could affect progress, including the following:

a. Tentative construction schedule.
b. Phasing.
c. Critical work sequencing.
d. Designation of responsible personnel.
e. Procedures for processing field decisions and Change Orders.
f. Procedures for processing Applications for Payment.
g. Distribution of the Contract Documents.
h. Submittal procedures.
i. Preparation of Record Documents.
j. Use of the premises.
k. Responsibility for temporary facilities and controls.
l. Parking availability.
m. Office, work, and storage areas.
n. Equipment deliveries and priorities.
o. First aid.

p. Security.
q. Progress cleaning.
r. Working hours.

3. Each Prime Contractor shall submit the following items at this meeting:
   a. Contractor's Construction Schedule
   b. List of Subcontractors.
   c. Schedule of Values.
   d. Submittal Schedule.
   e. Products List (Proposed products and manufacturers including any substitution products proposed).
   f. Labor rate sheets; provide for each trade classification of Prime Contract workforce.

C. Preinstallation Conferences: When required in the individual Specification Section, conduct a Preinstallation conference at Project site before each construction activity that requires coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect and Construction Manager of scheduled meeting dates in advance.

2. Contractor shall prepare agenda, preside at conference, record minutes, and distribute copies after conference to participants. Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
   a. Contract Documents.
   b. Options.
   c. Related Change Orders.
   d. Purchases.
   e. Deliveries.
   f. Submittals.
   g. Review of mockups.
   h. Possible Conflicts.
   i. Compatibility problems.
   j. Time schedules.
   k. Weather limitations.
   l. Manufacturer's written recommendations.
   m. Warranty requirements.

n. Compatibility problems.
o. Acceptability of substrates.
p. Temporary facilities and controls.
q. Space and access limitations.
r. Regulations of authorities having jurisdiction.
s. Testing and inspecting requirements.
t. Required performance results.
u. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements.

4. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Progress Meetings: The Construction Manager will conduct progress meetings at prescheduled weekly intervals. Coordinate dates of meetings with preparation of payment requests.

1. The Construction Manager will preside over these meetings.

2. Attendees: In addition to representatives of Owner, Construction Manager and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

b. Review present and future needs of each entity present, including the following:

1). Adjust list below to suit Project.
2). Interface requirements.
3). Sequence of operations.

4). Status of submittals.
5). Deliveries.
6). Off-site fabrication.
7). Access.
8). Site utilization.
9). Temporary facilities and controls.
10). Work hours.
11). Hazards and risks.
12). Progress cleaning.
13). Quality and work standards.
14). Change Orders.
15). Documentation of information for payment requests.

4. Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present. Include a brief summary, in narrative form, of progress since the previous meeting and report.

   a. Schedule Updating: Revise Contractor's Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

E. Coordination Meetings: The Architect / Construction Manager will conduct coordination meetings at prescheduled intervals. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of Owner, Construction Manager, and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work

2. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

   a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to Combined Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

b. Schedule Updating: Revise Combined Contractor's Construction Schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.

c. Review present and future needs of each contractor present, including the following:

1). Interface requirements.
2). Sequence of operations.
3). Status of submittals.
4). Deliveries.
5). Off-site fabrication.
6). Access.
7). Site utilization.
8). Temporary facilities and controls.
9). Work hours.
10). Hazards and risks.
11). Progress cleaning.
12). Quality and work standards.
13). Change Orders / CFA's.

3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

Procore Instructions

Revision #4 - 05/29/2024

If there are any questions, send an email to the TPG Superintendent or Project Administrator for guidance.

Table of Contents

Contents

GENERAL INFORMATION

Best Practices for all users:

- If there are any questions or issues with any of the Tools in Procore, contact the **TPG Project Administrator or TPG Superintendent** assigned to your Project.
- For quick questions, Procore **Live Chat** is also available to assist with resolving issues.
- All items must be uploaded with the **correct numbering** per Trade: EX: GC-01, MC-23, etc.
- All PDF documents must have all pages uploaded in the correct **orientation** for all items in Procore. **PDFs cannot be rotated** once uploaded to Procore.
- As questions come up, new processes starting, or new users are being brought into Procore, instructions sections shall be cut/pasted + included in emails for clarification purposes.

PROCORE DIRECTORY TOOL– IMPORTING USERS

Contractor/Architect/Owner/Consultant Instructions: Collecting required User & Company/Vendor Information:

Contractor/Architect/Owner/Consultant Instructions: Collecting/reviewing required User & Company/Vendor Information:

1. **Three forms** to be filled out, one is for individual **users**, one is for **companies/vendors** (Contractors, Owners, Architect w/ Consultants), one is for role information per **"PROCORE START UP COVERSHEET"** form.
    a. These are sent out to every entity on the project via email request, then filled out and emailed back to TPG.
2. **For the company form, the Prime Contractor only needs to fill out one row for their own company information.** It's not for Subs or Companies that are not Prime Contractors, Architects, Consultants or Owners. The company **name (legal name)** in the **company/vendor form** would need to cross reference between the company name on the **user form,** this must match exactly.
3. Red and Orange columns are the critical columns and green columns are for referencing/sorting but don't affect the configuration, gray columns do not get filled out by contractor.
4. **State** needs to be 2 characters (Ex: NY) and **Country**: "United States" per below.
5. **All Phone Numbers** need to be typed in the following format: 000-000-0000.
6. TPG will fill out the "**Permission Template**" column in the gray column by cutting and pasting the types per instructions, then on the user template, select "is employee" column as "no".
7. **Each Company is to have submitted the "PROCORE START UP COVERSHEET"** form, which is to supply role information, Invoice Contacts, Notifications List, and Primary Points of Contact.
    a. **Each entity** will have to tell TPG who the **Invoice/Payment Application Contacts** are for sending in and reviewing Pay Apps/Invoices.
    b. **Each entity** will have to tell TPG who the **Primary Project Management Contacts** are for Correspondence.
    c. The Contractor can provide a **"foreman"** user to give "limited read only access" to the Drawings/RFI's/etc. but can still respond to punchlist items and no financials access. The Contractor to provide a list of these users.
8. Once TPG imports the users to Procore, the Procore Directory Tool can be used to view contact information for all users on the Project.

PROCORE SUBMITTALS TOOL

Optimize the view of the Submittal Tool / Log upon first use.

1. SUBMITTALS: Open "Submittals" under "Tools".
    a. Set up of the viewing window of the Log:
        i. Open the Submittal Log in the Submittal Tool to view open submittals in each Contractor's Court / Responsible Contractor. **"Spec Section"** view is recommended instead of "Item View".
        ii. Set up Column Headers per user preference use vertical "…".
            1. Turning off Columns: Approvers, Response, Sent Date, and Returned Date will show the log in a more compact view.
        iii. Resize columns as needed.

Using Filters to locate specific submittals:

1. Filters can be applied to sort Submittals by Status, Spec Section/Submittal Number, Responsible Contractor, or Ball in Court
2. Select "add filter", select filter, then select the items to view.
3. "Clear All" will remove all filters.

Closeout Submittal Package Instructions:

1. A Submittal Schedule of all submittals including closeout submittals must be submitted and approved by the Architect/CM prior to submitting the final Closeout Package.
2. Each Item is to be submitted individually as separate submittals and approved on the submittal coversheets prior to assembling the final package.
3. Once all items on approved submittal schedule are approved, assemble files into Final Package Zip File containing:
    a. O&M's (separated by spec section) (with copy of Record Documents and Warranties)
    b. Dedicated Record Documents (Contains Record Shop Drawings, Contract Drawings / Spec's)
    c. Dedicated Warranty Package, to include the Project specific warranty information including start/end dates and provide provisions for Owner to make warranty claims directly.
4. PDF files in the package to be labeled to include the Submittal Number, Type, and Description.
5. Include a numbered table of contents that directly cross references to all PDF files in the package. Attach a submittal coversheet for the entire package. The Table of Contents should correlate with the items on the Approved Submittal Schedule.

Viewing the Submittal Log / Report:

1. Open "Procore **Reports** Tool" in "Project Tools"
2. Under " Assigned Reports" select: Submittal Log (Project Level)
3. The Submittal Log will be visible. Horizontal Scroll Bar at the bottom of the page.
4. Select "Add Filter" to filter by **Contractor**, **Status, Ball in Court, or Spec Section Number**
        i. See below info on statuses to view all open submittals with filters.
        ii. To view **only the open submittals**, select filters to view under **status**:
            1. Closed & Provide Additional Submittal
            2. Open
            3. Open w/ AE
            4. Open w/ Contractor
            5. Revise and Resubmit (Open)
5. Select "Export" button in the upper right corner and select "PDF" or "PDF with Visuals."

Contractor Submittal Instructions:

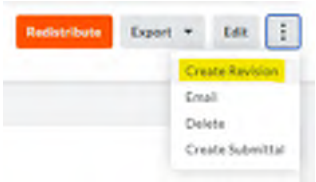
Create a submittal as a Contractor.

1. Review Procore instructions: https://support.procore.com/products/online/user-guide/project-level/submittals/tutorials/create-a-submittal
2. If a Revised Submittal is being submitted, follow instructions below for "Create a REVISED SUBMITTAL from a previously created Submittal as a Contractor."
3. For new Submittals: Click **"Create" -> "Submittal"** in the Submittal Tool.
4. Enter a **Title** for the Submittal. If applicable, indicate location in Title.
    a. Title Naming convention should include specific information like Submittal Type, Equipment Tags, etc.
5. Select the correct **Spec section**. If spec section can't be found or if there is a question, contact TPG.
6. The **Submittal Number** will auto generate the next number in the sequence.
    a. **Numbering convention** is (Section #) – (Submittal # within that section)
7. Select the correct **Submittal Type**, see end of sheet for submittal type descriptions to select the correct option.
8. Select your company as the **Responsible Contractor**.
9. Select the TPG Project Super as the **Submittal Manager**.
10. Submittal **Status** to be "Open".
11. The **Distribution List** would be the Prime Contractor creating the submittal and the CM Group. This is so the users listed will receive an email notification when a submittal is closed.
12. List the approximate material **Lead Time**.
13. **Required onsite date** to be filled out with anticipated delivery date for material.
14. Leave **Private** submittal check box unchecked, unless Submittal contains confidential information (Bonds, Insurance, SOV, Wage Rates, Employee List, Other Front End Documents).
15. Attach the submittal file in the **Attachments.**
    a. Include the Architect Submittal coversheet, make sure the cover sheet is attached to the front of the PDF, completely filled out with Contractor's signature.
16. Enter the date creating the submittal in **Creation Date**.
17. Leave the **Submittal Review Workflow** blank. CM Superintendent to fill this section once received.
18. Click "**Create and Send Emails**".

Create a REVISED SUBMITTAL from a previously created Submittal as a Contractor.

(**Must be the original submitter otherwise create new Submittal with matching Submittal Number**)

1. **"View**" the previous submittal.
2. Select the "vertical ellipses" button, then select create revision.
3. Attach the submittal file in the **Attachments** with updated coversheet.
4. Select the correct **Submittal Workflow Template "0 – CONTRACTOR CREATED"** to clear and update the workflow.
5. Select "**Create and Send Emails**"



Architect/Construction Manager Submittal Instructions:

SUBMITTALS: Open “Submittals” under “Tools”.

Respond to a submittal item:

1. https://support.procore.com/products/online/user-guide/project-level/submittals/tutorials/respond-to-a-submittal-as-an-approver
2. CM Superintendent Step Only:
    a. When a submittal is first received and ready to be sent for review, the submittal must be edited to apply the correct workflow review template. Multiple review templates can be used for specialty consultant reviews, Architect to specify at Project Start.
    b. Steps:
        i. Select “Edit” on the Submittal.
        ii. Scroll to **Submittal Review Workflow Template,** then select the correct review template based on trade.
        iii. Change the Status from “Open” to “Open w/ AE”, then press “Update”
3. Click on the submittal item you are reviewing. Open the previous PDF file submitted in the workflow.
4. Create Mark ups/Text boxes as needed in the Procore PDF tool. Mark up the coversheet in the pdf with final response.
5. Click the “x” to exit the view, pdf is autosaved.
6. Click “Respond”, check that the marked-up attachment is included and select “next”.
    a. If the PDF was marked up and saved in Procore, then the marked-up copy will automatically pull forward. No additional attachment is needed.
    b. If the PDF is sent through as is with no mark ups, the previous pdf will pull forward as is.
    c. If the PDF is marked up outside of Procore, add the attachment to this field to replace the previous attachment.
    d. The Response “Pending” will hold a Submittal until changed.
7. **If an additional review is needed, select forward for review (Ex: consultant review). This will create another review step in the workflow for the reviewer.**
    a. https://support.procore.com/products/online/user-guide/project-level/submittals/tutorials/forward-a-submittal-for-review
8. Select a response code: R&R, AAN, APP, etc. and then select “preview”, then “Respond”.
9. This will send the submittal to the next step in the workflow. If this is the last person in the submittal review workflow, then it will be returned to TPG ready to be closed.

Close a submittal (as CM):

1. https://support.procore.com/products/online/user-guide/project-level/submittals/tutorials/close-a-submittal
2. Open the submittal, then select “Close & Distribute” if the submittal has been fully reviewed.
3. If users are in “CC”(from distribution list), do not duplicate in “To” field, leave blank.
    - Confirm the **Contractor** and the **CM** is in the Distribution List.
4. Select final **Status**. See Submittal Status Description Instructions.
5. Leave “Create revision” unchecked.
6. Select the latest response and the general info.
7. Select next, then select **Distribute**.

Submittal Status Descriptions:

- **Open Statuses:**
  - Closed & Provide Additional Submittal
    - Submittal has been accepted but a separate follow submittal is required.
    - When follow up submittal has been accepted, then change this status to closed.
  - Open
    - Default status when Contractor creates a submittal.
    - Defined as open with Construction Manager.
  - Open w/ AE
    - CM to change status from “Open” to “Open w/ AE” when the submittal has been sent through to the Architect.
  - Open w/ Contractor
    - When a submittal is created by the CM that is due by the Contractor with special workflow.
    - This status is seldom used.
  - Revise and Resubmit (Open)
    - The architect has not accepted this submittal and is requiring a resubmittal.
    - Change this status to “Void, See Revised Submittal” when the revised submittal has been accepted.
- **Closed Statuses:**
  - Closed
    - Submittal has been accepted. No further action required,
  - Rejected, No resubmittal needed.
    - Submittal is not part of project or not applicable and no resubmittal is required.
  - Void, See Revised Submittal
    - When a rejected or R&R submittal has been revised and accepted, then the original rejected submittal is to be changed to this status, so these items are not mixed with the other closed submittals.

Submittal "Type" Descriptions:

- Project Start Submittals:
  - Delegated Design / Calcs: Resubmit shop drawings separately.
  - Product Information: Includes all Product data for that section, if separate components of a section are being submitted, indicated in the Submittal Title.
  - Shop Drawing: If locations are being broken out or if different equipment tags are being submitted, indicate this information in the Title.
  - Sample: Color selection Samples to be submitted separately. If a physical sample is sent, include selection chart in submittal.
  - Start Up (Bonds, Insurance, Qualifications, SOV): For Miscellaneous Project Start up Submittals such as: Bonds, Insurance Packages, W9, SOV, Qualifications Packages, Submittal Schedule, Prime/Sub Wage Rate Package, Contact Lists, PreCon Photos, List of Employees/OSHA cards, Site Specific Safety Plan.
- Mid Project Submittals:
  - QC: Contractor Test Report / Equipment Start Up: Includes either Contractor Field Test Reports (Piping, System, material testing) or Equipment Start Up Reports.
  - Coordination Drawings
    - Discuss coordination process prior to submission (if in Submittal Tool or outside of Procore using BIM modeling).
    - Once all Contractor's accept a coordination drawing, then the drawing must be updated and resubmitted as a separate shop drawing.
- Closeout Submittals:
  - Product Manual
    - Includes all Operations and Maintenance Manuals.
  - Maintenance Material / Attic Stock
    - Signed Transmittals, separated by spec section.
  - Warranty
    - Provide warranties specific to the Project and indicate start date, end date, duration, and provide any information required to make a warranty claim (receipts, invoices; if applicable)
  - Training Documentation: Provide Sign in Sheet and video. Sign in Sheet must indicate start / end times /duration.
  - Record Document / As built: Include Prime Contract Drawings/Specs As-built's as well as updated shop drawings if applicable.
  - Close Out Package (Complete): See "Closeout Package Instructions". For complete packages only containing all O&M's, Record Documents, Warranties, etc.
- Other: For all other unclassified Submittals.
- Not to be used Submittal Types (Procore cannot disable)
  - Document
  - Plans
  - Prints

PROCORE RFI's TOOL

Contractor Instructions:

Create an RFI as a Contractor.

a. Review Procore instructions: https://support.procore.com/products/online/user-guide/project-level/rfi/tutorials/create-an-rfi
b. Click **"Create"** in the top right of the RFI Tool.
c. Enter a **Subject** for the RFI.
d. Enter the RFI **Question** in the question box.
e. Add any additional **attachments** (Drawings, Specs, Photo's, Emails)
    a. A coversheet on the attachment is not required unless the Architect for the Project requires their own cover sheet.
f. Enter the correct **RFI Number** which is contractor specific. EX: GC-01, MC-23, etc.
g. Enter a reasonable **Due Date** (5 business days default) on when the answer is needed by.
h. **RFI Manager** to be TPG Project Super (set by default).
i. Select the TPG Project Superintendent(s)/Project Manager as the first **Assignee**. Do not add Architect yet. Leave all assignees unchecked.
j. The **Distribution List** should be set by default with distribution group "CM". Add any other users/contractors that need to be notified when the RFI is closed.
k. Select your company as the **Responsible Contractor**.
l. Select the applicable **Spec Section**.
m. If an RFI is specific to a location, then select the correct **Location** using the tiered drop-down locations. (Locations must be set up prior for the Project).
n. Select the applicable **Drawing Number**.
o. Identify if there is a **Cost** or **Schedule** impact. If the answer is yes, then a new field will be opened allowing entry of a cost ($) or schedule impact (days).
p. Provide a **Contractor's Proposed Solution**, if not applicable, enter "Not Applicable".
q. Identify **Priority** ("Standard" or "High")
r. Click "**Create as Open**".

Architect/CM Instructions:

Respond to an RFI item:

1. https://support.procore.com/products/online/user-guide/project-level/rfi/tutorials/respond-to-an-rfi
2. Click "view" on the RFI item you are reviewing.
3. Review RFI and any attachments.
4. Select **Add Response** and enter a response in the text box. Add any additional attachments in the attachment field. It is recommended to respond to the RFI directly in text box vs adding additional form if possible.
    1. For the Official Final Response, cut and paste any information/attachments from other responses (consultant's, CM Comments, etc.) into the Final Response for one unified response.
5. If the CM Super is able to close an RFI themselves without additional responses, then proceed to **Close RFI** step. If an additional assignee needs to be added, then proceed to **Add Additional Assignee** step to send to an Architect or Consultant for review**.**

Add Additional Assignee to an open RFI (Send to Architect/Consultant):

1. If CM: Click "**Edit**" on the RFI. If Architect, press "+", then "Forward For Review"
2. If the CM Superintendent is not responding to an RFI and instead deferring to the Architect, then remove the CM Superintendent as an Assignee.
3. **Add in the new assignee(s) (Architect/Consultant).**
4. Leave the new assignee(s) **unchecked for parallel review**.
    a. When an RFI is forwarded to the Architect primary point of contact, their response should be marked required.
    b. When the Architect has all the required responses, the Architect should indicate which response(s) should be marked as the official response as a comment.
5. Click **Save Changes**.

Close an RFI (as CM):

1. https://support.procore.com/products/online/user-guide/project-level/rfi/tutorials/close-an-rfi
2. View the RFI.
3. Verify that all users associated with the RFI are in the **Distribution List**. If multiple CM Superintendents are on a Project, they are to be included as well. Use "edit" to add users.
4. **Mark the Response as Official** as indicated by either the CM or Architect.
5. Select the "**Close RFI"** button to Close and Distribute the RFI.

Viewing the RFI Log / Report:

1. Open "Procore **Reports** Tool" in "Project Tools"
2. Under "Assigned Reports" select: RFI Log (Project Level)
3. The RFI Log will be visible. Horizontal Scroll Bar at the bottom of the page.
4. Select "Add Filter" to filter by **Responsible Contractor**, **Status, or Ball in Court.**
    i. See below info on statuses to view all open submittals with filters.
    ii. To view **only the open RFI's**, select filters to view under **status**: Open.
5. Select "Export" button in the upper right corner and select "PDF" or "PDF with Visuals."

PROCORE REPORTS TOOL (Printable and filterable Logs of Items)

List of available Reports:

1. RFI Log (Project Level)
2. Submittal Log (Project Level)
3. Contract List / Directory (Project Level)
4. List of Specifications (Project Level)
    a. Can be used to assist in creating the Contractor's Submittal Schedule.
5. Potential Change Order Log (Project Level)
    a. For 2 Tier Projects Only.
    b. Costs fields require custom fields feature to be added by Procore at later date.
6. Change Order Log (Project Level)
    a. Includes Allowance Authorizations.
7. Payment Application Status Log (Project Level)
8. Daily Log / Manpower Log (Project Level)
    a. Construction Manager Use Only
    b. Includes Manpower, Inspections, Notes, Dumpster Logs
9. Commitment/Contract Summary (In Commitments Tool)
    a. Located in Commitments Tool -> Export -> PDF Beta. Not located in Reports Tool.
    b. Includes current Contract Amounts, Payments, and Change Orders/Potential Change Orders
    c. Expand Change Order Drop Downs under each commitment to see Change Order's in Log.
10. Other Reports can be generated within their respective Tools by: With Main Page of Tool open, select Export-> PDF.
    a. Includes: Observations, Inspections, Incidents, etc.
    b. Correspondence Tools included. (Use Filter By: Type-> Select Type). (Clarifications, PR's, Schedules, etc.)
11. Outbound Emails Report (Under Canned Project Reports) can be used to diagnose email notification issues. Provides a list of all notification emails sent in a Project.
12. Other Canned Reports are not customized for Construction Management use and should not be used.

General Report Information and Tools:

1. Utilize the filter button to filter reports with parameters such as by: Contractor, Date, BIC, Status, Billing Period, etc.
2. Re-Sort reports by clicking the column headers to sort by the select column.
3. Export the Report as PDF by using export button -> PDF. Excel Files can also be exported.

PROCORE CORRESPONDENCE TOOLS (Schedule, Two Week Look Aheads, PR's/IB's/CIC's/ASI's/ASK's/CMSK's, SCIR's (Punchlist Reports))

Use Filter -> Correspondence "Type" to View only one specific item. Then click "Number" Column Header to sort in numerical order.

Project Schedule – Contractor Submitting Schedule

1. Open Correspondence Tool -> **"+ Create" -> "Project Schedule"**
2. Enter a **Number** Ex: "GC-01", "MC-02", etc.
3. **Status** should be Open.
4. Enter a **Subject**.
    a. Examples:
        i. "GC Project Schedule for Summer 2023 R1"
        ii. "GC Master Schedule R3"
        iii. "HVAC Equipment Delivery Schedule R1"
5. Set **Assignee** to CM Project Superintendent.
6. Set a **Due Date** to be 1 week from submission for CM review.
7. Leave **Private** check box unchecked.
8. Add "All Contractors" and "AE+CM" to **Distribution Group** for notifications.
9. Leave Origin Correspondence/RFI blank.
10. Attach the Two Week Look Ahead **PDF** in the **Attachment Box**.
11. Enter your company name in "**Contractor**".
12. Click "**Create and Issue**"
13. CM Superintendent to review, post a comment, and change status to "Closed" if acceptable.

Two Week Look Ahead – Contractor Submitting Two Week Look Ahead

1. Open Correspondence Tool -> **"+ Create" -> "Two Week Look Ahead."**
2. Enter a **Number** Ex: "GC-01", "MC-02", etc.
3. **Status** should be Open.
4. Enter a **Subject**.
    a. Examples:
        i. "GC – 6/19/2023-6/30/2023"
5. Set **Assignee** to CM Project Superintendent.
6. Set a **Due Date** to be 1 week from submission for CM review.
7. Leave **Private** check box unchecked.
8. Add "All Contractors" and "AE+CM" to **Distribution Group** for notifications.
9. Leave Origin Correspondence/RFI blank.
10. Attach the Two Week Look Ahead **PDF** in the **Attachment Box**.
11. Enter your company name in "**Contractor**".
12. Click "**Create and Issue**"
13. CM Superintendent to review, post a comment, and change status to "Closed" if acceptable.

Architect Sketch – Architect issuing Sketch (ASK)

1. Open Correspondence Tool -> "+ Create" -> "**Architect Sketch**"
2. Enter a **Number** Ex: "GC-01", "MC-02", etc.
3. **Status** should be Open.
4. Enter the Title as the **Subject**.
5. Leave **Private** check box unchecked.
6. Set **Assignee** to the Contractor Associated.
7. Set a **Due Date** to be 5 days from issue date for Contractor response. (or Project Specific Duration)
8. Add associated Contractor and "AE+CM" to **Distribution Member** for notifications.
9. Select applicable **Origin Correspondence/RFI**. If not applicable leave blank.
10. Enter a description in the **Description** Field.
11. Attach the "Sketch" PDF in the **Attachments** Box.
12. Enter the Contractor's company name in "**Contractor**".
13. Select the **Cost Proposal to be Submitted** selection from the drop down.
    a. Options: "No Cost Change Expected" or "Cost Proposal Requested"
14. Click "**Create and Issue**"
15. Contractor to review, **post a comment** confirming acknowledgement.
16. TPG Superintendent to **Close** once responded to by Contractor and associated Proposal is Submitted.

ASI – Architect issuing Architectural Supplemental Instruction (ASI)

1. Open Correspondence Tool -> "+ Create" -> "**Architectural Supplemental Instruction**"
2. Enter a **Number** Ex: "GC-01", "MC-02", etc.
3. **Status** should be Open.
4. Enter the Title as the **Subject**.
5. Leave **Private** check box unchecked.
6. Set **Assignee** to the Contractor Associated.
7. Set a **Due Date** to be 5 days from issue date for Contractor response. (or Project Specific Duration)
8. Add associated Contractor and "AE+CM" to **Distribution Member** for notifications.
9. Select applicable **Origin Correspondence/RFI**. If not applicable leave blank.
10. Enter a description in the **Description** Field.
11. Attach the "Sketch" PDF in the **Attachments** Box.
12. Enter the Contractor's company name in "**Contractor**".
13. Click "**Create and Issue**"
14. Contractor to review, **post a comment** confirming acknowledgement.
15. TPG Superintendent to **Close** once responded to by Contractor.

CMSK – CM issuing Construction Manager Sketch (CMSK)

1. Open Correspondence Tool -> "+ Create" -> "**Construction Manager Sketch**"
2. Enter a **Number** Ex: "GC-01", "MC-02", etc.
3. **Status** should be Open.
4. Enter the Title as the **Subject**.
5. Leave **Private** check box unchecked.
6. Set **Assignee** to the Contractor Associated.
7. Set a **Due Date** to be 5 days from issue date for Contractor response. (or Project Specific Duration)
8. Add associated Contractor and "AE+CM" to **Distribution Member** for notifications.
9. Select applicable **Origin Correspondence/RFI**. If not applicable leave blank.
10. Enter a description in the **Description** Field.
11. Attach the "Sketch" PDF in the **Attachments** Box.
12. Enter the Contractor's company name in "**Contractor**".
13. Select the **Cost Proposal to be Submitted** selection from the drop down.
    a. Options: "No Cost Change Expected" or "Cost Proposal Requested"
14. Click "**Create and Issue**"
15. Contractor to review, **post a comment** confirming acknowledgement.
16. TPG Superintendent to **Close** once responded to by Contractor and associated Proposal is Submitted.

SCIR – Architect or CM Issuing Substantial Completion Inspection Report or Punchlist Report (SCIR)

For issuing **Compiled** Substantial Completion Inspection and Punchlist Reports with Multiple Punchlist Items on one Report.
See Punchlist Tool for instructions on live Procore Punchlist Tool for individual Punchlist Items.

1. Open Correspondence Tool -> "+ Create" -> "**Substantial Completion Inspection Report.**"
2. Enter a **Number** Ex: "GC-01", "MC-02", etc. (Assigned to Specific Contractor)
3. **Status** should be Open.
4. Enter the Title as the **Subject**. Indicate Phase, Area, and Inspection Date.
5. Leave **Private** check box unchecked.
6. Set **Assignee** to the Contractor Associated.
7. Set a **Due Date** to be Project Final Completion Date. (or Project Specific Duration)
8. Add associated Contractor and "AE+CM" to **Distribution Member** for notifications.
9. Select applicable **Origin Correspondence/RFI**. If not applicable leave blank.
10. Enter a description in the **Description** Field.
11. Attach the "SCIR Report or Punchlist Report" PDF in the **Attachments** Box.
    a. If Procore Punchlist Tool is being used, attached the PDF Export of the Punchlist Report from the Punchlist/Reports Tool.
12. Enter the Contractor's company name in "**Contractor**".
13. Select appropriate **Inspection Area Includes**: "Entire Project" or "Portion".
14. Indicate if **Work Is Substantially Complete.**
15. Select the **Onsite Inspection Date**.
16. Indicate any **Areas Previously Inspected**.
17. Indicate **Areas Inspected in This Report**.
18. Click "**Create and Issue**"
19. Contractor to review, **post a comment** to submit a response/request reinspection.
20. TPG Superintendent to **Close** once all items in the report are addressed.

PROCORE OBSERVATION TOOL

AE/CM Instructions:

Create an Observation as an Architect/CM.

- Review Procore instructions:
  - https://support.procore.com/products/online/user-guide/project-level/observations/tutorials/create-an-observation
  - https://support.procore.com/procore-mobile-ios/user-guide/observations-ios/tutorials/create-an-observation-ios
- Observations can be created on a **Tablet** which is the recommended method of collecting photos and description finalized on PC. Or Created and Issued on Tablet, or entirely on PC.
  - Observations can be created by the CM or AE and Issued directly to the Contractor.
  - Or CM Issued to the AE (**private**) for AE review. Then reissued as a new item from the AE/CM to Contractor.

1. Open Observation Tool -> **"+ Create**" (On Tablet, select Manual Input -> Without Template)
   a. Quick Capture is another option which takes a photo/video with text to speech.
2. Select Observation **Type**: Safety vs Quality.
3. Leave **Status** as "Initiated".
4. Enter a **Title** for the observation. Include a Trade Prefix if Applicable.
   a. Ex: "GC-01", "MC-02", etc. Report Type Prefixes can be used as well. Ex: "CDR-GC-01"-Construction Deficiency Report, "EOR-MC-02"-Engineer's Observation Report, etc.
5. Select **Priority**.
6. Leave Observation **#** as auto filled, in default.
   a. Numbering to remain in sequence. Ex: 1, 2, 3, 4, 5 ,6. The # cannot be edited when Submitting on Mobile.
   b. See Title and Observation Number (For Assignee) fields for more information.
7. Select applicable **Location**.
8. Select **Assignee** responsible for responding to the observation item.
   a. Note 1: Only one user can be an assignee at a time. Primary Points of Contact are listed in the Home Tool.
   b. Note 2: All other users on the distribution list will still be notified.
9. Add in the Associated Contractors, and CM+AE Distribution Groups to the **Distribution**.
10. **Due Date** to be set as 5 Working Days by default. To be updated when the items BIC changes.
11. Select **Private** checkbox if item is to be restricted to the Contractor's in the Distribution Group.
12. For Safety Hazard Observations Only: Select **Contributing Condition**, **Contributing Behavior**, **Hazard** options from drop down as applicable. Contact TPG Admin if an item is needed that isn't in the lists.
13. Provide detailed **Description** containing information regarding the observations. Use numbered bullet point lists as needed for cross reference.
14. Provide **Attachments** as needed, separate PDFs of Reports created outside of Procore can be added here.
    a. On Mobile, this is where photos can be taken and imported.
15. Enter the **Observation Number (For Assignee)** which should match the number indicated in the title.
    a. Ex: "GC-01", "MC-02", etc.
16. List the associated entity in the **Company** Field for whom the observation is assigned to.
17. Press "Create"
18. Then from the Observations Main Page (where all observations are shown), press **"Send".**
    a. (Yellow Banner on PC) or (Send button next to orange "+" on Tablet)
    b. Observations will not be sent to the assignee until this action happens.

Contractor/AE Instructions:

Responding to an Observation as a Contractor/Architect

1. Review Procore instructions:
    a. https://support.procore.com/products/online/user-guide/project-level/observations/tutorials/respond-to-an-observation
    b. https://support.procore.com/procore-mobile-ios/user-guide/observations-ios/tutorials/add-a-comment-to-an-observation-ios
    c. https://support.procore.com/procore-mobile-ios/user-guide/observations-ios/tutorials/respond-to-an-observation-ios
2. Open Observation Tool -> Select View on the Observation Item to be responded to.
3. Post a response in the Comment field on how the item was addressed or what the response of the item is.
    a. Photos/Files can be added in the attachment field on PC and on Mobile.
    b. On PC Select Change Status in the Activity section to change the status and post a comment simultaneously. Mobile requires posting comment first, then change status.
4. If you are an Assignee, you will be able to change the status from “Initiated” to “Ready for Review”.
    a. Do not change the status to “Closed”.
    b. Non-Assignees in the Distribution (in the same company) can still post a response and photos.
    c. The Creator/Distribution will still be notified for all responses.

Reviewing an Observation response as an Architect/CM.

1. Review Procore instructions:
    a. https://support.procore.com/products/online/user-guide/project-level/observations/tutorials/respond-to-an-observation
    b. https://support.procore.com/procore-mobile-ios/user-guide/observations-ios/tutorials/add-a-comment-to-an-observation-ios
    c. https://support.procore.com/procore-mobile-ios/user-guide/observations-ios/tutorials/respond-to-an-observation-ios
2. Open Observation Tool -> Select View on the Observation Item to be responded to.
3. Post a response in the Comment field if the response was accepted or not accepted/requiring further backup.
    a. Photos/Files can be added in the attachment field on PC and on Mobile.
    b. On PC Select Change Status in the Activity section to change the status and post a comment simultaneously. Mobile requires posting comment first, then change status.
4. If you are the Creator, you will be able to change the status from “Ready for Review” to “Closed” or “Not Accepted”.
    a. Non-Assignees in the Distribution (in the same company) can still post a response and photos.
    b. The Creator/Distribution will still be notified for all responses. Then the TPG Super can set status to “Closed” or “Not Accepted”
5. If closed, then the item is complete. If Not Accepted, the due date is to be adjusted, and this will be returned to the Assignee’s Ball in Court.

PROCORE INSPECTIONS TOOL

CM/Contractor Instructions:

Create an Inspection as a CM/Contractor with a TPG templates.

- The following Inspection Templates have been created for use by The Palombo Group for Projects:
  - **[TPG] - PIPING PRESSURE TEST (WITNESS)** (by Contractor or witnessed by the CM)
  - **[TPG] - PRE-DRYWALL INSPECTION** (by the CM)
  - **[TPG] - ABOVE CEILING INSPECTION** (by the CM)
- Review Procore instructions:
  - https://support.procore.com/products/online/user-guide/project-level/inspections/tutorials/create-a-project-level-inspection
  - https://support.procore.com/products/online/user-guide/project-level/inspections/tutorials/perform-an-inspection
- Inspections can be created/performed on a **Tablet** which is the recommended method for collecting photos, signatures, making comments. Or Created and Issued entirely on PC.
  1. Open Inspections Tool -> **"+ Create**" -> "Inspection" -> Select Template.
     a. Orange "+" on Tablet. Do not use "Inspection Schedule". Leave **Status** as "Open".
  2. **Photos / Files / Attachments** can be added now or added later via "edit". On PC Documents/Drawings can be attached as well.
  3. **Inspection Date** to be date of Inspection. **Due Date** to be the latest the inspection is to be performed.
  4. **Assignees** is the Person(s) performing the Inspection.
     a. TPG Superintendent for Above Ceiling and Drywall Inspections. Contractor can perform their own Pressure Tests inspection if allowed on the Project.
  5. Select the correct **location** that covers the area (if Locations are set up). See "Area Information Field".
  6. Add the Associated Contractor's, CM, and Architect (if Applicable) to **Distribution** for notifications.
  7. Set **Private** to "no" or "unchecked".
  8. In **Description**, enter a general description and any other general information. Leave field blank if applicable.
  9. In **Area Information**, add in specification location/area information.
     a. Example: "Area A Bathrooms", "Café" "Rooms 101, 102, and 103"
  10. **Contractors associated with Work being Inspected** to list Contractors/ Points of Contact who performed the work that is being inspected.
  11. **Contractors with Open items** to be left blank until inspection is performed. Then edit later to add Points of Contact for Contractors with open items once inspection is performed with failed items.
  12. **Contractor Responses**, this field is used to store any contractor responses made outside of Procore.
      a. Example: Cut and paste an email response with timestamp and sender.
  13. **Terms and Conditions** is a read-only field to be printed on the report.
  14. Press "**Create**".

Perform an Inspection as a CM/Contractor with a TPG templates.

- The following Inspection Templates have been created for use by The Palombo Group for Projects:
    - **[TPG] - PIPING PRESSURE TEST (WITNESS)** (by Contractor or witnessed by the CM)
    - **[TPG] - PRE-DRYWALL INSPECTION** (by the CM)
    - **[TPG] - ABOVE CEILING INSPECTION** (by the CM)

1. With the inspection open (view mode) on Tablet or PC, review each item and select the Green "Check" or Red "X" for pass or fail of the inspection item.
    a. If an item failed the inspection, press the **"i"** to:
        i. **Add a comment** detailing the issue.
        ii. **Take a photo** to be associated with the item.
        iii. **Observation** Reports can be made if the item is a major item that requires further follow-up.
            1. See "Create Observation Item" Instructions.
    b. Take pictures of passing items either by pressing the item specific **"i"** and the select "photo" or for general overall photos, pressing "Edit" then selecting the Camera Tool.
    c. Add general comments of passing items either by pressing the item specific **"i"** and the select "comment" or for general overall comments, pressing "Edit" then edit the Description.
2. Add in any text information any of the "Add Text" information fields that require text to be entered.
3. Once all items are reviewed:
    a. **If there are any failed items,** then "Edit" the Inspection to add Contractors to the **Contractors with Open items** field for tracking and to the **Assignee** field.
    b. When a failed item has been addressed and reinspected, by using the **item specific "i" activity button:**
        i. Add comment is to be added (by the CM or Contractor) confirm how the item was addressed.
        ii. Provide a photo of the addressed item.
        iii. CM to then review and confirm acceptance, then change the item to passing if accepted.
    c. **If all items passed inspection**, then select "Add" under **Signatures** (in view mode) and add associated contractors and CM Superintendent to sign the inspection report. Then add these users to the assignees via "edit" then add to the **Assignee** field. (Check Project Requirements for signatures on TPG Reports.
        i. If an assignee was already assigned due to having a previously failed item, then they need to be removed from **Assignee**, save the inspection, reselect "edit", then re-add that user in order for them to get an email notification.
4. Once all items are in a passing state, and any required signatures a received, then the **Status** is to be changed to "closed", this will send out an email notification to all on the Distribution List.
5. The Inspection can then be exported via the "Export" button for record.

PROCORE INCIDENTS TOOL

CM Instructions:

Create an Incident as a CM/Contractor with a TPG templates.

- The following Incident Report Templates are available for use for documenting Incidents that have occurred:
  - **Major Injury/Illness**
  - **Property Damage**
  - **Environmental**
  - **Near Miss**
- Review Procore instructions:
  - https://support.procore.com/products/online/user-guide/project-level/incidents/tutorials/create-an-incident
- Incidents can be created/performed on a **Tablet** which is the recommended method for collecting photos, signatures, making comments. Or Created and Issued entirely on PC.

1. Open Incidents Tool -> **"+ Create**" -> "Incident" -> Select Template. Orange "+" on Tablet.
2. Enter a **Title** that Describes the Incident.
3. In the **Distribution**, add any users that were associated with the Incident to the distribution so they can view the report and be notified when issued/closed.
4. Add the **Location** of the Incident. (Locations must be set up prior.)
5. **Event Date** and **Event Time** to be entered.
6. For the **Recordable** check box, leave unchecked.
7. Enter a detailed description of all aspects of the Incident in the **Description** field. Include detailed sequence of events, identified any precautions, protocols, or guidelines not followed.
8. Attach Photos, outside reports, and/or other documents to the **Attachments** field.
9. Enter **Hazard**, **Contributing Condition**, and **Contributing Behavior** from the pre-set drop down lists. If additional items need to be added, contact TPG Admin.
10. Press "**Create**" to create an Open Incident. Then further detailed information can be added before the report is closed.
11. Under **Incident Records**, add a record for the Incident based on the available Incident Types: **Major Injury/Illness, Property Damage, Environmental, Near Miss.**
    a. Fill out all fields detailing the record, then press "**Create"**.
12. Under **Witness Statements,** if applicable add a Witness Statement Entry.
    a. If a witness is not a user in Procore, then a new name can be added under "Create Person".
    b. Fill out all applicable fields, then press "**Create**".
13. Under **Actions**, add an action as either "Preventative" or "Corrective". Fill out info, then "**Create**".
14. Once the report is complete, "Edit" the Incident to change the **Status** from **"Open"** to **"Closed".**

DAILY LOG TOOL AND PHOTOS TOOL

Daily Log Tool on Tablet, Mobile, or PC

1. In the **Weather** section, typical data is automatic for temperature, weather conditions, wind.
    a. If there is an abnormal extreme weather event, an entry can be added.
2. **Manpower**:
    a. Create entries for each contractor onsite.
    b. If a Prime Contractor has multiple trades or subcontractors, then separate entries need to be created for each trade (designated by the "Trade – Subcontractor" field).
    c. "Trade – Subcontractor" should be entered as "Trade Name" – "Subcontractor Company name" if applicable. If manpower is self-performed by Prime Contractor, then only enter the trade name.
    d. If locations are set up, utilize to identify the general area that the workers in. If workers are working in multiple rooms or areas and not in one specific, use the broader tier.
    e. Enter a detailed description in the Comments field of what work each trade performed.
3. **Photos** (Tablet or Mobile Only):
    a. Photos should be taken directly on the Procore App Daily Log Tool, using "+" -> Take a Photo.
        i. (Not Camera or Photo's Tool).
    b. The album selection at the top should be set to "Photos from Daily Log", not "Unclassified" or any other album.
    c. Enable the Time Stamps printed on the photos with the Time Stamp Button at the top.
    d. Once photos are taken, the icon in the bottom left can be tapped to view the taken photos.
    e. Photos can be marked up with pen, clouds, arrows, and text boxes. Descriptions can be entered in the photo in the markup section.
    f. "Specific Issues" Photos to be taken using applicable Observation, Punchlist, Inspections Tools.
    g. Procore Photos Tool can be used to view and manage all photos taken for a Project.
4. **Inspections** (Not to be confused with Inspections Tool):
    a. Inspections including 3rd Party Special Inspections can be entered in this section.
    b. All Entries to be filled out: Inspector (Name), Start/End Time, Type (Steel, Structural, Concrete, Masonry, Air Monitoring, TPG Pre-Ceiling/Drywall etc.)
    c. To be used when reviewing Special Inspections Invoices.
5. **Dumpsters** (Only to be enable if TPG is tracking dumpsters for invoicing (set in Daily Log configuration)
6. **Notes**: Any other unspecified general notes to be entered here.
7. **Complete Day**: After a Daily Log is finalized at the end of the day, press the "Complete Day" Button to finalize the entries. On the PC version, this is viewed in Calendar view or at the bottom of the Log.
8. **Daily Log / Manpower Report**: In the **Reports Tool**, the "Daily Log / Manpower (Project Level)" Report can be used to view all daily log entries throughout a Project. Filters are available to filter by company.

DRAWINGS TOOL (Posting Drawings with RFI's as CM)

Personal <u>unpublished</u> mark ups can be placed for your personal use in any preferred formatting. Published mark ups by TPG will be posted for all users.

Posting Post-Bid Clarifications: RFI's, Sketches, Documents (Change Orders), Correspondence (ASI's/Sketches):

A Log/Checklist should be maintained to check off which items have been posted and which Drawing Numbers they were posted to.

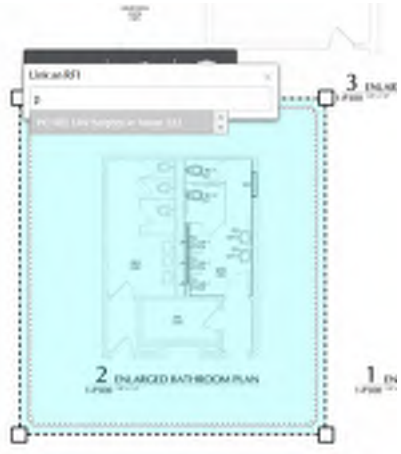
9. Open Drawings Tool.
10. Select the Mark Up Button.
11. Select Cloud Tool.
12. Draw a cloud around the item that relates to the item being posted.
13. Select the attachment button.
14. Select the item type (RFI, Submittal, Document, Correspondence (Contains: Sketches, ASI's, CIC's, Bulletins), etc.)
    a. Note that "Sketch" is a separate undeveloped tool and not related to the sketches issued under Correspondence Tools.
15. Type in the name of the item (ProCore will autofill).
16. Press the "**Publish"** which will make the mark up live to all.
    a. Unpublished mark ups will stay personal to you for your uses.

Color code for mark ups:

- Red – Addendum (Prior to Procore)
- Green – Approved PCO's (Change Orders / Allowances Executed)
- Yellow – Clarifications (ASK's/ASI's/Sketches/Bulletin's/CIC's) (No cost items)
- Blue – RFI's

Other available tools in Drawings Tool:

- Measure (Calibrate first):
  - Distance
  - Area
- Link other Drawings for short cuts.
- Pin:
  - Photos
  - Punchlist
  - Observation Reports



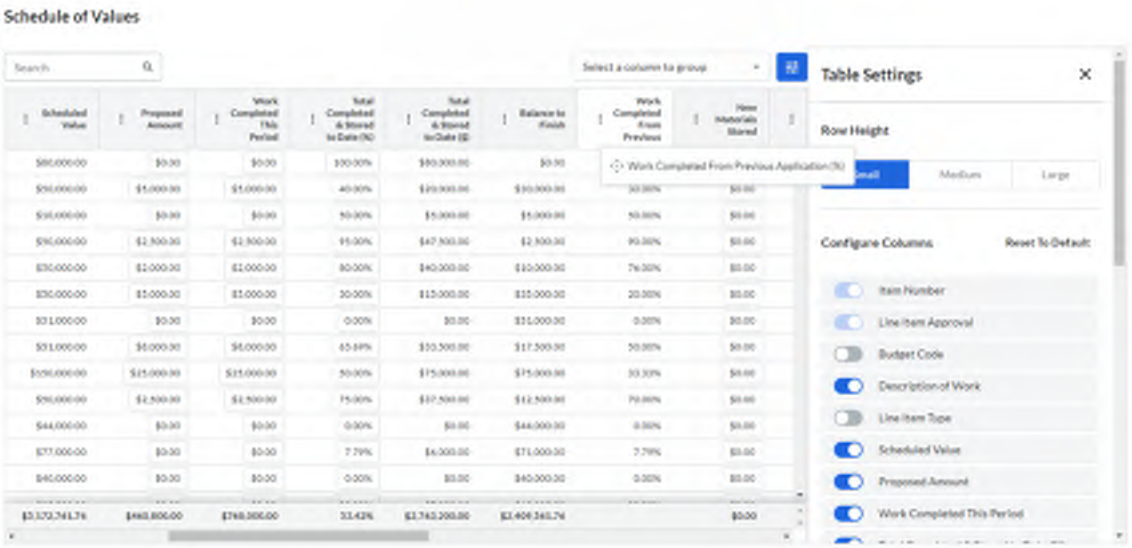
PROCORE INVOICING/COMMITMENT TOOL FOR INVOICES/APPLICATION FOR PAYMENT

Methods to view an invoice (All Users):

1. Responding to email notification: (Invite to Bill or Action Required in Workflow Email Notification)
2. Commitment Tool -> Subcontractor's Tab -> Select Contract Number -> Invoices ->
    a. "Create" -> "Invoice" (only if the Invite to Bill email has been sent)
        i. This method will require the Contractor to enter in the Proposed amount twice in "Proposed Amount" and "Work Completed This Period". Then press "Start Workflow" once complete.
    b. Select the previously created Invoice from the list.
3. If the Invoice has already been created: Home Tool -> My Open Items -> Select the Invoice

Optimizing the View of the SOV for each invoice (Once invoice has already been created) (All users):

1. Procore by default displays the columns in SOV of the invoice with extra information that isn't needed and can be adjusted to view all the information needed at a glance. **This adjustment only needs to be completed for the first Invoice (each contractor),** then follow-up invoices will have the layout saved for the rest of the project.
2. With the invoice open and the Schedule of Values in view, select the **Table Settings** Button.
3. **Disable**: "Budget Code" and "Line Item Type".
4. **Pin** "Total Completed & Stored to Date (%)" **to the left** using the 3 dots button in the column header.
5. Expand the column widths as needed to see all the text in the boxes (descriptions, long column header names)
6. Set row height to "small" (user preference)
7. For CM Pencil Review, Hide the Workflow prior to reviewing/editing the SOV. Then View Workflow and Respond after.
8. To Group by building with **Building Subtotals**, choose "Select column to group", then select "Sub Job".



Creating Billing Period and Inviting the Contractor to Bill (CM ADMIN STEP)

1. Open **Procore Invoicing Tool**.
2. Select "**Create Billing Period"**.
    a. A Billing period should be created once all previous Invoices have been Approved in Procore by the Owner or 5 Days before the Invoice Due Date to allow contractors time to assemble their invoice.
    b. If the previous billing period is not complete for a specific contractor and the next invoice is created, then the previous invoice cannot have any dollar amount changes, and attachments/comments will only be able to be edited by the CM.
3. Select **Manual** Mode.
4. **Default Billing Period** is the first day of the month to the last day of the month.
5. **Procore Due Date** should be 3 days after the actual project due date for the invoice.
    a. This is to account for weekends and technical issues if the contractor is having an issue submitting.
    b. If a contractor needs to submit after this date due to a technical issue, this due date can be changed later to allow submission of the Invoice.
6. Press the "**Create**" Button. This will set the previous billing period to close and open the new billing period.
7. Select the Subcontractor Tab to view all the invoices. Each Contractor should now be listed for the current billing period.
    a. By default, the current billing period is filtered. Press the "x" next to the billing period filter to remove the filter and see all Invoices for all Contractors.
8. Select the **check box** next to each contractor, then press "**Send Invites**". This will send an email notification to the Invoice Contacts of the Contractors.
9. Once the Contractor Responds to the Invite to Bill, the Invoice Workflow will start.

Procore Invoice / Application for Payment Review Process

CONTRACTOR SUBMISSION (BY CONTRACTOR)

1. https://support.procore.com/products/online/user-guide/project-level/commitments/tutorials/accept-or-decline-an-invite-to-bill-as-an-invoice-contact
2. Respond to "Invite to Bill" email notification sent to the Contractor's "Invoice Contacts". Selecting "Yes" in the invite which will open the invoice in Procore.
3. Once the Invoice is open in Procore, follow the procedure below to enter in the information. Press the "Edit" Button to change the information in the Invoice.
    a. https://support.procore.com/products/online/user-guide/project-level/invoicing/tutorials/create-a-new-invoice-as-an-invoice-contact
4. Enter an **Invoice Number,** this is the "Trade Prefix-Invoice Sequence Number."
    a. Example: GC-02, MC-32, WC4-08
5. **Billing Date** is the date of submission.
6. Scroll down to the **Schedule of Values** section.
    a. See Instructions for "Optimizing the View of the SOV for each invoice (Once invoice has already been created) (All users):"
7. Edit the **Percentages** or **Dollar Amounts** on each line item that is being requested to bill against.
    a. This should happen as one activity. **If the Contractor saves, exits, and re opens later through the commitment tool, or creates the invoice in the Commitments Tool directly then the Dollars in "Proposed Amount" will not be auto filled, and the contractor will have to manually enter in the dollars in both Proposed Amount and work/material this period.** Recommend entering once through "Invite to Bill" Email invite.
8. **Change Orders** and **Allowances** must be fully executed and processed in Procore prior to the creation of the invoice in order to be billed against. Once processed, they will show in the SOV.
9. Do not adjust any **Retainage** columns, this must remain the default. If a retainage release is being requested, it must be formally requested outside of Procore prior. TPG will then provide direction on the Retainage Release Procedure after preliminary approval.
10. Scroll Down to the **Additional Information** section.
    a. Add any General Comments by the Contractor in the "Contractor General Comments" text box to provide further explanation on any of the billing items.
        i. For any work that is not currently complete but **anticipated to be complete** by the end of the billing period, list these items in this field.
    b. List any subcontractors who were onsite for the current billing period in the "**Prime Contractor's Subcontractors Onsite"** text field. This is for Certified Payroll and Partial Lien Waiver review purposes.
    c. The additional Attachment upload slots will be left blank until the invoice has been reviewed and the pay app is returned to the Contractor in the later workflow steps. The Coversheet does not need to be signed at this point.
    d. If there is **Stored Material** being billed (new or present) (Column F), the backup must be included with the Pencil to include the backup including: List of Material, Invoices, Photos, and Special Insurance. This is to be uploaded to the **"Invoice Back Up Attachments"** Upload Slot. This file will be replaced by the Final **PDF Back Up Attachment** when the Contractor Submits the Final.
11. Once the Invoice is complete, press the "Send" or "Save" Button.
12. Then to submit to the CM, view the workflow column on the right side of the screen and then press "respond".
    a. Choose the default response option, enter any general comments in the response field, leave the attachments box blank.
    b. Press "submit" to send to the "CM PENCIL REVIEW" Step.

CM PENCIL REVIEW (BY CM SUPERINTENDENT)

1. Open the invoice and review the General Information section, confirm that the Contractor entered the correct **Invoice #.** For user preference, the **invoice can be printed** by pressing the "Export" -> "PDF" button.
2. Click Edit on the "Schedule of Values" section of the Invoice.
    a. Review each line item that has dollars billed in the "Proposed Amount" Column.
        i. If the proposed amount or percentage is acceptable, click the green "check" to approve.
        ii. If the proposed amount or percentage is not acceptable, click the red "X" and then add a comment that indicates the reason.
            1. Then include the original percentage **and** the revised percentage in the reason box along with the reason. Example: "Change from 80% to 50%. Only half the work is complete."
            2. Then change the percentage in the "Total Complete & Stored to Date" Column to the amount noted in the comment.
            3. Do not change the amount in the "Proposed Amount" Column.
        iii. Do not click a "Check" or an "X" for line items that do not have any dollars billed in the proposed amount column.
        iv. Check that all the Retainage Dollars
            1. Shortcut: Click the column header for Retainage to change sort which will cycle ascending/descending and if any items are above/below the default percentage they will show at the top.
    b. Click the "Save" button to save all changes.
3. Click "Edit" on the "Additional Information" Section of the invoice.
    a. Check that the Contractor listed the Subs onsite in the **"Prime Contractor's Subcontractors Onsite"** section. If not, correct/add the subs who were onsite.
    b. Add in any general comments in the **"Construction Manager General Comments"** section.
    c. Press the "Save" button.
4. In the workflow Column press the "Respond" button.
    a. Select: "**CM Reviewed - Forward for AE Pencil Review**" as the response option.
        i. If a Pay App is completely wrong and pay app is to not be reviewed, select "Revise and Resubmit" and provide a reason why.
        ii. Do not select the "CM Bypass Approval", this is an Admin only option to bypass the entire workflow if the Pay App was processed outside of Procore.
    b. Press the Respond button to send the Invoice to the next step. Dollar amounts will now be locked as the Invoice is now in the "Under Review" Status.

AE PENCIL REVIEW (BY ARCHITECT)

1. Open the Invoice and view either by:
    a. Pressing the "Export" -> "PDF" button to open a printable pdf. The Comments will be on the last page.
    b. View the invoice in Procore.
2. Return the Invoice by pressing the "Respond" button and selecting "AE Reviewed - Return to CM to address comments and resubmit Final" response option.
    a. Provide any text comments in the response text box. If the pdf was marked up, place the pdf into the "Attachments" upload slot.
3. Click "Respond"

CM COMPILED COMMENTS (BY TPG ADMIN)

1. Open the invoice and review any additional comments made by the Architect in either their workflow response text box or any attachments in the workflow section.
2. Check to make sure TPG Superintendent properly filled out all comments during the "CM PENCIL REVIEW" step.
3. If the Architect has any line-item percentage changes:
    a. Select Respond -> "Adjust SOV Billing Line Items" Response option -> Respond to change the Invoice back to draft status to allow Schedule of Value changes. Once Changes are made, respond in workflow with "Reviewed and Accepted" response option.
    b. Follow procedure in 2. A. ii. Under the "CM PENCIL REVIEW (BY CM SUPERINTENDENT)" section of the instructions to edit Invoice line items.
4. Cut and paste any comments by the Architect in the "**Architect General Comments**" text box in the "Additional Information" section of the invoice.
5. Return the Invoice by pressing the "Respond" button and selecting "Return and Resubmit Signed Pay App w/ comments addressed" response option.
6. Create a folder in the TPG OneDrive "(2-1) APPLICATION FOR PAYMENT" folder using the **monthly** template within each contractor folder. Rename the template to have the Pay App # and the Month / Year. Example: "PAY APP 32 OCT 2023"
7. Save a copy of the PDF export to the TPG OneDrive "(2-1) APPLICATION FOR PAYMENT" Folder under "(2) PENCIL".

CONTRACTOR REVISED INVOICE (BY CONTRACTOR)

1. Open the invoice and then press the “Export” -> “PDF” to view the adjusted Invoice. All comments / line item changes (with explanations) will be shown on the last sheet of the PDF.
2. See Instructions posted on Invoice / in Procore:
    a. Percentages have already been adjusted per our comments to match the allowed percentages. No changes to the SOV / Line items billed to be made. If there are any questions on the line item changes, note them in the comments of the workflow text box when responding to the Invoice or contact TPG Project Superintendent.
    b. **All documents must be uploaded in the correct orientation/rotation. If scanned in the wrong orientation, a PDF editor must be used to correct prior to uploading.**
    c. Export PDF of coversheet, Print, Sign in blue ink & notarize, scan in color in high quality, upload **signed cover sheet <u>only</u>** into workflow attachments field. (label filename with Trade).
    d. Provide **one PDF Back Up Attachment** for all items below and upload as the second item in the workflow attachment slot. (Label File Name with Trade)
        i. Provide Contractor Partial Lien Waiver PDF.
        ii. Provide Subcontractor / Major Supplier Partial Lien Release PDF in attachment field.
            1. Provide list of subcontractors and periods as a coversheet if there are more than 3 subcontractors / suppliers.
            2. This list will be checked by cross-referencing certified payroll from each subcontractor listed in the previous billing period.
        iii. Provide Prime Contract Certified Payroll PDF in attachment field.
            1. If “no work” was performed for the billing period, a sheet must be provided stating there was no work performed during the billing period.
        iv. Provide Subcontract Certified Payroll PDF in attachment field.
            1. Provide list of subcontractors and periods as a coversheet if there are more than 3 subcontractors.
            2. See list above of subcontractors that are required to submit certified payroll.
            3. Once a subcontractor begins work onsite, they must submit certified payroll for every week until the end of the project, or documentation of dates that the subcontractor was not onsite.
        v. Provide any other requested back up.
            1. This includes all documentation for all stored material (Special Insurance, List of Material, etc.).
    e. Once the Invoice package attachments are added, press the respond button in the workflow column to send the Invoice to the CM for CM Signature.
    f. Send The Palombo Group an email if there are any questions on this process.

CM SIGNATURE (BY CM ADMIN OR CM EXECUTIVE)

1. Open the invoice and review any comments made by the contractor in the workflow section.
2. Review the backup attachment document uploaded by the Contractor for:
    a. Lien Waivers, Subcontractor Lien Waivers, Prime Contractor Certified Payroll, Subcontractor Certified Payroll, any stored material back up, and any other back up documentation required.
3. If the Invoice Back Up Package is acceptable, download the PDF to the computer and then reupload to the **"Invoice Back Up Attachments"** upload slot. Procore cannot drag and drop attachments from the workflow to the upload slot. These items can be stored in the "(3) DRAFT FINAL BACK UP DOCS" folder in OneDrive.
4. Verify that the Coversheet uploaded by the Contractor is signed (blue ink), notarized, and matches all dollar amounts shown in the "Summary Preview" section of the Procore Invoice.
5. Download this coversheet and print for CM Executive Signature. Then upload into **"Signed Coversheet"** upload slot.
6. Check the checkbox for "**Turn Off Additional Information Page"** to remove the "Additional Information" page on the Final Invoice export.
7. If any of these items are incorrect, select "Revise and Resubmit" response option and return to the contractor with reason why listed in the workflow text box.
8. If a dollar amount needs to be changed at this stage after further discussion with CM, Contractor, and Architect; select "Adjust SOV Billing Line Items" response option.
9. If ready for Architect's signature, select "Reviewed and Accepted" response option.

AE SIGNATURE (BY ARCHITECT)

1. Open the invoice and press the "Export" -> "PDF" button to open a printable pdf.
2. Review the Invoice.
3. Press "Respond" in the workflow column.
4. If acceptable: Print, Sign, upload the **Coversheet only** and upload into the **workflow attachment slot**.
    a. Select "Reviewed and Accepted" to send to CM to be then forwarded to the Owner.
5. If not acceptable, select "Revise and Resubmit" response option to return to CM and state reason why.

CM COMPILED SIGNATURES (BY CM ADMIN)

1. Open the Invoice and confirm that the Architect signed the coversheet and uploaded into the workflow.
2. Download the Signed coversheet, and then re upload into the "**Signed Coversheet"** upload slot in the Additional Information section of the Invoice.
    a. Procore cannot drag and drop attachments directly from the workflow to the upload slot.
3. **If acceptable, click "Respond" then select "Reviewed and Accepted" response option to send to the Owner.** Save copy of PDF export in TPG OneDrive "(2-1) APPLICATION FOR PAYMENT" Folder under "(1) EXECUTED".
4. If not acceptable, select "Revise and Resubmit" response option to return to Architect and state reason why.

OWNER REVIEW (BY OWNER)

1. Open the Invoice in Procore via email notification or Commitments Tool -> Contract Number -> Invoicing.
2. Select "Export" -> "PDF" to export the entire Invoice / Application for Payment Package.
3. If acceptable, press the Respond button in the workflow column on the right.
    a. Select "Reviewed and Accepted" response option, then press "respond" to confirm receipt and notify all parties that the Invoice has been accepted.
4. If not acceptable, select "Revise and Resubmit" response option to return to CM and state reason why.

CHANGE ORDERS (POTENTIAL CHANGE ORDERS, CHANGE ORDERS, ALLOWANCES)

POTENTIAL CHANGE ORDERS (COMMITMENT TOOL PCO's) (2 TIER CHANGE ORDERS)

Contractor PCO Submission (1st Submission) – (CONTRACTOR STEP)

1. Open **Commitments Tool.**
2. Select the associated Contractor Contract Number -> **"+ Create**" -> "**Create Potential CO**".
3. Enter the PCO **Number** (with trade prefix) and **Revision** Ex: "GC-01", "MC-02", etc. Default Revision is "0".
4. Enter a PCO **Title** that briefly describes the PCO, (45 Character Limit).
    a. Do not reenter the PCO number in the Title.
    b. Include relevant "Proposal Request" or "RFI", Number.
5. Select applicable **Change Reason** from drop down.
6. Leave **RFQ** blank.
7. Leave **Private** checkbox set to private/checked.
8. Enter a detailed **Description** of the Potential Change Order **including justification** for contract cost change and/or contract time change. This can be cut and pasted from Contractor's PCO PDF if already included.
9. Leave **Request Received From** blank.
10. Select applicable **Location**. (Only if Locations are set up, otherwise leave blank).
11. If there is a **Schedule Impact** to the Final Substantially Completion Date only, then enter in the number of days delayed. If none, enter "0" Days.
12. If there is a Proposal Request or other issued price request document/RFI, enter the number in **Reference.**
13. Leave **Field Change** and **Paid in Full** check boxes unchecked.
14. Upload the Contractor PCO PDF to the **Attachments** field, to include the following **in one combined PDF**:
    a. Cost Breakdown to include itemize Labor / Material / Equipment items. Applies to Subcontractors as well.
    b. Include Line items that Show: Item, QTY * Rate * = Extended Cost
    c. Add these items to a subtotal that includes no mark up. Requirement applies to Subcontractors as well.
    d. Then Apply Project Standard mark up and list Grand Total.
    e. Include PDF copy of any associated Documents, Proposal Requests, RFI's, Drawings, emails, etc. within the Contractor PCO PDF Attachment. (One combined PDF).
15. Enter the initially submitted Revision #0 Cost in **Initially Submitted Cost (with Mark Up): ($)** (Pre-Negotiated Cost)
16. Enter the current Cost without OH&P/Mark Up in **Current Cost (no Mark Up): ($)** (This is the cost for Allowance)
17. Enter the total current Cost (update if Revision) in **Current Cost (with Mark Up): ($)** (This is the cost for C.O.)
18. Leave **Owner Recommendation, Architect Comments, Constriction Manager Comments, Contractor Revision Comments (Dated): Contractor Revision Comments (Dated)** as Blank.
19. Press **Save / Save as Draft** to create the PCO. (Not Submitted Yet).
20. To submit the created PCO to the CM, press **"Start Workflow",** then "**Show Workflow**" (Takes a few seconds to update).
21. Press **Respond** to open the review workflow.
22. Select "Contractor PCO Submission" Response.
23. Attach a copy of PCO PDF to the **Workflow Attachment**s slot to retain a record copy of original PCO if the main attachment gets updated. Workflow Attachments do not get deleted.
24. Comments in the **Workflow Comments/Reason for Response** box can be entered for Revisions describing changes.
25. Press **Submit** to send the PCO to CM PCO Review.

Contractor PCO Revision (Revision Submission) or View Status of PCO – (BY CONTRACTOR)

At no point is the PCO to be edited by the Contractor using the Edit button to make changes after the PCO is submitted. Revisions are to be submitted to the original PCO in the Workflow, no new PCO to be created.

1. Open PCO by either:
    a. **Home Tool** -> "My Open Items" list -> Select PCO Number.
    b. **Commitments Tool**-> Select the associated Contractor Contract Number
        i. Change Orders Tab -> Scroll Down to Potential Change Orders -> Select PCO Number.
    c. **Reports Tool** -> Potential Change Order Log (Commitment PCO's) (Enhanced) -> Select PCO Number.
2. Press **Respond** to open the review workflow.
3. Select "Contractor PCO Submission" Response.
4. Attach a copy of Updated PCO PDF to the **Workflow Attachment**s slot to retain a record copy of original PCO if the main attachment gets updated. Workflow Attachments do not get deleted.
5. Comments in the **Workflow Comments/Reason for Response** box can be entered for Revisions describing changes.
6. Press **Submit** to send the PCO to CM PCO Review.

CM PCO Review or View Status of PCO – (By CM Superintendent/PM) (Send to Contractor R&R, AE, or Owner)

1. Open PCO by either:
    a. **Home Tool** -> "My Open Items" list -> Select PCO Number.
    b. **Commitments Tool**-> Select the associated Contractor Contract Number.
        i. Change Orders Tab -> Scroll Down to Potential Change Orders -> Select PCO Number.
    c. **Reports Tool** -> Potential Change Order Log (Commitment PCO's) (Enhanced) -> Select PCO #.
2. Check that the general information fields are filled out properly by the Contractor for the PCO (per instructions).
3. Review the Workflow for changes: From Contractor, Architect, or Owner: Comments and Attachments.
    a. Copy and paste any comments (List **itemized**, **dated** & **initialed)** from the previous step into the appropriate: Contractor, Architect, or Owner; **Comment Fields** into the PCO when in edit mode.
    b. Download and reupload any previous attachments from the Workflow into the "**Attachments**" field.
4. To Export PDF, with the PCO item updated and open, press the Export Button to download the complete PDF.
5. To add CM comments, with the PCO open, press the edit button, then:
    a. List itemized, dated & initialed comments in "**Construction Manager Comments (Dated):"** text box.
    b. Attach the updated marked up PCO attachment to the **Attachments Field**. Leave the previous attachments for record if needed or remove if not needed. Attachments will be shown in the export.
    c. If comments are complex or in dispute: detailed comments can be sent via email if necessary; and then when resolved, the Contractor can submit the latest revision to Procore.
6. Press **Respond** to open the review workflow.
7. Select either "CM Reviewed - Forward for AE PCO Review", "Revise and Resubmit", "Rejected - No Revision to be submitted", or "CM Reviewed and Accepted - Forward for Owner Approval" responses respectively.
8. Indicate whether CM Comments are in the text box, marked up pdf attachment, or sent separately via email in the **Workflow Comments/Reason for Response** box.
9. Press **Submit** to send the PCO to the next step per the response choices. Remove Assignee from associated PR.
10. If PCO is accepted and ready to be processed, use the "**CM Reviewed and Accepted – Forward for Admin Processing**" workflow response option.
    a. Back up PDF's (PR's, RFI's, Sketches, etc.) to be included in the attachments field.
    b. Cost fields to be updated. Note cost amount and if: Change Order or Allowance, in the comments.
    c. **"Explanation and Recommendation to Owner (By CM/AE):"** Field should be filled out.
11. If a PCO is to be on hold for an extended period, use "**Hold PCO Until Further Notice (No Notifications)**".

ARCHITECT PCO Review or View Status of PCO – (Return to CM with AE Comments, or Send to Owner)

1. Open PCO by either:
    a. **Home Tool** -> "My Open Items" list -> Select PCO Number.
    b. **Commitments Tool**-> Select the associated Contractor Contract Number.
        i. Change Orders Tab -> Scroll Down to Potential Change Orders -> Select PCO Number.
    c. **Reports Tool** -> Potential Change Order Log (Commitment PCO's) (Enhanced) -> Select PCO #.
2. To Review PCO and add Architect comments (**Architect STANDARD USER**):
    a. Export the PCO as PDF, with the PCO open, press the Export Button to download the complete PDF.
    b. Press **Show Workflow** -> **Respond** to open the review workflow.
    c. Select "Return to CM with AE Comments" **Response Option**.
    d. **List** itemized, dated & initialed comments in the "**Workflow Comments/Reason for Response"** text box.
    e. **Attach** the updated marked up PCO attachment to the **Workflow Attachments Field**.
    f. If the PCO is Accepted by the Architect, provide an **"Explanation and Recommendation to Owner (By AE):"** in the Workflow Comment box for:
        i. Record justification of why the Change Order/Allowance is needed. (To be used for the C.O.)
        ii. To be processed as a Change Order or Allowance.
        iii. Accepted Dollar Amount.
    g. Press **Submit** to send the PCO to the next step per the response choices.
3. OR: To Review PCO and add Architect comments (**Architect ADMIN USER**):
    a. With the PCO open, Press the edit button in the top right corner.
        i. (Do not change any fields except as shown below).
    b. **List** itemized, dated & initialed comments in the "**Architect Comments (Dated)"** text box.
    c. **Attach** the updated marked up PCO attachment by adding it to the **PCO Attachments Field**.
    d. If the PCO is Accepted by the Architect, enter in the **"Explanation and Recommendation to Owner (By AE):"** Field in the Workflow Comment box for:
        i. Record justification of why the Change Order/Allowance is needed. (To be used for the C.O.)
        ii. To be processed as a Change Order or Allowance.
        iii. Accepted Dollar Amount.
        iv. Accepted Schedule Impact/Extension of Time or indicate no Extension to the Final Substantial Completion Date.
    e. Press "**Save**", (not Save & Email).
    f. Press **Show Workflow** -> **Respond** to open the review workflow.
    g. Select one of the **Response Option** (depending on Project Requirements):
        i. "Return to CM with AE Comments" Standard Option in most cases.
        ii. "Architect Send to Owner (AE Admin Bypass Only)"
            1. If the Owner is required to approve PCO's and is 100% prepared with compiled comments properly added.
            2. Final PCO Should be checked via export button before sending to the Owner.
    h. Indicate whether Architect Comments are in the PCO text box, marked up pdf attachment, or sent separately via email in the **Workflow Comments/Reason for Response** box. If marked up PDF is used, include record copy of attachment in workflow attachments as well.
    i. Press **Submit** to send the PCO to the next step per the response choices.
4. Press **Submit** to send the PCO to the next step per the response choices.

OWNER PCO Review or View Status of PCO – (Return to CM) (Only used if Owner Review of PCO's is required)

1. Open PCO by either:
    a. **Home Tool** -> "My Open Items" list -> Select PCO Number.
    b. **Commitments Tool**-> Select the associated Contractor Contract Number.
        i. Change Orders Tab -> Scroll Down to Potential Change Orders -> Select PCO Number.
    c. **Reports Tool** -> Potential Change Order Log (Commitment PCO's) (Enhanced) -> Select PCO #.
2. To Review PCO as the Owner:
    a. Export the PCO as PDF, with the PCO open, press the Export Button to download the complete PDF.
    b. Press **Show Workflow** -> **Respond** to open the review workflow.
    c. Select **Response Option:** "Reviewed and Accepted" if accepted otherwise "Revise and Resubmit".
    d. If there are any comments, provide in the "**Workflow Comments/Reason for Response"** text box.
    e. Press **Submit** to return the PCO to CM for processing or corrections.

CM PCO ADMIN PROCESSING – (PREPARE FOR CHANGE ORDER OR ALLOWANCE AUTHORIZATION)

1. Open PCO by either:
    a. **Home Tool** -> "My Open Items" list -> Select PCO Number.
    b. **Commitments Tool**-> Select the associated Contractor Contract Number.
        i. Change Orders Tab -> Scroll Down to Potential Change Orders -> Select PCO Number.
    c. **Reports Tool** -> Potential Change Order Log (Commitment PCO's) (Enhanced) -> Select PCO #.
2. To Process the PCO:
    a. Export the PCO as PDF, with the PCO open, press the Export Button to download the complete PDF.
    b. Review the PCO to confirm:
        i. General Information is correct: PCO #, Revision#, Title, Description, Reference (with RFI/PR #'s).
        ii. Schedule Impact with extension of time to the final date of Substantial Completion. If there is an extension of time, ensure that all parties are aware, and the date is accepted. (In the "Explanation and Recommendation to the Owner" field).
        iii. Cost fields properly show:
            1. Initially submitted pre-negotiated cost (Revision 0) (Should always be greater than final).
            2. Final Cost with Prime Contractor (and Subs) Mark Up/OH&P.
            3. Final Cost without Prime Contractor (and Subs) Mark Up/OH&P.
        iv. All Comment fields correctly show the official history between CM, Architect, and Contractor.
        v. **"Explanation and Recommendation to Owner (By CM/AE):"** Is filled out for:
            1. Record justification of why the Change Order/Allowance is needed.
            2. To be processed as a Change Order or Allowance.
            3. Accepted Dollar Amount.
            4. Accepted Schedule Impact/Extension of Time or indicate no Extension to the Final Substantial Completion Date.
    c. Add the costs to the SOV/Cost Codes: Select "Schedule of Values" Tab -> Edit.
        i. Add a single line item for the Accepted PCO Amount:
            1. Prime Contract Line Item: Not Selected
            2. Cost Code: Select Contractors Cost Code.
            3. Sub Job: If multiple buildings, select cost code for specific building (even if allowance).
            4. Description: "CO #" "(SUBJOB)" "(PCO #R#)" "PCO Title (with PR/RFI#)"
                a. EX: "CO-WC4-01(ES) (PCO-WC4-05R1) Blocking at Windows (RFI-WC4-58)".
                b. 100 Character Limit Recommended.
            5. Cost Type: "All Costs"
            6. Enter Line item: QTY: "1", Unit: "LS", Unit Cost: Accepted Dollar Value.
            7. Press "+Add" then "Save". (Not Save & Email)
    d. Press **Show Workflow** -> **Respond** to open the review workflow.
    e. Select **Response Options:**
        i. "PCO Accepted - To be processed as a Change Order" if Change Order.
        ii. "PCO Accepted - To be processed as an Allowance" if Allowance.
        iii. "Revise and Resubmit" to Return to the CM Superintendent.
    f. Press **Submit** to Close the PCO. See instructions for Processing Change Order or Allowance.

PROCESSING CHANGE ORDERS OR ALLOWANCES

CM Created Change Order or Allowance Authorization (CM ADMIN STEP)

1. Open **Commitments Tool.**
2. Select the associated Contractor Contract Number -> **"+ Create**" -> "**Create Commitment CO**".
3. Sign with DocuSign **check box** to be used if DocuSign is being used, otherwise leave unchecked.
4. Enter the Change Order **Number** and **Revision** as "0". Use Allowance Prefix "AA-" if Allowance.
5. Enter the CO **Title** from PCO SOV Line-Item Description. Include relevant "Proposal Request" Number.
    1. "(SUBJOB)" "(PCO #R#)" "PCO Title (with PR/RFI#)"
    2. Example: "(ES) (PCO-WC4-05R1) Wood blocking at Windows (RFI-WC4-58)".
    3. Change Order Number not to be included in Change Order Title.
    4. 100 Character Limit Recommended.
    b. 100 Character Limit Recommended.
6. Leave **Private** checkbox set to private/checked.
7. Leave **Due Date**, **Invoiced Date**, **Paid Date,** and **Signed Change Order received Date** as blank.
8. Select the Contractor's Signature Contact as the **Designated Reviewer.** (Only one user).
9. Enter a detailed **Description** of the Change Order **including justification** for contract cost change and/or contract time change. This can come from the **"Explanation and Recommendation to Owner (By CM/AE):"** field from the PCO.
10. Leave the **Executed** check box unchecked until all signatures are received.
11. If there is a **Schedule Impact** to the final Substantially Completion Date only, then enter in the number of days delayed. If none, enter "0" Days.
12. Select the Accepted PCO to Add in to **Potential Change Orders** drop down.
13. The general **Attachments** field is reserved for replacement Change Order coversheets with signed sheets. Leave empty until these are received later. If there is a document in this field, it will replace the Procore Form.
14. Add the PCO PDF export, and any additional back up to the **Back Up Attachments** field. To be added behind cover.
15. Update the **Substantial Completion Date** if changed, otherwise enter the previous Substantial Completion Date.
16. Select applicable **To be Processed as: Change Order / Allowance**. (Determines which form is exported).
17. Enter in the accepted "**Total Cost"**, and "**Original Submitted Negotiated Cost: ($)"** (PCO Revision 0 Cost)
18. If Allowance is being processed, fill in Allowance Cost Values #1-6. Confirm all calculations are correct.
19. Press "**Create"** to create the Change Order or Allowance. (Not Distributed for Signature yet.)
20. Export the PDF to **verify** the Change Order or Allowance Authorization is properly assembled.
21. See Processing Allowance Instructions to **Add Allowance onto Contractor's** Invoice SOV.

CM Send Change Order or Allowance Authorization for Signature (CM ADMIN STEP)

Signature Order: Construction Manager-> Architect -> Contractor -> Owner. (Save Executed Document to OneDrive)

If Using Procore's Signature Workflow (No DocuSign, Manual Emails, or Bypass Processes)

1. Upload the CM Signed Coversheet to the Change Order **Attachments Field**.
2. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
3. Press **Respond** to open the review workflow.
4. Select "Reviewed and Accepted" to send to the first Signature Step/First Signature Assignee(s).
5. Press **Submit** to send the Chage Order or Allowance to the next signature party.
6. The Assignee should return the Change Order/Allowance Package with a Signed Coversheet to be swapped with the unsigned Change Order/Allowance.
    a. If the Architect has additional Documents: (Added back, SED Sheets, or owner CO/AA Coversheet), they can be sent to the Construction Manager via the Workflow Attachments.
7. Download the Workflow Attachments (Signed Cover Sheet or Back Up). Re-upload to the Change Order/Allowance **Attachments** field, or **Back Up Attachments** field as applicable, so the CO/AA is updated.
8. Repeat steps above by responding to the workflow after each CM COMPILED SIGNATURE step with "Reviewed and Accepted".
9. Once Change Order/Allowance is Executed with all 4 Signatures, and is in "CM COMPILED SIG. (OWNER)" Step, use response options:
    a. "PCO Accepted - To be processed as a Change Order".
    b. "PCO Accepted - To be processed under Allowance".
    c. "Revise and Resubmit" Response sends it back to the previous step.

If Using DocuSign (No Manual Emails, or Bypass Processes)

1. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
2. Press **Respond** to open the review workflow.
3. Select "Send to DocuSign" response option to set the Procore Workflow Status to DocuSign. Then press "Submit".
    a. If Additional Architect Back Up Documents are needed and not being received through DocuSign, use" Obtain AE CO/AA Back Up Documents" Response Option.
4. "Edit" the Change Order/Allowance, and at the bottom, press "Complete with DocuSign" Button.
5. Once sent, in the DocuSign Bar at the top, press "Edit" to go to DocuSign. (Not the gray Change Order edit button).
6. In DocuSign, continue through Process of setting up signatures, adding recipients, set signing order, view only/receive copy recipients. Templates/Custom Fields can be used to automate this process.
7. Send the Document through for Signature.
8. Once completed in DocuSign, review that the final PDF is correct.
9. Press Show Workflow -> Respond and select response options and then press "submit" to Close the C.O./A.A.
    a. PCO Accepted - To be processed as a Change Order.
    b. PCO Accepted - To be processed under Allowance.

If Using CO/AA Bypass (No DocuSign or Procore Signature workflow)

1. Verify the Change Order or Allowance has been fully executed outside of Procore with all signatures.
2. Edit the Change Order / Allowance and upload the fully executed PDF into the Change Order Attachments Field.
3. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
4. Press **Respond** to open the review workflow. Select Applicable Response options below, then press "submit" to close the C.O./A.A.
    a. CM CO Bypass Approval (ADMIN ONLY)
    b. CM AA Bypass Approval (ADMIN ONLY)

CM Send Change Order or Allowance Authorization for Signature (CM ADMIN STEP)

Signature Order: Construction Manager-> Architect -> Contractor -> Owner. (Save Executed Document to OneDrive)

If Using Procore's Signature Workflow (No DocuSign, Manual Emails, or Bypass Processes)

1. Upload the CM Signed Coversheet to the Change Order **Attachments Field**.
2. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
3. Press **Respond** to open the review workflow.
4. Select "Reviewed and Accepted" to send to the first Signature Step/First Signature Assignee(s).
5. Press **Submit** to send the Chage Order or Allowance to the next signature party.
6. The Assignee should return the Change Order/Allowance Package with a Signed Coversheet to be swapped with the unsigned Change Order/Allowance.
    a. If the Architect has additional Documents: (Added back, SED Sheets, or owner CO/AA Coversheet), they can be sent to the Construction Manager via the Workflow Attachments.
7. Download the Workflow Attachments (Signed Cover Sheet or Back Up). Re-upload to the Change Order/Allowance **Attachments** field, or **Back Up Attachments** field as applicable, so the CO/AA is updated.
8. Repeat steps above by responding to the workflow after each CM COMPILED SIGNATURE step with "Reviewed and Accepted".
9. Once Change Order/Allowance is Executed with all 4 Signatures, and is in "CM COMPILED SIG. (OWNER)" Step, use response options:
    a. "PCO Accepted - To be processed as a Change Order".
    b. "PCO Accepted - To be processed under Allowance".
    c. "Revise and Resubmit" Response sends it back to the previous step.

If Using DocuSign (No Manual Emails, or Bypass Processes)

1. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
2. Press **Respond** to open the review workflow.
3. Select "Send to DocuSign" response option to set the Procore Workflow Status to DocuSign. Then press "Submit".
    a. If Additional Architect Back Up Documents are needed and not being received through DocuSign, use" Obtain AE CO/AA Back Up Documents" Response Option.
4. "Edit" the Change Order/Allowance, and at the bottom, press "Complete with DocuSign" Button.
5. Once sent, in the DocuSign Bar at the top, press "Edit" to go to DocuSign. (Not the gray Change Order edit button).
6. In DocuSign, continue through Process of setting up signatures, adding recipients, set signing order, view only/receive copy recipients. Templates/Custom Fields can be used to automate this process.
7. Send the Document through for Signature.
8. Once completed in DocuSign, review that the final PDF is correct.
9. Press Show Workflow -> Respond and select response options and then press "submit" to Close the C.O./A.A.
    a. PCO Accepted - To be processed as a Change Order.
    b. PCO Accepted - To be processed under Allowance.

If Using CO/AA Bypass (No DocuSign or Procore Signature workflow)

1. Verify the Change Order or Allowance has been fully executed outside of Procore with all signatures.
2. Edit the Change Order / Allowance and upload the fully executed PDF into the Change Order Attachments Field.
3. To submit the created C.O./A.A. to the next step, press **"Start Workflow",** then "**Show Workflow.**"
4. Press **Respond** to open the review workflow. Select Applicable Response options below, then press "submit" to close the C.O./A.A.
    a. CM CO Bypass Approval (ADMIN ONLY)
    b. CM AA Bypass Approval (ADMIN ONLY)

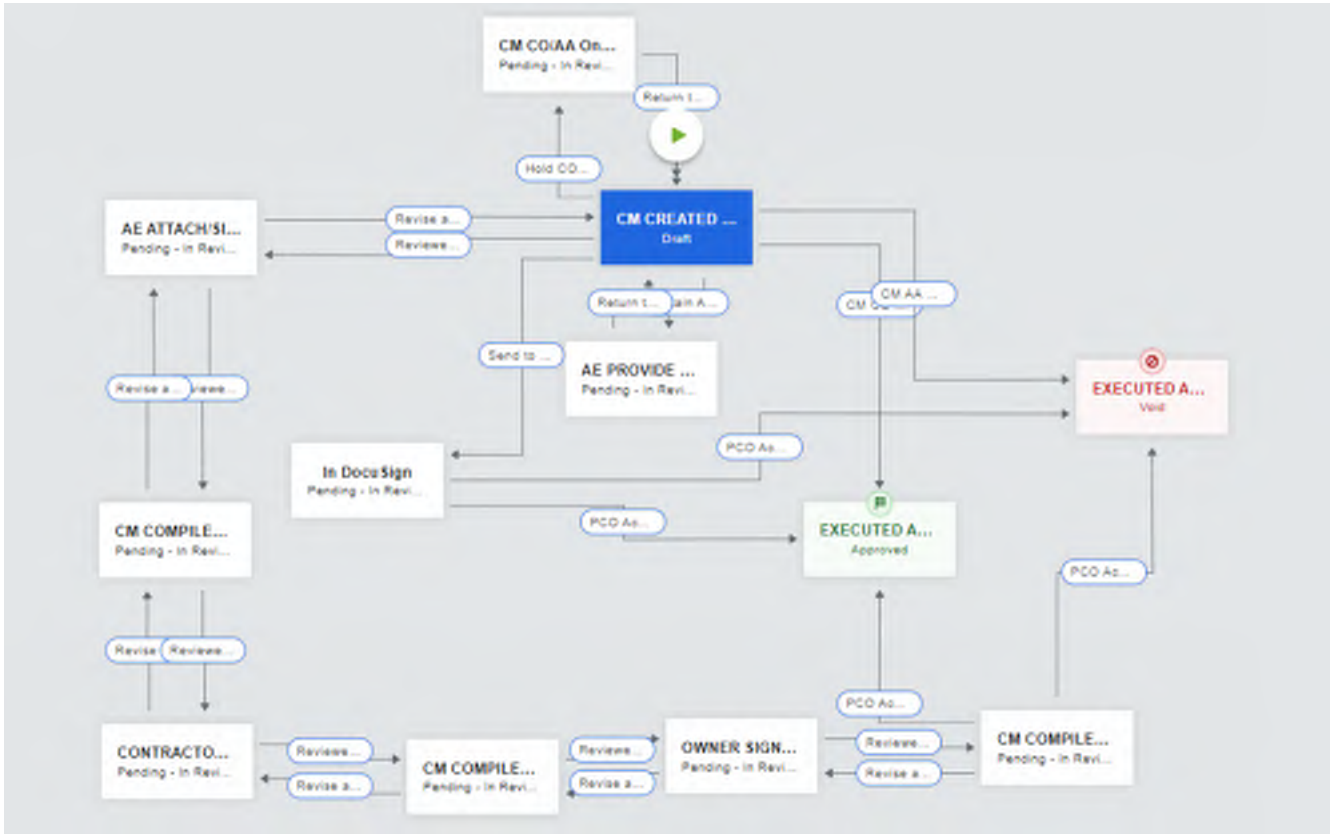
Change Order Workflow:



END OF SECTION 013100.01

SECTION 01 31 15

COORDINATION AMONG MULTIPLE PRIME CONTRACTORS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes preparation of coordination drawings for architectural, structural, mechanical, plumbing, fire protection, fire alarm, lighting, information technology, security, and electrical Work.

B. Related Sections include the following:

1. Division 01 Section "Project Management and Coordination" for administrative provisions for coordinating construction operations.

2. Division 01 Section "Closeout Procedures" for project record drawing requirements.

1.2 DEFINITION AND INTENT

A. The Contract Drawings are diagrammatic only and are not intended to show the alignment, exact physical locations, or configurations of such Work. Performance by the Contractor shall be required to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the intended results. When possible, the Contractor shall take field measurements and verify field conditions and shall carefully compare such field measurements and conditions and other information known to the Contractor with the Contract Documents before commencing coordination drawings.

B. Coordination drawings are drawings prepared by Contractor that superimpose Work of multiple trades involved in the construction process. Coordination drawings indicate systems and components to be installed by the Contractor with the intention to maximize clear height and free area in Ceiling Cavities, Mechanical Rooms, Electrical Rooms, Boiler Rooms, and Plumbing/Water Rooms; to allow for proper and adequate equipment service clearances, minimize space required by shafts and chases and provide the most efficient functioning and use of materials possible while complying with the final performance and finished appearance required by the Contract Documents.

C. Coordination drawings are intended to show the relationship and integration of different construction elements that require coordination during fabrication or installation to fit in the space provided, to function as intended, and to present the intended final finished appearance.

D. The Contractor shall manage the process so that each trade/ sub-contractor provides all required information in a timely manner. Coordination Drawings may be completed on a phased basis so as not to delay the overall project schedule. The CPM Schedule specified elsewhere in Division 01 Section "Construction Progress Documentation" shall include the submission of Coordination Drawings. The same shall demonstrate how the Contractor intends to integrate the submission of Coordination Drawings to suit the overall project schedule.

E. Contractor shall maintain equipment access and pathways as indicated on the Drawings. Floor space in MEP equipment rooms shall be maintained as indicated on the Architectural Drawings. Contractor shall clearly indicate access and floor space to be maintained in coordinated shop drawings submitted to the Owner and Architect as per the Specifications.

F. Definitions:

1. Building Information Model (BIM): A digital representation of physical and functional characteristics of a facility.

2. Coordination Model: Building Information Model(s) that demonstrates and communicates the facility data necessary to procure, fabricate, schedule, or construct the Project.

3. Coordination Report: A report developed to communicate and demonstrate that the facility elements have been properly coordinated and identify areas where issues may still exist.

4. Design Intent Model: Building Information Model(s) that demonstrates and communicates the creative objectives of the designer.

5. Fabrication/Shop Drawing: Drawing generated by the contractor from a Coordination Model based on the contract documents that communicates the information necessary to fabricate facility elements. Fabrication/Shop Drawings typically contain one system and are intended for use of trade personnel to fabricate, assemble, and install facility elements.

6. Facility Breakdown Structure: a system-oriented hierarchical decomposition of a facility into smaller components. Typically, the facility breakdown structure is based on disciplines, trades, described by Master Format.

7. Interference: Spatial conflict between facility elements.

1.3 CONTRACTOR'S USE OF ARCHITECT'S CAD FILES

A. Refer to Division 01 Section "Submittal Procedures" for availability of and use of Architect's CAD Background Drawings.

1.4 COORDINATION RESPONSIBILITIES OF EACH PRIME CONTRACTOR

A. **Each Prime Contractor** is required to engage a **qualified drafting agency** capable of producing coordination drawings and models utilizing various industry standards and file formats including but not limited to: (Revit, AutoCAD, etc.). Each Prime Contractor is responsible for providing their own clash detection process for items of their work and any work shown on the Coordination Model from previous iterations by other Prime Contractors.

B. In **Renovation Construction** (where no new walls or floors are being constructed):

1. Each Contractor is required to provide field verification of all scheduled work to confirm installation fitment within existing conditions.

2. Each Contractor is required to submit coordination drawings depicting items listed in 013115: 3.2. Locations to be referenced using field marked reference points in the existing building in lieu of building column lines.

3. Each Contractor is to provide coordination drawings/models in existing spaces to confirm fitment/access and class detection between other Contractors prior to release of material installation.

4. Contractors providing equipment to be powered by existing power are to verify in field the existing power supplied meets the requirements of the new equipment. The Electrician providing new power for equipment is to provide field verification of existing power conditions with respect to the new equipment and power scheduled on the Contract Drawings/Approved Equipment Submittals.

C. **For <u>ALL</u> Construction: Each Contractor is required to provide a field mark out of their work** to be followed by other Contractors who are to provide openings, penetrations, wiring connections, structural support, trench layout, and any other work needed by a following Contractor. Layout to be based off the approved Shop Drawings generated from the Multi Trade signed off Coordination Model. Any openings/steel support required to be installed shall be marked out on the underside of the Roof Deck by the contractor installing the items requiring the opening/support.

D. The **Mechanical Contractor** will take on the additional responsibility of overseeing the coordination modeling/drawing process and provide additional clash detection reports of all models by other Prime Contractors using the BIM Modeling Software for <u>New Construction Building Work</u>. The Mechanical Contractor is to communicate any issues that arise from other Contractors not fulfilling their obligations to the Construction Manager.

E. The Construction Manager will provide direction and communications between each Prime Contractor and schedule coordination meetings as required.

F. **Coordination Model(s):** Each Contractor is to prepare and submit Coordination Drawings/Model(s) as scheduled on the Project Milestone Schedule. Coordination Model(s) are to be based on the facility breakdown structure of the Contract Drawings

and/or Design Intent Model. Contractors are to perform all work utilizing 3D modeling software in order to facilitate seamless coordination with BIM workflows. All design elements should be produced three-dimensionally in programs that can output file formats supported by Autodesk Navisworks. Coordination Model(s) are to be submitted using Autodesk Navisworks with all disciplines.

1. Coordination Model(s) are to be submitted prior to fabrication, and installation of any element within the area represented within the Coordination Model(s).

2. Fabrication/Shop Drawings and Construction Model(s) are to be integrated into the Coordination Model(s) or otherwise referenced in the Coordination Model(s).

G. Coordination Drawings. Each Prime Contractor is to export Coordination Drawings documents from the BIM authoring application in a (.pdf) for distribution and review by the Construction Manager/Architect/Engineer.

H. Coordination Meetings: Contractors are to attend coordination meetings bi-weekly or as required by the construction manager until the Coordination process is complete. Each Contractor is to provide details of the status of their respective portions of the coordination drawings and provide a list of any current conflicts or clash detection items at each meeting.

I. Coordination Drawing Sequence in **New Construction** (or as directed by the Construction Manager):

1. The Architect **may, when available,** provide the Design Intent Model (.RVT) but does not alleviate the responsibility of each Contractor to provide their own self-generated model.

2. The General Contractor shall provide the structural coordination model/coordination drawing depicting the Structural Elementals of the building (Steel, Concrete, Masonry, Floors, Roofs.

3. The General Contractor shall add to the coordination model, separate layers for the Architectural Contract work for partitions, walls, ceilings, soffits and other items as applicable. The General Contractor shall self-perform their own clash detection between the Structural and Architectural Items prior to sending the model to the next Contractor.

4. The coordination model shall then be sent to the Mechanical Contractor who will be designated the responsible Contractor to incorporate the models of the following trades and provide dedicated clash detection of all Models. The Mechanical Contractor will then detail the Mechanical items (Piping, Ductwork, and Equipment) and self-perform clash detection between Mechanical and General Contractor's Items. Mechanical Contractor to resolve clashes prior to passing the model to the Plumbing Contractor.

5. The Plumbing Contractor will then detail the Plumbing items onto the coordination model, self-perform their own clash detection, and then return to the Mechanical Contractor for final Clash detection.

6. The Electrical Contractor will then detail the Electrical items onto the coordination model, self-perform their own clash detection, and then return to the Mechanical Contractor for final Clash Detection.

7. Any other specialty Contractor will then detail their respective new work items onto the model and then return to the Mechanical Contractor for Clash Detection.

1.5 SUBMITTALS

A. Coordination Drawings are not a replacement for shop drawings specified in the technical specifications or the Record Drawings required in Division 01. Once the Coordination model is complete and all conflicts are resolved, each Contractor is responsible to submit Shop Drawings of their respective work for final approval. Circle and clearly note deviations from Contract Documents with reason for deviation stated. Contractor failure to identify deviations from the Contract Documents does not alleviate the Contractors responsibility to provide installations per the Contract Documents.

B. Coordination Clash Detection Report:

1. Prepare and submit a written Coordination Report generated from the Coordination Model(s) prior to fabrication, and installation of any facility element within the area represented within the Coordination Model(s). Develop Coordination Reports identifying outstanding issues after the development of the Coordination Model(s), including but not limited to:

Clashes:

Itemize number of clashes.

Clash Category

Describe clashes.

Describe the resolution of clashes and other conflicts.

Design changes.

Differing site conditions.

Hazardous, Maintenance Accessibility, or Safety related issues.

2. The report shall be organized by CSI Master Format 2016 specification section or by trade.

3. The issues identified within the Coordination Clash Detection Report are to be addressed by the Contractor in consultation with the Construction Manager and the Architect / Engineer prior to installation of facility elements. The Construction Manager may direct the Contractor to submit the issues in the Coordination Clash Detection Report as an RFI to the Architect/Engineer.

4. The Contractor is solely responsible for the cost of remedying any clashes that could have been discovered during the clash detection process.

1.6 PROJECT CONDITIONS

A. Maintain marked up set of coordination drawings at Project site available for reference by Owner and Architect.

B. Failure to submit coordination drawings or indicate work to be installed on coordination drawings will result in no changes to contract sum for necessary corrections to uncoordinated work not shown in coordination drawings.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PREPARATION OF COORDINATION DRAWINGS IN NEW CONSTRUCTION.

A. The intent of the Coordination Model(s) is to communicate the necessary information to construct the facility including size, location, and arrangement of both existing to remain and new elements and to incorporate the as-built conditions.

B. Develop Coordination Model(s) based upon Contract Documents, Design Intent Model(s), and verified existing conditions.

C. Coordination Model(s) are to have a consistent origin that can be referenced to a real-world datum or benchmark.

D. Prepare coordination drawings for Project using BIM: Revit or similar coordination documentation overlay drawings indicating coordination of the project.

E. The Construction Manager will review and direct coordination responsibilities for the preparation of the coordination drawings.

1. The Construction Manager will direct each Prime Contractor for the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components.

3.2 INFORMATION REQUIRED IN COORDINATION DRAWINGS/MODEL(S) –

The coordination Model(s) will include, but not be limited to, the following elements with all necessary intelligence included to produce plans, sections, elevations, riser diagrams, and schedules as applicable:

Locations (center points and edges of coordination element) to be depicted with locations referencing Column Lines and heights referencing Above Finish Floor Heights.

A. Structural Work Information Required in Coordination Drawings by General Construction Contractor:

1. All Structural Steel and Miscellaneous Steel.
2. Concrete, Masonry, and Foundation Walls. (Depict Sleeves and Structural Support for all utilities, piping, and conduit passing through the concrete/masonry walls).
3. Floor Assembly (Including Slab edge locations and locations of sleeves dimensioned from building lines and floor lines).
4. Roof Assembly (Include Roof Drains depicted and coordinated with Tapered insulation).
5. Structural Support for Roof Mounted Equipment by this Contract and Other Prime Contractors.
6. Structural Support for Floor/Roof Opening and sleeve locations including required openings not indicated on Contract Documents.

B. Architectural Work Information Required in Coordination Drawings by General Construction Contractor:

1. Exterior Wall Layout for Building enclosure.
2. Interior Wall and Partition Layout. Incorporate Concrete and Masonry Walls.
3. Depict Wood blocking and Access Doors.
4. Doors, including door swing area.
5. All Ceilings Systems including support for support system. Depict final ceiling grid layout for Acoustical Ceiling.

C. Plumbing Work Information Required in Coordination Drawings by Plumbing Construction Contractor:

1. Sizes, bottom elevations, locations of above ground piping with insulation thickness included. Include Piping Supports and Hangers.

2. Sizes, bottom elevations, locations of underground piping. Indicate Point of Connection for Site Utility Piping Connections and sleeve locations through building foundation/exterior walls.

3. Support of all roof-mounted plumbing piping and equipment.

4. Depict all Plumbing Valves, Drains, Vents Specialty Items.

5. Required space to install, service, access, and maintain all plumbing mechanical items and systems.

6. Sizes and locations of Floor Drains, Floor Sinks, cleanouts, and any other items embedded in the Floor.

7. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

8. Wood Blocking Locations required to support the work of this trade (for Plumbing Fixtures and other wall mounted Plumbing items.

9. Provide Sizes and Locations of concrete equipment pads for equipment supplied under this contract.

D. Mechanical Work Information Required in Coordination Drawing by Mechanical Construction Contractor

1. Sizes and bottom elevations of ductwork, piping with insulation thickness, flanges, supports, and hangers included.

2. Depict all Volume, Motorized, Fire Dampers, and Ductwork Access Doors.

3. Sizes, bottom elevations, locations of above ground piping with insulation thickness included. Include Piping Supports and Hangers.

4. Depict all HVAC Valves, Drains, Vents Specialty Items.

5. Indicate Size and Layout of all floor/roof openings and sleeves for this contract. Indicate size of duct/pipe chase partition sizes.

6. Indicate Size and Layout of all Interior/Exterior Wall Openings and Sleeves for this contract.

7. Locations for support of all roof-mounted HVAC piping, ductwork, and equipment. (Depict all HVAC Equipment: Sizes, support, layout, access/service area, and Provide HVAC roof curb sizes and locations including Pipe Portals, Duct Curbs, Roof Rails, and other Roof Top Items.)

8. Provide Sizes and Locations of concrete equipment pads for equipment supplied under this contract.

9. Power and Wiring Connection Locations for Equipment.

10. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

11. Wood Blocking Locations required to support the work of this trade.

E. Electrical Work Information Required in Coordination Drawings by Electrical Construction Contractor (including telecommunications, data, security, lighting, and fire alarm systems scoped under the Electrical Contract):

1. Runs of vertical and horizontal conduits 1-1/4-inch diameter and larger, and all cable trays, indicate bottom and sizes of horizontal conduit and cable trays.
2. Sizes, bottom elevations, locations of underground conduits. Indicate Point of Connection for Site Utility Conduit Connections and sleeve locations through building foundation/exterior walls.
3. Location of pull boxes and junction boxes, dimensioned from column centerlines. All to be placed in accessible locations.
4. Light fixture locations and sizes.
5. Wall and Ceiling Mounted Device Layout.
6. Panelboard, switchboard, transformer Layout.
7. Depict all roof mounted conduits/supports and equipment under this trade. (Coordinate with other Contractors to share pipe portals and equipment electrical raceways.)
8. Required space to install, service, access, and maintain all electrical items and systems.
9. Power and Wiring Connection Locations for Equipment.
10. Provide Sizes and Locations of concrete equipment pads for equipment supplied under this contract.
11. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.
12. Wood Blocking Locations required to support the work of this trade (Including Door Holders and other surface mounted equipment).

F. Fire Protection System Information Required in Coordination Drawings by Contractor responsible for providing Fire Protection:

1. Locations of standpipes, valves, mains piping, branch lines, pipe drops, building entry piping, Inspection Test Locations, Fire Protection Specialty Piping, and sprinkler heads.
2. Bottom elevation of main and branch lines, including Hangers and Supports.
3. Wood Blocking Locations required to support the work of this trade.
4. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

G. Building Automation Controls Work Information Required in Coordination Drawings by Contractor Responsible for providing Building Automation Controls.

1. Thermostats and wall/ceiling mounted controls devices.
2. Wall Mounted Panels and controllers.
3. Wood Blocking Locations required to support the work of this trade.
4. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

H. Casework and Furniture Work Information Required in Coordination Drawings by Contractor Responsible for providing Casework and Furniture.

1. All Casework shown on Contract Drawings.
2. Depict all connections for Electrical and Communications work.
3. Depict all Plumbing Connections and Cut outs for Plumbing items to be installed in casework.
4. Depict all other connections by other Contractors to be installed in casework.
5. Wood Blocking Locations required to support the work of this trade.

I. Telecommunication/Low Voltage Work Information Required in Coordination Drawings by Contractor Responsible for providing Telecommunication/Low Voltage Work.

1. Wall Mounted Devices.
2. Sleeve Locations for all Floor/Roof Openings.
3. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

J. Security Work Information Required in Coordination Drawings by Contractor Responsible for providing Telecommunication/Low Voltage Work.

1. Wall mounted panels and controllers.
2. Wall mounted devices.
3. Wood Blocking Locations required to support the work of this trade.

K. Equipment Work Information Required in Coordination Drawings by Contractor Responsible for providing Equipment Work.

1. Wall and Ceiling mounted devices, panels, and controllers.

2. Access Door locations required to support the work of this trade. Size, Layout, and type to be indicated.

3. Wood Blocking Locations required to support the work of this trade.

4. Power and Wiring Connection Locations for Equipment.

3.3 SITEWORK COORDINATION

A. The Contractor responsible for providing Sitework shall prepare Coordination Drawings depicting all sitework and utility work that is to be coordinated between other Contractors.

B. Items to be provided the following in the Coordination Drawings/Model:

1. Utilities to be shown by the Sitework Contractor include but not limited to: Storm Piping, Footing Drains, Sanitary/Sewer Piping, Watermain piping, Fire Protection Piping, Concrete Structures, Electrical and Low Voltage Conduit, Conduit Duct Banks, Concrete Structures. Indicate Tops/Bottoms, and sizes of utilities.

2. Depict Utility Point of Connection locations.

3. Sitework Contractor to confirm heights/depths of utilities will be at correct elevations with respect to the finished grade and finished sitework.

4. Provide drawings coordinating concrete sidewalks and stairs with connection to the building or other existing concrete pathway connections.

3.4 ELECTRICAL POWER AND WIRING COORDINATION

1. All Prime Contractor's providing equipment and devices to be wired and connected to by the Electrician shall provide the contractor designated of wiring the equipment/devices with wiring diagrams and power requirements.

2. The Electrician shall not release or install materials to power any equipment until the electrician has reviewed and confirmed the power requirements of the engineer approved equipment submittal submitted by the equipment installer and verified the power supplied from the panel/breaker will meet the requirements of the approved equipment.

3. The Equipment supplier will indicate on the coordination drawings the proposed locations of any wall or ceiling devices.

4. The Contractor furnishing Electrified Door Hardware, or Doors/Frames scheduled to receive electrified Door hardware or Door Controls/Security shall provide in new storefronts/door frames; internal raceway and drag wire from all electrified hardware devices to a concealed location above the ceiling in the building. The Door/Frame installer shall also notify the Construction Manager and Contractor

responsible for providing hardware wiring when storefront/door frames installation is to be scheduled prior to wiring installation.

3.5 CONFLICTS IN COORDINATION DRAWINGS

A. The issues identified within the Coordination Clash Detection Report are to be addressed by the Contractor in consultation with the Construction Manager and the Architect / Engineer prior to installation of facility elements. The Construction Manager may direct the Contractor to submit the issues in the Coordination Clash Detection Report as an RFI to the Architect/Engineer.

1. Each Prime Contractors shall revise their respective portions of the Coordination Drawings to eliminate the collisions and interferences identified.

2. Each Prime Contractor shall determine that all work can be installed without interference.

3. Each Prime Contractor shall approve the revised Coordination Drawings in writing indicating approval of installation coordination and clearances.

3.6 CONTRACTOR COORDINATION PARTICIPATION REQUIREMENT

A. All Contractors are required to provide information and fulfill coordination obligations identified in this specification section.

B. Failure to submit coordination drawings or indicate work to be installed on coordination drawings will result in no changes to contract sum for necessary corrections to uncoordinated work not shown in coordination drawings. Additional costs by other Contractors to change other Contractors conflicting work if required will be the responsibility of the Contractor that failed to provide their obligated coordination responsibilities.

C. If a contractor fails to perform coordination services under this specification section when scheduled and within 7 days upon notice and request by the Construction Manager, in which results in a delay to another contractors scheduled release of work, then the Owner retains the right to hire an outside detailing services/surveying services to review the work of the Contract and provide coordination services to other Contractors and deduct costs from the Contractor who has failed to provide the contractual scheduling services. If the Construction Manager must perform these services on behalf of the Contractor after the Contractor has failed to provide the required coordination information/services after notification and allotted time, then the Contractor will be required to pay the Construction Manager $125.00 per hour via deduct change order to provide the coordination administrative services on behalf of the Contractor.

END OF SECTION 013115

SECTION 01 32 00

CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Preliminary Construction Schedule.
2. Contractor's Construction Schedule.
3. Submittals Schedule.
4. Daily construction reports.
5. Material location reports.
6. Field condition reports.
7. Construction photographs.

1.2 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

1. Critical activities are activities on the critical path. They must start and finish on the planned early start and finish times.
2. Predecessor activity is an activity that must be completed before a given activity can be started.

B. Event: The starting or ending point of an activity.

C. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.

D. Major Area: A story of construction, a separate building, or a similar significant construction element.

E. Milestone: A key or critical point in time for reference or measurement.

1.3 SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with

project names and addresses, names and addresses of architects and owners, and other information specified.

B. Pre-Construction Photographs: Contractor's to submit to Procore Preconstruction photos as a Record Submittal. Refer to Selective Demolition Specification.

C. Construction Photographs: Contractors to take daily progress photos, as well as completion photos of all areas as they are completed and turned over to the owner. Submit date/time-stamped digital images on Procore within seven (7) days of taking photographs.

1.4 COORDINATION

A. Coordinate Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from parties involved.

2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

B. Auxiliary Services: Cooperate with photographer and provide auxiliary services requested, including access to Project site and use of temporary facilities including temporary lighting.

PART 2 PRODUCTS

2.1 SUBMITTALS SCHEDULE

A. Preparation: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery when establishing dates.

1. Submittal Schedule to be submitted on form specified by the Project or as directed by Construction Manager.

2. Submittal Schedule items to be broken down into a list by individual submittal document. **All expected individual closeout submittals** to also be included in the Submittal Schedule prior to approval. Closeout Submittals may include but not limited to: Maintenance Manuals, Record Drawings/Specifications, Warranties, Test Reports, Training Documentation, Maintenance Materials.

3. Submittals to be grouped into the following types: Product Information/Product Data, Shop Drawings, Samples/Mockups, and Closeout Documents: Maintenance Manuals, Record Drawings/Specifications, Warranties, Test Reports, Training Documentation, Maintenance Materials; and type "other".

4. If the Contractor fails to provide a detailed submittal schedule by due date on Milestone Schedule or within 14 days upon request by the Construction Manager, then the Owner retains the right to hire outside services to review the specifications and generate the initial list of expected submittal and closeout items and deduct costs from the Contractor who has failed to provide the contractual submittal schedule. If the Construction Manager must perform these services on behalf of the Contractor after the Contractor has failed to provide the required submittal schedule after notification and allotted time, then the Contractor will be required to pay the Construction Manager $125.00 per hour via deduct change order to provide these administrative services on behalf of the contractor.

B. Need to include Closeout Submittals (Record Drawings/Specs, O&M's

1. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.

2. Within thirty (30) days after Notice to Proceed:
   a. Structural Steel,
   b. Soil proctors,
   c. Concrete mix designs,
   d. Billet steel shop drawings,
   e. HVAC components,
   f. Electrical panels,
   g. and all other submittals required to commence work and long-lead items critical to job schedule
   h. No payment will be made to contractor until complete schedule of submittals has been received and accepted by owner.

3. Balance of Submittals - within **sixty (60) days** after Notice to Proceed

   a. Time Limit Excludes: Closeout Documents due no later 2 weeks after Substantial Completion.

   b. Time Limit Excludes: Coordination Drawings due as indicated per Project Milestone Schedule.

4. Upon approval by the Architect, non-critical submittals may be transmitted later.

C. Prepare a written schedule (or log) showing each specification item to be submitted, projected date into architect for review, lead time for procurement and required on job date.

D. Distribution: Following response to the initial submittal, print and distribute copies to the Construction Manager for distribution to the Architect, Owner, and other parties required to comply with submittal dates indicated. Post copies in the Project meeting room and field office.

1. When revisions are made, distribute to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in construction activities.

E. Schedule Updating: Revise the submittal schedule after each meeting or activity where revisions have been recognized or made. Issue the updated schedule concurrently with the report of each meeting.

2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

A. Contractor Construction Project Schedule: Each Prime Contractor is required to engage a qualified CPM Construction Scheduling Service to generate (or provide equivalent self-performed scheduling services with CM approval) and submit a construction schedule based on the dates of the Contract Milestone Schedule. See Construction Progress Documentation / Schedule Specifications for additional requirements.

1. Each Contractor's construction schedule is to be submitted for review and comment no later than 3 weeks after a Notice to Proceed for the work is issued.

2. Contractor Project Schedules are to be assembled in compliance with the Contract Milestone Schedule.

3. For the initial Construction Project Schedule, the Project Milestone Schedule is to be used as a basis for predecessor activities.

4. If there is schedule information pending from other Contractors to schedule an activity on the schedule, the Contractor shall indicate on the schedule the duration and sequence of the activity and further indicate the item as pending by others.

5. Include notes regarding activities that may impact other Contractor's activities.

6. Each Contractor has the responsibility to respond to questions from other Contractors with regards to the sequence and completion dates/durations of activities.

7. An updated Project schedule is to be included with each Application for Payment.

8. If the Contractor fails to provide a detailed construction schedule within 14 days upon request by the Construction Manager, then the Owner retains the right to hire CPM Scheduling Services to review the work of the Contract and generate detailed schedule information to perform the work of the contract to meet the date of substantial completion and deduct costs from the Contractor who has failed to provide the contractual scheduling services. If the Construction Manager must perform these services on behalf of the Contractor after the Contractor has failed to provide the required schedule after notification and allotted time, then the Contractor will be required to pay the Construction Manager $125.00 per hour via deduct change order to provide the scheduling administrative services on behalf of the Contractor.

B. Master Construction Schedule: The General Construction Work Contract (Contract #1) is required to review all Construction Schedules submitted by the other Contractors and entities performing work on the Project and combine into a complete Master construction schedule that has been coordinated with all other work on the Project. The Master Construction Schedule shall be submitted no later than 2 weeks after all other Contractors have submitted their respective Construction Schedules.

1. If the Critical Path of the projected Substantial Completion exceeds the Substantial Completion date of the Milestone Schedule or other dates listed in the Milestone Schedule, then the contractor designated as the entity responsible for producing the master schedule is to identify the critical path items and notify the Construction Manager. If the conflict cannot be resolved, then a meeting is to be scheduled between each Contractor to review the resolution options which may require Contractors to provide additional Crews/Manpower.

2. Multiple Crews: To maintain the project schedule, each Prime Contractor is to provide multiple crews. Each crew is to be furnished with its own supervision, cranes, scaffold, and other means necessary to maintain the Project Schedule.

C. 2 Week Look Ahead Schedule: Each Contractor will be required to submit a detailed 2 week look ahead schedule that indicates which activities are scheduled each day for all periods each contractor is performing any amount of work.

D. Bar-Chart Schedule: Prepare a fully developed, horizontal bar-chart-type, contractor's construction schedule. Submit within 3 weeks days after Notice to Proceed is issued.

1. Provide a separate time bar for each significant construction activity. Show ordering and delivery times of all long-lead equipment and materials. Provide a continuous vertical line to identify the first working day of each week. Use the same breakdown of units of the Work as indicated in the "Schedule of Values".

2. Within each time bar, indicate estimated completion percentage in 10 percent increments. As Work progresses, place a contracting mark in each bar to indicate Actual Completion.

3. Prepare the schedule on a sheet, or series of sheets, of stable transparency, or other reproducible media, of sufficient width to show data for the entire construction period.

4. Secure time commitments for performing critical elements of the Work from parties involved. Coordinate each element on the schedule with other construction activities; include minor elements involved in the sequence of the Work. Show each activity in proper sequence. Indicate graphically the sequences necessary for completion of related portions of the Work.

5. Coordinate the Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittal Schedule, progress reports, payment requests, and other schedules.

6. Indicate completion in advance of the date established for Substantial Completion. Indicate Substantial Completion on the schedule to allow time for the Architect's procedures necessary for certification of Substantial Completion.

E. Work Stages: Indicate important stages of construction for each major portion of the Work, including submittal review, testing, and installation.

F. Cost Correlation: At the head of the schedule, provide a cost correlation line, indicating planned and actual costs. On the line, show dollar volume of Work performed as of the dates used for preparation of payment requests.

1. Refer to Division 1 Section "PAYMENT PROCEDURES" for cost reporting and payment procedures.

G. Distribution: Following response to the initial submittal, print and forward copies to the to the Architect, Owner, subcontractors, and other parties required to comply with scheduled dates. Post copies in the Project meeting room and temporary field office.

1. When revisions are made, distribute to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in construction activities.

H. Schedule Updating: Revise the schedule after each meeting, event, or activity where revisions have been recognized or made. Issue the updated schedule concurrently with the report of each meeting.

I. A project schedule is being specified, and all Prime Contractors shall comply with this schedule. The project schedule requires that the phases of the project be substantially complete by the dates indicated in the Construction Manager's milestone construction schedule included at the end of this section.

J. The owner reserves the right to adjust the project schedule from time to time during construction tom mitigate unavoidable problems and insure that the project completion date is achieved. Prime contractors shall comply with the adjusted Project Schedule without additional costs.

K. The milestone schedule is included at the end of this section.

L. Phasing of the work: The phasing plan specifies detailed Phasing requirements that must be followed by contractors for completion of work. The phasing plan is shown on the drawings.

2.3 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site and submit duplicate copies to the Architect at weekly intervals:

1. List of subcontractors at Project site.

2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. High and low temperatures and general weather conditions.
5. Accidents.
6. Meetings and significant decisions.
7. Unusual events (refer to special reports).
8. Stoppages, delays, shortages, and losses.
9. Emergency procedures.
10. Orders and requests of authorities having jurisdiction.
11. Change Orders received and implemented.
12. Construction Change Directives received.
13. Services connected and disconnected.
14. Equipment or system tests and startups.
15. Partial Completions and occupancies.
16. Substantial Completions authorized.

B. Material Location Reports: At weekly intervals, prepare a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.

C. Field Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare a detailed report. Submit with a request for information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

D. Submittal of Daily Log of Construction Activities

1. Deliver a copy of the daily logs to the construction manager's site office at the end of every fifth day. Failure to do so will result in the owner withholding progress payments until the logs are submitted to date requested or owed.

2.4 PHOTOGRAPHIC MEDIA

A. Digital Images: Provide images in JPEG format, with minimum sensor size of 1.3 megapixels.

PART 3 EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one (1) week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the work progresses, indicate the Actual Completion percentage for each activity.

3.2 CONSTRUCTION PROGRESS PHOTOGRAPHS

1. All Prime Contractors are required to take Date and Time Stamped Preconstruction Photographs of all work areas prior to scheduling any work onsite:
    a. Indicate locations on photographs as needed to identify photograph location.
    b. Show existing conditions of all areas that might be misconstrued as damage caused by selective demolition operations. Submit to Construction Manager before Work begins.
2. All Prime Contractors are required to take daily progress photographs (Date and Time Stamped) of the work being completed under their respective contract.
    a. Indicate locations on photographs as needed to identify photograph location.
3. All Prime Contractors are required to take Date and Time Stamped "Final Photographs" of all completed work and completed work areas. The Contractor is required to protect installation of new work until these photographs are taken. Restore work that has been damaged due to lack of protection prior to Final Photographs being taken.
    a. Indicate locations on photographs as needed to identify photograph location.

3.3 CONSTRUCTION PROFESSIONAL PHOTOGRAPHS (BY GENERAL CONTRACTOR)

A. Photographer: Engage a qualified photographer to take construction photographs.

B. Date Stamp: Unless otherwise indicated, date and time stamp each photograph as it is being taken so stamp is integral to photograph.

C. Preconstruction Professional Photographs: Before starting construction, take four color photographs of Project site and surrounding properties from different vantage points, as directed by Architect. Show existing conditions adjacent to property.

D. Periodic Construction Professional Photographs: Take four color photographs monthly, coinciding with cutoff date associated with each Application for Payment. Photographer shall select vantage points to best show status of construction and progress since last photographs were taken.

1. Field Office Prints: Retain one set of prints of periodic photographs in field office at Project site, available at all times for reference. Identify photographs the same as for those submitted to Architect.

E. Final Completion Construction Professional Photographs: Take eight color photographs after date of Substantial Completion for submission as Project Record Documents. Architect will direct photographer for desired vantage points.

MILESTONE CONSTRUCTION SCHEDULE
(TO BE PROVIDED AS AN ADDENDUM)

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 01 40 00

QUALITY REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.

2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.

3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

1.2 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.

C. Mockups: Full-size, physical assemblies that are constructed on-site. Mockups are used to verify selections made under sample submittals, to demonstrate aesthetic effects and, where indicated, qualities of materials and execution, and to review construction, coordination, testing, or operation; they are not Samples. Approved mockups establish the standard by which the Work will be judged.

D. Laboratory Mockups: Full-size, physical assemblies that are constructed at testing facility to verify performance characteristics.

E. Preconstruction Testing: Tests and inspections that are performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.

F. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with industry standards.

G. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.

H. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

I. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

J. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1. Using a term such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to tradespeople of the corresponding generic name.

K. Experienced: When used with an entity, "experienced" means having successfully completed a minimum of five previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.3 CONFLICTING REQUIREMENTS

A. General: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to Architect for a decision before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.4 SUBMITTALS

A. Qualification Data: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

B. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Description of test and inspection.
3. Identification of applicable standards.
4. Identification of test and inspection methods.
5. Number of tests and inspections required.
6. Time schedule or time span for tests and inspections.
7. Entity responsible for performing tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

C. Reports: Prepare and submit certified written reports that include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, and telephone number of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents,

established for compliance with standards and regulations bearing on performance of the Work.

1.5 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this Article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

C. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.

F. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

1. Requirement for specialists shall not supersede building codes and regulations governing the Work.

G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 548; and with additional qualifications specified in individual Sections; and where required by authorities having jurisdiction, that is acceptable to authorities.

1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.

2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.

H. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect

installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:

1. Contractor responsibilities include the following:

   a. Provide test specimens representative of proposed products and construction.

   b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.

   c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.

   d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.

   e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.

   f. When testing is complete, remove test specimens, assemblies, mockups, and laboratory mockups; do not reuse products on Project.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

J. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.

2. Notify Architect seven days in advance of dates and times when mockups will be constructed.

3. Demonstrate the proposed range of aesthetic effects and workmanship.

4. Obtain Architect's approval of mockups before starting work, fabrication, or construction.

   a. Allow seven days for initial review and each re-review of each mockup.

5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

6. Demolish and remove mockups when directed, unless otherwise indicated.

1.6 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.

1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.

2. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.

B. Tests and inspections are explicitly assigned to the Owner.

C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 1 Section "Submittal Procedures."

D. Retesting/Reinspecting: Regardless of whether original tests or inspections were Manufacturer’s responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

E. Testing Agency Responsibilities: Cooperate with Architect and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.

2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.

3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.

4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.

5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.

6. Do not perform any duties of Contractor.

F. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.

2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

H. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within 30 days of date established for the Notice to Proceed.

1. Refer to Specification section 01450 for the list of required inspections.
2. Distribution: Distribute schedule to Owner, Architect, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.7 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Owner will engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, and as follows:

1. Notifying Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
2. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
3. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
4. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
5. Retesting and reinspecting corrected work.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 ACCEPTABLE TESTING AGENCIES

A. Any agencies which has the proper qualifications and certifications to perform the test and or inspection.

3.2 TEST AND INSPECTION LOG

A. Prepare a record of tests and inspections. Include the following:

1. Date test or inspection was conducted.

2. Description of the Work tested or inspected.

3. Date test or inspection results were transmitted to Architect.

4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and modifications as they occur. Provide access to test and inspection log for Architect's reference during normal working hours.

3.3 REPAIR AND PROTECTION

A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Specification Sections. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible.

2. Comply with the Contract Document requirements for Division 1 Section "Cutting and Patching."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 014000

SECTION 01 41 00

REGULATORY REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. This section includes: "**Uniform Safety Standards for Maintenance Projects"** for maintaining a Certificate of Occupancy during construction.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 GENERAL REQUIREMENT

A. The occupied portion of any village building shall always comply with the minimum requirements necessary to maintain a certificate of occupancy.

3.2 HAZARDOUS BUILDING MATERIALS

A. Surfaces that will be disturbed during renovation or demolition have been tested for lead and asbestos. Results of the testing are available, upon request, from the Owner.

3.3 GENERAL SAFETY AND SECURITY STANDARDS FOR CONSTRUCTION PROJECTS.

A. General safety and security standards for construction projects include the following:

1. All construction materials shall be stored in a safe and secure manner.

2. Fences around construction supplies or debris shall be maintained.

3. Gates shall always be locked unless a worker is in attendance to prevent unauthorized entry.

4. During exterior renovation work, overhead protection shall be provided for any sidewalks or areas immediately beneath the work site or such areas shall be fenced off and provided with warning signs to prevent entry.

5. Workers shall be required to wear photo-identification badges at all times for identification and security purposes while working at occupied sites.

B. The Contractor will prepare a plan detailing how exiting required by the applicable building code will be maintained during construction. The plan shall indicate temporary

construction required to isolate construction equipment, materials, people, dust, fumes, odors, and noise during the construction period. Temporary construction details shall meet code-required fire ratings for separation and corridor enclosure. At a minimum, required exits, temporary stairs, ramps, exit signs, and door hardware shall be provided at all times.

3.4 CONTROL OF CHEMICAL FUMES, GASES AND OTHER CONTAINMENTS DURING CONSTRUCTION

A. The contractor shall be responsible for the control of chemical fumes, gases, and other contaminates produced by, including but not limited to, welding, gasoline or diesel engines, roofing, paving, or painting, to ensure they do not enter occupied portions of the building or air intakes.

1. Contractors shall provide a plan indicating how and where welding, gasoline engine, roofing, paving, painting or other fumes will be exhausted from the work site. Contractors shall provide all temporary means to assure that fresh air intakes do not draw in such fumes.

2. If any portion of the work will generate toxic gases that cannot be contained in an isolated area, the work shall be done when school classes and programs are not in session. The contractor shall include costs associated with this requirement in his bid. The building shall be properly ventilated and, the material shall be given proper time, as recommended by the manufacturer, to cure "off-gas" before re-occupancy.

3. The contractor shall maintain all manufacturers' Material Safety Data Sheets (MSDS) at the site for all products used in the project. Copies of the MSDS sheets shall be given to the Architect and to the School District. MSDS sheets shall be provided to anyone who requests them.

3.5 CONTROL OF OFF-GASSING DURING CONSTRUCTION

A. The General Work Contractor shall be responsible to ensure that activities and materials which result in "off-gassing" of volatile organic compounds such as glues, paints, furniture, carpeting, wall covering, drapery, etc. are scheduled, cured or ventilated in accordance with manufacturers recommendations before a space can be occupied.

1. Contractor shall provide, in their schedules for work of the construction, proper time for "off-gassing" or volatile organic compounds introduced during construction before occupancy is allowed. Specific attention is warranted for activities including glues, adhesives, paint, furniture, carpeting, wall coverings, and drapery. Manufacturers shall be contacted to obtain information regarding appropriate temperatures and times needed to cure or ventilate the product during use and before safe occupancy of the space can be assured. The contractor shall include the above-mentioned information and shall clearly highlight the information, as part of the shop drawing submittal.

2. Building materials or furnishings which "off-gas" chemical fumes, gases, or other contaminants shall be aired out in a well ventilated heated warehouse before it is brought to the project for installation or, the manufacturer's recommended "off-gassing" periods must be scheduled between installation and use of the space.

3. The contractor shall maintain all manufacturers' Material Safety Data Sheets (MSDS) at the site for all products used in the project. Copies of the MSDS sheets shall be given to the Architect and to the School District. MSDS sheets shall be provided to anyone who requests them.

3.6 ASBESTOS CONTAINING BUILDING MATERIALS

A. Large and small asbestos abatement projects as defined by 12NYCRR56 shall not be performed while the building is occupied. The term "building", as referenced in this section, means a wing or major section of a building that can be completely isolated from the rest of the building with sealed non combustible construction. The isolated portion of the building must contain exits that do not pass through the occupied portion and ventilation systems must be physically separated and sealed at the isolation barrier.

B. Exterior work such as roofing, flashing, siding, soffit or site work may be performed on occupied buildings provided proper variances are in place as required, and complete isolation of ventilation systems and at windows is provided. Care must be taken to schedule work so that classes are not disrupted by noise or visual distraction.

C. For clearance sampling, the air sampling technician shall provide aggressive air sampling per Rule 56 and as follows: First direct the exhaust of a leaf blower, against all walls, ceilings, floors, ledges, and other surfaces in the work area. Continue agitation for at least five minutes per every 1,000 sf of floor space. Following this aggressive agitation, the air-sampling technician shall use at least one 20-inch fan per 10,000 cubic feet of work area space for continuous agitation. The fan shall be operated on low speed and pointed toward the ceiling. Sampling pumps shall be started after the fans are started and stopped before the fans are stopped.

1. Samples shall be logged on a permanently bound logbook at the laboratory. No whiteout will be used to make corrections.

2. All lab counts, data and analysis shall be recorded on a lab summary sheet for each sample.

3. All samples will be tested using TEM analysis.

3.7 LEAD CONTAINING BUILDING MATERIALS

A. Surfaces that will be disturbed by reconstruction need to have a determination made indicating "No Lead Present" prior to any material removal.

1. Projects which disturb surfaces that contain lead shall have in the specifications a plan prepared by a certified Lead Risk Assessor or Supervisor which details

provisions for occupant protection, worksite preparation, work methods, cleaning and clearance testing which are in general accordance with the HUD Guidelines.

END OF SECTION 01410

SECTION 01 42 00

REFERENCES

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes an alphabetical listing of organizations and agencies that publish recognized industry standards referred to in the Contract Documents. It also includes definitions of construction-related terms that are not defined in the Construction Documents.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract. No such implied meaning will be interpreted to extend the Architect/Engineer's responsibility into the Contractor's area of construction supervision.

C. "Architect": Other terms including "Architect/Engineer" and "Engineer" have the same meaning as "Architect".

D. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "approved," "required," and "permitted" have the same meaning as "directed."

E. "Experienced": When used with an entity, "experienced" means having successfully completed a minimum of five previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

F. "Furnish": Supply and deliver to Project Site or other designated location, all materials and equipment so specified, ready for unloading, unpacking, assembly, installation, and similar operations or other form of incorporation into the Project, and maintained ready for use. Supply and deliver products requiring additional or supplemental fitting, assembly, fabrication, or incorporation into other elements of the Project directly to the fabricator, installer or manufacturer as required.

G. "Include": When used in any form other than "inclusive," is non-limiting and is not intended to mean "all-inclusive."

H. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

I. "Install": Operations at Project site including unloading, temporarily storing, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

J. "Installer": Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1. Using a term such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to tradespeople of the corresponding generic name.

K. "Product": As used includes materials, systems and equipment.

L. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

M. "Provide": Furnish and install, complete and ready for the intended use.

N. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

O. "Supplier": Any person or organization who supplies materials or equipment for the work, including that fabricated to a special design.

P. "Utility": Any gas, steam, water, sanitary sewer, storm sewer, electrical or other such service".

1.3 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents, unless otherwise indicated.

C. Conflicting Requirements: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to Architect for a decision before proceeding.

1. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the

context of requirements. Refer uncertainties to Architect for a decision before proceeding.

D. Copies of Standards: Each entity engaged in construction on Project must be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

E. Abbreviations and Acronyms for Standards and Regulations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the standards and regulations in the following list. Names, telephone numbers, and Web site addresses are subject to change and are believed to be accurate and up-to-date as of the date of the Contract Documents.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION (Not Used)

END OF SECTION 014200

SECTION 01 45 00

SPECIAL INSPECTIONS

PART 1 GENERAL

1.1 SUMMARY

A. This section includes: Requirements for Special Inspections. The Owner shall employ one Special Inspection Manager and one or more Special Inspectors to provide inspections during construction.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the contract Documents requirements.

Requirements for the contractor to provide quality-control services required by Architect or Authorities having jurisdiction are not limited by provisions of this section.

C. The Owner will retained the services of an inspection company for onsite review of subsurface conditions, suitability of soils, coordination and review of testing requirements for the utilities, site parking area and building pad.

1.2 DEFINITIONS

A. Approved Agency: An established and recognized agency regularly engaged in conducting tests or furnishing inspection services, when such agency has been approved. The inspecting agency shall maintain a current certificate of accreditation, by an independent recognized national standards organization, for the test(s) that will be performed by said agency. Approved agency(s) will be required to submit resumes of all employees working on the project.

Independent: An approved agency shall be objective and competent. The agency shall also disclose possible conflicts of interest so that objectivity can be confirmed.

Equipment: An approved agency shall have adequate equipment to perform required tests. The equipment shall be periodically calibrated.

Personnel: An approved agency shall employ experienced personnel educated in conducting, supervising and evaluating tests and/or inspections.

B. Special Inspection, Continuous: The full-time observation of work requiring special inspection by an approved Special Inspector who is present in the area where the work is being performed.

C. Special Inspection, Periodic: The part-time or intermittent observation of work requiring special inspection by an approved Special Inspector who is present in the area where the work has been or is being performed and at the completion of the work.

D. Quality-Assurance Services: Activities, actions and procedures performed before and during execution of the work to guard against defects and deficiencies and ensures that proposed construction complies with requirements.

E. Special Inspection Manager: Special Inspection Manager collects, Review for completeness and distributes special inspection reports to the Code Enforcement Official and the Engineer/Architect of record. The Special Inspection Manager shall schedule and coordinate work of the Special Inspectors with the contractors.

F. Code Enforcement Official: Authority Having Jurisdiction

1.3 REGULATORY REQUIREMENTS

A. Copies of Regulations: Obtain copies of the following regulations and retain at the project site to be available for reference by parties who have a reasonable need:

Building Code of New York State, Chapter 17 "Structural Tests and Special Inspections". By New York State Department of State, 41 State Street, Albany, New York.

B. Building permit requirement: The permit applicant shall submit a statement of special inspections prepared by the registered design professional in responsible charge as a condition for permit issuance.

1.4 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by basic designation only.

ACI International (ACI)

a. ACI 318/318R (1995) Building Code Requirements for Structural Concrete and Commentary

b. ACI 318M (1995) Metric Building Code Requirements for Structural Concrete and Commentary

d. AISC 341 (1997) Seismic Provisions for Structural Steel Building

e. AISC 350 (1993) Load and Resistance Factor Design Specification for Structural Steel Buildings

f. American Society for Testing and Materials (ASTM)

g. ASTM A 435/A 435M (1990) Straight-Beam Ultrasonic Examination of Steel Plates

h. ASTM A 615/A 615M (1996a) Deformed and Plain Billet-steel Bars for Concrete Reinforcement

i. ASTM A 898/A 898M (1991) Straight Beam Ultrasonic Examination of Rolled Steel Structural Shapes

1.5 QUALITY ASSURANCE

A. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the State of New York and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or products that are similar to those indicated for this Project in material, design, and extent.

B. Special Inspector: Provide a Special Inspector at the work site for each of the areas of responsibilities, specified below, who shall assist and report to the Special Inspection Manager, Owner, Engineer/Architect of record and who shall have no duties other than their assigned quality control duties. Special Inspectors are required to be physically present at the construction site to perform the phases of control and prepare documentation for each definable feature of work in their area of responsibility at the frequency specified. Special Inspectors shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

Requirement for Special Inspectors shall not supersede building codes and similar regulations governing the Work, nor interfere with local trade-union jurisdictional settlements and similar conventions.

Concrete:

a. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.

b. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I.

c. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.

Smoke Control Systems:

a. Personnel conducting field tests shall be qualified in fire protection engineering, mechanical engineering, and certification as air balancer certified by AABC Test and Balance Technician.

b. Structural Steel: Registered Structural Engineer, (P.E.) in New York State with a minimum of 5-years experience.

Welding

a. Personnel conducting field tests shall be qualified as Certified Welding Inspector (CWI) according to AWS QC1 or an equivalent certification program.

1.6 SPECIAL INSPECTIONS

A. Inspection of fabricators. Where fabrication of structural load-bearing members and assemblies is being performed on the premises of a fabricator's shop, special inspection of the fabricated items shall be required by this section and as required elsewhere in the code.

B. Steel construction. The special inspections for steel elements of buildings and structures shall be as required by Section 1704.3 and Table 1704.3 of The New York State Building Code. Where required special inspection of steel shall also comply with Section 1715 of The Building Code of New York State.

C. Concrete construction. The special inspections and verifications for concrete construction shall be as required by this Section 1704.4 and Table 1704.4 of The Building Code of New York State.

D. Masonry construction. Masonry construction shall be inspected and evaluated in accordance with the requirements of The Building Code of New York State, depending on the classification of the building or structure or nature of occupancy, as defined by the Building Code of New York State (see Table 1604.5 and Table 1617.6 of The Building Code of New York State).

E. Wood construction. Special inspections of the fabrication process of wood structural elements and assemblies shall be in accordance with Section 1704.2. of The Building Code of New York State

F. Soils. The special inspections for existing site soil conditions fill placement and load-bearing requirements shall follow Section 1704.7.1 through 1704.7.3 of The Building Code of New York State. The approved soils report, required by Section 1802.2 of The Building Code of New York State, shall be used to determine compliance.

G. Pile foundations. A special inspector shall be present when pile foundations are being installed and during tests. The special inspector shall make and submit to the code enforcement official records of the installation of each pile and results of load tests. Records shall include the cutoff and tip elevation of each pile relative to a permanent reference.

H. Pier foundations. Special inspection is required for pier foundations for buildings assigned to Seismic Design Category C, D, E or F in accordance with Section 1616.3 of The Building Code of New York State.

I. Wall panels and veneers. Special inspection is required for exterior and interior architectural wall panels and the anchoring of veneers for buildings assigned to Seismic Design Category E or F in accordance with Section 1616.3 of The Building Code of New York State. Special inspection of such masonry veneer shall be in accordance with Section 1704.5 of The Building Code of New York State.

J. Sprayed fire-resistant materials. Special inspections for sprayed fire-resistant materials applied to structural elements and decks shall be in accordance with Sections 1704.11.1 through 1704.11.5 of The Building Code of New York State. Special inspections shall be based on the fire-resistance design as designated in the approved construction documents.

K. Exterior insulation and finish systems (EIFS). Special inspections shall be required for all EIFS applications.

L. Special cases. Special inspections shall be required for proposed work that is, in the opinion of the code enforcement official, unusual in its nature, such as, but not limited to, the following examples:

Construction materials and systems that are alternatives to materials and systems prescribed by this code.

Unusual design applications of materials described in this code.

Materials and systems required to be installed in accordance with additional manufacturer's instructions that prescribe requirements not contained in this code or in standards referenced by this code.

M. Smoke Control systems. Smoke control systems shall be tested by a special inspector.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 STATEMENT OF SPECIAL INSPECTIONS

A. Refer to attached form **"Statement of Special Inspections"** at the end of this section.

B. Refer to Sheet S-002 in the Drawing Set for the list of required Special Inspections.

3.2 SPECIAL INSPECTION REPORTS

A. Report requirement: Special Inspectors shall keep records of inspections. The Special Inspector shall furnish inspection reports to the Special Inspection Manager. The Special Inspection Manager shall furnish reports to the Code Enforcement official, Owner, and to the Engineer/Architect in responsible charge.

Reports shall indicate that work inspected was done in conformance to approved construction documents.

Discrepancies shall be brought to the immediate attention of the contractor for correction. If the discrepancies are not corrected, the discrepancies shall be brought to the attention of the Code Enforcement Official and to the Engineer/Architect in responsible charge prior to the completion of that phase of the work.

B. Periodic Report: On the first day of each month, the Special Inspector shall furnish to the Special Inspection Manager five copies of the combined progress reports of the special inspector's observations. The Special Inspection Manager shall furnish five reviewed copies to the Code Enforcement Official and to the Engineer/Architect of responsible charge. These progress reports shall list all special inspections of construction or reviews of testing performed during that month, note all uncorrected deficiencies, and describe the corrections made both to these deficiencies and to previously reported deficiencies.

Each monthly report shall be signed by all special inspectors who performed special inspections of construction or reviewed testing during that month, regardless of whether they reported any deficiencies.

Each monthly report shall be signed by the Contractor.

C. Final Report: At completion of construction, each Special Inspector shall prepare and sign a final report attesting that all work they inspected and all testing and test reports they reviewed were completed in accordance with the approved construction documents and that deficiencies identified were satisfactorily corrected.

The Special Inspector shall submit a combined final report containing the signed final reports to the Special inspection manager.

The Special Inspection Manager shall submit the combined final report to the Code Enforcement Official, Owner, and to the Engineer/Architect in responsible charge.

The Contractors shall sign the combined final report attesting that all final reports of Special Inspectors that performed work to comply with these construction documents are contained therein, and that the Contractor has reviewed and approved all of the individual inspector's final reports.

Refer to attached form **"Report of Special Inspections"** attached at the end of this section.

END OF SECTION 014500

SECTION 01 50 00

TEMPORARY FACILITIES & CONTROLS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes requirements for temporary facilities and controls, including temporary utilities, support facilities, and security and protection.

B. Temporary utilities include, but are not limited to, the following:

1. Portable Chemical Toilet Facilities.
2. Dumpsters.
3. Temporary Electric Power.
4. Temporary Lighting.
5. Water service and distribution.
6. Temporary heat.
7. Temporary Barricades.
8. Temporary Storm Drainage.
9. Temporary Staging Area, Access Roads, Site Signage, and Site Fence
10. Building and Site Maintenance
11. Temporary Fire Extinguishers and Signage for Building Construction:

C. Support facilities include, but are not limited to, the following:

1. Field offices and storage sheds.
2. Architects/Engineers field office.
3. Telecommunication service.
4. Dewatering facilities and drains.
5. Temporary enclosures.
6. Hoists and temporary elevator use.
7. Rodent and pest control.
8. Construction aids and miscellaneous services and facilities.

D. Security and protection facilities include, but are not limited to, the following:

1. Environmental protection.
2. Tree and plant protection.
3. Pest control.
4. Security enclosure and lockup.

1.2 DIVISION OF RESPONSIBILITIES

A. General: Each prime contractor is specifically assigned certain responsibilities for temporary services and facilities to be used by other prime contractors, and other nonprime contractors and separate entities at the site, Owner’s workforces, Construction Manager, Architect, testing agencies, personnel of governing authorities, and personnel authorized to be at project site during contract time.

1.3 USE CHARGES

A. General: Cost or use charges for temporary facilities are not chargeable to the Owner or the Architect. The Architect will not accept a prime contractor's cost or use charges for temporary services or facilities as a basis of claim for an adjustment in the Contract Sum or the Contract Time.

B. Water Service: Use water from the Owner's existing water system (when available) without metering and without payment of use charges. Access to water shall be designated by the Owner. If existing water supply system is not available, then provide water tanks as required and fill with potable water to supply the Temporary Water Distribution System.

C. Electric Power Service:

1. Use of electric power from the Owner's permanent power system (when available) will be granted to all prime contractors without payment of use charges.

1.4 SUBMITTALS

A. Temporary Utilities: The prime contractor shall submit reports of tests, inspections, meter readings, and similar procedures performed on temporary utilities.

B. Implementation and Termination Schedule: Within 15 days of the date established for submittal of the Contractor's Construction Schedule, each prime contractor shall submit a schedule indicating implementation and termination of each temporary utility for which the Contractor is responsible.

C. Temporary Signage: Provide shop drawings, indicating the size and layout of the signs, color choices for Owner selection and installation details.

D. Submit Product Data and Shop Drawings of Proposed Temporary Facilities.

1.5 QUALITY ASSURANCE

A. Regulations: The prime contractor shall comply with industry standards and with applicable laws and regulations of authorities having jurisdiction including, but not limited to, the following:

1. Building code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Police, fire department and rescue squad rules.
5. Environmental protection regulations.

B. Standards: The prime contractor shall comply with NFPA 241 "Standard for Safeguarding Construction, Alterations, and Demolition Operations," ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition," and NECA Electrical Design Library "Temporary Electrical Facilities."

1. Local custom and trade union jurisdictional settlements do not control the scope of work included in each prime contract. When a potential jurisdictional dispute or similar interruption of work is first identified or threatened, the affected prime contracts shall promptly negotiate a reasonable settlement to avoid or minimize the pending interruption and delays.

2. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

C. Inspections: Arrange for authorities having jurisdiction to inspect and test each temporary utility before use. Obtain required certifications and permits.

1.6 PROJECT CONDITIONS

A. Temporary Utilities: The prime contractor shall prepare a schedule indicating dates for implementation and termination of each temporary utility for which the Contractor is responsible. At the earliest feasible time, when acceptable to the Owner, change over from use of temporary service to use of permanent service.

1. Temporary Use of Permanent Facilities: The Installer of each permanent service shall assume responsibility for its operation, maintenance, and protection during use as a construction facility prior to the Owner's acceptance, regardless of previously assigned responsibilities.

B. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Relocate temporary services and facilities as the Work progresses. Do not overload facilities or permit them to interfere with progress. Take necessary fire-prevention measures. Do not allow hazardous, dangerous, or unsanitary conditions, or public nuisances to develop or persist on-site.

PART 2 PRODUCTS

2.1 MATERIALS

A. General: The prime contractor shall provide new materials. If acceptable to the Architect, undamaged, previously used materials in serviceable condition may be used. Provide materials suitable for use intended.

B. Lumber and Plywood:

1. For job-built temporary offices, shops, and sheds within the construction area, provide UL-labeled, fire-treated lumber and plywood for framing, sheathing, and siding.

2. For signs and directory boards, provide exterior-type, Grade B-B high-density concrete form overlay plywood of sizes and thicknesses indicated.

3. For fences and vision barriers, provide minimum 3/8-inch- thick exterior plywood.

4. For safety barriers, sidewalk bridges, and similar uses, provide minimum 5/8-inch- thick exterior plywood.

C. Insulation: Unfaced mineral-fiber blanket manufactured from glass, slag wool, or rock wool; with maximum flame spread and smoke developed indices of 25 and 50, respectively.

D. Gypsum Wallboard: Provide gypsum Type X wallboard on interior walls of temporary barricades or partitions.

E. Roofing Materials: Provide UL Class A standard-weight asphalt shingles or UL Class C mineral-surfaced roll roofing on roofs of job-built temporary offices, shops, and sheds.

F. Paint: Comply with requirements of Division 9 Section "Painting."

1. For job-built temporary offices, shops, sheds, fences, and other exposed lumber and plywood, provide exterior-grade acrylic-latex emulsion over exterior primer.

2. For sign panels and applied graphics, provide exterior-grade alkyd gloss enamel over exterior primer.

3. For interior walls, provide 2 coats interior latex-eggshell wall paint.

G. Tarpaulins: Provide waterproof, fire-resistant, UL-labeled tarpaulins with flame-spread rating of 15 or less. For temporary enclosures, provide translucent, nylon-reinforced, laminated polyethylene or polyvinyl chloride, fire-retardant tarpaulins.

H. Water: Provide potable water approved by local health authorities.

I. Open-Mesh Fencing: Provide 0.12-inch- thick, galvanized 2-inch chain-link fabric fencing 8 feet high with galvanized barbed-wire top strand and galvanized steel pipe posts, 1-1/2 inches I.D. for line posts and 2-1/2 inches I.D. for corner posts.

2.2 EQUIPMENT

A. General: The prime contractor shall provide new equipment. If acceptable to the Architect, undamaged, previously used equipment in serviceable condition may be used. Provide equipment suitable for use intended.

B. Water Hoses: Provide 3/4-inch heavy-duty, abrasion-resistant, flexible rubber hoses 100 feet long, with pressure rating greater than the maximum pressure of the water distribution system. Provide adjustable shutoff nozzles at hose discharge.

C. Electrical Outlets: Provide properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher voltage outlets. Provide receptacle outlets equipped with ground-fault circuit interrupters, reset button, and pilot light for connection of power tools and equipment.

D. Electrical Power Cords: Provide grounded extension cords. Use hard-service cords where exposed to abrasion and traffic. Provide waterproof connectors to connect separate lengths of electric cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length-voltage ratio.

E. Lamps and Light Fixtures: Provide service lamps of wattage required for adequate illumination per OSHA requirements. Provide guard cages or tempered-glass enclosures, when exposed to breakage. Provide lamps suitable for exterior conditions when lamps are exposed to exterior conditions or moisture.

F. Heating Units: Provide temporary heating units that have been tested and labeled by UL, FM, or another recognized trade association related to the type of fuel being consumed.

1. The use of indirect fired source heaters (Heat source placed outside the building, ducted into the building) shall be the primary source of temporary heat.

2. Use of gasoline-burning space heaters, direct fire, open flame, or salamander-type heating units is prohibited. Temporary heating sources utilizing electric power as energy source, shall not be used on this project.

G. Temporary Offices: Each contractor shall provide its own prefabricated or mobile units or similar job-built construction with lockable entrances, operable windows, and serviceable finishes. Provide heated and air-conditioned units on foundations adequate for normal loading.

H. Temporary Toilet Units: Provide self-contained, single-occupant toilet units of the chemical, aerated recirculation, or combustion type. Provide units properly vented and fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

I. Fire Extinguishers: Provide hand-carried, portable, UL-rated, Class A fire extinguishers for temporary offices and similar spaces. In other locations, provide hand-carried, portable, UL-rated, Class ABC, dry-chemical extinguishers, or a combination of extinguishers of NFPA-recommended classes for the exposures.

1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

PART 3 EXECUTION

3.1 TEMPORARY FACILITIES RESPONSIBILITIES - DESIGNATED IN 011200 MULTIPLE CONTRACT SUMMARY.

See 011200 – Multiple Contract Summary for designated Contractor responsibility of temporary facilities indicated below.

1. Temporary Portable Chemical Toilet Facilities

a. Temporary Portable Chemical Toilet Facilities shall comply with regulations, CDC guidelines, and health codes for type, location, operation, and maintenance of fixtures and facilities.

b. Provide enough portable toilet facilities in suitable quantity to service all workers who are to utilize facilities.

c. Provide Portable Toilet Facility at Staging area and areas near building.

d. Provide enough portable toilet facilities in suitable quantity to service all workers who are to utilize facilities.

e. Provide toilet tissue, paper towels, paper cups, hand sanitizer, and similar disposable materials for each facility. Provide covered waste containers for used material.

f. Provide separate facilities for male and female personnel.

g. Provide portable handwash sink(s) with soap dispensers and paper towels.

h. Provide at minimum (1) portable handwash sink at staging area.

i. Install Portable Toilets and Portable Sinks. where facilities will best serve the Project's needs.

j. Replenish consumable materials as utilized. Provide cleaning of facilities when required.

k. Contractors are to not use owner's existing restrooms or facilities.

2. Dumpsters:

a. Dumpsters are to be provided as needed to dispose of all materials needing to be removed from the building/site and waste materials associated with the new building/site work indicated on milestone schedule or when complete with their own work (whichever occurs later).

b. Dispose of materials lawfully.

c. Waste disposal facilities, including collection and legal disposal of its own hazardous, dangerous, unsanitary, or other harmful waste materials will be by the contractor designated responsible for removing the hazardous waste.

d. Surfaces/Pavement below dumpsters are to be protected and restored.

3. Temporary Electric Power Service:

a. **Temporary Electric Power Service** shall consist of main power hook-up and panel board for the new building and site. Temporary service shall be maintained during all workdays and shall comply with all codes and regulations. System shall be modified as required or as directed by the Construction Manager as work progresses.

b. Obtain temporary service from existing building service or local power pole. If practical, power to each location shall be tapped at transformer vault or main distribution panel, ahead of main breakers to minimize demand on service equipment from operations. Over-current protection shall be installed as required. Provide disconnect at connection to service.

c. The Contractor shall pay all fees to Utility Company for Temporary Electric Power Service Connection when an existing Power Source is not indicated to already be available for connection in the Contract Documents.

d. Minimum power characteristics: 240/120-volt, single phase.

e. Provide distribution equipment, feeders, and branch circuit panelboards to serve:

1) **Temporary Lighting Service**.

2) Temporary convenience receptacles.

a) Quad 120V Outlet boxes to allow for 25' extension cord with walls in place; enough to accommodate requirements of the entire building.

3) To accommodate construction operations requiring power, use of power tools, and start up testing of permanent electric powered equipment prior to its permanent connection to electrical system.

b) Each Contractor shall provide his own extension lines, and other special equipment. Welding equipment shall run from generator trucks. Any specialty high voltage/amperage power required beyond what's provided

by under the Temporary Electric Power Service is to be provided by the contractor requiring the specialty power.

c) The Contractor shall be responsible for initial connections and final demolition of all temporary fixtures and wiring at direction of the Construction Manager.

d) Unless indicated on Staging and Logistics plan, each Contractor will be responsible for hookup of their own project trailers by a licensed electrician to existing service or temporary electric panel provided per Staging Area and Logistics Plan if indicated or for Contractor Trailer Power. The Contractor shall erect poles safely and sufficient for site power and telephone service. The Contractor shall disconnect all items and restore damaged areas upon project completion. If abused, power from temporary service will be disconnected.

4. **Temporary Lighting Service**:

a) When an overhead floor or roof deck has been installed obstructing daylight from overhead, the Contractor shall provide temporary lighting with local switching suitable for exterior weather conditions within the building under the roof deck prior to building weathertight roof enclosure.

b) Temporary lighting shall be maintained in accordance with OSHA standards for power and foot candle levels in all areas, rooms, and corridors while workers occupy the space. Temporary lighting shall be controlled by time clocks and lighting contactors; settings to be coordinated by the Construction Manager.

c) Additional lighting beyond OSHA standards for specialty work is to be provided by **each contractor** performing specialty work requiring the additional lighting.

d) As ceilings are installed, the Contractor is to move temporary lights as needed to maintain lighting in all work areas during working hours.

e) Security lighting for building exteriors shall be continuously operational and maintained. The Contractor shall provide a minimum of six (6) exterior temporary site lights at 10,000 Lumen each, ***ON SITE TO BE LOCATED by CM.***

f) Temporary Site Lighting: The Contractor is to maintain existing exterior lighting to adequately light the entrances and exits of project site.

g) Temporary lighting shall be controlled by time clocks and lighting contactors; settings to be coordinated by the Construction Manager.

5. **Temporary Water Service**:

a) If existing water service is available by Owner, the Contractor shall provide and maintain temporary water service from Owner existing water source.

b) If existing water service is not available, then the Contractor designated as responsible for the Temporary Water service shall supply potable water tank(s). The Contractor shall refill water tank(s) with potable water as other contractors utilize the supplied water until final water service is installed.

c) Provide distribution piping of sizes and pressures adequate for construction and hose bibs on site as to provide service to all areas of construction activities as required throughout the construction period. (Allow for 50′ water extension hose to work areas.)

d) **Each Contractor** shall provide temporary water as needed for their own work until Temporary Water Service is installed.

e) Water service shall be potable and modified as required or as directed by the Construction Manager as work progresses.

f) Sterilization: Sterilize temporary water piping.

g) Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel who handle materials that require wash up. Dispose of drainage properly.

6. **Temporary Heating Service:**

a) Upon enclosure of the new building(s) and addition(s) (by either temporary barriers or permanent wall systems) or as indicated by the milestone schedule, whichever is sooner, the Contractor shall provide **Temporary Heating Service**: equipment, heaters, duct, and all fuel necessary to continue construction work and maintain proper heated conditions in the buildings at a minimum temperature of 50°F.

1) The use of <u>indirect fired source heaters</u> (Heat source placed outside the building, ducted into the building) shall be the primary source of temporary heat. The contractor shall provide duct from the heaters into the various areas of the building. In no case shall temperature in the building be less than 50°F.

2) Substitutions of Temporary Heating Method may be proposed and reviewed at the discretion of the Construction Manager/Architect.

3) Use of gasoline-burning space heaters, direct fire, open flame, or salamander-type heating units is prohibited. Temporary heating sources utilizing electric power as energy source, shall not be used on this project.

b) Temporary Heating for Isolated work area: Each prime contractor shall provide temporary heating or dehumidification as required by construction activities for curing or drying of completed installations or for protecting stored materials or installed construction within building from adverse effects of low temperatures above the 50°F minimum temperature or high humidity.

c) Select safe equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce the ambient condition required and minimize energy consumption.

d) The Contractor(s) shall provide manpower for maintenance, operation, and supervision for Temporary Heating Service, multiple shifts as applicable.

e) The Owner will not accept utilization of permanent HVAC system for temporary heat until spaces served by HVAC system have received final cleaning and project acceptance.

7. **Temporary Barricades and Building Signage:**

a) Provide Temporary lockable entrances / doorways and exits to the building, which is to be furnished, installed, and maintained.

1) Exits shall be maintained for exiting in emergency conditions which include doors with lockable panic hardware and closers until permanent structures are in place. Maintain Doorways throughout construction to ensure all hardware functions, and closers automatically close doors.

2) Provide copies of keys to Owner, Construction Manager, and each Contractor for temporary Doors.

3) Provide copies of keys to Owner, Construction Manager, and each Contractor for temporary Doors.

b) Provide Temporary Interior/Exterior Partitions, which shall be at minimum fire rated 1-hour constructed of: metal stud framing, acoustic insulation, sealant.

1) For interior partitions utilize painted gypsum. For Exterior Partitions, utilize painted 5/8″ Fire Retardant Plywood.

1). Provide sealant of all seams to prevent migration of dust.

2) Adjust and Reinstall Ceiling as required at Temporary Partitions for a finished appearance from the occupied side of partition.

3) Temporary interior partitions and interior doorways shall be provided to separate construction areas from occupied areas.

c) The Construction Manager may direct the **General Contractor** to install and maintain Temporary Plastic Sheeting Partitions as needed to separate the construction areas from the occupied areas at no additional cost.

d) Additional Temporary Barricades may be required due to delay of substantial completion for owner's use of section(s) of building(s) and are to be provided contractor responsible for the delay.

e) The Contractor shall provide and maintain OSHA Minimum perimeter and stairwell barricades/railings at grade changes, multiple levels, and floor/roof openings.

1) Provide Top & Mid railings, and Toe boards per OSHA requirements.

2) Install posts as required to support railings.

3) Provide fluorescent ribbons to accent floor/roof openings.

4) If a Contractor should need to temporarily relocate barrier, same Contractor shall protect personnel in the area and replace barrier to original location.

f) Temporary infill/coverings for openings are to be provided by the Contractor that created the opening. Temporary opening infills/coverings are to meet structural requirements per OSHA guidelines.

g) Provide Temporary Emergency Exit Signage within the new building to direct personnel to nearest emergency exits. Provide at all exits, stairwells, and areas where exit signs cannot be seen.

h) Provide Project Identification Signage at Building Entrance (Indicate Contact Names and Phone numbers of all Contractor, Construction Manager, and Owner Contacts.)

i) Restore all surfaces after removal of Temporary Barricades.

8. **Temporary Building Storm Drainage:**

a. Temporary Building Storm Drainage shall consist of Temporary drainage piping from Roof Drains to sufficient distance from of building as required to not disturb ongoing construction until final roof drain piping is installed, and final drainage utility system is completed.

b. Adjust Drainage Piping as directed by Construction Manager.

9. **Temporary Staging Area, Access Roads, Site Signage, and Site Fence:**

a. The Contractor shall provide construction of the temporary staging area, access roads, stabilized construction entrances, temporary site signage, and temporary construction fence as indicated on the Staging and Logistics Plans.

b. Maintain and restore staging area and access roads that are disturbed throughout construction.

c. Remove all temporary materials and restore all areas at completion of project.

d. The Contractor responsible for Site Work (Site Contractor) shall maintain access roads for suitable parking areas as indicated on Site Logistics plans.

1) Re-grade, re-seed and restore any areas disturbed by parking/staging.

2) Parking Areas: Includes contractors' employees and construction vehicle parking. Minimum of 6" reference Item. #304.3 course installed over geotextile fabric.

3) Temporary parking by construction personnel shall be allowed only in areas designated.

e. Access Roads: Includes access roads for delivery through staging area to building work areas, and to equipment and storage areas and sheds. Minimum of 9" reference Item. #304.3 course installed over geotextile fabric.

1) Stabilized Construction entrances: Minimum 6" Thick, 50FT Length x 24' Width, 2" Stone over geotextile fabric/filter cloth. Extend width of entrance to 32' width where entrance meets existing pavement to allow turning radius of vehicles pathway.

2) Remove temporary paving not intended for or acceptable for integration into permanent paving. Where the area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil in the area. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at the temporary entrances, as required by the governing authority.

f. Construction Fence: Provide Construction fence with lockable entrance gates. Locate where indicated or enclose the entire site or the portion determined sufficient to accommodate construction operations or as indicated on Staging Area and Logistics Plan. Install in a manner that will prevent people, dogs, and other animals from easily entering the site, except by the entrance gates.

1) Provide at Construction Fence: open-mesh, 8-foot-high chain-link fencing with posts at 8-feet on center, set in a compacted mixture of gravel and earth.

a) Provide movable fence panels with sandbags and fence clamps to prevent tampering with fence when required in areas that require adjustment during construction as approved by Construction Manager.

2) Provide maintenance of Temporary Construction Fence as disturbed throughout construction to ensure site and staging area security is maintained and all gates remain operational.

3) Provide minimum of (1) 4' man gate, and (3) 20' hinged double swing access gates. Each gate is to have a chain and padlock. Adjust gate hinges to prevent gating from dragging on surface.

4) Provide keys for each lock to the Construction Manager, Owner, and each Contractor.

g. Temporary Site Signage: The Contractor shall provide all temporary Construction Signage, temporary traffic controls at junction of temporary roads with public roads.

1) Engage an experienced sign painter to apply graphics. Comply with details indicated.

2) Include warning signs for public traffic and "STOP" signs for entrance onto public roads.

3) Comply with requirements of authorities having jurisdiction.

4) Engage an experienced sign painter to provide the following signs to be installed by the Contractor in compliance with signage requirements (install all directional signage at all intersections):

a) To direct visitors (as required to reach visitor area)

b) For construction parking (as required to reach parking area)

c) To direct deliveries (as required to reach material delivery area) (List each Contractor)

d) "Construction Site – Authorized Personnel Only" (Perimeter of Construction Fence 40' Intervals)

e) Project Identification Signage at Entrance of Site (Indicate Contact Names and Phone numbers of all Contractor, Construction Manager, and Owner Contacts.)

10. **Building & Site Maintenance:**

a. <u>Maintaining Temporary Access Roads and Existing Roads</u>:

1) Maintain and restore roads over the period of construction.

2) Road Cleaning: Maintain roads and walkways in an acceptably clean condition. This includes the removal of debris daily.

3) If required, provide a minimum of once-a-week road cleaning for debris/dust accumulated.

a) Road cleaning equipment to be wet/vacuum type. Contractor will clean the roads affected by all contract work. The Contractor will maintain roads until project completion.

4) Snow Plowing: Provide snow/ice removal to building entrances, temporary access roads, parking areas, staging area, portable toilets, and a 5′ walkway to all office trailers.

b. Snow/Ice Removal at Building/Adjacent Sidewalks:

1) Provide snow/ice removal at sidewalk areas and entrances adjacent to building, ice/snow removal inside the building areas, and roofing areas for scheduled work.

2) Protect areas from snow/ice removal and restore any surfaces damaged.

11. **Temporary Fire Extinguishers for Building Construction:**

a. The Contractor shall provide, until fire-protection needs are supplied by permanent facilities, install, and maintain temporary fire-protection facilities of the types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 10, "Standard for Portable Fire Extinguishers," and NFPA 241, "Standard for Safeguarding Construction, Alterations, and Demolition Operations."

1) Locate fire extinguishers where convenient and effective for their intended purpose, but not less than one extinguisher on each floor at or near each usable stairwell.

2) Store combustible materials in containers in fire-safe locations outside of buildings.

3) Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire-protection facilities, stairways, and other access routes for fighting fires. Prohibit smoking in hazardous fire-exposure areas.

3.2 TEMPORARY TELECOMMUNICATIONS SYSTEMS (To be Provided by All Contractors)

A. General: Engage the appropriate local telecommunication, internet service provider, or utility company to install temporary telecommunication service or connect to existing service. Where the company provides only part of the service, provide the remainder with matching, compatible materials, and equipment. Comply with company recommendations.

B. Temporary Telephones: Each Prime Contractor shall provide temporary telephone service throughout the construction period for all personnel engaged in construction activities.

1. Contractors are required to lease or purchase a cellular telephone – to be used by their site superintendents for communication with the other primes and the Architect.

3.3 TEMPORARY FACILITIES INSTALLATION (To be Provided by All Contractors)

A. Use qualified personnel for installation of temporary facilities. Locate facilities where they will serve the Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required.

B. The prime contractor shall provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.4 SUPPORT FACILITIES INSTALLATION (To be Provided by All Contractors)

A. Locate field offices, storage sheds, sanitary facilities, and other temporary construction and support facilities for easy access as directed by the Construction Manager.

1. Maintain support facilities until near Substantial Completion. Remove prior to Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to the Owner.

B. Provide incombustible construction for offices, shops, and sheds located within the construction area or within 50 feet of building. Comply with requirements of NFPA 241.

C. Field Offices: Each prime contractor shall provide an insulated, weathertight temporary office of sufficient size to accommodate required office personnel at the Project Site. Keep the office clean and orderly for use for small meetings. Furnish and equip offices as follows:

1. Furniture: Furnish with a desk and chairs, a 2-drawer file cabinet, plan table, plan rack, and a bookcase.

D. Storage and Fabrication Sheds: Install storage and fabrication sheds sized, furnished, and equipped to accommodate materials and equipment involved, including temporary utility service. Sheds may be open shelters or fully enclosed spaces within the building or elsewhere on-site. Flammable liquids are not to be stored in building at any time and to be stored in proper rated containers.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION (To be Provided by All Contractors)

A. Operations of the Contractor may not block, hinder, impede, or otherwise inhibit the safe and expeditious exiting of the building's occupants during an emergency.

B. In the event of an emergency, (designated by the sounding of the fire alarm system) all construction activities must immediately cease. Contractor's work force will evacuate themselves from work areas and remain outside of work areas until the "all clear" is given. No work operations will be tolerated during the evacuation of the building or during an emergency.

C. Temporary Facility Changeover: Except for using permanent fire protection as soon as available, do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion, or longer, as requested by the Architect.

D. Building Security Enclosure and Lockup: Provide locking entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security.

1. Storage: Where materials and equipment must be stored, and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

E. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction in ways and by methods that comply with environmental regulations, and minimize the possibility that air, waterways, and subsoil might be contaminated or polluted or that other undesirable effects might result. Avoid using tools and equipment that produce harmful noise. Restrict use of noise-making tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.6 OPERATION, TERMINATION, AND REMOVAL (To be Provided by All Contractors)

A. Supervision: Enforce strict discipline in use of temporary facilities. Limit availability of temporary facilities to essential and intended uses to minimize waste and abuse.

B. Maintenance: Maintain facilities and good operating condition until removal. Protect from damage by freezing temperatures and similar elements.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

2. Protection: Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

C. Termination and Removal: Unless the Construction Manager requests that it be maintained longer, remove each temporary facility when the need has ended, when replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are the property of each prime contractor. The Owner reserves the right to take possession of project identification signs.

END OF SECTION 015000

SECTION 01 60 00

PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes the following administrative and procedural requirements: selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; product substitutions; and comparable products.

1.2 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.

2. New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.

3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes in products, materials, equipment, and methods of construction required by the Contract Documents proposed by the Contractor after award of the Contract are considered to be requests for substitutions. The following are not considered to be requests for substitutions:

1. Substitutions requested during the bidding period and accepted by Addendum prior to award of the Contract.

2. Specified options for products and construction methods included in the Contract Documents.

3. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named and accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Special Warranty: Written warranty required by or incorporated into the Contract Documents to extend time limit provided, either by manufacturer's warranty or to provide more rights for Owner.

1.3 SUBMITTALS

A. Submittals shall comply with the requirements of the Construction Contract Clauses, Division 1 section "SUBMITTAL PROCEDURES" and the individual sections specifying the work.

B. Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.

1. Coordinate product list with Contractor's Construction Schedule and the Submittals Schedule.

2. Form: Tabulate information for each product under the following column headings:

a. Specification Section number and title.

b. Generic name used in the Contract Documents.

c. Proprietary name, model number, and similar designations.

d. Manufacturer's name and address.

e. Supplier's name and address.

f. Installer's name and address.

g. Projected delivery date or time span of delivery period.

h. Identification of items that require early submittal approval for scheduled delivery date.

3. Initial Submittal: Within fifteen (15) workdays after date of commencement of the Work, submit one electronic copy of initial product list. Include a written explanation for omissions of data and for variations from Contract requirements.

a. At Contractor's option, initial submittal may be limited to product selections and designations that must be established early in Contract period.

4. Completed List: Within thirty (30) workdays after date of commencement of the Work, submit one electronic copy of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.

5. Architect's Action: Architect will respond in writing to Contractor within 10 workdays of receipt of completed product list. Architect's response will include a list of unacceptable product selections and a brief explanation of reasons for this action. Architect's response, or lack of response, does not constitute a waiver of requirement that products comply with the Contract Documents.

C. Substitution Requests: Refer to Section 012500 'Substitution Procedures'

1.4 QUALITY ASSURANCE

A. Source Limitations: To the fullest extent possible, provide products of the same kind from a single source. Equipment of the same function shall be manufactured by the same entity, unless otherwise indicated.

B. Compatibility of Options: When the Contractor is given the option of selecting between 2 or more products for use on the Project, the product selected shall be compatible with products previously selected, even if previously selected products were also options.

C. Labels and nameplates: Except for required labels and operating data, do not attach or imprint manufacturer's or producer's nameplates or trademarks on surfaces of products that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on concealed surfaces or, where required for observation after installation, on accessible surfaces that are not conspicuous.

2. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate nameplate on an easily accessible surface that is inconspicuous in occupied spaces. The nameplate shall contain the following information:

a. Name of product manufacturer.

b. Model and serial numbers.

c. Operating data such as capacity, speed and ratings.

3. Protection: Labels and nameplates shall be protected from defacement and other damage during the remainder of the Work.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.

2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.

4. Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.

5. Store products to allow for inspection and measurement of quantity or counting of units.

6. Store materials in a manner that will not endanger Project structure.

7. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.

8. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.

9. Protect stored products from damage.

B. Storage: Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.

1.6 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.

2. Refer to Divisions 2 through 16 Sections for specific content requirements and particular requirements for submitting special warranties.

PART 2 - PRODUCTS

2.1 PRODUCT COMPLIANCE AND REQUIREMENTS

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged, and unless otherwise indicated, that are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.

2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.

3. Where products are accompanied by the term "as selected," Architect will make selection.

4. Where products are accompanied by the term "match sample," sample to be matched is Architect's.

B. Product Selection Procedures: The Contract Documents, including the Construction Contract Clauses, govern product selection. Requirements for product selection include the following:

1. Where the Specifications lists manufacturers' names or product designations, the Contractor may provide any product that complies with the requirements, subject to the following conditions:

a. Manufacturers: Where a Specification paragraph or subparagraph titled "Manufacturers" lists manufacturers' names, provide a compliant product by one of the manufacturers named, or request a Substitution of another compliant product by another manufacturer.

b. Products: Where a Specification paragraph or subparagraph titled "Products" lists product designations, provide one of the products designated, or request a Substitution of another compliant product.

c. Basis of Design: Where a Specification paragraph or subparagraph titled "Basis of Design" includes a product designation, provide the product designated, or an equivalent product by another manufacturer.

2. Descriptive Requirements: Where Specifications describe a product or assembly, listing exact characteristics required, provide a product or assembly that provides the characteristics and otherwise complies with Contract requirements.

3. Performance Requirements: Where Specifications require compliance with performance requirements, provide products that comply with these requirements and are recommended by the manufacturer for the application indicated. Manufacturer's recommendations may be contained in published product literature or by the manufacturer's certification of performance.

4. Prescriptive Requirements: Where Specifications require products that are produced using specified ingredients and components, including specific requirements for mixing, fabricating, curing, finishing, testing and similar operations in the manufacturing process, provide products produced in accordance with the prescriptive requirements that otherwise comply with Contract requirements.

5. Codes, Standards and Regulations: Where Specifications require compliance with an imposed code, standard or regulation, select a product that complies with the codes, standards or regulations specified.

6. Visual Matching: Where Specifications require matching an established Sample, the Contracting Officer's Representative's decision will be final on whether a proposed product matches satisfactorily. Where no product available within the specified category matches satisfactorily and complies with other specified requirements, comply with provisions concerning "substitutions" for selections of a matching product in another product category.

7. Visual Selection: Where specified product requirements include the phrase "as selected from manufacturer's standard colors, patterns, textures" or a similar phrase, select a product and manufacturer that complies with other specified requirements. The Contracting Officer's Representative will select the color, pattern and texture from the manufacturer's product line.

2.2 PRODUCT SUBSTITUTIONS

A. Timing: Architect will consider requests for substitution if received within the bid period. Requests received after that time may be considered or rejected at discretion of Architect.

B. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

1. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities

Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.

2. Requested substitution does not require extensive revisions to the Contract Documents.

3. Requested substitution is consistent with the Contract Documents and will produce indicated results.

4. The request is timely, fully documented, and properly submitted.

5. The specified product or method of construction cannot be provided within the Contract Time. The Architect will not consider the request if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities properly.

6. The specified product or method of construction cannot be provided in a manner that is compatible with other materials and where the Contractor certifies that, the substitution will overcome the incompatibility.

7. The specified product or method of construction cannot be coordinated with other materials and where the Contractor certifies that the proposed substitution can be coordinated.

8. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Contractor certifies that the proposed substitution provides the required warranty.

9. Requested substitution has received necessary approvals of authorities having jurisdiction.

10. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2.3 COMPARABLE PRODUCTS

A. Where products or manufacturers are specified by name, submit the following, in addition to other required submittals, to obtain approval of an unnamed product:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.

2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance,

weight, size, durability, visual effect, and specific features and requirements indicated.

3. Evidence that proposed product provides specified warranty.

4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.

5. Samples, if requested.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRODUCTS

A. Comply with manufacturer's instructions and recommendations for installation of products in the applications indicated. Anchor each product securely in place, accurately located and aligned with other Work.

1. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

END OF SECTION 016000

SECTION 01 70 00

EXECUTION REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. General installation of products.
4. Coordination of Owner-installed products.
5. Progress cleaning.
6. Starting and adjusting.
7. Protection of installed construction.
8. Correction of the Work.

1.2 SUBMITTALS

A. Qualification Data: For land surveyor to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Certificates: Submit certificate signed by land surveyor certifying that location and elevation of improvements comply with requirements.

C. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

D. Certified Surveys: Submit two copies signed by land surveyor.

E. Final Property Survey: Submit 5 copies showing the Work performed and record survey data.

1.3 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of site improvements, utilities, and other construction indicated as existing are not guaranteed.

1. Before construction, verify the location and points of connection of utility services.

B. Existing Utilities: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities and other construction affecting the Work.

1. Contact private utility companies to determine location of electric and telephone.

2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

C. Acceptance of Conditions: Examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

a. Description of the Work.

b. List of detrimental conditions, including substrates.

c. List of unacceptable installation tolerances.

d. Recommended corrections.

2. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

3. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.

4. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.

5. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to local utility and Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Architect. Include a detailed description of problem encountered, together with recommendations for changing the Contract Documents.

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.

B. General: The Site Work Contractor (Contract #1) and General Work Contractor (Contract #2) shall engage a land surveyor to lay out their respective Work using accepted surveying practices.

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.

2. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.

3. Inform installers of lines and levels to which they must comply.

4. Check the location, level and plumb, of every major element as the Work progresses.

5. Notify Architect when deviations from required lines and levels exceed allowable tolerances.

6. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and invert elevations.

D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.4 FIELD ENGINEERING

A. Identification: Owner will identify existing benchmarks, control points, and property corners.

B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.

2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

C. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.

2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.

3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

E. Final Property Survey: Prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.

2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.5 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.

2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.

3. Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.

4. Maintain minimum headroom clearance of 8 feet in spaces without a suspended ceiling.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

E. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

F. Anchors and Fasteners: Provide anchors and fasteners as required to anchor each component securely in place, accurately located and aligned with other portions of the Work.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.

2. Allow for building movement, including thermal expansion and contraction.

G. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

H. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.6 OWNER-INSTALLED PRODUCTS

A. Site Access: Provide access to Project site for Owner's construction forces.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction forces.

1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.

2. Preinstallation Conferences: Include Owner's construction forces at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction forces if portions of the Work depend on Owner's construction.

3.7 PROGRESS CLEANING

A. General: Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.

2. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F.

3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

D. Remove liquid spills promptly.

E. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

F. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

G. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

H. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

I. Cutting and Patching: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

1. Thoroughly clean piping, conduit, and similar features before applying paint or other finishing materials. Restore damaged pipe covering to its original condition.

J. Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

K. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

L. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

M. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.8 STARTING AND ADJUSTING

A. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

B. Adjust operating components for proper operation without binding. Adjust equipment for proper operation.

C. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Division 1 Section "Quality Requirements."

3.9 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Comply with manufacturer's written instructions for temperature and relative humidity.

3.10 CORRECTION OF THE WORK

A. Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in Division 1 Section "Cutting and Patching."

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Restore permanent facilities used during construction to their specified condition.

C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

E. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 017000

SECTION 01 73 10

CUTTING AND PATCHING

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes procedural requirements for cutting and patching.

1.2 DEFINITIONS

A. Cutting: Removal of existing construction necessary to permit installation or performance of other Work, including, but not limited to; cutting, drilling, chopping, and other similar operations.

B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work, including, but not limited to; patching, rebuilding, reinforcing, repairing, refurbishing, restoring, replacing, an other similar operations.

1.3 SUBMITTALS

A. Cutting and Patching Proposal: Submit a proposal describing procedures at least 10 days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:

1. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.

2. Changes to Existing Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.

3. Products: List products to be used and firms or entities that will perform the Work.

4. Dates: Indicate when cutting and patching will be performed.

5. Utilities: List utilities that cutting and patching procedures will disturb or affect. List utilities that will be relocated and those that will be temporarily out of service. Indicate how long service will be disrupted.

6. Architect's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.

1.4 QUALITY ASSURANCE

A. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following structural elements:

a. Foundation construction

b. Bearing and retaining walls

c. Structural concrete

d. Structural steel

e. Lintels

f. Timber and primary wood framing

g. Structural decking

h. Stair systems

i. Miscellaneous structural metals

j. Exterior curtain-wall construction

k. Equipment supports

l. Piping, ductwork, vessels, and equipment

m. Structural systems of special construction in Division 13 Sections.

B. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following operating elements or safety related systems:

a. Primary operational systems and equipment

b. Air or smoke barriers

c. Water, moisture, or vapor barriers

d. Membranes and flashings

e. Fire protection systems

f. Noise and vibration control elements and systems

g. Control systems

h. Communication systems

i. Conveying systems

j. Electrical wiring systems

k. Operating systems of special construction in Division 23 Sections

C. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

D. Miscellaneous Elements: Do not cut and patch the following elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.

1. Water, moisture, or vapor barriers.

2. Membranes and flashings.

3. Equipment supports.

4. Piping, ductwork, vessels, and equipment.

5. Noise- and vibration-control elements and systems.

1.5 WARRANTY – Not applicable for Existing Warrantees

PART 2 PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections of these Specifications.

B. Existing Materials: Use materials identical to existing materials. For exposed surfaces, use materials that visually match existing adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of existing materials.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.

1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

3.3 PERFORMANCE

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Cutting: Cut existing construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.

2. Existing Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.

3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.

4. Excavating and Backfilling: Comply with requirements in applicable Division 2 Sections where required by cutting and patching operations.

5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.

6. Proceed with patching after construction operations requiring cutting are complete.

C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections of these Specifications.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.

2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

   a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang existing ceilings as necessary to provide an even-plane surface of uniform appearance.

5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

END OF SECTION 017310

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 01 73 20

SELECTIVE DEMOLITION

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Demolition and removal of selected site elements.

2. Repair procedures for selective demolition operations.

3. Demolition and removal coordination with/for asbestos abatement.

1.2 DEFINITIONS

A. Remove: Detach items from existing construction and legally dispose of them off-site, unless indicated to be removed and salvaged or removed and reinstalled.

B. Remove and Salvage: Detach items from existing construction and deliver them to Owner or Construction Manager ready for reuse.

C. Remove and Reinstall: Detach items from existing construction, prepare them for reuse, and reinstall them where indicated.

1.3 MATERIALS OWNERSHIP

A. Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property or become Construction Manager’s property, demolished materials shall become Contractor's property and shall be removed from Project site.

1.4 SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Proposed Dust-Control and Noise-Control Measures: Submit statement or drawing that indicates the measures proposed for use, proposed locations, and proposed time frame

for their operation. Identify options if proposed measures are later determined to be inadequate.

C. Schedule of Selective Demolition Activities: Indicate the following:

1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity.

D. Inventory: After selective demolition is complete, submit a list of items that have been removed and salvaged.

E. Predemolition Photographs or Videotape: Show existing conditions of site improvements that might be misconstrued as damage caused by selective demolition operations. Submit before Work begins.

F. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.

1.5 QUALITY ASSURANCE

A. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.

B. Professional Engineer Qualifications: Comply with Division 1 Section "Quality Requirements."

C. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

D. Standards: Comply with ANSI A10.6 and NFPA 241.

E. Predemolition Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to selective demolition including, but not limited to, the following:

1. Inspect and discuss condition of construction to be selectively demolished.

2. Review structural load limitations of existing structure.

3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.

4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.

1.6 PROJECT CONDITIONS

A. Owner assumes no responsibility for condition of areas to be selectively demolished.

1. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

B. Hazardous Materials: Hazardous materials are present on site to be selectively removed. A report on the presence of hazardous materials is on file for review and use. Examine report to become aware of locations where hazardous materials are present.

1. Hazardous material remediation is specified elsewhere in the Contract Documents.

2. Do not disturb hazardous materials or items suspected of containing hazardous materials except under procedures specified elsewhere in the Contract Documents.

3. If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Engineer and Owner. Hazardous materials will be removed by Owner under a separate contract.

C. Storage or sale of removed items or materials on-site will not be permitted.

D. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.

1. Maintain fire-protection facilities in service during selective demolition operations.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped.

B. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.

C. Inventory and record the condition of items to be removed and reinstalled and items to be removed and salvaged.

D. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

E. Engage a professional engineer to survey condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective demolition operations.

F. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

3.2 UTILITY SERVICES - NOT APPLICABLE

3.3 PREPARATION

A. Dangerous Materials: Drain, purge, or otherwise remove, collect, and dispose of chemicals, gases, explosives, acids, flammables, or other dangerous materials before proceeding with selective demolition operations.

B. Pest Control: Employ a certified, licensed exterminator to treat building and to control rodents and vermin before and during selective demolition operations.

C. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

2. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction.

3. Protect existing site improvements, appurtenances, and landscaping to remain.

4. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.

5. Coordinate any work within the NYS Rte. 44 highway bounds with requirements stipulated in the NYSDOT Highway Work Permit.

D. Temporary Enclosures: Provide temporary enclosures for protection of existing building and construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.

E. Temporary Shoring: Provide and maintain interior and exterior shoring, bracing, or structural support to preserve stability and prevent movement, settlement, or collapse of construction to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.

3.4 POLLUTION CONTROLS

A. Dust Control: Use water mist, temporary enclosures, and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations.

1. Do not use water when it may damage existing construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.

2. Wet mop floors to eliminate trackable dirt and wipe down walls and doors of demolition enclosure. Vacuum carpeted areas.

B. Disposal: Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

3.5 SELECTIVE DEMOLITION

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.

2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.

3. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain fire watch and portable fire-suppression devices during flame-cutting operations.

4. Maintain adequate ventilation when using cutting torches.

5. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

6. Dispose of demolished items and materials promptly.

B. Concrete Slabs-on-Grade: Saw-cut perimeter of area to be demolished, then break up and remove.

3.6 PATCHING AND REPAIRS

A. General: Promptly repair damage to adjacent construction caused by selective demolition operations.

B. Patching: Comply with Division 1 Section "Cutting and Patching."

C. Repairs: Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

A. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.

B. Burning: Do not burn demolished materials.

C. Disposal: Transport demolished materials and dispose of at designated spoil areas off site.

END OF SECTION 017320

SECTION 01 77 00

CLOSEOUT PROCEDURES

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Inspection procedures.
2. Project Record Documents.
3. Operation and maintenance manuals.
4. Warranties.
5. Instruction of Owner's personnel.
6. Final cleaning.

1.2 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion, complete the following. List items below that are incomplete in request.

1. In the Application for Payment that coincides with, or first follows, the date Substantial Completion is claimed, show 100 percent completion for the portion of the Work claimed as substantially complete.

a. Include supporting documentation for completion as indicated in these Contract Documents and a statement showing an accounting of changes to the Contract Sum.

b. If 100 percent completion cannot be shown, prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete.

1. Advise Owner of pending insurance changeover requirements.
2. Submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
3. Obtain and submit releases permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
4. Prepare and submit Project Record Documents, operation and maintenance manuals, Final Completion construction photographs, damage or settlement surveys, property surveys, and similar final record information.

5. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable.
6. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
7. Complete startup testing of systems.
8. Submit test/adjust/balance records.
9. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
10. Advise Owner of changeover in heat and other utilities.
11. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
12. Complete final cleaning requirements, including touchup painting.
13. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

B. Inspection: Submit a written request for inspection for Substantial Completion. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect that must be completed or corrected before certificate will be issued.
1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for Final Completion.

1.2 FINAL COMPLETION

A. Preliminary Procedures: Before requesting final inspection for determining date of Final Completion, complete the following:
1. Submit a final Application for Payment according to Division 1 Section entitled "PAYMENT PROCEDURES."
   a. Submit an updated final statement, accounting for final additional changes to the Contract Sum.
2. Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4. Submit final meter readings for utilities, a measured record of stored fuel, and similar data as of the date of Substantial Completion or when the Owner took possession of and assumed responsibility for corresponding elements of the Work.
5. Submit consent of surety to final payment.
6. Submit pest-control final inspection report and warranty.
7. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training videotapes.

B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.3 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Preparation: Submit three copies of list. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
   1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
   2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
   3. Include the following information at the top of each page:
      a. Project Name
      b. Date
      c. Name of Architect
      d. Name of Contractor
      e. Page Number

1.4 PROJECT RECORD DOCUMENTS

Delete this Article if Project uses Division 1 Section "Project Record Documents."

AIA Document A201 includes general provisions for Project Record Documents. This Article expands on those requirements.

A. General: Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for Architect's reference during normal working hours.

B. Record Drawings: Maintain and submit one electronic copy of Contract Drawings and Shop Drawings.
   1. Mark Record Prints to show the actual installation where installation varies from that shown originally. Require individual or entity that obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to prepare the marked-up Record Prints.
      a. Give particular attention to information on concealed elements that cannot be readily identified and recorded later.
      b. Accurately record information in an understandable drawing technique.
      c. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.
      d. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Contract Drawings.
   2. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.
   3. Mark important additional information that was either shown schematically or omitted from original Drawings.
   4. Note Construction Change Directive numbers, Change Order numbers, alternate numbers, and similar identification where applicable.

5. Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location. Organize into manageable sets; bind each set with durable paper cover sheets. Include identification on cover sheets.

C. Record Specifications: Submit one electronic copy of Project's Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Note related Change Orders, Record Drawings, and Product Data, where applicable.

D. Record Product Data: Submit one electronic copy of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, Record Drawings, and Record Specifications, where applicable.

E. Record Sample Submitted: Immediately prior to Substantial Completion, the Contractor shall meet with the Architect and the Owner's personnel at the Project Site to determine which Samples are to be transmitted to the Owner for record purposes. Comply with the Owner's instructions regarding delivery to the owner's Sample storage area.

F. Miscellaneous Record Submittals: Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

1.3 OPERATION AND MAINTENANCE MANUALS

A. Assemble a complete set of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Sections and as follows:

1. Operation Data:

a. Emergency instructions and procedures.

b. System, subsystem, and equipment descriptions, including operating standards.

c. Operating procedures, including startup, shutdown, seasonal, and weekend operations.

d. Description of controls and sequence of operations.

e. Piping diagrams.

2. Maintenance Data:

a. Manufacturer's information, including list of spare parts.

b. Name, address, and telephone number of Installer or supplier.

c. Maintenance procedures.

d. Maintenance and service schedules for preventive and routine maintenance.

e. Maintenance record forms.

f. Sources of spare parts and maintenance materials.

g. Copies of maintenance service agreements.

h. Copies of warranties and bonds.

i. Wiring Diagrams

j. Fixture lamping schedule

B. Organize operation and maintenance manuals into suitable sets of manageable size. Bind and index data in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, with pocket inside the covers to receive folded oversized sheets. Identify each binder on front and spine with the printed title "OPERATION AND MAINTENANCE MANUAL," Project name, and subject matter of contents.

1.5 WARRANTIES

A. Submittal Time: Submit electronic written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

On advice of Owner's legal counsel, revise paragraph below to suit Project. Sometimes, extended warranties may be necessary.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.

Revise first subparagraph below to suit Project.

1. Bind warranties and bonds in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch (115-by-280-mm) paper.
2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.

Coordinate below if Division 1 Section "Operation and Maintenance Data" is used.

PART 2 - PRODUCTS

2.1 MATERIALS

Below contains basic requirements. Revise requirements to suit Project or to accommodate unusual situations.

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 DEMONSTRATION AND TRAINING

Delete this Article if using Division 1 Section "Demonstration and Training." Paragraphs and subparagraphs below contain minimum requirements.

A. Instruction: Instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

If specific instructors, e.g., Installer or a factory-authorized service representative, are required for demonstration, indicate the requirement in individual Specification Sections.

1. Provide instructors experienced in operation and maintenance procedures.
2. Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at the start of each season.
3. Schedule training with Owner, through Architect, with at least seven days' advance notice.
4. Coordinate instructors, including providing notification of dates, times, length of instruction, and course content.

B. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections. For each training module, develop a learning objective and teaching outline. Include instruction for the following:
1. System design and operational philosophy.
2. Review of documentation.
3. Operations.
4. Adjustments.
5. Troubleshooting.

6. Maintenance / Maintenance agreements and similar continuing commitments
7. Repair.
8. Spare Parts and Materials
9. Tools
10. Lubricants
11. Fuels
12. Identification Systems
13. Control Sequences
14. Hazards
15. Cleaning

C. As part of instruction for operating equipment, demonstrate the following procedures:

1. Start-up
2. Shutdown
3. Emergency operations
4. Noise and vibration adjustments
5. Safety procedures
6. Economy and efficiency adjustments
7. Effective energy utilization

D. Record "As-Built" Drawings

1. Upon completion of the Work, and review of the record drawings by the Architect, prepare a final set of record drawings in electronic format. Submit final set PDF's to Construction Manager and Architect.
2. The cost of furnishing electronic documents and preparing these record drawings shall be included in the Contract price.

E. Provide operating and maintenance instruction to Owner's personnel for following systems and equipment, with minimum instruction periods, comprised of approximately 50% classroom instruction and 50% "hands on" instruction as follows:

Systems and Equipment		Training Time Hour(s)
1. Site Work Contract		
a.	Bio Retention Maintenance	2
2. General Construction Work Contract		
a.	Electrified door hardware	2
b.	Elevator	4
c.	Miscellaneous General Construction items (not included above)	4
d.	Store front maintenance	1
3. Plumbing Work Contract		
a.	Plumbing domestic hot and cold water systems	1
b.	Sanitary Systems	1
c.	Plumbing Fixtures and specialties	2

d. Miscellaneous plumbing items 2

4. HVAC Work Contract
   a. Fans 1
   b. Cabinet heaters 1
   c. Condensing units 1
   d. VRF System 2
   e. Balancing 4
   f. Temperature Controls 24
   g. Terminal units 2
   h. Miscellaneous HVAC items (not included above) 4

5. Electrical Work Contract
   a. Fire Alarm system 8
   b. Lighting Control Equipment 4
   c. Security 8
   d. Miscellaneous electrical items (wiring devices, fuses, panelboards, interior lighting, disconnect switches, circuit breakers) 2

6. Videotape, electronic format, hands-on training sessions and classroom instruction periods, specified in this Specification. No special effects required.

3.2 FINAL CLEANING

Delete this Article if owners prefer to use their own forces. Cleaning provisions in the General Conditions are limited to rubbish removal and similar activities.

A. General: Provide final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
   1. If final cleaning is delayed until final acceptance, revise subparagraph below.

   2. The Site Work Contractor (Contract #1) shall complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
      a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
      b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
      c. Remove snow and ice to provide safe access to building.

   3. The General Work Contractor (Contract #2) shall complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
      a. Clean roof areas of debris and foreign matter.

b. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
c. Sweep concrete floors broom clean in unoccupied spaces.
d. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
e. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.
f. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
g. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
h. Clean windows, inside and outside including frames at project completion
i. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
    1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
j. Remove tools, construction equipment, machinery, and surplus material from Project site.
k. Leave Project clean and ready for occupancy.

4. The Plumbing Work Contractor (Contract #3) shall complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
    a. Wipe surfaces of plumbing equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
    b. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
    c. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
        1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
    d. Remove tools, construction equipment, machinery, and surplus material from Project site.
    e. Leave Project clean and ready for occupancy.

5. The HVAC Work Contractor (Contract #4) shall complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
    a. Wipe surfaces of mechanical equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
    b. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

c. Clean ducts, blowers, and coils if units were operated without filters during construction.
d. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
e. Remove tools, construction equipment, machinery, and surplus material from Project site.
f. Leave Project clean and ready for occupancy.

6. The Electrical Work Contractor (Contract #5) shall complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
a. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.
b. Wipe surfaces of electrical equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
c. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
d. Remove tools, construction equipment, machinery, and surplus material from Project site.
e. Leave Project clean and ready for occupancy.

C. Pest Control: The General Work Contractor (Contract #2) shall engage an experienced, licensed exterminator to make a final inspection and rid Project of rodents, insects, and other pests. Prepare a report.

D. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Project site and dispose of lawfully.

END OF SECTION 01770

SECTION 01 78 10

PROJECT RECORD DOCUMENTS

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for Project Record Documents.

1.2 SUBMITTALS

A. Project Record Document Package: Comply with the following:

1. Submit Project Record Document Package as follows:

a. Submittal: Submit one set of electronic Project Record Document Package.

1). Electronic Media: uploaded as a compressed file or .zip file (containing submittal coversheet, sub folders, and .PDF Submittal Documents) to Contract Administration platform provided by Owner.

b. See Specification 017700 – Closeout Procedures for additional requirements on turnover of Project Record Documents after approval.

B. Project Record Document Package (submitted as compressed file or .zip) (assemble with sub folders for the following documents):

1. Submittal Coversheet for Record Document Package

2. Record Documents Table of Contents (Initially submitted as one independent Submittal).

3. Record Contract Drawings (Initially submitted as one independent Submittal).

a. Record Contract Drawing Mark Up Schedule (Include with Record Contract Drawings Submittal).

4. Record Contract Specifications. (Initially submitted as one independent Submittal).

5. Record Submittal Package: Record Preconstruction Submittals and Record Closeout Submittals:

a. Record Preconstruction Submittal Types (To have been previously approved during preconstruction submittal process):

1). Record Product Data Submittals.

2). Record Shop Drawing Submittals.

3). Record Sample Selection Submittals.

4). Other Miscellaneous Preconstruction Submittals.

b. Record Closeout Submittal Types (Submit Independently as new Closeout Submittals):

1). Operation and Maintenance Manuals

2). Warranties

3). Training Agendas

4). Training Documentation Sign in Sheets, Training Instruction Videos, and Video Recordings.

5). Start Up and Test Report Documentation.

6). All Documents required per 017820 - Operation and Maintenance Data.

7). Any other Miscellaneous Post Construction or other Miscellaneous Project Record Submittals as required by each specific Project Specification Sections.

6. Record Contract Modification Documents.

a. Copies of all Addenda.

b. Copies of Executed Change Orders or Construction Change Directives.

c. Copies of Executed Allowances.

d. Copies of Proposal Requests.

e. Copies of Contract Document Clarifications/Bulletins/ASIs

f. Copies of RFI's.

g. Copies of Project Schedules.

7. Record BIM/CAD Coordination Models, CAD Files of Shop Drawings, and Survey Electronic Files.

8. Record software configurations for custom programming applications.

9. Contractor's Subcontractor and Supplier Directory Contact List.

10. Contractor's Certification of "No Asbestos Materials Installed".

PART 2 PRODUCTS

2.1 RECORD DOCUMENT TABLE OF CONTENTS

A. A Table of Contents of Record Document Package shall be provided by the Contractor that lists all items, files, submittals, documents, and folders individually.

B. Files, Folders, and Subfolders listed on the Table of Contents are to have their titles and numbering match the folder/subfolder names of the items within the final Record Document Package.

C. Each PDF Document or Submittal to be titled as per key below: (1-2-3-4-5)

1. "Submittal Number"

a. Composed of "Specification Section Number" "-" "Submittal Number"

2. "Specification Section Title" (Abbreviate as required)

3. "Submittal Type" or "Description Title" (Abbreviate as required)"

4. Binder Tabulation Number or Record Drawing Set Number. (See Hard Copy Binder and Hard Copy Record Drawing Set Requirements)

a. "#" for Binder Tabulations. "DS" for Drawing Sets.

b. Binders to be divide into sections containing: 600 Sheets per binder maximum and 2-1/4″ maximum thickness of sheets within 3″ Binder.

5. "Approval Status and Date"

a. If the Specific Submittal has not been approved during submission of Final Closeout Package, indicate the item listed as "Not Reviewed" for items pending review.

b. Inclusion of Documents not independently reviewed and approved into the closeout package shall be at the discretion of the Construction Manager or Architect, other submit all items as independent Submittals.

D. Example Document File Names:

1. "230000-06R0 - Roof Top Units – Warranty-#6– APP-01.01.2020"

2. "080000-05R2 – Door Hardware – O&M – NOT REVIEWED"

3. "220000-03R5 – Sanitary Piping Record Drawings-#3 – APP – 03.03.2020"

E. Table of Contents to indicate Hard Copy Binder Division and Binder Identification, Binder Series Numbers, and Binder Section Tabulation Numbers.

1. Binders to be divide into sections containing: 600 Sheets per binder maximum and 2-1/4″ maximum thickness of sheets within 3″ Binder.

2.2 RECORD CONTRACT DRAWINGS

A. Record Contract Drawings: Maintain set of Contractor-provided Contract Drawings on site.

1. Preparation: Mark Record Contract Drawings to show the actual installation where installation varies from that shown originally.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.

b. Accurately record information in an acceptable drawing technique utilizing Electronic PDF drawing mark-up software. Use colors to distinguish between different categories of work.

c. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional Changes to Drawings

b. Revisions to details shown on Drawings.

c. Revisions to routing and sizes of piping, conduits, and duct work.

d. Revision to Electrical Circuitry. Include updated Panel Schedules for all modified Panels.

e. Control or Equipment Panel Locations and functions.

f. Locations of Concealed internal utilities.

g. Locations of Valves, Control Valves, Dampers, Automatic Dampers, cleanouts and other major or specialty components of ductwork or piping systems.

h. Locations and depths of Underground Utility Locations.

i. All Partition Wall Blocking Locations.

j. Revisions to Programmed Systems Sequence of Operations.

k. Revisions to Programmed Systems User Interface Pages.

l. Change Orders, Allowance Authorizations, and Unit Price Authorizations.

1). (Indicate corresponding Proposal Requests or Clarifications if applicable)

m. Proposal Requests

1). (Indicate if Proposal Requests Contractor Proposals are approved or if proposal not accepted or not performed).

n. Architect Contract Document Clarifications: Bulletins, Architectural Supplementals Instructions, Architectural Sketches, Change in Conditions, or Information Bulletins.

3. Mark the Record Contract Drawings or Record Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. If Shop Drawings are marked, show cross-reference on the Contract Drawings.

4. Mark important additional information that was either shown schematically or omitted from original Drawings.

B. Record Transparencies: Immediately before inspection for Certificate of Substantial Completion, the Contractor is to review marked-up Record Drawings with Architect.

1. Refer instances of uncertainty to Architect for resolution.

C. Format: Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location. Identify Contractor and Architect Name on each Record Drawing.

1. Record electronic Drawings: Organize Record Drawing information into separate electronic files that correspond to each sheet of the Contract Drawings.

2. Identification: As follows:

a. Project name.

b. Date.

c. Designation "PROJECT RECORD DRAWINGS."

d. Name of Architect.

e. Name of Contractor.

2.3 RECORD CONTRACT DRAWING MARK UP SCHEDULE:

A. Contract Drawing Mark Up Schedule: Provide Mark Up Schedule for Record Contract Drawings. Mark Up Schedule to indicate a list of mark ups applied to the Record Contract Drawings and Drawing Numbers of the Drawings that the mark ups are marked on

a. Include the following Mark Ups on Contract Drawing Mark Up Schedule:

1). Change Orders.

2). Allowance Authorizations.

3). Unit Price Authorizations.

4). Proposal Requests.

5). Architect Contract Document Clarifications.

2.4 RECORD CONTRACT SPECIFICATIONS

A. Provide Contract Specifications with Project Record Documents, including Addenda and Contract Modifications.

B. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.

3. Record the name of the manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.

4. Note related Change Orders, Record Drawings, and Product Data where applicable.

2.5 RECORD SUBMITTALS: RECORD PRECONSTRUCTION SUBMITTALS AND RECORD CLOSEOUT SUBMITTALS:

A. Each Record Preconstruction Submittal is to have been previously submitted and approved independently prior to incorporation into the final Record Submittal Package.

1. Where installed conditions differ from what is described in original Preconstruction Submittal, update the Record Preconstruction Submittal and submit as a new Record Submittal for re-approval.

B. Each Record Closeout Submittal is to be submitted initially as independent Submittals with each submittal containing an independent Submittal Coversheet for each Record Closeout Submittal and approved independently prior to incorporation into the final Record Submittal Package

C. Once each individual Record Submittal is independently approved, then the Record Submittals is be incorporated into the Record Submittal Package which is to be included in the Project Record Document Package for final review.

D. Within the Record Submittal Package: Provide Sub folders for each Specification Section and group all Record Submittals by Specification Section.

E. Sub Folders are to be labelled by Specification Section Number and Title. Abbreviate or simplify Specification Title text as needed for file name length software restrictions.

F. When Record Submittals are associated with work that an Operation and Maintenance Manuals have been provided for (as identified or grouped by Spec Section Number), include a copy of the Record Submittals as an inserted document in the Operation and Maintenance Manuals.

G. Preparation: Resubmit Record Preconstruction Submittals to indicate the actual product installation where installation varies substantially from that indicated in original preconstruction submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.

3. Note related Contract Document Changes, and other Record Submittals where applicable.

PART 3 EXECUTION

3.1 RECORDING AND MAINTENANCE

A. Recording: The Contractor is to provide a printed (minimum) size 24″ x 36″ set of Contract Drawings (with all changes via addenda marked) prior to start of construction for record drawing mark ups only by the Contractor’s personnel to record mark ups as soon as changes occur, do not wait until the end of the Project.

B. Maintenance of Record Documents and Samples: Store Record Documents and Samples in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Architect's reference during normal working hours.

3.2 TURNOVER OF APPROVED FINAL PROJECT RECORD DRAWING PACKAGE

A. Upon Approval of the Submittal Coversheet for the Final Project Record Document Package the Contractor shall provide via qualified print shop or approved equal: (2) Electronic Flash Drive Copies, 2 Hard Copy Binder Sets, and (2) Printed Record Drawing Sets.

1. The Contractor is to assemble an Electronic Flash Drive Copy of the Final Project Record Document Package onto (1) Single Flash Drive. Provide at least (2) duplicate Flash Drives that contain the Final Record Document Package to be turned over to the Construction Manager. (Flash Drive to possess enough memory capacity to contain entire Final Record Document Package on 1 Flash Drive.)

2. Hard Copy Binder Sets of the Final Project Record Document Package to be assembled as indicated within this section:

3. Printed Record Drawing Sets of Record Contract Drawings.

4. The Contractor is to provide a transmittal of the physical items being turned over to be received initially by the Construction Manager, and then turned over to the Owner. Include the Transmittal of the Project Record Document Package with the Final Application for Payment.

B. Hard Copy Binder Set of Project Record Document Package Requirements:

1. Binders to be sized as 3″ Maximum Heavy Duty Binders with D Rings. (O ring Binders to not be used).

2. Binders to be divide into sections containing: 600 Sheets per binder maximum and 2-1/4″ maximum thickness of sheets within 3″ Binder.

3. Include a copy of the "Table of Contents of Record Document Package" in all Binders.

4. Provide Numbered Binder Tabs between each Submittal or Document within Binder. Reference Binder Tab numbers on Table of Contents.

5. Provide Binder Labels on Face and Spine of Binder indicating:

a. Binder Identification (Record Document Package)

b. Binder Series Number ("Binder #" of "Total Number of Binders")

c. Contractor Name

d. Contractor Phone Number

e. Contractor Address

f. Contract Name

g. Project Name

h. Project Number

i. Owner Name

j. Owner Phone Number

k. Owner Address

l. Architect Name

m. Construction Manager Name

C. Printed Record Drawing Set Requirements:

1. Provide Large Format 24″ x 36″ Printed Drawing Sets of Record Contract Drawings.

END OF SECTION 017810

SECTION 01 78 20

OPERATIONS AND MAINTENANCE DATA

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory.
2. Emergency manuals.
3. Operation manuals for systems, subsystems, and equipment.
4. Maintenance manuals for the care and maintenance of systems and equipment.

1.2 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.3 SUBMITTALS

A. Initial Submittal: Submit 1 draft electronic of each manual at least 15 days before requesting inspection for Substantial Completion. Include a complete operation and maintenance directory. Architect will return 1 electronic copy of draft and mark whether general scope and content of manual are acceptable.

B. Final Submittal: Submit 1 electronic copy of each manual in final form at least 15 days before final inspection. Architect will return electronic copy with comments within 15 days after final inspection.

1. Correct or modify each manual to comply with Architect's comments. Submit 1 electronic copy of each corrected manual within 15 days of receipt of Architect's comments.

1.4 COORDINATION

A. Where operation and maintenance documentation includes information on installations by more than one factory-authorized service representative, assemble and coordinate information furnished by representatives and prepare manuals.

PART 2 PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Organization: Include a section in the directory for each of the following:

1. List of documents.
2. List of systems.
3. List of equipment.
4. Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.

C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with the same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guidelines, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 MANUALS, GENERAL

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Enclose title page in transparent plastic sleeve. Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name, address, and telephone number of Contractor.

6. Name and address of Architect.

7. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

1. Binders: Heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.

b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.

2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.

3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software diskettes for computerized electronic equipment.

4. Supplementary Text: Prepared on 8-1/2-by-11-inch, 20-lb/sq. ft.white bond paper.

5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.

b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

2.3 EMERGENCY MANUALS

A. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.
4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

D. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions.
2. Performance and design criteria if Contractor is delegated design responsibility.
3. Operating standards.

4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

B. Descriptions: Include the following:

1. Product name and model number.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

C. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

E. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUAL

A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

D. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUAL

A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.

B. Source Information: List each system, subsystem, and piece of equipment included in the manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or

supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:

1. Standard printed maintenance instructions and bulletins.
2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training videotape, if available.

E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for maintenance.

F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

H. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

PART 3 EXECUTION

3.1 MANUAL PREPARATION

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.

B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.

2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in Record Drawings to ensure correct illustration of completed installation.

1. Do not use original Project Record Documents as part of operation manuals.

2. Comply with requirements of newly prepared Record Drawings in Division 1 Section "Project Record Documents."

G. Comply with Division 1 Section "Closeout Procedures" for the schedule for submitting operation and maintenance documentation.

END OF SECTION 017820

SECTION 01 82 00

DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Demonstration of operation of systems, subsystems, and equipment.

2. Training in operation and maintenance of systems, subsystems, and equipment.

1.2 SUBMITTALS

A. Instruction Program: Submit one electronic copy of outline of instructional program for demonstration and training, including a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. At completion of training, submit one complete training manual for Owner's use.

B. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

E. Demonstration and Training Videotape: Submit two copies at end of each training module.

1.3 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 1 Section "Quality Requirements," experienced in operation and maintenance procedures and training.

C. Pre-instruction Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:

1. Inspect and discuss locations and other facilities required for instruction.

2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.

3. Review required content of instruction.

4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.4 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections, and as follows:

1. Motorized doors, including, overhead coiling doors, overhead coiling grilles and automatic entrance doors.

2. Equipment, including stage equipment, projection screens, loading dock equipment, waste compactors, food-service equipment, residential appliances and laboratory fume hoods.

3. Fire-protection systems, including fire alarm, fire pumps and fire-extinguishing systems.

4. Intrusion detection systems.
5. Conveying systems, including elevators, wheelchair lifts and cranes.
6. Gas equipment, including medical gas equipment and piping.
7. Laboratory equipment, including laboratory air and vacuum equipment and piping.
8. Heat generation, including, boilers, feedwater equipment, pumps, steam distribution piping and water distribution piping.
9. Refrigeration systems, including chillers, cooling towers, condensers, pumps and distribution piping.
10. HVAC systems, including air-handling equipment, air distribution systems and terminal equipment and devices.
11. HVAC instrumentation and controls.
12. Electrical service and distribution, including transformers, switchboards panelboards, uninterruptible power supplies and motor controls.
13. Packaged engine generators, including transfer switches.
14. Lighting equipment and controls.
15. Communication systems, including intercommunication, surveillance, clocks, programming voice and data and CCTV equipment.
16. Any other equipment not specifically listed that is part of these construction documents.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
    a. System, subsystem, and equipment descriptions.
    b. Performance and design criteria if Contractor is delegated design responsibility.
    c. Operating standards.
    d. Regulatory requirements.
    e. Equipment function.
    f. Operating characteristics.
    g. Limiting conditions.
    h. Performance curves.

2. Documentation: Review the following items in detail:
    a. Emergency manuals.
    b. Operations manuals.
    c. Maintenance manuals.
    d. Project Record Documents.
    e. Identification systems.
    f. Warranties and bonds.
    g. Maintenance service agreements and similar continuing commitments.
    h. Emergencies: [Include the following, as applicable:]
3. Instructions on meaning of warnings, trouble indications, and error messages.
    a. Instructions on stopping.
    b. Shutdown instructions for each type of emergency.
    c. Operating instructions for conditions outside of normal operating limits.
    d. Sequences for electric or electronic systems.
    e. Special operating instructions and procedures.
4. Operations: Include the following, as applicable:
    a. Startup procedures.
    b. Equipment or system break-in procedures.
    c. Routine and normal operating instructions.
    d. Regulation and control procedures.
    e. Control sequences.
    f. Safety procedures.
    g. Instructions on stopping.
    h. Normal shutdown instructions.
    i. Operating procedures for emergencies.
    j. Operating procedures for system, subsystem, or equipment failure.
    k. Seasonal and weekend operating instructions.
    l. Required sequences for electric or electronic systems.
    m. Special operating instructions and procedures.

5. Adjustments: Include the following:
    a. Alignments.
    b. Checking adjustments.
    c. Noise and vibration adjustments.
    d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
    a. Diagnostic instructions.
    b. Test and inspection procedures.
7. Maintenance: Include the following:
    a. Inspection procedures.
    b. Types of cleaning agents to be used and methods of cleaning.
    c. List of cleaning agents and methods of cleaning detrimental to product.
    d. Procedures for routine cleaning
    e. Procedures for preventive maintenance.
    f. Procedures for routine maintenance.
    g. Instruction on use of special tools.
8. Repairs: Include the following:
    a. Diagnosis instructions.
    b. Repair instructions.
    c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
    d. Instructions for identifying parts and components.
    e. Review of spare parts needed for operation and maintenance.

PART 3 EXECUTION

3.1 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a combined training manual.

B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. Architect will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.

2. Owner will furnish an instructor to describe Owner's operational philosophy.

3. Owner will furnish Contractor with names and positions of participants.

C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner, through Architect, with at least seven days' advance notice.

D. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.

E. Demonstration and Training: Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. Comply with requirements in Division 1 Section "Photographic Documentation."

2. At beginning of each training module, record each chart containing learning objective and lesson outline.

F. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

END OF SECTION 018200

SECTION 02 41 19

SELECTIVE DEMOLITION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Contractor shall provide all labor, materials, equipment and incidentals as shown, specified and required to complete the demolition, removal and disposal work.

B. Included, but not limited to, are demolition and removals of existing materials, structures, equipment, or work necessary to install the new Work as shown and specified and to connect same with existing work in an approved manner.

C. Demolitions and removals which may be specified under other Sections shall conform to requirements of this Section.

D. Contractor shall obtain all required permits from any authorities having jurisdiction.

1.3 REFERENCES

A. 29 CFR 1926 - Safety and Health Regulations for Construction (Subpart T - Demolition)

B. 29 CFR 1910 - Occupational Safety and Health Standards

C. ANSI/ASSE A10- Construction and Demolition Safety Standards

D. AWS D12.1 - Reinforcing Steel Welding Code

1.4 SUBMITTALS

A. Contractor shall submit working drawings, shop drawings and material specifications for the approval of the Owner's Representative in accordance with the requirements of the Work. Working drawings and shop drawings shall include, but not be limited to proposed methods, equipment and operating sequences to be used in performance of the demolition and removals work and handling of hazardous materials.

B. Schedule: Show coordination of operations and sequence for shut-off, capping, temporary services, continuation of utility services, and other applicable items to ensure no interruption of Owner's operations.

C. Sequence and Schedule: Submit a detailed schedule showing the sequence and duration of demolition activities.

1.5 JOB CONDITIONS

A. Protection:

1. Demolition and removal work shall be performed by competent workmen experienced in the various types of demolition and removal work required and it shall be carried through to completion with the prevention of damage or injury to structures, occupants thereof, work persons on the site, the public and adjacent features which might result from falling debris or other causes, and so as not to interfere with the use of, and free and safe passage to and from, adjacent structures.

2. Contractor shall provide, erect and maintain catch platforms, lights, barriers, weather protection, warning signs and other items as required for proper protection of the public, occupants of the surrounding buildings, work persons engaged in demolition operations, and adjacent construction.

3. Contractor shall take necessary precautions to control dust and dirt as required by the contract drawings. Dust and dirt shall be prevented from rising by wetting demolished masonry, concrete, plaster and similar debris. Contractor shall take necessary precautions to ensure proper disposal/collection of runoff dust and dirt control water to avoid damage to adjacent construction, or create hazardous/objectionable conditions (such as ice, flooding, and downstream pollution).

4. Contractor shall provide adequate fire protection in accordance with local Fire Department requirements.

5. Contractor shall be solely responsible for making all necessary arrangements and for performing all necessary work involving the discontinuance or interruption of all utilities or services.

6. Any equipment, piping and appurtenances removed without proper authorization, and that are necessary for the operations of the existing or expanded facilities, shall immediately be replaced to the satisfaction of the Owner's Representative at no cost to the Owner.

7. Closing or obstructing of roadways, sidewalks, and passageways adjacent to the Work by the placement or storage of materials will not be permitted, and all operations shall be conducted with minimum interference to vehicle, pedestrian or other traffic.

8. Contractor shall repair damage caused by his operations to facilities to remain, or to any property belonging to the Owner at no additional cost to the Owner.

9. The work shall comply with 29 CFR Part 1926 -- Safety and Health Regulations for Construction, applicable provisions and recommendations of ANSI/ASSE

A10 -- Construction and Demolition Safety Standards, all governing codes and rules, and as specified herein or in the Detailed Specifications.

10. Contractor shall make such investigations, explorations and probes as are necessary to ascertain any required protective measures before proceeding with demolition and removal.

11. Demolition and removal of hazardous materials shall be in accordance with applicable Federal, State and Local regulations.

B. Permits: Obtain all permits from all appropriate regulatory agencies required for closing or obstructing streets and sidewalks.

C. Condition of Equipment:

1. The Owner does not assume responsibility for the actual condition of equipment to be demolished and removed.

2. Conditions existing at the time of inspection for bidding purposes will be maintained by the Owner so far as practicable. However, there is no guarantee by the Owner that the number of fixtures, amount of equipment or any other material of value existing at bidding time in the structures to be demolished will be present in the structures when they are demolished. Contractor shall have no claim against the Owner because of the absence of such fixtures and materials.

3. The information regarding the existing equipment shown on the Drawings is based on visual inspection and a walk-through survey only. Neither the Owner's Representative nor the Owner will be responsible for interpretations or conclusions drawn therefrom by Contractor.

D. Scheduling: Carry out operations so as to avoid interference with Owner's operations and work in the existing facilities.

E. Notification: At least 72 hours prior to commencement of a demolition or removal, Contractor shall notify the Owner's Representative in writing of his proposed schedule. The Owner will inspect the existing equipment or facilities and review with the Contractor those items which are to remain the property of the Owner. No removals shall be started without the permission of the Owner's Representative.

1.6 PRE-DEMOLITION MEETING

A. The Contractor shall have a pre-demolition meeting with the Owner's Representative, in the presence of the Owner, to review all of the work areas that will be affected by the removal of materials from demolition.

PART 2 PRODUCTS

2.1 SOIL MATERIALS

A. Satisfactory Soils: Comply with requirements in Section 312000 "Earth Moving."

PART 3 EXECUTION

3.1 GENERAL

A. The work required shall be done with care, and shall include all necessary shoring, bracing, and support to prevent movement, settlement, or collapse of existing structures or facilities. Contractor shall be responsible for any damage which may be caused by demolition and removal work to any part or parts of existing structures or items designated for reuse or to remain. Contractor shall perform patching, restoration and new work in accordance with applicable technical sections of the Specifications and in accordance with the details shown on the Drawings.

B. Pollution Controls: Use water sprinkling, temporary enclosures, and other suitable methods to limit the amount of dust and dirt rising and scattering in the air to the lowest practical level. Comply with contract drawings and all governing regulations pertaining to environmental protection.

1. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.

2. Clean adjacent structures, facilities, and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to conditions existing prior to the start of the work.

3. The use of calcium chloride for dust control will not be allowed.

C. Contractor shall remove temporary work, such as enclosures, signs, guards, and the like when such temporary work is no longer required or when directed at the completion of the work.

D. Contractor shall dispose of all demolition materials, equipment debris, and all other items not marked or specified by the Owner or the Owner's Representative to remain as property of the Owner, off-site and in accordance with all existing applicable laws and regulations.

E. All construction and demolition debris that has come in contact with regulated solid waste is to be cleaned to the satisfaction of the Owner's Representative before leaving the site.

F. The use of explosives will not be permitted.

G. Dust Control: The Contractor is responsible for controlling visible dust caused by demolition activities. Dust control shall be provided as described in the contract drawings.

3.2 MECHANICAL REMOVALS

A. When underground piping is to be altered or removed, the remaining piping shall be properly capped. Abandoned underground piping may be left in place unless it interferes with new work or is shown, specified or otherwise required to be removed.

B. Provide all caps, plugs, blind flanges, shut-off valves and other work and materials required to remove existing piping from service and as necessary to keep existing piping in service where shown or required.

3.3 PAVEMENT, CURB AND SIDEWALK REMOVALS

A. Remove existing pavement, including base and surface courses, stabilized sub-bases, curbs, and gutters as required to construct new facilities or as shown. Before removing, saw a straight joint at least 1-1/2-inches deep between sidewalk and pavement designated for removal and that left in place. Curbs and gutters shall be removed to the nearest construction joint beyond the limit of demolition shown on the Drawings. If no construction joints lie close to the limits of demolition, curbs shall be cleanly cut to ensure a clean transition between existing and new curbing.

B. Provide for satisfactory transition between replaced pavement and sidewalks and the portions remaining in place.

3.4 MISCELLANEOUS REMOVALS

A. Contractor shall remove miscellaneous items where shown on the Drawings or where necessary for the construction of new structures or modification of existing structures.

3.5 MODIFICATIONS AND CLOSURES

A. Modifications shall conform to all applicable Specifications, the Drawings, and the directions and approvals of the Owner.

3.6 MAINTENANCE AND CLEAN UP

A. Contractor shall maintain the buildings, structures, and other Owner properties free from accumulations of waste, debris, and rubbish caused by the demolition and removal operations.

B. Contractor shall provide on-site dump containers for collection of waste materials, debris and rubbish, and shall wet down dry materials to prevent blowing dust.

C. At reasonable intervals during the progress of the demolition and removal work or as directed by the Owner's Representative, Contractor shall clean the Site and properties, and dispose of waste materials, debris, and rubbish.

END OF SECTION

THIS PAGE LEFT BLANK INTENTIONALLY

SECTION 03 10 00

CONCRETE FORMING AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Form-facing material for cast-in-place concrete.
2. Form liners.
3. Insulating concrete forms.
4. Shoring, bracing, and anchoring.

1.3 DEFINITIONS

A. Form-Facing Material: Temporary structure or mold for the support of concrete while the concrete is setting and gaining sufficient strength to be self-supporting.

B. Formwork: The total system of support of freshly placed concrete, including the mold or sheathing that contacts the concrete, as well as supporting members, hardware, and necessary bracing.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review the following:

a. Special inspection and testing and inspecting agency procedures for field quality control.
b. Construction, movement, contraction, and isolation joints
c. Forms and form-removal limitations.
d. Shoring and reshoring procedures.
e. Anchor rod and anchorage device installation tolerances.

1.5 ACTION SUBMITTALS

A. Product Data: For each of the following:
   1. Exposed surface form-facing material.
   2. Concealed surface form-facing material.
   3. Form liners.
   4. Insulating concrete forms.
   5. Form ties.
   6. Waterstops.
   7. Form-release agent.

B. Shop Drawings: Prepared by, and signed and sealed by, a qualified professional engineer responsible for their preparation, detailing fabrication, assembly, and support of forms.
   1. For exposed vertical concrete walls, indicate dimensions and form tie locations.
   2. Indicate dimension and locations of construction and movement joints required to construct the structure in accordance with ACI 301.
   3. Indicate location of waterstops.
   4. Retain first subparagraph below for when form liners are applicable.
   5. Indicate form liner layout and form line termination details.
   6. Indicate proposed schedule and sequence of stripping of forms, shoring removal, and reshoring installation and removal.
   7. Indicate layout of insulating concrete forms, dimensions, course heights, form types, and details.

C. Samples:
   1. For Form Liners: 12-inch by 12-inch (305-mm by 305-mm) sample, indicating texture.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing and inspection agency.

B. Research Reports: For insulating concrete forms indicating compliance with International Code Council Acceptance Criteria AC353.

C. Field quality-control reports.

D. Minutes of preinstallation conference.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Form Liners: Store form liners under cover to protect from sunlight.

B. Insulating Concrete Forms: Store forms off ground and under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

C. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Concrete Formwork: Design, engineer, erect, shore, brace, and maintain formwork, shores, and reshores in accordance with ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads, so that resulting concrete conforms to the required shapes, lines, and dimensions.

1. Design wood panel forms in accordance with APA's "Concrete Forming Design/Construction Guide."
2. Design formwork to limit deflection of form-facing material to 1/240 of center-to-center spacing of supports.

a. For architectural concrete specified in Section 033300 "Architectural Concrete," limit deflection of form-facing material, studs, and walers to 0.0025 times their respective clear spans (L/400).

B. Design, engineer, erect, shore, brace, and maintain insulating concrete forms in accordance with ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads, so that resulting concrete conforms to the required shapes, lines, and dimensions.

1. Design cross ties to transfer the effects of the following loads to the cast-in-place concrete core:

a. Wind Loads: As indicated on Drawings.

1) Horizontal Deflection Limit: Not more than L/600 of the wall height.

2.2 FORM-FACING MATERIALS

A. As-Cast Surface Form-Facing Material:

1. Provide continuous, true, and smooth concrete surfaces.
2. Furnish in largest practicable sizes to minimize number of joints.
3. Acceptable Materials: As required to comply with Surface Finish designations specified in Section 033000 "Cast-In-Place Concrete, and as follows:

a. Plywood, metal, or other approved panel materials.
b. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

1) APA HDO (high-density overlay).
2) APA MDO (medium-density overlay); mill-release agent treated and edge sealed.
3) APA Structural 1 Plyform, B-B or better; mill oiled and edge sealed.
4) APA Plyform Class I, B-B or better; mill oiled and edge sealed.

B. Concealed Surface Form-Facing Material: Lumber, plywood, metal, plastic, or another approved material.

1. Provide lumber dressed on at least two edges and one side for tight fit.

2.3 INSULATING CONCRETE FORMS

A. Insulating Concrete Forms: Concrete-forming system complying with ASTM E2634, consisting of two panels of insulation connected with cross ties.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Alleguard (formerly Amvic Building System).
b. BuildBlock Building Systems, LLC.
c. Fox Blocks; Airlite Plastics Co.
d. Nudura Corporation.

2. Insulation: ASTM C578, Type II, expanded polystyrene.

a. Thickness: Not less than 2-1/2 inches each face.
b. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1) Flame Spread: 25 or less.

3. Smoke Developed Index: 450 or less. Cross Ties: Polypropylene, with integral reinforcement supports, designed to allow passage of concrete during placement.
4. Core Thickness: 8 inches

2.4 RELATED MATERIALS

A. Reglets: Fabricate reglets of not less than 0.022-inch thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

B. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch minimum.

C. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
2. Form release agent for form liners shall be acceptable to form liner manufacturer.

D. Form Ties: Factory-fabricated, removable or snap-off, glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

PART 3 - EXECUTION

3.1 INSTALLATION OF FORMWORK

A. Comply with ACI 301.

B. Construct formwork, so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117 and to comply with the Surface Finish designations specified in Section 033000 "Cast-In-Place Concrete" for as-cast finishes.

C. Limit concrete surface irregularities as follows:

1. Surface Finish-1.0: ACI 117 Class D, 1 inch.
2. Surface Finish-2.0: ACI 117 Class B, 1/4 inch .
3. Surface Finish-3.0: ACI 117 Class A, 1/8 inch .

D. Construct forms tight enough to prevent loss of concrete mortar.

1. Minimize joints.
2. Exposed Concrete: Symmetrically align joints in forms.

E. Construct removable forms for easy removal without hammering or prying against concrete surfaces.

1. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces.
2. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
3. Install keyways, reglets, recesses, and other accessories, for easy removal.

F. Do not use rust-stained, steel, form-facing material.

G. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces.

1. Provide and secure units to support screed strips.
2. Use strike-off templates or compacting-type screeds.

H. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible.

1. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar.
2. Locate temporary openings in forms at inconspicuous locations.

I. Chamfer exterior corners and edges of permanently exposed concrete.

J. At construction joints, overlap forms onto previously placed concrete not less than 12 inches.

K. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work.

1. Determine sizes and locations from trades providing such items.
2. Obtain written approval of Architect prior to forming openings not indicated on Drawings.

L. Construction and Movement Joints:

1. Construct joints true to line with faces perpendicular to surface plane of concrete.
2. Install so strength and appearance of concrete are not impaired, at locations as approved by Architect and Engineer.
3. Place joints perpendicular to main reinforcement.
4. Locate joints for beams, slabs, joists, and girders in the middle third of spans.

    a. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
5. Space vertical joints in walls

    a. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

M. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection.

1. Locate ports and openings in bottom of vertical forms, in inconspicuous location, to allow flushing water to drain.
2. Close temporary ports and openings with tight-fitting panels, flush with inside face of form, and neatly fitted, so joints will not be apparent in exposed concrete surfaces.

N. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

O. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

P. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete.

1. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
3. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
4. Clean embedded items immediately prior to concrete placement.

3.3 INSTALLATION OF INSULATING CONCRETE FORMS

A. Comply with ACI 301 and manufacturer's instructions.

B. Construct formwork, so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Install forms in running bond pattern.

1. Align joints.
2. Align furring strips.

D. Construct forms tight to prevent loss of concrete mortar.

E. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work.

1. Determine sizes and locations from trades providing such items.
2. Obtain written approval of Architect and Structural Engineer prior to forming openings not indicated on Drawings.

F. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection.

1. Locate ports and openings in bottom of vertical forms, in inconspicuous location, to allow flushing water to drain.
2. Close temporary ports and openings with tight fitting panels, flush with inside face of form, and neatly fitted, so joints will not be apparent in exposed concrete surfaces.

G. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

H. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

I. Shore insulating concrete forms to ensure stability and to resist stressing imposed by construction loads.

3.4 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F

for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achievedat least 70 percent of its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work.

1. Split, frayed, delaminated, or otherwise damaged form-facing material are unacceptable for exposed surfaces.
2. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints.

1. Align and secure joints to avoid offsets.
2. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.5 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

C. Inspections:

1. Inspect formwork for shape, location, and dimensions of the concrete member being formed.

2. Inspect insulating concrete forms for shape, location, and dimensions of the concrete member being formed.

END OF SECTION 031000

SECTION 03 20 00

CONCRETE REINFORCING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel reinforcement bars.
2. Welded-wire reinforcement.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review the following:

a. Special inspection and testing and inspecting agency procedures for field quality control.
b. Construction contraction and isolation joints.
c. Steel-reinforcement installation.

1.4 ACTION SUBMITTALS

A. Product Data: For the following:

1. Each type of steel reinforcement.
2. Epoxy repair coating.
3. Zinc repair material.
4. Bar supports.
5. Mechanical splice couplers.

B. Shop Drawings: Comply with ACI SP-066:

1. Include placing drawings that detail fabrication, bending, and placement.
2. Include bar sizes, lengths, materials, grades, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, location of splices, lengths of lap splices, details of mechanical splice couplers, details of welding splices, tie spacing, hoop spacing, and supports for concrete reinforcement.

3. For structural thermal break insulated connection system, indicate general configuration, insulation dimensions, tension bars, compression pads, shear bars, and dimensions.

C. Construction Joint Layout: Indicate proposed construction joints required to build the structure.

1. Location of construction joints is subject to approval of the Engineer.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For testing and inspection agency.

B. Welding certificates.

1. Reinforcement To Be Welded: Welding procedure specification in accordance with AWS D1.4/D1.4M

C. Material Test Reports: For the following, from a qualified testing agency:

1. Steel Reinforcement:

a. For reinforcement to be welded, mill test analysis for chemical composition and carbon equivalent of the steel in accordance with ASTM A706/A706M.

D. Field quality-control reports.

E. Minutes of preinstallation conference.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified in accordance with ASTM C1077 and ASTM E329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.4/D 1.4M.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.

1. Store reinforcement to avoid contact with earth.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

B. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, plain, fabricated from as-drawn steel wire into flat sheets.

C. Deformed-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, flat sheet.

2.2 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A615/A615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place.

1. Manufacture bar supports from steel wire, plastic, or precast concrete in accordance with CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

a. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire, all-plastic bar supports, or CRSI Class 2 stainless steel bar supports.

C. Mechanical Splice Couplers: ACI 318 Type 2, same material of reinforcing bar being spliced; tension-compression type.

D. Steel Tie Wire: ASTM A1064/A1064M, annealed steel, not less than 0.0508 inch in diameter.

1. Finish: Plain.

2.3 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

PART 3 - EXECUTION

3.1 PREPARATION

A. Protection of In-Place Conditions:

1. Do not cut or puncture vapor retarder.
2. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

3.2 INSTALLATION OF STEEL REINFORCEMENT

A. Comply with CRSI's "Manual of Standard Practice" for placing and supporting reinforcement.

B. Accurately position, support, and secure reinforcement against displacement.

1. Locate and support reinforcement with bar supports to maintain minimum concrete cover.
2. Do not tack weld crossing reinforcing bars.

C. Preserve clearance between bars of not less than 1 inch, not less than one bar diameter, or not less than 1-1/3 times size of large aggregate, whichever is greater.

D. Provide concrete coverage in accordance with ACI 318

E. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

F. Splices: Lap splices as indicated on Drawings.

1. Bars indicated to be continuous, and all vertical bars shall be lapped not less than 36 bar diameters at splices, or 24 inches, whichever is greater.
2. Stagger splices in accordance with ACI 318.
3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.
4. Weld reinforcing bars in accordance with AWS D1.4/D 1.4M, where indicated on Drawings.

G. Install welded-wire reinforcement in longest practicable lengths.

1. Support welded-wire reinforcement in accordance with CRSI "Manual of Standard Practice."

a. For reinforcement less than W4.0 or D4.0, continuous support spacing shall not exceed 12 inches.

2. Lap edges and ends of adjoining sheets at least one wire spacing plus 2 inches for plain wire.
3. Offset laps of adjoining sheet widths to prevent continuous laps in either direction.
4. Lace overlaps with wire.

3.3 JOINTS

A. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Engineer.

1. Place joints perpendicular to main reinforcement.
2. Continue reinforcement across construction joints unless otherwise indicated.
3. Do not continue reinforcement through sides of strip placements of floors and slabs.

B. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length, to prevent concrete bonding to one side of joint.

3.4 INSTALLATION TOLERANCES

A. Comply with ACI 117.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

C. Inspections:

1. Steel-reinforcement placement.
2. Steel-reinforcement mechanical splice couplers.
3. Steel-reinforcement welding.

END OF SECTION 032000

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 03 30 00

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cast-in-place concrete, including concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:

1. Section 031000 "Concrete Forming and Accessories" for form-facing materials, form liners, and insulating concrete forms.
2. Section 032000 "Concrete Reinforcing" for steel reinforcing bars and welded-wire reinforcement.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. Water/Cement Ratio (w/cm): The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete manufacturer.
d. Concrete Subcontractor.

2. Review the following:

    a. Special inspection and testing and inspecting agency procedures for field quality control.
    b. Construction joints, control joints, isolation joints, and joint-filler strips.
    c. Semirigid joint fillers.
    d. Vapor-retarder installation.
    e. Anchor rod and anchorage device installation tolerances.
    f. Cold and hot weather concreting procedures.
    g. Concrete finishes and finishing.
    h. Curing procedures.
    i. Forms and form-removal limitations.
    j. Shoring and reshoring procedures.
    k. Methods for achieving specified floor and slab flatness and levelness.
    l. Floor and slab flatness and levelness measurements.
    m. Concrete repair procedures.
    n. Concrete protection.
    o. Initial curing and field curing of field test cylinders (ASTM C31/C31M.)
    p. Protection of field cured field test cylinders.

1.5 ACTION SUBMITTALS

A. Product Data: For each of the following.

1. Portland cement.
2. Fly ash.
3. Aggregates.
4. Admixtures:

    a. Include limitations of use, including restrictions on cementitious materials, supplementary cementitious materials, air entrainment, aggregates, temperature at time of concrete placement, relative humidity at time of concrete placement, curing conditions, and use of other admixtures.

5. Color pigments.
6. Fiber reinforcement.
7. Vapor retarders.
8. Floor and slab treatments.
9. Liquid floor treatments.
10. Curing materials.
11. Joint fillers.
12. Repair materials.

B. Design Mixtures: For each concrete mixture, include the following:

1. Mixture identification.
2. Minimum 28-day compressive strength.
3. Durability exposure class.
4. Maximum w/cm.
5. Slump limit.

6. Air content.
7. Nominal maximum aggregate size.
8. Steel-fiber reinforcement content.
9. Synthetic micro-fiber content.
10. Indicate amounts of mixing water to be withheld for later addition at Project site if permitted.
11. Include manufacturer's certification that permeability-reducing admixture is compatible with mix design.
12. Include certification that dosage rate for permeability-reducing admixture matches dosage rate used in performance compliance test.
13. Intended placement method.
14. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

C. Shop Drawings:

1. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

a. Location of construction joints is subject to approval of the Architect/Structural Engineer.

D. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article, including the following:

1. Concrete Class designation.
2. Location within Project.
3. Exposure Class designation.
4. Formed Surface Finish designation and final finish.
5. Final finish for floors.
6. Curing process.
7. Floor treatment if any.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:

1. Installer: Include copies of applicable ACI certificates.
2. Ready-mixed concrete manufacturer.
3. Testing agency: Include copies of applicable ACI certificates.

B. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Fiber reinforcement.
4. Curing compounds.
5. Floor and slab treatments.
6. Bonding agents.
7. Adhesives.

8. Vapor retarders.
9. Semirigid joint filler.
10. Joint-filler strips.
11. Repair materials.

C. Material Test Reports: For the following, from a qualified testing agency:

1. Portland cement.
2. Fly ash.
3. Slag cement.
4. Silica fume.
5. Aggregates.
6. Admixtures

D. Floor surface flatness and levelness measurements report, indicating compliance with specified tolerances.

E. Research Reports:

1. For concrete admixtures in accordance with ICC's Acceptance Criteria AC198.
2. For sheet vapor retarder/termite barrier, showing compliance with ICC AC380.

F. Preconstruction Test Reports: For each mix design.

G. Field quality-control reports.

H. Minutes of preinstallation conference.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs Project personnel qualified as an ACI-certified Flatwork Technician and Finisher and a supervisor who is a certified ACI Flatwork Concrete Finisher/Technician or an ACI Concrete Flatwork Technician with experience installing and finishing concrete, incorporating permeability-reducing admixtures.

1. Post-Installed Concrete Anchors Installers: ACI-certified Adhesive Anchor Installer.

B. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Laboratory Testing Agency Qualifications: A testing agency qualified in accordance with ASTM C1077 and ASTM E329 for testing indicated and employing an ACI-certified Concrete Quality Control Technical Manager.

1. Personnel performing laboratory tests shall be an ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician, Grade I. Testing agency

laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician, Grade II.

D. Field Quality Control Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified in accordance with ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests shall be qualified as an ACI Concrete Field Testing Technician, Grade 1, in accordance with ACI CPP 610.1 or an equivalent certification program.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on each concrete mixture.

1. Include the following information in each test report:

a. Admixture dosage rates.
b. Slump.
c. Air content.
d. Seven-day compressive strength.
e. 28-day compressive strength.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C94/C94M and ACI 301.

1.10 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.

1. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
2. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
3. Do not use frozen materials or materials containing ice or snow.
4. Do not place concrete in contact with surfaces less than 35 deg F, other than reinforcing steel.
5. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1, and as follows:

1. Maintain concrete temperature at time of discharge to not exceed 95 deg F
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless modified by requirements in the Contract Documents.

2.2 CONCRETE MATERIALS

A. Regional Materials: Verify concrete is manufactured within 100 miles of Project site from aggregates and cementitious materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

B. Source Limitations:

1. Obtain all concrete mixtures from a single ready-mixed concrete manufacturer for entire Project.
2. Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant.
3. Obtain aggregate from single source.
4. Obtain each type of admixture from single source from single manufacturer.

C. Cementitious Materials:

1. Portland Cement: ASTM C150/C150M, Type I.
2. Fly Ash: ASTM C618, Class C or F.

D. Normal-Weight Aggregates: ASTM C33/C33M, coarse aggregate or better, graded. Provide aggregates from a single source.

1. Alkali-Silica Reaction: Comply with one of the following:

a. Expansion Result of Aggregate: Not more than 0.04 percent at one-year when tested in accordance with ASTM C1293.
b. Expansion Results of Aggregate and Cementitious Materials in Combination: Not more than 0.10 percent at an age of 16 days when tested in accordance with ASTM C1567.
c. Alkali Content in Concrete: Not more than 4 lb./cu. yd. for moderately reactive aggregate or 3 lb./cu. yd. for highly reactive aggregate, when tested in accordance with ASTM C1293 and categorized in accordance with ASTM C1778, based on alkali content being calculated in accordance with ACI 301.

2. Maximum Coarse-Aggregate Size: See "Concrete Mixtures Section" for maximum aggregate size for each class of Concrete.
3. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

E. Air-Entraining Admixture: ASTM C260/C260M.

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete.

Do not use calcium chloride or admixtures containing calcium chloride in steel-reinforced concrete.

1. Water-Reducing Admixture: ASTM C494/C494M, Type A.
2. Retarding Admixture: ASTM C494/C494M, Type B.
3. Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
5. High-Range, Water-Reducing and -Retarding Admixture: ASTM C494/C494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.
7. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C494/C494M, Type C.

G. Water and Water Used to Make Ice: ASTM C94/C94M, potable.

2.3 FIBER REINFORCEMENT

A. Synthetic Macro-Fiber: Synthetic macro-fibers engineered and designed for use in concrete, complying with ASTM C1116/C1116M, Type III, 1 to 2-1/4 inches long.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Euclid Chemical Company (The); a subsidiary of RPM International, Inc.
b. Master Builders Solutions; brand of MBCC Group.
c. Sika Corporation.

2.4 VAPOR RETARDERS

A. Sheet Vapor Retarder, Class A: ASTM E1745, Class A; not less than 15 mils thick. Include manufacturer's recommended adhesive or pressure-sensitive tape.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

a. Foxfire Enterprises, Inc.
b. Stego Industries, LLC.
c. W. R. Meadows, Inc.

2.5 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C171, polyethylene film burlap-polyethylene sheet.

1. Color:

a. Ambient Temperature Below 50 deg F: Black.
b. Ambient Temperature between 50 deg F and 85 deg F : Any color.
c. Ambient Temperature Above 85 deg F: White.

D. Water: Potable or complying with ASTM C1602/C1602M.

E. Clear, Waterborne, Membrane-Forming, Curing Compound: ASTM C309, Type 1, Class B, 18 to 25 percent solids, nondissipating certified by curing compound manufacturer to not interfere with bonding of floor covering.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
a. Dayton Superior Corporation.
b. Euclid Chemical Company (The); a subsidiary of RPM International, Inc.
c. Kaufman Products, Inc.
d. Master Builders Solutions; brand of MBCC Group.
e. W. R. Meadows, Inc.

2.6 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D1751, asphalt-saturated cellulosic fiber or ASTM D1752, cork or self-expanding cork.

B. Epoxy Bonding Adhesive: ASTM C881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade and class to suit requirements, and as follows:

1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.7 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C150/C150M portland cement or hydraulic or blended hydraulic cement, as defined in ASTM C219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand, as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 4100 psi at 28 days when tested in accordance with ASTM C109/C109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C150/C150M portland cement or hydraulic or blended hydraulic cement, as defined in ASTM C219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 5000 psi at 28 days when tested in accordance with ASTM C109/C109M.

2.8 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, in accordance with ACI 301.

1. Use a qualified testing agency for preparing and reporting proposed mixture designs, based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash or Other Pozzolans: 25 percent by mass.

C. Admixtures: Use admixtures in accordance with manufacturer's written instructions.

1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, and concrete with a w/cm below 0.50.
4. Use corrosion-inhibiting admixture in exposed exterior concrete applications.

2.9 CONCRETE MIXTURES

A. Class A: Normal-weight concrete used for exterior footings, foundation walls, and exterior slab on ground.

1. Exposure Class: ACI 318 F2.
2. Minimum Compressive Strength4500 psiat 28 days.
3. Maximum w/cm: 0.45
4. Maximum Aggregate Size: 1 ½" nominal.
5. Air Content:
   a. Exposure Classes F2 and F3: 6 percent, plus or minus 1.5 percent at point of delivery for concrete containing 1-inch nominal maximum aggregate size.

6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
7. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than the rate indicated in the Structural Drawings.

B. Class B: Normal-weight concrete used for interior slabs-on-ground.

1. Exposure Class: ACI 318 F0.
2. Minimum Compressive Strength: 4000 psiat 28 days.
3. Maximum w/cm:.0.50
4. Maximum Aggregate Size: 1" nominal.
5. Air Content:

    a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
7. Synthetic Macro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than a rate of 5.0 lb/cu. yd..

C. Class C: Normal-weight concrete used for interior footings.

1. Exposure Class: ACI 318 F0.
2. Minimum Compressive Strength: 4000 psi at 28 days.
3. Max w/cm: 0.50
4. Maximum Aggregate Size: 1 ½" nominal.
5. Air Content:

    a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

6. Limit water-soluble, chloride-ion content in hardened concrete to 1.00 percent by weight of cement.

2.10 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete in accordance with ASTM C94 , and furnish batch ticket information.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete in accordance with ASTM C94. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than five minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.
2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide reasonable auxiliary services to accommodate field testing and inspections, acceptable to testing agency, including the following:

1. Daily access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Secure space for storage, initial curing, and field curing of test samples, including source of water and continuous electrical power at Project site during site curing period for test samples.
4. Security and protection for test samples and for testing and inspection equipment at Project site.

3.3 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.

1. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of ANSI/AISC 303.
3. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.

3.4 INSTALLATION OF VAPOR RETARDER

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder in accordance with ASTM E1643 and manufacturer's written instructions.

1. Install vapor retarder with longest dimension parallel with direction of concrete pour.
2. Face laps away from exposed direction of concrete pour.
3. Lap vapor retarder over footings and grade beams not less than 6 inches, sealing vapor retarder to concrete.
4. Lap joints 6 inches and seal with manufacturer's recommended tape.

5. Terminate vapor retarder at the top of floor slabs, and grade beams, sealing entire perimeter to floor slabs, grade beams, or foundation walls.
6. Seal penetrations in accordance with vapor retarder manufacturer's instructions.
7. Protect vapor retarder during placement of reinforcement and concrete.

    a. Repair damaged areas by patching with vapor retarder material, overlapping damages area by 6 inches on all sides, and sealing to vapor retarder.

3.5 JOINTS

A. Construct joints true to line, with faces perpendicular to surface plane of concrete.

B. Construction Joints: Coordinate with floor slab pattern and concrete placement sequence.

1. Install so strength and appearance of concrete are not impaired, at locations indicated on Drawings or as approved by Architect/Structural Engineer.
2. Place joints perpendicular to main reinforcement.

    a. Continue reinforcement across construction joints unless otherwise indicated.
    b. Do not continue reinforcement through sides of strip placements of floors and slabs.

3. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
4. Locate joints for beams, slabs, joists, and girders at third points of spans.
5. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
6. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Control Joints in Slabs-on-Ground: Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Grooved Joints: Form control joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch (3.2 mm). Repeat grooving of control joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
2. Sawed Joints: Form control joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random cracks.

D. Isolation Joints in Slabs-on-Ground: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated on Drawings.
2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch (below finished concrete surface, where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.

3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints:

1. Install dowel bars and support assemblies at joints where indicated on Drawings.
2. Lubricate or asphalt coat one-half of dowel bar length to prevent concrete bonding to one side of joint.

F. Dowel Plates: Install dowel plates at joints where indicated on Drawings.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.

1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Notify Architect and testing and inspection agencies 24 hours prior to commencement of concrete placement.

C. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Engineer in writing, but not to exceed the amount indicated on the concrete delivery ticket.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.

1. If a section cannot be placed continuously, provide construction joints as indicated.
2. Deposit concrete to avoid segregation.
3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.

a. Do not use vibrators to transport concrete inside forms.
b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Do not place concrete floors and slabs in a checkerboard sequence.
2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
3. Maintain reinforcement in position on chairs during concrete placement.
4. Screed slab surfaces with a straightedge and strike off to correct elevations.
5. Level concrete, cut high areas, and fill low areas.
6. Slope surfaces uniformly to drains where required.
7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.
8. Do not further disturb slab surfaces before starting finishing operations.

3.7 FINISHING FORMED SURFACES

A. As-Cast Surface Finishes:

1. ACI 301 Surface Finish SF-2.0, "Rough Form Finish": As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.

a. Patch voids larger than 3/4 inch wide or 1/2 inch deep.
b. Remove projections larger than 1/4 inch.
c. Patch tie holes.
d. Surface Tolerance: ACI 117 Class B.
e. Locations: Apply to concrete surfaces not exposed to view.

2. ACI 301 Surface Finish SF-3.0, "Smooth Form Finish":

a. Patch voids larger than 3/4 inch (19 mm) wide or 1/2 inch (13 mm) deep.
b. Remove projections larger than 1/16 inch (3 mm).
c. Patch tie holes.
d. Surface Tolerance: ACI 117 Class A.
e. Locations: Apply to concrete surfaces exposed to view or to be covered with a coating or covering material applied directly to concrete.

B. Rubbed Finish: Apply the following to as cast surface finishes where indicated on Drawings:

1. Grout-Cleaned Rubbed Finish:

a. Clean concrete surfaces after contiguous surfaces are completed and accessible.
b. Do not clean concrete surfaces as Work progresses.
c. Mix 1 part portland cement to 1-1/2 parts fine sand, complying with ASTM C144 or ASTM C404, by volume, with sufficient water to produce a mixture with the consistency of thick paint. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces.
d. Wet concrete surfaces.
e. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap, and keep surface damp by fog spray for at least 36 hours.

C. Related Unformed Surfaces:

1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a color and texture matching adjacent formed surfaces.
2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.8 FINISHING FLOORS AND SLABS

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Float Finish:

1. When bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operation of specific float apparatus, consolidate concrete surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats.
2. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture and complies with ACI 117 tolerances for conventional concrete.
3. Apply float finish to surfaces to receive trowel finish and to be covered with fluid-applied or sheet waterproofing, or sand-bed terrazzo.

C. Trowel Finish:

1. After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel.
2. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance.
3. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
4. Do not add water to concrete surface.
5. Do not apply hard-troweled finish to concrete, which has a total air content greater than 3 percent.
6. Apply a trowel finish to surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.
7. Finish surfaces to the following tolerances, in accordance with ASTM E1155, for a randomly trafficked floor surface:

    a. Slabs on Ground:

        1) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-ft.- (3.05-m-) long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.
        2) Specified overall values of flatness, F_F 25; and of levelness, F_L 20; with minimum local values of flatness, F_F 17; and of levelness, F_L 15.
        3) Specified overall values of flatness, F_F 35; and of levelness, F_L 25; with minimum local values of flatness, F_F 24; and of levelness, F_L 17.

4) Specified overall values of flatness, F_F 45; and of levelness, F_L 35; with minimum local values of flatness, F_F 30; and of levelness, F_L 24.
5) Specified Overall Value (SOV): F_F 50 and F_L 25 with minimum local value (MLV): F_F 40 and F_L 17.
6) Specified Overall Value (SOV): F_F 25 and F_L 20 with minimum local value (MLV): F_F 17 and F_L 15.

b. Suspended Slabs:
1) Specified overall values of flatness, F_F 25; and of levelness, F_L 20; with minimum local values of flatness, F_F 17; and of levelness, F_L 15.
2) Specified overall values of flatness, F_F 35; and of levelness, F_L 20; with minimum local values of flatness, F_F 24; and of levelness, F_L 15.
3) Specified overall values of flatness, F_F 45; and of levelness, F_L 35; with minimum local values of flatness, F_F 30; and of levelness, F_L 24.

D. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom perpendicular to main traffic route.

1. Coordinate required final finish with Architect before application.
2. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

E. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and locations indicated on Drawings.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.
2. Coordinate required final finish with Architect before application.

3.9 INSTALLATION OF MISCELLANEOUS CONCRETE ITEMS

A. Filling In:

1. Fill in holes and openings left in concrete structures after Work of other trades is in place unless otherwise indicated.
2. Mix, place, and cure concrete, as specified, to blend with in-place construction.
3. Provide other miscellaneous concrete filling indicated or required to complete the Work.

3.10 CONCRETE CURING

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

1. Comply with ACI 301 and ACI 306.1 for cold weather protection during curing.
2. Comply with ACI 301 and ACI 305.1 for hot-weather protection during curing.
3. Maintain moisture loss no more than 0.2 lb/sq. ft. x h, calculated in accordance with ACI 305.1,) before and during finishing operations.

B. Curing Formed Surfaces: Comply with ACI 308.1 as follows:

1. Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces.
2. Cure concrete containing color pigments in accordance with color pigment manufacturer's instructions.
3. If forms remain during curing period, moist cure after loosening forms.
4. If removing forms before end of curing period, continue curing for remainder of curing period, as follows:

    a. Continuous Fogging: Maintain standing water on concrete surface until final setting of concrete.
    b. Continuous Sprinkling: Maintain concrete surface continuously wet.
    c. Absorptive Cover: Pre-dampen absorptive material before application; apply additional water to absorptive material to maintain concrete surface continuously wet.
    d. Water-Retention Sheeting Materials: Cover exposed concrete surfaces with sheeting material, taping, or lapping seams.
    e. Membrane-Forming Curing Compound: Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.

        1) Recoat areas subject to heavy rainfall within three hours after initial application.
        2) Maintain continuity of coating and repair damage during curing period.

C. Curing Unformed Surfaces: Comply with ACI 308.1 as follows:

1. Begin curing immediately after finishing concrete.
2. Interior Concrete Floors:

    a. Floors to Receive Floor Coverings Specified in Other Sections: Contractor has option of the following:

        1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.

            a) Lap edges and ends of absorptive cover not less than 12-inches.
            b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than seven days.

        2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive.

            a) Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
            b) Cure for not less than seven days.

        3) Ponding or Continuous Sprinkling of Water: Maintain concrete surfaces continuously wet for not less than seven days, utilizing one, or a combination of, the following:

a) Water.
b) Continuous water-fog spray.

b. Floors to Receive Penetrating Liquid Floor Treatments: Contractor has option of the following:

1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.

a) Lap edges and ends of absorptive cover not less than 12 inches.
b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than seven days.

2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive.

a) Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
b) Cure for not less than seven days.

3) Ponding or Continuous Sprinkling of Water: Maintain concrete surfaces continuously wet for not less than seven days, utilizing one, or a combination of, the following:

a) Water.
b) Continuous water-fog spray.

c. Floors to Receive Curing Compound:

1) Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.
2) Recoat areas subjected to heavy rainfall within three hours after initial application.
3) Maintain continuity of coating, and repair damage during curing period.
4) Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

d. Floors to Receive Curing and Sealing Compound:

1) Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller in accordance with manufacturer's written instructions.
2) Recoat areas subjected to heavy rainfall within three hours after initial application.
3) Repeat process 24 hours later, and apply a second coat. Maintain continuity of coating, and repair damage during curing period.

3.11 TOLERANCES

A. Conform to ACI 117.

3.12 APPLICATION OF LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment in accordance with manufacturer's written instructions.

1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
2. Do not apply to concrete that is less than 28 days' old.
3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing.
4. Rinse with water; remove excess material until surface is dry.
5. Apply a second coat in a similar manner if surface is rough or porous.

B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller in accordance with manufacturer's written instructions.

3.13 JOINT FILLING

A. Prepare, clean, and install joint filler in accordance with manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least one month(s).
2. Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints.

D. Overfill joint, and trim joint filler flush with top of joint after hardening.

3.14 CONCRETE SURFACE REPAIRS

A. Defective Concrete:

1. Repair and patch defective areas when approved by Architect.
2. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete.

    a. Limit cut depth to 3/4 inch.
    b. Make edges of cuts perpendicular to concrete surface.
    c. Clean, dampen with water, and brush-coat holes and voids with bonding agent.
    d. Fill and compact with patching mortar before bonding agent has dried.
    e. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.

2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.

    a. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
    b. Compact mortar in place and strike off slightly higher than surrounding surface.

3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Engineer.

D. Repairing Unformed Surfaces:

1. Test unformed surfaces, such as floors and slabs, for finish, and verify surface tolerances specified for each surface.

    a. Correct low and high areas.
    b. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

2. Repair finished surfaces containing surface defects, including spalls, popouts, honeycombs, rock pockets, crazing, and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.

3. After concrete has cured at least 14 days, correct high areas by grinding.

4. Correct localized low areas during, or immediately after, completing surface-finishing operations by cutting out low areas and replacing with patching mortar.

    a. Finish repaired areas to blend into adjacent concrete.

5. Correct other low areas scheduled to receive floor coverings with a repair underlayment.

    a. Prepare, mix, and apply repair underlayment and primer in accordance with manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
    b. Feather edges to match adjacent floor elevations.

6. Correct other low areas scheduled to remain exposed with repair topping.

a. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations.
b. Prepare, mix, and apply repair topping and primer in accordance with manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

7. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete.

a. Remove defective areas with clean, square cuts, and expose steel reinforcement with at least a 3/4-inch clearance all around.
b. Dampen concrete surfaces in contact with patching concrete and apply bonding agent.
c. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate.
d. Place, compact, and finish to blend with adjacent finished concrete.
e. Cure in same manner as adjacent concrete.

8. Repair random cracks and single holes 1 inch or less in diameter with patching mortar.

a. Groove top of cracks and cut out holes to sound concrete, and clean off dust, dirt, and loose particles.
b. Dampen cleaned concrete surfaces and apply bonding agent.
c. Place patching mortar before bonding agent has dried.
d. Compact patching mortar and finish to match adjacent concrete.
e. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Engineer's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Engineer's approval.

3.15 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform field tests and inspections and prepare testing and inspection reports.

B. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

1. Testing agency shall be responsible for providing curing container for composite samples on Site and verifying that field-cured composite samples are cured in accordance with ASTM C31.
2. Testing agency shall immediately report to Architect/Engineer, Contractor, and concrete manufacturer any failure of Work to comply with Contract Documents.
3. Testing agency shall report results of tests and inspections, in writing, to Owner, Architect/Engineer, Contractor, and concrete manufacturer within 48 hours of inspections and tests.

a. Test reports shall include reporting requirements of ASTM C31, ASTM C39, and ACI 301, including the following as applicable to each test and inspection:

1) Project name.
2) Name of testing agency.
3) Names and certification numbers of field and laboratory technicians performing inspections and testing.
4) Name of concrete manufacturer.
5) Date and time of inspection, sampling, and field testing.
6) Date and time of concrete placement.
7) Location in Work of concrete represented by samples.
8) Date and time sample was obtained.
9) Truck and batch ticket numbers.
10) Design compressive strength at 28 days.
11) Concrete mixture designation, proportions, and materials.
12) Field test results.
13) Information on storage and curing of samples before testing, including curing method and maximum and minimum temperatures during initial curing period.
14) Type of fracture and compressive break strengths at seven days and 28 days.

C. Batch Tickets: For each load delivered, submit three copies of batch delivery ticket to testing agency, indicating quantity, mix identification, admixtures, design strength, aggregate size, design air content, design slump at time of batching, and amount of water that can be added at Project site.

D. Inspections:

1. Headed bolts and studs.
2. Verification of use of required design mixture.
3. Concrete placement, including conveying and depositing.
4. Curing procedures and maintenance of curing temperature.
5. Verification of concrete strength before removal of shores and forms from beams and slabs.

E. Concrete Tests: Testing of composite samples of fresh concrete obtained in accordance with ASTM C 172 shall be performed in accordance with the following requirements:

1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.

a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143:

a. One test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture.
b. Perform additional tests when concrete consistency appears to change.

3. Slump Flow: ASTM C1611:

    a. One test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture.
    b. Perform additional tests when concrete consistency appears to change.

4. Air Content: ASTM C231 pressure method, for normal-weight concrete.

    a. One test for each composite sample, but not less than one test for each day's pour of each concrete mixture.

5. Concrete Temperature: ASTM C1064:

    a. One test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.

6. Compression Test Specimens: ASTM C31:

    a. Cast and laboratory cure two sets of six 6-inch by 12-inch or 4 inch by 8 inch cylinder specimens for each composite sample.
    b. Cast, initial cure, and field cure one set of four standard cylinder specimens for each composite sample.

7. Compressive-Strength Tests: ASTM C39/C39M.

    a. Test one set of two laboratory-cured specimens at seven days and one set of two specimens at 28 days. Retain one set of two laboratory-cured specimens for later testing if required.
    b. Test one set of two field-cured specimens at seven days and one set of two specimens at 28 days. Retain one set of two field-cured specimens for later testing if required.
    c. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

8. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
9. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 500 psi if specified compressive strength is less than or equal to 5000 psi, or no compressive strength test value is less than 10 percent of specified compressive strength if specified compressive strength is greater than 5000 psi.
10. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but will not be used as sole basis for approval or rejection of concrete.
11. Additional Tests:

    a. Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect/Engineer.

b. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42 or by other methods as directed by Architect/Engineer.

1) Acceptance criteria for concrete strength shall be in accordance with ACI 301, section 1.6.6.3.

12. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
13. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

F. Measure floor and slab flatness and levelness in accordance with ASTM E1155 within 48 hours of completion of floor finishing and promptly report test results to Engineer.

3.16 PROTECTION

A. Protect concrete surfaces as follows:

1. Protect from petroleum stains.
2. Diaper hydraulic equipment used over concrete surfaces.
3. Prohibit vehicles from interior concrete slabs.
4. Prohibit use of pipe-cutting machinery over concrete surfaces.
5. Prohibit placement of steel items on concrete surfaces.
6. Prohibit use of acids or acidic detergents over concrete surfaces.
7. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.
8. Protect concrete surfaces scheduled to receive surface hardener or polished concrete finish using Floor Slab Protective Covering.

END OF SECTION 033000

SECTION 03 30 01

CAST-IN-PLACE CONCRETE FOR SITE WORK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Except as shown or specified otherwise, the Work of this Section shall conform to the requirements of Specifications for Structural Concrete for Buildings ACI 301-05 of the American Concrete Institute.

1.2 DEFINITIONS (Amendments to ACI 301, Section 1.2):

A. Exposed Construction: Exposed to view.

1.3 SUBMITTALS

A. Submittals Package: Submit product data for design mix(es) and materials for concrete specified below at the same time as a package.

B. Shop Drawings: Placing drawings for bar reinforcement.

C. Product Data:

1. Concrete design mix(es) with name and location of batching plant.
2. Portland Cement: Brand and manufacturer's name.
3. Fly Ash: Name and location of source, and DOT test numbers.
4. Air-entraining Admixture: Brand and manufacturer's name.
5. Water-reducing Admixture: Brand and manufacturer's name.
6. Aggregates: Name and location of source, and DOT test numbers.
7. Chemical Curing and Anti-Spalling Compound: Brand and manufacturer's name, and application instructions.
8. Bonding Agent (Adhesive): Brand and manufacturer's name, and preparation and application instructions.
9. Expansion Joint Filler: Brand and manufacturer's name.

D. Quality Control Submittals:

1. Certificates: Affidavit required under Quality Assurance Article.

1.4 QUALITY ASSURANCE

A. Concrete batching plant shall be currently approved as a concrete supplier by the New York State Department of Transportation.

B. Fly ash supplier shall be currently approved as a fly ash supplier by the New York State Department of Transportation.

C. Certifications: Affidavit by the bar reinforcement manufacturer certifying that bar material meets the contract requirements.

D. Source Quality Control: The Owner's Representative reserves the right to inspect and approve the following items, at his own discretion, either with his own forces or with a designated inspection agency:

1. Batching and mixing facilities and equipment.
2. Sources of materials.

1.5 STORAGE

A. Store materials so as to insure the preservation of their quality and fitness for the Work. Materials, even though accepted prior to storage, are subject to inspection and shall meet the requirements of the Contract before their use in the Work.

PART 2 PRODUCTS

2.1 MATERIALS (Amendments to ACI 301, Section 4, for Normal Weight Concrete and Section 7 for Lightweight Concrete):

A. Water-reducing Admixture: ASTM C 494, Type A, and on the New York State Department of Transportation's current "Approved List".

B. Fly Ash: ASTM C 618, including Table 1A (except for footnote A), Class F except that loss on ignition shall not exceed 4.0 percent.

C. Chemical Curing and Anti-Spalling Compound: ASTM C-309, Type 1D, Class B, with a minimum 18 percent total solids content. No thinning of material allowed.

1. SureCure Emulsion, Kaufman Products, Inc. 3811 Curtis Avenue, Baltimore, MD 21226, (800) 637-6372.
2. Cure & Seal by Symons Corp., 200 East Touhy Ave., PO Box 5018, Des Plaines, IL 60017-5018, (847) 298-3200.
3. "Kure N Seal W" by Sonneborn/ BASF Building Systems, 889 Valley Park Dr., Shakopee, MN 55379, (800) 433-9517.
4. Day-Chem Cure & Seal 26 percent (J-22) by Dayton Superior Corp., 721 Richard St., Miamisburg, OH 45342, (800) 745-3700.

5. Acrylseal HS by Master Builders/ BASF Building Systems, 23700 Chagrin Blvd., Cleveland, OH 44122, (800) 628-9990.

D. Type 1 Expansion Joint Filler: Preformed, resilient, non-extruding cork units; ASTM D 1752, Type II.

E. Chamfer Strips: Wood, metal, PVC or rubber; one inch chamfer.

F. Epoxy Bonding Agent (Adhesive): 100 percent solids epoxy-resin-base bonding compound, complying with ASTM C 881, Types I, II, IV and V, Grade 2 (horizontal areas) or Grade 3 (overhead/vertical areas), and Class B (40-60 degrees Fahrenheit) or Class C (60 degree Fahrenheit and above).

1. SurePoxy HM Series by Kaufman Products, Inc., 3811 Curtis Avenue, Baltimore, MD 21226, (800) 637-6372.
2. Sikadur Hi-Mod 32 by Sika Corporation, 201 Polito Avenue, Lyndhurst, NJ 07071, (800) 933-7452.
3. Epogrip by Sonneborn/ BASF Building Systems, 889 Valley Park Drive, Shakopee, MN 55379, (800) 433-9517.

2.2 PROPORTIONING (Amendments to ACI 301, Sections 4 & 7):

A. Compressive Strength: Minimum 4500 psi, unless shown or specified otherwise.

1. Concrete used in thrust blocks for underground water service piping shall have its bearing strength adjusted to suit onsite conditions. See specific bearing strength requirements for specific soil types

B. Weight: Normal

C. Durability: Concrete shall be air-entrained. Design air content shall be 6 percent by volume, with an allowable tolerance of plus or minus 1.5 percent for total air content. Entrained air shall be provided by use of an approved air-entraining admixture. Air-entrained cement shall not be used.

D. Slump:

1. 4500 psi Normal Weight Concrete: Between 2 inches and 3 inches before the addition of any water-reducing admixtures or high-range water-reducing admixtures (superplasticizers) at the Site.

E. Admixtures: Do not use admixtures in concrete unless specified or approved in writing by the Owner's Representative.

F. Selection of Proportions: Concrete proportions shall be established on the basis of previous field experience or laboratory trial batches, unless otherwise approved in writing by the Owner's Representative. Proportion mix with a minimum cement content of 611 pounds per cubic yard for 4500 psi concrete.

1. Optional Material: Fly ash may be substituted for (Portland) cement in normal weight concrete up to a maximum of 15 percent by weight of the required minimum (Portland) cement. If fly ash is incorporated in a concrete design mix, make necessary adjustments to the design mix to compensate for the use of fly ash as a partial replacement for (Portland) cement.

    a. Adjustments shall include the required increase in air-entraining admixture to provide the specified air content.
    b. Lower early strength of the concrete shall be considered in deciding when to remove formwork.

2.3 REINFORCEMENT (Amendments to ACI 301, Section 3):

A. Bar Reinforcement: ASTM A 615, Grade 60, deformed steel bars.

B. Bar Supports: Galvanized steel or AISI Type 430 stainless steel, and without plastic tips.

C. Tie Wire: Black annealed wire, 16-1/2 gage or heavier.

2.4 JOINTS AND EMBEDDED ITEMS (Amendments to ACI 301, Section 5.3.2.6):

A. Obtain bond at construction joints by the use of bonding agent (adhesive) or the use of cement grout.

2.5 PRODUCTION (Amendments to ACI 301, Section 5):

A. Provide ready-mixed concrete, either central-mixed or truck-mixed.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Do not use items of aluminum for mixing, chuting, conveying, forming or finishing concrete, except magnesium alloy tools may be used for finishing.

B. Keep excavations free of water. Do not deposit concrete in water.

C. Hardened concrete, reinforcement, forms, and earth which will be in contact with fresh concrete shall be free from frost at the time of concrete placement.

D. Prior to placement of concrete, remove all hardened concrete spillage and foreign materials from the space to be occupied by the concrete.

3.2 FORMWORK (Amendments to ACI 301, Section 2):

A. Chamfer all exposed external corners of concrete.

3.3 PLACING REINFORCEMENT (Amendments to ACI 301, Section 3):

A. At the time concrete is placed, reinforcement shall be free of mud, oil, loose rust, loose mill scale, and other materials or coatings that may adversely affect or reduce the bond.

3.4 PLACING CONCRETE (Amendments to ACI 301, Section 5):

A. Operation of truck mixers and agitators and discharge limitations shall conform to the requirements of ASTM C 94.

B. Do not allow concrete to free fall more than 4 feet.

3.5 FINISHING FORMED SURFACES (Amendments to ACI 301, Section 5.3.3):

A. Finish Schedule: Except where indicated otherwise on the Drawings, provide the finishes below:

1. Rough Form Finish for concrete surfaces not exposed to view.
2. Architectural Finish (for concrete surfaces exposed to view): after pour, strip forms, rub finish with stone and wooden trowel while concrete is still green. The finish shall be architectural and free of nubs, spalls, irregularities and formwork seams.

3.6 FINISHING SLABS (Amendments to ACI 301, Section 5.3.4):

A. Finish Schedule: Except where indicated otherwise on the Drawings, provide the finishes below:

1. Floated Finish for:

    a. Treads and platforms of exterior steps and stairs.

2. Broom or Belt Finish for:

    a. Exterior slabs. Texture, as approved by the Owner's Representative.

B. Finishing, General: Provide monolithic finishes on concrete floors and slabs without the addition of mortar or other filler material. Finish surfaces in true planes, true to line, with particular care taken during screeding to maintain an excess of concrete in front of the screed so as to prevent low spots. Screed and darby concrete to true planes while plastic and before free water rises to the surface. Do not perform finishing operations during the time free water (bleeding) is on the surface.

3.7 CURING AND PROTECTION (Amendments to ACI 301, Section 5.3.6):

A. Maintain concrete surfaces in a moist condition for at least 7 days after placing, except where otherwise indicated. Do not use curing compound.

B. For surfaces of exterior slabs (on grade), apply chemical curing and anti-spalling compound in accordance with the recommendations of the manufacturer.

END OF SECTION

SECTION 03 35 43

CONCRETE TOPPING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the polished concrete floor finishing at interior slabs as shown on the drawings and specified herein.

1. Interior concrete topping applied to cast-in-place concrete surfaces.

1.3 SUBMITTALS

A. Manufacturer's Data: Submit manufacturer's product data with installation instructions for color additive and penetrating sealer.

B. Submit proposed location and details of construction joints to the Engineer for approval.

1.4 MOCK-UP

A. Mock-Ups: Cast colored concrete mockups to demonstrate typical joints, surface finish, bonding, texture, color, tolerances, and standard of workmanship.

1. Build mock-ups approximately 4'-0" x 4'-0" in the location indicated or, if not indicated, as directed by Architect.

2. Notify Architect seven days in advance of dates and times when mock-ups will be constructed.

3. Obtain Architect's approval of mock-ups before starting construction.

4. If Architect determines that mock-ups do not meet requirements, demolish and remove them from the site and cast others until mock-ups are approved.

5. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed Work.

6. Demolish and remove mock-ups when directed.

7. Provide mock-ups for light, medium, and hard sandblast finish; Architect will review for texture. Provide 4'-0" x 4'-0" mock-ups for interior finishes, minimum four mock-ups. Provide patterned concrete finishes as indicated.

PART 2 PRODUCTS

2.1 MATERIALS

A. Portland Cement: ASTM C 150, Type I or Type III.

B. Standard Aggregate: ASTM C 33.

C. Standard Topping: Design mix to produce topping material with following characteristics:

1. Compressive strength, 3500 psi minimum.

2. Slump, 4" maximum.

3. Cement per cu. yd., 590 lb. minimum.

4. W/C ratio, 0.45 maximum.

D. Mixing: Provide batch type mechanical mixer for mixing topping material at project site. Equip batch mixer with a suitable charging hopper, water storage tank, and a water-measuring device. Use mixers that are capable of mixing aggregates, cement and water into a uniform mix within specified time, and of discharging mix without segregation.

1. Mix each batch of 2 cu. yds., or less, for at least 1-1/2 minutes after ingredients are in mixer. Increase mixing time 15 seconds for each additional cu. yd. or fraction thereof.

E. Joints: Provide control and construction joints as indicated or required. Use standard pre-molded joint filler at perimeters finished with backer-rod and sealant.

1. Key Joint Filler #780 as manufactured by Key Resin Company.

F. Reinforcing: Provide bar reinforcement as noted. Unless otherwise detailed or required, reinforce all areas with fiber mesh at rate required per manufacturer to minimize cracking.

G. Bonding Agent: Larsen's, for intended purpose.

H. Concrete Sealer: Subject to compliance with requirements, provide "Key Acrylic Sealer" as manufactured by Key Resin Company.

I. General: Decorative ground concrete is produced by grinding and finishing trowel finished cured concrete in a manner similar to that for terrazzo.

J. Do not consolidate concrete with the use of vibrating or tamping. Allow concrete to cure minimum 28 days.

K. Color Additive: ASTM C979.

1. Color: PC-1 - Cool Grey; shade as selected by Architect.

L. Polished Concrete Chemical Sealer/Hardener/Densifier Compounds:

1. High performance chemical densifier manufactured specifically for application over polished concrete.
2. Satin sheen to match finish luster as measured with specular gloss meter in accordance with ASTM D523 of 30 when measured with 60 degree meter.
    a. Acceptable Products:
        1) RetroPlate, Advanced Floor Products, Inc., Provo, UT
        2) Certi-Shine, Vexcon Chemicals, Inc., Philadelphia, PA
        3) FGS/Permashine, L&M Construction Chemicals, Inc., Omaha, NE.
        4) Perfect Polish.
        5) HTC Superfloor, HTC-America, Knoxville, TN.

M. Cleavage Membrane: ECB &5 Anti Fracture Membrane by NAC or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine the areas and conditions where polished concrete floor finishing is to be installed and notify the Architect of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

B. Ensure concrete has cured for sufficient amount of time before commencing polishing operations, in order to match texture of approved sample.

C. Verify that surfaces are clean, dry, dust free, and free of efflorescence, oil, or other matter detrimental to sealer/hardener application.

D. Verify that joint sealant work in adjoining surfaces is complete prior to applications of sealers. Delay application until sealants have cured.

3.2 PREPARATION

A. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, and other surface or physical damage.

B. Remove loose particles, foreign matter, and oil by method which will not affect sealer/hardener application.

C. Prepare surfaces in accordance with manufacturer's directions.

D. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, spillage, overspray and other surface or physical damage.

E. Once polished concrete flooring operations begin, do not allow construction traffic in work area until floor is completely finished and covered with protective materials to prevent damage and staining.

F. Follow CPAA (Concrete Polishing Association) recommendation for evaporation control and wet curing concrete slabs according to ACI308R-01

3.3 CLEAVAGE MEMBRANE

A. Follow manufacturer's guidelines.

3.4 INSTALLATION

A. Topping Applied to Hardened Concrete: Remove dirt, loose material, oil, grease, paint or other contaminants, leaving a clean surface.

1. Base slab surface shall be brushed with a coarse wire broom and roughened by chipping or scarifying before cleaning a minimum of 1/16" in depth.

B. At unbonded slabs, provided wire mesh bond breaking between existing slab and topping slab. Provide control joints in accordance with ACI requirements.

1. Prior to placing topping mixture, dampen concrete slab surface but do not leave standing water. Over dampened surface, and immediately before placing topping, apply bonding agent. Apply by brush or spray, and at recommended rates, in accordance with manufacturer's directions.

C. Placing and Compacting: Spread topping mixture evenly over prepared base, bring to required level with straight-edge and strike-off. After placement, do not work surface further until ready for floating. Begin floating when surface water has disappeared, or when concrete has stiffened sufficiently to permit operation of power driven floats. Consolidate surface with power-driven floats, or by hand-floating if area is small or inaccessible to power units.

D. Slab Finishes

1. Screed to true and level alignment unless indicated sloped on drawings, then uniformly slope as indicated.

2. Tool all salient edges of concrete.

3. Do not absorb water with neat cement.

4. Make sharp arrises at wall to floor conditions unless otherwise indicated.

5. Finish/steel trowel.

E. Floor Tolerances

1. Ff=50 / Fe=30

F. Cut down high areas and fill low areas. Uniformly slope surfaces to drains. Immediately after leveling, refloat surface to a uniform, smooth finish.

1. Wet cure topping after refloating surface.

G. Performance: Failure of concrete topping to bond to substrate (as evidenced by a hollow sound when tapped), or disintegration or other failure of topping to perform as a floor finish, will be considered failure of materials and workmanship. Repair or replace toppings in areas of such failures.

3.5 CONCRETE FINISHES

A. Polished Concrete Finish Preparation: Clean concrete of loose foreign matter.

B. Saw cut control joints and accent lines as indicated. Interior saw cut joints shall be grouted.

C. Clean dust and debris from saw cut joints and fill with approved epoxy joint filler colored to match with concrete color as selected by the Architect.

3.6 CONCRETE GRINDING

A. General: Follow manufacturer's instructions and use same procedures and personnel used in creating approved sample. Approved sample will be used to judge acceptability of polished concrete finishing.

B. Grinding:

1. Grind and smooth concrete with diamond impregnated abrasive discs fitted to large, heavy floor grinding and polishing machines. Use dry or wet method as approved by manufacturer for selected system.

a. Produce ground finish surface to match approved field sample.

b. Ensure 50 percent minimum aggregate exposure.

2. Initial Grinding

a. Grind concrete with #30 or #40 or finer diamond plates.

b. Follow initial grind with #80 or finer grit stones.

3. Grouting:

a. Cleanse with clean water and rinse thoroughly.

b. Remove excess rinse water and allow to dry.

c. Steel trowel cement paste to fill voids completely.

d. Allow grout to cure.

4. Final Grinding:

a. Polish with progressively finer grit stones to achieve medium reflectivity (800 grit) polish finish matching approved sample.

b. Cleanse with clean water and rinse thoroughly.

c. Remove excess rinse water and allow to dry.

3.7 SEALER APPLICATION

A. General

1. Provide finishes to match approved samples at locations indicated.

2. Apply materials in accordance with manufacturer's printed instructions.

B. Sealer/Densifier: Apply minimum of 2 coats of sealer/densifier to harden exposed concrete to depth of 1/16 to 1/8 inch of floor resulting in hardened floor with satin shine.

3.8 ADJUSTING, CLEANING AND PROTECTION

A. Repair or replace adjacent Work that has been damaged by finishing operations.

B. Clean up and remove debris daily.

C. Clean spillage, overspray, or drift from adjacent surfaces; remove immediately in accordance with manufacturer's instructions.

D. Once polished concrete flooring operations begin, do not allow construction traffic in work area until floor is completely finished and covered with protective materials to prevent damage and staining.

E. Protect finished concrete surfaces from damage by construction equipment and operations.

END OF SECTION 033543

SECTION 042000

UNIT MASONRY

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. The Work of this Section includes all labor, materials, equipment, and services necessary to complete the unit masonry work as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:

1. Concrete block walls and partitions.
2. Concrete block enclosure for emergency generator and electrical transformer.
3. Decorative concrete unit masonry veneer.
4. Stone trim units.
5. Metal joint reinforcing, anchors, ties, weeps, closures, and related accessories for masonry.
6. Control and expansion joints in masonry, filled with joint fillers.
7. Through-wall flashing.
8. Cavity drainage material.
9. Chases, recesses, pockets, and openings in masonry as required for installation of work by others.
10. Building in of items furnished by others into masonry, including access doors, door frames, anchors, sleeves and inserts, and other similar items to be embedded in masonry.
11. Grouting in of metal items built into masonry work.
12. Protection, pointing and cleaning of masonry.

1.3 RELATED SECTIONS

A. Cast-in-Place Concrete - Section 033000.

B. Miscellaneous Metals - Section 055000, for steel lintels.

C. Thermal Insulation - Section 072100.

D. Sheet Metal Flashing - Section 076200.

E. Firestops and Smokeseals - Section 078413.

F. Joint Sealers - Section 079200.

1.5 SUBMITTALS

A. Submit Shop Drawings for the following:

1. Anchoring details.

2. Control and expansion joint locations and details.

3. Special decorative masonry shapes.

4. Flashing at typical lintels indicating relationship of flashing to lintel hangers.

B. Submit Samples for the following:

1. Decorative concrete unit masonry in color and texture as indicated.

a. Submit samples of all special shapes required showing color range and sizes.
b. Submit certification that block meets ASTM standards specified herein.

2. Stone trim units.

3. Joint reinforcing, each type, width, and proposed location (labeled).

4. Anchors, wedges and ties, each type, width, and proposed location (labeled).

5. Joint filler, each type.

6. Flashing, including splice sample, 12" long.

7. Mortar color, 12" long cured sample.

C. Submit technical and installation information for the following:

1. Mortar materials, each material and mortar type.

2. Certification of mortar mix.

3. Flashing material, descriptive literature.

4. Concrete block, joint reinforcing, anchors, ties, and joint filler; submit manufacturer's technical and descriptive literature.

5. Block manufacturer shall submit certifications of compliance with ASTM C 90, C 331 and UL 618 prior to any job site delivery. Field sampling of concrete block may be tested by an Independent Testing Laboratory retained by the Owner according to the requirements of ASTM C 140.

D. Cleaning Procedures: Submit proposed procedures and materials for cleaning masonry work; including certification that cleaner will not adversely affect stone, gaskets, sealants, etc.

1.6 QUALITY ASSURANCE

A. Conform to the following non-cumulative tolerances (any masonry work not meeting these standards shall be re-built as directed by the Architect).

1. Variation from Plumb:

   a. In lines and surfaces of columns, walls and arrises:
      1). In 10 feet 1/8"
      2). In any story of 25 feet maximum 1/4"
      3). In 40 feet or more 1/4"
   b. For external corners, expansion joints and other conspicuous lines:
      1). In any story of 25 feet maximum 1/4"
      2). In 40 feet or more 3/8"

2. Variation from the level or the grades indicated on the drawings; for exposed lintels, sills, parapets, horizontal grooves and other conspicuous lines:

   a. In any bay or 20 feet maximum 1/4"
   b. In 40 feet or more 1/4"

3. Variation of the linear building lines from established position in plan related portion of columns and partitions:

   a. In any bay or 20 feet maximum 1/4"
   b. In 40 feet or more 1/2"

4. Variation in cross-sectional dimensions of columns and in thickness of walls:

   a. Minus 1/8"
   b. Plus 1/8"

5. Variation in dimensions of masonry openings:

   a. Horizontal dimension -0" + 1/16"
   b. Vertical dimension +0" - 1/16"

B. Job Mock-Up: Prior to installation of masonry work, erect sample wall panel mock-up using materials, bonding patterns and joint tooling required for final work and including cavity wall, masonry sill, window unit and sill, projecting courses, anchors and reinforcement as detailed. Provide special features as directed by the Architect for caulking and contiguous work. Build mock-up at the site, 4' x 4' size as directed by the Architect, indicating the proposed range of colors, textures and workmanship to be expected in the completed work. Reconstruct mock-up if directed by the Architect until it meets with Architect's approval. Obtain Architect's acceptance of visual qualities of the mock-up before start of masonry work. Retain mock-up during construction as a standard for judging completed masonry work. Do not alter, move or destroy mock-up until work is completed and accepted by the Architect. Use sample panels to test proposed cleaning procedures after sample panel meets with Architect's approval.

   1. Approved sample panel shall remain on view at the site until completion of masonry veneer work and shall establish the technical and aesthetic standards for the Project.

C. Work of this Section shall conform to the requirements of the following:

   1. ACI 530/ASCE 5/TMS 402 Building Code Requirements for Masonry Structures.

2. ACI 530-1/ASCE 6/TMS 602 Specifications for Masonry Structures.

3. Brick Industry Association (BIA) "Technical Notes on Brick Construction."

D. Pre-Construction Conference: Prior to installation of masonry and associated work, Contractor shall arrange a meeting with Masonry Subcontractor, installers of related work, and other entities concerned with masonry wall performance, including the Architect and Owner. Contractor shall record discussions and agreements and furnish copy to each participant. Provide at least seventy-two (72) hours' advance notice to participants prior to convening conference. Review methods and procedures related to masonry work, including, but not limited to, the following:

1. Review masonry requirements (drawings, specifications, and other Contract Documents).

2. Review required submittals, both completed and yet to be completed.

3. Review and finalize construction schedule related to masonry work and verify availability of materials, installer's personnel, equipment, and facilities needed to make progress and avoid delays.

4. Review required inspection, testing, certifying and material usage accounting procedures.

5. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.

6. Coordinate work with air/vapor barrier membrane and related flashing, review details to avoid conflicts.

1.7 PRODUCT HANDLING

A. General: Deliver, store, handle and protect all materials from damage, moisture, dirt and intrusion of foreign matter. Store all masonry units and mortar materials on raised platforms and under ventilated and waterproof cover. Store packaged materials in manufacturer's unopened containers, marked with manufacturer's name and product brand name. Immediately reseal containers after partial use. Remove and replace damaged materials.

B. Masonry Units: Pack, deliver and store to prevent breakage, cracking, chipping, spalling or other damage. Store, protect and ventilate units at project site.

C. Aggregate: Store with provisions for good drainage.

D. Reinforcement and Anchors: Store and protect so that when placed, joint reinforcement and anchors will be free of soil, dirt, ice, loose rust, scale, or other coatings which would destroy or reduce bond with mortar, and will not be disfigured or bent out of shape.

1.8 JOB CONDITIONS

A. In cold weather, when the outside temperature is below forty (40) deg. F., conform to the requirements of "Cold Weather Masonry Construction and Protection

Recommendations" publication by Brick Industry Association (BIA). No anti-freeze admixtures are permitted.

1. In addition, conform to the following:

   a. Masonry materials must be warmed as required.
   b. Masonry veneer work must be protected a minimum of 24 hours after installation so as to maintain enough heat for hydration of the cement in the mortar.

B. Hot-Weather Requirements: Protect unit masonry work when temperature and humidity conditions produce excessive evaporation of water from mortar and grout. Provide artificial shade and wind breaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg. F. and above. In addition, conform to the following:

1. Masonry materials must be cool.

2. Mortar must be used within 2 hours of initial mixing.

C. Protection of Masonry: During erection, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24" down both sides and hold cover securely in place.

2. Where one wythe of multi-wythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24" down face next to unconstructed wythe and hold cover in place.

D. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and mortar splatter by coverings spread on ground and over wall surface.

2. Protect sills, ledges, and projections from mortar droppings.

3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt on completed masonry.

1.9 ATTIC STOCK

A. Provide additional 10% of dry mortar mix labeled, packaged, and delivered to location determined by Owner for attic stock.

B. Provide additional 5% of decorative concrete masonry units labeled, packaged, and delivered to location determined by Owner for attic stock.

PART 2 PRODUCTS

2.1 MATERIALS

A. Standard Concrete Block

1. Portland cement, ASTM C 150, Type 1, low alkali (less than 0.6%), single source for entire project.

2. Aggregates, ASTM C 331, lightweight expanded shale, clay, or slate aggregates, manufactured by the rotary kiln process equal to "Solite," "Norlite," or "Haydite."

   a. Block scheduled to receive painted finish shall contain normal weight aggregate meeting ASTM C 331 in addition to lightweight aggregate in order to receive a smooth, uniform finish.

3. Concrete Masonry Units: Load bearing lightweight aggregate concrete masonry units conforming to the requirements of ASTM C 90, Type 1.

   a. Block behind masonry veneer and block for rated walls shall be 75% solid units.
   b. All other block may be hollow units.

4. The producer of the concrete masonry units shall furnish certification from an independent testing laboratory confirming that all 8" or larger masonry units meet all of the UL 618 requirements for two (2) hours or better (as required), referencing full scale fire test reports (ASTM E 119). All 4" and 6" units shall conform to "National Bureau of Standards" and "National Research Council" full scale fire tests.

5. Sizes and Shapes: Nominal face size 8" x 16" by thickness as indicated on drawings, with stretcher units, jamb units, header units, square corner units (at ends and corners of exposed or painted work), sash units (at control joints within masonry wall), lintel units and other special shapes and sizes required to complete the work.

6. Finish: For exposed or painted block surfaces, in addition to ASTM requirements, block shall have uniformly dense, flat, fine grain texture, with no cracks, chips, spalls, or other defects which would impair appearance. For concealed CMU, surfaces shall be free from deleterious materials that would stain plaster or corrode metal.

7. Curing: All concrete block shall be steam cured, and air dried for not less than thirty (30) days before delivery.

8. Density of concrete block shall not exceed one hundred and five (105) lbs. per cubic foot.

9. Shrinkage: Shrinkage of concrete blocks shall not exceed 0.065% when tested in accordance with ASTM C 426-16, Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.

10. Water Content

a. At the time of delivery to the job site, concrete masonry units shall have a value, in weight of contained water, of not more than thirty (30) percent of the fully saturated content for the unit tested.
b. Ship all units from the factory, and store at the job site, with all necessary protection to prevent increase of water content from rain and other sources.

B. Decorative CMUs: Conform to ASTM C90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2150 psi (14.8 MPa).

2. Density Classification: Normal weight.

3. Basis-of-Design Manufacturer: Westbrook Concrete Block.

a. Finish: Ground-face.
b. Color: GF-213A.

4. Size: 8-inch x 16-inch.

5. Thickness: 4-inch.

6. Corners: 4-inch “L Corner” 1F/1E from Westbrook.

C. Stone Trim Units: Stone for trim, sills, copings, etc. used in masonry walls shall be limestone conforming to ASTM C 568, Classification II Medium Density, of dimensions and profiles shown on drawings.

1. Grade and Color: Standard, buff; according to grade and color classification established by ILI.

2. Finish: Stone shall have a smooth finish on all exposed surfaces, unless otherwise indicated; concealed surfaces may be sawn. Edges to receive grout or sealant shall be sawn.

3. Provide stone units accurately shaped, with exposed faces dressed true, and with beds and joints at right angles to faces. Comply with recommendations in ILI's "Indiana Limestone Handbook."

D. Joint Reinforcing for Masonry Walls

1. For anchoring masonry veneer to CMU back-up, provide "280 S.I.S. Dub'l Loop-Lok Seismiclip Interlock System" as manufactured by Hohmann & Barnard or equal by manufacturer noted below in Para. D.5. All wire used in assembly shall be 3/16" dia. Assembly shall contain ladder reinforcing, welded loops, box tie, seismiclip and continuous wire in veneer mortar joint. Provide special formed prefabricated pieces at corners and intersections of walls or partitions. Reinforcing wire in veneer mortar joint to extend at least 2" into face of veneer unit. Show anchor locations on approved shop drawings.

a. Reinforcing assembly shall be hot dip galvanized steel finish conforming to ASTM A 153 with zinc coating of 1.5 oz. of zinc per sq. ft, after fabrication.

2. Masonry Joint Reinforcement for Single-Wythe Masonry: Provide either ladder or truss type with single pair of side rods.

3. For interior block walls and partitions, provide standard reinforcing fabricated of 9 ga. side and cross rods, truss or ladder design, no ties, spaced every other block course. Provide prefabricated pieces at corners and intersections of walls or partitions. Reinforcing shall be mill galvanized conforming to ASTM A 641, Class B-1, applied after fabrication.

4. Wire used in assemblies noted above shall be cold drawn steel wire conforming to ASTM A 82.

5. Approved Joint Reinforcing Manufacturers

   a. Hohmann & Barnard
   b. Wire-Bond
   c. Heckmann Building Products
   d. National Wire Products Industries, Inc.

E. Anchors and Ties

1. Dovetail Anchor Slots: Hot-dip galvanized steel, 16 gauge, equal to No. 100 Dovetail Anchor Slot made by Heckmann Building Products, No. 305 anchor slot made by Hohmann & Barnard, or approved equal by other manufacturers in Para. D.5.

   a. Flexible Metal Ties for Dovetail Slots: Hot-dip galvanized, 16 gauge by 1" wide by Heckmann Building Products Inc., or approved equal manufacturer noted above in Para. D.5.
      1). No. 106 Dovetail Corrugated Anchor.
      2). No. 129 Dovetail Triangle Tie.
   b. For anchoring masonry veneer to concrete back-up where there are no dovetail slots provided, provide "CMU/Concrete Screw Wing-Nut Pos-I-Tie" with five (5) gauge hot-dip galvanized (ASTM A 153, Class B-2) wire pintle tie made by Heckmann Building Products, or approved equal by manufacturer noted above in Para. D.5.

2. Wire Mesh: Hot-dip galvanized sixteen (16) gauge steel wire, square mesh, width 3" by length to suit condition; No. 268 by Heckmann Building Products, or approved equal by manufacturer noted above in Para. D.5.

3. For anchoring masonry to structural steel, provide hot-dip galvanized steel, as listed, or approved equal by manufacturer noted above in Para. D.5:

   a. Made by Heckmann Building Products. Galvanizing shall conform to ASTM A 153, with zinc coating of 1.5 oz. of zinc per sq. ft.
      1). No. 195 Column Anchors.
      2). No. 197 Column Anchors.
      3). No. 315 Weld-On Anchor Rods with No. 316 Triangle Ties.
      4). No. 315-B Weld-On Anchor Straps with No. 316 Triangle Ties.
   b. Made by Hohmann & Barnard or approved equal. Galvanizing shall conform to ASTM A 153, with zinc coating of 1.5 oz. of zinc per sq. ft.

1). No. 355 Column Anchors.
2). No. 356 Column Anchors.
3). No. 357 Beam Anchors.
4). No. 359 F anchor straps with VWT tie.

4. For anchoring CMU interior partitions to underside of steel beams, provide hot dip galvanized steel tube anchors equal to No. 419 and No. 421 made by Heckmann Building Products, No. PTA-420 made by Hohmann & Barnard, or approved equal by manufacturer noted above in Para. D.5.

5. For anchoring CMU interior partitions to underside of structural deck, provide 4" x 4" x 1/4" galvanized steel angles (ASTM A 36), 3'-0" long spaced 3'-0" o.c. alternately on each side of partition. Anchor partition securely to structural deck.

F. Reinforcing Bars and Rods: ASTM A 615, Grade 60. See Drawings for size.

G. Control and Expansion Joint Fillers

1. Vertical Installation Within Concrete Masonry Wall: Extruded high-grade neoprene rubber, cross shape, for use with concrete masonry sash units, which shall provide a force fit in the grooves of the sash block, and shall have 1/2" diameter tubular ends (compressed 25% when installed in 3/8" wide joint).

a. Provide the following sizes:
1). 2-5/8" wide control joint fillers for 4" block walls.
2). 4-5/8" wide for 6" block walls.
3). 6-5/8" wide for 8", 10" and 12" block walls.
b. Provide backer rod and sealant joint over joint filler as per drawings and Section 079200 of these specifications.

2. Isolation Joint Filler at Abutting Construction and at Intersecting CMU Walls: Compressible and resilient closed cell neoprene gasket with pressure sensitive adhesive backing, thickness 30% greater than thickness of joint. Acceptable joint filler shall be "Everlastic, Type NN-1" by Williams Products, Inc., or approved equal. Recess joint filler and install backer rod and sealant as per drawings and Section 079200 of these specifications.

3. Within Masonry Veneer: Provide filler rod and sealant installed by Section 079200. Filler depth shall be 2 times joint width.

a. Compressible filler between top of masonry veneer and bottom of shelf angle shall be "Soft Joint Sealant" made by Polytite, or approved equal.

4. Within Expansion Joint at Masonry Veneer: Manufacturer's standard preformed, pre-compressed, open-cell polyurethane foam sealant impregnated with a water based, non-drying polymer modified acrylic water repellent. Provide "Seismic Colorseal" installed to twenty-five 25 percent compression, as manufactured by Emseal or approved equal.

a. Properties: Permanently elastic, mildew resistant, non-migratory, non-staining, and compatible with joint substrates and other joint sealants. Density: 8.4 to 9.1 lb./cu. ft.

2.2 MORTAR MATERIALS

A. Portland Cement: ASTM C 150, Type 1, standard color, one source.

B. Hydrated Lime: ASTM C 207, Type S.

C. Aggregate for Mortar: Clean, washed, buff colored sand, graded per ASTM C 144.

D. Aggregate for Grout: ASTM C 404.

E. Water: Clean, fresh, and suitable for drinking.

2.3 MORTAR MIX

A. Exterior Masonry Veneer Construction: Mortar mixes shall meet ASTM C 270, Type N, cement/lime mortar. Colors of mortars shall use coloring agent made by Davis Colors, Lehigh Cement or approved equal. Color of mortar to meet with Architect's approval. The Contractor may use pre-packaged colored mortar equal to "Color Mortar Blend" made by Glen-Gery.

1. Color of mortar must match Architect’s approved sample and mock-up panel.

B. Exterior Block Back-Up Construction: Provide Portland cement/lime mortar as noted above conforming to ASTM C 270, Type N.

C. Interior Masonry Construction: Provide Portland cement/lime mortar conforming to ASTM C 270, Type N, for load bearing conditions, mortar shall conform to ASTM C 270, Type M.

D. Reinforced Concrete Block: Provide Portland cement/lime mortar conforming to ASTM C 270, Type S.

E. Grout for Unit Masonry: Comply with ASTM C 476 for grout for use in construction of unit masonry. Use grout of consistency (fine or coarse) at time of placement which will completely fill all spaces intended to receive grout. Grout shall have a minimum compressive strength of 3000 psi when tested in accordance with ASTM C 1019.

F. Mixing

1. General: Add cement just before mixing and mix dry. Use sufficient amount of water as necessary to produce workable mix. Mix in small batches to make plastic mass.

2. Mixing: Machine mix all mortars in approved type mixer with device to accurately and uniformly control water. Add hydrated lime dry. Mix dry materials not less than two (2) minutes. Add water, then mix not less than three (3) minutes, not to exceed five (5) minutes. Mix only amount of mortar that can be used before initial set. Do not use mortar which has reached its initial set or two (2) hours after initial mixing, whichever comes earlier. Mortar may not be re-tempered. Clean mixer for each batch, whenever mortar type is changed, and at end of each day's work.

3. Acceleration or other admixtures not permitted.

4. Mortar shall have a flow after suction of not less than seventy-five (75) percent of that immediately after mixing as determined by ASTM C 91.

G. Admixtures

1. No air-entraining admixtures or cementitious materials containing air-entraining admixtures shall be used in the mortar.

2. No antifreeze compounds or other substances shall be used in the mortar to lower the freezing point.

3. Calcium chloride or admixtures containing calcium chloride shall not be used in mortar.

2.4 MASONRY ACCESSORIES

A. Neoprene Joint Filler: Provide closed cell neoprene, Type NN-1, conforming to ASTM D 1056, Grade 1, high performance, as manufactured by Williams Products Inc., or equal made by D. S. Brown, Norton, or approved equal.

B. Weep Holes: Provide clear plastic weep holes 3/8" wide and 1-1/2" high by four (4) inches long equal to No. 342 made by Hohmann & Barnard or approved equal manufacturer listed above.

C. Through-Wall Flashing: Provide sheet membrane flashing as part of exterior wall membrane system. Provide sealants and tapes as recommended by the manufacturer. Provide preformed corner sections "end dams" with system when flashing is discontinuous.

1. Provide flashing for surface adhered applications at sheathed areas with 26 ga. stainless steel termination bar.

2. Wall flashing shall have 26 ga. stainless steel drip edge adhered to edge of flashing, drip edge shall be set in sealant as specified in Section 079200.

D. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from UV-resistant, high-density polyethylene. Cell flashing pans have integral weep spouts designed to be built into mortar bed joints and that extend into the cell to prevent clogging with mortar.

E. Cavity Drainage Material: Provide 10" high HDPE "Mortar Net" open mesh mortar net of width to fit masonry cavity shown on drawings, manufactured by Hohmann & Barnard, Inc., or equal "Mortar Break II," made by Advanced Building Products.

PART 3 EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection

1. Prior to all work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence.

2. Verify that masonry may be completed in accordance with all pertinent codes and regulations, the referenced standards, and the original design.

3. Do not start any work until mock-ups are approved by the Architect.

B. Discrepancies: In the event of discrepancy, immediately notify the Architect in writing. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved. Starting of work by the Contractor means acceptance by the Contractor of the substrate.

3.2 COORDINATION

A. Carefully coordinate with all other trades to ensure proper and adequate interface of the work of other trades with the work of this Section.

3.3 INSTALLATION

A. General

1. Do not wet concrete block units.

2. Build walls to the full thickness shown. Build single wythe walls to the actual thickness of the masonry units, using units of nominal thickness shown.

3. Build chases and recesses as shown or required for the work of other trades.

4. Leave openings for equipment to be installed before completion of masonry work. After installation of equipment, complete masonry work to match work immediately adjacent to the opening.

5. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint widths and to properly locate openings, movement type joints, returns and offsets. Avoid the use of less than half size units at corners, jambs and wherever possible.

6. Lay up walls plumb and true with courses level, accurately spaced and coordinated with other work.

7. Pattern Bond: Lay exposed masonry patterns as noted on drawings. If not shown, provide running bond. Lay concealed concrete block with all units in a wythe bonded by lapping not less than two (2) inches. Bond and interlock each course of each wythe at corners. Do not use units of less than four (4) inches horizontal face dimensions at corners or jambs.

8. Walls and partitions shall be plumb, true to line and free from defects such as open cells, voids, dry joints and other similar defects.

9. Mortar, ties, and reinforcement must not extend into or bridge any expansion joints.

10. For best appearance and water resistance, tuckpoint scored joints on interior and exterior applications.

B. Mortar Bedding and Jointing

1. All joints between masonry veneer units shall be completely filled with mortar. Bed joints shall be beveled per BMI recommendations, with the veneer units then shoved in place. At cavity wall construction, care shall be taken that no excess mortar goes into masonry cavity. Head joints shall be completely filled with mortar and shall be formed by applying a full coat of mortar to the entire end or the entire side, as the case requires, and then shoving the mortar covered end and/or side of the veneer unit tightly against the veneer units previously laid; the practice of “slushing” by throwing mortar into the head joints will not be permitted. All veneer units shall be laid without disturbing the units previously laid. Veneer units shall be laid within a minute or so after the mortar is placed. Dry or butt joints will not be permitted. Grouting shall be done only as necessary. Do not slush head joints.

2. After veneer unit placement, mortar squeezed out of bed joints shall be cut off before tooling.

3. Lay concrete masonry units with full mortar coverage on horizontal and vertical face shells. Bed webs in mortar in starting course on exterior walls and in all courses of piers, columns and pilasters, where solid CMU is used and where adjacent to cells or cavities to be reinforced or filled with concrete or grout.

   a. To ensure alignment of masonry veneer and block coursing, adjust block back-up by cutting block to insure alignment of coursing or use adjustable anchorage.

4. Lay masonry walls with 3/8" joints unless otherwise shown on drawings.

5. Tool exposed joints slightly concave after the mortar joint is thumbprint hard. Concealed joints shall be struck flush, including at any CMU schedule to receive a waterproofing or air barrier membrane.

6. Remove masonry units disturbed after laying; clean and reset in fresh mortar. Do not pound corners at jambs to fit stretcher units which have been set in position. If adjustments are required, remove units, clean off mortar and reset in fresh mortar.

C. Stopping and Resuming Work: Rake back 1/2 unit length in each course; do not tooth. Clean exposed surfaces of set masonry, wet units lightly (if required) and remove loose masonry units and mortar prior to laying fresh masonry.

D. Built-In Work

1. As the work progresses, build in items specified under this and other Sections of these specifications. Fill in solidly with masonry around built-in items.

2. Mortar in door frames, access doors, louvers and other metal items embedded or built into masonry work solidly with mortar as the masonry units are laid up.

3. Grout under lintels, bearing plates, and steel bearing on masonry with solid bed grout.

4. Sleeves, pipes, ducts, and all other items which pass through masonry walls shall be caulked with interior grade sealant meeting requirements of Section 079200, so as to be airtight and prevent air leakage. Refer to Section 078413 for packing of voids in rated masonry walls.

5. Fill vertical cells of masonry units solid with grout which have anchoring, reinforcing rods, supporting or hanging devices embedded in the cell including stone anchors and window or curtain wall anchors.

6. Fill vertical cells of masonry units solid with mortar on each side of door frames to sixteen (16) inches beyond.

7. Unless otherwise noted, fill vertical cells of masonry units solid with grout which are below steel bearing plates, steel beams, and ends of lintels, to eight (8) inches beyond bearing and from floor to bearing.

8. Place wire mesh in horizontal joint below masonry unit cells to be filled with mortar, to prevent mortar from dropping into unfilled cells below.

9. Masonry indicated as being reinforced shall have all voids filled solid with grout. Grout shall be consolidated in place by vibration or other methods which insure complete filling of cells. When the least clear dimension of the grouted cell is less than two (2) inches, the maximum height of grout pour shall not exceed twelve (12) inches. When the least clear dimension is two (2) inches or more, maximum height of grout pour shall not exceed forty-eight (48) inches. When grouting is stopped for one (1) hour or longer, the grout pour shall be stopped 1-1/2" below the top of a masonry unit. Vertical bar reinforcing shall be accurately placed and held in position while being grouted, and shall be in place before grouting starts. All such reinforcing shall have a minimum clear cover of 5/8". Lap all bars a minimum of forty (40) bar diameters and provide steel spacer ties (not to exceed 192 bar diameter) to secure and position all vertical steel and prevent displacement during grouting. Provide continuous horizontal reinforcement embedded in mortar joints every second course.

E. Cutting and Patching

1. All exposed masonry which requires cutting or fitting shall be cut accurately to size with motorized carborundum or diamond saw, producing cut edges.

2. Do not saw cut any masonry openings in veneer construction without Architect's approval and after a procedure has been reviewed and approved.

3. Holes made in exposed masonry units for attachment of handrail brackets and similar items shall be neatly drilled to proper size.

4. All masonry which requires patching in exposed work, if approved by Architect, shall be patched neatly with mortar to match appearance of masonry as closely as possible and to the Architect's satisfaction. Rake back joints and use pointing mortar to match as required.

F. Solid Wall Construction

1. Fill the vertical longitudinal joint between wythes solidly with mortar by parging the in-place wythe and shoving units into the parging.

2. Tie wythes with continuous horizontal reinforcement embedded in mortar joints sixteen (16) inches o.c. vertically.

G. Interior Block Partitions (not used)

H. Ties and Anchors for Masonry Construction

1. Provide ties and anchors as shown or specified, but not less than one metal tie, spaced not to exceed 16" o.c. horizontally and/or vertically. Provide additional ties within 1'-0" of all openings and adjacent to expansion joints and spaced not more than 16" apart around perimeter of openings.

2. Anchoring Masonry to Structure: Provide an open space not less than 1/2" in width between masonry and structural member, unless otherwise shown. Keep open space free of mortar or other rigid materials.

I. Control and Expansion Joints

1. Provide expansion, control and isolation joints in masonry as shown. Build in related items as the masonry work progresses.

2. CMU Control Joint Spacing: If location of control joints is not shown, place vertical joints spaced not to exceed 40'-0" o.c. In addition, locate joints at points of natural weakness in the masonry work, including the following:

   a. At structural column or joint between bay.
   b. Above control joints in the supporting structure.
   c. Above major openings at end of lintels upward and below at ends of sills downward. Place at one side of jamb for openings not less than 6'-0" wide and at both sides for openings over 6'-0" wide.
   d. At reduction of wall thickness.
   e. Where masonry abuts supporting structure.
   f. If additional joints are required, indicate same on approved shop drawings.

3. Masonry Veneer Expansion Joint Spacing: Vertical expansion joints in veneer construction shall be located maximum 20'-0" o.c. unless otherwise noted in addition to expansion joints located within 2'-0" of each corner of the building.

J. Lintels

1. Install loose steel lintels furnished by Section 055000, allowing eight (8) inch bearing at ends.

2. For concrete block walls, use specially formed U-shaped concrete block lintel units with reinforcing bars in accordance with the following table, filled with grout.

Number and Size of Reinforcing Bars Required at Concrete Block Lintels		
Maximum Clearance Span	Wall Width	Rebar No. - Size
2'-0" to 6'-0" 6'-0" to 8'-0"	6"	2 - #3 2 - #4
2'-0" to 6'-0" 6'-0" to 8'-0"	8"	2 - #3 2 - #4
2'-0" to 6'-0" 6'-0" to 8'-0"	12"	3 - #3 3- #4

3. U-shaped concrete block lintels shall extend a minimum of 8" at each side of opening.

3.4 FLASHING/WEEP HOLES

A. General: Install embedded flashing and weep holes in masonry at relieving angles, shelf angles, lintels, ledges, other obstructions to the downward flow of water in the wall, and where indicated. Space weeps 16" o.c. unless otherwise shown on drawings. Weeps shall occur immediately above the flashing.

B. Prepare masonry surfaces so that they are smooth and free from projections that could puncture flashing.

C. Flashing shall be placed, generally, at bottoms of cavity wall construction, over all wall openings, window jambs, at sills of window, and in other locations where indicated on the drawings. Flashing shall overlap a minimum of 6". At bottoms of cavity walls, the flashing shall be built extending from the exterior face of the veneer unit, up and into the mortar joint 2" at the inner wythe of the CMU back-up; at sheathed areas attached with pressure bar. Extreme care shall be exercised in placing the masonry materials not to damage the flashing. Flashing damaged during the masonry erection shall be repaired or replaced by the Contractor at no additional cost to the Owner. Discontinuous flashing shall terminate with an end dam in a head joint, rising at least 1".

D. When spanning an air space, flashing shall be supported with a mortar wash, insulation or treated wood blocking.

E. Where flashing is penetrated by anchors, patch flashings at penetration using adhesive and mastic recommended by the manufacturer to insure watertight seal.

F. Install flashing in accordance with manufacturer's instructions, using adhesive, primer, thinner, cleaner and mastic as recommended by flashing manufacturer.

1. Flashing shall overlap adjacent piece of flashing a minimum of 6".

G. Provide drip edge when flashing extends beyond face of veneer.

H. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.

3.5 CLEANING, PROTECTION, ADJUSTMENT

A. Protection

1. The Contractor shall take adequate precautions for the protection of all surfaces against mortar spatter and shall immediately remove any such spatter should it inadvertently occur, leaving no stain or discoloration.

2. Excess mortar shall be wiped off the masonry surfaces as the work progresses.

3. Wood coverings shall be placed over all such masonry surfaces as are likely to be damaged during the progress of the entire project.

4. Protective measures shall be performed in a manner satisfactory to the Architect.

5. Damaged masonry units shall be replaced to satisfaction of the Architect.

6. Exterior masonry walls shall be draped with waterproof covering until copings are in place, to prevent water penetration in cavity.

B. Cleaning of Masonry: Upon completion, all exposed masonry shall be thoroughly cleaned following recommendations of the BIA Technical Note No. 20. Before applying any cleaning agent to the entire wall, it shall be applied to a sample wall area of approximately 4' x 4' in a location approved by the Architect. No further cleaning work may proceed until the sample area has been approved by the Architect, after which time the same cleaning materials and method shall be used on the remaining wall area. If stiff brushes and water do not suffice, the surface shall be thoroughly saturated with clear water and then scrubbed with a solution of an approved detergent masonry cleaner, equal to "Vana Trol" made by ProSoCo Inc. or equal made by Diedrich or approved equal, mixed as per manufacturer's directions, followed immediately by a thorough rinsing with clear water. All lintels and other corrodible parts shall be thoroughly protected during cleaning.

1. Unless otherwise required by cleaning agent manufacturer use only low-pressure device (30 to 50 psi) for application of cleaning agent and water rinsing.

C. Pointing: Point any defective joint with mortar identical with that specified for that joint.

END OF SECTION 042000

SECTION 04 72 00

Cast Stone

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. The Work of this Section includes all labor, materials, equipment and services necessary to provide sill / projecting cast stone band and accessories as indicated on Drawings, specified herein, and as needed for a complete and proper installation.

1.2 DESIGN REQUIREMENTS

A. No air-entraining admixtures or material containing such shall be permitted in the mortar. Also, no anti-freeze compounds, calcium chloride, or other compounds, unless expressly permitted otherwise, shall be permitted in the mortar.

B. Mortar types to be used at the following locations, unless otherwise stated:

1. General Setting – Type N

1.3 REFERENCES

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. Cast Stone Institute (CSI)

C. American Concrete Institute (ACI).

D. Concrete Reinforcing Steel Institute (CRSI).

E. American Society for Testing and Materials (ASTM).

1.4 SUBMITTALS

A. Product Data

Submit Product Data to show compliance with specified requirements.

1. Submit complete data for reinforcement.

2. Portland Cement used in mortar: Brand and manufacturer's name.

3. Lime used in mortar: Brand and manufacturer's name.

4. Mortar and Stone Pigments: Brand and manufacturer's name.

5. Packaged Products: Manufacturer's specifications and application instructions.

6. Sand used in mortar: Location of pit, name of owner, and previous test data.

7. Anchors and other ties.

8. Cast Stone cleaner. Also provide cast stone manufacturer’s recommended cleaning procedure for the cleaning product to be used and required adjacent material protection requirements.

B. Shop Drawings

1. Shop Drawings showing complete information for fabrication and erection of the Work of this Section, including, but not limited to:

   a. Plan and elevation of all stone location with dimension and joint locations. Show location of corresponding joint in adjoining masonry. Stone identification marks used on plan shall be used on fabricated unit.

   b. Show fabrication and installation details for cast stone. Include dimensions and cross sections; details, locations, size, and type of reinforcement. Indicate finished faces.

      1) If changes to the profile are proposed, show existing profile in dotted line and new or proposed profile in solid line clearly depicting the proposed changes.

   c. Erection procedures, sequence of erection, and required handling equipment.

   d. Layout, dimensions, and identification of each precast unit corresponding to the sequence and procedure of installation.

   e. Details of inserts, connections, and joints, including accessories.

   f. Location and details of anchorage devices that are to be embedded in other construction.

   g. Anchorages, including special reinforcement and lifting devices necessary for handling and erection.

C. Samples: Review of samples by the Architect will be for color, texture, and general condition only. Compliance with all other requirements is the exclusive responsibility of the Contractor.

1. Cast Stone: Submit 3 cast stone samples approximately 12" x 12" ", showing quality, texture, and color of the proposed finish.

2. Samples for Initial Selection of Mortar Color: Submit the full range of colors available.

3. Samples for Verification of Mortar Color: For each mortar color required, submit the full range expected in the finished construction. Make samples using the same ingredients to be used on Project. Label samples to indicate type and amount of colorant used.

4. Submit 3 samples each of anchorages and other attachments and accessories.

D. Quality Control Submittals

1. Mix design for the cast stone showing each aggregate, cement, pigment, admixture, water to cement ratio, and unit weight. If wet cast, show air content and slump. Include aggregate gradation and fineness modulus that was used in the sample subject to the required freeze-thaw test. Include acceptable limits for the gradation to meet pass the testing.

2. Laboratory tests reports, by a qualified independent testing laboratory, as specified in Article titled "Source Quality Control".

   For Cast Stone Institute (CSI) certified plants, the 6-month regular plant-performed testing for each 500 ft^3 may be provided for all tests by an independent lab in lieu of project specific testing.

   a. For Cast Stone Institute (CSI) certified plants, the 6 month regular independent tests and plant performed testing for each 500 ft^3 may be provided in lieu of tests for each 500 ft^3 of project material by an independent lab. Provide proof of CSI plant certification and membership in good standing.

3. Sieve analysis of aggregates for each 500 ft^3 of project production run.

4. Certificates

   a. Statements that manufacturer, installer, adhesive anchor installer and test laboratory have the specified qualifications. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

b. Statements that cast stone and mortar materials meet the single source requirements indicated under "Quality Control".

c. For wet-cast units, **c**ertification that air-entraining admixture is compatible with other admixtures used by the admixture manufacturer.

5. Field quality control test samples, if required.

E. Warranty

1. Manufacturer's Warranty

1.5 QUALITY ASSURANCE

A. Qualifications

1. Installer: A firm with at least 3 years experience in installing cast stone units of a type and quantity similar to those indicated for this Project. Use adequate numbers of skilled workman who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the Work of this Section.

2. Manufacturer: A supplier experienced in manufacturing cast stone units similar to those indicated for this Project and with a record of successful in-service performance **of 5 years**, as well as sufficient production capacity to manufacture required units.

3. Testing Laboratory: An independent testing laboratory qualified according to ASTM E329 to conduct the testing specified. Lab is also to be qualified by CSI or demonstrate experience in performing the testing required by ASTM C1364.

B. Regulatory Requirements

1. Building Code: Work of this Section shall conform to all requirements of the NYS Building Code and all applicable regulations of governmental authorities having jurisdiction, including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the Building Code are given in this Section, the requirements of this Section shall govern.

C. Source Quality Control

1. Source Limitations for Cast Stone: Obtain cast stone units through one source from a single manufacturer.

2. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

3. Cleaning

   Prior to cleaning all stones, perform mock-up on two stones to verify cleaner and technique will not damage stones nor the adjoining surfaces.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver the Work of this Section to the job site in such quantities and at such times as to assure the continuity of construction; carefully pack or crate to prevent damage.

B. Store units at the job site in a manner to prevent cracking, distortion, warping, staining, and other physical damage, and in a manner to keep markings visible.

C. Lift and support the units only at designated lifting points or supporting points as shown on the approved Shop Drawings.

D. Any units damaged before final acceptance shall be replaced.

E. Patching of units will not be acceptable, except as permitted in Article 2.02.

F. Pack, handle, and ship cast stone units in suitable packs or pallets.

   1. Lift using only manufacturer installed or approved field installed lifting devices. Do not lift with wide-belt slings or wire ropes to avoid chipping units. Move cast stone units, if required, using dollies with wood supports.

   2. Store cast stone units on wood skids or pallets with non-staining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation. Place nothing on top of cast stone pallets. Do not double stack without manufacturer's written permission.

G. Store installation materials on elevated platforms, under cover, and in a dry location.

H. Store mortar aggregates where grading and other required characteristics can be maintained and contamination avoided.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Cold Weather Construction Requirements

   1. Per Section BC 2104.1, cold weather construction provisions of TMS 602/ACI 530.1/ASCE 6 Article 1.8C shall be implemented when either the ambient temperature falls below 40°F or the temperature of masonry units is below 40°F.

   2. Salt or other chemicals for lowering the freezing temperature of the mortar shall not be used.

B. Hot Weather Construction Requirements

Per the requirements of Section BC 2104.1, hot weather construction provisions of TMS 602/ACI 530.1/ASCE 6 Article 1.8D shall be implemented when temperatures exceed 100°F, or 90°F with a wind velocity greater than 8 mph.

1.8 WARRANTY

A. Provide a 5-year warranty that all parts of the cast stone will be free from defects in material and workmanship.

PART 2 - PRODUCT

2.1 MATERIALS

A. Cast Stone

1. Portland Cement: ASTM C150, Type I, white, containing not more than 0.60 percent total alkali when tested according to ASTM C114.

2. Coarse Aggregates: Granite, quartz, or limestone complying with ASTM C33; gradation as needed to produce required textures. Used for wet mix process.

3. Fine Aggregates: Manufactured or natural sands complying with ASTM C33, gradation as needed to produce required textures.

4. Coloring Admixture for Cast Stone: ASTM C979, synthetic mineral-oxide pigments or colored water-reducing admixtures, temperature stable, non-fading, and alkali resistant. Limit pigment loading to 10% of total cementitious material.

5. Water: Shall be clean potable water free of injurious foreign matter.

6. Air-Entraining Admixture: ASTM C260, certified by the manufacturer to be compatible with other admixtures used.

   a. Add to wet-cast process mixes for units exposed to the exterior at manufacturer's prescribed rate to result in an air content of 4 to 8 percent. For dry-cast process mixes, it is required if needed to meet the freeze-thaw resistance criteria, as verified by freeze-thaw testing.

7. Other Admixtures: ASTM C494

8. Reinforcement: Deformed steel bars complying with ASTM A615.

   a. Galvanizing: ASTM A767

9. Inserts: Fabricated from stainless steel complying with ASTM A276 or ASTM A666, Type 304 **or** steel hot dip galvanized in accordance with ASTM A123.

B. Anchors

1. Eye rods: Type 304 stainless steel complying with ASTM A276.

2. Pins/Dowels: Round stainless-steel bars complying with ASTM A276, Type 304, 1/2" diameter **minimum**.

3. Strap Anchors for building with back-up wall: 1/8" thick minimum stainless steel, Type 304 conforming to ASTM A240. See Drawings for sizes and shapes.

C. Mortar

1. Portland Cement: ASTM C150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color, white, or a blend to produce mortar color indicated.

2. Hydrated Lime: ASTM C207, Type S.

3. Mortar Aggregate: ASTM C144.

   a. White-Mortar Aggregates: Natural, white sand or ground, white stone.

4. Mortar Coloring: Provide pure mineral pigments, natural and synthetic iron oxides, and chromium oxides compounded for use in mortar mixes. Material shall conform to ASTM C979. Coloring shall not contain alkalyde salts. No liquid colorants shall be permitted. Use only pigments with record of satisfactory performance in masonry mortars.

5. Water: Shall be clean potable water free of injurious foreign matter.

D. Accessories

1. Cast Stone Cleaner**:** Cleaner shall be as recommended by the manufacturer and capable of adequately cleaning stones of mortar droppings and other stains without damaging adjoining surfaces.

2. Sealant

   a. Sealant as specified in Section 07900 - Joint Sealers, as applicable for vertical joints and for horizontal joints.

   b. Bond breaker tape as specified in Section 07900 - Joint Sealers.

2.2 CAST STONE UNIT FABRICATION

A. Provide cast stone units complying with ASTM C1364 for the following attributes:

1. Compressive Strength: At 28 days after manufacture, not less than 6500 psi, when tested in accordance with Test Method ASTM C1194.

2. Absorption, Cold Water: At 28 days after manufacture, not greater than 6%, when tested in accordance with ASTM C1195.

3. Free-thaw Resistance: The CPWL shall be less than 5% after 300 cycles of freezing and thawing in accordance with ASTM C1634, with testing performed per ASTM C666.

4. Linear Shrinkage: Shrinkage shall not exceed 0.065% when tested in accordance with ASTM C426.

5. Air Content: For wet cast product, shall be between 4 to 8% when tested in accordance with ASTM C173 or C231. Air entrainment is not required for the dry cast method.

B. Colors and Textures

1. As selected by Project Architect from manufacturer's full range for colors and textures. As a minimum, provide samples of the following colors in multiple textures for the Architect to select:

a. Corinthian Cast Stone standard color: Limestone - Buff (LS1)

b. Corinthian Cast Stone standard color: Limestone - Warm Tan (LS38)

c. Corinthian Cast Stone premium color – Arctic White

d. Corinthian Cast Stone premium color – Eggshell

2. Color shall be uniform for each unit and consistent for all units.

C. Fabrication

1. General

a. Fabricate the Work of this Section to the sizes and shapes indicated, and of texture matching the approved Samples.

b. Provide finished units that are straight, true to size and shape, and within the specified casting tolerances.

c. Make exposed edges sharp, straight, and square, unless indicated otherwise. Make flat surfaces into a true plane.

d. Stones that are warped, out of tolerance, broken, spalled, stained, have continuous effloresce, surface-crazed, have cracks, have a deteriorating surface and/or are otherwise defective are not acceptable and are to be replaced. Stones with chips may be repaired if no more than an 1½" in any length and only after test patches have been deemed acceptable by the AEOR. Patches shall match color and texture. Patches are to be done by a manufacturer-trained technician utilizing the manufacturer's recommended mix manufacturer and guaranteed by the Contractor for the same 5-year period as the manufacturer's warranty. If patches are deemed not acceptable, units shall be replaced.

e. Place and secure in the forms all anchors, clips, stud bolts, inserts, lifting devices, shear ties, and other devices required for handling and installing the precast units and for attachment of subsequent items as indicated or specified.

f. Reinforce units as indicated and as required by ASTM C1364. Use galvanized reinforcement. Damage to the galvanizing is to be repaired with appropriate material conforming to ASTM A780.

g. Install lifting points and hardware for all units exceeding 65 pounds/LF. No slings are to be used as the primary lifting apparatus.

2. Fabricate units with sharp arris and details accurately reproduced with indicated texture on all exposed surfaces, unless otherwise indicated.

a. Slope exposed horizontal surfaces at least 1:12, unless otherwise indicated.

b. Provide raised fillets at backs of sills and at ends indicated to be built into jambs.

c. Provide drips on projecting elements, unless otherwise indicated.

3. Casting tolerances

Maintain casting, bowing, warping, and dimension tolerance below the following maximums:

a. Overall dimension for height and width of units:

Plus zero, and minus 1/16" of unit length.

b. Make thickness of units plus or minus 1/8" maximum.

c. Bowing or warping: Do not exceed 1/360 of the length.

d. Insert locations: Place within plus or minus 1/4" in each direction.

4. Cure and finish units as follows:

a. Cure units in totally enclosed curing room under dense fog and water spray at 95 percent relative humidity for a minimum of 24 hours. Follow PCI recommendations.

b. Yard cure units until the sum of the mean daily temperatures for each day equals or exceeds 350˚F.

c. Utilize appropriate methods to meet the finish specified in paragraph B above without need to repair. If none is specified, provide fine-grained surface imitating Indiana limestone.

2.3 MORTAR MIXES

A. Setting Mortar

1. Shall conform to ASTM C270 and BIA M1-88. Provide Type I Portland cement. Masonry cement and masonry mortar shall not be used as a substitute. Preconstruction testing with the proportions carefully monitored is to be used to establish the upper end of the strength range, which should generally be near the minimum strength of the next higher strength mortar (e.g. Type N many times is in the 2000 to 3000 range).

a. Type M: 1 part gray cement, 1/4 part lime, $3^{3}/_{4}$ parts dry sand. Minimum compressive strength shall be 2500 psi at 28 days.

b. Type N: 1 part gray cement, 1 part lime, 6 parts dry sand. Minimum compressive strength shall be 750 psi at 28 days.

B. Mortar Color: Proportion mortar coloring with other mortar mix ingredients to obtain desired color, as approved by the AEOR. Do not exceed 1 part pigment to 10 parts cement, by weight. If consistent color cannot be obtained, provide as a minimum premixed Portland cement and coloring from major cement manufacturer.

2.4 SOURCE QUALITY CONTROL

A. Employ an independent testing agency to sample and test cast stone according to ASTM C1364 and the specific test methods specified in Article titled "Cast Stone Units".

Include testing for:

1. Compressive Strength in accordance with Test Method ASTM C1194. Test units from each 500 ft^3 of cast stone.

2. Absorption, Cold Water, in accordance with Test Method ASTM C1195. Test units from each 500 ft^3 of cast stone.

3. Resistance to Freezing and Thawing in accordance with Test Method ASTM C666, Procedure A. Test one unit from each cast stone mixture design.

B. Provide sieve analysis of the aggregate for each batch with each shipment of material to show compliance with the gradation limits of the accepted cast stone mix design for which the ASTM C666 test was performed.

C. If test specimens fail or the sieve analysis does not match that of the test specimen used for the freeze-thaw test, the specimens and the entire 500 ft^3 lot they came from shall be rejected and shall not be used in the project.

D. If the plant is CSI certified, the requirements for Source Quality Control testing by an independent lab for each 500 ft^3 of material for the individual project can be replaced by the test reports by the plant for every 500 ft^3 of material manufactured by the plant required by CSI and the six month independent lab tests required by ASTM C1364, if the mix utilized is the manufacturer's standard mix for which the ASTM C1364 testing was performed. If the mix for the project is new, the testing of the production run is to be performed. See Article titled "Submittals" for certification and other submittals required.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of cast stone.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PROTECTION

A. Cover top of masonry wall with waterproof plastic membrane at the end of the work period, when work is not in progress, and at other times when Work needs to be protected from rain and other precipitation. Extend cover down sides as needed to thoroughly protect the Work.

B. During cold weather, do not use wet masonry units and frozen masonry units.

C. Do not use frozen materials or lay masonry on frozen materials; remove frozen materials from wall. Refer to Part 1 of this Section, "Environmental Requirements" for temperature restrictions.

D. Remove excess mortar from walls as soon after laying units as practicable to prevent staining and to facilitate cleaning of wall.

E. Brace walls as needed until sufficiently set, or until intersecting walls provide lateral support.

F. Prevent masonry cleaners from coming in contact with adjacent glass, metal, and other masonry surfaces such as cast stone. Protect adjoining glass and metal surfaces and all other adjacent materials and property from masonry operations.

3.3 MIXING PROCEDURES FOR MORTAR

A. Measure material by volume or equivalent weight. In measuring by volume, measure ingredients by container. Do not measure by shovel.

B. Mix ingredients in a clean mechanical mixer for a minimum of 3 minutes, maximum of 5, with the minimum amount of water to produce a workable consistency.

C. Mortar that has stiffened because of evaporation of water from the mortar may be retempered only once, and only during the first hour of placement to restore the required consistency. Mortar shall be used within $2^1/_2$ hours after initial mixing. Limit amount of mortar batched at one time to stay within these requirements.

3.4 INSTALLATION

A. Do not install units that do not meet the aesthetic requirements of the specification.

B. Coordinate as required with other trades to assure proper and adequate accommodation with the Work of this Section.

C. Set cast stone as indicated on Drawings. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place. Set units accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.

D. Drench units with clear water just before setting.

E. Set units in full bed of mortar with full head joints, unless otherwise indicated. Build anchors and ties into mortar joints as units are set. Anchors **are** to be set in substrate with adhesives.

1. Sills: Set 3/8" of mortar prior to installation of flashing providing full bed. Rake joint 3/8" to allow for bondbreaker tape and sealant installation under flashing. Seal flashing penetrations with sealant. Install another 3/8" mortar on top of flashing and place stone. Provide full bed of mortar and tool joint. After stones are set and mortar cured, install bond breaker tape and sealant under the flashing.

2. Fill dowel holes and anchor slots with mortar.

3. Fill collar joint solid as units are set, if part of solid masonry construction. If part of a cavity construction, keep area clear of mortar.

4. Build concealed flashing into mortar joints as units are set.

F. After units are set in or on the wall they shall have all top surfaces covered and protected from the elements at the close of each day's work and shall be kept covered and protected until all the Work is completed.

G. Lead, Plastic or hard rubber buttons shall be used in setting large units to sustain the weight until mortar has set.

H. Units with horizontal surfaces subject to water (windowsills, projecting stone bands, etc.): All transverse joints between units (not bed joints) shall be raked out 3/8" deep and shall be filled with joint sealer, (after bond breaker tape) as specified in Article titled "Accessories".

I. Expansion Joints

Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.

Provide expansion joints at a maximum spacing of approximately 20 feet on center. Match joint spacing with facade expansion joints.

Provide filler seal, bond breaker tape, and joint sealers at expansion joints where indicated on the Drawings and where required for proper installation. (See Section 079000 Joint Sealers).

Keep joints free of mortar and other rigid materials.

J. Discrepancies

1. Immediately notify Architect and Construction Manager.

2. Do not proceed until fully corrected.

3.5 INSTALLATION TOLERANCES

A. Variation from Level: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 3/8 inch (9 mm) maximum.

B. Variation in Joint Width: Do not vary joint thickness more than 1/8 inch in 36 inches (3 mm in 900 mm) or one-fourth of nominal joint width, whichever is less.

C. Variation in Plane between Adjacent Surfaces (Lipping): Do not exceed 1/16-inch (1.5-mm) difference between planes of adjacent units or adjacent surfaces indicated to be flush with units.

3.6 ADJUSTING AND CLEANING

A. Remove and replace stained and otherwise damaged units and units not matching approved Samples.

B. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean cast stone as work progresses. Protect adjoining surfaces from damage. Remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, and after completion of other work liable to damage or soil cast stone units, clean exposed cast stone as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

2. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film, or waterproof masking tape. Follow fabricators recommendations for type of cleaners.

3. Clean in conjunction with the cleaning of all other masonry work. Perform a mock-up the cleaning procedure demonstrating the units will not discolor or burn using the manufacturer's recommended dilution rate and dwell time. Do not clean in temperature below 50°F. Drench all units with water prior to application of approved cleaner. Clean by scrubbing with cleaner and water, applied vigorously with stiff fiber brushes. After scrubbing, drench all surfaces of the cast stone units thoroughly with clean water. The use of sand blast, wire brushes; etc**.** will not be permitted under any circumstances for the cleaning of cast stone Work. Start the cleaning operation at the top of the structure and proceed downward.

END OF SECTION 047200

SECTION 05 12 00

STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Shear stud connectors.
3. Shrinkage-resistant grout.

B. Related Requirements:

1. Section 053100 "Steel Decking" for field installation of shear stud connectors through deck.
2. Section 055000 "Metal Fabrications" for other steel items not defined as structural steel.
3. Section 099000 “Painting and Finishing” for painting requirements.

1.3 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in ANSI/AISC 303.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data:

1. Structural-steel materials.
2. High-strength, bolt-nut-washer assemblies.
3. Shear stud connectors.
4. Anchor rods.
5. Threaded rods.
6. Shop primer.
7. Galvanized-steel primer.
8. Etching cleaner.
9. Galvanized repair paint.
10. Shrinkage-resistant grout.

B. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
5. Identify members not to be shop primed.

C. Delegated-Design Submittal: For all structural-steel connections to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator, professional engineer.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural-steel materials, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers, including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shear stud connectors.

F. Survey of existing conditions.

G. Source quality-control reports.

H. Field quality-control reports.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU.

B. Installer Qualifications: A qualified Installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.

C. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125/F3125M, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with applicable provisions of the following specifications and documents:

1. ANSI/AISC 303.
2. ANSI/AISC 360.
3. RCSC's "Specification for Structural Joints Using High-Strength Bolts."

B. Connection Design Information:

1. Option 3 and 3B: Design connections and final configuration of member reinforcement at connections in accordance with ANSI/AISC 303 by fabricator's qualified professional engineer.

a. Use Load and Resistance Factor Design; data are given at factored-load level.

C. Moment Connections: Type FR, fully restrained.

D. Construction: Combined system of moment frame, and shear walls.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A992, Grade 50.

B. Channels, Angles: ASTM A36/A36M.

C. Plate and Bar: ASTM A36/A36M.

D. Cold-Formed Hollow Structural Sections: ASTM A500/A500M, Grade C structural tubing.

E. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS AND CONNECTORS

A. High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F959/F959M, Type 325-1, compressible-washer type with plain finish.

B. Zinc-Coated High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating.
2. Direct-Tension Indicators: ASTM F959/F959M, Type 325-1, compressible-washer type with mechanically deposited zinc coating, baked epoxy-coated finish.

2.4 RODS

A. Headed Anchor Rods: ASTM F1554, Grade 36, straight.

1. Nuts: ASTM A563 heavy-hex carbon steel.
2. Plate Washers: ASTM A36 carbon steel.
3. Washers: ASTM F436, Type 1, hardened carbon steel.
4. Finish: Plain.

2.5 PRIMER

A. Steel Primer:

1. Comply with 099900 +Painting and Finishing
2. SSPC-Paint 23, latex primer.
3. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

2.6 SHRINKAGE-RESISTANT GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.7 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate in accordance with ANSI/AISC 303 and to ANSI/AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel in accordance with ASTM A6 and maintain markings until structural-steel framing has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted in accordance with SSPC-SP 3.

F. Shear Stud Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld using automatic end welding of headed-stud shear connectors in accordance with AWS D1.1/D1.1M and manufacturer's written instructions.

2.8 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

2.9 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel in accordance with ASTM A123/A123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

2.10 SHOP PRIMING

A. Shop prime steel surfaces, except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
4. Galvanized surfaces unless indicated to be painted.
5. Surfaces enclosed in interior construction.

B. Surface Preparation of Steel: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces in accordance with the following specifications and standards:
1. SSPC-SP 3.

C. Priming: Immediately after surface preparation, apply primer in accordance with manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

2.11 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.

1. Allow testing agency access to places where structural-steel work is being fabricated or produced to perform tests and inspections.
2. Bolted Connections: Inspect and test shop-bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."

3. Welded Connections: Visually inspect shop-welded connections in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

    a. Liquid Penetrant Inspection: ASTM E165.
    b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
    c. Ultrasonic Inspection: ASTM E164.
    d. Radiographic Inspection: ASTM E94.

4. In addition to visual inspection, test and inspect shop-welded shear stud connectors in accordance with requirements in AWS D1.1/D1.1M for stud welding and as follows:

    a. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear stud connector.

5. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated on Drawings.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and in accordance with ANSI/AISC 303 and ANSI/AISC 360.

B. Baseplates, Bearing Plates and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.

2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack shrinkage-resistant grout solidly between bearing surfaces and plates, so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for grouting.

C. Maintain erection tolerances of structural steel within ANSI/AISC 303.

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure. Slope roof framing members to slopes indicated on Drawings.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt and joint type specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with ANSI/AISC 303 and ANSI/AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

3.5 PREFABRICATED BUILDING COLUMNS

A. Install prefabricated building columns to comply with ANSI/AISC 360, manufacturer's written recommendations, and requirements of testing and inspecting agency that apply to the fire-resistance rating indicated.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

1. Bolted Connections: Inspect and test bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
2. Welded Connections: Visually inspect field welds in accordance with AWS D1.1.

    a. In addition to visual inspection, test and inspect field welds in accordance with AWS D1.1 and the following inspection procedures, at testing agency's option:

        1) Liquid Penetrant Inspection: ASTM E165.
        2) Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
        3) Ultrasonic Inspection: ASTM E164.
        4) Radiographic Inspection: ASTM E94.

3.7 PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing, and repair galvanizing to comply with ASTM A780.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing, and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Painting: Cleaning and touchup painting are specified in 99900 “Painting and Finishing”.

END OF SECTION 051200

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 05 12 10

STRUCTURAL STEEL-TO-STEEL INSULATED CONNECTIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: Engineered, factory-fabricated, thermally broken structural assemblies for connecting exterior structural steel framing to interior structural steel framing.

B. Related Sections:

1. Section 051200 "Structural Steel Framing" for placing connection anchors, and welding and erection of adjacent steel framing.

1.3 REFERENCE STANDARDS

A. ASTM: American Society for Testing Materials.

1. ASTM A276: Standard Specification for Stainless Steel Bars and Shapes.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate work with installation of connections to supporting structural components.
2. Furnish anchorage items to be embedded in, or attached to, other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.
3. Coordinate selection of shop primers to structural steel assemblies with selection of topcoats or fire protective coatings to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Include assembly locations, plans, elevations, dimensions, shapes and sections, and support conditions. Detail fabrication and installation of structural thermal break assemblies.

1. Indicate welded connections by AWS standard symbols. Show size, length, and type of each weld.
2. Detail connections.
3. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
4. Indicate location of each thermal break assembly unit by same identification mark placed on assembly unit.
5. Indicate relationship of assemblies to adjacent materials.

C. Delegated Design Submittal: For structural thermal break assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer, installer, inspection agency and professional engineer.

B. Material Certificates: For the following, from manufacturer:

1. Structural steel components.
2. Anchors.

C. Thermal Design: Provide thermal modeling analysis indicating compliance with performance requirements.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for the following, indicating compliance with performance requirements.

1. Each type of structural thermal break assembly.
2. Studs, nuts, and washers including mechanical properties and chemical analysis.

E. Field quality-control and special inspection reports.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications:

1. Assumes responsibility for engineering structural thermal break assemblies to comply with the performance requirements.
2. Assumes responsibility for preparation of Shop Drawings and comprehensive engineering analysis by a qualified engineer.
3. Has minimum of 5 years' experience in the manufacture of structural thermal break products for concrete applications.
4. Has experience with North American projects of a similar scope and scale.

B. Installer Qualifications: Qualified installers must attend a preconstruction meeting with the manufacturer to review installation requirements for the thermal break assembly prior to installation. Preconstruction meetings may be held either in person or virtually.

C. Inspection Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

D. Design Standards: Comply with the following specifications and documents, as applicable to types of structural thermal break assemblies indicated, unless modified by requirements in the Contract Documents.

1. Steel Construction:

a. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.

b. AISC 341 and AISC 341s1 - Seismic Provisions for Structural Steel Buildings Including Supplement No. 1.

c. AISC 360 - Specifications for Structural Steel Buildings.

d. Specification for Structural Joints Using ASTM A 325 or A 490 Bolts by Research Council on Structural Connections (RCSC).

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original containers and packaging, and place units with labels or other identifying marks clearly visible to allow for inspection.

B. Store assemblies with adequate support and protect units to prevent contact with soil, to prevent staining, and to prevent displacement or physical damage.

1. Place stored units so identification marks are clearly visible, and units can be inspected.

C. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses that would cause displacement or physical damage. Protect exposed ends of reinforcement to prevent injury; provide continuous wood bar across ends, or suitably sized plastic caps.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer: Subject to compliance with requirements, provide Isokorb products by:

1. Distributor: Schöck USA Inc., 2 Advantage Court, Unit B, Bordentown, NJ 08505, Tel. 855 572 4625, info-na@schoeck.com www.schoeck.com

B. Substitutions: Comply with requirements in Division 01 Section for "Substitution Procedures.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design structural thermal break assemblies, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Provide structural thermal break assemblies and connections capable of withstanding the following design loads:

1. Provide assembly connections capable of withstanding dead loads, snow loads, and design loads in conformance with applicable codes and the following:

a. Design Moment: As indicated on Drawings.

b. Shear Force: As indicated on Drawings.

c. Axial Load: As indicated on Drawings.

2. Design assemblies and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, accommodate live-load deflection, shrinkage and creep of primary building structure and other building movements. Maintain structural concrete deflections within limits of ACI 318 (ACI 318M) and AISC 360.

a. Thermal Movements: Allow for in-plane thermal movements resulting from annual ambient temperature changes of minus 30 to plus 120 deg F.

2.3 STRUCTURAL THERMAL BREAK ASSEMBLIES

A. Steel-to-Steel Connection: Provide thermal break assemblies, engineered, tested and sized to suit structure as indicated.

B. Accessories:

1. Threaded Rods, Nuts, and Anchors: Stainless Steel, engineered to meet performance requirements.
2. Lubricate threaded parts of with an anti-seize thread lubricant during assembly.

2.4 FABRICATION

A. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.

1. Weld studs according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

2. Remove, re-weld, or repair incomplete and defective welds.

B. Reinforce structural thermal break assemblies to resist handling, transportation, and erection stresses.

C. Protect strand ends and anchorages with manufacturer recommended removable protective coatings or coverings to avoid corrosion.

D. Discard and replace structural thermal break assembly units that do not comply with requirements, including structural, manufacturing tolerance.

E. Size assemblies to accommodate required thicknesses of integrated thermal barrier materials.

F. Fabrication Tolerances: Fabricate structural break assemblies straight and true to size and shape and to applicable requirements of ACI 117.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean connection plates of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond connection efficacy.

3.3 INSTALLATION

A. Install structural thermal break assemblies according to manufacturer's written instructions and approved shop drawings.

B. Install structural thermal break assemblies level, plumb, and square within specified allowable tolerances. Provide temporary structural supports, and bracing as required to maintain position, stability, and alignment of units until permanent connection or support.

C. Accurately position, support, and secure reinforcement against displacement, and in accordance with Manual of Standard Practice by CRSI. Locate and support reinforcement with bar supports to maintain minimum concrete cover.

D. Field cutting of components is not permitted without approval of the Engineer/Architect.

E. Field welding of components is not permitted.

F. At bolted connections, use lock washers, or other approved means to prevent loosening of nuts after final adjustment.

1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot. For friction connections, apply specified bolt torque and check 25 percent of bolts at random by calibrated torque wrench.

G. Installation Tolerances:

1. Maximum Variation from Plumb and Level of Structural Thermal Break Assemblies: 1/8 inch (3 mm).

3.4 FIELD QUALITY CONTROL

A. Inspections: Owner will engage an inspecting engineer to perform field inspections and prepare reports determining compliance with the structural plans.

1. Provide inspector access to installed assemblies to facilitate inspection of reinforcement. Provide notification of commencement and duration of shop fabrication in sufficient time to allow inspection.

2. Inspections:

a. Steel members and welds.

b. Studs.

3. Inspector will report findings promptly and in writing to Contractor and Architect.

4. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

5. Prepare inspection reports.

END OF SECTION 051210

SECTION 05 21 00

STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. Joist accessories.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing bearing plates in concrete.
2. Section 051200 "Structural Steel Framing" for field-welded shear connectors.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.

B. Shop Drawings:

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Welding certificates.

C. Manufacturer certificates.

D. Mill Certificates: For each type of bolt.

E. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications"

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications".

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

A. Deliver steel bearing plates to be built into cast-in-place concrete =construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Canam Buildings US Inc.; Canam Group Inc.
2. New Millennium Building Systems, LLC.
3. Vulcraft/Verco Group; a division of Nucor Corp.

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.

1. Use LRFD.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:
   a. Roof Joists: Vertical deflection of 1/360 of the span.

2.3 K-SERIES STEEL JOISTS

A. Manufacture steel joists of type indicated according to "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.

B. Provide holes in chord members for connecting and securing other construction to joists.

C. Top-Chord Extensions: Extend top chords of joists with SJI's Type R top-chord extensions where indicated, complying with SJI's "Specifications."

D. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

E. Do not camber joists.

F. Camber joists according to SJI's "Specifications.

G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 PRIMERS

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

B. Primer: Provide shop primer that complies with Section 099912 "Interior Painting."

2.5 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."

C. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325, Type 1, heavy-hex steel structural bolts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

D. Welding Electrodes: Comply with AWS standards.

E. Galvanizing Repair Paint: ASTM A780/A780M.

F. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.6 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.

B. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

C. Shop priming of joists and joist accessories is specified in Section 099912 "Interior Painting."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using carbon-steel bolts.

E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts" for high-strength structural bolt installation and tightening requirements.

F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Visually inspect field welds according to AWS D1.1.

1. In addition to visual inspection, test field welds according to AWS D1.1 and the following procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E165.
b. Magnetic Particle Inspection: ASTM E709.
c. Ultrasonic Testing: ASTM E164.
d. Radiographic Testing: ASTM E94.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.4 PROTECTION

A. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.

1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2 or power-tool cleaning according to SSPC-SP 3.
2. Apply a compatible primer of same type as primer used on adjacent surfaces.

END OF SECTION 052100

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 05 31 00

STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Roof deck.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for shop- and field-welded shear connectors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.

D. Evaluation Reports: For steel deck, from ICC-ES.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."

C. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

2.2 ROOF DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Canam Steel Corporation; Canam Group, Inc.
2. New Millennium Building Systems, LLC.
3. Vulcraft; Nucor Corporation, Verco Group.

B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:

1. Prime-Painted Steel Sheet: ASTM A1008, Structural Steel (SS), Grade 33 minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.

2. Galvanized-Steel Sheet: ASTM A653/A653M, Structural Steel (SS), G60 (Z180) zinc coating.
3. Galvanized and Shop-Primed Steel Sheet: ASTM A653/A653M, Structural Steel (SS), G60 (Z180) zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.
4. Deck Profile: As indicated.
5. Profile Depth: As indicated.
6. Design Uncoated-Steel Thickness: As indicated.
7. Span Condition: Triple span or more.
8. Side Laps: Overlapped or interlocking seam at Contractor's option.

2.3 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile indicated.

G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

H. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch thick, with factory-punched hole of 3/8-inch minimum diameter.

I. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:

1. Weld Diameter: 5/8 inch, nominal.
2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds 12 inches apart in the field of roof and 6 inches apart in roof corners and perimeter, based on roof-area definitions in FMG Loss Prevention Data Sheet 1-28.
3. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 18 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum.

D. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

E. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

3.5 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

END OF SECTION 053100

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 05 40 00

COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. Provide all materials, labor and equipment to properly install the following Work:

1. Provide exterior structural non-load-bearing steel stud wall framing for the lateral support of exterior wall material finishes.

2. Provide steel stud wall framing for interior partitions, soffits and ceilings.

1.1 SUMMARY

A. Section Includes:
1. Exterior non-load-bearing wall framing.
2. Interior non-load-bearing wall framing.
3. Ceiling joist framing.
4. Soffit framing.

B. Related Requirements:
1. Concrete Panels: Section 074247
2. Gypsum Drywall: Section 092900

1.2 PREINSTALLATION MEETINGS

1.3 ACTION SUBMITTALS

A. Product Data: For the following:

1. Cold-formed steel framing materials.
2. Exterior non-load-bearing wall framing.
3. Interior non-load-bearing wall framing.
4. Vertical deflection clips.
5. Single deflection track.
6. Double deflection track.
7. Drift clips.
8. Ceiling joist framing.
9. Soffit framing.
10. Post-installed anchors.
11. Power-actuated anchors.

B. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

C. Delegated Design Submittal: For cold-formed steel framing.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and tracks.

D. Product Test Reports: For each listed product, for tests performed by manufacturer and witnessed by a qualified testing agency.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

E. Research Reports:

1. For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

B. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment, indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

C. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the Steel Framing Industry Association.

D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

E. Comply with the following AISI Specifications and Standards:

1. AISI S100, "North American Specification for the Design of Cold-Formed Steel Structural Members."
2. AISI S200, "North American Standard for Cold-Formed Steel Framing – General Provisions."
3. AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."
4. AISI S240, "North American Standard for Cold-Formed Steel Structural Framing."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. ClarkDietrich.

B. MarinoWARE.

C. Super Stud Building Products Inc.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: As indicated on Drawings.
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
   a. Exterior Non-Load-Bearing Framing: Horizontal deflection of 1/360 of the wall height.
   b. Interior Non-Load-Bearing Framing: Horizontal deflection of 1/360 of the wall height under a horizontal load of 5 lbf/sq. ft..
   c. Ceiling Joist Framing: Vertical deflection of 1/360 of the span for live loads and 1/240 for total loads of the span.
3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure,

connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.

4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:

    a. Upward and downward movement of L/360.

5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and AISI S240.

D. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.3 COLD-FORMED STEEL FRAMING MATERIALS

A. Framing Members, General: Comply with AISI S240 for conditions indicated.

B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:

1. Grade: As required by structural performance.
2. Coating: G60, A60, AZ50, or GF30.

C. Steel Sheet for Vertical Deflection and Drift Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G60.

2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-3/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs.
2. Flange Width: 1-1/4 inches.

C. Vertical Deflection Clips, Exterior: Manufacturer's standard bypass and head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1 inch plus the design gap for one-story structures.

E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.

1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

a. Minimum Base-Metal Thickness: 0.0428 inch.
b. Flange Width: 1 inch plus the design gap for one-story structures.

2. Inner Track: Of web depth indicated, and as follows:

a. Minimum Base-Metal Thickness: 0.0428 inch.
b. Flange Width: equal to sum of outer deflection track flange width plus 1 inch.

F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.5 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-3/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-1/4 inches.

C. Vertical Deflection Clips, Interior: Manufacturer's standard bypass and head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with

flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1 inch plus the design gap for one-story structures.

E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.

1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

a. Minimum Base-Metal Thickness: 0.0329 inch.
b. Flange Width: 1 inch plus the design gap for one-story structures.

2. Inner Track: Of web depth indicated, and as follows:

a. Minimum Base-Metal Thickness: 0.0428 inch.
b. Flange Width: equal to sum of outer deflection track flange width plus 1 inch.

F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.6 CEILING JOIST FRAMING

A. Steel Ceiling Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with standard holes, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.7 SOFFIT FRAMING

A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0329 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.8 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.9 ANCHORS, CLIPS, AND FASTENERS

A. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193 , ICC-ES AC58, or ICC-ES AC308 as appropriate for the substrate.

1. Uses: Securing cold-formed steel framing to structure.
2. Type: Torque-controlled expansion anchor Torque-controlled adhesive anchor or adhesive anchor.
3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 or Group 2 stainless steel bolts, ASTM F593, and nuts, ASTM F594.

B. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

C. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

D. Welding Electrodes: Comply with AWS standards.

2.10 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A780/A780M MIL-P-21035B or SSPC-Paint 20.

B. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

2.11 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.

C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

H. Install insulation, specified in Section 072100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.3 INSTALLATION OF EXTERIOR NONLOADBEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: 16 inches or as indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to bypassing and infill studs and anchor to building structure.
4. Connect drift clips to cold-formed steel framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at centers indicated on Shop Drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.4 INSTALLATION OF INTERIOR NONLOADBEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: 16 inches or as indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to studs and anchor to building structure.
4. Connect drift clips to cold-formed steel metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at centers indicated on Shop Drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INSTALLATION OF JOIST FRAMING

A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.

B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.

1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches.
2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections.

C. Space joists not more than 2 inches from abutting walls, and as follows:

1. Joist Spacing: As indicated on Shop Drawings.

D. Frame openings with built-up joist headers, consisting of joist and joist track or another combination of connected joists if indicated.

E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement.

1. Install web stiffeners to transfer axial loads of walls above.

F. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as follows:

1. Joist-Track Solid Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.

2. Combination Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.

G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.6 INSTALLATION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error are not to exceed minimum fastening requirements of sheathing or other finishing materials.

3.7 REPAIR

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 054000

SECTION 05 50 00

MISCELLANEOUS METALS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the miscellaneous metal work as indicated on the drawings and/or specified herein, including, but not limited to, the following:

1. Rough hardware.
2. Open riser steel service stairs at Mechanical Equipment Room.
3. Loose steel lintels.
4. Light steel framing and supports not included as part of work of other trades.
5. Steel gratings and frames.
6. Steel plate covers and frames.
7. Miscellaneous steel trim, corner guards, angle guards and channels.
8. Countertop supports.
9. Trench drains.
10. Masonry support steel.
11. Sleeves in concrete walls and slabs.
12. Steel framing, bracing, supports, anchors, bolts, shims, fastenings, and all other supplementary parts indicated on drawings or as required to complete each item of work of this Section.
13. Prime painting, touch-up painting, galvanizing and separation of dissimilar metals for work of this Section.
14. Cutting, fitting, drilling and tapping work of this Section to accommodate work of other Sections and of concrete, masonry or other materials as required for attaching and installing work of this Section.

1.3 RELATED SECTIONS

A. Structural Steel Framing - Section 051200.

B. Painting and Finishing - Section 099000.

1.4 QUALITY ASSURANCE

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication, where possible. Do not delay job progress; allow for trimming and fitting where taking field measurements before fabrication might delay work.

B. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for re-assembly and coordinated installation.

C. Reference Standards: The work is subject to requirements of applicable portions of the following standards:

1. "Manual of Steel Construction," American Institute of Steel Construction.

2. AWS D1-1 "Structural Welding Code," American Welding Society.

3. SSPC SP-3 "Surface Preparation Specification No. 3, Power Tool Cleaning," Steel Structures Painting Council.

4. SSPC PA-1 "Painting Application Specification," Steel Structures Painting Council.

5. "Handbook on Bolt, Nut and Rivet Standards," Industrial Fasteners Institute.

6. American Hot-Dip Galvanizers Association (AGA) publication "Inspection of Products Hot-Dip Galvanized After Fabrication."

D. Steel Materials: For steel to be hot dip-galvanized, provide steel chemically suitable for metal coatings complying with the following requirements: carbon below 0.25 percent, silicon below 0.24 percent, phosphorous below 0.05 percent, and manganese below 1.35 percent. Notify galvanizer if steel does not comply with these requirements to determine suitability for processing.

E. Engage the services of a galvanizer who has demonstrated a minimum of five (5) years' experience in the successful performance of the processes outlined in this specification in the facility where the work is to be done and who will apply the galvanizing and coatings within the same facility as outlined herein. The Architect has the right to inspect and approve or reject the galvanizer/galvanizing facility.

F. The galvanizer/galvanizing facility must have an ongoing Quality Control/Quality Assurance program which has been in effect for a minimum of five years and shall provide the Architect with process and final inspection documentation. The galvanizer/galvanizing facility must have an on-premise testing facility capable of measuring the chemical and metallurgical composition of the galvanizing bath and pickling tanks.

G. Inspection and testing of hot-dip galvanized coating shall be done under the guidelines provided in the American Hot-Dip Galvanizers Association (AGA) publication "Inspection of Products Hot-Dip Galvanized After Fabrication."

1.5 PERFORMANCE STANDARDS

A. Stairs and railings shall be constructed to conform to the following performance standards:

1. Stairs and platforms shall support a live load of one hundred (100) psf and a concentrated live load of three hundred (300) lbs. and shall have a live load deflection limited to 1/360 of the span. Loads shall not apply simultaneously.

2. Railings shall be designed to resist loads 2020 New York State Building Code.

1.6 SUBMITTALS

A. Manufacturer's Literature: Submit manufacturer's specifications, load tables, dimension diagrams, anchor details and installation instructions for products to be used in the fabrication of miscellaneous metal work, including paint products.

B. Shop Drawings: Shop drawings for the fabrication and erection of all assemblies of miscellaneous iron work which are not completely shown by manufacturer's data sheets. Include plans and elevations at not less than 1" to 1'-0" scale, and include details of sections and connections at not less than 3" to 1'-0" scale. Show anchorage and accessory items.

C. Engineering Data

1. Before any stairs, ladders or railings are fabricated, submit engineering data drawings to the Architect for review indicating how performance standards specified here shall be met. The Contractor is responsible for the structural design and supports for these systems and must show his proposed systems on these drawings.

2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New York and shall be signed and sealed by this Engineer.

D. Welding shall be indicated on shop drawings using AWS symbols and showing length, size and spacing (if not continuous). Auxiliary views shall be shown to clarify all welding. Notes such as 1/4" weld, weld and tack weld are not acceptable.

E. Certification: For items to be hot-dip galvanized, identify each item galvanized and to show compliance of application. The Certificate shall be signed by the galvanizer and shall contain a detailed description of the material processed and the ASTM standard used for the coating and, the weight of the coating. In addition, and as attachment to Certification, submit reports of testing and inspections indicating compliance with the provisions of this Section.

PART 2 PRODUCTS

2.1 MATERIALS

A. Metals

1. Metal Surfaces, General: For fabrication of miscellaneous metal work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness.

2. Steel Plates, Shapes and Bars: ASTM A 36.

3. Steel Bar Grating: ASTM A 1011 or ASTM A 36.

4. Steel Tubing: Cold formed, ASTM A 500; or hot rolled, ASTM A 501.

5. Structural Steel Sheet: Hot rolled, ASTM A 1011; or cold rolled, ASTM A 1008, Class 1; of grade required for design loading.

6. Galvanized Structural Steel Sheet: ASTM A 924, of grade required for design loading. Coating designation G90.

7. Steel Pipe: ASTM A 53, type and grade as selected by fabricator and as required for design loading; black finish unless galvanizing is indicated; standard weight (Schedule 40), unless otherwise indicated.

8. Gray Iron Castings: ASTM A 48, Class 30, unless another class is indicated or required by structural loads.

9. Malleable Iron Castings: ASTM A 47, grade as selected by fabricator.

10. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

11. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A 153.

B. Grout: Non-shrink, non-metallic grout conforming to the requirements of Section 033000.

C. Fasteners

1. General: Provide zinc-coated fasteners for exterior use or where built into exterior walls. Select fasteners for the type, grade and class required.

2. Bolts and Nuts: Regular hexagon head type, ASTM A 307, Grade A.

3. Anchor Bolts: ASTM F 1554, Grade 36.

4. Lag Bolts: ASME B18.2.1.

5. Machine Screws: ASME B18.6.3.

6. Plain Washers: Round, carbon steel, ASME B18.22.1.

7. Masonry Anchorage Devices: Expansion shields, FS FF-S-325.

8. Toggle Bolts: Tumble-wing type, FS FF-B-588, type, class and style as required.

9. Lock Washers: Helical spring type carbon steel, ASME B18.21.1.

D. Shop Paint: Shop prime all non-galvanized miscellaneous metal items using Series 88 Azeron Primer made by Tnemec, ICI Devoe "Rust Guard" quick dry alkyd shop coat No. 41403, or "Interlac 393" by International Protection Coatings.

1. If steel is to receive high performance coating as noted in Section 099000, shop prime using primer noted in Section 099000.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

F. Galvanizing Repair Coating: For touching up galvanized surfaces after erection, provide repair coating that is V.O.C. compliant, equal to "Silver Galv" made by Z.R.C. Worldwide or approved equal. Apply to a dry film thickness of 1.5 to 3.0 mils.

2.2 PRIME PAINTING

A. Scope: All ferrous metal (except galvanized steel) shall be cleaned and shop painted with one coat of specified ferrous metal primer. No shop prime paint required on galvanized steel or aluminum work.

B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.

1. Steel to get high performance coating as noted in Section 099000 shall be cleaned as per SSPC SP.6 "Commercial Blast Cleaning."

C. Application

1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces shall be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc.

2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures shall be only as stated in said instructions.

3. Paint shall uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work shall be shipped until the shop prime coat thereon has dried.

D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.

E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.

2.3 GALVANIZING

A. Scope: All ferrous metal exposed to the weather, and all ferrous metals indicated on drawings or in specifications to be galvanized, shall be cleaned and then hot-dipped galvanized after fabrication as provided by Duncan Galvanizing or approved equal.

B. Avoid fabrication techniques that could cause distortion or embrittlement of steel items to be hot-dip galvanized. Fabricator shall consult with hot-dip galvanizer regarding potential warpage problems or handling problems during the galvanizing process that may require adjustment of fabrication techniques or design before finalizing shop drawings and beginning of fabrication.

C. Cleaning: Thoroughly clean metal surfaces of all mill scale, rust, dirt, grease, oil, moisture and other contaminants prior to galvanizing.

D. Application: Hot-dip galvanizing shall conform to the following:

1. ASTM A 143: Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel.

2. ASTM A 123: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

3. ASTM A 153: Galvanized Coating on Iron and Steel Hardware - Table 1.

4. ASTM A 384: Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.

5. ASTM A 385: Practice for Providing High Quality Zinc Coatings.

6. ASTM A 924: Galvanized Coating on Steel Sheets.

7. Minimum weight of galvanized coating shall be two (2) oz. per square foot of surface.

E. Fabricate joints which will be exposed to weather in a manner to exclude water or provide weep holes where water may accumulate.

F. All galvanized materials must be inspected for compliance with these specifications and marked with a stamp indicating the name of the galvanizer, the weight of the coating, and the appropriate ASTM number.

G. To minimize surface imperfection (e.g.: flux inclusions), material to be galvanized shall be dipped into a solution of Zinc Ammonium Chloride (pre-flux) immediately prior to galvanizing. The type of galvanizing process utilizing a flux blanket overlaying the molten zinc will not be permitted.

H. After galvanizing all materials not exposed to view must be chromated by dipping material in a 0.2% chromic acid solution.

I. Galvanized surfaces, where exposed to view, must have a smooth, level surface finish. Where this does not occur, piece shall be rejected and replaced to the acceptance of the Architect.

2.4 PROTECTIVE COATINGS

A. Whenever dissimilar metals will be in contact, separate contact surfaces by coating each contact surface prior to assembly or installation with one coat of specified bituminous paint, which shall be in addition to the specified shop prime paint. Mask off those surfaces not required to receive protective coating.

2.5 WORKMANSHIP

A. General

1. Miscellaneous metal work shall be fabricated by an experienced fabricator or manufacturer and installed by an experienced tradesman.

2. Materials, methods of fabrication, fitting, assembly, bracing, supporting, fastening, operating devices, and erection shall be in accordance with drawings and specifications, approved shop drawings, and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand stresses and strains to which materials and assembled work will be subjected.

3. All work shall be accurately and neatly fabricated, assembled and erected.

B. Shop Assembly: Insofar as practicable, fitting and assembly of work shall be done in shop. Shop assemble work in largest practical sizes to minimize field work. It is the responsibility of the miscellaneous metal subcontractor to assure himself that the shop-fabricated miscellaneous metal items will properly fit the field condition. In the event that shop-fabricated miscellaneous metal items do not fit the field condition, the item shall be returned to the shop for correction.

C. Cutting: Cut metal by sawing, shearing, or blanking. Flame cutting will be permitted only if cut edges are ground back to clean, smooth edges. Make cuts accurate, clean, sharp and free of burrs, without deforming adjacent surfaces or metals.

D. Holes: Drill or cleanly punch holes; do not burn.

E. Connections: Make connections with tight joints, capable of developing full strength of member, flush unless indicated otherwise, formed to exclude water where exposed to weather. Locate joints where least conspicuous. Unless indicated otherwise, weld or bolt shop connections; bolt or screw field connections. Provide expansion and contraction joints to allow for thermal movement of metal at locations and by methods approved by Architect.

1. Welding

a. Shall be in accordance with AWS D1.1 Structural Welding Code of the American Welding Society and shall be done with electrodes and/or methods recommended by the manufacturer of the metals being welded.

b. Welds shall be continuous, except where spot welding is specifically permitted. Welds exposed to view shall be ground flush and dressed smooth with and to match finish of adjoining surfaces; undercut metal edges where welds are required to be flush.
c. All welds on or behind surfaces which will be exposed to view shall be done so as to prevent distortion of finished surface. Remove weld spatter and welding oxides from all welded surfaces.

2. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts. Bolts and screw heads exposed to view shall be flat and countersunk. Cut off projecting ends of exposed bolts and screws flush with nuts or adjacent metal.

F. Operating Mechanism: Operating devices (i.e. pivots, hinges, etc.) mechanism and hardware used in connection with this work shall be fabricated, assembled, installed and adjusted after installation so that they will operate smoothly, freely, noiselessly and without excessive friction.

G. Built-In Work: Furnish anchor bolts, inserts, plates and any other anchorage devices, and all other items specified under this Section of the Specifications to be built into concrete, masonry or work of other trades, with necessary templates and instructions, and in ample time to facilitate proper placing and installation.

H. Supplementary Parts: Provide as necessary to complete each item of work, even though such supplementary parts are not shown or specified.

I. Coordination: Accurately cut, fit, drill and tap work of this Section to accommodate and fit work of other trades. Furnish or obtain, as applicable, templates and drawings to or from applicable trades for proper coordination of this work.

J. Exposed Work

1. In addition to requirements specified herein and shown on drawings, all surfaces exposed to view shall be clean and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs, and other defects which mar appearance of finished work.

2. Metal work exposed to view shall be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design.

3. Exposed fastenings, where permitted, shall be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and shall be of the smallest practicable size.

K. Preparation for Hot-Dip Galvanizing: Fabricator shall correctly prepare assemblies for galvanizing in consultation with galvanizer and in accordance with applicable Reference Standards and applicable AGA publications for the "Design of Products to be Hot-Dip galvanized After Fabrication." Preparation shall include but not be limited to the following:

1. Remove welding flux.

2. Drill appropriate vent holes and provide for drainage in inconspicuous locations of hollow sections and semi-enclosed elements. After galvanizing, plug vent holes with shaped lead and grind smooth.

2.6 MISCELLANEOUS METALS ITEMS

A. Rough Hardware

1. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Division 6 Sections.

2. Fabricate items to sizes, shapes and dimensions required. Furnish malleable iron washers for heads and nuts which bear on wood connections; elsewhere, furnish steel washers.

B. Open Riser Service Stairs

1. General: Construct stairs to conform to sizes and arrangements shown; joint pieces together by welding. Provide complete stair assemblies, including metal framing, hangers, railings, newels, balusters, struts, clips, brackets, bearing plates and other components necessary for the support of stairs and platforms and as required to anchor and contain the stairs on the supporting structure.

2. Stair Framing: Fabricate stringers of structural steel channels, or plates, or a combination thereof. Provide closures for exposed ends of stringers. Construct platforms of structural steel channel headers and miscellaneous framing members as shown. Bolt or weld headers to strings and newels and framing members to strings and headers; fabricate and join so that bolts, if used, do not appear on finish surfaces.

3. Attach treads to stringers by means of brackets made of steel and angles or bars. Weld brackets to strings and attach metal treads to brackets by welding, riveting or bolting.

4. Provide platforms of same metal as treads and in thicknesses required to support design loading. Attach platform to platform framing members with welds.

5. Steel Floor Plate Treads and Platforms: Provide raised pattern steel floor plate complying with FS QQ-F-461, Class I. Provide diamond pattern.

   a. Form treads of 1/4" thick steel floor plate with integral nosing and back edge stiffener. Weld steel supporting brackets to strings and treads to brackets.
   b. Fabricate platforms of steel floor plate. Provide nosing matching that on treads at all landings. Secure to platform framing members with welds.

C. Loose Steel Lintels: Provide loose structural steel lintels for openings and recesses in masonry walls and partitions as shown. Weld adjoining members together to form a single unit where indicated. Provide not less than eight (8) inches bearing at each side of openings, unless otherwise indicated.

1. Loose lintels shall conform to the following Schedule:

Opening Width (Maximum)	WALL THICKNESS		
	4 inches	6 inches	8 inches*
2'-0"	3-1/2" x 3-1/2" x 1/4"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 1/4"
3'-0"	3-1/2" x 3-1/2" x 5/16"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 5/16"
4'-0"	3-1/2" x 3-1/2" x 5/16"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 5/16"
5'-0"	4" x 3-1/2" x 3/8"	6" x 4" x 3/8"	4" x 3-1/2" x 5/16"
6'-0"	5" x 3-1/2" x 3/8"	6" x 4" x 3/8"	5" x 3-1/2" x 5/16"
7'-0"	5" x 3-1/2" x 3/8"	5" x 5" x 1/2"	5" x 3-1/2" x 3/8"
8'-0"	5" x 3-1/2" x 3/8"	5" x 5" x 5/8"	5" x 3-1/2" x 3/8"

* Two angles at all openings in eight (8) inch walls.

2. At columns or vertical surfaces where lintels cannot bear on masonry, provide clip angles sized for structural capacity of lintel.

D. Miscellaneous Light Steel Framing

1. Light steel framing, bracing, supports, framing, clip angles, shelf angles, plates, etc., shall be of such shapes and sizes as indicated on the drawings and details or as required to suit the condition and shall be provided with all necessary supports and reinforcing such as hangers, braces, struts, clip angles, anchors, bolts, nuts, welds, etc., as required to properly support and rigidly fasten and anchor same in place and to steel, concrete, masonry and all other connecting and adjoining work.

2. All light steel framing steel shall be furnished and erected in accordance with the applicable requirements of the "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" by the American Institute of Steel Construction and as specified herein.

E. Steel Gratings and Frames: Provide hot dipped galvanized steel gratings with rectangular cross bars welded to bearing bars. Bars to have plain wearing surface.

1. Manufacturer: Provide gratings manufactured by McNichols, IKG, Ohio Gratings, or approved equal.

2. Hinged Section: Provide hinged sections in areaway gratings where required by the drawings. Each hinged section up to 4'-0" wide shall be provided with two (2) five knuckle, fast pin, regular weight, plain bearing, wrought bronze butt hinges. Each hinged section over 4'-0" wide shall be provided with three (3) butt hinges. Hinged sections shall have provisions for padlocking on the underside.

3. Furnish grating frames, with corners mitered, welded and ground smooth, and with welded-on straps for secure anchorage into concrete. Frames and anchors to be galvanized.

4. Structural Performance: Provide gratings capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections:

   a. Floors: Capable of withstanding a uniform load of 250 lbf/sq. ft. or a concentrated load of 3000 lbf, whichever produces the greater stress.
   b. Walkways and Elevated Platforms Other Than Exits: Capable of withstanding a uniform load of 60 lbf/sq. ft. Limit deflection to L/360 or 1/4", whichever is less.
   c. Walkways and Elevated Platforms Used as Exits: Capable of withstanding a uniform of 100 lbf/sq. ft. or a concentrated load of 300 lbf on an area of 4 sq. in., whichever produces the greater stress. Limit deflection to L/360 or 1/4", whichever is less.
   d. Sidewalks and Vehicular Driveways: Capable of withstanding a uniform load of 250 lbf/sq. ft. or a concentrated load of 8000 lbf, whichever produces the greater stress.

F. Pit Covers and Frames: Provide minimum 1/2" thick steel checkered plate cover, reinforced as required to limit deflection to 1/360 of span, with two (2) recessed lifting handles capable of supporting five hundred (500) lbs. each. Furnish covers with steel angle frames, with corners mitered, welded and ground smooth, and with welded-on straps for secure anchorage into concrete. Frames and anchors to be galvanized. Plate covers shall be capable of supporting same loads as adjacent floor surfaces.

G. Miscellaneous Steel Trim: Provide shapes and sizes for profiles shown. Except as otherwise indicated, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other work.

H. Corner Guards: Provide steel corner guards where shown. Unless otherwise indicated, use 4" x 4" x 1/4" steel angles to a height of four (4) feet above finished floor with 1-1/4" x 8 1/4" bent steel strap anchors welded to backs of angles at each end and approximately sixteen (16) inches o.c. Set and adjust guards to finish flush with adjacent surfaces.

I. Countertop Supports: Steel framing as indicated or required to support countertops. Conceal framing under countertops and within wall behind countertops. Provide supports to withstand a concentrated load of not less than three hundred (300) lbs. applied at any point with a deflection not to exceed L/240 for the length of the countertop.

J. Trench Drains: Provide Series R-4999 trench frame with Type A grated cover, heavy duty, made of ductile iron as manufactured by Neenah Foundry Co., or approved equal, sizes as shown on drawings. Assembly shall have asphalt coating. Grate shall be bolted in place with stainless steel hex head cap screws.

K. Masonry Support Steel

1. Provide galvanized steel, relieving angles, plates, accessories, and other steel shapes for masonry support steel; for lintels refer to Para. E. herein.

2. Fabricate masonry support steel to allow final adjustment with the closest tolerances possible. Relieving angles which require cutting to fit masonry flashing shall be straightened without deflections.

3. Coordinate masonry support system with concrete work for locations of wedge inserts.

4. Install to meet requirements of building masonry work, face brick coursing and stone placement. Coordinate final adjustments with masonry work as work progresses.

L. Sleeves in Concrete Walls and Slabs

1. Sleeves through concrete walls shall be of Schedule 40 steel pipe with i.d. two (2) inches larger than o.d. of pipe or conduit (including insulation, if any) to be accommodated. Sleeves shall project one-half (1/2) inch on each side of finished wall. Provide rectangular one-quarter (1/4) inch steel plate collar at center, continuously welded to the perimeter of the sleeve, and six (6) inches wider than the o.d.

2. Slots in slabs shall be 12 gauge steel sheet, galvanized, of dimensions indicated, with strap anchors welded in place not more than twelve (12) inches on centers.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where miscellaneous metal is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 ERECTION

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as required.

B. Cutting, Fitting and Placement: Perform cutting, drilling and fitting required for installation of miscellaneous metal fabrications. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry, or similar construction.

C. Fitting Connections: Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints but cannot be shop

welded because of shipping size limitations. Grind exposed joints smooth and touch up shop paint coat. Do not weld, cut or abrade the surfaces of exterior units which have been hot dip galvanized after fabrication, and are intended for bolted or screwed field connections.

D. Field Welding: Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance, and quality of welds made, and methods used in correcting welding work.

E. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

F. Field Touch-Up of Galvanized Surfaces: Touch-up shop applied galvanized coatings damaged during handling and installation. Use galvanizing repair coating specified herein for galvanized surfaces.

END OF SECTION 055000

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 062000

CARPENTRY

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the carpentry work as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Blocking and miscellaneous wood.
2. Plywood backing panels for telephone and electrical closets.
3. Rough hardware.
4. Installation only of finish hardware.
5. Installation only of doors and hollow metal frames.

1.3 RELATED SECTIONS

A. Architectural Woodwork - Section 064023.

B. Roofing - Section 074113.

C. Steel Doors and Frames - Section 081113.

D. Flush Wood Doors - Section 081416.

E. Finish Hardware - Section 087100.

1.4 QUALITY ASSURANCE

A. Lumber Standard: Comply with PS 20.

B. Plywood Standard: Comply with PS 1 and American Plywood Assoc. (APA).

C. Shop fabricate carpentry work to the extent feasible and where shop fabrication will result in better workmanship than feasible for on-site fabrication.

D. Grade Marks: Identify lumber and plywood by official grade mark.

1. Lumber: Grade stamp to contain symbol of grading agency certified by Board of Review, American Lumber Standards Committee, mill number or name, grade of

lumber, species grouping or combination designation, rules under which graded where applicable, and condition of seasoning at time of manufacture.

a. S-Dry: Maximum nineteen (19) percent moisture content as per ASTM D 2016.

E. Installation of doors, frames and hardware shall conform to the minimum standards of "Installation Guides for Doors and Hardware" of the Door and Hardware Institute.

1.5 SUBMITTALS

A. Pressure Treatment: Include certification by treating plant stating chemicals and process used, net amount of salts retained and conformance with applicable standards.

B. Fire-Retardant Treatment: Include certification by treating plant that treatment material complies with governing ordinances and that treatment will not bleed through finished surfaces.

1.6 PRODUCT HANDLING

A. Deliver carpentry materials to the site ready to use with each piece of lumber clearly marked as to grade, type and mill, and place in an area protected from the elements.

B. Deliver rough hardware in sealed kegs and/or other containers which shall bear labels as to type and kind.

C. Pile lumber for rough usage, when delivered to the site in stacks to insure drainage and with a minimum clearance of six (6) inches above grade. Cover stacks with tarpaulins or other watertight coverings. Store grounds and similar small sized lumber inside the building as soon as possible after delivery.

D. Do not store seasoned lumber in wet or damp portions of the building.

E. Protect fire retardant treated materials against high humidity and moisture during storage and erection.

F. Remove delivered materials which do not conform to specified grading rules or are otherwise not suitable for installation from the job site and replace with acceptable materials.

G. All items specified in Section 087100 of this specification entitled "Finish Hardware" shall be received, accounted for, stored and applied under this Section.

H. Hardware shall be sorted and stored in space assigned by Contractor and shall be kept at all times under lock and key. The safety and preservation of all items delivered will be the responsibility of the Contractor.

1.7 JOB CONDITIONS

A. Installer must examine the substrates and supporting structure and the conditions under which the carpentry work is to be installed, and notify the Contractor in writing of conditions detrimental to the work. Do not proceed with the installation until unsatisfactory conditions have been corrected in a manner acceptable to the Installer and the Architect.

B. Coordination: Fit carpentry work to other work; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds, and similar supports to allow proper attachment of other work.

PART 2 PRODUCTS

2.1 WOOD MATERIAL

A. General

1. All wood shall be sound, flat, straight, well-seasoned, thoroughly dry and free from all defects. Warped or twisted wood shall not be used.

2. For miscellaneous wood blocking, grounds, furring as required, use Utility Grade Coastal Douglas Fir or Southern Pine, free from knots, shakes, rot, or other defects, straight, square edges and straight grain, air seasoned with maximum moisture content of nineteen (19) percent. Wood shall be S4S, S-Dry, complying with PS-20.

3. Concealed Plywood backing and rough carpentry for telephone and electrical closets, provide 3/4" thick C-D EXT-APA plywood, fire retardant treated as specified herein.

B. Wood Treatment

1. All interior wood material specified herein shall be fire retardant treated to comply with the AWPA standard U1 to achieve a flame spread rating of not more than 25 (UL Class "FR-S") when tested in accordance with UL Test 723 or ASTM E 84. The fire-retardant chemicals used to treat the lumber must comply with FR-1 of AWPA Standard P49 and be free of halogens, sulfates and ammonium phosphate.

   a. After treatment, kiln dry to a moisture content of fifteen (15) percent; if wood is to be painted or finished, kiln dry to a moisture content of twelve (12) percent. Treatment shall be equal to "Dricon" made by Arch Wood Protection Inc. or approved equal. Provide UL approved identification on treated materials.

2. For exterior blocking, roofing and sheet metal, pressure treat wood with copper azole, Type B (CA-B); ammoniacal copper quat (ACQ) or similar preservative product that contains no arsenic or chromium. Preservative shall comply with AWPA Standard U1, (.25 lbs./cubic foot of chemical in wood).

   a. After treatment, kiln dry to a maximum moisture content of fifteen (15) percent. Treatment shall be equal to "Wolmanized Natural Select" made by Arch Wood Protection Inc. or approved equal.

3. Treated wood which is cut or otherwise damaged shall be further treated in accordance with the AWPA Standard M-4.

2.2 HARDWARE

A. Rough Hardware for Treated Woods and Exterior Use: Hot-dipped galvanized or Type 304 stainless steel.

B. Nails: Common steel wire, untreated for interior work as per ASTM F 1667.

C. Bolts: Standard mild steel, square head machine bolts with square nuts and malleable iron or steel plate washers or carriage bolts with square nuts and cut washers conforming to the following:

1. Bolts: ASTM A 307, Grade A.

2. Nuts: ASTM A 563.

3. Lag Screws and Bolts: ASME B 18.2.1.

D. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.

1. Material for Treated Woods and Exterior Use: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2.

2. Material for Other Uses: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.

E. Wood Screws: ASME B 18.6.1.

F. Concrete and Masonry Anchors: Standard expansion-shield self-drilling type concrete anchors where so shown or noted on the drawings, or where approved by the Architect.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where carpentry is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION OF FINISH HARDWARE

A. Hardware shall be carefully fitted and securely attached, in accordance with these specifications and the instructions of the various manufacturers.

B. Unless otherwise noted, mount hardware units at heights established in Section 081113.

C. Install each hardware item in compliance with the manufacturer’s instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, install each item completely and then remove and store in a secure place during the finish application. After completion of the finishes, re-install each item. Do not install surface-mounted items until finishes have been completed on the substrate.

D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units which are not factory prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

F. Cut and fit threshold and floor covers to profile of door frames, with mitered corners and hair-line joints. Join units with concealed welds or concealed mechanical joints. Cut smooth openings for spindles, bolts and similar items, if any.

G. All keys used shall be construction keys which are to be tagged with fiber discs as approved, clearly labeled with identifying inscriptions and then neatly arranged in a temporary cabinet. All construction keys shall be returned to the Owner.

H. Adjusting and Cleaning

1. Adjust and check each operating item of hardware and each door, to ensure proper operation and function of every unit. Lubricate moving parts with type lubrication recommended by manufacturer (graphite type if no other recommended). Replace units which cannot be adjusted and lubricated to operate freely and smoothly as intended for the application made.

2. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make a final check and adjustment of all hardware items in such space or area. Clean and re-lubricate operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

3.3 INSTALLATION OF DOORS AND FRAMES

A. Preparation

1. Remove welded-in shipping spreaders installed at factory.

2. Prior to installation and with installation spreaders in place, adjust and securely brace standard steel door frames for squareness, alignment, twist, and plumb to the following tolerances:

a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

3. Drill and tap doors and frames to receive non-templated mortised and surface-mounted door hardware.

B. Installation

1. General: Provide doors and frames of sizes, thicknesses, and designs indicated. Install steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

2. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

    a. Install frames in accordance with ANSI/SDI A250.11, Recommended Erection Instructions for Steel Frames, unless more stringent requirements are specified herein.
    b. At fire-protection-rated openings, install frames according to NFPA 80.
    c. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
    d. Install frames with removable glazing stops located on secure side of opening.
    e. Frames set in masonry walls shall have door silencers installed in frames before grouting.
    f. Remove temporary braces necessary for installation only after frames have been properly set and secured.
    g. Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

3. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with post-installed expansion anchors.

    a. Floor anchors may be set with powder-actuated fasteners instead of post-installed expansion anchors if so indicated and approved on Shop Drawings.

4. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames conforming to the requirements of Section 072100 "Thermal Insulation."

5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar; refer to Section 042000 "Unit Masonry" for installation of frames in masonry walls.

6. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.

7. Installation Tolerances: Adjust steel door frames for squareness, alignment, twist, and plumb to the tolerance given in HMMA 841 of ANSI/NAAMM, current edition.

8. Steel Doors: Fit hollow metal doors accurately in frames to the tolerances given in HMMA 841 of ANSI/NAAMM, current edition.

    a. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

9. Glazing: Comply with installation requirements in Section 088000 "Glass and Glazing" and with standard steel door and frame manufacturer's written instructions.

    a. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c., and not more than 2 inches o.c. from each corner.

C. Wood Doors

1. Condition doors to average prevailing humidity in installation area prior to hanging.

2. Install doors in accordance with manufacturer’s instructions.

3. Fit door to frames and machine for hardware to whatever extent not previously worked at factory as required for proper fit and uniform clearance at each edge.

4. Clearances: Install doors to meet clearance requirements specified in Section 081416.

5. Fire-Rated Doors: Install in corresponding fire-rated frames in accordance with the requirements of NFPA No. 80. Provide clearances complying with the limitations of the authority having jurisdiction.

D. Adjustments: Check and readjust operating finish hardware items just prior to final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including doors or frames which are warped, bowed or otherwise unacceptable.

3.4 BLOCKING AND MISCELLANEOUS WOOD

A. General

1. Erect rough carpentry true to line, levels and dimensions required; squared, aligned, plumbed, and securely fastened in place.

2. Shim where required to true up furring, blocking and the like. Use wood or metal shims only.

3. Do all cutting, fitting, drilling and tapping of other work as required to secure work in place and to perform the work included herein. Do all the cutting and fitting of carpentry work, for the work of other trades as required.

B. Blocking and Miscellaneous Wood

1. Furnish and install all wood grounds, furring, blocking, curbs, bucks, nailers, etc., that may be necessary and required in connection with the carpentry and with the work described for any other trades and including required carpentry for electrical fixtures. All blocking and nailers shall be continuous wherever required, whether or not so indicated.

2. Blocking shall be as required for the proper installation of the finished work and for items in mechanical sections as required. Blocking, edgings, stops, nailing strips, etc., shall be continuous, unless distinctly noted otherwise. Provide blocking as required to install all equipment. Provide blocking and nailers where shown or required to fasten interior sheet metal work.

3. Fastening for wood grounds, furring and blocking shall be of metal and of type and spacing as best suited to conditions. Hardened steel nails, expansion screws, toggle bolts, self-clinching nails, metal plugs, inserts or similar fastenings shall be used, of suitable type and size to draw the members into place and securely hold same.

C. Rough Lumber for Roofing and Sheet Metal

1. Furnish and install all wood nailing strips and wood blocking required in connection with respective types of roofing, fans, flashings, and sheet metal work, using preservative treated wood as herein before specified.

2. Wood blocking shall be of sizes and shapes as indicated on the drawings and/or designed for the reception of curb flashings for roof ventilators and similar items.

3. All nailing strips and blocking shall be carried out in accordance with the printed installation instructions, and/or recommendations of the accepted manufacturer of the roofing materials, and in coordination and cooperation with the sheet metal work trades.

4. All blocking and nailing strips shall be firmly secured in place using counter bored bolt and nut fastenings, or secured by any other proposed flush surfaced fastenings.

5. Wood nailing strips or blocking required to be embedded in concrete work shall be furnished in time due for placing, prior to start of concrete operations. Locations and spacings of nailing strips or blocking shall be performed in coordination with the concrete trades, as required for respective installations.

3.5 TELEPHONE AND ELECTRICAL EQUIPMENT MOUNTING BOARDS

A. Furnish and install 3/4" thick plywood backing panels between the studs of the telephone and electrical equipment rooms in accordance with the requirements of the local utility company.

B. Secure to wall using proper devices for substrates encountered, spaced twelve (12) inches o.c., maximum around the edges, 1-1/2" from corners, and in three (3) rows of three (3) each in the field. Recess fastening devices flush with the plywood surface. Adjacent panels shall be butted with 1/16" space between without lapping.

3.6 ROUGH HARDWARE

A. Securely fasten rough carpentry together. Nail, spike, lag screw or bolt as required by conditions encountered in the field and the Contract Documents.

B. Provide rough or framing hardware, such as nails, screws, bolts, anchors, hangers, clips, inserts, miscellaneous fastenings, and similar items of the best quality and of the proper

size and kind to adequately secure the work together and in place, in a rigid and substantial manner.

C. Secure rough carpentry to masonry with countersunk bolts in expansion sleeves or other acceptable manner, with fastenings not more than sixteen (16) inches apart. Secure woodwork to hollow masonry with toggle bolts spaced not more than sixteen (16) inches apart.

D. Countersink bolts in nailers and other rough woodwork and include washers and nuts. Cut bolts off flush with surfaces and peen as may be required to receive finished work.

E. Inserts to secure wood nailers to concrete shall be malleable iron threaded inserts with 3/8" diameter bolts of length to allow for countersinking. Locate at end of each nailer and at intervals not exceeding thirty (30) inches o.c.

F. Furnish to the mason for building into the work, or attaching the work which is to be built in, anchors, bolts, wall plates bolted to masonry, corrugated wall plugs, nailing blocks, etc., which are required for the proper fastening and installation for the work or other items as called for in this Section.

G. Detailed instructions with sketches of necessary requirements, shall be given to the masonry trade showing the location and other details of such nailing devices.

3.7 CLEANING UP

A. General: Keep the premises in a neat, safe and orderly condition at all times during execution of this portion of the work, free from accumulation of sawdust, cut-ends and debris.

B. Sweeping

1. At the end of each working day, or more often if necessary, thoroughly sweep all surfaces where refuse from this portion of the work has settled.

2. Remove the refuse to the area of the job site set aside for its storage.

3. Upon completion of this portion of the work, thoroughly broom clean all surfaces.

END OF SECTION 062000

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 064023

ARCHITECTURAL WOODWORK

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the architectural woodwork as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Wood trim and base.
2. Wood millwork and counters with plastic laminate finish.
3. Hardware for architectural woodwork.
4. Wood shelving.
5. Wood framing and rough lumber as required for work of this Section.
6. Wood grounds, blocking, nailers, furring as required for work of this Section.
7. All rough hardware and fastenings for work of this Section.
8. Drilling concrete and masonry, drilling and/or tapping metal work, as required, for the installation of work of this Section.
9. Back painting as specified herein.
10. Shop finish of work of this Section, except items indicated herein to be shop primed only.

1.3 RELATED SECTIONS

A. Carpentry - Section 062000.

B. Caulking between architectural woodwork and any wall, floor, or ceiling joints - Section 079200.

C. Flush Wood Doors - Section 081416.

D. Field finishing of architectural woodwork - Section 099000.

1.4 REFERENCES

A. American Lumber Standards Committee (ALSC): American Lumber Standards Simplified Practice Recommendation R-16, latest edition.

B. Architectural Woodwork Institute (AWI): Architectural Woodwork Standards (AWS), latest edition.

1.5 QUALITY STANDARDS

A. The quality standards of the Architectural Woodwork Institute, "Architectural Woodwork Standards" (AWS), 2nd Edition, dated July 1, 2016, shall apply to all workmanship, including materials and installation, for architectural woodwork, and by reference are made a part of this specification. All work shall conform to "Premium" grade requirements of the AWS unless otherwise modified herein.

B. In the event of a dispute as to the quality grade (or grades), the Contractor shall call upon the Architectural Woodwork Institute for an inspection under AWI's Quality Certification Program which shall include a QCP Inspection and Report. The Contractor agrees to abide by the decision of this Report. The cost of said inspection and report shall be borne by the Contractor.

C. Employ only tradesmen experienced in the fabrication and installation of architectural woodwork.

D. Woodworking firm must be accredited by the AWI Quality Certification Program (QCP).

E. Provide fire test reports by an accredited testing laboratory of all woodwork demonstrating compliance with fire rating classification as required by Code.

1.6 SUBMITTALS

A. Shop Drawings

1. Submit shop drawings of all woodwork specified and indicated on the drawings. Shop drawings shall indicate room plans and elevations at 3/4" equals 1'-0" scale and typical construction details at 3" equals 1'-0" scale. Shop drawings shall indicate all materials, thicknesses, and finishes.

2. Shop drawings shall show all finish hardware, anchors, fastenings, and accessories.

3. Shop drawings shall show all jointing, joint treatment and butt jointing in veneers and plastic laminate.

4. Shop drawings for cabinet work must show centerline height and horizontal location of all required internal wall blocking.

5. Where architectural woodwork deviates from AWI standards noted herein, shop drawings must identify these deviations.

B. Samples: Submit samples of each of the following items:

1. Plastic laminate, twelve (12) inches square, including a section of outside corner.

2. Transparent finish for each species of wood veneer laminated to particleboard, twelve (12) inches square, for each finish specified or shown.

3. Opaque finish wood veneer laminated to particleboard, twelve (12) inches square for each color, gloss and finish specified or shown.

4. Each type and finish of each type of wood trim, base, etc., eight (8) inches long, finish as specified.

5. Cabinet hardware.

1.7 QUALIFICATIONS

A. The work of this Section shall be provided by a firm having a minimum of five (5) years' experience on projects of similar size and quality to that specified and shown.

1.8 COORDINATION

A. Coordinate the work of this Section with other appropriate Sections of the specifications to insure proper scheduling for fabrication and installation of the work specified herein.

B. Coordinate with partition and finish trades to insure that proper provisions are made for the installation of the work specified herein.

C. Verify all dimensions in the field prior to fabrication of all Architectural Woodwork to assure proper fit.

1.9 PRODUCT HANDLING

A. All materials and work of this Section shall be protected from damage from time of shipment from shop to final acceptance of work. Cover, ventilate, and protect work of this Section from damage caused by weather, moisture, heat, staining, dirt, abrasions, any other causes which may adversely affect appearance or use, or which may cause deterioration of finish, warping, distortion, twisting, opening of joints and seams, delamination, loosening, etc., of work of this Section.

B. Keep all finish carpentry, millwork, and cabinet work under cover both in transit and at the premises. Do not deliver any finish carpentry, millwork or cabinet work before it is required for installation. Protect such work to avoid damage in transit, during erection and after erection until acceptance of the building; use all such methods to provide the proper protection. Remove such protection when directed by the Architect.

C. Deliver finish carpentry, millwork, and cabinet work in a dry stable condition; protect same against injury and dampness. Do not store or install finish carpentry, millwork or cabinet work until after the concrete, masonry and plaster work are thoroughly dry.

D. Damaged or defective items of work of this Section are subject to rejection and replacement with new by Contractor, at no cost to Owner.

1.10 JOB CONDITIONS

A. Humidity Controls: The ambient relative humidity at the site, including both the storage and the installation areas, shall be maintained between 25% and 55% prior to delivery and through the life of the installation.

B. Determine equilibrium moisture content and maintain required temperature and relative humidity as required for a tolerance of plus or minus one (1) percent of the specified optimum moisture content until woodwork receives specified finishes. Refer to "Guide to Wood Species Selection," AWI, for method of determining equilibrium moisture content values.

C. Examination of Substrate and Conditions: The installer must examine the substrate and the conditions under which the work of this Section is to be performed, and notify the Contractor in writing of unsatisfactory conditions. Do not proceed with work under this Section until unsatisfactory conditions have been corrected in a manner acceptable to the Installer.

D. Areas to receive architectural woodwork must be fully enclosed with windows and/or curtain wall installed and glazed, exterior doors in place, HVAC systems operational, and temporary openings closed. Any plaster, wet grinding and concrete work shall be fully dry.

E. Architectural woodwork shall be allowed to come to equilibrium on site for 7 days prior to installation.

PART 2 PRODUCTS

2.1 BASIC REQUIREMENTS

A. Wood Moisture Content: Provide kiln-dried (KD) lumber with an average moisture content range of nine (9) to twelve (12) percent for exterior work and six (6) to eleven (11) percent for interior work.

B. Measurements: Before proceeding with woodwork required to be fitted to other construction, obtain field measurements and verify all dimensions of shop drawing details as required for accurate fit.

C. Compatibility of Grain and Color: Architect reserves the right to select materials for best compatibility between visually related members and veneers.

D. Machine and sand woodwork to comply with requirements of Standards for specified grade.

E. Fabricate woodwork to dimensions, profiles and details shown. Rout or groove back of flat trim members, kerf backs of other wide flat members except plywood or veneered members.

F. Miter joints by joining, splining and gluing to comply with requirements for the specified grade.

G. Inspect each piece of lumber and plywood or each unit of woodwork after drying; do not use twisted, warped, bowed or otherwise damaged or defective wood.

2.2 GENERAL - MATERIALS

A. Softwood lumber shall conform to the requirements of the latest edition of American Lumber Standards Simplified Practice Recommendation R-16. Grades shall conform to the grading rules of the Association having jurisdiction, and shall bear the official grade

and trademark of the Inspection Bureau of the Association and a mark of mill identification.

B. Framing and Rough Lumber: No. 1 KD grade Southern Pine or Dense Construction grade Douglas Fir, having extreme fiber in bending stress of at least 1700 psi, surfaced four sides (S4S). Provide fire retardant treatment meeting requirements of Section 062000.

C. Grounds, Blocking, Nailers, Furring: Southern Pine, Douglas Fir or Sitka Spruce, grade to suit particular purpose and to be straight, square edged, straight grained, surfaced four sides (S4S), and which will retain nails and screws without splitting. Provide fire retardant treatment.

D. Wood Veneers and Lumber: Provide AWI Premium Grade materials and workmanship. For species not listed in the AWS comply with the following:

1. Provide AWS Lumber Grade Premium and AWS Grade AA Veneer, book-matched, minimum 6-inch face veneer width. Kiln dry to 6-8 percent moisture content. Components shall be free of defects and sapwood. Match adjacent pieces for color and grain pattern.

2. Single-Source Requirement for Wood Veneers and Solids: Intent is to provide wood which matches as closely as possible throughout the project. Provide wood veneers and solids from the same distributor, and from the same flitches and solids sources to the greatest extent possible.

E. Lumber: AWS Section 3 with the following requirements:

1. Hardwood for Transparent Finish: Premium Grade, select species and cut to match adjoining veneers, unless otherwise shown or specified, and free from cat’s eyes, bird’s eyes, burls, curls, or cross grains.

2. Hardwood for Opaque Finish: Any hardwood which, when finished, will not show any grain, imperfection or other surface defects when used with the opaque finish specified.

F. Plywood: AWS Section 4; veneer core, particleboard or plywood core unless otherwise specified, and with the following requirements:

1. Hardwood: Premium Grade, face veneers as shown or specified.

2. Particleboard: Premium Grade, fire retardant for wall paneling only equal to Duraflake FR and Duraflake for cabinets. Particleboard shall be certified to meet EPP CPA 3-08 formaldehyde emission limit of 0.18 ppm, and contain no added formaldehyde resins.

3. Medium-Density Fiberboard (MDF): Conforming to ANSI A208.2, Grade 130 and ANSI MR10 moisture-resistant properties on 5/8" or thicker board. MDF shall be certified to meet EPP CPA 3-08 formaldehyde emission limit of 0.21 ppm, and contain no added formaldehyde resins.

4. Edges: Banded with hardwood in accordance with Premium Grade Standards.

G. Wood Species and Cut for Transparent Finish: Quarter sliced/sawn, species as selected by the Architect.

1. Architect's control samples for transparent finish, veneer grain and figure characteristics are available for review at the office of the Architect.

H. Veneer Matching Requirements:

1. Matching Between Adjacent Veneer Leaves: Book match and architectural end match.

2. Matching Within Individual Panel Faces: Balance and Center Match.

3. Method of Matching Panels: Blueprint-matched panels and components.

I. Finishing (Wood)

1. Transparent Finish

a. AWI Factory Finish System "Conversion Varnish, System 5, Transparent."
b. AWI Premium Grade.
c. Stain: As selected by the Architect.
d. Degree of Sheen: Dull satin.

2. Opaque Finish

a. AWI Factory Finish System "Conversion Varnish, System 5, Opaque."
b. AWI Premium Grade.
c. Degree of Sheen: Satin.
d. No grain to show.

2.3 PLASTIC LAMINATE

A. Face Sheets: NEMA Publication LD3, Grade GP50, Type I, 0.05" thick, as manufactured by Formica, Nevamar, WilsonArt. Color, pattern, and finish as selected by the Architect.

B. Backing Sheets: Non-decorative, high-pressure plastic laminate, NEMA LD3, Grade BK20, 0.02" thick.

C. Edges: Finish with plastic laminate to match face and applied before face sheets are applied, unless otherwise shown or specified.

2.4 METAL

A. Steel

1. Structural Steel Shapes and Plates: ASTM A 36.

2. Hot-Rolled Carbon Steel Sheets: Commercial quality, ASTM A 569, may be used for concealed parts only. Galvanize sheets for planters.

B. Primer for Unexposed Metal: Zinc chromate primer.

2.5 MISCELLANEOUS PRODUCTS

A. Fasteners

1. Wood Screws: FS FF-S-111, type, size, material and finish as required for the condition of use.

2. Nails: FS FF-N-105, type, size, material and finish as required for the condition of use.

3. Anchors: Type, size, material and finish as required for the condition of use.

4. Staples: Upholstery type staples of sufficient strength to hold fabric taut in place without sagging.

B. Adhesives

1. For Laminating Plastic Laminate Surfaces: Urea resin, Type II, as recommended by fabricator.

2. For All Other Uses: Polyvinyl acetate resin emulsion or other type as recommended by the fabricator.

2.6 CABINETS WITH PLASTIC LAMINATE FINISH

A. General

1. Fabricate all cabinetry and millwork to the "Premium Grade" standards of the AWS, Section 10.

2. Face construction of cabinets shall be "Flush Overlay."

3. Provide 3/4" thick doors, drawer fronts and fixed panels (including thickness of plastic) except where required to be thicker by Standards; and provide flush units.

4. Provide dust panels of 1/4" thick plywood or tempered hardboard above compartments and drawers, except where located directly below countertops.

5. Exposed Edges: Plastic laminate matching exposed panel surfaces. Ease exposed edge of overlap sheet.

B. Plastic Laminate

1. Plastic Laminate for Horizontal Surfaces: 0.050" thick, general purpose type (high pressure).

2. Plastic Laminate for External Vertical Surfaces: 0.028" thick, general purpose type (high pressure).

3. Plastic Laminate for Post Forming: 0.042" thick, post forming (high pressure).

4. Plastic Laminate for Cabinet Linings: 0.020" thick, cabinet liner (high pressure).

5. Plastic Laminate for Concealed Panel Backing: 0.020" thick, backer type (high pressure).

6. Plastic Laminate Colors and Patterns: As selected by the Architect from manufacturer’s standard satin finish products.

C. Shop Assembly: All work shall be shop assembled. Work that is too large for entrance into the use area shall be fabricated in attachable sections with provisions for reconnection in the using space.

D. Material Thicknesses: See drawings for general material thicknesses. Minimum thickness of solid lumber for web frames, trim, bases, etc., shall be 3/4". Minimum thickness of plywood and particleboard shall be 3/4".

E. Sizes: See drawings for woodwork sizes required. The manufacturer shall check field dimensions and verify all openings and actual field conditions prior to fabrication of work.

F. Manufacturer is responsible for rigidity and structural stability.

2.7 PLASTIC LAMINATE COUNTERTOPS

A. Grade: Same as AWI grade required for cabinet work; plastic laminate finish.

B. Construction

1. Provide back-splash and end-splash, where detailed; top-mounted square butt joint, fully covered with matching plastic laminate, eased edges.

2. Exposed Counter Edges: Plastic laminate matching surface, except as otherwise indicated. Ease exposed edges of overlap sheet.

3. Cut openings for equipment to be installed. Comply with equipment manufacturer's requirements, but provide internal corners of 1/8" minimum radius. Smooth saw cut and ease edges.

4. Seal cut edges of counter at openings for sinks and other "wet" equipment, using waterproofing compound recommended by plastic manufacturer and compatible with laminating adhesive.

2.8 HARDWARE

A. Architectural Woodwork Hardware: Provide the following items, or their approved equal, as required:

1. Hinges: Concealed hinges.

2. Catches: Magnetic; top and bottom.

3. Pulls: Selected by the Architect.

4. Locks: Directed by the Architect.

5. Drawer Slides

a. 24" Maximum Width: Accuride, Model 7434, full extension, 100 lb. capacity.

b. 16" Maximum Width, Easy Close: Accuride Model 3832C, full extension, 100 lb. capacity.

6. Shelf Supports: Pin and grommet system equal to No. 282.01.701 pin and 282.50.704 grommet made by Hafele.

7. Finish: Satin stainless steel.

B. Closet Hardware: Oval wardrobe rails, chrome-plated steel with center bracket and wall-support brackets made by Hafele, or approved equal.

2.9 WOOD FOR RAILINGS, CAPS, TRIM, BASES, AND FRAMES

A. Quality Standard: For the following types of interior architectural woodwork, comply with indicated standards as applicable.

1. Standing and Running Trim: AWS Section 6.

2. Miscellaneous Millwork: AWS Section 6.

B. Woodwork for Transparent Finish: Except as otherwise indicated, comply with the following:

1. Grade: Premium.

2. Species of Solid Wood: Quarter Sawn species as noted on drawings.

C. Woodwork for Paint Finish: Except as otherwise indicated, comply with the following:

1. Grade: Premium.

2. Species of Solid Wood: Solid, paint grade, sound clear Poplar or Birch.

2.10 FABRICATION - GENERAL

A. Provide lumber framing for architectural woodwork, complete with all bracing and fastening devices as required for a rigid installation, and as required to sustain the imposed loads.

B. Do all fabrication from field measurement with provision for scribing as required to meet built-in conditions.

C. Coordinate the work of this Section with the work of other trades.

D. Fabricate units in largest practicable sections. Assemble in the shop for trial fit, disassemble for shipment and reassemble with concealed fasteners.

E. Maintain relative humidity and temperature during fabrication, storage and finishing operations matching that of the areas of installation.

F. Details indicate the required type and quality of construction. Modifications to conform to manufacturer’s standards will be considered provided that they comply with the Contract Documents and maintain the profiles shown, subject to acceptance by the Architect.

G. Reinforcing shown is minimum. Provide additional reinforcing as required to ensure a rigid assembly. Exposed surfaces shall be free from dents, tool marks, warpage, buckle, glue and open joints, or other defects affecting serviceability or appearance. Accurately fit all joints, corners and miters. Conceal all fasteners. Make threaded connections up tight so that threads are entirely concealed.

H. Factory finish all items where possible. Defer final touch-up, cleaning and polishing until after delivery and installation.

I. Comply with AWI, Premium Grade, for sanding, filling countersunk fasteners, back priming and similar preparations for the finishing of architectural woodwork, as applicable to each unit of work.

J. Prepare all countersunk wood screw attachments for wood plugs. Wood plugs shall match surrounding species and grain direction; putty filling is not acceptable.

2.11 FABRICATION - SPECIFIC ITEMS

A. Millwork

1. Include all preparations for mechanical, electrical, telephone and plumbing work required.

2. Provide cabinet hardware for millwork as shown.

3. Provide dust panels in body webs and between drawer units.

4. Provide wood veneers for exposed surfaces as specified herein before.

5. Hollow core doors will not be permitted.

6. Provide matching veneers for edge treatments of case body members where transparent finishes are indicated or specified.

7. Provide drawers with slides as specified. Drawers shall not rest on web body frames.

8. Provide wood veneers for transparent finish, of matching and continuing grain, for drawer and door edges.

B. Closet and Storage Shelving

1. Provide closet and storage shelving in accordance with AWI, Custom Grade, unless otherwise shown or specified.

2. Exposed edges shall have hardwood edge bands.

C. Standing and Running Trim: Provide standing and running trim of the sizes, profiles, species and finish as specified or shown and complying with AWI Section 6, Premium Grade.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where architectural woodwork is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 FRAMING

A. Use specified framing lumber, sizes and spacing as indicated on drawings and as required to support loads.

B. Framing shall be cut square on bearings, closely fitted, accurately set to required lines and levels, rigidly secured in place at bearings and connection with nails, lag screws and/or bolts as required by conditions.

3.3 GROUNDS, BLOCKING, NAILERS, AND FURRING

A. Provide all wood grounds, blocking, nailers, furring, and the like for work of this Section, where shown and where required, dressed to size indicated or required to suit the condition. Install grounds, blocking, nailers, furring, etc., rigidly, in proper alignment, trued with a long straight edge.

3.4 ROUGH HARDWARE

A. Provide all rough hardware, such as nails, screws, bolts, anchors, hangers, clips and similar items. Hardware shall be of the proper size and kind to adequately secure the work together and in place, in a rigid and substantial manner. Use galvanized hardware at exterior walls, and at other locations where subject to moisture or where water will be present.

B. Secure wood to concrete and to solid masonry with countersunk bolts in expansion sleeves or other approved manner, to steel with countersunk bolts, to hollow masonry and to drywall with heavy duty countersunk toggle bolts. Space fastenings not more than sixteen (16) inches apart. Hardened cut nails, power-driven fastenings, or other suitable devices may be used where approved by the Architect.

C. Connections and fastenings shall be made in such manner as will compensate for swelling and shrinkage and shall permit the work to remain permanently in place without any splitting or opening of joints.

3.5 INSTALLATION OF CABINET FINISH HARDWARE

A. All items of finish hardware furnished under this Section shall be carefully fitted and secured in place as part of the work of this Section. Locations and positioning of hardware shall be subject to the Architect’s approval. Care shall be taken not to mar or damage hardware, or other work. Install doors plumb and true. Hardware shall be fitted to assure operation without forcing.

B. After preliminary fitting of hardware, the Contractor shall remove trim for painting and finishing work; after which he shall reinstall the hardware in a permanent manner.

C. Upon completion of the work, before final acceptance of the building by the Owner, the Contractor shall, in the presence of the Architect, show that all hardware is in satisfactory working order; fit all keys in their respective locks and, upon acceptance of the work, shall tag and deliver all keys to the Architect and Owner.

D. When directed by the Owner, at any time during the first year after the completion of the Contract, the Contractor shall return to the building and adjust and refit the work and hardware, and leave such items in satisfactory working order.

3.6 GENERAL INSTALLATION

A. Wall anchorage and general installation procedures for cabinetry work shall conform to AWS Section 10, Article entitled "EXECUTION," Sub-Article 6.1, with all related sub-paragraphs.

B. Install the work plumb, level, true and straight with no distortions. Shim as required using concealed shims. Install to a tolerance of 1/8" in 8'-0" for plumb and level (including countertops), and with 1/16" maximum offset in flush adjoining surfaces, 1/8" maximum offset in revealed adjoining surfaces.

C. Scribe and cut work to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.

D. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation.

3.7 WOOD TRIM

A. Install with minimum number of joints possible, using full-length pieces for each run. Stagger joints in adjacent and related members. Cope at returns, miter corner.

B. Joints of all trim and/or moldings shall be set tight, miter exterior angles and cope interior angles. Joints, except end joints less than twelve (12) feet apart, will not be permitted in straight runs of trim and/or moldings.

C. Secure all trim and/or moldings with glue and blind nail with finishing nails. Set exposed nail heads in finished work and putty. Sand all work to remove any tool marks and irregularities.

D. Wood shall receive finish as specified in Section 099000, "Painting and Finishing."

3.8 WOOD HANDRAILS

A. Wood shall be planed straight, square and level, then sanded smooth with flush finished surfaces. Joints shall occur over supports. Right angle joints shall be mitered.

B. All exposed fastening devices shall be countersunk and set below finished wood surfaces, and fitted with matching wood plugs; sand plugs and finish smooth and flush with exposed surfaces.

C. Provide all hardware and metal supports required for complete installation as detailed on drawings.

3.9 CLOSET AND STORAGE SHELVING

A. Provide closet and storage shelving at the locations shown. Provide hang rods where shown. Set adjustable center hangers.

3.10 CABINET WORK AND MILLWORK

A. General

1. Materials and workmanship shall conform to the Quality Standards of the Architectural Woodwork Institute specified herein and to the drawings.

2. Cabinet work and millwork shall be performed by an experienced cabinet work and millwork company, having craftsmen skilled in their trade.

3. Fabricate all cabinet work and millwork completely in the shop, in complete and/or as large units as practical, leaving only fitting, assembly, installation and a minimum of fabrication and finishing to be done at the building. Assembled work shall be rigidly secured and permanently fastened together with concealed fasteners.

4. Afford Architect every facility for inspection of work at shop or mill at such times as the Architect may select.

5. As far as practicable, use concealed fastenings for joining and assembling the work. Where this is impossible, the means of securing shall be placed in inconspicuous places and methods of joining and assembling submitted for Architect’s approval prior to fabrication.

6. Mill all finish wood accurately to detail, with clean cut moldings, profiles and lines, machined, sanded smooth, housed, jointed, blocked, put together in the best manner, with provision for swelling and shrinkage, and to assure the work remaining in place without warping, splitting or opening of joints.

7. Cut trim to dimensions and profiles shown, from solid stock.

8. Make all trim and the like in single lengths wherever possible; joints mitered, glued and splined. Continuous members shall have tight flush joints, doweled or splined and glued.

9. Make all joints hairline tight, fitted accurately and joined with hardwood splines or dowels, glued together, or by other method approved by Architect. Use screws, not nails, for fastenings.

10. Gluing shall, where practicable, be by the hot plate press method and glued surfaces shall be in close contact throughout. Glue stains on finished work will not be permitted.

11. Cover surface fastenings, where permitted, with matching wood plugs or wood putty. Finish exposed edges of plywood with matching solid stock. Lock miter external corners; tongue and groove internal corners to allow for contraction and expansion.

12. Machine sand with grain, finish with hand sanding, leave exposed surfaces free from machine or tool marks that will show through the finish.

13. Work which adjoins drywall, concrete, or other finish shall be fitted and scribed in a careful manner and ample allowance shall be given for cutting and scribing.

14. Erect work true to lines, levels and dimensions, square, aligned and plumb, securely and rigidly fastened in place.

B. Cabinet Work: Provide all items of cabinet work indicated on drawings and as herein specified.

1. Tops, sides, backs, bottoms, dividers, shelves, fronts, doors and drawer fronts shall be of plywood or flakeboard core, with the specified wood veneer or plastic laminate as indicated on drawings.

2. Drawer sides and backs shall be 1/2" thick solid clear selected white birch, suitable for clear finish. Drawer bottom shall be 3/8" thick plywood with clear selected white birch veneers, suitable for clear finish.

3. Cabinet doors and drawers shall be flush mounted.

4. Adjustable shelves in cabinets shall have grommets spaced 2" o.c.

5. Fixed shelves shall be dadoed into side supports and glued.

6. Shelves shall be 3/4" thick for spans up to 30"; for spans in excess of 30" to 48" shelves shall be 1" thick.

7. All cabinets shall have closed top, sides, bottom, and back with veneers to match face work. Cabinets to fit accurately into indicated locations; scribe moldings permitted only where indicated.

8. Countertops, counters, counter fronts, shelves, etc., indicated on drawings to have plastic laminate, shall have plastic laminate shop applied to 3/4" thick core, with plastic laminate backing sheet on underside or back of countertops, counters and shelves. Plastic laminate shall be pressure laminated to core with laminate at external corners. Provide concealed wood framing to support plastic laminate counters, securely fastened to wall and to underside of counters.

C. Countertops shall be installed to support a minimum concentrated live load of 150 lbs. acting downward at mid span at outer edge of counter without causing deformation and damage.

3.11 WOOD BASES

A. Provide plywood backing, toggle bolted to substrate, if substrate not suitable for securing wood base.

B. Machine wood bases from specified wood, to profiles indicated on drawings.

C. Set base level and plumb. Where indicated on drawings, face of wood base shall be flush with wall above. Glue wood base to substrate or to plywood backing, and screw or nail wood base to substrate or to plywood backing with countersunk wood screws or

with finishing nails, recess wood screw heads, and spackle with wood putty, set and spackle nails with wood putty. Do not nail or fasten wood base to floor. Ends of wood base shall be either splined or shiplapped.

D. Where no wood backing occurs, screw apply base at each stud with screw countersunk and wood putty applied and sanded smooth and flush with base.

3.12 PAINTING AND FINISHING

A. General: All painting and finishing work of this Section shall be shop applied, unless otherwise noted, as specified below. All painting and finishing shall match approved samples. Field finish painting, where specified below, shall be by painting Subcontractor, as specified for in Painting Section.

B. Back-Painting: All work of this Section in contact with concrete or masonry or other moisture areas and all concealed surfaces of cabinet and millwork, shall be back-painted with one (1) coat of oil-based paint prior to installation, shop applied where practicable.

C. Field Touch-Up: Field touch-up shall be the responsibility of the installing Subcontractor and shall include the filling and touch-up of exposed job made nail or screw holes, refinishing of raw surfaces resulting from job fitting, repair of job inflicted scratches and mars, and final cleaning up of the finished surfaces.

3.13 CLEAN UP AND PROTECTION

A. Clean Up: At regular intervals during the course of the work, all debris and excess material shall be cleaned up and removed from the site. Upon completion of installation, clean all spaces of debris caused by woodwork installation.

B. Protection: Protect all woodwork from marring, defacement of other damage until final completion and acceptance of the project by the Owner. Repair or replace all defective units prior to final inspection as directed by the Architect. Any units that cannot be satisfactorily repaired in the opinion of the Architect shall be replaced with new units of same original design, at no additional cost to the Owner.

END OF SECTION 064023

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 06 41 00

CUSTOM CASEWORK

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. Provide casework, cabinets and shelving as indicated on the Drawings and as specified herein. All casework shall have wood finish except where laminate cladding is indicated on the Drawings.

1.2 SUSTAINABILITY REQUIREMENTS

A. Sustainability requirements included in the Section are as follows:

1. Restrictions on the use of urea-formaldehyde containing materials.

2. All MDF, High Pressure Decorative Plastic Laminates (HPL), and particleboard products must have a industry wide (generic) or product specific Environmental Product Declaration (EPD). EPD must conform to the following standards: ISO 14025, 14040, 14044 and EN 15804 or ISO 21930

1.3 REFERENCES

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. Architectural Woodwork Institute (AWI):
   Architectural Woodwork Quality Standards

2. ASTM International (ASTM)

3. American National Standards Institute (ANSI):
   ANSI 156.9 B43161, ANSI A208.1

4. International Organization for Standardization (ISO)

5. European Standards (EN)

6. National Electrical Manufacturers Association (NEMA):
   NEMA LD3 High-Pressure Decorative Laminates

7. American Wood Preservers' Association (AWPA).
   Standard UC1

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's product data for each product and process specified as work of this Section and incorporated into items of the casework.

B. Manufacturer’s AWI Certifications: Submit casework manufacturer's (fabricator's) certification, stating that fabricated casework complies with AWI quality grades and other requirements indicated herein.

C. Wood Treatment Data: Submit chemical treatment manufacturer's instruction for handling, storing, installation, and finish of treated material.

D. Fire-Retardant Treatment: Certification by treating plant stating treated material complies with AWPA specified use category UCFA standards and treatment will not bleed through specified finishes.

E. Hardware (for each type): Name, manufacturer, type, style, size, function, finish, and information about fastenings.

F. Shop Drawings: Submit Shop Drawings showing location of each item, dimensioned plans and elevations, large-scale details and profiles, attachment devices, hardware and other components.

1. Identify casework using same identification system shown on Architectural Drawings.

2. Coordinate details and cut-outs to accommodate accessories and work specified under other Sections.

G. Samples: Submit the following samples representative of quality to be provided in finished work:

1. Wood trim, 12" length by specified width of each type and finish.

2. Hardwood veneer plywood.

3. Plastic laminate, 8" x 10" for each type, color, pattern and surface finish.

4. Hardware, one of each type and finish of each item to be used.

5. Counter tops and exposed shelving, 12" x 12" with wood edge and/or laminate edge as shown.

6. Quartz agglomerate simulated stone countertop, 6”x6”. Sample for each color/pattern selected. Sample shall include a seam if project includes tops more than 10 feet long.

7. Stain Colors for selection

8. One Unit of Cabinet Work Each Shipment (If Requested)

H. Name of Cabinet Mfr/Fabricator of cabinetwork

I. Low Emitting Materials Compliance Submittals

1. Provide documentation for each adhesive to be used on site, indicating that the adhesives comply with low V.O.C. requirements as stated above under 'Sustainability Requirements.'

J. Sustainability Submittals

1. Submit manufacturer's documentation that composite wood products, including plywood, that are used are manufactured without the use of any added urea-formaldehyde. This requirement includes binders, and laminating adhesives used in the field or shop. Submit manufacturer's documentation of the resin used in lieu of urea-formaldehyde in binders and laminating adhesives.

2. Submit generic or product specific EPD or Product Specific Declaration for MDF, High Pressure Decorative Plastic Laminates (HPL), and particleboard products.

1.5 QUALITY ASSURANCE

A. AWI Quality Standard: Comply with applicable requirements of the AWI "Architectural Woodwork Quality Standards", except where indicated otherwise.

B. Fabrication and Installation Qualifications: firm which can demonstrate a minimum of 5 years of successful experience in fabricating and installing casework items similar in type and quality to those required for this project.

C. Submit name of firm to the Owner for approval.

D. The Owner reserves the right to select at random one unit of cabinetwork in each shipment and to dismantle and examine it for determination of compliance with the Specifications.

If, after examination, it is found that the unit does comply, the cost of the replacement unit will be paid for by the Owner. If, after examination, it is found that the unit does not comply, the entire shipment shall be removed from the Project Site and cabinetwork complying with the Specifications shall be provided. Expense of removal and replacement shall be borne by the Contractor.

E. Obtain each type of hardware from a single manufacturer.

F. Fire-Retardant Treated Material: Accredited testing agency mark on each piece of wood indicating compliance with the fire hazard classification.

G. All plywood, composite wood products and laminating adhesives used shall contain no added urea-formaldehyde.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect casework during transit, delivery, storage and handling to prevent damage, soiling and deterioration.

B. Do not deliver casework, until operations which could damage, soil or deteriorate casework have been completed in installation areas. If casework must be stored, store only in areas meeting requirements specified for installation areas.

1.7 PROJECT CONDITIONS

A. Casework Manufacturer and Installer shall advise the Owner's Representative of temperature and humidity requirements in writing for casework installation and storage areas. Do not install casework until building is enclosed, wet work and utility roughing-in are complete, and HVAC system is operating and required temperatures and relative humidity have been stabilized.

B. Maintain temperature and humidity in installation area as required to maintain moisture content of installed woodwork within 1.0 percent of optimum moisture content as follows:

1. Optimum Moisture Content of Wood: 5-10%

2. Relative humidity required to be maintained in installation and storage areas: 25-55%

1.8 COLOR SELECTIONS

A. Stain colors and plastic laminate colors, patterns and textures: selected by the Project Architect from manufacturer’s standard colors.

PART 2 – PRODUCTS

2.1 FABRICATION, GENERAL

A. Wood Moisture Content: Comply with requirements of referenced quality standard for moisture content of lumber and plywood at time of fabrication and for relative humidity in installation areas.

B. Fabricate casework to dimensions, profiles, and details indicated with openings and mortises precut, where possible, to receive hardware and other items and work.

C. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to maximum extent possible. Disassemble components only as necessary for shipment and installation. Where necessary, provide ample allowances for scribing, trimming, and fitting.

D. Pre-Cut Openings: Provide casework with pre-cut openings, where possible, for hardware, appliances, plumbing fixtures, electrical work and similar items. Locate openings accurately and use templates or roughing-in diagrams for proper size and shape. Smooth edges of cutouts and, where located in countertops, seal edges of cutouts with a water-resistant coating.

E. Measurements: Before fabrication of casework to be fitted to other construction, obtain field measurements and verify dimensions and shop drawing details as required for accurate fit.

1. Where field measurements before fabrication would delay the project, fabricate without field measurements and provide ample borders and edges to allow for scribing and trimming of casework.

F. Cabinet work and paneling construction shall comply with the requirements of AWI Architectural Cabinets and Paneling, Premium Grade, except where indicated herein and on the Drawings for more stringent requirements.

G. All plywood, composite wood products and laminating adhesives used shall contain no added urea-formaldehyde.

2.2 WOOD SPECIES AND GRADES

A. Solid Wood and Hardwood Veneer Plywood

1. Where exposed to view, interior finish throughout Building, except as indicated in 2. below, and except as indicated otherwise on the Drawings: Plain Sawn Red Oak, AWI Grade A1.

2. Plywood not exposed to view (tops and backs): AWI Grade B2.

3. Grain appearance: Running match; grain consistent for each cabinet.

4. Provide same species of veneer on both sides of plywood.

5. Shelving in Cabinets (exposed) and Backs of Open Book Shelves and Magazine Racks: Plain Sawn Red Oak, AWI Grade A1 for Oak Units; White Birch, AWI Grade A1 for Birch units. Solid wood shelving edge (Oak or Birch, to match cabinet species).

6. Shelving in Cabinets (unexposed): White or Red Birch, AWI Grade B2, with solid wood edge (Oak or Birch, to match cabinet species).

7. For all laminated cabinet/counter tops with sinks, and including the full sub-top beneath solid surfacing countertops: AWI grade B2 sanded plywood.

2.3 TYPES OF PANELS

A. Particleboard: High density grade H-1(min 50 pounds per cubic foot) for plastic-laminate countertops. Particleboard shall not be permitted for shelving or support legs for countertops.

B. Particleboard core plywood: medium density particleboard core, with face and back veneers and cross bandings (5-ply). Use only for drawer sides or where covered by laminate. Not permitted for shelving.

C. Veneer Core Plywood: core of odd number of veneer plies, with face and back hardwood veneers. Use veneer core plywood for all other casework.

2.4 TEMPERED HARDBOARD

A. Manufacturers

1. Masonite Corp. Towanda, PA 18848
2. Lousiana-Pacific Corp. Neenah, WI
3. Forestex Co. Division of Stimson Lumber Forest Grove, OR

B. Type: solid or perforated (holes spaced evenly at 1" o.c. in both directions, with even borders around edges), as indicated on the Drawings.

C. Thickness: as indicated on the Drawings.

2.5 HIGH PRESSURE DECORATIVE PLASTIC LAMINATES

A. Manufacturers

1. Formica Corp.
2. Wilsonart LLC.
3. Panolam Surface Systems – Nevamar, Pionite decorative surfaces

B. Adhesives: as recommended by plastic laminate manufacturer.

2.6 GENERAL NOTES

A. Provide 24 gage stainless steel channel edging strips for exposed edges for sink top and splash back unless otherwise indicated. See Drawing Details. Provide plastic laminate covered splash backs at sides of sink cabinets where they abut walls, cabinets, and at other abutments. Where sink top is quartz agglomerate provide splash backs of quartz agglomerate.

B. Certain cabinets shall have stainless steel channel edging. Tops of movable units shall have hardwood edges securely glued to plywood as indicated on the Drawing Details.

C. Provide continuous neoprene and aluminum weather-stripping at top, bottom and hinge side of door openings and on edge of one door of each metal lined cabinet in shops of Intermediate and High Schools where indicated on Drawings. Weatherstripping at top, bottom and hinge side of door openings shall be Catalog No. 50M; weather-stripping at edge of door shall be Catalog No. 53M, both as manufactured by Zero Weatherstripping Company, Inc. or equivalent by Reese Enterprises Inc. Weatherstripping on meeting edge shall be let into door as indicated on Details.

D. Provide the tempered hardboard materials for sliding doors and backs of certain cabinets at locations indicated on the Drawings. Doors and backs of certain cabinets shall be perforated or solid tempered hardboard of thickness indicated.

E. Provide birch shelf cabinet in Helps' locker rooms. Top shall be covered with plastic laminate as specified herein, finished with stainless steel edging. See Drawing Details.

F. Provide the steel plates for tapered wood legs at movable storage cabinets. See Drawing Details.

G. All book cabinets, book and magazine racks and all other cabinets shall be provided under this Section of the Work in accordance with Detail Drawings.

H. Exposed edge treatment not otherwise specified: Solid wood matching face for species and cut.

I. Where structural columns occur between cabinets in line, wood paneling or cabinet shall be carried across the face of column same height as adjoining cabinet groups, where so indicated on the Drawings.

2.7 ARCHITECTURAL CABINETS - LAMINATE CLAD

A. Comply with AWI requirements for Section 10 4.2.8 Laminate Clad Cabinets, Premium Grade.

B. Laminate Cladding: High pressure decorative laminate complying with the requirements of AWI Section 4 4.2c and minimum test procedures and requirements of NEMA LD3:

1. Colors, Finishes, Patterns: as selected by the Project Architect.

2. Surfaces, Grades and Thicknesses:

a. Horizontal surfaces other than tops: HGS, nominal thickness 0.048".
b. Tops: HGS, nominal thickness 0.048".
c. Post-formed Surfaces: Horizontal HGP, nominal thickness, 0.039".
d. Post-formed Surfaces: Vertical VGP, nominal thickness, 0.028”
e. Vertical Surfaces: VGS, nominal thickness 0.028".
f. Edges: nominal thickness 0.048".

C. Surface Material of Panels

1. Exposed surfaces (other than edges): Grade II.

2. Semi-Exposed surfaces (other than edges): Grade III.

3. Edges: Grade II.

D. Types of Panels

See Article. 2.3.

E. Wood Laminate Grains

1. Long direction of panel, unless indicated otherwise on the Drawings.

F. Grades of Semi-exposed Components

1. Comply with AWI Section 10 4.2.8.3, Premium Grade, unless indicated otherwise on the Drawings.

G. Materials and Minimum Thickness for Cabinet Components

1. Body members: Panel: 3/4"
2. Rails: Panel or Lumber: 3/4"
3. Shelves: Veneer Core Plywood Panel:

3/4" for spans to 39"
1" for spans 39" to 48"

4. Backs: Panel: 1/2"
5. Drawer Sides: Particleboard core plywood Panel: 1/2"
6. Drawer Bottoms: Veneer Core Plywood:
   For bottoms 12" wide or less: 1/4"
   For bottoms 12" to 30" wide: 3/8"
   For bottoms over 30" wide: 5/8"
7. Drawer Fronts: Panel: 3/4"

H. Core materials and Thickness for Hinged Cabinet Doors

1. Particleboard core plywood: Thickness dependent on size of door
2. For doors 30" width, 60" height: 3/4"
3. For doors 36" width, 72" height: 1"

I. Core Materials and Thickness for Sliding Cabinet Doors

1. Particleboard core plywood: Thickness dependent on size of door:

Minimum	Thickness of Door	Maximum Width	Size Height
Top Suspension	3/4"	30"	72"
Bottom Track	3/4"	24"	32"
Top Suspension	1" to 1¼"	36"	84"
Bottom Track	1" to 1¼"	30"	36"

J. Edge Treatment of Exposed and Semi-exposed Components

1. Body Members and Shelves: Match face laminate
2. Doors: Match face laminate.
3. All edges: HDPL, banded; pressure-glued.

K. Construction: Comply with the following AWI requirements:

1. Drawer Construction: AWI Section 10 4.4.26.2.
2. Joinery and Case Body Member Fastening: Comply with AWI Section 10 4.4 Standards for Premium Grade.

2.8 CABINET TOPS

A. Comply with the requirements of AWI Section 10 4.4.9, for Premium Grade.

B. Solid Laminated Wood Tops

The tops of cases and counters, when built up, shall be grooved and splined and glued or other approved method of joining, cleated on underside where so shown, secured in place with concealed screws and washers, hand scraped and left perfectly true and smooth.

Length in one piece: 10'

Thickness of Top: $1^{1}/_{8}$" minimum

C. High Pressure Decorative Laminate Tops

Width: if exceeds 60", shop assembled.

Length in one Piece: 12'

Thickness of Top: 3/4" minimum.

Balancing Sheet Requirements: Standard 0.02" backup sheet wherever unsupported area exceeds 4 sq. ft. and core is 3/4" thick; 6 sq. ft. and core is 1" thick; 8 sq. ft. and core is $1^{1}/_{8}$" thick or thicker.

2.9 FIXED PANELS

A. Wood paneling areas adjacent to cabinetwork and paneling at walls in other areas:

1. Comply with the requirements of AWI Section 6 Premium Grade.

2. Wood Species: Plain Sawn Red Oak, AWI Grade A1.

2.10 FIRE-RETARDANT TREATMENT

A. Where lumber is indicated or required to be fire-retardant treated, provide "UCFA" lumber, complying with AWPA Standards for pressure impregnation with fire-retardant chemicals to achieve a flame spread rating of 25 or less, when tested in accordance with UL Test 723, ASTM E84 or NFPA Test 255.

1. Where treated items are indicated to receive a transparent or paint finish, use a fire-retardant treatment which will not bleed through or adversely affect bond of finish.

2. Provide UL label or identifying mark on each piece of fire-retardant lumber.

3. Redry treated items to maximum moisture content of 19 percent after treatment.

B. Fire-retardant Treated Plywood

Comply with APA requirements.

2.11 CASEWORK TYPES

A. Bookcases and Miscellaneous Cases and Cabinets

Bookcases, cabinets, special cabinets, and other casework and cabinets shall be provided in all rooms where so indicated on the Drawings or specified herein.

Provide all doors, cupboards, drawers, counters and shelves, hardware and other accessories and components in connection therewith.

B. Restroom Lavatory Countertops: See 066616 'Solid Surfacing Fabrications'

2.12 HARDWARE - GENERAL

A. Manufacturers

1. Cylinders for Drawers, and Book cabinets
   a. Sargent
   b. Corbin Russwin
2. Cabinet Hardware
   a. Ives
   b. Stanley
3. Door Pulls
   a. Ives
   b. Stanley
4. Drawer Pulls
   a. Ives
   b. Stanley
5. Drawer Slides
   a. Grant
   b. Knape & Vogt
6. Hinges
   a. Ives
   b. Stanley
   c. Lawrence
   d. McKinney
7. Shelf Standards and Supports
   a. Knape & Vogt
   b. Parker
8. Elbow Catch
   a. Ives
   b. Knape & Vogt
9. Sheaves for Sliding Cabinet Doors and Sliding Cork Display Boards
   a. Knape & Vogt
   b. Grant
10. Bottom Track for Sliding Cabinet Doors and Sliding Cord Display Boards
    a. Knape & Vogt

b. Grant
c. Stanley

11. Top Track for Sliding Cabinet Door
    a. Knape & Vogt
    b. Grant
    c. Stanley

12. Finger Pull for Sliding Hardboard Door
    a. Knape & Vogt
    b. Ives

13. Flush Pull for Sliding Cabinet Door
    a. Ives
    b. Rockwood

14. Coat, Hat and Umbrella Hooks
    a. Ives
    b. Stanley
    c. Rockwood

B. Screws

1. Secure hardware with suitable screws and bolts of same material and finish as hardware items unless otherwise specified. Provide Phillips head screws unless otherwise indicated.

2. Manufacturer of each hardware item shall provide the fastenings required for the installation of that item.

C. Hardware Finish

Hardware finishes including the following shall comply with requirements of ANSI/BHMA standards:

BHMA Code	Description	Base material	U.S.Standards equivalent
605	Bright Brass	Brass	US3
625	Bright Chromium	Brass or Bronze	US26
626	Satin Chromium	Brass/Bronze base	US26D
629	Bright Stainless Steel	Stainless steel	US32
630	Satin Stainless Steel	Stainless steel	US32D

2.13 HARDWARE REQUIREMENTS

A. Pin Tumbler Cylinder Lock for Drawers in Tables, Book Cabinets, Bookcases, Supply Cabinets, and other locations indicated:

Bronze.

B. Pin Tumbler Cylinder Lock for Doors in Book Cabinets, Bookcases, Supply Cabinets, and other locations indicated.

Cast bronze lock, size 2" x $1^{5}/_{8}$", with 3/16" x 7/8" bolt of not less than 1" throw, Sargent 1655.

Lock for Sliding Doors shall be cylinder push lock.

C. Cylinders

Cylinders of locks shall be of proper length to fit doors or drawers for which they are intended. Cylinders shall be solid brass with common standard diameter rotating plug. The keyway shall be paracentric type of single section with seven pins or multiple (four or more) sections with six pins capable of being masterkeyed and grand masterkeyed as specified without duplications or interchanges.

D. Magnetic Catches

For doors over 3'-0" in height: Aluminum Case. Dual triple pole with self-aligning magnets. Conform to ANSI 156.9 B43161. Ives Heavy Duty Magnetic Catch No. 327.

For doors 3'-0" and under in height: Aluminum Case. Dual double pole with self-aligning magnets. Conform to ANSI 156.9 B43161. Ives Heavy Duty Magnetic Catch No. 326.

E. Elbow Catch on Inactive leaf of Doors Under 3'-0" in Height

Cast brass elbow catch with spring on plate not less than 2½" x 1", strike plate not less than 1½" x 1/2", six screws. Conform to ANSI 156.9.

F. Hinges for laminate clad doors with particleboard cores

Provide Blum Modul Series hinges as manufactured by Julius Blum Inc. or equivalent by Sugatsune America Inc. Provide quantity of hinges for door size and weight as recommended by the hinge manufacturer, as a minimum. Provide at least 3 hinges for doors less than 5'-0" and at least 4 hinges for doors between 5'-0" and 6'-0".

G. Door to Bookcases and Supply Closets

Solid standard pattern cast-bronze pull with clear finger space 3½" x 7/8". weight not less than 3½ ounces, secured with 4 screws.

H. Drawer Pulls

Approved cast-bronze, secured by two concealed screws. Clear finger space not less than 11/16" x $2^{5}/_{8}$", and $4^{1}/_{8}$" over all. Weight not less than 2 ounces. Unless otherwise specified, provide two pulls for drawers 20" wide or over and one pull for drawer less than 20" wide.

I. Slides: Powder coated metal slides, 100 lb. rating, bottom mount with self-closing action. All drawers to open to three-fourths of the drawer length.

J. Cabinet Shelf Rests

Rests shall be of gray-plate metal supported by gray plate metal standards. Four (4) rests for each shelf. Provide rests for adjustable wood and metal shelves in cases and cabinets indicated on Drawings.

K. For Glass SS Shelves and Free Standing Adjustable Shelving to conform to ANSI/BHMA A156.9

Knape & Vogt 186-187 Heavy-Duty Brackets, Type 304 stainless steel.

Knape & Vogt 87 Heavy-Duty Standards, Type 304 stainless steel installed in accordance with manufacturer's installation instructions.

Adjustable shelving on pegboard shall be as part of work of Section 06200.

L. Screw Hooks for Umbrellas

Ives No. 581 MB Satin Chromium for umbrella hooks in Teachers' closets or wardrobes.

M. Hardware for Doors in Tables, Cases, Cabinets

1. Hardware for doors to display cases and display cabinets in corridors indicated on Drawings are provided with cases or cabinets. See Section 10415.

2. Butts for cabinet doors: Wrought Bronze, 3" x 3" fast pin for 1¼" doors, 3" x 2½" fast pin for $1^{1}/_{8}$" doors, 2½" x 2½" butts for small doors under counter shelves in cupboards, and 2" x 2" butts for 13/16" doors.

3. Hinges for laminate clad doors with particle board cores shall be Blum Modul Series by Julius Blum Inc. or equivalent product by Sugatsune America Inc. Provide number of hinges for door size as recommended by hinge manufacturer, as a minimum. Provide at least 3 hinges for doors less than 5'-0" and at least 4 hinges for doors between 5'-0" and 6'-0".

N. Doors for Cabinets Over 3'-0" in Height

Fast Pin Wrought Bronze Butts shall be 3" x 2½" and 3" x 3", 0.092 gage. Each hinge shall have 6 screws. Provide 4 butts for doors 5'-0" to 6'-0" in height, 1¼" thick or less.

Pin tumbler cylinder lock for bookcases, book cabs, and supply cabinets: Cast bronze lock, size 2" x $1^{5}/_{8}$", with 3/16" x 7/8" bolt of not less than 1" throw, Sargent 1655.

Pulls shall be solid standard pattern cast-bronze pull with clear finger space 3½" x 7/8", weight not less than 3½ ounces, secured with 4 screws.

Surface bolts shall be Ives No. 054, 4" long at top and bottom of inactive leaf of double doors. Approved magnetic catch at top or bottom of doors.

O. Small Cupboard Doors, Doors under Counter Shelves, Counters including Storage Cabinets at Science Room and Prep Room Windows

Fast Pin Wrought Bronze Butts, 3" x 2½" and 3" x 3", 0.092 gage. Each hinge shall have 6 screws. Lock: Cast bronze locker lock, size 2" x $11^{5}/_{8}$", with 3/16" x 7/8" bolt of

not less than 1" throw, Sargent 1655. Lock for Sliding Doors shall be cylinder push lock.

Ives Elbow Catch No. 2 MB-Satin Chromium finish at top or bottom of inactive leaf of double doors, approved knob pulls, approved magnetic catch at top or bottom of active doors.

P. Sliding Cabinet Doors in Wood Frames

Two (2) 400A Knape & Vogt sheaves, top track, Knape & Vogt 467 bottom track for each pair doors, Ives No. 22 flush pulls.

Q. Hinged Doors for Wall Cabinets over Sinks

Fast Pin Wrought Bronze Butts, 3" x 2½" and 3" x 3", 0.092 gage. Each hinge shall have 6 screws. Magnetic catch, no knobs or locks required.

2.14 INSTALLATION MATERIALS

A. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage.

2.15 FACTORY FINISHING

A. Finish for Wood Cabinetwork: Comply with AWI Section 5- Factory Finishing System #11 Catalyzed Polyurethanes, Satin-medium rubbed sheen, as follows for Premium grade:

Oak: Filler, washcoat, stain, sealer, sand (220 grit stearated paper), topcoat.

Birch and Maple (and other closed grain woods): washcoat, stain, sealer, sand (220 grit stearated paper) topcoat.

2.16 KEYING FOR CABINETWORK

A. All casework/millwork – doors and drawers shall have locks and keys.

B. All casework/millwork in a room shall be individually keyed, mastered by room and grand mastered.

C. Provide three (3) keys for each lock and three (3) master keys.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine all areas to receive Work of this Section and correct conditions as required to accommodate the Work.

B. Do not deliver and install Work of this Section until wet work such as plastering, painting and other finishes is completed; the HVAC system shall be operating and maintaining proper temperature and humidity conditions.

C. Condition cabinetwork and paneling to the average ambient humidity conditions prior to installation.

D. Verify the location and condition of concrete inserts, and other built-in anchoring devices.

3.2 INSTALLATION

A. Install cabinetwork and paneling plumb, true, level and without distortion. Shim as needed with concealed wood or hard plastic shims.

Tolerances: 1/8" in 8'-0" for plumb and level (including tops); allow no variation in flushness of adjoining surfaces.

B. Scribe and cut cabinets, paneling, and tops to fit adjoining Work. Refinish cut surfaces to match adjacent surfaces; repair damaged finishes.

C. Provide filler strips; trim strips to irregularities of adjacent surfaces.

D. Secure and anchor fixed cabinetwork to substrates with concealed devices and fasteners of sufficient sizes and strengths to support fully-loaded cabinets.

E. Anchor tops to cabinets and supports with concealed fasteners.

F. Full sub-tops for quartz agglomerate sink counters shall be flat, level, and completely supported.

G. Secure paneling to substrates or supports with concealed fasteners, where possible; where nails are required, use countersunk finishing nails.

H. Adhesives used in field assembly shall comply with restrictions for V.O.C.s.

3.3 HARDWARE INSTALLATION

A. Secure hardware with screws, bolts and fasteners of the proper sizes, with finish to match hardware.

B. Secure hardware to metal with suitable tap screws.

C. Shop install hardware.

3.4 ADJUSTMENT, CLEANING, FINISHING, AND PROTECTION

A. Adjust cabinetwork units as required for proper and uniform appearance.

B. Clean and lubricate hardware; adjust hardware for proper operation.

C. Clean woodwork and glasswork on both exterior and interior surfaces.

D. Touch-up shop-applied finishes where damaged or soiled, to obtain a finished appearance to match that of adjacent surfaces. If not possible to obtain a suitable finish, provide a new surface or component.

3.5 CLEANING AND ADJUSTING

A. Clean hardware items thoroughly and adjust for proper operation.

3.6 KEY OPERATION AND INSPECTION

A. Upon completion of the building and after locks have been secured in proper positions, keys belonging thereto shall be fitted and made to work freely in respective locks in the presence of the Owner's Representative.

END OF SECTION 064100

SECTION 06 61 16

SOLID SURFACING FABRICATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Provide solid surfacing fabrications including but not limited to following:

1. Window sills.
2. Lavatory or laboratory tops with seamed bowls.
3. Millwork counter tops with sinks and cove backsplashes.

B. Related Sections: Following description of work is included for reference only and shall not be presumed complete:

1. Provision of finish carpentry and architectural woodwork: Section 064023, Architectural Woodwork.
2. Provision of elastomeric joint sealants: Section 079200, Joint Sealants.
3. Provision of tile work: Section 093013, Ceramic Tiling.
4. Provision of plumbing and plumbing fixtures: Division 22, Plumbing.

1.2 REFERENCES

A. Abbreviations and Acronyms:

1. MDF: Medium Density Fiberboard.
2. SCAQMD: South Coast Air Quality Management District; www.aqmd.gov.
3. VOC: Volatile Organic Compound.

B. Definitions:

1. Solid Surface: Non-porous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment.

C. Reference Standards:

1. ANSI/NPA A208.2-09
   - Medium Density Fiberboard (MDF) For Interior Applications
2. ASTM C920-14a
   - Standard Specification for Elastomeric Joint Sealants
3. ASTM D638-10

- Standard Test Method for Tensile Properties of Plastics

4. ASTM D785-08
   - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials

5. ASTM D790-10
   - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials

6. ASTM D5420-10
   - Standard Test Method for Impact Resistance of Flat, Rigid Plastic Specimen by Means of a Striker Impacted by a Falling Weight (Gardner Impact)

7. ASTM E84-14
   - Standard Test Method for Surface Burning Characteristics of Building Materials

8. ASTM E228-11
   - Standard Test Method for Linear Thermal Expansion of Solid Materials with a Push-Rod Dilatometer

9. ASTM G21-13
   - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi

10. ASTM G22-76(96)
    - Standard Practice for Determining Resistance of Plastics to Bacteria

11. ASTM G155-13
    - Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Non-Metallic Materials

12. NFPA 255-06
    - Standard Method of Test of Surface Burning Characteristics of Building Materials

13. SCAQMD Rule 1168
    - Adhesive and Sealant Applications (amended January 2005)

14. UL 723
    - Standard for Test for Surface Burning Characteristics of Building Materials

15. UL Environment/ GREENGUARD UL 2818 - Standard for Chemical Emissions for Building Materials, - Finishes and Furnishings, Section 7.1

16. UL Environment/ GREENGUARD UL 2818 - Gold Standard for Chemical Emissions for Building Materials, - Finishes and Furnishings, Section 7.1 and 7.2

17. UL 2824 - GREENGUARD Certification Program, Method for Measuring Microbial Resistance from Various Sources Using Static Environmental Chambers

1.3 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meetings: Arrange preinstallation meeting 1 week prior to commencing work with all parties associated with trade as designated in Contract Documents or as requested by Architect. Presided over by Contractor, include Architect who may attend, Subcontractor performing work of this trade, Owner’s representative, testing company's representative and consultants of applicable discipline. Review Contract Documents for work included under this trade and determine complete understanding of requirements and responsibilities relative to work included, storage and handling of materials, materials to be used, installation of materials, sequence and quality control, Project staffing, restrictions on areas of work and other matters affecting construction, to permit compliance with intent of work of this Section.

1.4 SUBMITTALS

A. Product Data: Indicate Product description including solid surface sheets, sinks, bowls and illustrating full range of standard colors, fabrication information and compliance with specified performance requirements. Submit Product data with resistance to list of chemicals.

B. Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 014000. Indicate plans, sections, dimensions, component sizes, edge details, thermosetting requirements, fabrication details, attachment provisions, sizes of furring, blocking, including concealed blocking and coordination requirements with adjacent work. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacles and other items installed in solid surface.

C. Coordination Drawings: Submit coordination drawings indicating plumbing and miscellaneous steel work indicating locations of wall rated or non-rated, blocking requirements, locations and recessed wall items and similar items.

D. Samples: Submit samples in accordance with Section 014000. Submit minimum 6" x 6" samples. Cut sample and seam together for representation of inconspicuous seam. Indicate full range of color and pattern variation. Approved samples will be retained as standards for work.

E. Test and Evaluation Reports: Submit flammability test reports

1.5 CLOSEOUT SUBMITTALS

A. Operational and Maintenance Data:

1. Submit manufacturer's care and maintenance data, including repair and cleaning instructions. Include in Project closeout documents.

2. Provide a commercial care and maintenance kit and video. Review maintenance procedures and warranty details with Owner upon completion.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Installers: Provide work of this Section executed by competent installers with minimum five (5) years experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

1.7 DELIVERY, STORAGE AND HANDLING

A. Delivery and Acceptance Requirements: Deliver no components to Project site until areas are ready for installation.

B. Storage and Handling Requirements:

1. Store components indoors prior to installation.

2. Handle materials to prevent damage to finished surfaces.

1.8 WARRANTY

A. Manufacturer Warranty: Provide manufacturer's standard warranty for material only for period of ten (10) years against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Architect and at no expense to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer List: Products of following manufacturers are acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

1. Corian by DuPont; www.corian.com

2. Samsung Chemical USA; www.staron.com

3. Wilsonart Contract; www.wilsonartcontract.com

B. Substitution Limitations: This Specification is based on Corian® Products. Comparable Products from manufacturers listed herein will be accepted provided they meet requirements of this Specification.

2.2 MATERIALS

A. Description:

B. Performance/Design Criteria:

Property	Requirement (min or max)	Test Procedure
1. Solid Surface Based Products:		
a. Tensile Strength	6000 psi min	ASTM D638
b. Tensile Modulus	1.5 x 10^6 psi min	ASTM D638
c. Tensile Elongation	0.4% min.	ASTM D638
d. Flexural Strength	10000 psi min	ASTM D790
e. Flexural Modulus	1.2 x 10^6 psi min	ASTM D790

f.	Hardness	>85-Rockwell "M" scale min.		ASTM D785
g.	Thermal Expansion	2.2 x 10^{-5} in./in./°F		ASTM E228
h.	Fungi and Bacteria	Does not support microbial growth		ASTM G21 & G22
i.	Microbial Resistance	Highly resistant to mold growth		UL 2824
j.	Ball Impact	No fracture - 1/2 lb. Ball: 6 mm slab - 36" drop 12 mm slab - 144" drop		NEMA LD 3, Method 3.8
k.	Weatherability	ΔE*94<5 in 1,000 hrs		ASTM G155
l.	Flammability			ASTM E84, NFPA 255 & UL 723
		All Colors		
		6 mm	**12 mm**	
m.	Flame Spread	<25	<25	
n.	Smoke Developed	<25	<25	
o.	Class	A	A	NFPA 101, Life Safety Code

C. Solid Surface Material:

D. Non-porous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment; not coated, laminated or of composite construction; meeting following criteria:

E. Flammability: Class 1 and A when tested to UL 723.

F. Adhesive for Bonding to Other Products: One component silicone to ASTM C920.

G. Sealant: A standard mildew-resistant, FDA/UL recognized silicone color matched sealant or clear silicone sealants.

H. Sink/Bowl Mounting Hardware: Manufacturer's approved bowl clips, brass inserts and fasteners for attachment of undermount sinks/bowls.

I. Heat Reflecting Tape: Manufacturer’s standard aluminum foil tape, with required thickness, for use with cutouts near heat sources.

J. Insulating Nomex® Fabric: Manufacturer’s standard for use with conductive tape in insulating solid surface material from adjacent heat source.

2.3 COMPONENTS

A. Window Sills: 1/2" thick solid surfacing material, adhesively joined with inconspicuous seams, edge details as indicated on Drawings. Color selected later by Architect from manufacturer’s full color range.

B. Counter Perimeter Frame: Ensure 3/4" thick, moisture resistant cores for counter tops in wet areas having sinks or lavatories are 3/4" thick exterior grade plywood with waterproof adhesive, Fir or Poplar plywood, veneer core only

C. Lavatory Tops: 3/4" thick countertop of [solid polymer] [100% acrylic] [polyester-acrylic blend] solid surfacing material, cast to desired profiles and sizes having edge details as indicated on Drawings conforming to CSA B45.5/IAPMO Z124. Provide countertops complete with backsplashes of size shown on Drawings. Ensure countertop

and backsplash is color; single color [non-coved] [coved] as selected by Architect. Ensure [5] bowls are [ ] model.

D. Fabrication:

1. Fabricate components in shop to greatest extent practical to sizes and shapes indicated, in accordance with approved Shop Drawings and solid polymer manufacturer requirements. Form joints between components using manufacturer's standard joint adhesive without conspicuous joints. Provide factory cutouts for plumbing fittings and bath accessories as indicated on Drawings.

2. Where indicated, thermoform corners and edges or other objects to shapes and sizes indicated on Drawings, prior to seaming and joining. Cut components larger than finished dimensions and sand edges to remove nicks and scratches. Heat entire component uniformly prior to forming.

3. Ensure no blistering, whitening and cracking of components during forming.

4. Fabricate backsplashes from solid surfacing material with optional radius cove where counter and backsplashes meet as indicated on Drawings. Backsplashes for most colors may be fabricated by traditional means discussed in K-25294 *Backsplashe*s. Colors with metallic/mica particle or veined colors creating directional aesthetics (K-26833 *Directional Aesthetics*) may require the techniques in Technical Bulletin K-28235 *Thermoformed Backsplash*.

5. Fabricate joints between components using manufacturer's standard joint adhesive. Ensure joints are inconspicuous in appearance and without voids. Attach 50 mm (2") wide reinforcing strip of solid polymer material under each joint. Reinforcing strip of solid polymer material is not required when using DuPont™ Joint Adhesive 2.0.

6. Provide holes and cutouts for plumbing and bath accessories as indicated on Drawings.

7. Rout and finish component edges to a smooth, uniform finish. Rout cutouts, then sand edges smooth. Repair or reject defective or inaccurate work.

8. Finish: Ensure surfaces have uniform finish:

   a. Matte, with a 60° gloss rating of 5 - 20.

   b. Semi-gloss, with a 60° gloss rating of 25 - 50.

   c. Polished, with a 60° gloss rating of 55 - 80.

9. Fabrication Tolerances:

   a. Variation in Component Size: +/-1/8".

   b. Location of Openings: +/-1/8" from indicated location.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work. Proceed with installation only after unsatisfactory conditions have been corrected.

2. Verify actual site dimensions and location of adjacent materials prior to commencing work.

3. Examine cabinets upon which counter tops are to be installed. Verify cabinets are level to within 1/8" in 10' - 0".

4. Notify Architect in writing of any conditions which would be detrimental to installation.

B. Evaluation and Assessment: Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

A. Install components plumb, level, rigid, scribed to adjacent finishes in accordance with reviewed Shop Drawings and Product installation details.

B. Fabricate field joints using manufacturer's recommended adhesive, with joints being inconspicuous in finished work. Exposed joints/seams are not permitted. Keep components and hands clean when making joints. Reinforce field joints as specified herein. Cut and finish component edges with clean, sharp returns.

C. Route radii and contours to template. Anchor securely to base component or other supports. Align adjacent components and form seams to comply with manufacturer’s written recommendations using adhesive in color to match work. Carefully dress joints smooth, remove surface scratches and clean entire surface.

D. Install countertops with no more than 1/8" sag, bow or other variation from a straight line.

E. Adhere topmount sinks/bowls to countertops using manufacturer recommended adhesives and white silicone sealant.

F. Seal between wall and components with joint sealant as specified herein and in Section 07 92 00, as applicable.

G. Provide backsplashes and endsplashes as indicated on Drawings. Adhere to countertops using a standard color-coordinated silicone sealant. Adhere applied sidesplashes to countertops using a standard color-matched silicone sealant. Provide coved backsplashes and sidesplashes at walls and adjacent millwork. Fabricate radius cove at intersection of counters with backsplashes to dimensions shown on reviewed Shop Drawings. Adhere to countertops using manufacturer’s standard color-coordinated joint adhesive.

H. Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Ensure components are clean on date of Substantial Completion of the Work.

I. Coordinate connections of plumbing fixtures with [Division 22] [Mechanical]. Make plumbing connections to sinks in accordance with [Division 22] [Mechanical].

3.3 REPAIR

A. Repair minor imperfections and cracked seams and replace areas of severely damaged surfaces in accordance with manufacturer's "Technical Bulletins".

3.4 SITE QUALITY CONTROL

A. Non-Conforming Work: Replace damaged work which cannot be satisfactorily repaired, restored or cleaned, to satisfaction of Architect at no cost to Owner.

3.5 CLEANING

A. Remove excess adhesive and sealant from visible surfaces.

B. Clean surfaces in accordance with manufacturer's "Care and Maintenance Instructions".

3.6 PROTECTION

A. Provide protective coverings to prevent physical damage or staining following installation for duration of Project.

B. Protect surfaces from damage until date of Substantial Completion of the Work.

END OF SECTION 066116

SECTION 071113

BITUMINOUS DAMPPROOFING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. The Work of this Section includes all labor, materials, equipment and services necessary to complete the bituminous dampproofing as shown on the drawings and/or specified herein, including but not limited to, the following:

1. Dampproofing applied to exterior side of foundation walls.

2. Protection board.

1.3 RELATED SECTIONS

A. Concrete work - Section 033000.

B. Earthwork - Section 312000.

1.4 SUBMITTALS

A. Product data for each type of product specified, including data substantiating that materials comply with requirements for each dampproofing material specified. Include recommended method of application, recommended primer, number of coats, coverage or thickness, and recommended protection course.

B. Certification by dampproofing manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the job site, ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name, and manufacturer's name. Delivered materials shall be identical to approved samples.

B. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged or otherwise not suitable for installation from the job site and replace with acceptable materials.

1.6 JOB CONDITIONS

A. Environmental Requirements: Dampproofing materials shall not be installed on wet surfaces, or when the temperature is 32 deg. F. and falling.

PART 2 PRODUCTS

2.1 MATERIALS

A. Provide trowel grade mastic manufactured from a blend of selected asphalts, stabilizers, fibers and solvents in compliance with ASTM D 4586, Type 1, (non-asbestos) equal to Karnak 86 AF manufactured by the Karnak Corp. or equal made by Sonneborn, Anti-Hydro or approved equal.

B. Priming Material: Applied to the concrete surfaces prior to the installation of the dampproofing, as required and/or recommended by the manufacturer.

C. Protection Boards: For the protection of the dampproofing after installation and before backfilling: provide 1/8" thick, multi-ply, semi-rigid board, consisting of a mineral stabilized asphalt core sandwiched between layers of asphalt saturated felt, and faced on one side with polyethylene film.

1. W.R. Meadows Inc.

2. Sonneborn.

D. Glass Fabric: Woven glass fabric, treated with asphalt, complying with ASTM D 1668, Type I.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where bituminous dampproofing is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PREPARATION

A. Surfaces to Receive Dampproofing: Clean, dry, smooth and free from surface treatments which may inhibit the bond of the dampproofing. Treat imperfections in these surfaces such as large cracks, honeycombs and holes prior to the dampproofing application, by repair work consisting of filling with cement, or as directed.

B. Install separate flashings and corner protection stripping, as recommended by prime materials manufacturer, where indicated to precede application of dampproofing. Comply with details shown and with manufacturer's recommendations. Pay particular attention to requirements at building expansion joints, if any.

C. The start of the dampproofing installation shall imply acceptance of those surfaces, and conditions encountered in the field, to install the work, as recommended and as specified.

3.3 INSTALLATION

A. Perform the work using skilled workmen in accordance with the acceptable manufacturer's instructions and directions.

B. Prime surfaces to receive dampproofing using Karnak No. 108 primer, as recommended by the manufacturer, carefully following label instructions as to rate of coverage.

C. Apply two (2) coats of dampproofing continuously, at a rate of 6 gallon/100 sq. ft. per coat.

D. At changes in plane or where otherwise shown as "reinforced", install lapped course of glass fabric in first coat of dampproofing compound before it thickens.

E. Install 2" x 2" cant strip of bituminous grout at base of vertical dampproofing where it meets horizontal surface.

F. Apply vertical dampproofing down walls from finished grade line to top of footing, extend over top of footing, and down a minimum of 6" over outside face of footing. Extend 12" onto intersecting walls and footings, but do not extend onto surfaces exposed to view when the Project is completed.

G. Protect the installed dampproofing by embedding the protection boards into the dampproofing when the dampproofing becomes tacky, or as recommended by the manufacturer.

3.4 PROTECTION

A. Protect surfaces adjacent to the dampproofing operations against staining or other damage during the work of this Section.

B. Staining or soiling which does occur to the adjacent materials shall be removed as the work progresses, including smear, spills or displaced materials. Leave installed work in a neat condition upon completion.

C. Backfilling against completed dampproofing shall not occur for at least 72 hours.

END OF SECTION 071113

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 071326

SHEET MEMBRANE WATERPROOFING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the sheet membrane waterproofing as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Sheet membrane waterproofing for foundation wall surfaces.

2. Sheet membrane waterproofing for under-slab conditions.

3. Sheet membrane waterproofing for blindside of foundation wall surfaces.

1.3 RELATED SECTIONS

A. Cast-in-Place Concrete - Section 033000.

B. Earthwork - Section 312000.

1.4 QUALITY ASSURANCE

A. Preinstallation Conference: Approximately 2 weeks prior to scheduled commencement of waterproofing installation, meet at Project site with Waterproofing Installer; preparer of substrate to receive waterproofing; installers of other work in and around waterproofing that must precede, follow, or penetrate waterproofing (including Mechanical and Electrical Installers as applicable); Architect; Owner; Construction Manager; and waterproofing manufacturer's representative to review materials, procedures, schedules, and other requirements and conditions related to installing waterproofing.

B. Qualifications of Subcontractors

1. Subcontractors: All work of this Section shall be performed by a subcontractor who is approved by the manufacturer of the waterproofing material.

2. Qualifications of Subcontractors: Subcontractors shall submit evidence of being bona fide waterproofing subcontractors, for a period of not less than five (5) years, and that they are approved by the manufacturer of the waterproofing material for the installation of the manufacturer’s material in accordance with the requirements of this Section.

a. Subcontractor shall submit a letter from manufacturer of waterproofing material stating that subcontractor is approved by the manufacturer for the application of the waterproofing systems specified and accepted for use on the Project.
b. Letter shall certify that the subcontractor has previously and satisfactorily applied the waterproofing systems specified herein on jobs of similar size and scope, under manufacturer's supervision.
c. Letter shall be on manufacturer's letterhead and shall be signed by an officer of the company, not by a local sales representative.

C. Manufacturer's Representative/Contractor's Certification

1. Representative of the waterproofing material manufacturer shall be required to provide field instructions and supervision for the installation of the waterproofing systems at the start of the work of this Section.

2. The manufacturer's representative shall be required to make sure that the workmen for waterproofing systems on the site of the Project are fully instructed and trained in the handling and application of all the materials and shall see that all the materials are correctly installed.

3. Upon completion of the Installation, submit to the Architect written certification that the representative of the manufacturer of the waterproofing material has supervised the work of this Section and that all materials were correctly installed.

1.5 SUBMITTALS

A. Shop Drawings: Typical installation details, showing details at flashings, at terminations, at joints, at intersection of horizontal and vertical surfaces, and at penetrations in membrane system.

B. Samples - Submit

1. Membrane, 6" x 6" samples of each membrane.

2. 6" x 6" sample of flashing.

3. 6" x 6" sample of drainage board.

C. Manufacturer's Literature: Submit manufacturer's technical, safety data sheets, and installation literature for all materials of this Section. Submit Independent Test data indicating that membrane meets properties specified herein.

D. General Contractor's Certification: Submit per Article 1.4.

1.6 STORAGE OF MATERIALS

A. All materials shall be stored in their original tightly sealed containers or unopened packages; shall be clearly labeled with the manufacturer's name, brand name and number, and batch number of the material with expiration date where appropriate.

B. Materials shall be stored in a neat and safe manner so as not to exceed the allowable live load of the storage area.

C. Material shall be stored out of the weather in a clean, dry area.

D. Liquid materials, such as adhesives, thinners, and primers, shall be stored in areas away from sparks, open flames, and excessive heat.

1.7 JOB CONDITIONS

A. No application of waterproofing shall commence or proceed during inclement weather, or the threat of imminent precipitation.

B. All surfaces to receive the system shall be thoroughly dry and free of dew or frost.

C. Materials shall be stored until time of mixing at temperatures above 60 deg. F. to maintain a consistency suitable for mixing. Do no work below 40 deg. F.

D. Prior to and during application, all dirt and dust shall be removed from surfaces either by vacuuming, sweeping, blowing with compressed air, or similar methods.

E. Surfaces not designated to receive the system shall be properly masked or otherwise protected against accidental spillage or application of the material to those areas.

1.8 PROTECTION

A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.

B. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during the installation, and after the installation until membrane systems are covered with protective boards or with the specified finishing materials.

C. Against Damage: Protect vertically installed work of this section from damage by reinforcing and placement.

1. Take and maintain necessary preventive measures to protect work of this Section from damage until Project is accepted.

2. Rejection of Damaged Work

a. Damaged materials or work will be rejected.
b. Rejected materials or work must be immediately removed and replaced with new materials.

1.9 FIELD QUALITY CONTROL

A. Construction Traffic:

1. Limit construction traffic over completed membrane.

2. General Contractor shall provide 1/2 in. plywood protection layer, where construction traffic is unavoidable.

B. Inform Architect in writing on a daily basis of any of the following events. State specific location of each occurrence.

1. Buckling to the Waterproofing and other deformations as a result of ground water events.

2. Leakage through the finished waterproofing installation.

3. Damage by other trades.

C. Provide Manufacturer's Representative's report (prior to backfill) stating that the waterproofing has been inspected and is acceptable and eligible for manufacturer's warranty.

1.10 WARRANTY

A. The manufacturer of the waterproofing system executed under this Section warrants the waterproofing system to be watertight and free from defects in materials and workmanship for a period of ten (10) years from date of acceptance of this Contract, and that he, agrees to promptly make repairs or replace defective waterproofing materials during the warranty period.

B. Contractor's Two-Year Workmanship Warranty: Provide a written guarantee for all work of this Section, stating that if, within two years after the Date of Substantial Completion of the Work, any of the work is found to be defective or not in accordance with the Contract Documents, the Contractor shall correct it promptly after receipt of a written notice from the Owner to do so. The guarantee shall state that the Contractor shall bear all costs incurred by the Owner, including reasonable attorney's fees, to enforce compliance with the obligations of this Guarantee, and will replace any material or system that requires repeated maintenance or repair to function effectively. The obligation of this Guarantee shall run directly to the Owner and may be enforced by the Owner against the Contractor, shall survive the termination of the Contract and shall not be limited by Conditions other than this Contract.

PART 2 PRODUCTS

2.1 WATERPROOFING MEMBRANE

A. Trade names used herein for membrane waterproofing are those of GCP Applied Technologies. Other acceptable manufacturers will be Carlisle Coatings and Waterproofing (CCW), Henry Company or approved equal.

B. For foundation walls, provide "Bituthene 4000" sheet waterproofing membrane, 60 mils thick and "Liquid Membrane," 60 mils thick, for flashing, as manufactured by GCP Applied Technologies or approved equal.

C. At under-slab conditions, provide adhesive coated HDPE Composite Sheet "Preprufe 300R Plus" system by GCP Applied Technologies or approved equal.

1. HDPE membrane or reinforced TPO membrane shall have a protective layer to protect the membrane from the weather and U.V. for up to 56 days before casting concrete against it.

D. At vertical blind side waterproof conditions, provide adhesive-coated HDPE composite sheet "Preprufe 160R Plus" system by GCP Applied Technologies, or approved equal.

E. Primer/Conditioner: "Bituthene 4000" latex/water-based primer specifically formulated to provide adhesion of Bituthene Waterproofing Membranes.

1. If water-based primer does not provide sufficient adhesion to substrate, substitute Bituthane Primer B-2 solvent-based primer.

F. Bituthene Elastomeric Mastic: Rubberized asphalt base mastic.

G. Tape: Double sided synthetic adhesive tape equal to "Preprufe LT" and "HC."

H. Protection Board: 1/4" thick semi-rigid protection board, "Bituthene Asphaltic Hardboard."

I. Bituthene Liquid Membrane: Two-component 100% solids trowel grade asphalt modified urethane.

J. Drainage Board/Composite: Prefabricated dimpled polystyrene drainage core with a non-woven filter fabric on one side and a polymer film on the reverse side.

1. Vertical Applications

a. "Hydroduct 220" by GCP Applied Technologies.
b. Or approved equal.

2. Horizontal Applications

a. "Hydroduct 660" by GCP Applied Technologies.
b. Or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where membrane waterproofing is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work. Starting of work implies acceptance of substrate.

3.2 PREPARATION OF SURFACES TO RECEIVE WATERPROOFING

A. Conform to the requirements of specified manufacturer.

B. Earth or crushed stone substrates shall be compacted to produce an even, sound substrate. Loose aggregate, sharp protrusions and standing water shall be removed.

3.3 INSTALLATION OF FOUNDATION WALL WATERPROOFING

A. General: Conform to recommendations and published specifications of the manufacturer' including environmental requirements and preparation requirements to receive waterproofing.

B. Foundation Walls

1. General: The membrane, when in place must withstand a minimum static ground water pressure of 150 feet.

2. Priming: Application of primer shall be limited to what can be covered with Bituthene Waterproofing Membrane in a given work day. Primed areas not covered by membrane during the work day will be reprimed. Apply primer by spray, roller or brush at a rate of 250 - 350 sq. ft. per gallon. Roller shall be natural material such as lamb's wool, having a nap of approximately one inch. Primer shall be applied to a clean, dry, frost-free and dust-free surface. Sufficient primer must be used on the day surface to condition it to a dust-free state suitable for the application of Bituthene Waterproofing Membranes.

   a. Bituthene 4000 Surface Conditioner should not be applied below 25 deg. F. on vertical surfaces. Allow primer to dry 30 minutes. Conditioner is considered dry when the substrate returns to its original color.
   b. Re-prime areas that become dusty or dirty prior to membrane installation.

3. Membrane Installation: Apply Bituthene Waterproofing Membrane vertically in sections of 8' in length or less. On higher walls apply two or more sections with the upper overlapping the lower by a least 2-1/2". Press all membrane in place with heavy hand pressure or rollers during application.

4. Sealing Edges: Bituthene Waterproofing Membrane shall be applied over the edge of the slab or over the top of the foundation or parapet wall. If the membranes are terminated on the vertical surface, a reglet or counter flashing may be used or the membrane may be terminated directly on the vertical surface by pressing very firmly to the wall. Press edges with a metal or hardwood tool such as a hammer or knife handle. Apply a troweled bead of Bituthene Mastic to all vertical and horizontal terminations. Bituthene Liquid Membrane can be used as an alternative method at the General Contractor's option.

5. Sealing Seams: All edges and end seams must be overlapped at least 2-1/2". Apply succeeding sheets with a minimum 2-1/2" overlap and stagger end laps. Roll or press the entire membrane firmly and completely as soon as possible. Patch misaligned or inadequately lapped seams with Bituthene Membrane. Slit any fish mouths, overlap the flaps, and repair with a patch of Bituthene and press or roll in place. The edges of the patch shall be sealed with a troweling of mastic. Laps within 12" of all corners shall be sealed with a troweling of mastic.

6. Corner Forming: Outside corners must be free of sharp edges. Inside corners shall receive a fillet formed with Liquid Membrane, latex modified cement mortar equal to Daraweld C made by Grace mixed with cement mortar or epoxy mortar. Do not

use fiber or wood cants. One of two methods may be used for treating corners at the General Contractor's option:

a. Apply Bituthene Liquid Membrane 6" in each direction from the corner and form a fillet with a minimum 3/4" face.
b. Install an 11" minimum strip of Bituthene Membrane centered on the corner. Install Bituthene Membrane over the treated inside and outside corners.

7. Over waterproofing, apply drainage composite board by adhering board to cured membrane using tape or adhesive per manufacturer’s recommendations; lap all edges 4” and conform to the following:

a. Install drainage layer directly over the membrane. Start at the low points on the wall and shingle all laps to the flow of water.
b. Splice drainage panels together by butting longitudinal edges of adjacent sheets and peeling back fabric to expose the cores of the panels. Install precut "lock strips" consisting of 4 dimple x 5 dimple sections of the drainage panel centered on the joint between the panels and spaced every 10 dimples along the length of the joint. Snap dimples of lock strip to dimples of each panel and reattach fabric over the panel joint.
c. Cut the core of the drainage panels around penetrations and cut an 'X' in the filter fabric and tape the fabric to the sides of the penetration.
d. Cover all terminal edges of the drainage composite with an integral fabric flap by tucking the fabric around the edge of the core and adhering the fabric to the bottom of the core.

3.4 INSTALLATION OF BELOW-GRADE, UNDERSLAB WATERPROOFING

A. General: Install adhesive coated HDPE composite sheet according to waterproofing manufacturer's written instructions.

B. Preparation

1. Surfaces to receive blind side membranes must be smooth and sound, with no gaps or voids in excess of 1/2 in. Earth and stone substrates must be compacted to produce an even, solid substrate. If required by membrane manufacturer, provide an additional layer of underlayment protection board over sharp or angular stone substrates. Surfaces to receive waterproofing shall be thoroughly dry and free of moisture.

2. General: Comply with manufacturer's instructions for preparing surface including joint or crack treatment.

3. Apply primer to substrate surfaces at rate recommended by manufacturer of primary waterproofing materials. Prime only area that will be covered by waterproofing membrane in same working day. Reprime areas not covered by waterproofing membrane within 24 hrs.

C. Underslab Applications

1. Apply Hydroduct 660 drainage composite board as recommended by manufacturer over the compacted sub-grade.

2. Apply the membrane over the drainage composite board with the HDPE side facing the drainage composite board and the treated white coating surface facing the concrete to be poured. The membrane may be installed at any convenient length. Apply succeeding sheets by overlapping previous sheets 3" along the self-adhesive edge of the membrane. Remove the silicone coated release liner covering the membrane and roll the side lap to assure a tight seal.

3.5 INSTALLATION OF VERTICAL BLIND-SIDE WATERPROOFING

A. General: Install adhesive coated HDPE composite sheet according to waterproofing manufacturer's written instructions.

1. Install drainage layer directly over the membrane. Start at the low points on the wall and shingle all laps to the flow of water.

2. Splice drainage panels together by butting longitudinal edges of adjacent sheets and peeling back fabric to expose the cores of the panels. Install precut “lock strips” consisting of 4 dimple x 5 dimple sections of the drainage panel centered on the joint between the panels and spaced every 10 dimples along the length of the joint. Snap dimples of “lock strip” to dimples of each panel and reattach fabric over the panel joint.

3. Cut the core of the drainage panels around penetrations and cut an 'X' in the filter fabric and tape the fabric to the sides of the penetration.

4. Cover all terminal edges of the drainage composite with an integral fabric flap by tucking the fabric around the edge of the core and adhering the fabric to the bottom of the core.

B. Preparation

1. Surfaces to receive blind side membranes must be smooth and sound, with no gaps or voids in excess of 1/2". Earth and stone substrates must be compacted to produce an even, solid substrate. If required by membrane manufacturer, provide an additional layer of underlayment protection board over sharp or angular stone substrates. Surfaces to receive waterproofing shall be thoroughly dry and free of moisture.

2. General: Comply with manufacturer's instructions for preparing surface including joint or crack treatment.

3. Apply primer to substrate surfaces at rate recommended by manufacturer of primary waterproofing materials. Prime only area that will be covered by waterproofing membrane in same working day. Reprime areas not covered by waterproofing membrane within 24 hours.

C. Wall Applications: Refer to manufacturer’s literature for complete installation instructions but not limited to the following:

1. Apply Hydroduct 220 Drainage Composite to a point 6" below grade line. Fasten Hydroduct 220 to the adjacent buildings foundation wall or soil retention system.

2. Peel back bottom flap of filter fabric and place core behind discharge pipe. Wrap loose filter fabric over and around discharge pipe. Tuck excess filter fabric behind pipe. Fold excess filter fabric at top termination down between drainage composite and membrane.

3. Apply membrane with the HDPE film facing the soil retention system or adjacent foundation. Remove the release liner and fasten membrane to Hydroduct drainage composite with large head nails or staples. All nail heads or staples must be covered with overlapping sheets of membrane.

4. Apply succeeding sheets by overlapping the previous sheet 3 inches along the uncoated edge of the membrane.

5. Overlap the ends of the membrane 3 inches. Apply Preprufe Tape centered over the end lap and roll firmly. Remove release liner.

6. Seal all transition, penetrations, tie down bracing and other conditions with initial membrane layer plus manufacturer’s recommended accessory materials, prior to application of the full membrane.

7. Concrete must be poured within 30 days of membrane application. Protect membrane until concrete pour.

8. If membrane ties into a vertical membrane, leave an additional 12" flap of Preprufe membrane to tie into Bituthene membrane.

3.6 SEAM REINFORCEMENT FOR HDPE COMPOSITE SHEETS ONLY

A. Provide a 6 in. strip of modified bituminous sheet membrane (Bituthene 4000) centered behind all laps.

B. At locations where a salvage edge is not present and at end laps, lap sheets 6 in., apply a 1/8 in. thick by 6 in. wide application of liquid membrane between sheets, to provide a 6 in. wide seal.

C. Integration of old onto new pre-applied sheet membrane.

1. Integration of Sheet Membrane onto Sheet Membrane that has been installed in excess of 30 days prior

a. Lap sheets 12 in., apply a 1/8 in. thick by 12 in. wide application of fluid membrane between sheets, to provide a 12 in. wide seal at this location.
b. Install Waterproofing Tape centered at edge of lap and roll firmly into place with an approved roller.
c. Install additional Waterproofing Tape to cover white film that has been installed over 30 days prior.

2. Repair of pre-applied sheet membrane

   a. Scratch on white coating exposing underlying black surface of Sheet Membrane. Install Waterproofing Tape at areas where the white coating of the membrane is damaged, including boot scuff marks and abrasions by rebar.
   b. Damage or Puncture of Sheet Membrane: Install Patch of short Membrane set in Liquid Membrane. Patch must extend 3 in. in every direction around extent of damaged area. Install Waterproofing Tape centered over the edge of the patch. If the damaged area does not have 5 in. of sound material around it, inject Liquid Membrane into puncture until Liquid Membrane backs out, and proceed with patch as space allows.

3.7 CLEAN-UP

A. Upon completion of the waterproofing system, the General Contractor shall remove all equipment, material and debris from the work and storage area, and leave those areas in an undamaged and acceptable condition.

END OF SECTION 071326

SECTION 07 14 00

FLUID-APPLIED WATAERPROOFING

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. Provide fluid-applied waterproofing system, including necessary accessories and auxiliary materials, for roof of entrance canopy as indicated on Drawings and as specified herein, including, but not limited to, the following:

1. Reinforced fluid-applied roofing membrane
2. Protection Sheet
3. Flexible uncured neoprene flashing
4. Drainage panels
5. Rigid Insulation
6. Filter fabric
7. All required primers and accessories
8. Testing of membrane integrity by Low-Voltage Electric Integrity Testing (LVEIT) methodology, such as EFVM by International Leak Detection

1.2 REFERENCES

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. ASTM International (ASTM).

C. Underwriters Laboratories, Inc. (UL).

D. National Roofing Contractors Association (NRCA).

E. Thermal Insulation Manufacturers Association (TIMA).

F. Factory Mutual Global (FM)

G. United States Environmental Protection Agency (EPA)

1.3 SUBMITTALS

A. Miscellaneous Submittals and Product Data

1. Submit manufacturer's complete technical and installation literature for all materials of this Section.

2. When the roofing and flashing system of a proposed manufacturer incorporates materials, details, or installation methods that differ from those indicated in the Specifications or Drawings, submit complete product information for consideration by the Architect, as required by Specifications Division 1, and the General Conditions. Submit information prior to start of any Work that would be affected by the proposed substitutions.

3. Submit membrane manufacturer's requirements for characteristics of concrete substrate, prior to start of Cast-in-Place Concrete work.

4. Submit written approval from membrane manufacturer confirming compatibility of the roofing system with the specified concrete roof deck and fill materials, prior to start of Cast-in-Place Concrete work.

5. Manufacturer's Warranty: Sample copy of the membrane manufacturer's 20-year warranty covering workmanship and materials, conforming to requirements of this Section. Warranty is to specifically indicate removal and replacement of overburden.

B. Shop Drawings

1. Submit installation details for roofing systems to show, at a minimum, details at drains, at reinforcing, at flashing, at terminations, at joints in structure below, at intersection of horizontal and vertical surfaces, at penetrations, and at roof parapets.

a. Submit for typical and non-typical conditions of Project. Manufacturer's standard data sheets are not acceptable for shop drawings.

b. Indicate and identify materials to be incorporated in the work, dimensions, thickness of each materials and system, and relationships to adjacent construction.

c. When there is a proposed deviation from the Contract Documents, submit the revised detail labeled as such for approval.

2. Roof membrane manufacturer shall review and approve roof detail shop drawings submitted for Work of Section 07600, Flashing and Sheet Metal, prior to review by the Architect.

C. Samples: Submit the following, with manufacturer's printed product identification on each item:

1. Insulation Material: 12" x 18".

2. Drainage panel: 12” x 12”.

3. Flashing and Reinforcing Materials: Each type and thickness required for project, minimum 12" long.
4. Fabric Sheets: Each type required for project, 12" x 12".
5. Roofing membrane materials: each type required for the project.
6. Protection sheet: 12” x 12”.

D. Quality Control Submittals

1. Fire Hazard Certification:
   a. Written certification that the roof system, including the specific insulation, has been tested in conjunction with the type of structural roof deck and roof slope applicable to the project and has achieved an Underwriters Laboratories Class A external fire resistance rating.
   b. Certification: Letter from Underwriters Laboratories, or a copy of the Underwriters Laboratories classification listing for the roofing system.
2. Material Certifications:
   a. Letter from the roofing membrane manufacturer certifying that the insulation is approved for use with the roofing system.
   b. Certification of an approved independent testing laboratory certifying that the membrane material meets the specified ASTM and CGSB standards.
   c. Letter from the roofing membrane manufacturer certifying that the submitted materials and installation instructions are in conformance with the latest roofing system specifications of the manufacturer.
   d. Certification by an approved independent testing laboratory certifying that the precast concrete pavers proposed for the project conform to specified requirements for solar reflectance.
3. Membrane Manufacturers Certifications:
   a. Submit a letter certifying that the manufacturer has been actively marketing the submitted system for a minimum of ten years.
   b. Submit the names and addresses of five roofing projects of same size and scope as this project, using this system, that have been in service for at least 10 years.
4. Applicator's Certification:
   a. Letter from the membrane manufacturer certifying that the applicator is licensed or approved to install the specified roof system, and has been in operation applying the system for 5 years or more.
   b. Names, address, and telephone numbers of five buildings where the applicator has installed the same type of fluid-applied hot rubberized asphalt roofing systems, which have the manufacturer's warranty issued. Include the types of roofing systems installed, the manufacturer's name, and the warranty numbers.

c. Letter certifying that the job foreman or crew chief and at least one other member of the roofing crew have installed at least five fluid-applied hot rubberized asphalt roofing systems and are thoroughly familiar with all aspects of the installation.

d. Evidence of job foreman training as specified under Article titled Quality Assurance.

e. Letter from manufacturer stating that the project is registered with the manufacturer. The Contractor is to bring this to the Pre-installation conference.

5. LVEIT testing firm qualifications including acceptance by membrane manufacturer

6. Required Roofing System Rating: Class A.

E. LVEIT test reports

Test reports for each roof showing initial testing results and final testing results with statement that the roof test indicates no breeches.

F. Contract Closeout Submittals:

1. Membrane manufacturer representative’s certification of completed roof system: As specified.

2. Guaranty and Warranty: As specified.

1.4 QUALITY ASSURANCE

A. Membrane Manufacturer's Qualifications

1. The manufacturer shall have the technical expertise and qualified technical representatives to promptly resolve questions or problems that may arise both during and after the Work is completed.

2. The manufacturer shall have been actively marketing a fluid-applied rubberized asphalt roof system for a minimum of five years.

3. The manufacturer shall provide the names of at least five previous projects of comparable size, scope, and complexity as the Work of this Section.

4. The manufacturer must require that the roof system be installed by a licensed or approved applicator.

B. Waterproofing Installation Qualifications

1. Waterproofing Firm Qualifications

a. Installation of a minimum of 10 waterproofing systems of type specified herein.

b. (List last 5 such jobs, including address, type of system, square footage, date installed and owner/agent with whom contracted).

c. In continuous operation of installing such waterproofing systems for 5 years or more.

d. Manufacturer’s certified installer for the waterproofing materials to be installed.

C. Low-Voltage Electric Integrity Testing (LVEIT) Firm Qualifications. Engage the services of an LVEIT Consulting firm to perform testing of all membranes. Obtain from the membrane manufacturer the name of an LVEIT firm(s) they will accept to provide the report that will used as part of the basis for the membrane manufacturer issuing the warranty. The firm shall have no less than a 5-year track record in the use of LVEIT technology.

D. Fire Hazard Classification

1. The roof system shall have an Underwriters Laboratories Class A External Fire Resistance rating.

2. The roof system, which includes a specific generic type of insulation and in some instances a specific name brand insulation, shall have been tested in conjunction with the type of structural roof deck and roof slope applicable to the project.

E. Company Field Advisor

Secure the services of a Company Field Advisor of the membrane manufacturer for a minimum of 30 working hours. The Field Advisor shall be certified in writing by the manufacturer to be technically qualified in design, installation, and servicing of the required products. Personnel involved solely in sales do not qualify. The Field Advisor shall be present at the Pre-Installation Conference and at the beginning of the actual membrane installation for the purpose of:

1. Verifying that conditions are satisfactory for installation of the membrane.

2. Rendering technical assistance to the Contractor regarding installation procedures of the system.

3. Answering all questions that might arise.

The Field Advisor shall also make, at a minimum, weekly visits during the active installation of the Work, and shall certify roof upon completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Delivery of Materials: Materials shall be delivered to the project site in manufacturer's unopened containers with manufacturer's brand name, instructions for use, all identifying numbers, and UL labels clearly marked thereon.

B. Storage

1. Store containers of materials on end, on wood or other clean rigid pad, a minimum of 6" off the ground, to prevent adherence of foreign material. Roll goods shall be stored on end in unopened packages.
2. Store in a neat, safe manner, clean and dry, protected from water, sunlight, excessive heat and humidity and open flame.
3. Temperature of storage area for adhesives shall be between 60oF and 80oF, or as otherwise recommended by the manufacturer.

1.6 PROJECT CONDITIONS

A. Environmental

1. Weather: Roofing systems shall not be applied in wet weather nor when frost or ice is on surfaces to receive work of this Section.
2. Temperature: Surface and air temperature shall be as recommended in writing by manufacturer of the materials being installed.

B. All surfaces to receive the membrane shall be free of water, dew, frost, snow, ice, or moisture of any kind, debris, and dust.

C. Preparation and application of membrane must be conducted in well ventilated areas.

D. After installation do not expose membrane to temperatures in excess of 180□F.

E. Do not use adhesives near an open fire. Do not use in confined areas without adequate ventilation. Consult container or packaging labels and Safety Data Sheets (SDS) for specific safety information.

F. Do not allow waste products (petroleum, grease, oil, solvents, vegetable or mineral oil, animal fat, etc.), or foreign chemicals or materials, to come in contact with the roof membrane.

1.7 CONTRACTOR'S GUARANTEE

A. The Contractor agrees as part of this Contract that all Roofing, Flashing, Sheet Metal Work, Parapet, Coping, and the entire envelope of the roofing system of this contract will be watertight and free from defects due to workmanship and material for a period of two years. Time of guarantee shall commence with approval of the substantial completion payment for the Work, or the final payment for the work if no substantial completion payment is made.

B. Should any defects develop or any leaks occur during the period of guarantee, such defects or leaks shall at once be remedied and all damage caused by such defects or leaks shall be repaired and corrected without cost or expense to the Owner, which is thus inclusive of overburden removal and replacement.

C. In the event of failure on the part of the Contractor to commence within three (3) days after the notification by the Owner or the Construction Manager, any Work required to be performed under the terms of the this guarantee, and to complete the same within a reasonable time thereafter, the Owner may have such work done by other parties and charge the cost thereof to the Contractor and the Surety herein.

D. The Performance Bonding Company's guarantee shall be for the entire two-year guarantee period.

1.8 ROOFING SYSTEM GUARANTEE/WARRANTY (ROOFING MANUFACTURER)

A. Furnish the roofing system manufacturer's twenty (20) year single-source warranty for the Work of this Section. The warranty shall include, but not be limited to, repair of leakage caused by defects in materials and workmanship. The monetary value of the warranty shall be at least equal to the original cost of the installation; including labor, materials and equipment.

B. The roof system shall be warranted to remain watertight for twenty years.

C. All components of the roof system, including but not limited to membrane, flashing, parapet waterproofing, protection course, reinforcement, drainage panels, insulation, filter fabric, and pavers shall be covered under the warranty. Pavers shall be covered for 10 years; all other components shall be covered for 20 years. In the event that defects or leaks occur the manufacturer will make repairs to correct them, which thus includes all overburden removal and replacement/reinstallation.

D. This warranty is in addition to the Contractor's guarantee described in this Section.

1.9 PROTECTION

A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work. Use insulation and 3/4" thick minimum plywood or other approved means to safely distribute the loads.

B. Against Traffic: Do not permit traffic on work of this Section, except for workmen doing the work, during the installation and after the installation until membrane systems are protected. Use 3/4” thick minimum plywood and insulation for temporary pathways if required.

C. Rejection of Damaged Work

1. Materials or installed work damaged during project construction activities will be subject to rejection.

2. Rejected materials or work must be immediately removed and replaced with new materials, at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following manufacturer and product systems shall be construed to mean the establishing of a minimum quality and performance standards for the specified item. Minimum thicknesses are indicated but each manufacturer will have a specific minimum thickness that may be greater than that provided to meet the performance requirements and warranty provisions and must be provided if a thicker membrane is required.

1. American Hydrotech, Chicago, IL
2. Henry Company, El Segundo, CA
3. Barret Company (Keene Family of Companies), Cleveland, OH
4. Tremco Inc., Beachwood OH
5. Carlisle Coatings & Waterproofing, Wylie, TX

2.2 MATERIALS

A. Provide fluid-applied, rubberized asphalt, fabric reinforced roofing system as indicated in the Drawings and Specifications.

B. Hot-Rubberized Asphalt System

1. Roof system shall meet or exceed such wind performance criteria as would be required to achieve the equivalent of a FM 1-90 classification.
2. Membrane: A hot applied, rubberized asphalt membrane meeting the following physical properties:

Properties	Test Method	Typical Value
Flash point	ASTM D92	475°F*
Low temperature crack bridging capability	CGSB-37.50-M89**	No cracking, adhesion loss, or splitting
Water vapor permeability	ASTM E96, Procedure E CGSB-37.50-M89	0.027 perm.
Water resistance 5 days/50°C	CGSB-37.50 -M89	No delamination, blistering, emulsification, or deterioration.
Water absorption	CGSB-37.50-M89	Gain in weight: 0.22g max. Loss in wt.: 0.18g max

Heat stability	CGSB-37.50-M89	No change in viscosity, penetration, flow or low temperature.
Low temperature Flexibility (-25°C)	CGSB-37.50-M89	No delamination, adhesion loss or cracking.
Penetration	ASTM D5329	@ 77°F., max. 100. @ 122°F.,max. 200.
Flow	ASTM D5329 CGSB-37.50-M89	@ 140°F., 3.0mm max.
Softening point	ASTM D36	180°F.
Elongation	ASTM D5329	1000% min.
Resiliency	ASTM D3407	40% min.
Bond to concrete	ASTM D3407	Pass 0°F
Solids content		100% - no solvents.
Shelf life		10 years (sealed containers)
Acid resistance	ASTM D896 Proc. 7.1 Note 8	Pass Nitric 50% Pass Sulfuric 50%
Toughness	CGSB-37.50-M89	16.0 Joules
Ratio of toughness to peak load	CGSB-37.50-M89	0.069
Viscosity	CGSB-37.50-M89	11.0 seconds
Specific gravity		1.23

* not less than 77°F (25°C) above the manufacturer's maximum recommended application temperature.

** Canadian General Standards Board (CGSB)

3. Roofing membrane shall be manufactured with a minimum of 7% of post-consumer content materials.

4. Primer: An asphalt based primer for concrete surfaces meeting ASTM D41-85 and/or CGSB-9M; as recommended by the manufacturer of the membrane.

5. Flashing/Reinforcing

   a. Manufacturer's PMMA, PUMA or urethane fleece reinforced flashing system for use at penetrations and flashings to a minimum 8" above finished roof surface levels.

   b. Modified bitumen SBS cap sheet, as used for full height flashing (above 8" above roof level)/waterproofing of parapets: 140 mils thick minimum, white granular surface. ASTM D6164 Type 1 Grade G. UL Classified.

   c. Flexible Flashing/Reinforcing: 60-mil thick uncured neoprene flashing/reinforcing sheet for full height flashing(above 8" above roof level)/waterproofing of parapets meeting the following physical properties; as recommended by the manufacturer of the membrane.

Property	Test Method	Requirement/Result
Thickness		60 mil
Tensile Strength	ASTM D412	DIE C 1400 psi
Elongation	ASTM D412	DIE C 300% min.
Tear Resistance	ASTM D624	DIE C 125 lb/in. min.
Brittleness Temp. (-30□F)	ASTM D2137	Does not break
Ozone Resistance	ASTM D1149	No Cracks

6. Fabric Reinforcing Sheet: polyester fabric. Meet the following physical properties, or as recommended by the manufacturer of the membrane.

Property	Test Method	Requirement/Result
Elongation	ASTM D5726	42% min.
Tear Strength	ASTM D5726	6 lb.
Breaking Strength	ASTM D5726	22 lb.
De Matia Flex Cycles	ASTM D813	100,000

7. Adhesives/Sealant

   a. Contact adhesive used to bond flashing together; as recommended by the manufacturer of the membrane.

   b. Contact adhesive used to bond flashing to an approved substrate; as recommended by the manufacturer of the membrane.

c. Sealant used to seal flashing seam edge; as recommended by the manufacturer of the membrane.

8. Protection sheet: A fiberglass reinforced, rubberized asphalt sheet, or other protection/separation course as recommended by the manufacturer of the roofing membrane. 70 to 90 mils thick, as recommended by the membrane manufacturer for the roofing system configuration.

9. Subject to compliance with the requirements, provide:

a. Monolithic Membrane 6125 FR EV, as manufactured and supplied by American Hydrotech, Inc., Chicago, IL.

b. Henry 790-11 EV reinforced membrane system, as manufactured and supplied by Henry Company, El Segundo, CA.

c. RamTough 250DM, as manufactured and supplied by Barrett Company, Cleveland, OH.

d. TREMproof 6100-25 fabric reinforced system, as manufactured and supplied by Tremco Inc., Beachwood, OH.

e. Carlisle 500R as manufactured and supplied by Carlisle Coatings & Waterproofing, Wylie, TX.

2.3 AUXILIARY MATERIALS

A. General: Provide related waterproofing materials as manufactured by or acceptable to the membrane manufacturer, including flashings, adhesives, sealants, reinforcing fabric, drainage panels, insulation, filter fabric, protection sheet, and pavers.

B. Wood Nailers/Blocking

Pressure treated meeting the AWPA U1-15 standard, Use Class UC3A, #2 or better lumber.

C. Miscellaneous Fasteners

Appropriate for purpose intended and approved by membrane system manufacturer; length required for thickness of material (with metal washers); as supplied by membrane manufacturer.

D. Drainage Panels: Geotextile-faced composite drainage panels of type recommended by the manufacturer of the roofing system. Facing laminated to both sides of a nonbiodegradable molded plastic sheet drainage core. Flow rate not less than 7 gpm/ft per ASTM D4716. Compressive strength 30,000 psf minimum. Thickness approximately 0.25” to 0.5”.

E. Insulation: Extruded polystyrene rigid board insulation such as Styrofoam brand roofing insulation by Dupont/Dow Chemical Co. or Foamular brand roofing insulation by Owens Corning as recommended by the manufacturer of the membrane and meeting the following physical properties:

1. Insulation shall meet ASTM C578, type VII.
2. Minimum compressive strength per ASTM D1621, 60 psi.
3. Maximum water absorption by volume per ASTM C272, 0.3%.
4. Water vapor permeance for 1" product per ASTM E96, 1.0 perm (max.)
5. Insulation shall have a minimum R-value of 40, 5.0□F•ft2•h/BTU (min.) per inch of thickness when tested at 75□F mean temperature in accordance with ASTM C518. Insulation manufacturer shall warrant product to retain at least 90% of original R-value for 15 years

F. Filter Fabric Sheet: Water permeable polymeric fabric, as recommended by the manufacturer of the membrane for filtering foreign materials and maintaining position of insulation boards.

G. Additional Materials: Provide cant strips, expansion joints, reglet bars, edge strips, accessories, tapes, primer, cements, and sealants as recommended by manufacturer of fluid-applied membrane.

2.4 PRE-INSTALLATION CONFERENCE

A. Before the roofing Work is scheduled to commence, a conference will be called by the Construction Manager at the site for the purpose of reviewing the Drawings and the Specifications and discussing requirements for the Work. The conference shall be attended by the Contractor, the authorized roofing applicator, the membrane manufacturer's Company Field Advisor, and the Architect.

B. Prior to the conference, the Contractor shall have registered the project with the membrane manufacturer and shall have submitted the membrane manufacturer's letter of intent to warranty the project. A copy of the letter is to be brought to the conference.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verify that Work of other trades that penetrates the roof deck or requires personnel and equipment to traverse the roof deck has been completed.

B. Examine surfaces for inadequate anchorage, foreign material, moisture, and unevenness that would prevent the execution, and quality of application, of the system as specified.

C. Do not proceed with application of system until defects are corrected.

3.2 PREPARATION

A. Condition of Surfaces: Surfaces to receive membrane shall be free of defects or conditions that will interfere with, or prevent, a satisfactory installation of waterproofing systems and shall comply with ASTM D5295.

1. Concrete surfaces shall be at least 28 days old and otherwise sufficiently cured to receive membrane.

2. Verify with membrane manufacturer and test field conditions for moisture content of concrete prior to membrane installation. Utilize procedure recommended by roofing manufacturer (e.g. ASTM D4263, NRCA deck dryness test, with heated waterproofing, etc.) Decks shall be thoroughly dried out and free of moisture. There shall be at least 2 test areas for every 2500 square feet of area to be waterproofed.

3. All surfaces shall be free of depressions, voids, protrusions, cracks, holes, unevenness and other unsatisfactory conditions of substrates. Concrete must be monolithic, without spalled areas, honeycombs and sharp protrusions. Patching of substrates is not permitted unless written permission is issued by the membrane manufacturer..

B. Contaminants

1. Surfaces shall be thoroughly cleaned and shall be free of water, dew, frost, dust, dirt oil, grease, concrete curing compounds, form release agents, laitance, and other foreign matter. Shotblast or sandblast if necessary to remove foreign materials, if so recommended by membrane manufacturer.

2. Dirt and dust shall be completely removed with an air compressor or industrial type vacuum cleaner or methods approved by membrane manufacturer so the surface shall pass a blue cloth test.

3.3 JOINTS, CRACKS, AND TERMINATIONS

A. Prepare and treat substrates to receive membrane, including joints and cracks, drains, and penetrations, according to CGSB-37.51, "Application of Rubberized Asphalt, Hot-Applied, for Membrane and Waterproof membrane," and membrane system manufacturer's written instructions.

1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D4258.

2. Moving Joints: Adhere strip of elastomeric flashing sheet to substrate in a layer of hot fluid-applied, rubberized asphalt. Extend flashing sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric flashing sheet.

3. Non-Moving Joints: Embed strip of reinforcing fabric into a layer of hot fluid-applied, rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond drains and penetrations.

   A. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

   B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric flashing sheet extended a minimum of 6 inches and 12 inches on each side of joints and adhere to substrates in layers of hot fluid-applied, rubberized asphalt. After installing foam expansion rod, apply second 12 inch sheet of elastomeric flashing over the foam rod and 6” sheet. Apply third layer of hot fluid-applied, rubberized asphalt over elastomeric reinforcing sheet.

3.4 INSTALLATION - PRIMER, REINFORCING, FLASHING, MEMBRANE, PROTECTION

A. Primer

1. Apply surface conditioner/primer to the concrete substrate evenly, at a rate recommended by the membrane manufacturer. Avoid excessive application. Ponding of the primer is not acceptable.

2. Allow sufficient time for the primer to thoroughly dry prior to the membrane application.

3. If primer is contaminated by dust, construction traffic or other sources, reprime as recommend by the manufacturer.

4. Prime and prepare parapet as recommended by the membrane manufacturer for application of full height flashing/waterproofing.

5. All metal flashing shall be bright metal clean, free of process oils and treated with conditioner/primer as recommended by the membrane manufacturer.

B. Reinforcing

1. Apply reinforcing to joints, cracks, changes in plane, and elsewhere as recommended by the membrane manufacturer.

C. Detailing/Flashing

1. All preparation of substrates and all detailing and flashings shall be done in accordance with the membrane manufacturer's printed instructions and as shown on the Drawings.

2. All detailing and flashing shall be completed before installing the membrane over the field of the substrate. Obtain prior written approval of the Project Architect or Engineer for conditions where the flashing assembly is properly installed in a different sequence.

3. Apply flashing at roof penetrations, vertical surfaces, drains, curbs, edges, and wherever required for a proper installation.

4. Where modified SBS or uncured neoprene base flashing terminates on a vertical wall surface, provide a continuous termination bar with mechanical fasteners spaced 12" o.c. maximum, and seal top edge. Install each and every night prior to leaving the job site to ensure rain does not get behind flashing. Conform to Drawing details and roofing manufacturers recommendations.

5. Provide flashing/waterproofing for the full height of parapets as indicated on the Drawings, and in accordance with the membrane manufacturer's written instructions. Materials and installation shall be as recommended by the membrane manufacturer as required for inclusion in the single source roof system warranty.

   Flashing/waterproofing assembly shall consist of one of the following, subparagraph a., b. or c. as recommended by the membrane manufacturer, and as indicated on approved Shop Drawings:

   a. Uncured neoprene flashing, 60 mils thick, adhered to back of parapet with membrane manufacturer's bonding adhesive or hot-rubberized asphalt; totally adhered without wrinkles. Provide termination bar and cap flashing as indicated on the Drawings. Where height of flashing on parapet exceeds 4'-0", or as recommended by the manufacturer, provide an intermediate termination bar at recommended height above concrete roof deck, and splice flashing as recommended by the manufacturer, with a six inch adhered lap covering the termination bar.

   b. Modified Bitumen SBS cap sheet, with white granular surface, adhered to back of parapet by embedding in 90 mils of hot rubberized asphalt or using torch; totally adhered without wrinkles. Provide uncured neoprene flashing reinforcing at roof/parapet transition and where recommended by the manufacturer. Reinforce rubberized asphalt with polyester felt if recommended by the manufacturer. Provide termination bar and cap flashing as indicated on the Drawings. Where recommended by the manufacturer because of the height of parapet provide an intermediate termination bar at recommended height above concrete roof deck, and splice the cap sheets as recommended by the manufacturer with a six inch adhered lap covering the termination bar. Coat white with acrylic elastomeric coating at any bleed-out of rubberized asphalt.

   c. PMMA and PUMA Flashing: Follow primary membrane manufacturer's installation recommendations.

D. Membrane

1. The membrane shall be heated in a double jacketed, oil bath melter, air jacketed melter, or other type of melter as approved by the Architect, with mechanical agitator and safety shutoff, specifically designed for the preparation of a rubberized asphalt membrane. Melter shall be equipped with thermometer and foreman shall record on a chart the temperatures to which materials have been heated; submit chart at end of each day to the Construction Manager. Only one fuel container

shall be on the roof at any one time, and it shall be removed at the end of the working day. Locate the container at least four feet away from the melter. Brace the container and shade it from the sun.

2. Provide fire extinguishers on the roof in the vicinity of the melters as required to ensure the safety of the roof.

3. Heat membrane until the material can be drawn, free flowing, at a temperature range stated in the membrane manufacturers written instructions. In no case shall material be heated above maximum temperature recommended by the manufacturer.

4. Apply the rubberized asphalt membrane at a rate to provide a continuous, monolithic coating of 90 mil minimum, into which fully embed a layer of the fabric reinforcing sheet, followed by another continuous monolithic coat of membrane at minimum thickness of 125 mil. Total minimum thickness: 215 mils. Apply membrane smooth, free from air pockets, or wrinkles. Ensure full bond of membrane to substrate.

5. Overlap fabric reinforcing sheet at least 2", and in accordance with the membrane manufacturer's instructions.

E. Separation/Protection Layer

1. Embed protection sheet into the membrane while it is still warm if recommended by membrane manufacturer.

2. Overlap adjoining sheet edges to ensure complete coverage.

3. Cover sheet with drainage panels, insulation, filter fabric and ballast within time period recommended by membrane manufacturer, and not to exceed 30 days.

F. Perform LVEIT and flood testing as specified in Articles below prior to installation of insulation. If breaches or leaks are found, drain water completely, make all necessary repairs, and retest.

3.5 INSTALLATION – DRAINAGE PANELS, INSULATION, FILTER FABRIC

A. General: Examine the roof area to be covered with subsequent topping materials in order to ensure that all roof areas have received the membrane, the membrane is free of damage, it is properly protected, and all flashing has been properly installed, before placing the insulation. Installation of all components shall be in accordance with the written instructions of the membrane manufacturer. Do not begin installation until the LVEIT and flood testing has been completed and membrane accepted.

B. Drainage Panels

Place drainage panels over protection sheet according to manufacturer’s instructions and without penetrating the waterproofing membrane. Drain cores shall directly abut each other. Lap geotextile to maintain continuity.

C. Insulation

1. Loose lay in a staggered manner and tightly butt together all insulation boards. Occasional joint widths of up to 1/8" will be allowed. Insulation shall be installed within 3/4" of all projections, penetrations, and other discontinuities in the roofing system.

2. Install insulation to achieve the required R-value indicated in the Documents. Where total insulation thickness is more than 2”, install the required thickness in two or more layers with joints of each succeeding layer staggered over joints of previous layer a minimum of 6” in each direction. The bottom layer of insulation shall be the thickest layer and shall be at least 2” thick. Layers shall be installed unadhered to each other.

D. Filter Fabric: Install fabric over the insulation as described below. Include additional provisions as required to prevent insulation boards from shifting out of position if the roof is flooded:

1. Overlap all edges a minimum of 1'-0". Do not use lengths less than 6'-0".

2. Install fabric so that no joints will exist between the sheets parallel to and within 6 feet of the roof perimeter.

3. Extend fabric above the ballast at the perimeter and penetrations. The dimension of the extension above the ballast and the method of terminating and securing the fabric shall be as instructed by the membrane manufacturer.

4. Extend fabric to drain bases or bonnets, but do not cover drains or restrict water flow to the drains.

5. Install additional fabric around all penetrations in order to prevent foreign material entry into the space between the penetration and the insulation.

3.6 FIELD QUALITY CONTROL

A. Progress inspections of the roofing system installation by CID’s Inspector, including reviewing the temperature charts, will be done on regular visits. Roofing deficiencies are to be addressed for compliance verification prior to proceeding with the next phase of the system installation.

3.7 LVEIT PROCEDURE

A. After completion of the fluid-applied roofing membrane, but prior to flood testing and installation of insulation and other items, test watertightness of installation by performing an LVEIT. Survey shall conform to ASTM D7877.

B. Once membrane has met all previously required inspection and testing requirements, the Contractor’s LVEIT consultant shall install the conductor cable on the surface of the finished membrane and secure in a method as directed by the testing consultant. This cable is to be considered part of the Work of the project and shall remain in place at the

completion of the testing for future use by the Department of Education. The membrane shall then be wetted and field energized and the LVEIT consultant shall walk the roof areas while assessing the field for breaches and defects.

C. All breaches shall be marked on the membrane by the LVEIT consultant and repair shall be completed by the Contractor. The test shall be performed again to verify all breeches have been remedied. A formal report of all tests is to be submitted indicating all findings/areas of failure as well as photographic documentation and drawing of the test area.

D. Once tested and no failures noted, the membrane shall be protected and the flood test performed. Upon completion of entire roof system, the roof shall be retested using the same process as described above.

3.08 FLOOD TEST

A. After completion of the LVEIT but prior to installation of insulation and the remainder of the system, test the watertightness of installation by plugging drains and flooding with water to a minimum depth of 1″ above the high points for a period of 24 hours. For each flood test performed, the Contractor shall notify the Construction Manager when the minimum 1″ of water above high point has been reached to mark the start of test period for verification and notification to Architect to allow for inspection.

B. If there are steep areas of roofing or the water level will exceed 6” at any point, create dams to provide flood testing of the roof in sections.

C. If leaks occur, the water shall be drained completely; the membrane installation shall be repaired, and then re-tested. Continue repair and re-testing until installation is leak-free

3.8 MEMBRANE MANUFACTURER'S FINAL INSPECTION

A. After all of the fluid-applied membrane waterproofing work is completed, an inspection shall be made by the manufacturer's representative, who shall certify that the system has been installed according to the Specifications.

3.9 PROTECTION

A. Provide for protection of completed membrane during installation of other materials or processes over membrane and throughout remainder of construction period. Do not allow traffic of any type on unprotected membrane. Minimum protection: 3/4" thick exterior grade plywood.

B. Clean up all debris and equipment. Remove spatters and clean soiled surfaces. Check drains to ensure proper function.

END OF SECTION 071400

SECTION 07 18 00

TRAFFIC COATINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes traffic coatings for the following applications:

1. Vehicular traffic.

2. Pavement markings.

B. Related Sections include the following:

1. Section 321216 "Asphalt Paving”

1.3 SUBMITTALS

A. Product Data: For each product indicated.

B. Qualification Data: For Installer.

C. Material Certificates: For each traffic coating, signed by manufacturers.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of traffic coatings required for this Project.

B. Source Limitations:

1. Obtain traffic coatings from a single manufacturer.

2. Obtain primary traffic coating materials, including primers, from traffic coating manufacturer. Obtain secondary materials including aggregates, sheet flashings, joint sealants, and substrate repair materials of type and from source recommended in writing by primary material manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers with seals unbroken and bearing manufacturer's labels showing the following information:

1. Manufacturer's brand name.

2. Type of material.

3. Directions for storage.

4. Date of manufacture and shelf life.

5. Lot or batch number.

6. Mixing and application instructions.

7. Color.

B. Store materials in a clean, dry location protected from exposure to direct sunlight. In storage areas, maintain environmental conditions within range recommended in writing by manufacturer.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.

1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.

B. Do not install traffic coating until items that will penetrate membrane have been installed.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which traffic coating manufacturer agrees to repair or replace traffic coatings that deteriorate during the specified warranty period. Warranty does not include deterioration or failure of traffic coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.

1. Deterioration of traffic coatings includes the following:

a. Adhesive or cohesive failures.

2. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PAVEMENT MARKINGS

A. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than 45 minutes.

1. Color: White or as indicated.

a. Use blue for spaces accessible to people with disabilities per requirements in the Americans with Disabilities Act.

2. Retroflective Glass Beads: clear, round glass beads. Beads shall be obtained from manufacturer compatible with paint product and application requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements and for other conditions affecting performance of traffic coatings.

1. Verify compatibility with and suitability of substrates.

2. Verify that substrates are visibly dry and free of moisture.

3. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Clean and prepare substrates according to manufacturer's written recommendations to produce clean, dust-free, dry substrate for traffic coating application.

3.3 PAVEMENT MARKINGS

A. Apply traffic paint for striping and other markings with mechanical equipment to produce uniform straight edges. Apply at manufacturer's recommended rates for a 15-mil-minimum wet film thickness.

3.4 GLASS BEADS

A. Glass beads shall be installed per manufacturer’s recommendations.

3.5 PROTECTING AND CLEANING

A. Protect traffic coatings from damage and wear during remainder of construction period.

B. Clean spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 072100

THERMAL INSULATION

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the thermal insulation as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Insulation under slabs-on-grade.

2. Foundation wall insulation.

3. Batt insulation.

4. Spray-foam insulation at gaps around glazing frames, door frames, penetrations, and similar items in exterior wall assemblies for tie-in of air/vapor barrier to frames.

5. Attachment devices.

1.3 RELATED SECTIONS

A. Firestops and Smokeseals - Section 078413.

B. Curtain wall insulation - Section 084413.

C. Acoustical insulation - Section 092900.

D. Earthwork - Section 312000.

1.4 QUALITY ASSURANCE

A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test. The basis of design

product listed herein is a component of the design test assembly selected by the Architect.

1.5 SUBMITTALS

A. Submit product data for each type of product indicated, including re-cycled content.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for insulation products.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Deliver materials to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type and brand. Delivered materials shall be identical to approved samples.

C. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged or otherwise not suitable for installation and replace with acceptable materials.

D. Take every precaution to prevent the insulation from becoming wet, cover with tarps or other weather/watertight sheet goods.

PART 2 PRODUCTS

2.1 FOUNDATION WALL AND UNDERSLAB INSULATION

A. Provide extruded polystyrene board insulation equal to "Foamular" manufactured by Owens Corning, or comparable product by Dow Chemical Co., or PACTIV Building Products, conforming to ASTM C 578, Type IV, with a maximum flame spread and smoke developed indices of 75 and 450 respectively.

B. Insulation shall have an aged R value of not less than 5/inch; shall be 2" thick unless otherwise noted on the drawings.

2.2 BATT INSULATION

A. Unfaced, Mineral-Wool Batt Insulation: ASTM C 665, Type I (batts without membrane facing); consisting of fibers; 2.5 pcf density, with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

B. Reinforced-Foil-Faced, Glass-Fiber Batt Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim Kraft, or foil-scrim polyethylene.

1. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

2.3 ACCESSORIES

A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place. Provide "Series T TACTOO Insul-Hangers" by AGM Industries, Inc., "Spindle Type" by Gemco, or approved equal.

1. Plate: Perforated, galvanized carbon-steel sheet, 0.030" thick by 2" square.

2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105" in diameter; length to suit depth of insulation indicated.

3. Affix plate with stainless steel staple or screw.

B. Clips for Securing Insulation to Encountered Surfaces: Spindle anchor and washer type consisting of perforated metal plates with spindle welded to center and snap on washers. Spindle and washers shall receive a corrosion-resistant electro-zinc plating. Adhesives for securing clips in place shall be recommended by the approved clip manufacturer.

1. Acceptable Manufacturers

a. Miracle Adhesives Corp.
b. Stic-Klip Mfg. Co., Inc.
c. Midwest Fasteners

C. Insulation Flashing Tape: Provide insulation manufacturer's recommended board joint tape for sealing joints, seams and veneer tie penetrations through the insulation layer; Dow Chemical Co. "Weathermate" straight flashing, 4-inch width with butyl rubber adhesive, or equal.

D. Wall Opening Flashing: Provide insulated sheathing manufacturer's recommended flashing sealing window and door wall openings; Dow Chemical Co. "Weathermate" straight flashing, 6-inch and 9-inch width with butyl rubber adhesive at straight opening heads, jambs and sills, or equal.

E. Adhesive for Bonding Insulation: The type recommended by the insulation manufacturer, and complying with fire-resistance requirements.

1. For bonding rigid polystyrene insulation to masonry or concrete, provide adhesive equal to "Foamgrab PS" made by Dacor Products Co. or equal made by ChemRex Inc. or Miracle Adhesives.

F. Protection Board: Premolded, semi-rigid asphalt/fiber composition board, 1/4" thick, formed under heat and pressure, standard sizes.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where thermal insulation is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION, GENERAL

A. Clean substrates of substances that are harmful to insulation including removing projections capable of puncturing vapor retarders, or that interfere with insulation attachment.

B. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

C. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

D. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

E. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF BELOW-GRADE INSULATION

A. On vertical surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.

1. Extend insulation below exterior grade line to top of footing.

B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

1. If not otherwise indicated, extend insulation a minimum of 36" in from exterior walls.

3.4 INSTALLATION OF BATT INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Glass-Fiber or Mineral-Wool Batt Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.

2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.

3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.

4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced batts mechanically and support faced batts by taping flanges of insulation to flanges of metal studs.

5. Vapor-Retarder-Faced Batts: Tape joints and ruptures in vapor-retarder facings and seal each continuous area of insulation to ensure airtight installation.

    a. Exterior Walls: Set units with facing placed toward interior of construction as indicated on Drawings.

3.5 INSTALLATION OF BOARD INSULATION FOR CONCRETE SUBSTRATES

A. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:

1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.

2. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.

3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.

4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.6 INSTALLATION OF SPRAY FOAM INSULATION

A. Apply self-supported, spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make it flush with face of studs by using method recommended by insulation manufacturer.

3.7 PROTECTION

A. Polyisocyanurate rigid foam board insulation from excess moisture, mechanical damage, and exposure to open flame.

B. Promptly repair damage caused to insulation in a manner that retains integrity and continuity of insulation and facer materials.

C. Keep polyisocyanurate boards dry and above job site water – keep tarped until ready to install.

D. Cover insulation with cladding promptly, but no later than 180 days after installation of insulation.

END OF SECTION 07210

SECTION 07 26 00

VAPOR RETARDERS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Reinforced vapor retarders.

B. Tape to seal joints and repair vapor retarder.

C. Pipe boots for sealing penetrations.

1.2 RELATED SECTIONS

A. Section 033000 - Cast-in-Place Concrete.

1.3 REFERENCES

A. ASTM International (ASTM):

1. ASTM D 882 - Tensile Properties of Thin Plastic Sheeting.
2. ASTM D 1709 - Impact Resistance of Plastic Film by the Free-Falling Dart Method.
3. ASTM D 2582 - Puncture-Propagation Tear Resistance of Plastic Film and Thin Sheeting.
4. ASTM D 3776 - Mass Per Unit Area (Weight) of Woven Fabric.
5. ASTM D 4833 - Index Puncture Resistance of Geotextiles, Geomembranes, and Related Products.
6. ASTM E 84 - Surface Burning Characteristics of Building Materials.
7. ASTM E 96 - Standard Test Methods for Water Vapor Transmission of Materials.
8. ASTM E 1643 - Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
9. ASTM E 1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

B. National Fire Protection Association (NFPA): NFPA 701 - Fire Tests for Flame-Resistant Textiles and Films.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 30 00 - Administrative Requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Samples: Submit manufacturer's samples of reinforced vapor retarders.

D. Verification Samples: For each product specified, two samples, minimum size 5 inches (125 mm) square, representing actual product.

1.5 QUALITY ASSURANCE

A. Preinstallation Meeting: Convene a preinstallation meeting two weeks before start of installation of reinforced vapor retarders. Require attendance of parties directly affecting work of this section, including Contractor, Architect, and installer. Review installation, protection, and coordination with other work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage:

1. Store products in manufacturer's unopened packaging until ready for installation.
2. Store materials in a clean, dry area in accordance with manufacturer's instructions.

C. Handling: Protect materials during handling and installation to prevent damage.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Acceptable Manufacturer: Griffolyn, Division of Reef Industries, Inc., which is located at: 9209 Almeda Genoa Rd.; Houston, TX 77075; Toll Free Tel: 800-231-6074; Tel: 713-507-4251; Fax: 713-507-4295; Email: request info (ri@reefindustries.com); Web: https://www.reefindustries.com

B. Or approved equal - for substitutions considered in accordance with provisions of Section 016000 - Product Requirements.

2.2 REINFORCED VAPOR RETARDERS

A. Reinforced Vapor Retarder: Griffolyn Type-65 G for use under concrete slabs; complying with ASTM E 1745 Class A.

1. Material: 4-ply laminate, combining 2 layers of high-density polyethylene and a high-strength non-woven cord grid with a layer of non-woven geotextile fiber.
2. Weight: 73 lb/1,000 sq ft (35.7 kg/100 sq m), when tested in accordance with ASTM D 3776.

3. Puncture Propagation Tear: 55 lb (245 N), when tested in accordance with ASTM D 2582.
4. Permeance (Perm): 0.038 grains/hr-sq ft-in Hg (2.18 ng/(Pa-s-sq m)), when tested in accordance with ASTM E 96.
5. Drop Dart: 2300 g, when tested in accordance with ASTM D 1709.
6. Tensile Strength: 160 lb/1,350psi (710 N/9.3 MPa), when tested in accordance with ASTM D 882, 3 inch (76 mm) wide specimen.
7. Puncture Strength: 60 lb (265 N), when tested in accordance with ASTM D 4833.
8. Classification: Class A, when tested in accordance with ASTM E 1745.
9. Usable Temperature Range: Minus 25 to 170 degrees F (minus 32 to 77 degrees C).
10. Application: Use under concrete slabs, over aggregate fill.

B.

2.3 ACCESSORIES

A. General: Ensure accessories are from same manufacturer as reinforced vapor retarders.

B. Mastic Tape: Griffolyn Fab Tape. RI Part Number: 60-0002.
1. Description: Black, double-sided, asphaltic, pressure-sensitive, mastic tape.
2. Weight: 3.75 pounds per 100 feet (1.7 kg per 30 m).
3. Thickness: 35 mils (0.9 mm).
4. 3 Inch Seam Shear: 35 pounds (156N).

C. Self-Adhesive Repair Tape: Griffolyn Sealant Tape RI Part Number: 60-0153.
1. Description: Reinforced white backing with Gray Adhesive.
2. Weight: 3.0 lbs for 4 inch x 50 foot roll.
3. Thickness: 26 mils (0.65 mm).
4. 3 inch Seam Shear: 30 lbs (134 N)

D. Fire Retardant Self-Adhesive Tape: Griff Tape FR RI Part Number 60-0151.
1. Description: White backed adhesive tape.
2. Weight: 3.75 lbs per roll, 4 inches x 180 feet long.
3. Thickness: 5 mils(0.125 mm).
4. Adhesion to Steel: 66 oz/in (18 N/in).

E. Pipe Boots: Griffolyn pipe boots, factory-fabricated.

F. Batten Strips: Manufacturer's standard for required application.

G. Fasteners: Manufacturer's standard for required application.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces and areas to receive reinforced vapor retarders. Notify Architect in writing of defects of work and other unsatisfactory site conditions that would cause defective installation of vapor retarders. Do not begin installation until unacceptable conditions have been corrected.

B. Verify site dimensions.

C. Commencement of work will imply acceptance of substrate.

3.2 INSTALLATION

A. Install reinforced vapor retarders in accordance with manufacturer's instructions.

B. Install reinforced vapor retarders in accordance with manufacturer's instructions and ASTM E 1643 at concrete slabs.

C. Install vapor retarders continuously at locations as indicated on the drawings. Ensure there are no discontinuities in vapor retarder at seams and penetrations.

D. Install vapor retarders in largest practical widths.

E. Ensure surface beneath vapor retarder is smooth with no sharp projections.

F. Join sections of vapor retarder and seal penetrations in vapor retarder with mastic tape. Ensure vapor retarder surfaces to receive mastic tape are clean and dry.

G. Immediately repair holes in vapor retarder with self-adhesive repair tape.

H. Seal around pipes and other penetrations in vapor retarder with pipe boots in accordance with manufacturer's instructions.

3.3 PROTECTION

A. Protect reinforced vapor retarders from damage until covered by roof insulation.

B. Protect reinforced vapor retarders from damage until covered by wall finish.

C. Protect reinforced vapor retarders from damage during installation of reinforcing steel and utilities and during placement of granular materials or concrete slab.

D. Immediately repair damaged vapor retarder in accordance with manufacturer's instructions.

END OF SECTION 072600

SECTION 072700

VAPOR-PERMEABLE AIR BARRIER LIQUID MEMBRANE

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the vapor-permeable air barrier liquid membrane as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:

1. Vapor-permeable/air barrier applied over concrete masonry units.

2. Materials and installation to bridge and seal the following air leakage pathways and gaps:

a. Connections of the walls to the roof.
b. Connections of the walls to the foundations.
c. Seismic and expansion joints.
d. Openings and penetrations of window frames, storefront, curtain wall.
e. Door frames.
f. Piping, conduit, duct and similar penetrations.
g. Masonry ties, screws, bolts and similar penetrations.
h. All other air leakage pathways in the building envelope.

1.3 RELATED SECTIONS

A. Unit Masonry - Section 042000.

1.4 SUBMITTALS

A. Provide evidence to the Architect of licensing and certification under the Air Barrier Association of America's (ABAA's) Quality Assurance Program.

B. Submit shop drawings showing locations and extent of air barrier and details of all typical conditions, intersections with other envelope systems and materials, membrane counter-flashings, and details showing how gaps in the construction will be bridged, how inside and outside corners are negotiated and how miscellaneous penetrations such as conduits, pipes electric boxes and the like are sealed.

C. Submit manufacturer's product data sheets for each type of membrane, including manufacturer's printed instructions for evaluating, preparing, and treating substrate, temperature and other limitations of installation conditions, technical data, and tested physical and performance properties.

D. Submit manufacturer's data showing solids content of fluid applied membranes and coverage rates and wet film thickness upon application in order to achieve minimum dry film thickness required by this specification.

E. Submit manufacturer's installation instructions.

F. Submit certification by air barrier manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

G. Submit certification of compatibility by air barrier manufacturer, listing all materials on the project that it connects to or that come in contact with it, including sealant as specified in Section 062000 for caulking joints between sheathing panels.

H. Test results of air permeability testing of primary air barrier material (ASTM E 2178).

I. Test results of assembly in accordance with ASTM E 2357.

J. Proof that the air barrier is part of an NFPA 285 approved wall assembly.

1.5 PERFORMANCE REQUIREMENTS

A. Provide air barrier constructed to perform as a continuous air barrier, and as a liquid water drainage plane flashed to discharge to the exterior any incidental condensation or water penetration. Membrane shall accommodate movements of building materials by providing expansion and control joints as required, with accessory air seal materials at such locations, changes in substrate and perimeter conditions.

B. Provide an air barrier assembly that has been tested in accordance with the Air Barrier Association of America's (ABAA's) approved testing protocol to provide air leakage results not to exceed 0.01 cfm/sf @ 1.57 psf as per ASTM 2357.

C. NFPA 285 Compliance.

D. Connections to Adjacent Materials: Provide connections to adjacent materials at the following locations and show same on shop drawings:

1. Foundation and walls, including penetrations, ties and anchors.

2. Walls, windows, curtain walls, storefronts, louvers or doors.

3. Different wall assemblies, and fixed openings within those assemblies.

4. Wall and roof connections.

5. Walls, floor and roof across construction, control and expansion joints.

6. Walls, floors and roof to utility, pipe, and duct penetrations.

7. Seismic and expansion joints.

8. All other leakage pathways in the building envelope.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:

1. The air barrier contractor shall be, during the bidding period as well as for the duration of the installation, officially recognized as a Licensed Contractor by the Air Barrier Association of America (ABAA). The contractor shall carry liability insurance and bonding.

2. Each worker who is installing air barriers must be either a Certified Applicator or an installer who is registered with ABAA.

3. Each Lead Certified Applicator can supervise a maximum of five registered installers. The Certified Applicator shall be thoroughly trained and experienced in the installation of air barriers of the types being applied. Lead Certified Applicators shall perform or directly supervise all air barrier work on the project.

B. Single-Source Responsibility: Obtain air barrier materials from a single manufacturer regularly engaged in manufacturing the product.

C. Provide products which comply with all state and local regulations controlling use of volatile organic compounds (VOCs).

D. Field-Constructed Mock-Ups in accordance with Quality Requirements Division 1: Prior to installation of air barrier, apply air barrier as follows to verify details under shop drawing submittals and to demonstrate tie-ins with adjoining construction, and other termination conditions, as well as qualities of materials and execution:

E. Test mock-up in accordance with ASTM E 783 and ASTM E 1105 for air and water infiltration.

F. Manufacturer shall be on-site at least once a week to observe installation and provide written report within 3 days.

G. Manufacturer shall confirm all termination details and compatibility with materials being terminated to.

H. Preinstallation Conference: Conduct conference at the Project site. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product, date of manufacture, and directions for storage.

B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by air barrier manufacturer. Protect stored materials from direct sunlight.

C. Avoid spillage. Immediately notify Owner, Architect if spillage occurs and start clean up procedures.

D. Clean spills and leave area as it was prior to spill.

1.8 WARRANTY

A. System Warranty: Provide the manufacturer’s five (5) year system warranty, including the primary air barrier and installed accessory sealant and membrane materials which fail to achieve airtight and watertight seal, exhibit loss of adhesion or cohesion, or do not cure.

PART 2 PRODUCTS

2.1 MATERIALS

A. Liquid Membrane: "Air-Bloc 17MR Vapor Permeable Fluid-Applied Membrane" by Henry Company, "Perm-A-Barrier VP" by GCP Applied Technologies or equal products by Tremco. WR Meadows, or approved equal. Trade names used herein are those of Henry Company.

B. Sheet Transition Membrane: Blueskin SA or Blueskin VP 160.

C. Window and Door Opening Flashing: Self-adhesive air and vapor barrier membrane; Blueskin SA or Metal Clad.

D. Liquid Applied Flashing: Henry Air-Bloc LF.

E. Primer for Blueskin: Blueskin LVC Adhesive.

F. Air Barrier Sealant: HE 925 BES Sealant.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where vapor-permeable air barrier liquid membrane is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected to permit proper installation of the work.

3.2 SURFACE PREPARATION

A. All surfaces must be sound, dry, clean, and free of oil, grease, dirt, excess mortar or other contaminants.

B. Cracks in masonry and concrete up to 2" wide shall be filled with a trowel application of Liquid Applied Flashing or Sealant and allowed to skin over prior to application of the fluid-applied membrane to the surface. Alternatively, the cracks may be sealed with a strip of Transition Membrane applied to the substrate.

C. Surfaces shall be tied in with beams, columns, etc. using strips of Transition Membrane lapped a minimum of 3" on both substrates. Mechanical attachment should be made to all window and door frames, or a properly designed sealant joint provided.

3.3 TRANSITION MEMBRANE

A. Align and position self-adhering transition membrane, remove protective film and roll firmly into place with heavy roller. Ensure minimum 2" overlap at all ends and side laps.

B. Tie-in to window frames, metal door frames, etc., and at the interface of dissimilar materials as indicated on the Drawings.

C. Promptly roll all laps and membrane with a countertop roller to effect seal.

D. Ensure all preparatory work is complete prior to applying Liquid Applied Membrane.

3.4 FLUID-APPLIED MEMBRANE APPLICATION

A. Apply fluid-applied membrane to wall substrates in a continuous coat at manufacturer’s recommended rate by spray or trowel to provide a minimum wet film thickness of 0.090" (90 mils) for rough surfaces like CMU and 0.070" (70 mils) for smooth sheathing.

1. Minimum dry film thickness shall be 0.048" (48 mils) on CMU and 0.037" (37 mils) on smooth sheathing.

B. Overlap liquid membrane on to transition membrane at connections a minimum of 1".

C. Apply fluid-applied membrane around masonry ties to ensure a complete seal.

D. Do not leave membrane exposed for any longer than 180 days.

E. Penetrations: Seal all penetrations with Liquid Applied Flashing or Sealant or other procedures in accordance with manufacturer’s instructions.

3.5 PROTECTING AND CLEANING

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

C. Protect air barrier from exposure to the elements as required by the manufacturer.

D. Remove any masking materials after installation. Clean any stains on materials that would be exposed in the completed work using procedures as recommended by manufacturer.

1. Schedule work to ensure that the air and vapor barrier system is covered as soon as possible after installation. Protect air and vapor barrier system from damage during subsequent operations. If the air and vapor barrier system cannot be permanently covered within 180 days after installation, apply temporary UV protection.

3.6 FIELD QUALITY CONTROL

A. Air Barrier Association of America Installer Audits: Cooperate with ABAA's testing agency. Allow access to work areas and staging. Notify ABAA in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Do not cover Work of this Section until testing and inspection is accepted. Arrange and pay for site inspections by ABAA to verify conformance with the material Manufacturer's instructions, the site Quality Assurance Program used by ABAA, and this section of the project specification.

1. Audits and subsequent testing shall be carried out at the following rate:

a. Up to 10,000 ft^2 of air barrier contract requires one (1) audit.
b. 10,001 – 35,000 ft^2 of air barrier contract requires two (2) audits.
c. 35,001 – 75,000 ft^2 of air barrier contract requires three (3) audits.
d. 75,001 - 125,000 ft^2 of air barrier contract requires four (4) audits.
e. 125,001 – 200,000 ft^2 of air barrier contract requires five (5) audits.
f. 200,001 ft^2 and over of air barrier contract requires six (6) audits.

2. Forward written audit reports to the Architect within 10 working days of the inspection and test being performed.

3. If the inspections reveal any defects, promptly remove and replace defective work at no additional cost to the Owner.

B. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.

2. Remove and replace deficient air-barrier components for retesting as specified above.

C. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

END OF SECTION 072700

SECTION 074113

METAL ROOF PANELS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the metal roofing as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Metal roof system.
2. Closure, flashing, trim, caps, roof edges, gutter, and related sheet metal work.
3. Nailable roof insulation.
4. Snow guards.
5. Supports and accessories.

1.3 RELATED SECTIONS

A. Structural Steel Framing - Section 051200.

B. Carpentry - Section 062000.

1.4 REFERENCES

A. ASTM A 463, steel sheet, zinc-coated (galvanized) by the hot dip process, structural physical quality.

B. ASTM A 653, steel sheet, zinc-coated by the hot dip process.

C. ASTM A 792, steel sheet, aluminum-zinc alloy coated.

D. ASTM B 209, aluminum and aluminum alloy sheet and plate.

E. ASTM E 1592, Test Method for Structural Performance of Sheet Metal Roofing and Siding Systems by Uniform Air Pressure Difference.

F. SMACNA, Architectural sheet metal manual.

1.5 QUALITY ASSURANCE

A. Manufacturer shall have had at least ten (10) years' experience in architectural roofing and the roof systems shall have been in use for at least ten (10) years. Manufacturer shall demonstrate past experience with examples of projects of similar type and exposure.

B. The installer shall be authorized by the manufacturer, and the actual work shall be supervised by personnel trained by the manufacturer in proper application of the product. The installer shall have capability for preparation of shop details and fabrication of all flashings not furnished by the panel manufacturer.

1.6 SUBMITTALS

A. Shop Drawings: Shop drawings must be in scale large enough to clearly show all details. Include dimensions of fabricated work, reference dimensions to the structure, type, size and spacing of fasteners, material thickness and finishes, plan layout with erection sequence and coordination required with other trades. Shop drawings must be reviewed and approved by the Architect prior to commencement of work.

B. Manufacturer's Data: Submit for information only, metal manufacturer's specifications, installation instructions and general recommendations for roofing applications. Include manufacturer's certification or other data substantiating that the materials comply with the requirements and are adequate to support roof loads as required by Code. Indicate by copy of transmittal that the Fabricator/Installer has received copy of manufacturer's instructions and recommendations.

C. Samples: Submit 12" square samples of each specified metal and gauge to be used on roofing. Samples will be reviewed by Architect for thickness and texture only. Compliance with all other requirements is the exclusive responsibility of the Contractor.

D. Submit certification indicating manufacturer's experience qualifications.

E. Engineering Data: Submit engineering and test data and tables showing performance characteristics of the panels for loads, deflections and infiltration of air and water meeting standards specified herein.

1.7 PERFORMANCE REQUIREMENTS

A. Provide manufactured roof panel assemblies complying with performance requirements indicated and capable of withstanding structural movement, thermally induced movement, and exposure to weather without failure or infiltration of water into the building interior.

B. Air Infiltration: Provide manufactured roof panel assemblies with permanent resistance to air leakage through assembly of not more than 0.09 cfm/sq. ft. of fixed roof area when tested according to ASTM E 1680 at a static-air-pressure difference of 4.0 lbf/sq. ft.

C. Water Penetration: Provide manufactured roof panel assemblies with no water penetration as defined in the test method when tested according to ASTM E 1646 at a

minimum differential pressure of 20 percent of inward acting, wind load design pressure of not less than 6.24 lb./sq. ft and not more than 12.0 lb./sq. ft.

D. Metal roof assembly shall be capable of passing ASTM E 1592 testing without failure of any kind when subject to wind uplift pressure as required by Code.

E. System shall conform to ASCE 7 standard.

1.8 PRODUCT HANDLING

A. Protection: Protection shall be provided during fabrication, shipment, storage and erection. During shipment, finished surfaces shall be protected from abrasion by a removable plastic film between areas of contract. Job site storage shall be in a clean, dry area out of direct contact with the ground, under cover or sloped for drainage, protected from abuse by traffic and from contamination by corrosive or staining materials. Stored materials and unfinished work shall be secured against wind damage. Installed panels shall be protected from abuse by other trades.

1.9 WARRANTY

A. Upon completion of this portion of the work, and as a condition of its acceptance, deliver to the Architect a written warranty signed by the Roofing Contractor, and endorsed by the roofing materials manufacturer guaranteeing that the installed roofing will remain intact and free from leaks for a period of at least twenty-five (25) years.

B. Paint finish shall have a twenty-five (25) year guarantee against cracking, peeling and fade.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Metal roof shall be UNA-CLAD "UC-6," standing seam roof system as manufactured by Elevate, or approved equal by ATAS, PAC-CLAD, or Berridge Manufacturing, or other manufacturer acceptable to the architect.

2.2 METAL ROOFING

A. Provide 22-gauge AISI-G90 zinc-coated, galvanized steel sheet conforming to ASTM A653, G90 coating designation, structural quality, prepainted by the coil-coating process to comply with ASTM A755.

1. Surface: Smooth, flat finish.

B. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer’s written instructions.

1. Fluoropolymer Three-Coat System: Manufacturer's standard three-coat, thermocured system consisting of specially formulated inhibitive primer and

fluoropolymer color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight.

2. Color: As selected by the Architect.

C. Standing seam roof panels shall be site formed, and panel assembly designed for concealed mechanical attachment of panels to deck.

1. Provide minimum 0.0625" thick, stainless steel panel clips designed to meet negative load requirements.

2. Provide concealed fastener floating interlock for double lock seam.

3. Mechanically seamed cleats formed from minimum 0.0250" thick, stainless steel or nylon coated aluminum sheets.

2.3 POLYISOCYANURATE BOARD INSULATION

A. Polyisocyanurate Board Roof Insulation, Nailable: Provide 7" thick rigid, cellular thermal insulation with polyisocyanurate closed-cell foam core bonded to 7/16" thick OSB on the top side and a fiber-reinforced felt facer on the bottom side; equal to "ACFoam Nail Base" as manufactured by Atlas Roofing Company, or equal, complying with ASTM C 1289, Type V, average LTTR value as designated at mean temperatures indicated after testing per ASTM C 1303 as follows:

1. LTTR R-Value: 6.0/inch at 75 deg. F.

2. Surface Burning Characteristics: Maximum flame spread of 25.

2.4 MISCELLANEOUS MATERIALS

A. Provide components required for a complete roof panel assembly including trim, copings, fascia, mullions, sills, corner units, ridge closures, clips, seam covers, battens, flashings, gutters, sealants, gaskets, fillers, closure strips, and similar items. Match materials and finishes of panels.

1. Closure Strips: Closed-cell, self-extinguishing, expanded, cellular, rubber or cross-linked, polyolefin foam flexible closure strips. Cut or premold to match configuration of panels. Provide closure strips where indicated or necessary to ensure weathertight construction.

2. Sealing Tape: Pressure sensitive, 100 percent solids, polyisobutylene compound sealing tape with release paper backing. Provide permanently elastic, non-sag, non-toxic, non-staining tape.

3. Elastomeric Joint Sealant: ASTM C 920, of base polymer, type, grade, class, and use classifications required to seal joints in panel roofing and remain weathertight. Provide sealant recommended by panel manufacturer. Sealant shall be compatible with membrane.

4. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance.

Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

5. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96" long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36" o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match roof panels.

6. Downspouts: Formed from same material as roof panels. Fabricate in 10-foot-long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.

7. Snow Guards: Provide "ColorGard" as manufactured by S-5!, non-penetrating, seam-mounted, clip-on, rail-type snow guards, compatible with preformed metal roofing system and factory-finished to match adjacent metal roofing system finish.

B. Fasteners shall be self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Use stainless steel fasteners for all exterior applications and galvanized steel fasteners for interior applications.

C. Self-Adhering, High-Temperature Underlayment (throughout): Provide "CLAD-GARD™ SA" by Holcim Elevate, or approved equal; a self-adhering, cold-applied, sheet underlayment, minimum 40 mils thick, consisting of a slip-resistant, woven polyethylene top surface laminated to a layer of SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer. Provide double layer of Underlayment around all roof penetrations and along all roof edges and junctures (for the width of the roll @ 36”).

1. Thermal Stability: Stable after testing at 250°F (121°C); ASTM D1970.

2. Low-Temperature Flexibility: Passes after testing at -22°F (-30°C); ASTM D1970.

D. Provide 1/2" (minimum) cement board mechanically attached to metal deck to accept vapor barrier.

E. Provide vapor barrier below insulation, shown on elevation. Carlisle VapAir Seal 750 or equal (option Vapair seal MD, direct to metal deck, screw through.

F. Bituminous coating shall be cold applied asphalt mastic, SSPC - Paint 12, compounded for 15 mil dry film thickness per coat. Provide inert type non-corrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 PANEL SUPPORTS AND ANCHORAGE

A. Miscellaneous Metal Subframing and Furring (as detailed): ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653, G90 coating designation or ASTM A 792, Class AZ50 coating designation unless otherwise indicated. Provide

manufacturer's standard sections as required for support and alignment of metal panel system on plywood substrate.

2.6 FABRICATION

A. Comply with dimensions, profile limitations, gauges and fabrication details shown on drawings and specified herein.

B. Fabricate components and assembly units to comply with performance requirements specified.

C. Apply specified finishes in conformance with manufacturer's standards, and according to manufacturer's instructions.

D. In addition to requirements specified herein or shown on drawings, all surfaces exposed to view shall be clean, and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs and other defects which mar appearance of finished work. Metal work exposed to view shall be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design. Exposed fastenings, where permitted, shall be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and shall be of the smallest practicable size.

E. Materials used shall be of such strength, thickness, and alloy that they are capable of meeting all standards and descriptions specified herein and as detailed on drawings.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where the metal roof systems are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Comply with manufacturer's instructions for assembly, installation, and erection of roof systems.

B. Fasten cement board to deck in accordance with FM approved assembly, followed by applying vapor barrier to entire surface.

C. Metal Separation: Apply a coat of bituminous paint, concealed, on one or both surfaces wherever dissimilar metals would otherwise be in contact.

D. Adhere insulation to vapor barrier and cement board following FM guidelines.

E. Anchor component parts securely in place, providing for necessary thermal and structural movement.

F. Joint Sealers: Install gaskets, joint fillers and sealants where required for weatherproof performance of system. Provide type of gaskets and sealants/fillers recommended by manufacturer.

G. Installation of Metal Roof Panels

1. Conform to standards set forth in the SMACNA architectural sheet metal manuals and manufacturer's recommendations.

2. Install panels so that they are weathertight, without waves, warps, buckles or distortions, and allow for expansion and contraction.

3. Caulk all flashing and panel joints that require caulking to prevent water penetration.

4. Horizontal Seams: Horizontal seams are not permitted. Panels must be roll-formed to full roof lengths on-site or delivered to the site as continuous lengths to eliminate horizontal seams.

5. Standing Seams: Standing seams shall be field-formed using manufacturer-recommended mechanical seaming equipment.

6. Remove any strippable film immediately upon installation.

H. Damaged Material: Remove and replace panels and component parts of the work that are damaged beyond successful repair, including damage to finishes, as directed by the Architect. Repair minor damage.

I. Clean exposed surfaces of metal panels promptly after completion of installation. Comply with recommendations of the manufacturer.

END OF SECTION 071400

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 074246

CONCRETE PANELS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the ultra high performance concrete (UHPC) fabrications, as indicated on drawings and specified herein including, but not limited to, the following:

1. UHPC façade panels.

2. Extruded aluminum support system.

3. Attachment hardware and accessories.

4. All cast-in angle clips for attaching to back-up support system shall be stainless steel.

1.3 RELATED SECTIONS

A. Thermal Insulation - Section 072100.

B. Vapor-Permeable Air Barrier Liquid Membrane - Section 072700.

C. Sheet Metal Flashing - Section 076200.

1.4 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Manufacturer of ultra high performance cement panels shall be a firm which successfully fabricated UHPC components specified for a period of not less than five (5) years and is equipped to provide the quality and quantity shown. Manufacturing plant shall be certified by the Prestressed Concrete Institute.

B. Mock-Up: Provide on-site composite mock-ups as directed by the Architect, including adjacent connected construction.

1.5 ULTRA HIGH PERFORMANCE CONCRETE PERFORMANCE CRITERIA

A. The components and assemblies of the UHPC components system shall comply with the Codes and regulations of all Governing Agencies having jurisdiction. When applicable Codes or specified requirements differ, the more stringent conditions shall be provided for. Except when applicable codes make other provisions, or as otherwise

noted herein, the loads shall act in combinations that provide the most unfavorable conditions.

B. Wind Loads: The wind loads on the UHPC components and its connections shall be positive and negative per window Section.

1. Design Wind Pressure shall be multiplied by a Load Factor of 1.50. With this Load Factor applied, design stresses shall not exceed yield point level or elastic buckling level, whichever is lower. No wall element, including sealants and sealed joints, shall sustain permanent deformation or failure under loading equivalent to 1.5 times the Design Wind Pressures.

2. Stresses shall not exceed the allowable values established and recommended by Prestressed Concrete Institute. In no case shall allowable values exceed the yield stress. For load combinations, a reduction in load or increase in allowable stress (but not both) may be used only if permitted by code.

1.6 SUBMITTALS

A. Product Data: Submit specifications and other data for each type of UHPC required, including certification that type complies with specified requirements. Include instructions for handling, storage, installation, protection and cleaning.

B. Samples: Submit sets of samples of each different color, grade and finish. Include in each set full range of exposed color and texture to be expected in completed work, 24 by 24 inches and of actual thickness.

C. Project -Specific Shop Drawings: Submit cutting and setting drawings showing sizes, dimensions, sections and profiles of UHPC units, arrangement and provision for jointing, anchoring, and fastening, supports and other necessary details for lifting devices and reception of other work, including the following:

1. Provide layout of engineered bracket and rail support system to be coordinated with cold-formed metal framing.

2. Provide 1/4"=1'-0" elevation drawings and plan layout drawings, fully dimensioned and referenced to column lines. Details shall be minimum of 3"=1'-0" scale, and shall indicated all fully coordinated adjacent construction.

3. Unit shapes (elevations and sections) and dimensions.

4. Thickness of facing and UHPC backing.

5. Finishes.

6. Steel stud frame details.

7. Joint and connection details. Include complete integrated aluminum plate trim indicating joints, connections, corner conditions, etc.

8. Lifting and erection details.

9. Location and details of hardware attached to structure.

10. Size, location and details of lateral and gravity anchors.

11. Handling procedures.

12. Sequence of erection for special conditions.

13. Relationship to adjacent material.

14. Description of all loose, cast-in, and field hardware.

15. Each piece of panel shall be dimensioned and numbered. The numbers shall correspond to the numbers on the approved setting drawings.

D. The manufacturer shall not proceed with fabrication of any products prior to receiving approval of samples and erection drawings by the Architect.

E. Engineering Calculations: Submit engineering and design calculations to substantiate the anchoring methods, fastening devices, and substructure assembly components of the rainscreen system, and all UHPC indicated on the submitted shop drawings, signed and sealed by a Professional Engineer licensed in the State of New York.

1. Calculations shall establish compliance with specified stress at all principal elements and the structural analysis of all connections. If calculations indicate any deficiencies, provide all items necessary to comply with the performance requirements without cost to the Owner.

2. Calculations shall be submitted on 8-1/2" x 11" sheets and shall be signed and sealed by a professional engineer registered in the State of New York.

3. The general design shown is presumed adequate to permit compliance with the specified performance. Provide details and calculations as necessary to verify and supplement the general design.

1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery and Handling

1. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses or damage.

2. Lift or support units only at the points shown on the erection shop drawings.

3. Place nonstaining resilient spacers of even thickness between units.

4. Support units during shipment on nonstaining, shock-absorbing material.

5. Protect units from dirt and damage during handling and transport.

B. Storage at Job Site

1. Store units to protect them from contact with soiling, staining, and from physical damage.

2. Store units, unless otherwise specified, with nonstaining, resilient supports located in same positions as when transported.

3. Store units on firm, level, and smooth surface.

4. Place stored units so that identification marks are easily readable.

1.8 TESTING

A. The following tests shall be performed:

1. Concrete compressive strength according to ASTM C 39. Use specimens 3" x 6". These tests shall be performed at 40 hours, after curing at 72°F for each batch.

2. Determination of flow according to ASTM C 109 performed on a flow table constructed according to ASTM C 230. Inform the Owner if the measured diameter of the concrete after 20 table drops is outside of the following limits: minimum 7"; maximum 8-1/2". Perform the test on every concrete batch.

PART 2 PRODUCTS

2.1 UHPC PANELS

A. UHPC Façade Panels: Standard + by TAKTL and as indicated on Drawings.

2.2 PERFORMANCE CHARACTERISTICS

A. Compressive Strength: ≥ 18,275 lbs./in2 (126 MPa).

B. Flexural Strength: ≥ 2,756 lbs./in2 (19 MPa).

C. Tensile Strength: 1,160 lbs./in2 (8 MPa).

D. Water Absorption: < measurable limit (kg/m x h0.5) 3.5%.

2.3 PIECE FORMING AND CONCRETE CURING:

A. All pieces shall be formed from same batch of integrally colored UHPC.

B. The design and fabrication of forms shall satisfy the requirements of the imposed dimensional tolerances, influence of concrete shrinkage and tightness of forms. The joint leakage of the concrete shall be prevented in order to ensure that each panel is cast using one concrete batch. Cold joints are not permitted. Submit the form fabrication drawing for review.

C. Method of reinforcement and inserts to form attachments, concrete placing and vibration shall be included in the manufacturing procedure submitted to the Architect for approval.

D. The concrete in the form shall be cured during 24 hours at a temperature of 86°F +/- 10°F (20°F +/- 5°F). The forms shall be covered with plastic sheeting and the concrete shall be kept moist

E. Fasteners and Inserts: The manufacturer shall cast in pipes as detailed on the contract drawings.

F. NOTE: Perforations are to be in TAKTL panels through which

2.4 FABRICATION TOLERANCES

A. Manufacturing Tolerances: Manufacture UHPC panels so each finished unit complies with PCI MNL 130 for dimension, position, and tolerances.

B. Manufacturing Tolerances: Manufacture UHPC panels so each finished unit complies with the following dimensional tolerances. For dimensional tolerances not listed below, comply with PCI MNL 130.

1. Overall Height and Width of Units, Measured at the Face Adjacent to Mold: As follows:

   a. 10 feet (3 m) or less, plus or minus 1/8 inch (3 mm).
   b. More than 10 feet (3 m), plus or minus 1/8 inch per 10 feet (3 mm per 3 m); 1/4 inch (6 mm) maximum.

2. Edge Return Thickness: Plus 1/2 inch (13 mm), minus 0 inch (0 mm).

3. Architectural Facing Thickness: Plus 1/8 inch (3 mm), minus 0 inch (0 mm).

4. Backing Thickness: Plus 1/4 inch (6 mm), minus 0 inch (0 mm).

5. Panel Depth from Face of Skin to Back of Panel Frame or Integral Rib: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).

6. Angular Variation of Plane of Side Mold: Plus or minus 1/32 inch per 3 inches (0.8 mm per 75 mm) of depth or plus or minus 1/16 inch (1/5 mm) total, whichever is greater.

7. Variation from Square or Designated Skew (Difference in Length of Two Diagonal Measurements): Plus or minus 1/8 inch per 72 inches (3 mm per 1800 mm) or plus or minus 1/4 inch (6 mm) total, whichever is greater.

8. Local Smoothness: 1/4 inch per 10 feet (6 mm per 3 m).

9. Bowing: Not to exceed L/240 unless unit meets erection tolerances using connection adjustments.

10. Length and Width of Block Outs and Openings within One Unit: Plus or minus 1/4 inch (6 mm).

11. Location of Window Opening within Panel: Plus or minus 1/4 inch (6 mm).

12. Maximum Permissible Warpage of One Corner out of the Plane of the Other Three: 1/16 inch per 12 inches (1.5 mm per 300 mm) of distance from nearest adjacent corner.

C. Position Tolerances: Measured from datum line locations, as indicated on Shop Drawings.

1. Panel Frame and Track: Plus or minus 1/4 inch (6 mm).

2. Flashing Reglets at Edge of Panel: Plus or minus 1/4 inch (6 mm).

3. Inserts: Plus or minus 1/2 inch (13 mm).

4. Special Handling Devices: Plus or minus 3 inches (75 mm).

5. Location of Bearing Devices: Plus or minus 1/4 inch (6 mm).

6. Blockouts: Plus or minus 3/8 inch (10 mm).

D. Panel Frame Tolerances: As follows:

1. Vertical and Horizontal Alignment: 1/4 inch per 10 feet (6 mm per 3 m).

2. Spacing of Framing Member: Plus or minus 3/8 inch (10 mm).

3. Squareness of Frame: Difference in length of diagonals of 3/8 inch (10 mm).

4. Overall Size of Frame: Plus or minus 3/8 inch (10).

2.5 WALL SUPPORT FRAMING SYSTEM

A. Basis of Design: "NV1" by NVelope Rainscreen Systems Ltd.

B. Gauge, Configuration, Dimensions, and Spacing: Minimum gauge and as required to conform to design criteria for each assembly.

C. Material: Alloy 6005A T6 appropriate for rainscreen cladding support and construction; finish as selected by the Architect.

D. Wall Brackets

1. Single brackets have a height of 75 mm and the double brackets, 150 mm Pre-Punched Holes: For minimum two wall anchors per bracket.

2. Stem for Connecting Rail to Bracket:

a. Small bracket dimensions: 3 inch (h) and 2.5 inch (w). Plate thickness: 4mm Pre-punched bracket to substrate fastener holes of 6.5mm for steel and wood frame, 11mm for concrete or CMU substrate.
b. Large bracket dimensions: 6 inch (h) and 2.5 inch (w). Plate thickness: 4mm Pre-punched bracket to substrate fastener holes of 6.5mm for steel and wood frame, 11mm for concrete or CMU substrate.
c. Pre-punched Holes: For easy engagement and placement of stainless steel self- tapping hex-head screws for use in attaching vertical rail to wall bracket.

3. Dimensions: As needed to offset cladding from wall plane where meeting substrate and to allow for installation of insulation equal in thickness to offset.

    a. Offset Brackets: 40mm, 60mm, 90mm, 120mm, 150mm, 180mm, 210mm, 240mm, 270mm, 300mm depths with up to 40mm of adjustment on the vertical axis.
        1). Align offsets to differing wall planes as shown on Drawings.

4. Recommended Product: Nvelope Thermal Isolator.

E. Vertical Rail: Minimum 2.2 mm thick extruded aluminum.

1. Profile: L rail for vertical furring members.

2. Nominal Dimensions: 60mm leg and 40mm leg.

3. Profile: T-section for vertical furring members.

4. Nominal Dimensions: (T60-80) 60mm leg and 80mm face. (T60-100) 60mm leg and 100mm face. (T40-100) 40mm leg and 100mm face. (T60-120) 60mm leg and 120mm face. (T60-140) 60mm leg and 140mm face.

5. Profile - U-Section: (HBL60-40) 60mm leg and 40mm face. 2.5 mm thickness.

6. Profile - Z-Section: (Z25-45-30) 25mm face and 45mm leg and 30mm face. (Z40-45-55) 40mm face and 45mm leg and 55mm face. 2.4 mm thickness.

F. Thermal Barrier

1. Material: Injection molded Polypropylene copolymer.

2. Size: To accommodate plate.

    a. Framing Member to Framing Member Isolation: Minimum 0.125 inch thick.
    b. Isolator must match support bracket and must not decrease structural performance of system.

3. Product: NV-T1 or NV-T2 Thermal Isolators by NVelope USA, LLC, or approved equal, , or recommended by system manufacturer.

G. Connectors and Anchors

1. All connectors shall be concealed behing panel (not exposed).

2. Connectors used with Cold-Formed Steel Framing Members: Conform to ICC ES AC261.

3. Screw Fasteners: Stainless steel as instructed by manufacturer.

    a. Thermoset Polyester coating that exhibits 1,000 hours of salt spray beyond stainless steel anti-corrosiveness.
    b. Minimum No. 14 self-drill hex-head screw fastener to be used to attach horizontal rail to vertical rail.

c. Steel Studs:
1). Self-drill hex-head TEK screw fasteners of sufficient length.
2). Minimum three threads must penetrate steel stud members.

4. Concrete and Masonry Wall Anchors: Mechanical and Adhesive anchors, bolts, nuts, and washers suited to use and as required for transference of design loads.

a. Mechanical Anchors: Expansion type, conforming to ICC ES AC193.
b. Adhesive Anchors: Torque Controlled, conforming to ICC ES AC308.

H. Accessories

1. Bracing, Furring, Bridging, Plates, Gussets, and Clips: Formed sheet steel, thickness as necessary to meet structural requirements for special conditions encountered.

2. Galvanic Protection: Utilize tapes and other methods as necessary to separate and prevent contact between dissimilar metals.

2.6 FINISHES

A. Finish exposed-face surfaces of UHPC as follows to match approved samples and mock-ups. Submit samples for color match review in mock-up construction. Panel faces shall be free of joint marks, grain, or other obvious defects.

1. Colors: ‘Titanium’ (63) and ‘Graphite’ (40).

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for environmental conditions, installation tolerances, and other conditions affecting performance of ultra high performance concrete fabrications.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prior to installation of units, the Contractor shall check the job site dimensions affecting the work. Any discrepancies between design dimensions and field dimensions that could adversely affect installation in accordance with the contract documents shall be brought to the attention of the Architect. Installation shall not proceed until discrepancies are corrected or until installation requirements are modified and reviewed by the Architect.

B. Examine UHPC components prior to installation.

1. Any piece with flaws, imperfections, dimensional errors, improper tolerances, damage, discolorations, staining, or otherwise not considered suitable and/or acceptable to the Architect, will be subject to rejection.

2. Defective items shall be removed from the job site and replaced to the Architect's satisfaction within 48 hours. Repairs, such as gluing of broken units are not to be allowed.

C. Touch up galvanized steel surfaces, which are scratched or damaged, with zinc-rich paint and/or approved "Galvanize Repair" paint products. Clean metal thoroughly before touch up.

3.3 INSTALLATION

A. Contiguous Work: Provide openings and other provisions as shown or required for contiguous work. When directed by the Contractor, close up openings in units after other work is in place. Use materials and set to match surrounding units.

B. Setting: Set UHPC units in accordance with drawings and final shop drawings. Provide anchors, supports, fasteners and other attachments shown or necessary to secure work firmly in place. Shim and adjust accessories for proper setting of units.

1. Make necessary provisions for the employment of the suitable lifting devices at points provided by the manufacturer.

2. Erect UHPC units plumb and true with joints uniform in width and accurately aligned within the allowable tolerances.

3. Provide temporary supports and bracings as required to maintain position, stability and alignment when units are being permanently connected. Fasten UHPC units in place by bolting or welding or both as shown on approved erection drawings.

a. Provide slotted holes in connection and attachments to accommodate induced panel movement due to creep, thermal, moisture, field tolerances and dimensional changes in the structural frame.

3.4 CONSTRUCTION TOLERANCES

A. Install UHPC units to comply with the following noncumulative maximum variations:

1. Tolerance of Face Width of Joint

a. Panel Dimensions 10 Feet or Less: + 3/16"
b. Panel Dimensions 10 to 20 Feet: + 1/4"
c. Panel Dimensions Over 20 Feet: + 5/16"

2. Warpage: Maximum permissible warpage of one corner out of the plane of the other three shall 1/16 inch/ft. distance from the nearest adjacent corner, or 1/4" total after installation.

3. Bowing: Not over L/360 with a maximum of 1", where L is the panel length in the direction of the bow. Differential bowing as erected between adjacent members of the same design shall be not more than 1/4".

3.5 ADJUSTMENTS AND CLEANING

A. Remove and replace units which are broken, chipped, stained or otherwise damaged. Where directed, remove and replace units which do not match adjoining work. Provide new matching units, install as specified and eliminate evidence of replacement.

B. Clean UHPC units not less than 6 days after completion of work, using clean water and stiff-bristle brushes. Do not use wire brushes, acid type cleaning agents or other cleaning compounds with caustic or harsh fillers.

C. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures work being without damage, discolorations, or deterioration during subsequent construction and until time of substantial completion.

END OF SECTION 074246

SECTION 074616

ALUMINUM SIDING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the aluminum siding as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Aluminum siding.
2. Aluminum trim.
3. Fasteners and accessories.

1.3 RELATED SECTIONS

A. Vapor-Permeable Air Barrier Liquid Membrane - Section 072700.

B. Sheet Metal Flashing - Section 076000.

1.4 QUALITY ASSURANCE

A. Qualifications of Installers: Use single source design and build manufacturer who is thoroughly trained and experienced in the skills required and completely familiar with the requirements established for this work.

1. For actual installation of siding, use only competent and skilled workers completely familiar with the products and the manufacturer's currently recommended methods of installation.
2. Installer: A firm that can show proof of prior successful experience with the installation of metal siding of similar type and equivalent scope.

B. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. Finish areas designated by the Architect.
2. Do not proceed with remaining work until workmanship, color, and gloss are approved by the Architect.
3. Refinish mock-up area as required to produce acceptable work.

1.5 PERFORMANCE CRITERIA

A. Structural Design: Design calculations certified by a registered professional engineer licensed in New York shall be submitted to verify load-bearing capability of panel system. Panel system shall be capable of resisting a minimum positive and negative wind load as required by ASCE-7 or prevailing code, whichever is more stringent, without exceeding a deflection of L/180.

B. Air Infiltration: 0.06 CFM/sq. ft. air leakage under a static pressure of 1.57 psf when tested in accordance with ASTM E 283.

C. There shall be no uncontrolled water penetration to the building interior when the wall panel system is tested per ASTM E 331 at a positive pressure differential of 6.24 psf or 20% of the design wind pressure whichever is greater. The test pressure need not exceed 12 psf.

D. Accommodate movement within system without damage to components or movement within system; movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; deflection of structural support framing.

E. Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.

1.6 SUBMITTALS

A. Manufacturer's Data: Submit for information only, metal manufacturer's specifications, installation instructions and general recommendations for wall cladding applications. Include manufacturer's certification or other data substantiating that the materials comply with the requirements. Indicate by copy of transmittal that the Fabricator/ Installer has received copy of manufacturer's instructions and recommendations.

B. Samples: Submit 12" square samples of each specified metal and gauge to be used on siding. Samples will be reviewed by Architect for compliance with thickness, texture, and finish requirements only. Compliance with all other requirements is the exclusive responsibility of the Contractor.

C. Shop Drawings: Submit shop drawings showing the manner of forming, jointing, and securing the metal work. Shop drawings shall be coordinated and show surrounding work and shall be promptly updated throughout the project as architectural drawings and shop drawings from other trades are updated.

D. Structural calculations: Submit structural calculations signed and sealed by a Professional Engineer licensed in the State of New York.

1.7 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during, and after installation, and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.8 WARRANTY

A. Upon completion of this portion of the work, and as a condition of its acceptance, deliver to the Architect a written warranty signed by the Siding Contractor and endorsed by the siding materials manufacturer warranting that the installed siding will remain intact for a period of at least fifteen (15) years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Longboard Architectural Products, or approved equal by Knotwood, Dizal, or Architectural Panel Systems or other manufacturer acceptable to the architect.

2.2 MATERIALS

A. Extruded Aluminum Siding and Soffits: Longboard 6-Inch V-Groove Planks, extruded aluminum 6063-T5.

1. Finish Coating: Powder coated finish.

2. Color: As selected by the Architect.

3. Gloss: 30 ± 5.

4. Thickness: 1.52 mm base metal thickness.

5. Profile: 6 inch (152.4mm) V-groove 24 ft. (7315.2mm) plank.

2.3 ACCESSORIES

A. Exposed Trim: Inside corners, outside corners, wide starter strip, J-track, flat-cap and base, U-cap and base, finishing-cap and base, two-piece corner, perforated 2.5 vent strip, 2.5 nonperforated strip in same material and finishes as siding.

2.4 DISSIMILAR METALS PROTECTION

A. Where possible, contact between dissimilar metal surfaces shall be avoided. Where contact occurs, notify the Architect who shall advise the Contractor how best to isolate the surfaces, as follows:

1. Painting with:

a. Bituminous paint complying with FS-TT-C-494, Type II, 12 mils dry film thickness.
b. Zinc chromate primer, alkyd, complying with FS-TT-P-645.

2. Taping or gasketing with a non-absorptive material.

3. Caulking the joint between the 2 metals using sealant specified herein.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where aluminum siding is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. General: Comply with panel manufacturer's instructions for assembly, installation, and erection of aluminum siding.

B. Use Hex Head #10 self-drilling screws for exterior use. Fasten the first 'L' piece directly to the supporting structure (aluminum sub-girts) 32" o.c. If the wall is more than 24'-0" long, leave a 1/4" gap between butt joints for expansion and contraction. Snap on second 'L' piece using a hammer and block. Snap on end caps to both ends of the 2-piece beam. Secure with a hammer and block.

C. Damaged Material: Remove and replace panels and component parts of the work which have been damaged (including finish) beyond successful repair, as directed by the Architect. Repair minor damage.

3.3 CLEANING AND PROTECTION

A. Clean exposed surfaces of custom metal siding work promptly after completion of installation. Comply with recommendations of panel manufacturer.

B. Protection: The Installer of aluminum siding shall advise the Contractor in writing of protection procedures that can be anticipated as needed to ensure that the work will be without damage or deterioration at the time of final acceptance after completion of other construction work.

END OF SECTION 074616

SECTION 076200

SHEET METAL FLASHING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the sheet metal flashing as indicated on the drawings and/or specified herein, including, but not limited to, the following:

1. Stainless steel cap metal flashing.
2. Field fabricating (including bending, cutting, soldering, etc.), if required, of stainless steel flashing.
3. Stainless steel flashing elsewhere, where metal flashing is indicated on drawings.
4. Separation of contacting surfaces of dissimilar metals.

1.3 RELATED SECTIONS

A. Unit Masonry - Section 042000.

B. Concrete Panels - Section 074246.

C. Roofing - Division 7.

1.4 SUBMITTALS

A. Shop Drawings: Submit, showing all materials, finishes, fastenings, joint details, fabrication, construction, and relation to adjoining construction.

B. Samples: Submit 12" x 12" samples of flashing materials and finishes.

1.5 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during, and after installation, and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary at no additional cost to the Owner.

1.6 WARRANTY

A. The Contractor shall warrant that all Metal Flashing Work executed under this Section will be free from defects in materials and workmanship for a period of ten (10) years from date of acceptance of the Project, and he shall remedy any defects in the Metal Flashing Work.

PART 2 PRODUCTS

2.1 MATERIALS

A. Stainless Steel Flashing Materials

1. Stainless Steel Flashing: ASTM A 240, Type 304, stainless steel, with 2D finish, dead soft temper, fully annealed, as manufactured by International Nickel Co., Republic Steel Corp., United States Steel, or Washington Steel Corp. Thickness of stainless steel shall be as listed below.

a. Concealed Flashings: 0.012" thick, thirty (30) gauge (U.S. Standard).
b. Exposed Flashings: 0.015" thick, twenty-eight (28) gauge (U.S. Standard).
c. Edge Strips: 0.025" thick, twenty-four (24) gauge (U.S. Standard).

2. Accessories and Fastenings: AISI, Types 302 and 304 stainless steel.

3. Solder: Composed of sixty (60) percent block tin and forty (40) percent pig lead, except that solder at seams exposed to public view shall be eighty (80) percent tin and twenty (20) percent lead.

4. Flux: An acid type flux manufactured specifically for soldering stainless steel, as approved.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type non-corrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where sheet metal flashing is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 METAL FLASHING INSTALLATION

A. Reference Standard: Conform to the requirements of 7th Edition of the Sheet Metal and Air Conditioning Contractors Association (SMACNA) Architectural Sheet Metal Manual.

B. General: Fabricate and install metal flashing work in accordance with details and specifications of above Reference Standard, with manufacturer's instructions, and as herein specified, to provide a watertight installation. Apply metal flashing to smooth, even, sound, clean, dry surfaces free from defects. Make provisions to allow for expansion and contraction of metal flashing work. Wherever practicable, shop form all metal flashing work and deliver ready for installation. Form metal flashing work accurately to required profiles, with flat surfaces, straight edges and corners, free from defects. Fold exposed metal edges back not less than 1/2" and form drip.

C. Nailing: Confine to sheets twelve (12) inches or less in width. Confine nailing to one edge only, locate nails where concealed. Use No. 12 x 1" long flat headed, annular threaded, Type 302 stainless steel nails for nailing to wood blocking; use one (1) inch long masonry nails for nailing to concrete. Space nails four (4) inches o.c. maximum.

D. Cleating: Use cleats where sheets are more than twelve (12) inches in width. Space cleats approximately twelve (12) inches o.c. Cleats two (2) inches wide by three (3) inches long, of the same material and weight as the metal flashing being installed. Secure one end of the cleat with two (2) nails and fold edge back over the nail heads. Lock other end into seam or into folded edge of metal flashing sheets. Pre-tin cleats for soldered seams.

E. Joining: Join metal flashings with one (1) inch locked and soldered seams except at slip joints. Mallet seams flat and solder full length of seam as specified below.

F. Soldering: Clean and pre-tin edges of metal flashing to be soldered before soldering is begun with solder on both sides for a width of not less than 1-1/2". Solder slowly with well heated metal surfaces. Use ample solder. Show not less than one full inch of evenly flowed solder on seam. Seams shall have a liberal amount of flux brushed in before soldering is commenced. Where soldering paste or killed acid is employed as a flux, soldering shall follow immediately after application of the flux. Upon completion of soldering, clean surfaces of all flux.

G. Slip Joints: Locate slip joints not more than twenty-four (24) feet apart and not more than eight (8) feet from corners. Form slip joints as three (3) inch wide joints with cover piece behind flashing and fill locked ends neatly with sealant.

H. Cap Flashing: Install over base flashings, in eight (8) to ten (10) foot lengths, lapped six (6) inches at ends. Cap flashing shall be increased longitudinally to produce spring action to hold bottom edge of cap flashing firmly against base flashing. Cap flashing shall lap base flashing at least four (4) inches, with exposed bottom edge at a forty-five (45) degree angle downward and folded back on underside at least 1/2" to form drip. Make cap flashing continuous at corners and angles.

I. Miscellaneous Flashing: Provide all other miscellaneous metal flashing not specifically mentioned herein but indicated on drawings and/or required to provide a watertight installation.

J. Separation of Dissimilar Materials: Back paint surfaces of metal flashing in contact with dissimilar metals or with concrete or masonry with bituminous paint.

K. Reglets

1. Provide watertight reglets in masonry and concrete work to receive cap flashing. Form reglets of stainless steel using same thickness as stainless steel sheet metal specified.

2. In masonry work use open or closed slot reglets with slat at least one (1) inch deep and 3/16" wide. Provide hook dams or turn-ups for anchoring securely into mortar joints. Insert cap flashing into slot full depth using button punch or lead wedges to lock in place.

3. In concrete work, use open or closed slot reglets with slot sloped upward at forty-five (45) degrees, at least one (1) inch deep and 3/16" wide. For fastening reglets to concrete forms use double-head stainless steel nails spaced twelve (12) inches apart maximum.

4. Insert cap flashing full depth into reglet slot, and wedge in place using lead strips spaced on twelve (12) inch centers maximum or lead caulking rope. When lead strips are used for continuous caulked reglets, use approved weather-resistant fibrous compounds.

END OF SECTION 076200

SECTION 07 71 23

GUTTERS AND DOWNSPOUTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum downspouts and accessories.

1.2 RELATED SECTIONS

A. 074113 Metal Roof Panels .

1.3 REFERENCES

A. ASTM ;B32 - Solder Metal.

B. ASTM :B209 - Aluminum and Aluminum Alloy Sheet and Plate.

C. SMACNA - Architectural Sheet Metal Manual.

1.4 SUBMITTALS

A. Submit under provisions of Section 013300 - SUBMITTALS.

B. Product Data: Provide data on prefabricated components.

C. Shop Drawings: indicate locations, configurations, jointing methods, fastening methods, locations and installation details.

D. Samples: Submit two samples, 6 inches long, illustrating component design, finish, color and configuration.

1.5 REGULATORY REQUIREMENTS

A. Conform to applicable code(s) for size and method of rain water discharge.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver, store, protect and handle products to site under provisions of Section 016500 - PRODUCT DELIVERY, STORAGE AND HANDLING.

B. Stack preformed and prefinished material to prevent twisting, bending or abrasion, and to provide ventilation. Slope to drain.

C. Prevent contact with materials during storage which may cause discoloration, staining or damage.

1.7 COORDINATION

A. Coordinate work under provisions of Section 013100 - PROJECT MANAGEMENT AND COORDINATION.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Aluminum: ASTM 8209, 3003 alloy, H14 temper; 0.032 inch thickness or as indicated; mill finish interior, shop pre-coated Kynar 500 or Hylar 5000 finish, color to match standing seam metal roof panels.

2.2 COMPONENTS

A. Gutters: SMACNA style profile seamless, 6 inch box gutter.

B. Downspouts: SMACNA rectangular profile seamless 3 inch x 4 inch. Configure with soldered elbow offsets to provide minimal clearance to Canopy structure while providing allowance for concealed connectors.

C. Cast Iron Boots: 4" Ø Rectangular iron downspout to round discharge outlet with integral mounting strap, heavy duty painted gray with cleanout. 18" minimum casting. Barrycraft B25A or approved equal.

2.3 ACCESSORIES

A. Anchorage Devices: Concealed Type recommended by manufacturer.

B. Gutter Supports: Hidden flanges screwed to fascia and interlocked / fastened to the top front edge of gutter.

C. Downspout Supports: Flat 1 1/4" min. width concealed straps matching leader profile and color.

D. End Caps, Elbows: Fabricate to gutter profile with factory soldered connections.

E. Fasteners: Aluminum finish exposed fasteners same as leader metal.

F. Leaf Screen: 10 gauge welded screen, galvanized after fabrication, sized to fit and cover entire length of gutter with gaps.

G. Splash Blocks: Provide precast concrete (5000 psi) splash blocks where downspouts discharge onto grade.

H. Primer: Zinc chromate type.

I. Protective Backing Paint: Bituminous

2.4 FABRICATION

A. Form gutters and downspouts of profiles and sizes indicated in accordance with approved shop drawings.

B. Fabricate with required connection, expansion and splice pieces.

C. Form sections square in required profile, true and accurate in size, in maximum possible lengths, free of distortion or defects detrimental to appearance or performance. Allow for expansion at joints and at intervals required by the manufacturer.

D. Hem exposed edges of metal.

E. Solder shop formed metal joints. After soldering, remove flux. Wipe and wash solder joints clean. Weather seal all field joints and intersections with adjacent materials with color matching exterior vertical grade sealant.

F. Fabricate gutter and downspout accessories; seal watertight.

2.5 FINISHES

A. Apply bituminous protective backing on surfaces in contact with dissimilar materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that surfaces are ready to receive work.

3.2 INSTALLATION

A. Install gutters, downspouts and accessories in accordance with manufacturer's instructions and approved shop drawings.

B. Slope gutters 1/8 inch per foot minimum to leader locations.

C. Seal metal joints other than factory welded joints watertight.

D. Provide leader strap connections at 5'-0" maximum with a minimum of at least two connections per section.

B. All gutter hangers shall be installed and fastened at 30 inches o.c. maximum.

END OF SECTION 077123

SECTION 07 72 00

ROOF ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Roof curbs.
2. Pipe supports.
3. Preformed flashing sleeves.

B. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of roof accessory indicated. include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For roof accessories. include plans, elevations, keyed details, and attachments to other work. indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof- mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.
2. Method of attaching roof accessories to roof or building structure.
3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
4. Required clearances.
5. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.6 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.7 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D2244.

b. Chalking in excess of a No. B rating when tested according to ASTM D4214.

c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 METAL MATERIALS

A. Aluminum Sheet: ASTM 8209, 0.040 inch thickness or as indicated, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.

1. Mill Finish: As manufactured.

2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.

3. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.

B. Stainless-Steel Sheet and Shapes: ASTM A24O/A240M or ASTM 4666, Type 304.

C. Galvanized-Steel Tube: ASTM A500/A500M, round tube, hot-dip galvanized according to ASTM A123/A123M.

2.2 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturers for a complete installation.

B. Polyisocyanurate Board insulation: ASTM C1289, thickness as indicated.

C. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M. D Underlayment:

1. Felt: ASTM D226, Type ll (No.30), asphalt. Saturated organic felt, non-perforated.
2. Polyethylene Sheet: 6-mil thick polyethylene sheet complying with ASTM D4397,
3. Slip Sheet: Building paper, 3-lb/100 sq. ft. minimum, rosin sized.

D. Fasteners: Roof accessory manufacturers recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:

1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM 4153/4153M or ASTM F 2329.
2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
3. Fasteners for Copper Sheet: Copper, hardware bronze, or passivated Series 300 stainless steel.
4. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

E. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.

F. Elastomeric Sealant: ASTM C920, elastomeric polyurethane polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

G. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.

1. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

2.3 EQUIPMENT SUPPORTS

A. Equipment Supports: internally reinforced metal equipment supports capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed

corner joints, integral metal cant, and integrally formed deck-mounting flange at perimeter bottom.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a. Greenheck Fan Corporation

b. Milcor lnc. ; Commercial Products Group of Hart & Cooley, lnc

c. Pate Company (The)

d. Thvbar Corporation

2. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.

C. Loads: Coordinate and verify load requirements with approved manufacturer's Product Data for each piece of equipment requiring support.

D. Material: Aluminum sheet, 0.090 inch thick.

1. Finish: Factory prime coating Baked enamel or powder coat .

2. Color: As selected by Architect from manufacturer's full range.

E. Construction:

1. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.

2. Fabricate equipment supports to minimum height of 12 inches unless otherwise indicated.

3. Sloping Roofs: Where roof slope exceeds 1:48, fabricate each support with height to accommodate roof slope so that tops of supports are level with each other. Equip supports with water diverters or crickets on sides that obstruct water flow.

4. Security Grille: Provide where indicated.

2.4 PIPE SUPPORTS

A. Pipe Supports: Adjustable-height, extruded-aluminum tube, filled with urethane insulation; 2 inches in diameter; with aluminum baseplate, EPDM base seal, manufacturer's recommended hardware for mounting to structure or structural roof deck as indicated and extruded-aluminum carrier assemblies; suitable for quantity of pipe runs and sizes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

2. Pipe Support Height: As indicated on Drawings.

3. Roller Assembly: With stainless-steel roller, sized for supported pipes.
4. Pipe Support Flashing: Manufacturer's standard insulated sleeve flashing with integral base flange; aluminum sheet, 0.063 inch (1.60 mm) thick.
5. Finish: Manufacturer’s standard.

2.5 PREFORMED FLASHING SLEEVES

A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, 12 inches (300 mm) high, with removable metal hood and slotted metal collar.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   a. Custom Solution Roof and Metal Products
   b. Milcor lnc.; Commercial Products Group of Hart & Cooley, Inc
2. Metal: Aluminum sheet, 0.063 inch (1.60 mm) thick.
3. Diameter: As indicated .
4. Finish: Manufacturer's standard.

B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   b. Custom Solution Roof and Metal Products
   c. Milcor lnc.' Commercial Products Group of Hart & Coolev lnc
2. Metal: Aluminum sheet, 0.063 inch (1.60 mm) thick.
3. Height: 13 inches (330 mm).
4. Diameter: As indicated.
5. Finish: As selected by the Architect from the manufacturer's full line of finishes.

C. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable.

E. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

C. Verify dimensions of roof openings for roof accessories.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: install roof accessories according to manufacturer's written instructions.

1. install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

2. Anchor roof accessories are securely in place so they are capable of resisting indicated loads.

3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.

4. lnstall roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of stainless-steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.

2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene sheet.

3. Bed flanges in thick coat of roofing cement where required by manufacturers of roof accessories for waterproof performance.

C. Roof Curb installation: install each roof curb so top surface is level.

D. Equipment Support installation: install equipment supports so top surfaces are level with each other.

E. Roof-Hatch I installation :

1. Install roof hatch so top surface of hatch curb is level.

2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.

3. Attach safety railing system to roof-hatch curb.

4. Attach ladder-assist post according to manufacturer's written instructions.

F. Pipe Support installation: install pipe supports so top surfaces are in contact with and provide equally distributed support along length of supported item.

G. Preformed Flashing-Sleeve installation: Secure flashing sleeve to roof membrane according to flashing- sleeve manufacturer's written instructions.

H. Seal joints with butyl sealant as required by roof accessory manufacturer.

3.3 REPAIR AND CLEANING

A. Clean exposed surfaces according to manufacturer's written instructions.

B. Clean off excess sealants.

C. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 077200

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 07 72 53

SNOW GUARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:

1. Standing Seam Two-Pipe Snow Guard.

1.2 RELATED SECTIONS

A. 074113 Metal Roof Panels .

1.3 ACTION SUBMITTALS

A. Product Data: include construction details, material descriptions, dimensions of individual components and profiles, and finishes for snow guards.

B. Shop Drawings: include roof plans showing layouts and attachment details of snow guards.

1. include details of Two-Pipe Snow Guard.

2. include calculation of number and location of snow guards based on snow load, roof slope, roof type, components, spacings, and finish.

C. Samples: Base, bracket, and Pad type snow guard.

1.4 QUALITY ASSURANCE

A. Installer to be an approved installer of the specified roofing and snow guard materials with a minimum of five years of experience.

1.5 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each type of snow guard, for tests performed by manufacturer and witnessed by a qualified testing agency.

1.6 DELIVERY, STORAGE AND HANDLING

A. Inspect material upon delivery and order replacements for any missing, defective or damaged items.

B. Keep materials dry, covered and off the ground prior to installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Performance Requirements: Provide snow guards that withstand exposure to weather and resist thermally induced movement without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

B. Structural Performance:

1. Snow Loads: 30 pounds per square foot unless indicated otherwise on the drawings.

2.2 TWO-PIPE-TYPE SNOW GUARDS

A. Basis-of-Design Product Subject to compliance with requirements, provide product product by one of the following:

1. Alpine Snowguards, a Division of Vermont Slate & Copper Services, lnc., 888-766-427 3. www.alpinesnowguards.com:

a. Model ASG4025 Gusseted Snow Guards with ASG4025-AL

2. S-5! (888) 825-3432 www.s-5.com

a. ‘DualGuard’

B. Finish:

1. Powder Coated.

2. Color: Custom color from RAL color chart for best match to metal panel roof.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for installation tolerances, snow guard attachment, and other conditions affecting performance of the Work.

1. Verify compatibility with and suitability of substrates including compatibility with existing finishes or primers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean and prepare substrates for bonding snow guards.

B. Prime substrates according to snow guard manufacturer's written instructions.

C. Inspect structure and verify that it will withstand additional; snow loading that may occur due to snow guard installations. Notify the contractor of any deficiencies for correction prior to the installation of the snow guards. inform the Architect or Engineer of any such findings and remedial work required.

D. Verify that the roofing material has been correctly installed and inspected by the roofing manufacturer issuing the roofing warranty prior to and following the snow guard installations. installation of snow guards shall be in accordance with the roofing manufacturer's warranty.

3.3 INSTALLATION

A. Install snow guards according to manufacturer's written instructions. Space rows as recommended by the manufacturer.

B. Attachment to ribs of double-fold standing seam metal roof panels with suitable clamp system from selected manufacturer.

END OF SECTION 0077253

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 078413

FIRESTOPS AND SMOKESEALS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the firestops and smokeseals as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Penetrations through fire-resistance-rated floor and roof construction including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

2. Penetrations through fire-resistance-rated walls and partitions including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

3. Penetrations through smoke barriers and construction enclosing compartmentalized areas involving both empty openings and openings containing penetrating items.

4. Sealant joints in fire-resistance-rated construction.

5. Penetrations at each floor level in shafts and/or stairwells.

6. Construction joints, including those between top of fire rated walls and underside of floors above.

1.3 RELATED SECTIONS

A. Cast-in-Place Concrete - Section 033000.

B. Unit Masonry - Section 042000.

C. Joint Sealants - Section 079200.

D. Gypsum Drywall - Section 092900.

E. Piping penetrations - Division 22.

F. Duct penetrations - Division 23.

G. Cable and conduit penetrations - Division 26.

1.4 REFERENCES

A. ASTM E 814 "Standard Method of Fire Tests of Through-Penetration Firestops."

B. UL 1479, UBC 7-5 (Both are same as A. above).

C. ASTM E 136 "Standard Test Method for Assessing Combustibility of Materials."

D. UL 263, UBC 7-1 "Fire Tests of Building Construction and Materials"

E. UL 2079 "Tests For Fire Resistance of Building Joint Systems."

F. ASTM E 1399 "Test For Dynamic Movement Conditions."

G. ASTM E 1966 (Same as E. above).

H. ASTM G 21 "Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi."

I. Test Requirements: ASTM E 2307, "Standard Test Method for Determining Fire Resistance of Perimeter Fire Barrier Systems Using Intermediate-Scale, Multi-story Test Apparatus."

J. Inspection Requirements: ASTM E 2174, "Standard Practice for On-site Inspection of Installed Firestops."

K. Published Through-Penetration Systems by recognized independent testing agencies.

1. UL Fire Resistance Directory, Volume II of current year.

2. Warnock Hersey Certification Listings, current year.

3. Omega Point Laboratories, current year.

L. International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgments.

1.5 SUBMITTALS

A. Submit manufacturer's product literature for each type of firestop material to be installed. Literature shall indicate product characteristics, typical uses, performance, limitation criteria, test data and indication that products comply with specified requirements.

B. Submit shop drawings detailing materials, installation methods, and relationships to adjoining construction for each firestop system, and each kind of construction condition penetrated and kind of penetrating item. Include firestop design designation of qualified testing and inspection agency evidencing compliance with requirements for each condition indicated.

1. Submit documentation, including illustrations, for proposed UL listed (or equal) firestop and smokeseal assembly required for the Project.

C. Material Safety Data Sheets: Submit MSDS for each firestop product.

D. Submit qualifications of firestop installer, including letter from firestop manufacturer of products proposed to be installed, wherein manufacturer approves or recognizes as trained/ or certifies installer for installation of that manufacturer's products.

E. Engineering Judgment: For those firestop applications that exist for which no qualified tested system is available through a manufacturer, an engineering judgment derived from similar qualified tested system designs or other tests will be submitted to local authorities having jurisdiction for their review and approval prior to installation. Engineering judgment documents must follow requirements set forth by the International Firestop Council.

1.6 QUALITY ASSURANCE

A. General: Provide firestopping systems that are produced and installed to resist the spread of fire and the passage of smoke and other gases.

B. Installation Responsibility: Assign installation of through-penetration firestop systems and fire-resistive joint systems in Project to a single sole source firestop specialty contractor.

C. Firestopping materials shall conform to Flame (F) and Temperature (T) ratings as required by local building code and as tested by nationally accepted test agencies per ASTM E 814 or UL 1479. The F-rating must be a minimum of one (1) hour, but not less than the fire resistance rating of the assembly being penetrated. T-rating, when required by code authority, shall be based on measurement of the temperature rise on the penetrating item(s). The fire test shall be conducted with a minimum positive pressure differential of 0.01 inches of water column.

1. Penetrations in Horizontal Assemblies: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.

   a. F-Rating: Minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
   b. T-Rating: When penetrant is located outside of a wall cavity, minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
   c. W-Rating: Class 1 rating in accordance with water leakage test per UL 1479.

2. Penetrations in Smoke Barriers: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.

   a. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at both ambient and elevated temperatures.

D. Firestopping products shall be asbestos free and free of any PCBs.

E. Do not use any product containing solvents or that requires hazardous waste disposal.

F. Do not use firestop products which after curing, dissolve in water.

G. Do not use firestop products that contain ceramic fibers.

H. Firestopping Installer Qualifications: Firestop application shall be performed by a single firestopping contractor who specializes in the installation of firestop systems, whose personnel to be utilized have received specific training and certification or approval from the proposed respective firestop manufacturer, and firestop installer shall have a minimum of three years' experience (under present company name) installing firestop systems of the type herein specified.

I. Mock-Up: Prepare job site mock-ups of each typical Firestop System proposed for use in the project. Approved mock-ups will be left in place as part of the finished project and will constitute the quality standard for the remaining work.

J. For firestopping exposed to view, traffic, moisture, and physical damage, provide products that do not deteriorate when exposed to these conditions.

1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.

2. For floor penetrations with annular spaces exceeding 4 inches or more in width and exposed to possible loading and traffic, provide firestop systems capable of supporting the floor loads involved either by installing floor plates or by other means.

3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

K. Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of less than or equal to 1 as determined by ASTM G 21.

L. Firestopping Materials are either "cast-in-place" (integral with concrete placement) or "post-installed." Provide cast-in-place firestop devices prior to concrete placement.

M. Firestop systems do not reestablish the structural integrity of load bearing partitions or assemblies, or support live loads and traffic. Installer shall consult the Structural Engineer prior to penetrating any load bearing assembly.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original unopened containers with manufacturer's name, product identification, lot numbers, UL or Warnock Hersey labels, and mixing and installation instructions, as applicable.

B. Store materials in the original, unopened containers or packages, and under conditions recommended by manufacturer.

C. All firestop materials shall be installed prior to expiration of shelf life.

1.8 PROJECT CONDITIONS

A. Verify existing conditions and substrates before starting work.

B. Do not use materials that contain solvents, show sign of damage or are beyond their shelf life.

C. During installation, provide masking and drop cloths as needed to prevent firestopping products from contaminating any adjacent surfaces.

D. Conform to ventilation requirements if required by manufacturer's installation instructions or Material Safety Data Sheet.

E. Weather Conditions: Do not proceed with installation of firestop products when temperatures are in excess or below the manufacturer's recommendations.

F. Schedule installation of firestop products after completion of penetrating item installation but prior to covering or concealing of openings.

G. Coordinate this work as required with work of other trades.

1.9 SEQUENCING AND SCHEDULING

A. Pre-Installation Conference: Convene a pre-installation conference to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

B. Sequence: Perform work of this and other sections in proper sequence to prevent damage to the firestop systems and to ensure that their installation will occur prior to enclosing or concealing work.

C. Install all firestop systems after voids and joints are prepared sufficiently to accept the applicable firestop system.

D. Do not cover firestop systems until they have been properly inspected and accepted by the authority having jurisdiction.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with requirements, provide products of one of the following manufacturers or approved equal:

1. Hilti, Inc.

2. Specified Technologies Inc.

3. 3M.

2.2 FIRESTOPPING, GENERAL

A. Compatibility: Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service and application, as demonstrated by firestopping manufacturer based on testing and field experience.

B. Accessories: Provide components for each firestopping system that are needed to install fill materials. Use only components specified by the firestopping manufacturer and approved by the qualified testing and inspecting agency for the designated fire-resistance-rated systems. Accessories include but are not limited to the following items:

1. Permanent forming/damming/backing materials including the following:

a. Semi-refractory fiber (mineral wool) insulation.
b. Sealants used in combination with other forming/damming materials to prevent leakage of fill materials in liquid state.
c. Fire-rated form board.
d. Joint fillers for joint sealants.

2. Temporary forming materials.

3. Substrate primers.

4. Collars.

5. Steel sleeves.

C. Applications: Provide firestopping systems composed of materials specified in this Section that comply with system performance and other requirements.

D. Smokeseals at top of partitions shall be flexible to allow for partition deflection.

E. Polypropylene Sleeves (PP): (For cast-in device options.)

2.3 FILL MATERIALS FOR THROUGH-PENETRATION FIRESTOP SYSTEMS

A. Endothermic, Latex Compound Sealant: Single-component, endothermic, latex formulation.

B. Intumescent, Latex Sealant: Single-component, Intumescent, latex formulation.

C. Intumescent Putty: Non-hardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.

D. Intumescent Wrap Strips: Single-component, elastomeric sheet with aluminum or polyethylene foil on one side.

E. Job-Mixed Vinyl Compound: Prepackaged vinyl-based powder product for mixing with water at Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings of zero per ASTM E 84.

F. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a non-shrinking, homogeneous mortar.

G. Pillows/Bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.

H. Moldable putty pads by 3M or approved equal.

I. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, non-shrinking foam.

J. Silicone Sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and non-sag formulation for openings in vertical and other surfaces requiring a non-slumping/gunnable sealant, unless firestop system limits use to non-sag grade for both opening conditions.

K. Fire Rated Cable Management Devices: Factory-assembled round metallic sleeve device for use with cable penetrations, containing an integrated smoke seal fabric membrane that can be opened and closed for re-penetration.

L. Drop-In Firestop Devices: Factory-assembled devices for use with combustible or noncombustible penetrants in cored holes within concrete floors. Device shall consist of galvanized steel sleeve lined with an intumescent strip, an extended rectangular flange attached to one end of the sleeve for fastening to concrete floor, and neoprene gasket.

M. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

N. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

O. Blocks/Plugs: Intumescent flexible block/plug suitable for reuse in re-penetration of openings. Blocks shall allow up to 12” of unreinforced annular space.

P. Tub Box Kit: Cast-in place pre-formed plastic tub box kit with three support legs for use with drain piping assembly associated with bathtub installations.

2.4 FIRE-RESISTIVE ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealant of base polymer indicated that complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class, and Uses, and requirements specified in this Section applicable to fire-resistive joint sealants.

1. Sealant Colors: Color of exposed joint sealants as selected by the Architect.

B. Single-Component, Neutral-Curing Silicone Sealant: Type S; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, G, A, and (as applicable to joint substrates indicated) O.

1. Additional Movement Capability: Provide sealant with the capability to withstand 33 percent movement in both extension and compression for a total of 66 percent movement.

C. Multi-Component, Non-Sag, Urethane Sealant: Type M; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, A, and (as applicable to joint substrates indicated) O.

1. Additional Movement Capability: Provide sealant with the capability to withstand 40 percent movement in extension and 25 percent in compression for a total of 65 percent movement in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated.

D. Single-Component, Non-Sag, Urethane Sealant: Type S; Grade NS; Class 25; and Uses NT, M, A, and (as applicable to joint substrates indicated) O.

2.5 MINERAL FIBER/CERAMIC WOOL NON-COMBUSTIBLE INSULATION (FIRE SAFING)

A. Provide min. 4 pcf safing insulation; Thermafiber Safing Mineral Wool Insulation by Thermafiber, Inc. (an Owens Corning company), Roxul Safe Fire Safing Insulation by Rockwool, Mineral Wool Safing by Johns Manville or approved equal to suit conditions and to comply with fire resistance and firestop manufacturer's requirements.

B. Material shall be classified non-combustible when tested per ASTM E 136.

2.6 MIXING

A. For those products requiring mixing prior to application, comply with firestopping manufacturer's directions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other procedures needed to produce firestopping products of uniform quality with optimum performance characteristics for application indicated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions with Installer present, for compliance with requirements for opening configuration, penetrating items, substrates, and other conditions affecting performance of firestopping. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings and joints immediately prior to installing firestopping to comply with recommendations of firestopping manufacturer and the following requirements:

1. Remove all foreign materials from surfaces of opening and joint substrates and from penetrating items that could interfere with adhesion of firestopping.

2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.

3. Remove laitance and form release agents from concrete.

B. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing seal of firestopping with substrates.

3.3 CONDITIONS REQUIRING FIRESTOPPING

A. Building Exterior Perimeters

1. Where exterior facing construction is continuous past a structural floor, and a space (i.e. construction joint) would otherwise remain open between the inner face of the wall construction and the outer perimeter edge of the structural floor, provide firestopping to equal the fire resistance of the floor assembly.

a. If mineral wool is part of firestop system, the mineral wool must be completely covered by appropriate thickness of UL or Warnock Hersey listed firestop sealant or spray.
b. Refer to Article 3.6 herein for description of fire safing insulation.

2. Firestopping shall be provided whether or not there are any clips, angles, plates, or other members bridging or interconnecting the facing and floor systems, and whether or not such items are continuous.

3. Where an exterior wall passes a perimeter structural member, such as a girder, beam, or spandrel, and the finish on the interior wall face does not continue up to close with the underside of the structural floor above, thus interrupting the fire-resistive integrity of the wall system, and a space would otherwise remain open between the interior face of the wall and the structural member, provide firestopping to continuously fill such open space.

B. Interior Walls and Partitions

1. Construction joints between top of fire rated walls and underside of floors above, shall be firestopped.

2. Firestop system installed shall have been tested by either UL or Omega Point, including exposure to hose stream test and including for use with steel fluted deck floor assemblies.

3. Firestop system used shall allow for deflection of floor above.

C. Penetrations

1. Penetrations include conduit, cable, wire, pipe, duct, or other elements which pass through one or both outer surfaces of a fire rated floor, wall, or partition.

2. Except for floors on grade, where a penetration occurs through a structural floor or roof and a space would otherwise remain open between the surfaces of the penetration and the edge of the adjoining structural floor or roof, provide firestopping to fill such spaces in accordance with ASTM E 814.

3. These requirements for penetrations shall apply whether or not sleeves have been provided, and whether or not penetrations are to be equipped with escutcheons or other trim. If penetrations are sleeved, firestop annular space, if any, between sleeve and wall of opening.

D. Provide firestopping to fill miscellaneous voids and openings in fire rated construction in a manner essentially the same as specified herein before.

3.4 INSTALLING THROUGH PENETRATION FIRESTOPS

A. General: Comply with the through penetrations firestop manufacturer's installation instructions and drawings pertaining to products and applications indicated.

B. Install forming/damming materials and other accessories of types required to support fill materials during their application and in the position needed to produce the cross-sectional shapes and depths required to achieve fire ratings of designated through-penetration firestop systems. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

C. Install fill materials for through penetration firestop systems by proven techniques to produce the following results:

1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.

2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.

3. For fill materials that will remain exposed after completing work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.5 INSTALLING FIRE-RESISTIVE JOINT SEALANTS

A. General: Comply with ASTM C 1193, and with the sealant manufacturer's installation instructions and drawings pertaining to products and applications indicated.

B. Install joint fillers to provide support of sealants during application and at position required to produce the cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability and develop fire resistance rating required.

C. Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross sectional shapes and depths relative to joint width that optimum sealant movement capability. Install sealants at the same time joint fillers are installed.

D. Tool no sag sealants immediately after sealant application and prior to the time skinning or curing begins. Form smooth, uniform beads of configuration indicated or required to produce fire resistance rating, as well as to eliminate air pockets, and to ensure contact and adhesion of sealants with sides of joint. Remove excess sealant from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.6 INSTALLING FIRESAFING INSULATION

A. Install fire safing insulation utilizing welded or screw applied galvanized steel impaling pins and retaining clips; space clips or pins 24" o.c. maximum.

B. Completely fill voids in areas where safing insulation is required. At spandrel conditions/floor edges, depth of insulation top to bottom shall be at least four (4) inches.

C. Cover top of all safing insulation with firestop sealant or spray.

3.7 FIELD QUALITY CONTROL

A. Inspecting agency employed and paid by the Owner will examine completed firestopping to determine, in general, if it is being installed in compliance with requirements.

B. Inspecting agency will report observations promptly and in writing to Contractor, Owner and Architect.

C. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.

D. Where deficiencies are found, Contractor must repair or replace firestopping so that it complies with requirements.

3.8 CLEANING

A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturers of firestopping products and of products in which openings and joints occur.

B. Protect firestopping during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated firestopping immediately and install new materials to product firestopping complying with specified requirements.

END OF SECTION 078413

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 079200

JOINT SEALERS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment and services necessary to complete the joint sealers work as shown on the drawings and/or specified herein, including but not necessarily limited to the following:

1. Exterior wall joints not specified to be sealed in other Sections of work.
2. Interior wall joints not specified to be sealed in other Sections of work, including caulking to fill between architectural woodwork and any wall, floor and/or ceiling imperfections.
3. Control and expansion joints in walls.
4. Joints at wall penetrations.
5. Joints between items of equipment and other construction.
6. All other joints required to be sealed to provide a positive barrier against penetration of air and moisture.

1.3 RELATED SECTIONS

A. Roofing - Division 7.

B. Concrete Panels - Section 074246.

C. Firestop sealants - Section 078413.

D. Glazing sealants - Section 088000.

E. Sealant within drywall construction - Section 092900.

F. Sealant at tile work - Section 093013.

G. Sealant at paving - Division 32.

1.4 QUALITY ASSURANCE

A. Qualification of Installers: Use only personnel who are thoroughly familiar, skilled, and specially trained in the techniques of sealant work, and who are completely familiar with the published recommendations of the sealant manufacturer.

B. Pre-Construction Field Adhesion Testing: Before installing elastomeric sealants, field test their adhesion to project joint substrates according to the method in ASTM C 794 and C 1521 that is appropriate for the types of Project joints.

C. Perform testing per ASTM C 1248 on interior and exterior sealants to determine if sealants or primers will stain adjacent surfaces. No sealant work shall start until results of these tests have been submitted and the Architect has given written approval to proceed with the work.

1.5 SUBMITTALS

A. Shop Drawings: Submit shop drawings showing all joint conditions, indicating relation of adjacent materials, all sealant materials (sealant, bond breakers, backing, primers, etc.), and method of installation.

1. Submit joint sizing calculations certifying that movement capability of sealant is not being exceeded.

B. Samples: Submit the following:

1. Color samples of sealants, submit physical samples (not color chart).

2. Sealant bond breaker and joint backing.

C. Product Data: Submit manufacturer's technical information and installation instructions for:

1. Sealant materials, indicating that material meets standards specified herein.

2. Backing rods.

D. Submit manufacturer's certification as required by Article 1.6 herein.

E. Submit results of testing required in Article 1.4 herein.

1.6 MANUFACTURER'S RESPONSIBILITY AND CERTIFICATION

A. Contractor shall require sealant manufacturer to review the Project joint conditions and details for this Section of the work. Contractor shall submit to the Architect written certification from the sealant manufacturer that joints are of the proper size and design, that the materials supplied are compatible with adjacent materials and backing, that the materials will properly perform to provide permanent watertight, airtight or vaportight seals (as applicable), and that materials supplied meet specified performance requirements.

1.7 ENVIRONMENTAL CONDITIONS

A. Temperature: Install all work of this Section when air temperature is above forty (40) degrees F. and below eighty (80) degrees F., unless manufacturer submits written instructions permitting sealant use outside of this temperature range.

B. Moisture: Do not apply work of this Section on surfaces which are wet, damp, or have frost.

1.8 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section, before, during and after installation and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

C. Storage

1. Store sealant materials and equipment under conditions recommended by their manufacturer.

2. Do not use materials stored for a period of time exceeding the maximum recommended shelf life of the material.

3. Material shall be stored in unopened containers with manufacturers' name, batch number and date when shelf life expires.

1.9 WARRANTY

A. Provide a written, notarized warranty from the manufacturer stating that the applied sealants shall show no material failure for a period of twenty (20) years.

B. Contractor to provide a written, notarized warranty stating that the applied sealants shall show no failure due to improper installation for a period of five (5) years.

C. Warranty shall be in a form acceptable to the Owner and executed by an authorized individual.

D. Include in the warranty an agreement to repair and/or replace, at the Contractor's expense, sealant defects that develop during the warranty period as a result of faulty labor and/or materials.

PART 2 PRODUCTS

2.1 SEALANT MATERIALS

A. Exterior Wall Sealant: Provide one (1) part non-sag sealant equal to "DOWSIL 790" or "DOWSIL 795" made by The Dow Chemical Company, "Silpruf SCS 2000" or "LM SCS 2700" made by G.E., "Spectrem 1" or "Spectrem 3" made by Tremco or

"Sonolastic 150" by Sonneborn conforming to the minimum standards of ASTM C 920, Type S, Grade NS, Class 50.

B. Interior Sealant: Provide a one (1) part acrylic-based sealant conforming to ASTM C 834, equal to "AC-20+ Silicone" made by Pecora, Masterseal NP 520 by BASF or equal made by Tremco.

C. Colors: Colors selected from manufacturer's standard selection.

2.2 MISCELLANEOUS MATERIALS

A. Back-Up Materials: Provide back-up materials and preformed joint fillers, non-staining, non-absorbent, compatible with sealant and primer, and of a resilient nature, equal to "HBR" made by Nomaco Inc. or approved equal, twenty-five (25) percent wider than joint width. Materials impregnated with oil, bitumen or similar materials shall not be used. Provide back-up materials only as recommended by sealant manufacturer in writing.

B. Provide bond breakers, where required, of polyethylene tape as recommended by manufacturer of sealant.

C. Provide primers recommended by the sealant manufacturer for each material to receive sealant. Note that each exterior joint must be primed prior to sealing.

D. Provide solvent, cleaning agents and other accessory materials as recommended by the sealant manufacturer.

E. Materials shall be delivered to the job in sealed containers with manufacturer's original labels attached. Materials shall be used per manufacturer's printed instructions.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where joint sealers are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Sealant Installation Standard: Comply with instructions and recommendations of the manufacturer and in accordance with ASTM C 1193 for use of joint sealants as applicable to materials, applications and conditions required by this Project where more stringent installation requirements are specified herein, such requirements shall apply.

B. Sample Section of Sealant

1. During sealant installation work in exterior wall, the manufacturer of sealant shall send their representative to the site, under whose supervision a section of the wall (used as "control section") shall be completed for purposes of determining

performance characteristics of sealant in joints. Architect shall be informed of time and place of such installation of control section.

2. Control section shall be installed according to specification given herein and shall not be considered as acceptable until written acceptance is provided by the Architect.

3. Accepted control section shall be standard to which all other sealant work must conform.

C. Supervision: The Contractor shall submit to the Architect written certification from the sealant manufacturer that the applicators have been instructed in the proper application of their materials. The Contractor shall use only skilled and experienced workmen for installation of sealant.

D. Apply sealant under pressure with a hand or power actuated gun or other appropriate means. Gun shall have nozzle of proper size and provide sufficient pressure to completely fill joints as detailed. Neatly point or tool joint to provide the contour as indicated on the drawings.

E. Preparation and Application

1. Thoroughly clean all joints, removing all foreign matter such as dust, oil, grease, water, surface dirt and frost. Sealant must be applied to the base surface. Previously applied film must be entirely removed.

2. Stone, masonry and concrete surfaces to receive sealant shall be cleaned where necessary by grinding, water blast cleaning, mechanical abrading, or combination of these methods as required to provide a clean, sound base surface for sealant adhesion.

   a. Do not use any acid or other material which might stain surfaces.
   b. Remove laitance by grinding or mechanical abrading.
   c. Remove loose particles present or resulting from grinding, abrading, or blast cleaning by blowing out joints with compressed air, oil and water free, or vacuuming joints prior to application of primer or sealant.

3. Clean non-porous surfaces such as metal and glass chemically. Remove protective coatings on metallic surfaces by solvent that leaves no residue and is compatible with sealant. Use solvent and wipe dry with clean, dry lint free paper towels. Do not allow solvent to air dry without wiping. Clean joint areas protected with masking tape or strippable films as above after removal of tape film.

4. Do not seal joints until they are in compliance with drawings, or meet with the control section standard.

5. Joint Size and Sealant Size: Joints to receive sealant shall be at least 1/4" wide. In joint 1/4" to 3/8" wide, sealant shall be 1/4" deep. In joints wider than 3/8" and up to 1" wide, sealant depth shall be one half the joint width. For joints wider than 1", sealant depth shall be as recommended by the sealant manufacturer. Depth of joint is defined as distance from outside face of joint to closest point of the filler.

6. Primer: Thoroughly clean joints and apply primer to all surfaces that will receive sealant. Apply primer on clean, dry surfaces, and prior to installation of joint backing. Completely wet both inner faces of the joint with primer. Mask adjacent surfaces of joint with non-staining masking tape prior to priming. Apply primer with clean brush and only when temperature is above 45 deg. F.

7. Joint Backing: In joints where depth of joint exceeds required depth of sealant, install joint backing (after primer is dry) in joints to provide backing and proper joint shape for sealant. Proper shape for sealant is a very slight "hourglass" shape, with back and front face having slight concave curvature. Use special blunt T-shaped tool or roller to install joint backing to the proper and uniform depth required for the sealant. Joint backing shall be installed with approximately twenty-five (25) percent compressions. Do not stretch, twist, braid, puncture, or tear joint backing. Butt joint backing at intersections.

8. Bond Breaker: Install bond breaker smoothly over joint backing so that sealant adheres only to the sides of the joint and not backing.

9. Sealant Application: Apply sealant in accordance with the manufacturer's application manual and manufacturer's instructions, using hand guns or pressure equipment, on clean, dry, properly prepared substrates, completely filling joints to eliminate air pockets and voids. Mask adjacent surfaces of joint with non-staining masking tape. Force sealant into joint in front of the tip of the "caulking gun" (not pulled after it) and force sealant against sides to make uniform contact with sides of joint and to prevent entrapped air or pulling of sealant off of sides. Fill sealant space solid with sealant.

10. Tooling: Tool exposed joints to form smooth and uniform beds, with slightly concave surface conforming to joint configuration per Figure 5A in ASTM C 1193. Finished joints shall be straight, uniform, smooth and neatly finished. Remove masking tape immediately after tooling of sealant and before sealant face starts to "skin" over. Neatly remove any excess sealant from adjacent surfaces of joint, leaving the work in a neat, clean condition.

11. Replace sealant which is damaged during construction process.

3.3 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:

   a. Perform 5 tests for the first 1000 feet of joint length for each kind of sealant and joint substrate.
   b. Perform one test for each 5,000 feet of joint length thereafter or one test per each floor per elevation.

2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521.

a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

3. Inspect tested joints and report on the following:

a. Whether sealants filled joint cavities and are free of voids.
b. Whether sealant dimensions and configurations comply with specified requirements.
c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.

5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

END OF SECTION 079200

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 080671 – DOOR HARDWARE SCHEDULE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section references specification sections relating to commercial door hardware for the following:

1. Swinging doors.
2. Sliding Doors.
3. Other doors to the extent indicated.

B. Commercial door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical and access control door hardware.
3. Electromechanical and access control door hardware power supplies, back-ups and surge protection.
4. Automatic operators.
5. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Door Hardware”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:

a. Type, style, function, size, label, hand, and finish of each door hardware item.
b. Manufacturer of each item.
c. Fastenings and other pertinent information.
d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
e. Explanation of abbreviations, symbols, and codes contained in schedule.
f. Mounting locations for door hardware.
g. Door and frame sizes and materials.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.

D. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service

representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.

F. Warranties and Maintenance: Special warranties and maintenance agreements specified in the Related Sections.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.5 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1.6 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. Refer to “PART 3 – EXECUTION” for required specification sections.

PART 3 - EXECUTION

3.1 DOOR HARDWARE SETS

A. The door hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a

hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.

2. The supplier is responsible for handing and sizing all products.

3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Products listed in the hardware sets shall be supplied by and in accordance with the requirements described in the specification section as noted for each item.

1. Section 08 71 00 – Door Hardware.
2. Section 25 13 00 – Access Control.

C. Manufacturer’s Abbreviations:

1. MK - McKinney
2. PE - Pemko
3. MR - Markar
4. RO - Rockwood
5. SU - Securitron
6. RU - Corbin Russwin
7. MC - Medeco
8. HS - HES
9. RF - Rixson
10. NO - Norton
11. SA - SARGENT
12. OT - Other

SET 1.0 NOTES:
- Doors normally locked and closed.
- Valid credentials energize lever for manual entry and energizes actuator for auto operation.
- Entry by manual key alerts head end as to entry w/ out audit trail.
- Egress by either push pad shunts DPS for authorized exit either leaf, or by actuator at all times.
- Bolt monitor alerts security when door held open too long.
- Free egress permitted at all times.
- System is Fail Secure.

Remote release, if provided, energizes lever and actuator for authorized entry.

SET 2.0 NOTES:

Entry to Corridor 103:

- Door normally closed and secured via delayed egress exit device.
- Presenting valid credential energizes actuator for auto operation by releasing electric strike, authorized manual entry and shunts DPS for set period of time.
- Depressing exit device for up to 3 sec initiates irreversible alarm and begin delayed egress entry up to 15 sec later (30 w/ AHJ prior approval). Once unlocked manual entry only permitted w/ audible alarm sounding.
- No trim on corridor 103 side.
- Upon fire alarm activation delayed egress is shunted and Electric strike Fails secure allowing fire rating and free egress on push side.
- System is Fail Secure.

Exit / Entry to Corridor 101:

- Door normally closed and unlocked from corridor 103 side only.
- Actuator always active and initiates auto operation by releasing electric strike and shunts DPS.
- Manual exit permitted and REX shunts elect strike LMS option permitting manual authorized exit.
- System is Fail Secure

* Power Supply is not required – unless otherwise confirmed by Security vendor.

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 081113

STEEL DOORS AND FRAMES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the steel door and frame work as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Interior and exterior hollow metal doors and frames for fire-rated and unrated door openings.
2. Interior hollow metal vision panels.
3. Preparation of metal doors and frames to receive finish hardware, including reinforcements, drilling, and tapping, as necessary.
4. Preparation of hollow metal doors to receive glazing where required.
5. Furnishing anchors for building into concrete and drywall.
6. Factory prime painting of work of this Section.

1.3 RELATED SECTIONS

A. Carpentry - Section 062000, for installation of doors and frames.

B. Flush Wood Doors - Section 081416.

C. Finish Hardware - Section 087100.

D. Glass and Glazing - Section 088000.

E. Gypsum Drywall - Section 092900.

F. Painting and Finishing - Section 099000.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm experienced in manufacturing custom steel doors and frames similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated.

C. Source Limitations: Obtain custom steel doors and frames through one source from a single manufacturer.

D. Fire-Rated Door and Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated.

1. Test Pressure: Test according to NFPA 252 or UL 10C. After 5 minutes into the test, the neutral pressure level in furnace shall be established at 40" or less above the sill.

2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that doors comply with standard construction requirements for tested and labeled fire-protection-rated door assemblies except for size.

3. Temperature-Rise Rating: At exit enclosures, provide doors that have a temperature-rise rating as required by prevailing Building Code in 30 minutes of fire exposure.

4. Fire rated assemblies must have UL approved label.

E. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9. Label each individual glazed lite.

F. Smoke-Control Door Assemblies: Comply with NFPA 105 or UL 1784.

1.5 SUBMITTALS

A. Product Data: Include construction details, material descriptions, core descriptions, label compliance, compliance with standards referenced herein, sound and fire-resistance ratings, and finishes for each type of door and frame specified.

B. Shop Drawings: Show fabrication and installation of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, reinforcement for surface applied hardware, dimensions of profiles and hardware preparation, location and installation requirements of door and frame hardware and reinforcements, and details of joints and connections. Show anchorage and accessories.

C. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.

1. Coordinate glazing frames and stops with glass and glazing requirements.

D. Oversize Construction Certification: For door assemblies required to be fire rated and exceeding limitations of labeled assemblies, submit certification of a testing agency

acceptable to authorities having jurisdiction that each door and frame assembly has been constructed to comply with design, materials, and construction equivalent to requirements for labeled construction.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver doors and frames palleted, wrapped, or crated to provide protection during transit and Project site storage. Do not use nonvented plastic.

B. Inspect doors and frames, on delivery, for damage. Minor damage may be repaired provided refinished items match new work and are approved by Architect; otherwise, remove and replace damaged items as directed.

C. Store doors and frames under cover at building site. Conform to the requirements of ANSI A 250-11-2001 for site storage unless more stringent requirements are noted herein. Place units on minimum 4-inch high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART 2 PRODUCTS

2.1 FABRICATION - GENERAL

A. Fabricate hollow metal units to be rigid, neat in appearance and free from defects, warp or buckle. Accurately form metal to required sizes and profiles. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible. Metallic filler to conceal manufacturing defects is not acceptable.

B. Unless otherwise indicated, provide countersunk flat Phillips or Jackson heads for exposed screws and bolts.

C. Prepare hollow metal units to receive finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with Finish Hardware Schedule and templates provided by hardware suppliers. Comply with applicable requirements of ANSI A115 "Specifications for Door and Frame Preparation for Hardware."

D. Locate finish hardware as shown on final shop drawings in accordance with locations noted herein.

2.2 MANUFACTURERS

A. Provide products manufactured by Ceco Door Products, or comparable product by Steelcraft, Curries, or approved equal meeting these specifications.

B. Exterior Doors and Frames

1. Basis of Design (Doors): Ceco Door/ Assa Abloy; energy efficient doors, or approved equal.

2. Basis of Design (Frames): Ceco Door/ Assa Abloy; Mercury Thermal Break Frames, TQB and TRB, or approved equal.

2.3 FRAMES

A. Materials

1. Frames for exterior openings shall be made of commercial grade cold-rolled steel conforming to ASTM A 1008, Type B not less than 14 ga., and shall have a hot dipped galvannealed coating conforming to ASTM A 924 and A 653 with A60 coating. The zinc-alloy coating shall be a dull matte surface treated for paint adhesion.

2. Frames for interior openings shall be either commercial grade cold-rolled steel conforming to ASTM A 1008, Type B or commercial grade hot-rolled steel conforming to ASTM A 1011, Commercial Steel, Type B. Metal thickness shall be not less than sixteen (16) ga. for frames in openings 4'-0" or less in width; not less than fourteen (14) ga. for frames in openings over 4'-0" in width.

B. Design and Construction

1. All frames shall be welded units with integral trim, of the sizes and shapes shown on approved shop drawings. Knock-down frames are not permitted.

2. Thermal-Break Frames: Frames shall be subject to the same compliance standards and requirements as standard hollow metal frames. Frames shall be tested for thermal performance in accordance with NFRC 102 and resistance to air infiltration in accordance with NFRC 400. Where indicated, provide thermally broken frame profiles available for use in both concrete and drywall construction. Fabricate with 1/16" positive thermal break and integral vinyl weather stripping.

3. All finished work shall be strong and rigid, neat in appearance, square, true and free of defects, warp, or buckle. Molded members shall be clean cut, straight and of uniform profile throughout their lengths.

4. Jamb depths, trim, profile, and backbends shall be as shown on drawings.

   a. Frames at drywall partitions shall be formed with double return backbends to prevent cutting into drywall surface.

5. Welded frames shall have corners mitered and reinforced and faces of welded frames shall be continuously back welded full depth and width of frame conforming to NAAMM Standard HMMA-820; face joints shall be hairline.

6. Minimum depth of stops shall be 5/8".

7. Frames for multiple or special openings shall have mullion and/or rail members which are closed tubular shapes having no visible seams or joints. All joints between faces of abutting members shall be securely welded and finished smooth.

   a. Mullions shall have 16 ga. internal steel stiffeners welded not less than 4" o.c.

8. Hardware Reinforcements

a. Frames shall be mortised, reinforced, drilled and tapped at the factory for fully-templated, mortised hardware only, in accordance with approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware is to be applied, frames shall have reinforcing plates.
b. Minimum thickness of hardware reinforcing plates shall be as follows (Contractor shall provide larger and thicker plates as required to accommodate weight of door):
   1). Hinge and pivot reinforcements - seven (7) ga., 1-1/4" x 10" minimum size.
   2). Strike reinforcements - twelve (12) gauge.
   3). Flush bolt reinforcements - twelve (12) gauge.
   4). Closer reinforcements - twelve (12) gauge.
   5). Reinforcements for surface mounted hardware - twelve (12) gauge.

9. Floor Anchors

   a. Provide adjustable floor anchors, providing not less than two (2) inch height adjustment.
   b. Minimum thickness of floor anchors shall be fourteen (14) gauge.

10. Jamb Anchors

   a. Frames for installation in concrete walls shall be provided with adjustable jamb anchors of the wire type. Anchors shall be not less than 0.156" diameter steel wire. The number of anchors provided on each jamb shall be as follows:
      1). Frames up to 7'-6" height - three (3) anchors.
      2). Frames 7'-6" to 8'-0" height - four (4) anchors.
      3). Frames over 8'-0" height - one (1) anchor for each 2'-0" or fraction thereof in height.
   b. Frames for installation in stud partitions shall be provided with steel anchors of suitable design, not less than eighteen (18) gauge thickness, securely welded inside each jamb as follows:
      1). Frames up to 7'-6" height - four (4) anchors.
      2). Frames 7'-6" to 8'-0" height - five (5) anchors.
      3). Frames over 8'-0" height - five (5) anchors plus one additional for each 2'-0" or fraction thereof over 8'-0".

11. Anchors in exterior frames and in concrete walls shall be hot dip galvanized per ASTM A 153.

12. Frames for installation in concrete wall openings more than 4'-0" in width shall have an angle or channel stiffener factory welded into the head. Such stiffeners shall be not less than twelve (12) gauge steel and not longer than the opening width. Stiffeners shall not be used as lintels or load bearing members.

13. Dust cover boxes (or mortar guards) of not thinner than twenty-six (26) gauge steel shall be provided at all hardware mortises on frames to be set in concrete or plaster partitions.

14. Ceiling Struts: Minimum 3/8" thick x 2" wide steel.

15. All frames shall be provided with a steel spreader temporarily attached to the feet of both jambs to serve as a brace during shipping and handling.

16. Loose glazing stops shall be of cold rolled steel, not less than twenty (20) gauge thickness, butted at corner joints and secured to the frame with countersunk cadmium-or zinc-plated screws. Interior frames may be provided with snap-on glazing stops.

17. Except on weatherstripped frames, drill stops to receive three (3) silencers on strike jambs of single door frames and two (2) silencers on heads of double-door frames.

C. Finish: After fabrication, all tool marks and surface imperfections shall be removed, and exposed faces of all welded joints shall be dressed smooth. Frames shall then be chemically treated to insure maximum paint adhesion and shall be coated on all surfaces with one coat of rust-inhibitive baked-on alkyd primer standard with the manufacturer which is fully cured before shipment to a dry film thickness of 2.0 mils.

1. Frames set in concrete walls shall be grouted in as described in Section 042000, "Unit Masonry." These frames shall have surfaces in contact with grout shop coated with epoxy coating equal to Series 27 FC Typoxy made by Tnemec or approved equal spray applied at 4 to 6 mils, passing NFPA 101, Class A for smoke and flame spread, tested per ASTM E 84.

2.4 HOLLOW METAL DOORS

A. Materials: Doors shall be made of commercial quality, level, cold rolled steel conforming to ASTM A 1008, Commercial Steel, Type B and free of scale, pitting or other surface defects. Face sheets for interior doors shall be not less than eighteen (18) gauge. Face sheets for exterior doors shall be not less than sixteen (16) gauge and shall have a hot dipped galvannealed coating conforming to ASTM A 924 and A 653, A60 coating. The zinc alloy coating shall be a dull matte surface treated for paint adhesion.

B. Exterior Doors (Energy Efficient): Face sheets fabricated of commercial quality hot-dipped zinc coated steel that complies with ASTM A924 A60. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level.

1. Design: Flush panel.

2. Core Construction: Foamed-in-place polyurethane and steel-reinforced core with no stiffener face welds.

a. Provide 16 gauge steel vertical reinforcements 6 inches apart and welded in place. Foamed-in-place polyurethane core shall be chemically bonded to all interior surfaces. No face welding is permitted.
b. Thermal properties to rate at a fully operable minimum U-Factor 0.374 and R-Value 2.53, including insulated door, Mercury thermal-break frame and threshold.

c. Kerf Type Frames: Thermal properties to rate at a fully operable minimum U-Factor 0.378 and R-Value 2.5, including insulated door, kerf type frame, and threshold.

C. Design and Construction

1. All doors shall be of the types and sizes shown on the approved shop drawings and shall be fully-welded, seamless construction with no visible seams or joints on their faces or vertical edges. Minimum door thickness shall be 1-3/4".

2. All doors shall be strong, rigid, and neat in appearance, free from warpage or buckles. Corner bends shall be true and straight and of minimum radius for the gauge of metal used.

3. Face sheets shall be stiffened by continuous vertical formed steel sections spanning the full thickness of the interior space between door faces. These stiffeners shall be not less than twenty-two (22) gauge spaced not more than six (6) inches apart and securely attached to face sheets by spot welds not more than five (5) inches o.c. Spaces between stiffeners shall be sound deadened and thermal insulated the full height of the door with an inorganic non-combustible batt type material.

4. Door faces shall be joined at their vertical edges by a continuous weld extending the full height of the door. All such welds shall be ground, filled and dressed smooth to make them invisible and provide a smooth flush surface.

5. Top and bottom edges of all doors shall be closed with a continuous recessed steel channel not less than fourteen (14) gauge, extending the full width of the door and spot welded to both faces. Exterior doors shall have an additional flush closing channel at their top edges and, where required for attachment of weatherstripping, a flush closure also at their bottom edges. Openings shall be provided in the bottom closure of exterior doors to permit the escape of entrapped moisture.

6. Edge profiles shall be provided on both vertical edges of doors as follows:

   a. Single-Acting Swing Doors: Beveled 1/8" in two (2) inches.
   b. Double-Acting Swing Doors: Rounded on 2-1/8" radius.
   c. No square edge doors permitted.

7. Hardware Reinforcements

   a. Doors shall be mortised, reinforced, drilled and tapped at the factory for fully templated hardware only in accord with the approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware (or hardware, the interrelation of which is to be adjusted upon installation - such as top and bottom pivots, floor closers, etc.) is to be applied, doors shall have reinforcing plates.
   b. Minimum gauges for hardware reinforcing plates shall be as follows (Contractor shall provide larger and thicker plates as required to accommodate weight of door):
      1). Hinge and pivot reinforcement - seven (7) gauge.

2). Reinforcement for lock face, flush bolts, concealed holders, concealed or surface mounted closers - twelve (12) gauge.
3). Reinforcements for all other surface mounted hardware - sixteen (16) gauge.

8. Glass Moldings and Stops

a. Where specified or scheduled, doors shall be provided with hollow metal moldings to secure glazing by others in accordance with glass opening sizes shown on drawings.
b. Fixed moldings shall be securely welded to the door on the security side.
c. Loose stops shall be not less than twenty (20) gauge steel, with mitered corner joints, secured to the framed opening by cadmium or zinc-coated countersunk screws spaced eight (8) inches o.c. Snap-on attachments will not be permitted. Stops shall be flush with face of door.

9. Louvers shall be sixteen (16) gauge sheet steel, stationary type, closely spaced inverted "V" blade design, flush with face sheets of door, integral with and welded to door. Fifty (50) percent free area, unless indicated otherwise on drawings.

D. Finish: After fabrication, all tool marks and surface imperfections shall be dressed, filled and sanded as required to make all faces and vertical edges smooth, level and free of all irregularities. Doors shall then be chemically treated to insure maximum paint adhesion and shall be coated, on all exposed surfaces, with manufacturer's standard rust-inhibitive alkyd primer as specified for frames which shall be fully cured before shipment.

E. Flatness: Doors shall maintain a flatness tolerance of 1/16" maximum, in any direction, including in a diagonal direction.

2.5 LABELED DOORS AND FRAMES

A. Labeled doors and frames shall be provided for those openings requiring fire protection ratings as scheduled on drawings. Such doors and frames shall be labeled by Underwriters' Laboratories or other nationally recognized agency having a factory inspection service.

B. If any door or frame specified by the Architect to be fire-rated cannot qualify for appropriate labeling because of its design, size, hardware or any other reason, the Architect shall be so advised before fabricating work on that item is started.

2.6 HARDWARE LOCATIONS

A. The location of hardware on doors and frames shall be as noted in "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames" of the Door Hardware Institute unless otherwise required by prevailing Handicapped Codes.

2.7 CLEARANCES

A. Fabricate doors and frames to meet edge clearances as follows:

1. Jambs and Head: 1/8" plus or minus 1/16".

2. Meeting Edges, Pairs of Doors: 1/8" plus or minus 1/16".

3. Bottom: 3/8" at threshold; 3/4" if no threshold.

B. Fire-rated doors shall have clearances as required by NFPA 80.

2.8 MANUFACTURING TOLERANCES

A. Manufacturing tolerance shall be maintained within the limits given in HMMA 841 of ANSI/NAAMM, current edition.

2.9 PREPARATION FOR FINISH HARDWARE

A. Prepare door and frames to receive hardware:

1. Hardware supplier shall furnish hollow metal manufacturer approved hardware schedule, hardware templates, and samples of physical hardware where necessary to insure correct fitting and installation.

2. Preparation includes sinkages and cut-outs for mortise and concealed hardware.

B. Provide reinforcements for both concealed and surface applied hardware:

1. Drill and tap mortise reinforcements at factory, using templates.

2. Install reinforcements with concealed connections designed to develop full strength of reinforcements.

2.10 REJECTION

A. Hollow metal frames or doors which are defective, have hardware cutouts of improper size or location, or which prevent proper installation of doors, hardware, or work of other trades, shall be removed and replaced with new at no cost.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where steel doors and frames are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Refer to Section 062000 for installation procedures for all work of this Section.

END OF SECTION 081113

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 081416

FLUSH WOOD DOORS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the wood doors as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Solid core flush wood doors, including sliding doors.

2. Fire-rated flush wood doors.

1.3 RELATED SECTIONS

A. Carpentry - Section 062000, for installation of wood doors.

B. Steel Doors and Frames - Section 081113, for hollow metal frames.

C. Finish Hardware - Section 087100.

D. Glass and Glazing - Section 088000.

1.4 SUBMITTALS

A. Product Data: Submit door manufacturer's product data, specifications and installation instructions for each type of wood door.

1. Include details of core and edge construction and trim for openings.

2. Include factory finish specifications.

3. Include certifications to show compliance with specifications.

4. Include certification to show compliance with AWI and WDMA requirements specified herein.

B. Shop Drawings: Submit shop drawings indicating location and size of each door, elevation of each kind of door, details of construction, location and extent of hardware blocking, fire ratings, requirements for finishing and other pertinent data.

1. Include requirements for veneer matching.

C. Submit samples of factory finishes applied to actual door face materials, approximately 8 by 10 inches for each material and finish. For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished work.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer.

B. Quality Standard: Comply with AWI's "Architectural Woodwork Quality Standards Illustrated"; latest edition "Premium" grade and WDMA "Extra Heavy Duty" Performance Level.

1. Only manufacturers that are certified and listed by AWI to be QCP qualified are acceptable for this project.

2. Provide letter of licensing for Project indicating that doors comply with requirements of grade specified.

C. Fire-Rated Wood Doors: Doors complying with Category A, Positive Pressure or Neutral Pressure testing standards per UBC 7-2-1997 and UL 10C (UBC 7-2-1994 and UL 10B) that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated on Door Schedule, based on testing according to NFPA 252.

1. Conform to prevailing Code requirements to determine which pressure standard (Positive or Neutral) is required.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package doors individually in plastic bags or cardboard cartons.

C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form, signed by manufacturer, Installer, and Contractor, in which manufacturer agrees to repair or replace doors that are defective in materials or workmanship, have warped (bow, cup, or twist) in excess of permitted standard noted in Article 2.2 herein, or show telegraphing of core construction in face veneers.

1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.

2. Warranty shall be in effect for the life of the installation starting from date of Substantial Completion.

PART 2 PRODUCTS

2.1 SOLID CORE FLUSH WOOD DOORS

A. Provide AWI PC-5 Premium Grade hot pressed 5-ply solid core particleboard doors, 1-3/4" thick, conforming to standards specified herein. Subject to meeting standards specified herein, the following manufacturers are acceptable: Marshfield Door Systems, Inc., Algoma Hardwoods Inc., or Eggers Industries.

1. Core shall consist of a formed flat panel consisting of wood particles bonded together with synthetic resins or other added binder, with an average density of 30 to 32 lbs. per cubic foot. The material shall meet or exceed the requirements of ANSI A208.1, Grade 1-LD-2 covering mat formed particleboard with face screw holding of 124 lbs., modulus of rupture of minimum 700 psi and modulus of elasticity of not less than 148,000 psi.

2. Core shall be capable of satisfying this WDMA TM-7 cycle slam test for 1 million slams for surface mounted hardware. Where the manufacturer's core does not meet this criterion, stiles and rails must measure a minimum of 5-1/2" and must be fabricated of hardwood.

a. Surface mounted hardware must be installed with minimum 1-1/4" screw penetrations using threaded to the head screws; coordinate with Section 087100.

B. Cross Bands: Shall be 1/16" thick hardwood extending full width of door and laid with grain at right angles to face veneers. Cross bands and faces shall be laminated to the core with Type I MF or PVA glue.

C. Stiles, Rails: Stile and rail shall be a minimum of 1-3/8" solid hardwood or structural composite lumber (after trimming) laminated to the core. Stiles and rails must be securely glued to the core with no voids allowed. Stiles and rails must be capable of screw holding of 550 lbs. per WDMA TM-10.

D. Transparent Finish: Finish in the shop with clear satin catalyzed polyurethane finish conforming to AWI System "Catalyzed Polyurethane Transparent."

1. Doors with transparent finish to have center balanced, slip matched, quarter sliced, Select veneer of wood species selected by the Architect. Veneer to conform to AWI, "AA" grade veneer with 3" wide leaf. Minimum veneer thickness shall be not less than 1/50" after sanding.

2. Veneers shall be continuous or end matched at transoms.

E. Opaque Finish: For doors to be shop painted, shop prime on all surfaces with one coat of alkyd wood primer applied to a dry film thickness of 1.5 mils. Apply final topcoat in the shop to paint manufacturer's specified thickness.

1. Doors to be field painted shall have MDO or hardboard face.

F. Where glass lites are noted, factory cut openings. Trim openings with solid hardwood moldings of same type of wood as face veneer. Lite openings in 20 minute rated doors shall have manufacturer's 20-minute approved hardwood system.

G. Doors shall have hinge-loading capacity of 500 lbs. per WDMA TM-8.

H. Vertical door edge must be capable of screw holding of 550 lbs. per WDMA TM-10; horizontal door edge must be capable of screw holding of 400 lbs. per WDMA TM-10.

I. Fire-Rated Wood Doors: Provide mineral core 1-3/4" thick solid core wood doors conforming to standards specified herein, manufactured by one of the manufacturers noted above. Stile construction on both stiles shall conform to the following:

1. Stile edge screw withdrawals when tested in accordance with ASTM D 1037-12 shall exceed 650 lbs. This applies to both stiles.

2. Stile edge split resistance when tested in accordance with ASTM D 143-14 Modified must exceed 950 lbs. This applies to both stiles.

3. Door to have face finish as specified above.

a. Where the core is free of urea formaldehyde, provide a layer of veneer over the substrate prior to application of finish veneer to prevent telegraphing of patterns from the adhesive.

4. Blocking: For surface mounted hardware only, provide composite blocking designed to maintain fire resistance of door but with improved screw-holding capability of same thickness as core and with minimum dimensions as follows:

a. 5-inch top rail blocking.
b. 5-inch bottom rail blocking.
c. 1 – 5" x 18" lock block at cylinder or mortise locksets.
d. 2 – 5" x 18" lock blocks at exit devices.

5. Pairs: Provide fire-rated pairs with fire-retardant stiles that are labeled and listed for kinds of applications indicated without formed-steel edges and astragals.

2.2 FABRICATION

A. Prefit and premachine wood doors at the factory.

B. Comply with the tolerance requirements specified herein. Machine doors for hardware requiring cutting of doors. Comply with final hardware scheduled and door frame shop drawings, and with hardware templates and other essential information required to ensure proper fit of doors and hardware.

C. Take accurate field measurements of hardware mortises in metal frames to verify dimensions and alignment before proceeding with machining in the factory.

D. Doors shall be factory sized to door opening so that trimming and fitting are not required in the field.

E. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances unless otherwise indicated.

1. Three-degree bevel or bevel to suit frame sizes indicated, with 3/16" prefit in width, +0/-1/32" tolerances. Prefit top of door 1/8" + 1/16"/-0" and undercut as required by floor condition. Undercut shall not exceed 1/8" from bottom of door to top of finished floor; where threshold occurs undercut shall not exceed 1/8" from bottom of door to top of threshold.

2. Comply with requirements in NFPA 80 for fire-rated doors.

F. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3 unless otherwise noted. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.

1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.

2. Provide concealed intumescent seals at fire-rated pairs of doors meeting the requirements of U.L. 10 C.

G. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kinds of doors required.

H. Once wood doors are installed, maximum allowable warp, bow, cut or twist in doors shall be 1/16" as measured by the 1/16-inch feeler gauge and a straight-edge extending from corner to corner of the door face at stiles, top and bottom rails and along both diagonals.

PART 3 EXECUTION

3.1 INSTALLATION

A. Refer to Section 062000 for installation of wood doors.

END OF SECTION 081416

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 083113

ACCESS DOORS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the access doors as indicated on the drawings and/or specified herein, including, but not limited to, the following:

1. Frameless recessed panel access doors at drywall ceilings and walls.

2. Framed flush panel access doors at masonry and tile walls.

3. Provide access doors and frames for access from occupied spaces to the following, where indicated or required, and as directed by the trades of Divisions 23 and 26.

   a. All shutoff or balancing valves.
   b. Fire dampers, as required.
   c. Points of duct access.
   d. Pull boxes.
   e. Controls of mechanical and electrical items.
   f. Masonry shafts for pipes and conduits, as required.
   g. Pipe spaces, if required.
   h. Inlets of fans.
   i. Fusible link and splitter damper at filter bank.
   j. Automatic damper and motor.
   k. Equipment not otherwise accessible.

1.3 RELATED SECTIONS

A. Unit Masonry - Section 042000.

B. Gypsum Drywall - Section 092900.

C. Ceramic Tiling - Section 093013.

D. Valves and connections - Division 23.

1.4 QUALITY ASSURANCE

A. For actual installation of the work of this Section, use only personnel who are thoroughly familiar with the manufacturer's recommended methods of installation and who are completely trained in the skills required.

B. Fire-Resistance Ratings: Wherever a fire-resistance classification is shown, or for construction where access doors are installed, provide required access door assembly with panel door, frame, hinge, and latch from manufacturers listed in Underwriters' Laboratories, Inc. "Classified Building Materials Index" for the rating shown.

1. Provide UL label on each access panel.

2. Provide flush, key operated cylinder lock.

C. Size Variations: Obtain Architect's acceptance of manufacturer's standard size units which may vary slightly from sizes shown or scheduled.

1.5 SUBMITTALS

A. Before any materials of this Section are delivered to the job site, submit complete manufacturer's literature to the Architect. Submit plans and schedules showing size and location of all access doors for Architect's acceptance prior to installation.

1.6 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

PART 2 PRODUCTS

2.1 MATERIALS AND FABRICATION

A. Provide access door assembly manufactured by Karp Associates, Inc., Milcor Inc., Nystrom Inc., or approved equal. Assembly shall be an integral unit complete with all parts and ready for installation.

B. Fabricate units of continuous welded steel construction. Grind welds smooth and flush with adjacent surfaces. Provide attachment devices and fasteners of the type required to secure access panels to the types of supports shown.

C. Frames for Masonry and Tile Wall Only (Flush Panel Units): Fabricate frame from sixteen (16) gauge steel. Provide frame with exposed flange not less than one (1) inch wide around perimeter of frame for exposed masonry and tile finishes.

1. For installation in masonry construction, provide frames with adjustable metal masonry anchors.

D. Frameless Units for Drywall Surfaces (Recessed Panel Units): Provide access doors without exposed frames for drywall adhered to recessed panel.

E. Panels: Fabricate from fourteen (14) gauge steel, with concealed spring hinges set to open to 175 degrees. Provide removable pin type hinges of the quantity required to

support the access panel sizes used in the work. Finish with manufacturer's factory applied baked enamel prime coat applied over phosphate protective coating on steel.

F. Locking Devices

1. For non-rated access doors, provide flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.

2. For fire rated doors, provide locks as described in paragraph 1.4, B. herein.

G. Inserts and Anchorage: Furnish inserts and anchoring devices which must be built into masonry for the installation of access panels. Provide setting drawings, templates, instructions, and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where access doors are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 COORDINATION

A. Coordinate all work with the mechanical trades to insure proper locations and in a timely manner to permit orderly progress of the total work.

B. Set frames accurately in position and securely attach to supports with face panels plumb or level in relation to adjacent finish surfaces.

C. Adjust hardware and panels after installation for proper operation.

D. Remove and replace panels or frames which are warped, bowed, or otherwise damaged.

END OF SECTION 083113

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 083453

SECURITY DOORS AND FRAMES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the security doors and frames as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Exterior aluminum security doors and frames.

2. Preparation of doors and frames to receive finish hardware, including reinforcements, drilling, and tapping necessary.

3. Preparation of hollow metal doors to receive glazing where required.

1.3 RELATED SECTIONS

A. Installation of doors and frames - Section 062000.

B. Security Windows - Section 085653.

C. Finish Hardware - Section 087100.

D. Glass and Glazing - Section 088000.

E. Gypsum Drywall - Section 092900.

F. Painting and Finishing - Section 099000.

1.5 SYSTEM DESCRIPTION

A. Design Requirements: Provide door and frame assemblies of “non-ricochet type" intended to permit capture and retention of attacking projectile, lessening potential of random injury or lateral penetration.

B. Test Procedures and Performance:

1. Specifications for Windows, Doors and Unit Skylights: AAMA 101.

2. Air Infiltration Test: ASTM E 283, at 6.24 psf static air pressure differential. Air infiltration shall not exceed 0.10 CFM per sq. ft.

3. Water Resistance Test: ASTM E 331, no water leakage at 15 psf static air pressure differential.

4. Uniform Load Deflection Test: ASTM E 330, at static air pressure of +/- 100 psf. No member shall deflect more than 1/175 of its span.

5. Uniform Load Structural Test: ASTM E 330, at static air pressure difference of +/- 150 psf.

6. Condensation Resistance Test: AAMA 1503.1, CRF shall be not less than 55.

7. Thermal Transmittance Test: AAMA 1503.1, U-Value shall not exceed 0.30 BTU/HR/SQ.FT/°F.

8. Door Lobby waiting Area: SHGC 0.4 to 0.6.

9. Wind Loads: 70psf, unless greater required by Code.

10. Impact Loads: 2000 ft lb.

1.6 ADMINISTRATIVE REQUIREMENTS

A. Provide hardware templates to door and frame assembly manufacturer for preparation of door and frame units to receive hardware other than hinges.

1.7 SUBMITTALS

A. Product Data: Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements.

B. Shop Drawings: Show fabrication and installation of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, reinforcement for surface applied hardware, dimensions of profiles and hardware preparation, location and installation requirements of door and frame hardware and reinforcements, and details of joints and connections. Show anchorage and accessories.

C. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.

D. Field Measurements: Take necessary field measurements before preparation of shop drawings and fabrication. Do not delay progress of job. If field measurements are not possible prior to fabrication, allow for field cutting and fitting.

E. Initial Selection Samples: Submit samples showing complete range of colors, textures, and finishes available for each material used.

F. Verification Samples: Submit representative samples of each material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide samples having minimum size of 144 sq. in.

G. Calculations: Provide professionally prepared calculations and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied; refer to Article 1.5, para. D for further description.

H. Test Reports: Provide certified test reports for specified tests.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm experienced in manufacturing custom steel doors and frames similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated.

1. Door and Frame Assemblies: Ballistic Level 1,tested to UL 752.

C. Source Limitations: Obtain aluminum security doors and frames through one source from a single manufacturer.

D. Installer: A firm with a minimum of three years' experience in type of work required by this Section and which is acceptable to manufacturers of primary materials.

E. Design Criteria: Drawings indicate sizes, member spacings, profiles, and dimensional requirements of work of this Section. Minor deviations will be accepted in order to utilize manufacturer's standard products when, in the Architect's sole judgment, such deviations do not materially detract from the design concept or intended performances.

F. Engineering: Provide services of a Professional Engineer, registered in State of New York, to design and certify that work of this Section meets or exceeds performance requirements specified.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver doors and frames palleted, wrapped, or crated to provide protection during transit and Project site storage. Do not use nonvented plastic.

B. Inspect doors and frames, on delivery, for damage. Minor damage may be repaired provided refinished items match new work and are approved by Architect; otherwise, remove and replace damaged items as directed.

C. Store doors and frames upright under cover at building site. Conform to the requirements of ANSI/SDI A250.11 for site storage unless more stringent requirements are noted herein. Place units on minimum 4-inch high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

1.10 WARRANTY

A. Manufacturer’s one year warranty against defects in materials and workmanship.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Provide products by U.S. Bullet Proofing, Upper Marlboro MD 20774 Tel: 301-218-7920 Fax: 301-218-7925, www.usbp.com, email: info@usbp.com .

1. Basis of Design Product: Model USAD1000 15 R Forced Entry and ballistic resistant door system.

B. Action Bullet Resistant, Corp (actionbullet.com).

C. Insulgard Security Products, Phone 800.624.6315; website www.insulgard.com

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: System design to be performed by qualified professional engineer licensed in State of New York.

B. Structural Performance: Design and size components to withstand the following load requirements without damage or permanent set:

1. Design Wind Loads: As indicated on Drawings.

2. Movement: Ambient temperature range of 120 degrees F and a surface temperature range of 160 degrees F.

3. Uniform structural loading: No glass breakage or permanent damage to fasteners or system components, tested to ASTM E330/E330M at 1.5 times design pressure.

C. Ballistics Resistance: Installed bullet-resistant glazing shall withstand ballistic impact loads and forces without damage to the glazing beyond that allowed by referenced standards.

1. Ballistic Level: Pass UL 752 Level 4.

D. Storm Resistance: Pass FEMA 361-15 and ICC 500-14 testing.

2.3 SECURITY DOORS AND FRAMES

A. Type: Flush-glazed, thermally broken, extruded aluminum framed storm-resistant, forced-entry-resistant, ballistic-resistant doors and frames.

1. Product: Model USAD1000 15 R, (by US Bullet Proof) or equivalent Bullet Resistant Level IV Door (by Action Bullet Resistant Corp) or HP500 (by Insulgard Security Products).

2. Door: Designed to receive 1.47 inch glazing retained mechanically with gaskets on four sides.

a. Size (w x h): As scheduled.
b. Thickness: 2-3/4 inch.
c. Stiles: Wide 5-7/16 inch width.
d. Rails: 6-5/16 inch top rail; 10inch bottom rail.
e. Design: Two-lite with horizontal mullion.

B. Frame: 2-1/2 x 4-1/2 inch size, thermally broken at exterior door with transom, designed to receive 1.47 inch ballistics-resistant glazing retained mechanically with gaskets on four sides.

2.4 HARDWARE

A. Entrance Door Hardware: specified in Section 080671 Door Hardware Schedule.

2.5 SECURITY GLAZING

A. Thicknesses indicated are minimums. Provide ballistics-resistant glazing in thicknesses as necessary to comply with requirements indicated.

B. Ballistic-Resistant Glazing: Pass UL 752 Level 4.

1. Level 4 Form: All-Glass.

2.6 ACCESSORIES

A. Glazing Accessories: Specified in Section 08 80 00 – Glazing.

B. Anchors: Series 316 stainless steel.

C. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.

D. Exposed Flashing: Aluminum sheet finished to match framing members.

E. Concealed Flashing: Dead-soft, 0.018-inch-thick stainless steel, ASTM A 240 of type recommended by manufacturer.

F. Concealed Framing Sealants: Manufacturer's standard.

G. Joint Sealants: For installation at perimeter of framing, as specified in Section 079200.

2.7 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B 221.

2. Sheet: ASTM B209.

2.8 FINISH

A. Superior - Performance Organic Finish: 2-coat or 3-coat depending on color chosen, PVDF fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color: Match Kawneer’s “Dove Gray.”.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where steel doors and frames are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Install doors, framing, and glazing in accordance with manufacturer's instructions and approved Shop Drawings, and refer to Section 062000 for installation procedures for all work of this Section.

B. Installation Tolerances: Comply with the following non-accumulating maximum tolerances:

1. Maximum Variation in Diagonal Framing Measurements: 1/8 inch.

2. Offset Between Adjacent Framing Members: 1/16 inch.

3. Maximum Variation from Plumb: 1/8 inch per 12 feet.

4. Alignment: Plus or minus 1/16 inch from door face to face of framing.

5. Door Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.

6. Sealant space between system and adjacent construction: As indicated but not greater than 1/2 inch or less than 1/4 inch.

C. Design Clearances:

1. Between Door and Frame: Maximum 1/8 inch.

2. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.

3. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.

END OF SECTION 083453

THIS IS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 084113

INTERIOR ALUMINUM STOREFRONTS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the aluminum entrances and storefronts as indicated on the drawings and/or specified herein, including the following:

1. Exterior entrance systems.
2. Interior entrance systems.
3. Exterior storefront systems.
4. Interior storefront systems.

1.3 RELATED SECTIONS

A. Joint Sealers - Section 079200.

B. Security Aluminum Entrances - Section 084213.13.

C. Security Storefronts - Section 084333.13.

D. Security Windows - Section 085653.

E. Glass and Glazing - Section 088000.

1.4 QUALITY ASSURANCE

A. Source: For each material type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.

B. Installer: A firm with a minimum of three years' experience in type of work required by this Section and which is acceptable to manufacturers of primary materials.

C. Design Criteria: Drawings indicate sizes, member spacings, profiles, and dimensional requirements of work of this Section. Minor deviations will be accepted in order to utilize manufacturer's standard products when, in the Architect's sole judgment, such deviations do not materially detract from the design concept or intended performances.

D. Engineering: Provide services of a Professional Engineer registered in the State of New York to design and certify that work of this Section meets or exceeds performance requirements specified.

1.5 TESTS AND PERFORMANCE REQUIREMENTS

A. Manufacturer's Standard Tests: Provide manufacturer's standard test data showing compliance with specified requirements.

B. Seismic Loads: Provide entrance and storefront systems, including anchorage, capable of withstanding the effects of earthquake motions calculated according to requirements of authorities having jurisdiction or ASCE 7, "Minimum Design Loads for Buildings and Other Structures," Section 9, "Earthquake Loads," whichever are more stringent.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements.

B. Shop Drawings: Provide large scale shop drawings for fabrication, installation and erection of all parts of work. Provide plans, elevations, and details of anchorages, connections and accessory items. Provide installation templates for work installed by others. Show interfaces and relationships to work of other trades.

C. Field Measurements: Take necessary field measurements before preparation of shop drawings and fabrication. Do not delay progress of job. If field measurements are not possible prior to fabrication, allow for field cutting and fitting.

D. Initial Selection Samples: Submit samples showing complete range of colors, textures, and finishes available for each material used.

E. Verification Samples: Submit representative samples of each material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide samples having minimum size of 144 sq. in.

F. Calculations: Provide professionally prepared calculations and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied; refer to Article 1.4, para. D for further description.

G. Test Reports: Provide certified test reports for specified tests.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations. Store under cover and protect from weather damage.

B. Sequence deliveries to avoid delays, but minimize on-site storage.

1.8 WARRANTIES

A. Provide written warranty, signed by manufacturer, agreeing to repair or replace work that exhibits defects in materials or workmanship. "Defects" is defined to include, but not be limited to, leakage of water, abnormal aging or deterioration, abnormal deterioration or fading of finishes, and failure to perform as required. Include requirement for removal and replacement of covering and connected adjacent work.

1. Warranty Period: Three (3) years from date of Substantial Completion; except finish shall be warranted for a period of fifteen (15) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/PRODUCTS

A. Provide storefronts and entrance systems of one of the following manufacturers that meet or exceed requirements of these specifications:

1. Kawneer North America.

2. Oldcastle Building Envelope.

3. Tubelite, Inc.

4. YKK AP America, Inc.

B. Products:

1. Interior frame system shall be equal to "Trifab II 450" manufactured by Kawneer, or approved equal by one of the manufacturers listed above.

2.2 MATERIALS AND ACCESSORIES

A. Aluminum Members: Provide 6063-T5 alloy and temper as recommended by manufacturer for strength, corrosion resistance, and application of required finish. Comply with ASTM B 221 for extrusions, and ASTM B 209 for sheet/plate. Provide 0.125" thick extrusions for door stiles and storefront framing. Provide 0.050" thick aluminum for glazing moldings.

B. Fasteners: Provide non-magnetic stainless steel fasteners, warranted by manufacturer to be non-corrosive and compatible with aluminum components.

C. Concealed Flashing: Dead-soft stainless steel, 26 gauge minimum, or extruded aluminum 0.062" minimum, of an alloy and type selected by manufacturer for compatibility with other components.

D. Brackets and Reinforcements: Non-magnetic stainless steel or hot-dip galvanized steel complying with ASTM A 123.

E. Concrete/Masonry Inserts: Cast-iron, malleable iron, or hot-dip galvanized steel complying with ASTM A 123.

F. Bituminous Coatings: Cold-applied asphalt mastic compounded for 30-mil thickness per coat.

2.3 FABRICATION

A. Sizes and Profiles: Required sizes for door and frame units, including profile requirements, are indicated on Drawings. Any variable dimensions are indicated, together with maximum and minimum dimensions required to achieve design requirements and coordination with other work.

B. Prefabrication: To greatest extent possible, complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site. Disassemble components only as necessary for shipment and installation.

1. Preglaze door and frame units to greatest extent possible, in coordination with installation and hardware requirements.

2. Do not drill and tap for surface-mounted hardware items until time of installation at project site.

3. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work in manner which prevents damage to exposed finish surfaces. For hardware, perform these operations prior to application of finishes.

C. Welding: Comply with recommendations of American Welding Society to avoid discoloration; grind exposed welds smooth and restore mechanical finish.

D. Reinforcing: Install reinforcing as necessary for performance requirements; separate dissimilar metals with bituminous paint or other separator to prevent corrosion.

E. Continuity: Maintain accurate relation of planes and angles, with hairline fit of contacting members.

F. Fasteners: Conceal fasteners.

G. Provisions shall be made in the framing for minimum edge clearance, nominal edge cover, and nominal pocket width for the thickness and type of glazing installed, and shall be in accordance with the FGMA Glazing Manual.

H. Pocket glazed framing shall provide:

		Insulating Glass
1.	Nominal edge cover (or bite) framing only	1/2"
2.	Min. nominal edge clearance	1/4"
3.	Min. face clearance	5/32"

2.4 STOREFRONT FRAMING

A. General: Provide inside-outside matched resilient flush glazed system with provisions for glass replacement. Shop fabricate and preassemble frame components where possible.

B. For glass and glazing, refer to Section 088000.

2.5 FINISH

A. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.

1. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

2. Custom color and gloss as selected by the Architect.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where aluminum entrances and storefronts are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Install aluminum entrance doors and storefront framing in openings prepared under other Sections plumb, square, level, in exact alignment with surrounding work, with proper clearances, and securely and positively anchored to building structure, to meet performance requirements specified herein, in accordance with manufacturer's published instructions and approved submittals.

B. Use only skilled mechanics for erection, under supervision of manufacturer's representative.

C. Provide protection against galvanic action. Isolate dissimilar materials with bituminous coating or non-absorptive dielectric tape.

D. Install aluminum storefront frame.

E. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction, unless otherwise indicated. Comply with requirements of Section 079200.

F. Erection Tolerances: Install entrance and storefront systems to comply with the following maximum tolerances.

1. Variation from Plane: Limit variation from plane or location shown to 1/8" in 12 feet; 1/4" over total length.

2. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16". Where surfaces meet at corners, limit offset from true alignment to 1/32".

3. Diagonal Measurements: Limit difference between diagonal measurements to 1/8".

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Contractor shall engage a qualified independent testing agency to perform testing indicated for storefronts.

B. Repair or remove Work that does not meet requirements or that is damaged by testing; replace to conform to specified requirements.

3.4 PROTECTION AND CLEANING

A. Protect finished metal surfaces from damage during fabrication, shipping, storage, and erection, and from then until acceptance by Owner.

B. Clean metal surfaces promptly after installation, exercising care to avoid damage. Remove excess sealant, dirt, and other substances. Lubricate hardware and other moving parts.

C. Replace glass that is broken, cracked, or chipped prior to time of final acceptance of Project by Owner.

D. Clean glass surfaces promptly after installation, exercising care to avoid damage to same.

END OF SECTION 084113

SECTION 08 51 13

ALUMINUM WINDOWS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

B. Provide aluminum windows with fixed lites complete with required accessories, as shown on Drawings and as specified herein.

Caulking between window members and adjacent materials shall be performed by this Contractor in accordance with the requirements herein and in Specification Section 079200 Joint Sealers.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the transaction window as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:

1. Security window with bullet-resistant glazing.

1.3 RELATED SECTIONS

A. Gypsum Drywall - Section 092900, for non-structural metal framing.

B. Joint Sealers - Section 079200.

1.4 QUALITY ASSURANCE

A. Take field measurements of existing openings prior to submitting shop drawings and show same on shop drawings for each opening. Note that the Contract Drawings show general locations and sizes of windows, but the Contractor shall remain responsible for all field measurements, quantities, etc.

B. Manufacturers shall have been engaged in the manufacture of security windows of resistance levels specified for not less than 10 years.

1.5 SUBMITTALS

A. Shop Drawings

1. Shop drawings shall show in detail and fully indicate locations and quantities of all the work, the kind, finish, size, section of each unit, overall and detail dimensions, factory and field joint locations, arrangements and details, location and detail of each piece of anchorage, and supporting construction provisions for the work of others.

2. Show all surrounding conditions on elevations and details, including steel, masonry, lintels, and anchorage; all correctly dimensioned.

3. Shop drawings of elevations shall be at scale of 3/4" = 1'-0" or larger. Other shop drawings shall be at scale that is normal to trade, or larger if required by Architect.

4. Contract drawings may not be used (reproduced, enlarged, reduced, etc.) for shop drawings.

5. Fully indicate all requirements regarding the manufacture, finishing, handling, storage, carting sequence and erection of the units.

6. Show joinery techniques, provision for horizontal and vertical expansion, glass and metal thicknesses, and framing member profiles.

7. Identify all materials, including metal alloys, glass types, fasteners, and glazing materials. Identify all shop and field sealants by product name and locate on drawings. Glazing details shall be at full size scale.

8. Show dimensioned position of glass edge relative to metal rabbet.

9. Verify all measurements of windows in the field before commencing fabrication.

10. Any proposed deviations from work shown on the Contract drawings shall be indicated and so identified on shop drawings for Architect's review.

B. Structural Calculations

1. Required mathematical calculations shall be prepared, signed and sealed by a Professional Engineer registered in New York State. Calculations required for:

   a. Design of mullions and other structural members in accordance with Par. 2.05F
   b. Window anchorage in accordance with Par. 3.06A

C. Samples

1. Color Chart: Chart shall include a minimum of 8 standard colors for color selection of finishes by the Project Architect.

2. For each color used on project, submit three (3) 12" long frame extrusion sections of window finished with Project Architect's color selection. Samples shall show full coverage of finish on extrusion and establish allowable color range. Use approved samples for comparison purposes during production finishing.

3. Sample of insulating glass unit for review for optical distortion.

   a. Sample shall be the larger of 36” x 48” or the largest size of glazed pane used on the project.
   b. Sample glazing shall be mounted in a frame which shall have wheels. Sample shall be delivered to the SCA and moved to the project location after approval.

4. Full size sample of largest size window or other project size window, as selected by the Project Architect, in project finish and color for approval before fabrication of windows for project installation. Sample shall be glazed with glazing material specified. If panning is specified, the sample shall have panning and exterior sill

attached. Sample shall be delivered to the project site. Approved window sample shall be incorporated into the project.

5. Sample window for installation within the masonry wall & air-vapor barrier mockup

    a. Frame type and configuration of such sample window shall be identical to the project window.

    b. Sample window shall be a minimum eight (8) SF.

    c. Finishes and glazing type for such sample window are not required to match the project windows.

    d. Window shall be delivered to the site.

    e. Sample shall be 12”x12”

D. Warranties:

1. Submit warranties as specified in form acceptable to the Owner:

2. Windows including all components, hardware and 4 bar hinges

3. Finishes on windows and component parts

4. Weatherstripping

5. Glazing

6. Sealants

7. Quality Assurance

    a. Manufacturers other than those certified herein shall submit letter of certification indicating a minimum of five (5) years successful experience manufacturing types and sizes of windows specified herein. Manufacturer’s certification shall include a list of projects where manufacturer’s product was installed and shall identify project name, location, date of installation and name, address and telephone number of Owners representative who can verify the information provided and furnish a reference.

    b. This requirement may be waived at the discretion of the Authority and subject to such additional requirements as the Owner may so require in order to permit such a waiver.

    c. Installer's list of projects completed indicating 5 years experience of successful installations of types and sizes of windows specified herein. List shall identify project name, location, date of installation and name, address and telephone number of Owners representative who can verify the information provided and furnish a reference.

    d. Provide letter from manufacturer approving the installer.

e. Manufacturer's certification for factory testing of windows.

f. Letter of certification by the window manufacturer that the windows proposed for use on the project are identical in every respect to the passing windows tested for the product certification laboratory test report, including all modifications made to the specimen to achieve a passing result. Manufacturer shall include Laboratory report test date and test number of the product's laboratory test in the letter.

8. VLT and SHGC values of glazing

9. Thermal Transmittance Test Report

10. Field Test Reports.

11. Shop Quality Control Program.

12. Acoustic test of window assembly

E. Project Closeout

1. Certification by manufacturer of the installation.

2. Manufacturers maintenance manual and instruction.

3. Extra Materials and as specified in Article 1.08.

4. The Contractor shall arrange for inspection of completed window installation by a representative of New York State Department of Labor and shall provide access for inspection by the New York State Department of Labor representative as may be required. Notify the Authority's representative of the date and time of the Department of Labor inspection 2 business days prior to the scheduled inspection.

5. Certification by the window manufacturer and contractor that the function check as specified in Article 3.08 has been satisfactorily completed.

F. Submittals for Product Certification or Project Specific Approval:

1. As a condition precedent to acceptance for the Work, for manufacturers and products that are not listed in Art. 2.01, the manufacturer shall submit the items listed in this paragraph in addition to the submittals specified in Art. 1.04, paragraph A.

2. Product Certification submittals are not required to be submitted for each project. Once a manufacturer and product has been certified, the submittals specified below will be kept on record at the Owner for the duration of the certification period after which time product certification must be renewed.

a. Product Certification Test reports. See Art. 1.05 and Part 4 for required tests and test report requirements.

b. Window manufacturer's specifications, installation recommendations. Catalog cuts and product literature for sealants, finish, glazing materials, thermal break material, hardware, 4 bar hinges & weatherstripping.

c. Die drawings cross-referenced to assembly drawings

d. Assembly drawings, standard details and glazing details.

e. Laboratory Test Reports from an AAMA accredited Laboratory for 4 bar hinges tested in accordance with AAMA 904.14.

f. Finish applicators Quality Control Program for monitoring compliance with the requirements of AAMA 2605. Include monitoring coating thickness(es); 100 double MEK rubs without pick up of paint finish; and testing for compliance with AAMA 2605 Articles 8.1 through 8.4 and 8.7 on samples of each part selected at random from each production run or shift.

g. Manufacturer’s Shop Quality Control Program, see Art. 1.05, Paragraph E.

h. Sealant and glazing manufacturer's detail review and tests for glazing materials, see Art. 2.05, Paragraph G.

i. Shop Drawings of Test Specimen

j. Manufacturer's Credentials:

1). Submit letter of certification indicating a minimum of five (5) years successful experience manufacturing types and sizes of windows specified herein.

2). Manufacturer’s certification shall include a list of projects where manufacturer’s product was installed and shall identify project name, location, date of installation and name, address and telephone numbers of Owners representative who can verify the information provided and furnish a reference.

3). These requirements may be waived at the discretion of the Owner and subject to such additional requirements as the Owner may so require in order to permit such a waiver.

3. Sample Window for review

a. Provide Sample for Architect review in size directed, but not larger than 3’-0” x 5’0”. Submit shop drawings for approval before fabrication. The window shall be mounted in a frame that shall have wheels.

4. Sample of each Warranty

G. Low Emitting Materials Compliance Submittals

1. Provide documentation for each sealant to be used on site and within the weatherproofing/waterproof membrane (interior) of the building, indicating that the sealants comply with V.O.C. requirements as stated in Specification Section G01600.

H. Sustainability Submittals

1. Submit documentation of recycled content consisting of product data or manufacturer’s statement as applicable for the following:

a. Window frames

Window glass

1.6 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

C. Store and handle windows, mullions, panels, hardware and appurtenant items in strict compliance with manufacturer's instructions.

D. Protect units adequately against damage from elements, construction activities and other hazards, before, during and after installation.

E. Windows shall be individually shrink-wrapped and placed on properly sized pallets.

F. Windows shall be delivered with the NFRC or Thermal performance label affixed to each window.

1.7 WARRANTY

A. Manufacturer’s one year warranty against defects in materials and workmanship.

B. The starting of Warranty period is defined as the earlier of the following:

1. date of substantial completion

or

2. six months after the windows are delivered to the contractor

C. Submit written warranties to the Architect and to the Project Officer from window manufacturer and Contractor for the following in a form acceptable to the Owner:

1. Windows: Windows including all components, hardware shall be fully warranted against defects in material or workmanship under normal anticipated use and service for a period of 10 years starting from the onset of warranty period in a form satisfactory to the Owner. The first 3 years of the warranty shall include parts and

labor, the remaining 7 years of the warranty shall include parts only. (Window manufacturer)

2. Finish: The finishes on windows and component parts (such as panning, trim, mullions) shall be certified as complying fully with requirements of AAMA Specification 2605-11. Fluoropolymer finish shall be fully warranted against chipping, peeling, cracking, crazing, blistering, chalking and fading for a period of 10 years from the onset of warranty period. (Window manufacturer and finish applicator)

3. Weather-stripping: 10 years from the onset of warranty period. (Window manufacturer)

4. Glazing: 5 years from the onset of warranty period to furnish replacements for insulating glass units or laminated-glass units that deteriorate. Deterioration is defined as defects developed during normal use that are attributed to the manufacturing process and not to causes other than glass breakage from use, accident, or vandalism and practices for maintaining and cleaning glass contrary to manufacturer's written instructions. Defects include edge separation, cracking due to manufacturing/installation, delamination materially obstructing vision through glass, discoloration, peeling and cracking of Low E coating and blemishes exceeding those allowed by referenced laminated/insulated-glass standard. (Window manufacturer)

5. Sealants: Sealants shall be warranted against adhesive and cohesive failure by the Sealant manufacturer for 10 years from the onset of warranty period. Warranty shall cover labor and material.

1.8 EXTRA MATERIAL STOCK

A. Contractor shall provide extra pieces of glazing cut to size, and sash hardware.

B. Extra stock shall be new and identical to products specified and provided for the project.

C. At the completion of the Work, extra stock shall be turned over to the Owner for the use of the Custodian.

PART 2 PRODUCTS

2.1 ALUMINUM WINDOW

A. Furnish each security window assembly designed and built in a manner that provides a completely assembled, finished unit, installed in a finished opening.

B. Contract Documents are based on products by U.S. Bullet Proofing, Upper Marlboro MD 20774; Tel: 301-218-7920, Fax: 301-218-7925, www.usbp.com email: info@usbp.com

1. Basis of Design Product: Bullet-resistant fixed aluminum window USAW400.

a. Ballistics Performance: Installed bullet-resistant glazing shall withstand ballistic impact loads and forces without damage to the glazing beyond that allowed by referenced standards.
   1). 1-5/16" thick.
   2). Ballistic Level: Pass UL 752 Level 4.

PART 3 EXECUTION

2.1 ACCESSORIES

A. Glazing Accessories: Specified in Section 088000.

B. Anchors: Series 316 stainless steel.

C. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.

D. Exposed Flashing: Aluminum sheet per Div. 07 Section "FLASHING AND SHEET METAL"; finish to match framing members.

E. Normally retain 1st option below.

F. Concealed Flashing: Dead-soft, 0.018-inch-thick stainless steel, ASTM A 240 of type recommended by manufacturer.

G. Framing Sealants: Manufacturer's standard.

H. Joint Sealants: For installation at perimeter of framing, as specified in Section 07 92 00.

2.2 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B 221.

2. Sheet: ASTM B209.

B. Aluminum Extrusions

1. Alloy: 6063-T5, with not less than 22,000 psi ultimate tensile strength, a yield of 16,000 psi. Comply with ASTM B221. Thickness shall be as required to meet the performance requirements of AAMA/WDMA/CSA 101/I.S.2/A440-11 AW-PG40-AP and this specification section but not less than 0.080 inch for sash and frame (jamb, head & sill). Panning thickness shall be minimum 0.062 inch for jamb, sill and head sections.

C. Fasteners

1. Aluminum, non-magnetic stainless steel, or other materials warranted by manufacturer to be non-corrosive and compatible with aluminum window members, trim, hardware, anchors and other components of window units.

2. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.125" thick, reinforce interior with aluminum or non-magnetic stainless steel to receive screw or provide standard non-corrosive pressed-in spliced grommet nuts.

3. Do not use exposed fasteners on exterior for application of hardware. Match finish of adjoining metal.

4. Provide Type 300 series non-magnetic stainless steel Phillips flat-head machine screws for exposed fasteners, where required, or special tamper-proof fasteners.

5. Locate fasteners not to disturb thermal break construction of windows.

D. Anchorage

1. Anchorage Clips

Provide manufacturer's standard extruded aluminum anchorage/interior trim clips spaced as required by approved structural calculations, but not exceeding 16" o.c.

2. If structural calculations determine that the extruded aluminum clips are not adequate, in addition to the aluminum clips provide bent clips, stainless steel. Shape, size, thickness and spacing of all anchorage clips as required by structural calculations.

3. Screws (clips to wood): Stainless steel, Type 300 series, hardened, Size as required by design.

4. Screws (clips to aluminum window): Stainless steel, Type 300 series, hardened, self-tapping blunt point sheet metal or self-drilling anchor. Size as required by design.

5. Expansion Shields and Bolts (clips to masonry): Type 300 series, stainless steel. Size as required by design.

6. Screws (Clips to steel members) Stainless steel, Type 300 or 400 series, non-corrosive, self-tapping blunt point screws. Size as required by design.

E. Compression glazing strips and weather-stripping: At manufacturer's option, provide extruded neoprene gaskets and butyl tape complying with ASTM D2000 Designation 2BC415 to 3BC415, PVC gaskets complying with ASTM D2287, or expanded neoprene gaskets complying with ASTM C509, Grade 4.

F. Sealant

1. Unless otherwise indicated, for sealants required within fabricated window units, provide elastomeric type as recommended by window manufacturer for joint size and movement, to remain permanently elastic, non-shrinking and non-migrating. Provide sealants complying with AAMA Specification 803.3 that are compatible with and will adhere to surrounding materials.

2. All sealants used within the weatherproofing/waterproof membrane (interior) of the building shall be low V.O.C. in accordance with the requirements of Section G01600.

2.3 FABRICATION AND ACCESSORIE

A. General

Provide manufacturer's standard fabrication and accessories which comply with specifications and standards and which are reglazable without dismantling of sash framing, except where more specific or stringent requirements are indicated. Provide complete system for assembly of components and anchorage of window units and prepare complete preglazing at factory.

B. Window Members

All window members shall be of aluminum. Friction tabs, shoes, weather-stripping guides, and the secondary members shall be of aluminum or material compatible with aluminum.

1. Main frame and sash members shall have nominal thickness of 0.080", except for integral or applied fin trim. Master frame and vent shall be no less than 2.25" in depth. Frame and vent shall have a flush interior and exterior surface. Overlap or extensions of ventilators beyond main frame are not acceptable.

2. Stiles and rails of operating sash shall be tubular, with welded corners. Alternate methods of construction will be considered provided the window passes testing for the performance requirements specified herein. Provide weather-stripping both at exterior flange and at interior contact.

3. Glazing rabbet of sash shall be of sufficient dimensions to provide for expansion and contraction of insulating glass unit and edge engagement as recommended by the insulating glass unit manufacturer for the unit size, thickness, glazing system and the design wind load used for the project.

C. Thermal Break

Thermal barrier shall provide continuous uninterrupted thermal break around entire perimeter of frame and sash and shall not be bridged by any metal conductors at any point.

D. Hardware

Hardware having exposed component parts shall be of aluminum, stainless steel or other non-corrosive materials compatible with aluminum. Cadmium or zinc-plated steel where used shall be in compliance with ASTM Specification B766 or B633

E. Construction

1. Assembly: Windows shall be assembled in secure and workmanlike manner to perform as specified. Vents shall be mitered and sealed with non-hardening sealant, forming watertight joint. Corners of vents shall be structurally reinforced.

2. Corners of frame shall be coped construction with two screws per corner into screw ports and backsealed, forming watertight joint.

3. Alternate methods of construction will be considered provided the window passes testing for the performance requirements specified herein.

F. Mullions and other structural members:

When mullion units occur, whether joined by integral mullions, independent mullions or a combination of frame members, the resulting members shall be capable of withstanding load outlined under Uniform Load specified load requirements, without deflecting more than 1/175th of its span. Where independent or integral mullions are used to join windows, such mullions shall contain thermal break as specified. Evidence of compliance may be by mathematical calculations prepared, signed and sealed by a Professional Engineer licensed in the State of New York.

G. Glazing

1. Units shall be pre-glazed with insulating glass units at factory as specified herein.

2. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

   a. Glazing Performance: Provide glass with the following minimum performance requirements:
      1). Center of glass U Value: as required to meet window assembly thermal values
      2). Visible Light Transmittance: >40%
      3). Solar Heat Gain Coefficient: ≤0.36

3. Glass: Laminated glass complying with ASTM C1172. Consisting of two sheets of Type I, Class 1 clear annealed float glass 1/8" thick with 60 mil thick clear polyvinyl butyral (PVB) interlayer (unless indicated otherwise). PVB interlayer Saflex as manufactured by Solutia Inc., Butacite as manufactured by DuPont.

4. Preassembled Insulating Glass Units: 1" – 1¼" thick preassembled units consisting of sealed lites of glass separated by a dehydrated air or argon filled interspace, and complying with ASTM E2190. Manufacturer's standard edge construction of spacers and sealants permanently bonded to glass surfaces. Insulating glass units shall be certified by (IGCC) and shall be fabricated of the following glass.

   a. Exterior Glass: 1/8" annealed glass, 60 mil Polyvinyl Butyral (PVB) interlayer, 1/8" annealed glass with low-e coating on the interior surface.

      Or

      Minimum 3/16" thick tempered glass with low-e coating on interior surface.

   b. Interior Glass: with additional low-e coating if required to achieve 'U' value.

   c. 1/8" annealed glass, 60 mil PVB interlayer, 1/8" annealed glass

   d. Interior Glass where indicated: 1/8" annealed glass, 60 mil PVB translucent white interlayer, 1/8" annealed glass

e. Sealing System: Dual seal with manufacturer's primary and secondary sealants that are compatible with glazing materials and aluminum finish.

f. Corner construction: Manufacturer's standard corner construction.

g. Optical distortion: Insulating glass units shall not produce visible distortion of transmitted or reflected images as demonstrated using a striped pattern ("zebra board") or other method as determined by the Owner, in comparison to the 36" x 48" control sample at the School Construction Owner offices, 30-30 Thomson Ave., Long Island City, NY. Project sample shall be the larger of 36" x 48" or the largest size of glazed pane used on the project. Project sample shall be submitted for review and approval by the Architect prior to glazing window units. The approved sample shall be delivered to the project location and will serve as a standard of quality for all project windows.

h. Glass installed in project windows shall not exhibit visible distortion greater than the approved sample. If distortion is apparent in installed glass, then the entire window shall be removed and replaced. Field re-glazing of windows will not be permitted.

5. Inside bead glazed utilizing an extruded butyl tape with continuous integral shim at the exterior and a dense neoprene or EPDM wedge or hollow compression gasket at the interior secured in place with removable aluminum bead.

6. All glazing materials used with laminated glass shall be compatible with the PVB interlayer to prevent deterioration and delamination of same. Verify compatibility of glazing materials with manufacturer of the PVB interlayer.

7. Obscure PVB Interlayer

   Provide Translucent white PVB interlayer for inner lite of glazing system at Toilet and Locker Room Windows and other locations indicated on Drawings.

8. Submit glazing material manufacturer's certification of detail review and satisfactory test results for adhesion, compatibility and non-staining to all materials and finishes with which the glazing materials will contact.

2.4 INTERIOR TRIM

A. Interior trim, closures and angles shall be as detailed and of extruded or break formed aluminum shapes, min. 0.062" nominal wall thickness. There shall be no sharp edges on any exposed metal.

2.5 PROTECTION

A. Provide heavy coat of bituminous paint, or appropriate sealant, tape or other electrolytic isolator on portions of aluminum frames in contact with dissimilar materials unless coated with window finish paint system. All steel anchors and reinforcing shall be galvanized.

B. Provide heavy coating of Tnemec 115 Unibond or equivalent on surfaces of steel reinforcing and anchors to prevent direct contact with dissimilar materials except for finished aluminum. Leave no part of steel reinforcing exposed on exterior of building.

2.6 SILLS, STOOLS, APRONS

A. Provide aluminum sills, stools, aprons, and other trim and accessories, finished to match windows, as indicated on Drawings. Thicknesses, profiles and sizes as detailed.

2.7 FINISHES

A. Superior-Performance Organic Finish: 2-coat PVDF fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color: Custom color as directed.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where bulletproof transaction windows are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

B. After delivery of windows to Site and before installation, the Owner reserves the right to select at random one window of each type and remove them to the office of the Owner for examination and inspection.

C. If, after the examination and inspection it is found that any window does not comply with requirements of Specifications, all windows of the type shall be inspected and defects corrected. If it is not possible to correct the defects at Site, the defective windows shall be removed from Site and all costs involved shall be borne by the Contractor.

D. If, after the examination and inspection it is found that the windows comply with requirements of Specifications, Contractor shall proceed with installation of windows including those examined and inspected by the Owner. The Owner will pay the cost to repair or replace windows damaged during the examination and inspection.

3.2 INSTALLATION

A. Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Install the work of this Section in strict accordance with the original design, requirements of governmental agencies having jurisdiction, and the manufacturer's recommended installation procedures, anchoring all components firmly into position for long life under hard use.

C. Use only skilled installers, with work done in accordance with approved shop drawings and specifications.

D. Install window units into prepared openings in strict accordance with approved shop drawings.

1. Set units plumb, level, and true to line, without warp or rack of frame.

2. Installation Tolerances: Comply with the following non-accumulating maximum tolerances:

   a. Maximum Variation in Diagonal Framing Measurements: 1/8 inch.
   b. Offset Between Adjacent Framing Members: 1/16 inch.
   c. Maximum Variation from Plumb: 1/8 inch per 12 feet.
   d. Alignment: Plus or minus 1/16 inch from door face to face of framing.
   e. Sealant space between system and adjacent construction: As indicated but not greater than 1/2 inch or less than 1/4 inch.

3.3 ADJUSTING AND CLEANING

A. After completion of installation, window units shall be inspected, adjusted, and left clean, free of labels, etc.

B. Glass that is broken, damaged, cracked, or permanently stained shall be replaced.

C. Clean aluminum surfaces promptly after installation of windows, exercising care to avoid damage to protection coatings and finishes. Remove excess glazing and sealant compounds, dirt, and other substances. Lubricate hardware and moving parts, as required for proper operation. Touch-up damaged paint finish employing finish formulators compatible air-dry fluoropolymer system.

D. Clean glazing as recommended by glazing material manufacturer, promptly after installation of windows. Remove glazing sealant compound, dirt and other substances. Temporary NFRC or Thermal performance stickers may be removed only after the completion of energy code special inspection.

E. Provide protection and other precautions required to ensure that window units will be without damage or deterioration (other than normal weathering) at time of acceptance.

F. Deliver to the Owner's representative written recommendations and instructions for maintenance, repair, cleaning (including glazing) adjustment and protection of windows, after acceptance. Instruct the Custodian in methods of maintenance, adjustment, protection and reglazing.

END OF SECTION 085113

SECTION 085653

SECURITY WINDOWS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the transaction window as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:

1. Security window with bullet-resistant glazing.

1.3 RELATED SECTIONS

A. Gypsum Drywall - Section 092900, for non-structural metal framing.

B. Joint Sealers - Section 079200.

1.4 QUALITY ASSURANCE

A. Take field measurements of existing openings prior to submitting shop drawings and show same on shop drawings for each opening. Note that the Contract Drawings show general locations and sizes of windows, but the Contractor shall remain responsible for all field measurements, quantities, etc.

B. Manufacturers shall have been engaged in the manufacture of security windows of resistance levels specified for not less than 10 years.

1.5 SUBMITTALS

A. Shop Drawings

1. Shop drawings shall show in detail and fully indicate locations and quantities of all the work, the kind, finish, size, section of each unit, overall and detail dimensions, factory and field joint locations, arrangements and details, location and detail of each piece of anchorage, and supporting construction provisions for the work of others.

2. Show all surrounding conditions on elevations and details, including steel, masonry, lintels, and anchorage; all correctly dimensioned.

3. Shop drawings of elevations shall be at scale of 3/4" = 1'-0" or larger. Other shop drawings shall be at scale that is normal to trade, or larger if required by Architect.

4. Contract drawings may not be used (reproduced, enlarged, reduced, etc.) for shop drawings.

5. Fully indicate all requirements regarding the manufacture, finishing, handling, storage, carting sequence and erection of the units.

6. Show joinery techniques, provision for horizontal and vertical expansion, glass and metal thicknesses, and framing member profiles.

7. Identify all materials, including metal alloys, glass types, fasteners, and glazing materials. Identify all shop and field sealants by product name and locate on drawings. Glazing details shall be at full size scale.

8. Show dimensioned position of glass edge relative to metal rabbet.

9. Verify all measurements of windows in the field before commencing fabrication.

10. Any proposed deviations from work shown on the Contract drawings shall be indicated and so identified on shop drawings for Architect's review.

1.6 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.7 WARRANTY

A. Manufacturer’s one year warranty against defects in materials and workmanship.

PART 2 PRODUCTS

2.1 SECURITY WINDOW

A. Furnish each security window assembly designed and built in a manner that provides a completely assembled, finished unit, installed in a finished opening.

B. Contract Documents are based on products by U.S. Bullet Proofing, Upper Marlboro MD 20774; Tel: 301-218-7920, Fax: 301-218-7925, www.usbp.com email: info@usbp.com

1. Basis of Design Product: Bullet-resistant fixed aluminum window USAW400.

a. Ballistics Performance: Installed bullet-resistant glazing shall withstand ballistic impact loads and forces without damage to the glazing beyond that allowed by referenced standards.
1). 1-5/16" thick.
2). Ballistic Level: Pass UL 752 Level 4.

PART 3 EXECUTION

2.1 ACCESSORIES

A. Glazing Accessories: Specified in Section 088000.

B. Anchors: Series 316 stainless steel.

C. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123/A 123M or ASTM A 153/A 153M.

D. Exposed Flashing: Aluminum sheet per Div. 07 Section "FLASHING AND SHEET METAL"; finish to match framing members.

E. Normally retain 1st option below.

F. Concealed Flashing: Dead-soft, 0.018-inch-thick stainless steel, ASTM A 240 of type recommended by manufacturer.

G. Framing Sealants: Manufacturer's standard.

H. Joint Sealants: For installation at perimeter of framing, as specified in Section 07 92 00.

2.2 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B 221.

2. Sheet: ASTM B209.

2.3 FINISHES

A. Anodized Aluminum Finish: AAMA 611, Architectural Class I anodized, [clear.] [dark bronze.]

or

B. Superior-Performance Organic Finish: 2-coat PVDF fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color: Custom color as directed.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where bulletproof transaction windows are to be installed and correct any conditions detrimental to the proper and timely completion of

the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Install the work of this Section in strict accordance with the original design, requirements of governmental agencies having jurisdiction, and the manufacturer's recommended installation procedures, anchoring all components firmly into position for long life under hard use.

C. Use only skilled installers, with work done in accordance with approved shop drawings and specifications.

D. Install window units into prepared openings in strict accordance with approved shop drawings.

1. Set units plumb, level, and true to line, without warp or rack of frame.

2. Installation Tolerances: Comply with the following non-accumulating maximum tolerances:

a. Maximum Variation in Diagonal Framing Measurements: 1/8 inch.
b. Offset Between Adjacent Framing Members: 1/16 inch.
c. Maximum Variation from Plumb: 1/8 inch per 12 feet.
d. Alignment: Plus or minus 1/16 inch from door face to face of framing.
e. Sealant space between system and adjacent construction: As indicated but not greater than 1/2 inch or less than 1/4 inch.

3.3 ADJUSTING AND CLEANING

A. After completion of installation, window units shall be inspected, adjusted, and left clean, free of labels, etc.

B. Glass that is broken, damaged, cracked, or permanently stained shall be replaced.

END OF SECTION 085653

SECTION 087100

DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Automatic operators.

C. Related Sections:

1. Division 06 Section “Rough Carpentry”.
2. Division 08 Section “Door Schedule”.
3. Division 08 Section “Door Hardware Schedule”.
4. Division 08 Section “Hollow Metal Doors and Frames”.
5. Division 08 Section “Flush Wood Doors”.
6. Division 08 Section “Bullet Resistant Doors and Frame”.
7. Division 08 Section “Blast Resistant Doors”.
8. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.
9. Division 08 Section “All-Glass Entrances”.
10. Division 28 Section “Access Control”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. UL/ULC and CSA C22.2 - Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.

8. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:

a. Type, style, function, size, label, hand, and finish of each door hardware item.
b. Manufacturer of each item.
c. Fastenings and other pertinent information.
d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
e. Explanation of abbreviations, symbols, and codes contained in schedule.
f. Mounting locations for door hardware.
g. Door and frame sizes and materials.
h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

    a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
    b. Complete (risers, point-to-point) access control system block wiring diagrams.
    c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity.

Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

   a. Two Hinges: For doors with heights up to 60 inches.
   b. Three Hinges: For doors with heights 61 to 90 inches.
   c. Four Hinges: For doors with heights 91 to 120 inches.
   d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

   a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
   b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

   a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
   b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

   a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

   a. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.2 CONTINUOUS HINGES

A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:.

   a. Pemko (PE).

B. Pin and Barrel Continuous Hinges: ANSI/BHMA A156.26 Grade 1-600 pin and barrel continuous hinges with minimum 14 gauge Type 304 stainless steel hinge leaves, concealed stainless pin, and twin self-lubricated nylon bearings at each knuckle separation. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:

a. Markar Products; ASSA ABLOY Architectural Door Accessories (MR).

2.3 POWER TRANSFER DEVICES

A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

1. Manufacturers:

a. Securitron (SU) - EL-CEPT Series.
1) For Continuous and Pin and Barrel hinges provide as integral part.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

1. Provide one each of the following tools as part of the base bid contract:

a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
b. McKinney (MK) - Connector Hand Tool: QC-R003.

2. Manufacturers:

a. McKinney (MK) - QC-C Series.

2.4 DOOR OPERATING TRIM

A. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.

2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Pulls, where applicable, shall be provided with a 10” clearance from the finished floor on the push side to accommodate wheelchair accessibility.
5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
6. Manufacturers:

    a. Rockwood (RO).

2.5 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: As directed by owner.

C. Small Format Interchangeable Cores: Provide small format interchangeable cores (SFIC) as specified, core insert, removable by use of a special key; usable with other manufacturers' cylinders.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).
4. Construction Control Keys (where required): Two (2).
5. Permanent Control Keys (where required): Two (2).

F. Construction Keying: Provide temporary keyed construction cores.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.6 KEY CONTROL

A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

a. Lund Equipment (LU).
b. MMF Industries (MM).
c. Telkee (TK).

P. Electronic Key Management System: Provide an electronic key control system with Stand-alone Plug and Play features including advanced RFID technology. Touchscreen interface with PIN access for keys individually locked in place. Minimum 1,000 system users and 21 iFobs for locking receptors. System shall have a minimum 250,000 audit events screen displayed or ability to be exported via USB port.

1. Manufacturers:

a. Medeco (MC).

2.7 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Manufacturers:

a. Corbin Russwin Hardware (RU) - ML2000 Series.

2.8 MULTI-POINT LOCKS AND LATCHING DEVICES

A. Multi-Point Locksets, Blast and Hurricane: Provide ANSI/BHMA A156.37, Series 1000, Operational Grade 1 and Security Grade 1 Certified Products Directory (CPD) listed multi-point locksets. Listed manufacturers shall meet all functions and features as specified herein.

1. Electromechanical locksets shall have the following functions and features:

a. Universal Molex plug-in connectors that have standardized color-coded wiring and are field configurable to fail safe or fail secure and operate from 12vdc to 24vdc regulated.
b. EcoFlex or equivalent technology that reduces energy consumption up to 92% as certified by GreenCircle.
c. Optional deadbolt and latchbolt monitoring.

2. Manufacturers:

a. Corbin Russwin Hardware (RU) - BL6600 Series.

2.9 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.10 ELECTROMAGNETIC LOCKING DEVICES

A. Surface Electromagnetic Locks (Heavy Duty): Electromagnetic locks to be surface mounted type conforming to ANSI A156.23, Grade 2 with minimum holding force strength of 1,200 pounds. Locks to be capable of either 12 or 24 voltage and be UL listed for use on fire rated door assemblies. Electronics are to be fully sealed against tampering and allow exterior weatherproof applications. As indicated in Hardware Sets, provide specified mounting brackets and housings. Power supply to be by the same manufacturer as the lock with combined products having a lifetime replacement warranty.

1. Manufacturers:

a. Securitron (SU) - M62 Series.

B. Delayed Egress Electromagnetic Devices: Delayed egress locking systems shall be fully integrated units with a minimum 1200 pound holding force magnetic lock, autosensing dual voltage with microprocessor technology, magnetic bond sensor and integrated door position

switch (DPS), and instant release circuit with no residual magnetism. System shall have easily visible LEDs that indicate status on secure side of door, adjustable door movement detection up to 1/4" and alarm strobe that indicates countdown and stays illuminated post alarm until reset.

1. Configurable settings shall include:

    a. Nuisance delay times: 0, 1, 2, or 3 seconds.
    b. Irrevocable alarm times: 15 or 30 seconds.
    c. Bypass delay times: 0, 15, 30, 45 seconds.
    d. No irrevocable alarm after bypass expiration.
    e. Post alarm reminder.
    f. Bypass expiration alarm.
    g. Manual/delayed relock.
    h. Unlocked at startup.

2. Manufacturers:

    a. Securitron (SU) – IMXDA Series.

2.11 ELECTRIC STRIKES

A. Standard Electric Strikes: Electric strikes conforming to ANSI/BHMA A156.31, Grade 1, for use on non-rated or fire rated openings. Strikes shall be of stainless steel construction tested to a minimum of 1500 pounds of static strength and 70 foot-pounds of dynamic strength with a minimum endurance of 1 million operating cycles. Provide strikes with 12 or 24 VDC capability, fail-secure unless otherwise specified. Where specified provide latchbolt and latchbolt strike monitoring indicating both the position of the latchbolt and locked condition of the strike.

1. Manufacturers:

    a. HES (HS) - 1500/1600 Series.

B. Provide electric strikes with in-line power controller and surge suppressor by the same manufacturer as the strike with the combined products having a five year warranty.

2.12 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. Exit devices shall have a five-year warranty.
2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the

proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
6. Flush End Caps: Provide flush end caps made of architectural metal in the same finish as the devices as in the Hardware Sets. Plastic end caps will not be acceptable.
7. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

    a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

8. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
9. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
10. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
11. Rail Sizing: Provide exit device rails factory sized for proper door width application.
12. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

1. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.

2.13 ELECTROMECHANICAL EXIT DEVICES

A. Electromechanical Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed panic and fire exit hardware devices subject to same compliance standards and requirements as mechanical exit devices. Electrified exit devices to be of type and design as specified below and in the hardware sets.

1. Energy Efficient Design: Provide devices which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
2. Where conventional power supplies are not sufficient, include any specific controllers required to provide the proper inrush current.

3. Motorized Electric Latch Retraction: Devices with an electric latch retraction feature must use motors which have a maximum current draw of 600mA. Solenoid driven latch retraction is not acceptable.

4. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ED5000 Series.

2.14 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Cycle Testing: Provide closers which have surpassed 15 million cycles.
4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.

1. Large body cast iron surface mounted door closers shall have a 30-year warranty.
2. Manufacturers:

    a. Norton Rixson (NO) - 9500 Series.

C. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Heavy duty surface mounted door closers shall have a 30-year warranty.

2. Manufacturers:

   a. Norton Rixson (NO) - 7500 Series.
   (Required as part of Blast assembly)

2.15 ELECTROHYDRAULIC DOOR OPERATORS

A. Electrohydraulic Door Operators (High Traffic): Provide ANSI/BHMA A156.19 Certified Products Directory (CPD) listed low energy operators that meet ANSI/BHMA A156.4 requirements and are UL listed for use on fire rated doors and UL10C certified that comply with requirements for the Americans with Disabilities Act (ADA). Operators shall be verified by GreenCircle to offer energy savings of 19% when compared to similar products to accommodate openings up 250 pounds and 48” wide.

1. Provide operators with features as follows:

   a. Non-handed with push and pull side mounting.
   b. Operates as mechanical surface closer during close cycles, when door is opened manually or if power is off.
   c. Activation by push button, hands-free or radio frequency devices.
   d. On board electronics to collect usage and cycle count data to facilitate preventative maintenance/diagnostics.
   e. Two-year limited warranty.
   f. Mounting backplate to simplify and speed up installation.

2. Operators shall have the following functionality:

   a. Adjustable Hold Open: Amount of time a door will stay in the full open position after an activation.
   b. Blow Open for Smoke Ventilation: Door opens when signal is received from alarm system allowing air or smoke to flow through opening. Door will stay open until signal from alarm system is stopped.
   c. Infinite Hold Open: Door will hold open at set position until power is turned off.
   d. Obstruction Detection: Door closes if it hits an obstruction while opening; door will reverse to open position if it hits an obstruction while closing. Door will stop once it hits an obstruction and will rest against the obstruction until removed.
   e. Open Delay: Delays operator opening for locking hardware.
   f. Overload Safety Shut-Off: After two minutes of receiving a door activation signal, inverter times out and door closes to prevent motor/inverter damage.
   g. Presence Detector Input: Input for external sensor to detect presence at door open or close position only.
   h. Push & Go: As the door is manually opened, the operator "senses" movement and opens door to the full-open position.
   i. Selector Mode Switch: Off disables the signal inputs unless Blow Open is activated, on activates the signal inputs, hold open activates the unit (unless Blow Closed is activated) to the hold open position.

j. Vestibule Delay: When the wall switch is pressed, first door in vestibule will open. Second door will open once vestibule door delay has expired. Delay is adjustable.

3. Manufacturers:

a. Norton Rixson (NO) - 6000 Series.

2.16 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

a. Rockwood (RO).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

1. Manufacturers:

a. Norton Rixson (RF).

2.17 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Pemko (PE).

2.18 AUTOMATIC DROP SEALS

Automatic Drop Seals to be of type and design as specified in the Hardware Sets.

2.19 ELECTRONIC ACCESSORIES

A. Push-Button Switches: Industrial grade momentary or alternate contact, back-lighted push buttons with stainless-steel switch enclosures. 12/24 VDC bi-color illumination suitable for either flush or surface mounting.

1. Manufacturers:

a. Securitron (SU) - PB Series.

B. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Manufacturers:

a. Securitron (SU) - DPS Series.

C. Intelligent Switching Power Supplies: Provide power supplies with single, dual or multi-voltage configurations at 12 and/or 24VDC. Power Supply shall have battery backup function with an integrated battery charging circuit. The power supply shall have a standard, integrated Fire Alarm Interface (FAI). The power supply shall provide capability for secondary voltage, power distribution, direct lock control and network monitoring through add on modules. The power supply shall be expandable up to 16 individually protected outputs. Output modules shall provide individually protected, continuous outputs and/or individually protected, relay controlled outputs. Network modules shall provide remote monitoring functions such as status reporting, fault reporting and information logging.

1. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.
2. Manufacturers:

    a. Securitron (SU) - AQL Series.

2.20 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.21 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.
2. The supplier is responsible for handing and sizing all products.
3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

B. Refer to Section 080671, Door Hardware Sets, for hardware sets.

END OF SECTION 087100

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 088000

GLASS AND GLAZING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the glass and glazing as shown on the drawings and/or specified herein, including, but not limited to, glazing of the following:

1. Windows.
2. Doors.
3. Entrances.
4. Storefront framing.
5. Bullet-resistant glazing.
6. Interior borrowed lites.
7. Interior frameless mirrors.

1.3 RELATED SECTIONS

A. Steel Doors and Frames - Section 081113.

B. Aluminum Entrances and Storefronts - Section 084113.

C. Security Aluminum Entrances - Section 084213.13

D. Security Storefronts - Section 084333.13.

E. Security Windows - Section 085653.

F. Toilet Accessories - Section 102813, for framed bathroom mirrors.

1.4 REFERENCES

A. Comply with the recommendations of the following references unless more stringent requirements are indicated herein.

1. FGMA Publications: FGMA Glazing Manual.
2. LSGA Publications: LSGA Design Guide.

3. IGMA Publications: TM-3000 Vertical Glazing Guidelines.

4. Safety Glass: Products complying with ANSI Z97.1 and testing requirements of 16 CFR Part 1201, Safety Standards for Architectural Glazing, Sealed Insulating Glass Manufacturing Association.

5. Fire-Resistive Glazing Products for Door Assemblies: Products identical to those tested per ASTM E 152, labeled and listed by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

6. ASTM C 920, Standard Specification for Elastomeric Joint Sealants.

7. Insulating Glass Criteria: IGCC International Glass Certification Council.

1.5 PERFORMANCE REQUIREMENTS

A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Glass Design: Glass thicknesses indicated on drawings and/or specified herein are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites for various size openings in nominal thicknesses indicated, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:

1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:

   a. Specified Design Wind Loads: Per ASCE-7.

2. Probability of Breakage for Vertical Glazing

   a. 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
   b. 1 lite per 1000 for lites installed 15 degrees from the vertical and under wind action.
   c. Load Duration: 60 seconds or less.

3. Maximum Lateral Deflection: For glass supported on all four edges, provide thickness required that limits center deflection at design wind pressure to 1/100 times the short side length or 1/2", whichever is less.

4. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

   a. Temperature Change (Range): 120 deg. F ambient; 180 deg F, material surfaces.

5. Thermal Solar Performance: See Article 2.2 herein.

C. Glass units shall be annealed, heat-strengthened, fully tempered or laminated where required to meet wind and/or snow loads and safety glazing requirements as shown, specified or recommended by the glass fabricator and as required by the 2020 New York State Building Code.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements, including performance requirements.

B. Submit compatibility and adhesion test reports from sealant manufacturer indicating materials were tested for compatibility and adhesion with glazing sealant, as well as other glazing materials including insulation units.

C. Initial Selection Samples: Submit samples of each glass and glazing material showing complete range of colors, textures, and finishes available for each material used.

1. Submit complete range of samples of standard colors and patterns for ceramic frits at insulating glass.

2. Submit complete range of samples of sandblasted glass showing variations of grits and opacity achieved.

D. Verification Samples: Submit representative samples of each glass and glazing material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide glass samples having minimum size of 144 sq. in. and 6 in. long samples of sealants and glazing materials; all samples shall bear the name of the manufacturer, brand name, thickness, and quality.

E. Calculations: Provide wind load charts, calculations, thermal stress analysis, and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied. Document shall be signed and sealed by a Professional Engineer licensed in the State of New York.

F. Test Reports: Provide certified reports for specified tests.

G. Warranties: Provide written warranties as specified herein.

1.7 QUALITY ASSURANCE

A. Source: For each glass and glazing type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.

B. Installer: A firm with a minimum of five years' experience in type of work required by this Section and which is acceptable to manufacturers of primary materials; and with a successful record of in-service installations similar in size and scope to this Project.

C. Glass Thickness: Glass thicknesses shown on drawings and/or specified herein are minimum thicknesses. Determine and provide size and thickness of glass products that are certified to meet or exceed performance requirements specified in this Section.

D. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.

1. GANA Publications: GANA's "Glazing Manual" and "Laminated Glass Design Guide."

2. IGMA Publications: IGMA TM-3000, "Vertical Glazing Guidelines for Sealed Insulating Glass Units."

E. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252.

F. Safety Glazing Products: Comply with the applicable requirements of the laws, codes, ordinances and regulations of Federal and Municipal authorities having jurisdiction. Wherever requirements conflict, the more stringent shall be required. Obtain approvals from all such authorities. As a minimum provide Category II materials complying with testing requirements in 16 CFR Part 12 and ANSI Z97.1.

1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council.

a. For glazing types with multiple lites of glass, laminated or assembled into an insulating unit, where safety labeling is required, provide labels that align in position and orientation from lite to lite.

2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.

3. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

G. Insulating Glass Certification Program: Permanently marked on spacers with appropriate certification label of the following testing and inspecting agency:

1. Insulating Glass Certification Council.

2. Associated Laboratories, Inc.

3. Insulating Glass Manufacturers Alliance.

H. Manufacturer shall be ISO 9001-2000 Certified.

1.8 TESTS

A. Preconstruction Sealant Test: Submit samples of materials to be used to glazing sealant manufacturer to determine sealant compatibility. Include samples of glass, gaskets, glazing materials, framing members, and other components and accessories of glazing work. Test in accordance with ASTM C 794 to verify what type of primers (if any) are required to ensure sealant adhesion to substrates.

1. Submit minimum of nine pieces of each type and finish of framing member, and nine pieces of each type, class, kind, condition, and form of glass, including monolithic, laminated, and insulating glass for adhesion tests.

2. Provide manufacturer's written report and recommendations regarding proper installation.

1.9 PROJECT CONDITIONS

A. Weather: Perform work of this Section only when existing or forecasted weather conditions are within limits established by manufacturers of materials and products used.

B. Temperature Limits: Install sealants only when temperatures are within limits recommended by sealant manufacturer, except, never install sealants when temperatures are below 40 deg. F.

C. Do not install sealants when substrates are wet or where contaminants capable of interfering with adhesion are present.

1.10 DELIVERY, STORAGE AND HANDLING

A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations and GANA Manual.

1. Protect materials from moisture, sunlight, excess heat, sparks and flame.

2. Sequence deliveries to avoid delays, but minimize on-site storage.

3. Glass shall be delivered to the site bearing the manufacturer's label, complete with glazing instructions where applicable.

4. Comply with insulating glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.11 WARRANTIES

A. General: Warranties shall be in addition to, and not a limitation of, other rights the Owner may have under the Contract Documents.

B. Manufacturer's Special Project Warranty on Coated Glass Products: Provide written warranty signed by manufacturer of coated glass agreeing to furnish f.o.b. point of manufacture, within specified warranty period indicated below, replacements for those coated glass units which develop manufacturing defects. Manufacturing defects are defined as peeling, cracking or deterioration in metallic coating due to normal conditions and not due to handling or installation or cleaning practices contrary to glass manufacturer's published instructions.

1. Warranty Period: Manufacturer's standard but not less than five (5) years after date of substantial completion.

C. Manufacturer's Special Project Warranty on Insulating Glass: Provide written warranty signed by manufacturer of insulating glass agreeing to furnish f.o.b. point of manufacture, freight allowed project site, within specified warranty period indicated below, replacements for those insulating glass units developing manufacturing defects. Manufacturing defects are defined as failure of the hermetic seal of air space (beyond that due to glass breakage) as evidenced by intrusion of dirt or moisture, internal condensation or fogging, deterioration of protected internal glass coatings, if any, and other visual indications of seal failure or performance; provided the manufacturer's instructions for handling, installing, protecting and maintaining units have been complied with during the warranty period.

1. Warranty Period: Manufacturer's standard but not less than ten (10) years after date of substantial completion.

D. Manufacturer’s Special Project Warranty on Laminated Glass: Manufacturer’s standard form, made out to Owner and signed by laminated glass manufacturer agreeing to replace laminated glass units that deteriorate as defined in “Definitions” Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty period five (5) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/FABRICATORS

A. All glass and glazing used at the exterior of the Project shall be manufactured by the same manufacturer. The same manufacturer and the same furnace shall be used for all tempered and heat strengthened glass used throughout the project. Acceptable manufacturers include, but are not limited to, the following:

1. Vitro Architectural Glass.

2. Guardian Industries.

3. Pilkington.

4. Viracon.

2.2 GLASS MATERIALS AND PRODUCTS

A. Ultra-Clear (Low-Iron) Glass: Class I (clear); with a minimum 91 percent visible light transmission and a minimum solar heat gain coefficient of 0.87.

1. Low Iron Tempered Glass: Provide "Starphire" by Vitro Architectural Glass, or approved equal, tempered in accordance ASTM C 1048, thicknesses as indicated.

B. Clear Float Glass: ASTM C 1036, Type I (transparent, flat), Class 1 (clear), Quality q3, minimum 1/4" thick.

C. Clear Tempered Glass: ASTM C 1048, Condition A (uncoated), Type I (transparent, flat), Class 1 (clear), Quality q3, Kind FT, minimum 1/4" thick. Tempered glass must be certified by SGCC to meet applicable standards.

1. Performance Requirements for Tempered Glass

a. Length and Width: For 2.9 mm to 6.0 mm; +/-1.6 mm.
b. Diagonal: +/- 3.0 mm.
c. Edgework: Belt seaming or diamond wheels. 1.5 mm seam of upper and lower glass edges. No sharp edges.
d. Corners: No more than 3.0 mm from square.
e. Float Glass Defects: Must meet the requirements of ASTM C 1036. The most common defects are scratches, stones gaseous bubbles and edge chips. Tables in the glass standards have limits for size/quantity of defects.
f. Tempered glass shall have a minimum surface compression of 10,000 psi.
g. Tempered glass to be heat-treated by horizontal (roller hearth) process with inherent roller-wave distortion parallel to the bottom edge of the glass when installed.
h. Flatness Tolerances
1). Roller-Wave or Ripple: The deviation from flatness at any peak shall be targeted not exceed 0.003" as measured per peak to valley for ¼" (6mm) thick glass.
2). Bow and Warp: The bow and warp tolerances shall not exceed 1/32" per linear foot.
3). Fully tempered glass shall be heat soaked to EN 14179-1:2016-European Heat Soaking Standard.

D. Laminated Safety Glass: Provide two glass panes of equal thickness, laminated together with a polyvinyl butyl interlayer, conforming to ASTM C 1172 and as follows:

1. Interlayer Color: Clear.

2. Interlayer Material: Provide Eastman Chemical "Saflex" or "Vanceva," or DuPont "Butacite," 0.030" thick at vertical applications, and 0.060" thick at sloped or horizontal applications.

3. Minimum thickness of 1/4".

E. Insulating Glass: Insulating glass unit shall consist of 1/4" clear exterior lite of float (or tempered, where required) glass with low-E coating on No. 2 face, 1/2" interspace and 1/4" clear interior lite of float (or tempered, where required) glass. Provide factory

assembled units of organically sealed panes of glass enclosing a hermetically sealed dehydrated air space, complying with ASTM E 2190, and as follows:

1. Sealing System: Dual Seal.

2. Primary Sealant: Polyisobutylene.

3. Secondary Sealant: Silicone, General Electric IGS 3204 or IGS 3100, or Dow Corning 982.

    a. For structurally glazed IG units, secondary seal shall conform to ASTM C 1249.
    b. Primary and secondary seals shall not contain voids and must be continuously bonded to the glass structure.

4. Spacer: Clear finish aluminum with welded, soldered, or bent corners, hollow tube types, filled with low nitrogen absorption desiccant.

5. Desiccant: Molecular sieve, silica gel, or blend of both.

6. Interspace Content: Argon.

7. Air Space Thickness: 1/2".

8. Glass Thickness: 1/4" minimum.

9. Low-E Coating: Provide high-performance, clear, metallic coating, VE1-2M as manufactured by Viracon or approved equal. Provide low-E coating having the following performance characteristics when applied to the No. 2 surface of 1" insulating units, both lites 1/4" clear:

    a. Visible Light Transmittance: 70%.
    b. Solar Energy Transmittance: 33%.
    c. Solar Heat Gain Coefficient (SHGC): 0.38.
    d. U-Value: 0.29 winter, 0.26 summer.

10. Units shall be certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGCC) or by IGMA, and tested in accordance with the above ASTM Test Methods.

11. Insulating glass shall conform to the following tolerances:

    a. Length and Width: + 3.0 mm/ -2.0 mm.
    b. Diagonal: +/- 3.0 mm.
    c. Thickness: As agreed +/- 1.0 mm.
    d. Edge-Deletion of Coating: Minimum 8 mm wide. Width of deletion must be more than the width of the secondary seal. Silver layer(s) must be completely removed. Appearance must be uniform.
    e. Primary PIB Seal: Must be complete with no breaks. Appearance must be uniform. PIB bead must overlap coating. No visible bright line when glass is viewed in transmission. The width of the PIB bead shall be 4.0 mm + 3.0/ - 1.5 mm.

f. Secondary Seal: Nominal 6 mm + 3.0/ - 1.5 mm. The minimum width of the secondary silicone seal for IG units that are glazed structurally must be determined according to ASTM C 1249. The secondary seal must be uniformly applied without bubbles, cavities or gaps. Avoid excess sealant that will need to be trimmed off later.

12. Additional requirements and properties for primary and secondary insulating glass seals and spacers:

a. All glass units shall comply with IGMA Guidelines which limits the dimension of the visible edge seal encroachment into the vision area to be no greater than the sightline infringement of 3mm (0.12").
b. Insulating glass unit hermetic seal to consist of butyl primary and silicone secondary seals with bent, welded, or soldered interpane spacer corners; keyed corners are not acceptable unless also soldered or welded. Spacers shall be aluminum or stainless steel. Locate spacer joint at the top or sides of the units, but in no instances at the sill. Design units to minimize the number of spacer joints. Provide solid keys, embedded in butyl sealant on all four sides, at spacer joints.
c. Hermetic seals must be continuous and intimately bonded to both lites of glass. Provide primary seal of uniform depth with a nominal width of 1/8" to 3/16". Hermetic seals shall not be contaminated with debris, fingerprints, or other foreign matter and shall not contain voids or air pockets that decrease the width of the seal below the minimum widths listed in these Specifications, or that breach the seal. The width of the primary seal shall not be less than 1/16", and the total cumulative length of the primary seal between 1/16" and 1/8" shall be less than 12" in any one insulating glass unit. The primary seal shall not have a reduced thickness at the corners. An increased thickness of the primary seal at the corners is acceptable.
d. Provide secondary seal of uniform depth with a nominal width of ¼". Provide a total width of the primary and secondary seal of ½". Units shall meet IGMA 65-7-2, latest edition. Units shall not contain breather or capillary tubes or similar penetrations.

F. Wire Glass: ASTM C 1036, UL Listed, Fire Rated polished transparent wire glass complying with ANSI Z97.1. Provide Type II - Patterned and Wired Glass, Class 1 (clear), Quality q8 (Glazing), Form 1 (polished both sides), and as follows:

1. Thickness: 1/4" unless otherwise indicated or required.

2. Square Pattern: Mesh M2.

G. Fire-Rated Glazing Material: Proprietary product in the form of clear flat sheets of 3/16" nominal thickness weighing 2.5 lb./sq. ft., and as follows:

1. Fire Protection Rating: As required by Code for the fire rated opening in which glazing material is installed, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.

2. Product: "Premium FireLite" by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.

H. Bullet-Resistant Security Glazing

1. Basis-of-Design Product: Subject to compliance with requirements, provide Insulgard Security Products' "BulletBlock HP600."

2. Ballistic Resistance: Level 5, designed to withstand at least one 7.62mm rifle FMJ with a velocity of at least 2750f/s in accordance with UL 752.

3. Glazing: 1/4" clear, tempered Pilkington Energy Advantage Hard Coat Low-E #2 glass + 1/2" air space + 1.28" clear ARMOR-GARD BALULN32 BR LAM, U.L. tested Level 5 with edge seal and BulletBlock HP500 painted full vision door glazed with 1.28" clear ARMOR-GARD BALULN32 BR LAM, U.L. tested Level 5 with edge seal.

4. Maximum Overall Unit Thickness: 1-3/8".

I. Frameless Mirrors: 1/4", Quality q2, clear float glass with silver, copper, and organic coating, edges uniformly ground and polished.

2.3 GLAZING MATERIALS AND PRODUCTS

A. General: Provide sealants and gaskets with performance characteristics suitable for applications indicated. Ensure compatibility of glazing sealants with insulating glass sealants, with laminated glass interlayers, and with any other surfaces in contact.

B. General Glazing and Cap Bead Sealant: Provide sealant with maximum Shore A hardness of 50. Provide one of the following:

1. Dow Corning 795.

2. General Electric Silglaze N 2500 or Contractors SCS-1000.

3. Tremco Spectrem 2.

C. Weather Seal Sealant: Provide non-acid curing sealant with movement range $\pm$ 50%, ASTM C 719. Provide one of the following:

1. Dow Corning 795.

2. General Electric Silpruf.

3. Tremco Spectrem 2.

D. Backer Rod: Closed cell non-gassing polyethylene rod with rod diameter 25% wider than joint width.

E. Dense Elastomeric Compression Seal Gaskets: Provide molded or extruded neoprene or EPDM gaskets, Shore A hardness of 75$\pm$5 for hollow profile, and 60$\pm$5 for solid profiles, ASTM C 864.

F. Cellular, Elastomeric Preformed Gaskets: Provide extruded or molded closed cell, integral-skinned neoprene, Shore A 40$\pm$5, and 20% to 35% compression, ASTM C 509; Type II.

G. Preformed Glazing Tape: Provide solvent-free butyl-polyisobutylene rubber with 100% solids content complying with ASTM C 1281 AAMA A 800 with integral continuous EPDM shim. Provide preformed glazing tape in extruded tape form. Provide Tremco "Polyshim II" or approved equal.

H. Setting Blocks: Provide 100% silicone blocks with Shore A hardness of 80-90. Provide products certified by manufacturer to be compatible with silicone sealants. Length to be not less than 4". Width for setting blocks to be 1/16" more than glass thickness and high enough to provide the lite recommended by glass manufacturer. When thickness of setting block exceeds 3/4" the glass manufacturer must be consulted for sizes and configuration. In a vented system, setting block shall be designed so as to not restrict the flow of water within the glazing rabbet to the weep holes.

1. Shims: For shims used with setting blocks, provide same materials, hardness, length and width as setting blocks.

2. Structural Silicone Glazing: Provide silicone setting blocks where structural silicone occurs at sills and at insulating units with silicone edge seals.

I. Edge Blocks: Provide neoprene or silicone as required for compatibility with glazing sealants. Provide blocks with Shore A hardness of 55±5.

J. Spacers: Elastomeric blocks or continuous extrusions with a Shore A durometer hardness required by glass manufacturer to maintain glass lites in place.

K. Miscellaneous Glazing Materials: Provide sealant backer rods, primers, cleaners, and sealers of type recommended by glass and sealant manufacturers.

L. Mirror Adhesive: Palmer's "Mirro-Mastic," or approved equal. Mastic must be compatible with mirror backing.

1. Clips: No. 4 finish Type 304 stainless steel.

2.4 FABRICATION OF GLASS AND OTHER GLAZING PRODUCTS

A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing standard, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with indoor and outdoor faces.

C. Grind smooth and polish exposed glass edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine glazing framing, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.

2. Presence and functioning of weep system.

3. Minimum required face or edge clearances.

4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GENERAL GLAZING STANDARDS

A. Install products using the recommendations from the manufacturer of glass, sealants, gaskets and other glazing materials, except where more stringent requirements are indicated, including those in the GANA "Glazing Manual."

B. Verify that Insulating Glass Unit (IGU) secondary seal is compatible with glazing sealants.

C. Install glass in prepared glazing channels and other framing members.

D. Install setting blocks in rabbets as recommended by referenced glazing standards in GANA's "Glazing Manual" and IGMA's "Glazing Guidelines."

E. Provide bite on glass, minimum edge and face clearances and glazing material tolerances recommended by GANA's "Glazing Manual."

F. Provide weep system as recommended by GANA's "Glazing Manual."

G. Set glass lites in each series with uniform pattern, draw, bow and similar characteristics.

H. Distribute the weight of glass unit along the edge rather than the corner.

I. Comply with manufacturers and referenced industry standards on expansion joint and anchors; accommodating thermal movement; glass openings; use of setting blocks, edge, face, and bite clearances; use of glass spacers; edge blocks and installation of weep systems.

J. Protect glass edge damage during handling and installation.

K. Prevent glass from contact with contaminating substances that result from construction operations, such as weld spatter, fireproofing or plaster.

L. Remove and replace glass that is broken, chipped cracked or damaged in any way.

3.4 GLAZING

A. Glazing channel dimensions, as indicated on Shop Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.

B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead. Install setting blocks at the one greater points of each lite along the horizontal mullion.

E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

F. Provide spacers for glass lites where the length plus width is larger than 50 inches as follows:

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.

2. Provide 1/8" minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

I. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

J. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

K. Flush Glazing

1. If the butt joint in the metal framing is in the vertical direction, the glazier shall run the tape initially on the head and sill members going directly over this joint. Should the butt joint in the metal framing run horizontally, tapes must first be applied to the jambs so that it crosses over the joint.

2. Each tape section shall butt the adjoining tape and be united with a tool to eliminate any opening.

3. Do not overlap the adjoining length of tape or rubber shim as this will prevent full contact around the perimeter of glass.

L. Off-Set Glazing

1. Where the glazing legs are off-set, the difference in the rabbet width shall be compensated by employing different glazing tapes with different diameter shims. The difference in shim shall be equal to the size of the off-set. The thinner tape shall be positioned first on the glazing leg closest to the interior. The thicker tape shall be cut to the exact length of the dimension between the applied tapes, and installed on the outermost glazing leg.

2. Immediately prior to setting glass, paper backing shall be removed. Apply a toe bead of sealant 6" in each direction, from each corner.

3. Locate setting blocks in the sill member at quarter points, or if necessary to within 6" of each corner. Setting blocks must be set equal distance from center line of the glass and high enough to provide the recommended bite and edge clearances.

4. Set edge block according to glass manufacturer's recommendations.

5. Set Glass: The glass shall be pressed firmly against the tape to achieve full contact.

6. In a vented system, apply a heel bead (air seal) of sealant around the perimeter of glass, between the sole of the I.G. unit and the base of the rabbet of the metal framing developing a positive bond to the unit and to the metal framing. The bead of the sealant shall be deep enough so that it will partially fill the channel to a depth of 1/4" between the glass edge and the base of the metal framing rabbet.

7. Interior stops shall be set, and glazing tape spline for the appropriate face clearance shall be rolled into place, compressing the glass to the shim within the glazing tape.

3.5 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Where framing joints are vertical, cover these joints by applying tapes to heads and sills first and then to jambs. Where framing joints are horizontal, cover these joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until just before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant as recommended by glass manufacturer or glass frame manufacturer.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces

of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape where noted on approved shop drawings.

3.6 GASKET GLAZING (DRY)

A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with stretch allowance during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Install gaskets so they protrude past face of glazing stops.

3.7 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

1. Exterior glazing gasket shall be set a minimum of 1/8" below exterior glazing stop to create a channel for sealant installation.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.8 FRAMELESS MIRRORS

A. Apply mastic to back of mirror "pats" spaced 4 pats/sq. ft.; adjust mirror so that it is plumb and in place to avoid distortion of reflecting images. Allow 1/8" space between back of mirror and wall surface.

1. Apply "pats" using Palmer Electric Applicator.

B. Apply stainless steel clips at mirror top and bottom; securely clip to substrate using non-corrosive anchors. At drywall back-up anchors must be secured to studs or steel wallplate spanning from stud to stud.

3.9 PROTECTION AND CLEANING

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents, and vandalism, during construction period.

E. Cleaning: Clean excess sealant or compound from glass and framing members immediately after application, using solvents or cleaners recommended by manufacturers.

1. Glass shall be cleaned according to:

a. GANA Glass Information Bulletin GANA 01-0300 – "Proper Procedure for Cleaning Architectural Glass Products."
b. GANA Glass Informational Bulletin GANA TD-02-0402 – Heat Treated Glass Surfaces are Different."

2. Do not use razor blades, scrapers, or metal tools to clean glass.

END OF SECTION 088000

SECTION 089000

LOUVERS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the louvers as shown on the drawings and/or specified herein, including, but not necessarily limited to, the following:

1. Aluminum louvers.
2. Blank-off panels.
3. Bird screens.

1.3 RELATED SECTIONS

A. Joint Sealers - Section 079200.

B. Louvers connected to ductwork - Division 23.

1.4 QUALITY ASSURANCE

A. Structural Performance: Provide exterior metal louvers capable of withstanding the effects of loads and stresses from wind and snow and normal thermal movement without evidencing permanent deformation of louver components including blades, frames, and supports; noise or metal fatigue caused by louver blade rattle or flutter or permanent damage to fasteners and anchors.

1. Wind Load: ASCE-7 or 2020 New York State Building Code, whichever is more stringent.

B. Thermal Movements: Provide louvers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, and other detrimental effects.

1. Temperature Change (Range): 120 deg. F., ambient; 180 deg. F, material surfaces.

C. Comply with SMACNA "Architectural Sheet Metal Manual" recommendations for fabrication, construction details and installation procedures, except as otherwise indicated.

D. Field Measurements: Verify size, location, and placement of louver units prior to fabrication.

E. Shop Assembly: Coordinate field measurements and shop drawings with fabrication and shop assembly to minimize field adjustments, splicing, mechanical joints, and field assembly of units. Preassemble units in shop to greatest extent possible and disassemble as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

F. Louvers shall be tested and certified in accordance with AMCA 500-L and approved to bear the AMCA 550 listing label for High Velocity Wind Driven Rain Resistant Louvers.

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's specifications, certified test data, where applicable, and installation instructions for required products, including finishes.

B. Shop Drawings: Submit shop drawings for fabrication and erection of louver units and accessories. Include plans, elevations and details of sections and connections to adjoining work. Indicate materials, finishes, fasteners, joinery, and other information to determine compliance with specified requirements.

C. Samples: Submit six (6) inch square samples of each required finish. Prepare samples on metal of same gauge and alloy to be used in work. Where normal color and texture variations are to be expected, include two (2) or more units in each sample showing limits of such variations.

D. Delegated-Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the professional engineer licensed in the State of New York responsible for their preparation.

1.6 PRODUCT HANDLING

A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.7 WARRANTY

A. Finish shall be warranted for a period of 20 years, starting from date of Substantial Completion of the Project.

PART 2 PRODUCTS

2.1 LOUVER MATERIAL

A. Provide storm-resistant, fixed horizontal louvers as manufactured by Airolite, Construction Specialties, Inc., Greenheck, Ruskin, or approved equal meeting these specifications.

B. Material: Heads, sills, jambs, and mullions shall be one-piece structural aluminum members. Louver shall be a 9-inch-deep system, consisting of a horizontal front blade and a vertical rear blade in a drainable frame. Louvers shall be supplied with 6-inch-high by full depth sill flashings formed from minimum 0.050" thick aluminum. Sill flashings shall have welded side panels. Louvers and sill flashings shall be installed in accordance with the manufacturer's recommended procedures to ensure complete water integrity performance of the louver system.

C. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer’s written instructions.

1. Fluoropolymer Two-Coat System: Manufacturer’s standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

2. Custom color and gloss as selected by the Architect.

D. Bird Screens

1. All louvers to be furnished with bird screens, finish to match louvers.

2. Screens to be 5/8" mesh, 0.050" thick expanded and flattened aluminum bird screen secured with 0.055" thick extruded aluminum frames. Frames to have mitered corners and corner locks.

E. Blank-Off Panels: Blank-off panels shall be 2" thick and faced on both sides with 0.032" thick aluminum sheet. Panels shall be fabricated with an expanded polystyrene (EPS) core having an R-value of 8. Panel perimeter frame shall be 0.050" thick formed aluminum channels. Panel frame shall be mitered at the corners. Panels are to be finished to match louvers.

F. Fastenings: Fasteners for exterior application shall be stainless steel. Provide types, gauges, and lengths to suit unit installation conditions. Use Phillips flat head machine screws for exposed fasteners, unless otherwise indicated.

G. Anchors and Inserts: Use non-ferrous metal or hot dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use steel or lead expansion bolt devices for drilled in place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

H. Bituminous Paint: SSPC-Paint 12 (cold applied asphalt mastic).

2.2 LOUVER FABRICATION, GENERAL

A. Fabricate frames including integral sills to suit adjacent construction with tolerances for installation, including application of sealants in joints between louvers and adjoining work.

B. Include supports, anchorages, and accessories required for complete assembly.

C. Provide sill extensions made of same material as louvers, where indicated, or required for drainage to exterior and to prevent water penetrating to interior.

D. Join frame members to one another and to stationary louver blades by welding or mechanical fasteners, as standard for the manufacturer, except where indicated otherwise or where field bolted connections between frame members are necessary by size of louvers. Maintain equal blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where louvers are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for the installation of anchorages which are to be embedded in masonry construction. Coordinate the delivery of such items to the project site.

3.3 INSTALLATION

A. Comply with manufacturer’s instructions and recommendations for installation of the work.

B. Verify dimensions of supporting structure at the site by accurate field measurements so that the work will be accurately designated, fabricated and fitted to the structure.

C. Anchor louvers to the building substructure.

D. Erection Tolerances:

1. Maximum variation from plane or location shown on the approved shop drawings: 1/8” per 12 feet of length, but not exceeding ½” in any total building length or portion thereof (non-cumulative).

2. Maximum offset from true alignment between two members abutting end to end, edge to edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no-load conditions.

E. Cut and trim component parts during erection only with the approval of the manufacturer or fabricator, and in accordance with his recommendations. Restore finish completely. Remove and replace members where cutting and trimming has impaired the strength or appearance of the assembly.

F. Do not erect warped, bowed, deformed, or otherwise damaged or defaced members. Remove and replace any members damaged in the erection process as directed.

G. Set units level, plumb and true to line, with uniform joints.

3.4 PROTECTION

A. Protect installed materials to prevent damage by other trades. Use materials that may be easily removed without leaving residue or permanent stains.

3.5 ADJUSTING AND CLEANING

A. Immediately clean exposed surfaces of the louvers to remove fingerprints and dirt accumulation during the installation process. Do not let soiling remain until the final cleaning.

B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to the material finishes. Thoroughly rinse surfaces and dry.

C. Restore louvers and accessory components damaged during installation and construction so no evidence remains of corrective wok. If results of restoration are unsuccessful, as determined by the Architect, remove damaged materials and replace with new materials.

1. Touch up minor abrasions in finishes with a compatible air-dried coating that matches the color and gloss of the factory applied coating.

END OF SECTION 089000

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 092313

SEAMLESS ABSORPTIVE PLASTER

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the seamless absorptive plaster as shown on the drawings and/or specified herein.

1.3 RELATED SECTIONS

A. Carpentry - Section 062000.

B. Gypsum Drywall - Section 092900.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualification: At least 3 years' experience fabricating and installing comparable work, employing skilled mechanics under competent supervision for all phases of the Work.

B. Special Experience Requirements: The contractor or subcontractor who will perform the specific areas of work specified above must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work. In addition, the contractor of subcontractor must be approved by the manufacturer.

1.5 SUBMITTALS

A. Shop Drawings/Product Data

1. Base drawings on field measurements.

2. Show dimensioned wall elevations with seam and joint locations, cutout sizes and locations, anchor locations, relation to adjacent work; large scale joint and mounting details; materials type, weight/thickness, design, color; and other data necessary to fabricate and install work and coordinate work with affected trades.

B. Mock-up: Provide full-size mockup including 2 connections and prefabricated corners demonstrating different geometric corners and shapes for Architect's approval.

C. Certification

1. Acoustical Performance: Certified reports of acoustical performance tests conducted and/or witnessed by a recognized, independent, testing agency. Tests shall have been done by specified methods or recognized equivalent. Sound absorption tests shall be not more than three years old. Reports on earlier tests are acceptable if it can be established to the Architect's satisfaction, that they are valid indications of compliance with Project requirements.

2. Fire Hazard: Evidence of compliance with regulatory agency and specifications requirements.

D. Cleaning and Maintenance Instructions: Recommendations for Owner maintenance and cleaning per General Requirements. Identify cleaning/spotting products generically or by trade name.

1.6 REFERENCES

A. ASTM C 423: Test for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

B. ASTM E 84: Test for Surface Burning Characteristics of Building Materials.

1.7 DELIVERY, STORAGE AND HANDLING

A. Allow materials to become acclimated to Project conditions before installation as necessary to prevent sag and distortion during service life.

1.8 ENVIRONMENTAL CONDITIONS

A. Work areas shall be at or near ambient occupancy temperature and relative humidity.

B. Painting, dust-raising activities, and work that introduces dampness shall be completed.

PART 2 PRODUCTS

2.1 MATERIAL

A. Basis of Design: The field-applied, Seamless Absorptive Plaster shall be BASWAphon as supplied by BASWA Acoustic North America, LLC, 21863 Aurora Rd., Cleveland, OH 44146. Acceptable Alternates: Fellert Silk, Pyrok StarSilent or approved equal.

1. Finish: Classic Fine.

2. Products below are those of BASWAphon as basis of design. Provide named products or comparable products of other manufacturers listed or approved equal.

B. Sound Absorbing Plaster System shall be provided in a total system thickness (adhesive, pre-coated mineral wool panels, Base 407 Coat and Fine Coat) of approximately 70mm.

C. Sound Absorbing Plaster System shall consist of pre-coated mineral wool supporting panels, panel adhesive, Fill, a base coat and a finish coat.

D. Trim Pieces: All corner beads, reveals, terminations, control joints or other trim pieces shall be white vinyl, manufactured by Trim-Tex or Vinyl Corp., in profiles approved by manufacturer. Trims shall be installed with Trim-Tex 847 Spray Adhesive; no other adhesive is acceptable.

E. The base and fine coats shall be integrally colored by the addition of pigments provided by the manufacturer. Color: As selected by Architect.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine areas where and conditions under which seamless absorptive plaster is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed until unsatisfactory conditions have been corrected to permit the proper installation of the work.

B. All substrates for the application shall not vary from plumb, level or smooth consistent curvature more than 1/4 inch in 12 feet.

C. Verify that all mechanical and electrical services within area of application has been tested and approved, prior to commencement of application.

3.2 INSTALLATION

A. Install materials in accordance with the manufacturer's installation instructions and details. Installation shall start only after all other work in the area of the installation has been completed.

B. Install a field applied adhesive layer 3-mm thick, using adhesive and methods in accordance with manufacturer's installation instructions to the 63-mm thick pre-coated panels and adhere panels to stable substrate. Ensure that panels are set as level and as smooth to each other as practicable.

C. Install Trims with approved adhesives and cover with Pre-Coat.

D. Fill seams with Pre-Fill, sand Pre-Fill on panel seams and Pre-Fill on Trim completely smooth when dry.

E. Apply a 1.5-mm thick layer of Base-Coat 407, trowel smooth, sand completely smooth when dry.

F. Apply a 0.5-mm thick layer of Top-Coat and trowel smooth to a quality level consistent with accepted samples or mock-up. Note that coating is a hand troweled finished product. Inherent in all hand-troweled product applications, minor trowel marks in the finished surface may occur. Critical lighting may expose minor trowel marks inherent in all hand troweled products. The finish should be viewed under end-use lighting conditions.

END OF SECTION 092313

SECTION 092423

SYNTHETIC STUCCO

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the synthetic stucco as shown on the drawings and/or specified herein.

1. Synthetic stucco applied over concrete unit masonry.

2. Metal lath at vertical substrates.

1.3 RELATED SECTIONS

A. Concrete Forming – Section 031000.

B. Unit Masonry - Section 042000.

1.4 QUALITY ASSURANCE

A. Provide a preconstruction meeting with Contractor, Construction Manager, Architect, and manufacturer representative to discuss the site conditions and installation prior to commencement of the work.

B. Manufacturer Requirements

1. Stucco products manufacturer for a minimum of 20 years.

2. Stucco finish products manufactured under ISO 9001 Quality System.

C. Contractor Requirements

1. Licensed, insured, and engaged in application of synthetic stucco systems for a minimum of 3 years.

2. Knowledgeable in the proper use and handling of manufacturers materials.

3. Employ skilled mechanics who are experienced and knowledgeable in Synthetic stucco application, and familiar with the requirements of the specified work.

4. Successful completion of minimum of 3 projects of similar size and complexity to the specified project.

5. Provide the proper equipment, manpower and supervision on the job site to install the system in compliance with manufacturer’s published specifications and details and the project plans and specifications.

D. Inspections: Provide independent, third-party inspection and code compliance.

E. Mock-Up: Provide 5' x 5' mockup of anticipated finish, for Architect’s review prior to commencement of the work.

1.5 SUBMITTALS

A. Submit the following for Architect’s review:

1. Manufacturer's specifications, details, installation instructions and product data.

2. Manufacturer’s code compliance report.

3. Manufacturer's standard warranty.

4. Samples for approval as directed by Project Architect.

5. Prepare and submit project-specific details at all interfaces with adjacent wall assemblies, at all penetrations.

6. Manufacturer’s letter indicating stucco contractor is certified to installl this system and provide warranty.

1.6 DELIVERY, STORAGE, HANDLING

A. Deliver all materials in their original sealed containers bearing manufacturer's name and identification of product.

B. Protect coatings (pail products) from freezing and temperatures in excess of 90°F. Store away from direct sunlight.

C. Protect Portland cement-based materials (bag products) from moisture and humidity. Store under cover off the ground in a dry location.

1.7 PROJECT CONDITIONS

A. Protect Portland cement-based materials (bag products) from moisture and humidity. Store under cover off the ground in a dry location.

B. Provide supplementary heat for installation in temperatures less than 40°F. Prevent concentration of heat on uncured stucco and vent fumes and other products of combustion to the outside to prevent contact with stucco.

C. Prevent uneven or excessive evaporation of moisture from stucco during hot, dry or windy weather. For installation under any of these conditions provide special measures to properly moist cure the stucco.

D. Provide protection of surrounding areas and adjacent surfaces from application of materials.

1.8 MANUFACTURER'S WARRANTY

A. Provide manufacturer's standard 7-year warranty.

PART 2 PRODUCTS

2.1 DESIGN REQUIREMENTS

A. Joints:

1. Provide expansion joints in the stucco system where building movement is anticipated: at joints in the substrate or supporting construction, where the system is to be installed over dissimilar construction or substrates, at changes in building height, at floor lines, at columns and cantilevered areas.

2. Provide expansion joints at through wall penetrations, for example, above and below doors or windows.

3. Provide appropriate accessories at stucco terminations and joints.

B. Sealant: Provide appropriate sealant at stucco terminations.

2.2 STUCCO SYSTEM

A. Provide "StoPowerwall NExT System" with air barrier, metal lath and finish system as manufactured by Sto Corp., or approved equal. (Sto products are specified as the basis for the project design.)

1. Provide waterproofing/air barrier, stucco, primer, and finish from single source manufacturer.

B. Waterproofing/ Air Barrier: StoGuard fluid applied waterproofing/air barrier for sheathing substrates consisting of three components:

1. Sto Gold Fill: Ready mixed acrylic based flexible joint treatment for rough opening protection, joint treatment of wall sheathing, and connections with flashing.

2. Sto GoldCoat: Ready mixed flexible waterproof coating for wall sheathing

3. StoGuard Mesh: Nominal 4.2 oz/yd^2, self-adhesive, flexible, symmetrical, interlaced glass fiber fabric, with alkaline resistant coating for compatibility with Sto materials (used with Sto Gold Fill® to reinforce rough openings, inside and outside corners, sheathing joints, and connections with flashings)

C. Slip Sheet: A minimum of 15 lb. asphalt saturated felt complying with ASTm D226, Type 1.

D. Lath: Minimum 2.5 lb./yd^2 self-furred galvanized steel diamond mesh metal lath in compliance with ASTM C 847.

E. Mechanical Fasteners: Provide minimum #8 wafer head fully threaded stainless steel screws with a minimum of 1 inch penetration. Install at rate per manufacturer requirements.

F. Accessories: Weep screed, casing bead, corner bead, corner lath, expansion and control joint accessories. All accessories shall meet the requirements of ASTM C 1063 and its referenced documents:

1. PVC plastic in compliance with ASTM D 1784, cell classification 13244C.

2. All accessories shall have perforated or expanded flanges and shall be designed with grounds for the specified thickness of stucco.

G. Job Mixed Ingredients

1. Water: Clean and potable.

2. Clean, well graded sand free of deleterious materials in compliance with ASTM C 897.

3. Stucco Admixture: Sto Bonding Agent - water based acrylic resin admixture for Sto Powerwall Stucco.

H. Stucco: Sto Powerwall Polymer Modified Stucco: Polymer-modified, factory proportioned, fiber reinforced Portland cement-based stucco, field mixed with graded sand (ASTM C 897), water and Sto Bonding Agent.

I. Primer: "Sto Hot Prime," acrylic-based, tinted, high-pH compatible primer/sealer.

J. Finish Coat: "Sto Limestone Finish," created using Sto Powerflex two coat elastomeric finishes; color as selected by the Architect.

2.3 MIXING

A. StoGuard

1. Sto Gold Fill: Mix with a clean, rust-free electric drill and paddle to a uniform consistency. Do not thin, or dilute with water.

2. Sto GoldCoat: Mix with a clean, rust-free electric drill and paddle to a uniform consistency. Do not thin, or dilute with water.

B. Sto Bonding Agent: No mixing required when used as a bonding agent. Shake sealed container before use to a homogeneous consistency.

C. Sto Powerwall Polymer Modified Stucco: Dilute Sto Bonding Agent with 3 parts water to one part Sto Bonding Agent by volume by adding clean, potable water to Sto Bonding Agent in a clean mixing pail and mixing with a high speed electric drill mixer. Follow normal mix ratio and procedures as recommended by Sto.

D. Primer: Mix with a clean, rust-free high-speed mixer to a uniform consistency.

E. Finish: Mix with a clean, rust-free high-speed mixer to a uniform consistency. A small amount of water may be added to adjust workability. Limit addition of water to amount needed to achieve the finish texture.

F. Mix only as much material as can readily be used.

G. Do not use anti-freeze compounds or other additives.

PART 3 EXECUTION

3.1 INSPECTION

A. Comply with manufacturer's requirements.

B. Report deviations from the requirements of project specifications or other conditions that might adversely affect the stucco installation to the General Contractor.

3.2 SURFACE PREPARATION

A. Comply with manufacturer's requirements.

B. Prepare concrete and CMU surfaces following manufacturers requirements.

C. Joints

1. Provide expansion joints in the stucco system where building movement is anticipated: at joints in the substrate or supporting construction, where the system is to be installed over dissimilar construction or substrates, at changes in building height, at floor lines, at columns and cantilevered areas.

2. Provide expansion joints at through wall penetrations, for example, above and below doors or windows.

3. Provide appropriate accessories at stucco terminations and joints.

4. Provide appropriate sealant at stucco terminations.

3.3 WATERPROOFING/AIR BARRIER INSTALLATION

A. NOTE: The waterproofing/air barrier installation described below is one component of the air barrier system for the building envelope and the moisture protection of the wall construction. Installation of the waterproofing/air barrier must be integrated with other air and moisture barrier components in the construction. This requires coordination with other trades to ensure proper sequencing of work, to achieve air barrier continuity, and to direct rainwater to the exterior, not into the wall assembly. Always protect rough openings in wall construction BEFORE installing windows, doors, louvers, etc. Where water is likely to penetrate the wall assembly, such as windows, flashing must be installed to direct water to the exterior at the leak source.

1. StoGuard Mesh: StoGuard Mesh is a self-stick glass fiber reinforcing mesh with adhesive on one side to facilitate placement of the mesh and installation of Sto Gold Fill over the mesh. Place minimum 4 inch (101 mm) wide mesh at sheathing joints and minimum 9 inch (152 mm) wide mesh at rough openings and inside and outside corners (refer to Sto details 5.09E and 5.23aE). Immediately apply Sto Gold Fill by spray or trowel over the mesh and trowel smooth. Protect from rain and freezing until dry.

2. Coordinate installation of connecting waterproofing/air barrier components, for example at expansion joints, penetrations, openings, foundation, and roof, with other trades to provide a continuous airtight membrane and moisture protection.

3. Coordinate installation of flashing and other moisture protection components with other trades to achieve complete moisture protection such that water is directed to the exterior, not into the wall assembly, and drained to the exterior at sources of leaks (windows, doors and similar penetrations through the wall assembly).

4. Note that some flashing components such as window or door head flashing, roof sidewall step flashing, and weep screeds at the base of the wall, require a splice strip of reinforcing mesh, joint treatment, and waterproofing. This creates a “shingle lap” and proper shedding of water onto the face of the flashing, not behind the flashing (refer to Sto details 5.09E and 5.23bE).

B. NOTE: Do not allow waterproofing/air barrier installation to remain exposed more than 60 days. Protect with stucco wall covering promptly after installation.

3.4 INSTALLATION

A. Lap lath 1" at ends and 2" at laps. Fasten lath to masonry with 1" long nail drive anchor with 2" dia. galvanized plate equal to "Zamac Nailin" made by Rawl or approved equal space 8" o.c. both directions.

B. General

1. The System shall be installed in accordance with the current STO application guides.

2. Install casing beads at stucco terminations and other through soffit penetrations. Install two-piece expansion joints (or back-to-back casing beads) at joints in the supporting construction, building expansion joints, where the stucco is to be installed over dissimilar construction or substrates, at columns, and cantilevered areas. Install full accessory pieces where possible and avoid small pieces. Seal adjoining pieces by embedding ends in sealant.

3. Install control joints in accordance with ASTM C 1063.

C. One Piece Expansion/Control Joint Installation: Cut lath in a straight line with shears at expansion/control joint location. Do not cut into or damage moisture barrier. Install one piece expansion/control joints over lath at through wall penetrations, for example, above and below doors or windows (unless another type of expansion joint is already provided at these locations). Install one-piece expansion/control joints over lath in

pattern indicated on drawings but not greater than every 144 sq. ft. Wire tie one-piece expansion/control joints to cut lath at no more than 7 inches on center. Make certain lath is discontinuous beneath joints. Do not exceed length to width ratio of 2:1 in expansion/control joint layout and do not exceed more than 18 feet in any direction without an expansion/control joint.

D. Inside and Outside Corners: Bend lath at inside corners and extend minimum 24 inches (610 mm) past corner. Attach through lath into framing at no more than 7 inches (178 mm) on center with appropriate fasteners. Alternatively, butt lath at corners and attach corner lath at no more than 7 inches (178 mm) on center into framing with appropriate fasteners. Install corner bead at outside corners over lath. Attach at no more than 7 inches (178 mm) on center intro framing with appropriate fasteners.

E. Stucco Installation

1. Scratch Coat: apply stucco with sufficient pressure to key into and embed the metal lath. Apply sufficient material, 3/8 – 1/2 inch (9-13mm), to cover the metal lath and to permit scoring the surface. Score the stucco upon completion of each panel in preparation for a second coat. Score horizontally.

2. Brown Coat: as soon as the first coat is firm enough to receive the second coat without damage, apply the second coat. Alternatively, moist cure the first coat up to 48 hours and dampen the scratched surface with water immediately before applying the second coat. Apply the second coat with sufficient pressure to ensure intimate contact with the first coat and as needed to bring the stucco to a uniform thickness that matches the grounds of the accessories. Use a rod or straight edge to bring the surface to a true, even plane. Fill depressions in plane with stucco. Final thickness of stucco shall be minimum 1/2 inch (13 mm), maximum 1 inch (22 mm) as required by project conditions and specifications. Stucco shall be uniform in thickness throughout the wall area.

3. After the stucco has become slightly firm float the surface lightly with a darby or wood float to densify the surface and to provide a smooth, even surface.

F. Primer Installation: Apply primer evenly with brush, roller or proper spray equipment over the clean, dry stucco and foam build-outs, and allow to dry thoroughly before applying finish.

G. Finish Installation: Apply finish directly over the primed stucco and foam build-outs when dry. Apply finish by spraying or troweling with a stainless steel trowel, depending on the finish specified. Follow these general rules for application of finish:

1. Avoid application in direct sunlight.

2. Apply finish in a continuous application and work a wet edge towards the unfinished wall area. Work to an architectural break in the wall before stopping to avoid cold joints.

3. Weather conditions affect application and drying time. Hot or dry conditions limit working time and accelerate drying. Adjustments in the scheduling of work may be required to achieve desired results; cool or damp conditions extend working

time and retard drying and may require added measures of protection against wind, dust, dirt, rain and freezing. Adjust work schedule and provide protection.

4. Float "R" or swirl finishes with a plastic float to achieve their swirl texture.

5. Do not install separate batches of finish side-by-side.

6. Do not apply finish into or over joints or accessories. Apply finish to outside face of wall only.

3.5 PROTECTION

A. Provide protection of installed materials from water infiltration into or behind them.

B. Provide protection of installed stucco from dust, dirt, precipitation, and freezing.

C. Provide protection of installed primer and finish from dust, dirt, precipitation, freezing and continuous high humidity until fully dry.

END OF SECTION 092423

SECTION 092900

GYPSUM DRYWALL

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the gypsum drywall as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Gypsum board work for partitions, ceilings, column enclosures, furring, and elsewhere where gypsum drywall work is shown on drawings.
2. Metal supports for gypsum drywall construction.
3. Acoustical insulation for gypsum drywall work.
4. Sealant for gypsum drywall work.
5. Concealed metal reinforcing for attachment of railings, toilet partitions, and other items supported on drywall partitions and walls.
6. Taping and finishing of drywall joints.
7. Installing rings and frames in drywall surfaces for grilles, registers, and lighting fixtures.
8. Bracing and connections.

1.3 RELATED SECTIONS

A. Thermal Insulation - Section 072100.

B. Hollow metal door frames - Section 081113.

C. Access Doors - Section 083113.

D. Painting and Finishing - Section 099000.

E. Rings for grilles, registers, and light fixtures - Division 23 and 26.

1.4 QUALITY ASSURANCE

A. The following standards, as well as other standards which may be referred to in this Section, shall apply to the work of this Section:

1. The Gypsum Construction Handbook, latest edition, USG.
2. Construction Guide, latest edition, National Gypsum.
3. ASTM A 568 "Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements For"
4. ASTM C 475 "Standard Specification for Joint Treatment Materials for Gypsum Wallboard Construction"
5. ASTM C 645 "Standard Specification for Non-Structural Steel Framing Members"
6. ASTM C 754 "Standard Specification for Installation of Steel Framing Members to Receive Screw Attached Gypsum Panel Products"
7. ASTM C 840 "Standard Specification for Application and Finishing of Gypsum Board"
8. ASTM C 919 "Standard Specification for Use of Sealants in Acoustical Applications"
9. ASTM C 954 "Standard Specification for Steel Drill Screws for the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 in. to 0.112 in. in Thickness"
10. ASTM C 1002 "Standard Specification for Steel Self-Piercing Tapping Screws for the Application of Gypsum Board"
11. ASTM C 1177 "Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing"
12. ASTM C 1178 "Standard Specification for Glass Mat Water Resistant Gypsum Backing Board"
13. ASTM C 1278 "Standard Specification for Fiber-Reinforced Gypsum Panel"
14. ASTM C 1396 "Standard Specification for Gypsum Board"
15. ASTM D 3273 "Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"

B. Allowable Tolerances: 1/32" offsets between planes of board faces, and 1/16" in 8'-0" for plumb, level, warp and bow.

C. System Design Load

1. Provide standard drywall wall assemblies designed and tested by manufacturer to withstand a lateral load of 5 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.
    a. Drywall assemblies with tile finish shall have a deflection limit of L/360.
2. Provide drywall ceiling assemblies designed, fabricated, and installed to have a deflection not to exceed L/360.

D. Fire-Resistance Rating: Where gypsum drywall with fire resistance ratings are indicated, provide materials and installations which are identical with those of applicable assemblies tested per ASTM E 119 by fire testing laboratories, or to design designations in UL "Fire Resistance Directory" or in listing of other testing agencies acceptable to authorities having jurisdiction, and compliant with UL Test #2079; criteria for cycle movement for all field height wall sections requiring allowance for vertical deflection within framing details.

E. Installer: Firm with not less than 5 years of successful experience in the installation of specified materials.

F. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Framing Industry Association (SFIA) or be a part of a similar organization that provides verifiable code compliance program.

1.5 SUBMITTALS

A. Submit shop drawing for each drywall partition, furring and ceiling system showing size and gauges of framing members, hanger and anchorage devices, wallboard types, insulation, sealant, methods of assembly and fastening, control joints indicating column lines, corner details, joint finishing and relationship of drywall work to adjacent work.

B. Samples: Each material specified herein, 12" x 12", or 12" long, or in manufacturer's container, as applicable for type of material submitted.

C. Manufacturer's Literature: Submit technical and installation instructions for each drywall partition, furring and ceiling system specified herein, and for each fire-rated and sound-rated gypsum board assembly. Submit other data as required to show compliance with these specifications, including data for mold resistant joint compound.

D. Test Reports: This Contractor shall submit test report, obtained by drywall manufacturer, indicating conformance of drywall assemblies to required fire ratings and sound ratings.

E. Evaluation Reports: Submit evaluation reports certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98, IAS Accreditation Criteria for Inspection Agencies.

1.6 PRODUCT HANDLING AND PROTECTION

A. Deliver, store and handle drywall work materials to prevent damage. Deliver materials in their original, unopened containers or bundles, and store where protected from moisture, damage and from exposure to the elements. Store wallboard in flat stacks.

B. Protect wallboard from becoming wet.

C. Protect metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI's "Code of Standard Practice."

1.7 ENVIRONMENTAL CONDITIONS

A. Provide and maintain minimum temperature of fifty-five (55) degrees F. and adequate ventilation to eliminate excessive moisture within the building in the area of the drywall

work for at least twenty-four (24) hours, prior to, during and after installation of drywall work. Installation shall not start until windows are glazed and doors are installed, unless openings are temporarily closed. Space above suspended ceilings shall be vented sufficiently to prevent temperature and pressure build up.

1.8 JOB MOCK-UP

A. At a suitable location, where directed by the Architect, lay up a portion of a finished wall and ceiling demonstrating the quality of work, including finishing, to be obtained under this Section. Omit drywall boards in locations as directed by the Architect to show stud spacing and attachments; after acceptance, complete assembly.

B. Adjust the finishing techniques as required to achieve the finish required by the Architect as described in this Section of these specifications.

C. Upon approval of the mock-up, the mock-up may be left in place as a portion of the finished work of this Section.

D. All drywall work shall be equal in quality to approved mock-up.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers for Gypsum Drywall Panels and Accessories: U.S. Gypsum Co., Georgia Pacific, CertainTeed Corporation, Continental Building Products, or National Gypsum Co. meeting specification requirements are acceptable.

1. All drywall products must be manufactured in North America.

B. Acceptable Manufacturers for Metal Supports of Drywall Assemblies: Unless otherwise noted, provide products manufactured by ClarkDietrich, Super Stud Building Products, Marino/Ware, or approved equal.

2.2 METAL SUPPORTS

A. Metal Floor and Ceiling Runners

1. Drywall Track: Formed from 0.0312 inch (20 U.S. Std. gauge) (minimum unless otherwise noted or required by performance requirements) cold formed steel, width to suit shaped metal studs. Use 20 ga. top runners with 1-1/4" minimum flanges.

2. Deflection track or head of wall connections at rated partitions shall conform to UL #2079 for cycle movement. Provide positive mechanical connection of framing to structure, allowing for vertical movement within connections. Minimum of 0.0312 (20 ga.) cold formed steel for clips, 25 ga. cold formed steel for deflection track.

a. Product: "BlazeFrame DSL" or "MaxTrak Slotted Deflection Track" as manufactured by ClarkDietrich, "VertiClip" or "VertiTrack" as manufactured by the Steel Network or equal made by Metal-Lite Inc.
b. FireTrak (including stud clips) by FireTrak Corp. or equal made by Metal-Lite Inc.

B. Metal Studs, Framing and Furring

1. C-Shaped Studs: Channel type with holes for passage of conduit formed from minimum 0.0312" (20 U.S. Std. gauge) (unless heavier gauge is required to meet deflection limits) cold formed steel, width as shown on drawings.

2. Furring Channels: Hat shaped, formed from galvanized steel, 25 U.S. Std. gauge.

a. Product: ClarkDietrich; Furring Channel, or a comparable product.

3. Continuous 16 gauge x 8" wide steel wall plate screwed to studs as required for support of railings, toilet partitions, and other items supported on drywall partitions and walls.

C. Suspended Ceiling and Fascia Supports

1. Main Runners: 1-1/2" steel channels, cold rolled at 0.475 lbs. per ft., rust-inhibitive paint finish.

2. Furring Members: Screw-type hat-shaped furring channels of 25 ga. zinc-coated steel; comply with ASTM C 645.

3. Hangers: Galvanized, 1" x 3/16" flat steel slats capable of supporting 5x calculated load supported.

4. Hanger Anchorages: Provide inserts, clips, bolts, screws and other devices applicable to the required method of structural anchorage for ceiling hangers. Size devices for 5x calculated load supported.

5. Furring Anchorages: 16 ga. galvanized wire ties, manufacturer's standard clips, bolts or screws as recommended by furring manufacturer.

D. Protective Coating: All cold-formed steel members shall have coating conforming to AISI S220; ASTM A 653, G60 or coating with equivalent corrosion resistance of ASTM A653/A653M, G60. Galvannealed products are not acceptable.

2.3 GYPSUM WALLBOARD TYPES

A. Gypsum Wallboard: 5/8" thick "Sheetrock" by USG, "Gold Bond" by National Gypsum, or "Regular Gypsum" by CertainTeed Corp., 48" wide, in maximum lengths available to minimize end-to-end butt joints.

B. Gypsum Ceiling Board: 5/8" thick, sag-resistant, long edges tapered.

C. Fire-Rated Gypsum Wallboard: 5/8" thick "Sheetrock Firecode C" by USG, "Firecheck Type C" by Lafarge/Continental, "Gold Bond Fireshield" by National Gypsum, or "Type C" and "Type X" by CertainTeed Corp., 48" wide, in maximum lengths available to minimize end-to-end butt joints.

D. Water-Resistant Backing Board for Tile Finish: 1/2" thick, "DUROCK Glass Mat Tile Backerboard" by USG, "Dens-Shield Tile Backer Board" by Georgia Pacific or "DiamondBack Tile Backer" by CertainTeed Corp. Cover joints with a pressure sensitive woven glass fiber tape equal to Imperial Type P Tape.

E. Cement Board Backing for Tile Finish at Showers: 1/2" thick "Durock Tile Backer Board" by USG, "Wonder Board Lite" by Custom Building Products or approved equal.

F. Mold-Resistant Paperless Gypsum Wallboard: 5/8" thick, 48" wide "DensArmour Plus" and "DensArmour Plus Fireguard C" by Georgia Pacific, or equal by National Gypsum, USG or approved equal that has a rating of 10 per ASTM D 3273 with core that meets ASTM C 1396, Section 6 or ASTM C 1658.

G. Moisture/Mold-Resistant Gypsum Wallboard (at all exterior walls and wet areas): 5/8" thick "Mold Tough," "Mold Tough FR," by U.S. Gypsum, "DensArmor Plus" by Georgia Pacific, "Mold Defense" and/or "Mold Defense Type X" by Lafarge/Continental, or "Gold Bond EXP Interior Extreme Gypsum Board" by National Gypsum, 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Board must have a rating of 10 per ASTM D 3273 with a core that meets ASTM C 1396, Section 6, or ASTM C 1658.

H. Abuse-Resistant Wallboard: 5/8" thick "Sheetrock Brand Mold Tough AR" by USG, "Dens Armor Plus Abuse Resistant Panels" by Georgia-Pacific, "EXP Interior Extreme AR" or "Gold Bond Brand Hi-Abuse XP" by National Gypsum, "Protecta AR100" or "Protecta HIR 300" by Lafarge/Continental, or "AirRenew Extreme Abuse" by CertainTeed Corp., 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Board must achieve a Level 1 rating per ASTM C 1629.

2.4 ACCESSORIES

A. Acoustical Fire Batt Insulation: Paper-less, non-combustible, semi-rigid mineral fiber mat, ASTM C665, Type I; minimum fire hazard classification rating of 0/0 per ASTM E84; minimum 3-inch thick; 2-1/2 inches thick for installation in 2-1/2 inch stud cavities; widths to friction-fit between studs, where indicated for installation in stud walls; formaldehyde free; 3 lb./cu. ft. maximum density;

1. Owens-Corning "Thermafiber SAFB"

2. Rockwool "Rockwool AFB"

3. Or approved equal.

B. Fasteners for Wallboard: USG Brand Screws; Type S Bugle Head for fastening wallboard to lighter gauge interior metal framing (up to 20 ga.). Type S-12 Bugle Head for fastening wallboard to heavier gauge interior metal framing (20 ga. to 12 ga.); Type S and Type S-12 Pan Head for attaching metal studs to door frames and runners; and Type G Bugle Head for fastening wallboard to wallboard. Lengths specified below under "Part 3 - Execution" Articles and as recommended by drywall manufacturer.

1. For Portland cement base boards, fasteners shall be equal to Durock Steel Screws by U.S. Gypsum.

C. Laminating Adhesive: "Sheetrock Brand Joint Compound."

D. Metal Trim - Corner Beads: For 90 degree external corners, provide ClarkDietrich "103 Deluxe Corner Bead (CBU)" or "103 Dur-A-Bead" by USG, 26 U.S. Std. ga. galvanized steel, 1-1/4" x 1-1/4".

E. Metal Trim - Edge Beads: "Sheetrock Brand Paper Faced Metal Bead and Trim."

F. Partition/Concrete Ceiling Trim: Trim-Tex Super Seal Tear Away or approved equal.

G. Metal Trim Treatment Materials and Joint Treatment Materials for Gypsum Drywall Boards: Paper tape for joint reinforcing; Setting Type (Durabond 90) or Lightweight Setting Type Joint Compound for taping and topping; and Ready Mix Compound for finishing.

1. For mold-resistant drywall, water-resistant drywall, and tile backer board, use glass mesh tape with setting joint compound that is rated 10 when tested in accordance with ASTM D 3273 and evaluated in accordance with ASTM D 3274. Acceptable joint compound is "Rapid Set One Pass" made by CTS Cement Manufacturing Corp. or "Rapid Joint" manufactured by Lafarge North America or approved equal meeting standards noted herein.

H. Control Joints: ClarkDietrich; #093 Control Joint or No. 0.093 by USG.

I. Acoustical Sealant: Non-hardening, low-shrinkage; for use in conjunction with gypsum board; maximum VOC content 250g/L: USG "Acoustical Sealant," Tremco Mfg. Co. "Tremco Acoustical Sealant," BASF "MasterSeal NP520," or approved equal.

J. Neoprene Gaskets: Conform to ASTM D 1056.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where gypsum drywall is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. General

1. Install drywall work in accordance with drywall manufacturer's printed instructions and as indicated on drawings and specified herein.

2. All metal framing for drywall partitions shall extend from floor to underside of structural deck above. Provide for vertical deflection with positive mechanical connections of framing members to structure.

3. Provide concealed reinforcement, 16 ga. thick by eight (8) inches wide or as detailed or as recommended by manufacturer, for attachment of railings, toilet partitions, and other items to be supported on the partitions which cannot be attached to the metal framing members. Concealed reinforcement shall span

between metal studs and be attached thereto using two (2) self-tapping pan head screws at each stud.

a. Back of drywall shall be scored or notched to prevent bulging out where reinforcement plate occurs.

B. Fire-Rated Assemblies: Install fire-rated assemblies in accordance with requirements of authorities having jurisdiction, Underwriters' Laboratories and test results obtained and published by the drywall manufacturer, for the fire-rated drywall assembly types indicated on the drawings.

C. Acoustical Assemblies: Install acoustically-rated assemblies to achieve a minimum STC as noted on drawings, in accordance with test results obtained and published by the drywall manufacturer, for the drywall assembly type indicated on the drawings.

D. Sealant

1. Install continuous acoustical sealant bead at top and bottom edges of wallboard where indicated or required for sound rating as wallboard is installed, and between metal trim edge beads and abutting construction.

2. Install acoustical sealant in 1/8" wide vertical control joints within the length of the wall or partitions, and in all other joints, specified below under "Control Joints." Install bead of acoustical sealant around electric switch and outlet boxes, piping, ducts, and around any other penetration in the wallboard; place sealant bead between penetrations and edge of wallboard.

3. Where sealant is exposed to view, protect adjacent surfaces from damage and from sealant material, and tool sealant flush with and in same plane as wallboard surface. Sealant beads shall be 1/4" to 3/8" diameter.

E. Wallboard Application

1. Do not install wallboard panels until steel door frames are in place; coordinate work with Section 081113, "Steel Doors and Frames."

2. See drawings for all board types. Use fire-rated wallboard for fire-rated assemblies. Use sag-resistant board for ceilings. Use water-resistant wallboard where indicated on drawings and where wallboard would be subject to moisture. Install water-resistant wallboard in full, large sheets (no scraps) to limit number of butt joints.

3. Apply wallboard with long dimension parallel to stud framing members, and with abutting edges occurring over stud flanges.

4. Install wallboard for partitions from floor to underside of structure above and secure rigidly in place by screw attachment, unless otherwise indicated.

5. Provide "Thermafiber" safing insulation meeting standards of Section 078413 at flutes of metal deck where partitions carry up to bottom of metal deck.

6. Neatly cut wallboard to fit around outlets, switch boxes, framed openings, piping, ducts, and other items which penetrate wallboard; fill gaps with acoustic sealant.

7. Where wallboard is to be applied to curved surfaces, dampen wallboard on back side as required to obtain required curve. Finish surface shall present smooth, even curve without fluting or other imperfections.

8. Screw fasten wallboard with power-driven electric screwdriver, screw heads to slightly depress surface of wallboard without cutting paper, screws not closer than 3/8" from ends and edges of wallboard.

9. Where studs are doubled-up, screw fasten wallboard to both studs in a staggered pattern.

F. Cementitious Backer Board

1. General: Furnish cementitious backer board in maximum available lengths. Install horizontally, with end joints over framing members.

2. Fastening: Secure cementitious backer board to each framing member with screws spaced not more than 12 inches on center and not closer than 1/2" from the edge. Install screws with a conventional screw gun so that the screw heads are flush with the surface of the board.

3. Joint Treatment: Fill space between edge of backer and receptor with dry-set Portland cement or latex-Portland cement mortar. Fill all horizontal and vertical joints and corners with dry-set Portland cement or latex-Portland cement mortar. Apply fiberglass tape over joints and corners and embed with same mortar.

G. Metal Trim: Install and mechanically secure in accordance with manufacturer's instructions; and finish with three (3) coats of joint compound, feathered and finish sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions.

1. Corner Beads: Install specified corner beads in single lengths at all external corners, unless corner lengths exceed standard stock lengths.

2. Edge Beads: Install specified edge beads in single lengths at all terminating edges of wallboard exposed to view, where edges abut dissimilar materials, where edges would be exposed to view, and elsewhere where shown on drawings. Where indicated on drawings, seal joint between metal edge bead and adjoining surface with specified gasket, 1/8" wide minimum and set back 1/8" from face of wallboard, unless other size and profile indicated on drawings.

3. Casing beads shall be set in long lengths, neatly butted at joints. Provide casing beads at juncture of board and vertical surfaces and at exposed perimeters.

H. Control Joint Locations: Gypsum board surfaces shall be isolated with control joints where:

1. Ceiling abuts a structural element, dissimilar wall or other vertical penetration.

2. Construction changes within the plane of the partition or ceiling.

3. Shown on approved shop drawings.

4. Ceiling dimensions exceed thirty (30) feet in either direction.

5. Wings of "L," "U," and "T" shaped ceiling areas are joined.

6. Expansion or control joints occur in the structural elements of the building.

7. Partition or furring abuts a structural element or dissimilar wall or ceiling.

8. Partition or furring runs exceed 30' without interruption.

9. Where control joints are required, ceiling height door frames may be used as control joints. Less than ceiling height frames shall have control joints extending to the ceiling from both corners.

I. Joint Treatment and Spackling

1. Joints between face wallboards in the same plane, joints at internal corners of intersecting partitions and joints at internal corners of intersections between ceilings and walls or partitions shall be filled with joint compound.

2. Screw heads and other depressions shall be filled with joint compound. Joint compound shall be applied in three (3) coats, feathered and finish surface sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions. Treatment of joints and screw heads with joint compound is also required where wallboard will be covered by finish materials which require a smooth surface, such as vinyl wall coverings.

3.3 FURRED WALLS AND PARTITIONS

A. Use specified metal furring channels. Run metal furring channel framing members vertically, space sixteen (16) inches o.c. maximum. Fasten furring channels to concrete or masonry surfaces with power-driven fasteners or concrete stub nails spaced sixteen (16) inches o.c. maximum through alternate wing flanges (staggered) of furring channel. Furring channels shall be shimmed as necessary to provide a plumb and level backing for wallboard. At inside of exterior walls, an asphalt felt protection strip shall be installed between each furring channel and the wall. Furring channel and splices shall be provided by nesting channels at least eight (8) inches and securely anchoring to concrete or masonry with two (2) fasteners in each wing.

B. Wallboard Installation: Same as specified under Article 3.4 - "Metal Stud Partitions."

3.4 METAL STUD PARTITIONS

A. Unless otherwise noted, steel framing members shall be installed in accordance with ASTM C 754.

B. Runner Installation: Use channel type. Align accurately at floor according to partition layout. Anchor runners securely sixteen (16) inches o.c. maximum with power-driven anchors to floor slab, with power-driven anchors to structural slab above. See "Stud Installation" below for runners over heads of metal door frames. Where required, carefully remove sprayed-on fireproofing to allow partition to be properly installed.

C. Stud Installation

1. Use channel type, positioned vertically in runners, spaced as noted on drawings, but not more than sixteen (16) inches o.c.

2. Anchor studs to floor runners with screw fasteners. Provide snap-in or slotted hole slip joint bolt connections of studs to ceiling runners leaving space for movement. Anchor studs at partition intersections, partition corners and where partition abuts other construction to floor and ceiling runners with sheet metal screws through each stud flange and runner flange.

3. Connection at ceiling runner for non-rated partitions shall be snap-in or slotted hole slip joint bolt connection that shall allow for movement. Seal studs abutting other construction with 1/8" thick neoprene gasket continuously between stud and abutting construction.

4. Connections for fire rated partitions at ceiling runners shall conform to UL Design #2079.

5. Install metal stud horizontal bracing wherever vertical studs are cut or wallboard is cut for passage of pipes, ducts or other penetrations, and anchor horizontal bracing to vertical studs with sheet metal screws.

6. At jambs of door frames and borrowed light frames, install doubled-up studs (not back to back) from floor to underside of structural deck, and securely anchor studs to jamb anchors of frames and to runners with screws. Provide cross braces from hollow metal frames to underside of slab.

7. Over heads of door frames, install cut-to-length section of runner with flanges slit and web bent to allow flanges to overlap adjacent vertical studs, and securely anchor runner to adjacent vertical studs with sheet metal screws. Install cut-to-length vertical studs from runner (over heads of door frame) to ceiling runner sixteen (16) inches maximum o.c. and at vertical joints of wallboard, and securely anchor studs to runners with sheet metal screws.

8. At control joints, in field of partition, install double-up studs (back to back) from floor to ceiling runner, with 1/4" thick continuous compressible gasket between studs. When necessary, splice studs with eight (8) inches minimum nested laps and attach flanges together with two (2) sheet metal screws in each flange. All screws shall be self-tapping sheet metal screws.

D. Runners and Studs at Chase Wall: As specified above for "Runners" and "Studs" and as specified herein. Chase walls shall have either a single or double row of floor and ceiling runners with metal studs sixteen (16) inches o.c. maximum and positioned vertically in the runners so that the studs are opposite each other in pairs with the flanges pointing in the same direction. Anchor all studs to runner flanges with sheet metal screws through each stud flange and runner flange following requirements of paragraph 3.4, B. Provide cross bracing between the rows of studs by attaching runner channels or studs set full width of chase attached to vertical studs with one self-tapping screw at each end. Space cross bracing not over thirty-six (36) inches o.c. vertically.

E. Wallboard Installation - Single Layer Application (Screw Attached)

1. Install wallboard with long dimension parallel to framing member and with abutting edge joints over web of framing member. Install wallboard with long dimension perpendicular to framing members above and below openings in drywall extending to second stud at each side of opening. Joints on opposite sides of wall shall be arranged so as to occur on different studs.

2. Boards shall be fastened securely to metal studs with screws as specified. Where a free end occurs between studs, back blocking shall be required. Center abutting ends over studs. Correct work as necessary so that faces of boards are flush, smooth, true.

3. Wallboard screws shall be applied with an electric screw gun. Screws shall be driven not less than 3/8" from ends or edges of board to provide uniform dimple not over 1/32" deep. Screws shall be spaced twelve (12) inches o.c. in the field of the board and 8" o.c. staggered along the abutting edges.

4. All ends and edges of wallboard shall occur over screwing members (studs or furring channels). Boards shall be brought into contact but shall not be forced into place. Where ends or edges abut, they shall be staggered. Joints on opposite sides of a partition shall be so arranged as to occur on different studs.

5. At locations where piping receptacles, conduit, switches, etc., penetrate drywall partitions, provide non-drying sealant and an approved sealant stop at cut board locations inside partition.

F. Wallboard Installation - Double-Layer Application

1. General: See drawings for wallboard partition types required.

2. First Layer (Screw Attached): Install as described above for single layer application.

3. Second Layer (Screw Attached): Screw attach second layer, unless laminating method of attachment indicated on drawings or necessary to obtain required sound rating or fire rating. Install wallboard vertically with vertical joints offset thirty-two (32) inches from first layer joints and staggered on opposite sides of wall. Attach wallboard with 1-5/8" screws sixteen (16) inches o.c. along vertical joints and sixteen (16) inches o.c. in the field of the wallboard. Screw through first layer into metal framing members.

4. Second Layer (Laminated): Install wallboard vertically. Stagger joints of second layer from first layer joints. Laminate second layer with specified laminating adhesive in beads or strips running continuously from floor to ceiling in accordance with manufacturer's instructions. After laminating, screw wallboard to framing members with 1-5/8" screws, spaced twelve (12) inches o.c. around perimeter of wallboard.

G. Wallboard Installation - Laminated Application: Where laminated wallboard is indicated, use specified laminating adhesive, install wallboard vertically and maintain tolerances as specified for screw attached wallboard.

H. Insulation Installation: Install where indicated on drawings. Place blanket tightly between studs.

I. Deflection of Structure Above: To allow for possible deflection of structure above partitions, provide top runners for non-rated partitions with 1-1/4" minimum flanges and do not screw studs or drywall to top runner. Where positive anchorage of studs to top runner is required, anchorage device shall be by means of slotted hole (in clip

connection with screw attachment to web of steel through bushings located in slots of clips), or other anchorage device approved by Architect.

J. Control Joints

1. Leave a 1/2" continuous opening between gypsum boards for insertion of surface mounted joint.

2. Back by double framing members.

3. Attach control joint to face layer with 9/16" galvanized staples six (6) inches o.c. at both flanges along entire length of joint.

4. Provide two (2) inch wide gypsum panel strip or other adequate seal behind control joint in fire rated partitions and partitions with safing insulation.

3.5 DRYWALL FASCIAS AND CEILINGS

A. Furnish and install inserts, hanger clips and similar devices in coordination with other work.

B. Secure hangers to inserts and clips. Clamp or bolt hangers to main runners.

C. Space main runners 4'-0" o.c. and space hangers 4'-0" o.c. along runners, except as otherwise shown.

D. Level main runners to a tolerance of 1/4" in 12'-0", measured both lengthwise on each runner and transversely between parallel runners.

E. Metal Furring Channels: Space sixteen (16) inches o.c. maximum. Attach to 1-1/2" main runner channels with furring channel clips (on alternate sides of main runner channels). Furring channels shall not be let into or come in contact with abutting masonry walls. End splices shall be provided by nesting furring channels no less than eight (8) inches and securely wire tying. At any openings that interrupt the furring channels, install additional cross reinforcing to restore lateral stability.

F. Mechanical accessories, hangers, splices, runner channels and other members used in suspension system shall be of metal, zinc coated, or coated with rust inhibitive paint, of suitable design and of adequate strength to support units securely without sagging, and such as to bring unit faces to finished indicated lines and levels.

1. Provide special furring where ducts are over two (2) feet wide.

G. Apply board with its long dimension at right angles to channels. Locate board butt joints over center of furring channels. Attach board with one (1) inch self-drilling drywall screws twelve (12) inches o.c. in field of board at each furring channel; eight (8) inches o.c. at butt joints located not less than 3/8" from edges.

3.6 ERECTION AT COLUMN ENCLOSURES

A. Metal furring supports shall be provided under work of this Section, and shall be cut to lengths as necessary for tight fit such that spacing is not more than sixteen (16) inches o.c.

B. Board shall be fastened securely to supports with screws as specified. Place boards in position with minimum number of joints. Where free ends occur between supports, back-blocking or furring shall be required. Center abutting ends over supports. Correct work as necessary so that faces of boards are flush, smooth and true. Provide clips or cross furring for attachment as required.

C. All layers shall be screw attached to furring.

D. When column finish called for on drawings to be in the same plane as drywall finish layer, maintain even, level plane.

3.7 FINISHING

A. Taping: A thin, uniform layer of compound shall be applied to all joints and angles to be reinforced. Reinforcing tape shall be applied immediately, centered over the joint, seated into the compound. A skim coat shall follow immediately but shall not function as a fill or second coat. Tape shall be properly folded and embedded in all angles to provide a true angle.

B. Filling: After initial coat of compound has hardened, additional compound shall be applied, filling the board taper flush with the surface. The fill coat shall cover the tape and feather out slightly beyond the tape. On joints with no taper, the fill coat shall cover the tape and feather out at least four (4) inches on either side of the tape. No fill coat is necessary on interior angles.

C. After compound has hardened, a finishing coat of compound shall be spread evenly over and extending slightly beyond the fill coat on all joints and feathered to a smooth, uniform finish. Over tapered edges, the finished joint shall not protrude beyond the plane of the surface. All taped angles shall receive a finish coat to cover the tape and taping compound and provide a true angle. Where necessary, sanding shall be done between coats and following the final application of compound to provide a smooth surface, ready for painting.

D. Fastener Depressions: Compound shall be applied to all fastener depressions followed, when hardened by at least two (2) coats of compound, leaving all depressions level with the plane of the surface.

E. Finishing Beads and Trim: Compound shall be applied to all bead and trim and shall be feathered out from the ground to the plane of the surface. When hardened, this shall be followed by two (2) coats of compound each extending slightly beyond the previous coat. The finish coat shall be feathered from the ground to the plane of the surface and sanded as necessary to provide a flat, smooth surface ready for decoration.

F. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840 and GA-214 of the Gypsum Association.

1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.

2. Level 2: Panels that are a substrate for tile, and where indicated.

3. Level 4: Level of finish for surfaces exposed to view shall conform to Level 4.

G. Drywall construction with defects of such character which will mar appearance of finished work, or which is otherwise defective, will be rejected and shall be removed and replaced at no expense to the Owner.

3.8 CLEANING AND ADJUSTMENT

A. At the completion of installation of the work, all rubbish shall be removed from the building leaving floors broom clean. Excess material, scaffolding, tools, and other equipment shall be removed from the building.

B. Work shall be left in clean condition ready for painting or wall covering. All work shall be as approved by Architect.

C. Cutting and Repairing: Include all cutting, fitting, and repairing of the work included herein in connection with all mechanical trades and all other trades which come in conjunction with any part of the work and leave all work complete and perfect after all trades have completed their work.

3.9 PROTECTION OF WORK

A. Installer shall advise Contractor of required procedures for protecting drywall work from damage and deterioration during remainder of construction period.

END OF SECTION 092900

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 093013

CERAMIC TILING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the ceramic tiling work as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Ceramic floor tile.

2. Ceramic wall tile and base.

3. Stone saddles.

4. Setting beds, grout and sealant.

5. Waterproofing membrane.

1.3 RELATED SECTIONS

A. Cast-in-Place Concrete - Section 033000.

B. Unit Masonry - Section 042000.

C. Gypsum Drywall - Section 092900.

1.4 REFERENCES

A. ANSI A108 Series/A118 Series - American National Standards for Installation of Ceramic Tile.

B. ANSI A136.1 - American National Standards for Organic Adhesives for Installation of Ceramic Tile.

C. ASTM C 144 - Standard Specification for Aggregate for Masonry Mortar.

D. ASTM C 150 - Standard Specification for Portland Cement.

E. TCNA - Handbook for Ceramic, Glass and Stone Tile Installation; Tile Council of North America.

F. ISO 13007 - International Standards Organization; Classification for Grout and Adhesives.

G. Large Format Tile (LFT): Tile 15" or larger in any direction and/or 144 sq. in. in size.

1.5 QUALITY ASSURANCE

A. Qualifications of Installers: For cutting, installing and grouting of ceramic tile, use only thoroughly trained and experienced journeyman tile setters who are completely familiar with the requirements of this work, and the recommendations contained in the referenced standards, and the installers are Certified Ceramic Tile Installer (CTI) through the Ceramic Tile Education Foundation (CTEF) or Tile Installer Thin Set Standards (ITS) verification through the University of Ceramic Tile and Stone.

B. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with the following:

1. Manufacture all ceramic tile in accordance with Standard Grade Requirements of ANSI A-137.1.

2. Install all ceramic tile in accordance with the recommendations contained in "Tile Council of North America Handbook for Ceramic, Glass, and Stone Tile Installation (TCNA)," latest edition.

C. Flooring surfaces shall have a minimum wet DCOF AcuTest value of 0.42 and tested per ANSI A326.3 Dynamic Coefficient of Friction of Hard Surface Flooring Materials.

1.6 SUBMITTALS

A. Samples

1. Before any ceramic tile is delivered to the job site, submit to the Architect sample panels, approx. 12" x 12", mounted on hardboard back-up with selected grout color for each color and pattern of ceramic tile and grout specified.

2. Submit 6" length of stone saddles.

3. Submit 12" x 12" samples of waterproofing membrane.

B. Master Grade Certificates: Prior to opening ceramic tile containers, submit to the Architect a Master Grade Certificate, signed by an officer of the firm manufacturing the ceramic tile used, and issued when the shipment is made, stating the grade, kind of tile, identification marks for tile containers, and the name and location of the project.

C. Mock-Ups

1. At an area on the site where approved by the Architect, provide a mock-up ceramic tile installation.

a. Make the mock-up approximately 36" x 36" in dimension.
b. Provide one mock-up for each type, class, and color of installation required under this Section.
c. The mock-ups may be used as part of the Work and may be included in the finished Work when so approved by the Architect.
d. Revise as necessary to secure the Architect's approval.

2. The mock-ups, when approved by the Architect, will be used as datum for comparison with the remainder of the work of this Section for the purposes of acceptance or rejection.

3. If the mock-up panels are not permitted to be part of the finished Work, completely demolish and remove them from the job site upon completion and acceptance of the work of this Section.

1.7 PRODUCT HANDLING

A. Delivery and Storage

1. Deliver all materials of this Section to the job site in their original unopened containers with all labels intact and legible at time of use.

2. Store all materials under cover in a manner to prevent damage and contamination; store only the specified materials at the job site.

B. Protection: Use all means necessary to protect the materials of this Section before, during, and after installation, and to protect the installed work and materials of all other trades.

C. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.8 PROJECT CONDITIONS

A. Maintain environmental conditions and protect work during and after installation to comply with referenced standards and manufacturer's printed recommendations.

B. Vent temporary heaters to exterior to prevent damage to tile work from carbon dioxide buildup.

C. Maintain temperatures at not less than 50 deg. F. in tiled areas during installation and for 7 days after completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Tile: Obtain tile of each type and color or finish from single source or producer.

1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.

1. Obtain setting and grouting materials, except for unmodified Portland cement and aggregate, from single manufacturer.

2. Obtain waterproof/crack isolation membrane, except for sheet products, from manufacturer of setting and grouting materials.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer:

1. Stone thresholds.

2. Waterproof membrane.

3. Metal edge strips.

2.2 MANUFACTURERS OF TILE

A. Provide as scheduled on the drawings from Dal-Tile Corp., American Olean, United States Ceramic Tile Co., Summitville Tiles Inc., or approved equal meeting these specifications. The Architect reserves the right to pick tile from any price group.

2.3 TRIM AND SPECIAL SHAPES

A. Provide external and internal corners, trim shapes at openings, and all other trim and special shapes to match the tile specified herein, as required by field conditions and drawing details.

2.4 STONE SADDLES

A. Provide sound stone of variety selected by the Architect, minimum 3/4" thick, with an abrasive hardness of not less than 10.0, when tested in accordance with ASTM C 241. Cut saddle to fit jamb profile, honed finish.

2.5 SETTING BEDS AND GROUT

A. Portland Cement: ASTM C 150, Type 1.

B. Hydrated Lime: ASTM C 207, Type S.

C. Sand: ASTM C 144, clean and graded natural sand.

D. Reinforcing for Mud Set Systems: 2" x 2" x 16/16 ga. welded wire mesh.

E. Latex Modified Mortar Bed

1. Laticrete 3701 Fortified Mortar Bed.

2. MAPEI, Modified Mortar Bed.

3. Pro Spec, Floor Mud with B-710 SBR Acrylic Additive.

F. Latex-Portland Cement Bond Coat, complying with ANSI A118.4 and ISO 13007, C2ES2P1 with minimum compressive strength of 400 psi.

1. Laticrete, 254 Platinum.

2. MAPEI, Keraflex Super.

3. Pro Spec; Permalastic System consisting of Permalastic Dryset Mortar and Permalastic Admixture.

G. Improved Modified Cement Mortars: For use with large format tile (LFT), complying with ANSI 118.15 and ISO 13007, CSES2PS.

1. Laticrete, MultiMax Lite.

2. Mapei; Keraflex Super.

3. Pro Spec; StayFlex 590.

H. Wall and Base Tile

1. Over masonry and concrete, use a mortar bed leveling coat conforming to ANSI A108.1A followed by a Latex Portland Cement Bond Coat: Laticrete "TriLite," MAPEI "Keraflex Super," or equal by Pro Spec, conforming to ANSI A118.4, ISO 13007-C2ES2P1, and TCA Detail W-211.

2. Over cement board, use a Latex Portland cement mortar bond coat: Laticrete "TriLite," MAPEI, "Keraflex Super," or equal by Pro Spec, conforming to ANSI A118.4, ISO 13007-C2ES2P1, and TCA Detail W-244; coat back of board with waterproof membrane as specified below.

3. Over glass-mat, water-resistant gypsum backer board, use a latex Portland cement mortar bond coat: Laticrete "TriLite," MAPEI "Keraflex Super," or equal by Pro Spec, conforming to ANSI A118.4, ISO 13007- C2ES1P1, and TCA Detail W-245.

I. Floor Tile and Stone Saddle - Mud Set: Set floor tile and stone saddle using Portland Cement mortar setting bed conforming to ANSI A108.1A and latex modified Portland cement bond coat. Basis of Design: Laticrete "254 Platinum" or MAPEI "Keraflex Super," conforming to ANSI A118.4, ISO 13007-C2ES1P1, and TCA Detail F-112.

1. For installation of LFT: Improved Modified Cement Mortars and medium bed; Basis of Design: Laticrete "Multi Max Lite," or MAPEI "Ultraflex LFT," conforming to ANSI 118.15, ISO 13007-C2ES1P1.

J. Floor Tile and Stone Saddle - Thin Set over Waterproof Setting Bed: Set floor tile and stone saddle using thin set latex Portland cement bond coat. Basis of Design: Laticrete "254 Platinum" or MAPEI "Keraflex Super" conforming to ANSI A118.4, ISO 13007-C2ES2P1, and waterproofing membrane conforming to TCA Detail F-122/122A.

1. For installation of LFT: Improved Modified Cement Mortars and medium bed; Basis of Design: Laticrete "Multi Max Lite," or MAPEI "Ultraflex LFT," conforming to ANSI 118.15, ISO 13007-C2ES1P1.

K. Waterproofing Membrane: Complying with ANSI A118.10 and ANSI A118.12; and having IAPMO certification as a shower pan liner; provide "Hydro Ban" made by Laticrete International, "Mapelastic AquaDefense" by MAPEI with factory blended "Bio-Block Antimicrobial," ProSpec "B6000," or approved equal.

1. Reinforce membrane with polyester fabric where recommended by manufacturer.

2. Showers: B-415; run waterproofing up full height of walls.

L. Water: Clean, fresh, and suitable for drinking.

M. Grout: Complying with A118.7; and ISO 13007, CG2WAF; for grouting ceramic tile, provide a commercial Portland cement grout, Laticrete "PermaColor" or "PermaColor Select," "Ultracolor Plus FA" (additive not required) made by MAPEI, or comparable product by Custom Building Products or approved equal; color as selected by the Architect.

N. Physical Properties: The setting beds and grouts must meet the following physical requirements:

1. Compressive Strength: 3000 psi min.

2. Shear Bond Strength: 500 psi min.

3. Water Absorption: 4.0% max.

4. Service Rating (ASTM C 627): Extra Heavy Duty.

O. Sealer: Seal all grout joints and all unglazed tile using "StoneTech Heavy Duty Sealer" by Laticrete, "Sealer's Choice 15 Gold" by Aqua Mix Inc. or "Ultracare Penetrating Plus Stone, Tile, and Grout Sealer" by MAPEI.

P. Temporary Protective Coating: Either product indicated below that is applied in the tile manufacturer's factory and formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

1. Petroleum paraffin wax, applied hot, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg. F. per ASTM D 87.

2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.

Q. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, equal to "StoneTech Stone & Tile Cleaner" by Laticrete, "Concentrated Stone & Tile Cleaner" Aqua-Mix, "Ultracare Concentrated Tile & Grout Cleaner" by MAPEI, or approved equal, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.6 SEALANT

A. Joint Backing: Preformed, compressible, resilient, non-extruding, non-staining strips of foam neoprene, foam polyethylene, or other material recommended by sealant manufacturer.

B. Bond Breaker: Polyethylene tape, 3 mils thick, or other material recommended by sealant manufacturer.

C. Sealant Primer: Colorless, non-staining, or type to suit substrate surface, as recommended by sealant manufacturer.

D. Sealant: One-part silicone based sanitary sealant, conforming to ASTM C 920, Type S, Grade NS, Class 25. Sealant hardness upon full cure shall be between 20-30 Shore "A" Durometer. Color of sealant to blend with or match adjacent materials, and as selected by the Architect. Sealant shall be equivalent to 1700 Sanitary Sealant made by General Electric or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where ceramic tile is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 CONDITION OF SURFACES

A. Allowable Variations in Substrate Levels in Floors: + 1/8" in 10'-0" distance and 1/4" total max. variation from levels shown.

B. Grind or fill concrete and masonry substrates as required to comply with allowable variations.

C. Concrete substrates must meet ANSI A108.01 tolerances and surface textures in preparation for tile work. Coordinate with concrete trades.

3.3 PREPARATION

A. Coordinate the following with Section 033000:

1. Steel trowel and fine broom finish concrete slabs that are to receive ceramic tile. Cure concrete slabs that are to receive tile before tile application. Do not use liquid curing compounds or other coatings that may prevent bonding of tile setting materials to slabs. Slab shall be dry at time of tile installation.

2. Tile floors with floor drains must have a slope to direction of 1/4" per foot; coordinate this with concrete trades.

B. Etch concrete substrate as may be required to remove curing compounds or other substances that would interfere with proper bond of setting bed. Rinse with water to remove all traces of treatment.

C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved samples. If not factory blended, either return to manufacturer or blend tiles at project site before installing.

D. Field Applied Temporary Protective Coating: Pre-coat tile with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.4 JOINTS IN TILE WORK

A. Joint Widths: 1/16" wide in ceramic tile.

B. Alignment: Wall, base and floor joints shall align through the field and trim. Direction and location of all joints as directed by Architect.

C. Movement Joints: Conform to TCA Detail EJ171. Locate where movement joints are in back-up material. Provide movement joint at joints between mop receptors and ceramic tile. Provide movement joint at all vertical internal joints of wall tile. Movement joints 1/8" wide in ceramic tile. Fill all movement joints with specified backing and sealant. Use bond breaker where sufficient space for joint backing does not exist.

1. Provide sealant between ceramic tile and plumbing fixtures, mirrors, pipes, countertops and other dissimilar materials penetrating or adjacent to ceramic tile.

3.5 INSTALLATION

A. Comply with the following installation standards:

1. Wall tile over cement board or glass mat backer board using dry set mortar with latex additive - ANSI A118.4 and ISO 13007, C2ES1P1.

2. Wall tile over masonry or concrete using dry set mortar with latex additive - ANSI A118.4 and ISO 13007, C2ES1P1.

3. Floor tile using full mud set mortar - ANSI A118.4, A228.15, and ISO 13007, C2ES1P1.

4. Floor tile using dry set mortar with latex additive - ANSI A118.4, A118.15, and ISO 13007, C2ES1P1.

5. Floor tile over waterproofing membrane - A118.15, and ISO 13007, C2ES1P1.

B. Backs of tile must be cleaned before installation.

C. All setting beds and/or adhesives shall provide for an average contact area of not less than 95% coverage.

D. Allowable Variations in Finished Work: Do not exceed the following deviations from level and plumb, and from elevations, locations, slopes, and alignment shown.

1. Floors: 1/8" in 10'-0" run, any direction; +/- 1/8" at any location; 1/32" offset at any location.

2. Walls: 1/8" in 8'-0" run, any direction; 1/8" at any location; offset at any location, 1/32".

3. Joints: +/- 1/32" joint width variation of any location; 1/16" in 3'-0" run deviation from plumb and true.

E. Waterproofing Membrane

1. Install the membrane in strict accordance with manufacturer's written recommendations.

2. Upon completion of work, test horizontal membrane for leaks by flood testing per ASTM D 5957. Inspect for leakage. Make necessary adjustments to stop all leakage and retest until watertight. If membrane is not immediately covered by another surface, provide protection until membrane is covered.

F. Handle, store, mix and apply setting and grouting materials in compliance with the manufacturer's instructions.

G. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions. Terminate work neatly at obstructions, edges and corners without disruption of pattern or joint alignment.

H. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight, aligned joints. Fit tile closely to electrical outlets, piping and fixtures so that plates, collars, or covers overlap tile.

I. Lay tile in grid pattern. Align joints when adjoining tiles on floor, base, walls and trim are the same size. Lay out tile work and center tile fields both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths.

3.6 INSTALLATION OF STONE SADDLES

A. Install stone saddles cut to profiles and sizes shown, accurately fitted to jambs, coped at stops, set in full bed of mortar herein specified, and with grouted edge joints as specified for floor tile.

3.7 CLEANING AND PROTECTION OF CERAMIC TILE

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove grout residue from tile as soon as possible.

2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use cleaners only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning to insure removal of all cleaning material.

3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

B. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. Apply coat of sealer to all grout joints and all unglazed tile.

C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

D. Before final inspection, remove protective coverings from tile surfaces.

E. Leave finished installation clean and free of cracked, chipped, broken, unbonded or otherwise defective tile work.

END OF SECTION 093013

SECTION 095113

ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the acoustical panel ceilings as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Acoustical panel units.
2. Exposed "T" suspension system, including hangers and inserts.
3. Provisions for the installation of lighting fixtures, diffusers, grilles and similar items provided under other Sections.
4. Cutting, drilling, scribing and fitting as required for electro-mechanical penetrations.
5. Perimeter and column moldings, trim and accessories for acoustical ceilings.

1.3 RELATED SECTIONS

A. Steel Decking - Section 053100.

B. Drywall ceilings - Section 092900.

C. Diffusers, grilles and related frames - Division 23.

D. Lighting fixtures - Division 26.

1.4 QUALITY ASSURANCE

A. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with all pertinent recommendations published by the Ceilings and Interior Systems Contractor’s Association.

B. Qualifications of Installers

1. The suspended ceiling subcontractor shall have a record of successful installation of similar ceilings acceptable to Architect and shall be currently approved by the manufacturer of the ceiling suspension system.

2. For the actual fabrication and installation of all components of the system, use only personnel who are thoroughly trained and experienced in the skills required and completely familiar with the requirements established for this work.

C. The work is subject to the following standards:

1. ASTM C 635 "Standard Specification for Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings," American Society for Testing and Materials.

2. ASTM C 636 "Standard Recommended Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels," American Society for Testing and Materials.

D. In addition to suspension system specified, provide seismic struts and seismic clips to meet seismic standards as required by prevailing Codes and Ordinances.

1.5 SUBMITTALS

A. Shop Drawings: Submit completely dimensioned ceiling layouts for all areas where acoustical ceilings are required, showing:

1. Any deviations from Architect’s reflected ceiling plan layouts, especially lighting fixture and dimensions. Also indicate if any light fixtures will not fit into Architect’s ceiling layout due to dimensional restrictions or field conditions.

2. Direction and spacing of suspension members and location of hangers for carrying suspension members.

3. Direction, sizes and types of acoustical units, showing suspension grid members, and starting point for each individual ceiling area.

4. Moldings at perimeter of ceiling, at columns and elsewhere as required due to penetrations or exposure at edge of ceiling tiles.

5. Location and direction of lights, air diffusers, air slots, and similar items in the ceiling plane.

6. Details of construction and installation at all conditions.

7. Materials, gauges, thickness and finishes.

B. Samples and Product Literature: Submit the following samples and related manufacturer’s descriptive literature.

1. Twelve (12) inch long components of suspension systems, including moldings.

2. Acoustical units — full size.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver acoustical ceiling units to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination or other causes.

B. Before installing acoustical ceiling units, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical ceiling units carefully to avoid chipping edges or damaging units in any way.

1.7 PROJECT CONDITIONS

A. Do not install acoustical ceilings until wet-work in space is completed and nominally dry, work above ceilings has been completed, and ambient conditions of temperature and humidity will be continuously maintained at values near those indicated for final occupancy.

1.8 COORDINATION

A. Coordinate layout and installation of acoustical ceiling units and suspension system components with other work supported by or penetrating through ceilings, including light fixtures, HVAC equipment, fire suppression system components, and partition system.

1.9 EXTRA STOCK

A. Extra Stock: Deliver stock of maintenance material to Owner. Furnish maintenance material matching products installed, packaged with protective covering for storage and identified with appropriate labels.

1. Acoustical Ceiling Units: Furnish quantity of full size units equal to 2.0% of amount installed.

PART 2 PRODUCTS

2.1 ACOUSTICAL UNITS

A. Acoustical Panel Ceilings

1. Surface Texture: Smooth Texture
2. Composition: Fiberglass
3. Color: White
4. Size:
   i. 24” x 24”, 24” x 48” (typical)
   ii. 6” x 42”, 6” x 48”, 6” x 96” (‘techzone’)
   iii. 12” x 48”
5. Edge Profile: Square Lay-in
6. Noise Reduction Coefficient (NRC) ASTM C 423 Classified w/ UL label on product carton: 0.90
7. Ceiling Attenuation Class (CAC): ASTM C 1414; Classified with UL label on product carton: N/A, 26

8. Articulation Class (AC): ASTM E 1111; Classified with UL label on product carton: N/A, 180, 190
9. Flame Spread: ASTM E 1264; Class A
10. Light Reflectance (LR) White Panel: ASTM E 1477; 0.88
11. Dimensional Stability: HumiGuard Plus
12. Recycle Content: Up to 71% total recycled content. (Total recycled content: pre-consumer, post-consumer and post-industrial)
13. Basis of Design: OPTIMA Lay-in or OPTIMA Tegular, item number _____, as manufactured by Armstrong World Industries, Inc.

A. Provide 3/4" thick, 24" x 24" and 24" x 48" mineral fiber panels with factory-applied white finish as manufactured by Armstrong World Industries, or comparable product of USG Interiors, Inc., Rockwool Rockfon, or approved equal. Panels shall meet ASTM E 1264, Class A, with maximum UL flame spread of 25 and smoke developed of 50 per ASTM E 84.

1. Coordinate with Techzone system where shown on architectural drawings.

2.2 SUSPENSION SYSTEM

A. Provide exposed "T" steel suspension system with low sheen white baked enamel finish equal to "Prelude," 15/16" exposed tee 2-way grid system made by Armstrong World Industries, or equal made by USG Interiors, Inc. or Chicago Metallic Corp.

B. The suspension system shall support the ceiling assembly shown on the drawings and specified herein, with a maximum deflection of 1/360 of the span, in accordance with ASTM C 635.

C. Provide min. 12 ga. galvanized wire hangers, soft annealed steel conforming to ASTM A 641, prestretched, Class 1 zinc coating, soft temper, size so that stress at 3 times hanger design load (ASTM C 635, Table 1, Direct Hung) will be less than yield stress of wire.

D. Provide ceiling clips and inserts to receive hangers, type as recommended by suspension system manufacturer, sizes for pull-out resistance of not less than five (5) times the hanger design load, as indicated in ASTM C 635.

E. Suspension systems shall conform to ASTM C 635, intermediate duty.

F. Provide manufacturer’s standard wall moldings with off-white baked enamel finish to match suspension systems. For circular penetrations of ceilings, provide edge moldings fabricated to diameter required to fit penetration exactly.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas where acoustical panel ceilings are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not

proceed with the work until unsatisfactory conditions have been corrected to permit proper installation of the layout.

3.2 PREPARATION

A. Coordination: Furnish layouts for inserts, clips, or other supports required to be installed by other trades for support of acoustical ceilings.

B. Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less-than-half width units at borders, and comply with reflected ceiling plans.

3.3 INSTALLATION

A. Codes and Standards: Install materials in accordance with manufacturer's printed instructions, and to comply with governing regulations and industry standards.

B. Install suspension systems to comply with ASTM C 636, with wire hangers supported only from building structural members. Locate hangers not more than 6" from each end and spaced 4'-0" along direct-hung runner, leveling to tolerance of 1/8" in 12'-0".

C. Secure wire hangers by looping and wire-tying, either directly to structures or to inserts, eye-screws, or other devices which are secure and appropriate for substrate, and which will not deteriorate or fail with age or elevated temperatures.

D. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum which are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal force by bracing, reinforcing, countersplaying or other equally effective means.

E. Install edge moldings at edges of each acoustical ceiling area, and at locations where edge of acoustical units would otherwise be exposed after completion of the work.

1. Secure moldings to building construction by fastening through vertical leg. Space holes not more than 3" from each end and not more than sixteen (16) inches o.c. between end holes. Fasten tight against vertical surfaces.

2. Level moldings with ceiling suspension system, to a level tolerance of 1/8" in 12'-0".

F. Install acoustical units in coordination with suspension system, with edges concealed by support of suspension members. Scribe and cut panels to fit accurately at borders and at penetrations.

G. Install hold-down clips in toilet areas, and in areas where required by governing regulations; space 2'-0" o.c. on all cross tees.

H. Light fixtures or other ceiling apparatus shall not be supported from main beams or cross tees if their weight causes the total load to exceed the deflection capability of the ceiling suspension system. In such cases the load shall be supported by supplemental hangers furnished and installed by this Section of work.

I. Where fixture or ceiling apparatus installation causes eccentric loading on runners, provide stabilizer bars to prevent rotation.

3.4 ADJUST AND CLEAN

A. Clean exposed surfaces of acoustical ceilings, including trim, edge molding, and suspension members; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage. Remove and replace work which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 095113

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 096513

RESILIENT BASE AND ACCESSORIES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the resilient tile flooring, as shown on the drawings and/or specified herein, including, but not limited to, the following:

1. Rubber base.

2. Accessories.

1.3 RELATED SECTIONS

A. Gypsum Drywall - Section 092900.

B. Resilient Tile Flooring - Section 096519.

C. Carpet Tile - Section 096813.

1.4 QUALITY ASSURANCE

A. Qualifications of Installers: Use only personnel who are thoroughly trained and experienced in the skills required and completely familiar with the requirements established for this work.

1.5 SUBMITTALS

A. Manufacturer's Data: For information only, submit manufacturer's technical information and installation instructions for type of resilient tile.

B. Samples: Submit six (6) inch long samples of base and strips.

1.6 DELIVERY AND STORAGE
