RE: Subgrade Stabilization Fabric

Upon inspection of the subgrade soil conditions, the special inspector is recommending that a stabilization fabric be placed over the subgrade prior to the importation of the RCA.

The recommended fabric is Tencate Mirafi HP 270 or equivalent. Reference attached e-mail.

Russell,

Tectonic takes no exception to this alternate compaction method and we will make sure our inspectors understand it prior to arriving on-site. Based on our field observations this morning, we would also recommend a separation/stabilization fabric (Tencate Mirafi HP270 or equivalent) be placed on top of the approved subgrade, prior to placement of the compacted RCA.

Christopher Burke, Ph.D., P.E., P.M.P.
